**Step 1: Short -a- n r f s (8 words)**

Lesson 1: Mm (monkey)

Lesson 2: Aa (cat) am

Lesson 3: Nn (nest) an, man, Nan

Lesson 4: Rr (rabbit) ran, ram

Lesson 5: Ff (fan) fan

Lesson 6: Ss (saw) Sam

**Step 2: Short -ē- t l g c k ck b (37 words)**

Lesson 7: Ee (bed) men

Lesson 8: Tt (top) mat, set, ten, met, sat, at, tan, Nat, net, fat, rat

Lesson 9: Ll (leaf) let

Lesson 10: Gg (goat) rag, gas, tag, get, sag, gag, leg, nag

Lesson 11: Cc (key) can, cab, cat

Lesson 12: Kk & ck (key) keg, tack, lack, sack, rack, Mack

Lesson 13: Bb (bear) Ben, bag, Tab, bat, beg, bet, back

**Step 3: Short -Ī- h d p (69 words)**

Lesson 14: Ii (fish) bit, tin, bib, big, sit, in, fit, fin, fig, rib, rim, it, tick, if

Lesson 15: Hh (horn) hat, hit, hem, ham, him, hen, hack, hick

Lesson 16: Dd (duck) red, hid, sad, rid, had, did, lad, mad, den, led, mid, din, lid, bed, dig, fed, bad, dim, kid, kit, nod, deck
Lesson 17: Pp (pig) tap, map, pin, tip, lap, pig, pen, rip, lip, pet, rap, cap, pat, sip, dip, pit, sap, hip, nap, pan, peg, pad, pun, pack, pick

Step 4: Short -ō- j w (37 words)

Lesson 18: Oo (top) log, rod, got, fog, pot, cob, hop, rob, not, lop, hot, sod, top, pod, lot, dot, cot, cod, on, dock, tock, lock, sock
Lesson 19: Jj (jug) jam, jet, jig, jug, jog, jot, Jack

Lesson 20: Ww (wagon) wag, wig, wit, wet, web, win, wick

Step 5: Short -ū- z x qu v y (53 words)

Lesson 21: Uu (duck) gum, pug, run, hum, bun, fun, tug, gun, bug, tub, sun, hub, cut, rub, hut, jot, mud, bud, rug, sup, up, hug, cup, but, pup, nut, us, duck, buck, luck, suck

Lesson 22: Zz (zebra) zap zip,

Lesson 23: Xx (box) ax, box, six, mix, fix, tax, Max, ox, fox

Lesson 24: Qq qu (queen) quit, quack, quick

Lesson 25: Vv (valentine) vat, van, Val

Lesson 26: Yy (yard) yes, yet, yam, yack

Step 6: Double Letter Endings: -ff, -ll, -ss, -tt, -gg, -nn, -zz, -dd (38 words)

Lesson 27: Double-Letter Word Endings: pass mass lass mess less fuss Bill fill bill fell Jill ill will till tell well sell yell jell bell dull moss boss toss loss kiss muss muff off puff huff cuff puff cuff mutt jazz buzz fuzz Ann add

Note to the Teacher

Mr. Potter designed The Blend Phonics Pre-Primer to be taught to young children before they begin the 45 Units of Reading Made Easy with Blend Phonics for First Grade. Decoding Fluency Cards are available.

I highly recommend using the Phonovisual Charts in conjunction with both the Blend Phonics Pre-Primer and the Blend Phonics Lessons and Stories. The charts teach 43 of the 44 English speech sounds and their major spelling patterns. An older edition of the charts is included at the end of this document to give an idea of how the sounds-corporrespondences are scientifically organized on the chart. The new charts are in color and have newer pictures. I recommend purchased them for the students: www.phonovisual.com I have a YouTube video explaining in detail the use of the charts.

Once the students know the 26 sound-to-symbol correspondences and are able to blend and spell the words in the Blend Phonics Pre-Primer, they will be ready for success with the Reading Made Easy with Blend Phonics for First Grade, its accompanying reader, Blend Phonics Lessons and Stories, and Blend Phonics Timed Fluency Drills.

The section below “On Teaching Phonics” was largely taken from Florence Akin’s 1913 all time phonics classic, Word Mastery: Phonics for the First Three Grades. I have published a paperback reprint of Akin’s book, available on Amazon or Barnes & Nobles.

Students who learn to read with the Blend Phonics Preprimer and Blend Phonics Lessons and Stories will never develop the whole word guessing habit. The whole word guessing habit is caused by sight-word “instruction” It is the main reason for children struggling with reading. Guessing words from shape and context always leads to reduction in comprehension. Conversely, good decoding skills lead to high comprehension, when students pay attention. Remember that attention is related to consciousness, will, and judgment. It is essentially un-trainable and cannot be automated. Many supposed comprehension deficiencies are nothing more than poor decoding skills that lead the children to misunderstand the meaning of the text. The tests for silent comprehension are a poor means of accessing a student’s reading difficulties.

The best test currently available for telling if a student has artificially induced whole-word dyslexia is the Miller Word Identification Assessment, available on my website. Students who take their first steps into literacy with the Blend Phonics Lessons and Stories will avoid these common man-made hindrances.

Parents and teachers should take as long as necessary teach the Blend Phonics Pre-Primer. I also recommend that the student learn to identify the letters by letter name so they can begin oral spelling right away.

If the student is old enough, start them on writing the letters so they can practice writing the words. It is better to have them write on a chalkboard at the start so they can use their large motor skills.

The letters m, n, r, f, s, l represent sounds that may be prolonged. This make them the easiest of sounds to blend, and therefore are taught first.

The Blend Phonics Pre-Premier teaches more than meets the eye. The children learned to write legibly and identify with facility all the letters of the alphabet. They learn all the consonant and short vowel sounds and spellings. They develop a mental set for reading without guessing. The brain is literally programmed for success in learning to read well. Last updated on 5/30/2016.
On Teaching Phonics
By Florence Banks Akin

The teacher must decide the amount of time given daily to the work in phonics. Classroom conditions make it possible for some to give twenty minutes a day while others can give but ten. Two exercises a day of ten minutes each is perhaps the ideal arrangement. The exercise should never be continued until pupils weary of it. At the first indication of lagging or weariness it is time to stop.

The teaching of phonics includes

1. Ear training,
2. Tongue training,
3. Eye training,

**Ear training** may begin on the first day the child enters school. Say to the pupils, “We shall play a little game. You may do what I tell you, but do not speak a word.” Then say to one, “Bring me a b-o-x,” speaking the last word very slowly (phonetically); to others, “Show me something r-e-d,” “Tap on your d-e-s-k,” “Touch something made of t-i-n,” “Cl-a-p your h-ands,” “R-u-n to the d-oo-r,” “H-o-p to the w-i-n-d-ow,” etc. Sufficient interest will soon be aroused to permit the teacher to leave off the play and say words phonetically, one after another, asking pupils to tell what each word is. In a few days they will be able to recognize almost any word that may be sounded. Occasionally tell a little story, saying a word phonetically here and there, and allowing pupils to pronounce the word. This form of training may be profitably continued throughout the first half-year.

**Tongue training** should begin about the third or fourth day. Sound a word and have a pupil tell what sound he hears first, what sound he hears last. Be very careful that he gives the sound correctly. There is a natural inclination to voice a breath, or voiceless sound, such as h. Holding an object before a pupil, have him say the name slowly (phonetically), as h-u-t, c-a-p, v-a-s-e, p-e-n, b-oo-k, f-a-n, etc. A picture may be placed before the class, and a pupil may be asked to say phonetically the name of each thing he sees in the picture. After a few days’ practice offer a sound (it may be a simple speech sound, as l, or a consonant blend, as sl); have the pupils see how many different words they can think of beginning with that sound. This training should be continued for several months. Ear training and tongue training should be practiced for eight or ten days before taking up eye training.

**Eye training** begins with the book, — teaching the pupil to associate the sound with the symbol. Ask the pupil to name the picture used to represent the sound monkey, m. Ask him what sound he hears first (the ear and the tongue training have prepared the way for prompt recognition), and he will reply, /m/. Now tell him that the pictures represent the first sound and that hereafter they will help him to tell words. The pupil next learns the sound of a, in the same way. Then he learns the sound of n. Now he says the sounds of the three letters m-a-n, and thereby discovers the word man. At first the pupil will say these sounds so far apart that he cannot hear a word, but keep him trying to say them more rapidly, as, m—a—n, m—a—n. m-a-n, m-a-n, until he does hear the word and tells it. Proceed in like manner with the lessons that follow.

Blend Phonics Reading Program

Brief Suggestions for Teaching

The Blend Phonics Pre-Primer

The students should be able to identify all the words and spell them accurately and rapidly. This combination of accuracy and speed is called “automaticity.” It is proof that the “reflex bonds” or “neurological connects” are correct and strong. The establishment of these bonds requires frequent, short episodes of spaced practice.

Teach the sounds represented by the letters using the Phonovisual Chart. Have the student say and spell the word being learned. Then teach the next word the same way.

When using the Decoding Fluency Cards, have the students read the words in mixed order. Then lay the words on the table and ask the student to point to the word when you say it. Eventually you can do several words at a time. Hide the deck behind your back and show a word at random to make sure the student can identify the word instantly, and does not confuse words. Take deck of words they have worked with, holding the cards so the student cannot see the words, and ask the student to spell the words. Do this with just two word at first and then add more words as their skills increase.

Remember that the subconscious mind works between training sessions. Students who cannot perform satisfactory during one session often perform quite well later, after the subconscious mind has had time to process the new learning. As William James observed, “We learn to skate in the summer.” NEVER practice until students become tired or discouraged because frustration is a leading cause of reversals and maladaptive behavior that works against learning.

The Pre-Primer is very beneficial because it introduces ALL the consonant sounds and short vowel sounds in an optimal sequence for easy mastery. It is essential to automate this level before satisfactory progress can be made further up the ladder in the acquisition of the necessary sub-skills. Often failure at the higher levels is due to a failure a lower level. For example, an apparent comprehension problem is more likely due to lower level decoding deficits than actual problems with comprehension. Misdiagnosing a decoding deficit as a comprehension deficit can lead to a tremendous waste of instructional time addressing the wrong problem. Conversely, targeting decoding problems inevitably leads to huge gains in comprehension. The so-called top down model assumes (falsely) that student will learn lower-level skills independently by extracting them from reading text that has the lower-level skills embedded in them. This is a false assumption that has lead to the tragically high illiteracy rates in our country. Real phonics is also known as part-to-whole phonics. Phony phonics is often known as whole-to-part, often associated with Guided Reading and Whole Language.

This Pre-Primer is characterized by its unwavering faithfulness to the principle of phonics-first and the total absence of instruction in guessing.

The phonics sequence is based on pages 5 to 25 of Florence Akin’s 1913 *Word Mastery: Phonics for the First Three Grades*. It begins with the letters m, n, r f, s, l because these letters represent sounds that may be prolonged (continuants). This makes them the easiest consonant sounds to blend, and therefore to learn first.

This is a Pre-Primer. A Pre-Primer is a book to be taught before the Primer. My *Blend Phonics Lessons and Stories* is an example of a good phonic Primer. A primer is a book for teaching beginning reading.

Prepared by Donald L Potter on April 8, 2014. [www.donpotter.net](http://www.donpotter.net)  [www.blendphonics.org](http://www.blendphonics.org)

Lesson 23 (Xx): 186-ax, 187-box, 188-six, 189-mix, 190-fix, 191-tax, 192-Max, 193-ox, 194-fox

Lesson 24 (qu): 195-quit, 196-quack, 197-quick

Lesson 25 (Vv): 198-vat, 199-van, 200-Val

Lesson 26 (Yy): 201-yes, 202-yet, 203-yam, 204-yack

Step 6: Double Letter Endings: -ff, -ll, -ss, -tt, -gg, -nn, -zz, -dd (38 words)

Shortcut to Manuscript
By Donald L. Potter
January 30, 2013

Students need to be able to form all the letters of the alphabet automatically without stress or hesitation. The writing process is directed by the mind, which directs the pencil to perform accurately. The mind, the child’s voice in saying quietly aloud (at first) for each letter the detailed steps necessary to write it, and the hand holding the pencil only to write (the other hand does all the holding and moving of the paper) the only parts of the body actively engaged.

I have worked with hundred of students who found handwriting and spelling difficult. Their common characteristic was their excessive tensing of the muscles in hands and arms and also in their legs. Small errors prevent children from learning to write easily, legibly and neatly. They require careful and continued teaching of all the techniques. Children from the beginning need to be taught to follow directions. Success in these writing skills gives children great pride and interest in learning each day’s lesson. Each skill builds self-confidence.

Start by teaching letter formation and the letter name. I am aware that many phonics programs discourage teaching letter names. In the long run, I feel that it is much better to establish a strong association between the letter formation and letter name, especially if we expect the students to develop strong oral spelling skills.

Many teachers and parents fail to realize the importance of teaching correct formation of the letters from the very start of teaching written language. Unless children write correctly, to do not see the correct symbols for the sounds, and motor patterns once formed are difficult to correct. Children need much patient supervision at this beginning stage. The beginner at any age needs to be taught all the writing techniques, which help any child acquire the correct motor patterns. Do not skip any of the techniques.

All parents should be taught this handwriting method so they can enjoy with their children what they are learning in school. In writing the brain directs the hand. This cannot be done correctly unless there is a thorough knowledge of how each letter and number is made.

The child who has no difficulty in learning to write needs to be taught at first, but need not be held for drill. The children who need help should be given the specific directions over and over until they can direct their hands in writing and no longer make errors in direction or orientation. This is where drill is an essential part of teaching, if children are to learn. The teacher has done no teaching unless and until the student learns.

In our method the letters are taught in ABC order. Learners will practice writing the letters in ABC order daily until they can do so from memory rapidly (40 LPM for kindergarten) and error free. They will learn to identify the letters by letter name at sight, and write the letters from the dictation of the letter name in random order without hesitation or error.

Position and Techniques

1. Clear the desk of books and materials not needed.
2. Sit with hips against the back of the chair, feet flat on the floor and back straight, with head tall.
3. The straight spinal column supports the head.
4. Keep two inches between the body and the desk. Lean forward just enough to see the paper clearly, but keep the head high.
5. Do not let the head fall forward because its heavy weight then it would be carried by the neck and back muscle.
6. Place both forearms on the desk with the elbows just off the front edge and comfortably close to the body.
7. Think of the hands as two separates parts needed for writing. One part holds and moves the paper and the other writes the letters.
8. The paper holding hand is the one which does not hold the pencil. It is placed across the top edge of the paper and moves the paper back and fourth, up and down, and holds it steadily. The paper weighs so little that little pressure from the paper holding hand is required to hold and move it.
9. The writing hand holds the pencil and writes. Keep the side edge of the paper parallel to the arm of the hand that holds the pencil (like the two rails of a railroad track).
10. The left-handed child needs special attention to be sure his paper is parallel to his writing (left) arm.
11. The writing hand and arm for all children should be below the base line on which they write.
How to Hold the Pencil

The middle finger and thumb form a vise for holding the pencil. Mrs. Romalda Spalding recommended the use of a six-sided, common wooden pencil for every age. Fountain pens are also very good for young students.

The pointing finger rounds, and the end of the nail sits on the pencil where the paint ends, about an inch from the point. (I have noted that many students hold the pencil too close to the tip, which blocks their view of what they are writing and forces them to bend their head sideways too close to the paper. Often just correcting the grip solves the problem with poor posture.)

The hinge (elbow) on the on the arm of the paper holding hand should be stationary. The writing hand moves the paper enough so that the pencil points remain in as mall area just forward of the center of the body.

Have each child hold a pencil across the palm of the hand and make him or her see that it weighs next to nothing. Train the student to consciously write with no real pressure in the arm or fingers. The arm should feel as light and soft as the leg and paw of a friendly kitten. Hold the child’s elbow in one our your hands and his in the other and have him feel no wright in his arm and hand. Write with the point of the pencil. The pencil should stand forward of the main knuckle.

All knuckles including the thumb should be bent and the fingers and thumb rounded to the same degree ( liken this to the way a cat’s claws are rounded).

Leave the space of one flat side between the pointing finger and the thumb. Run a finger between the thumb and pointing finger to make sure this is so.

Never use the writing hand to hold the paper. Make the other hand do that. The two hands have completely separate functions.

Paper for Writing

For beginners through second grade, use paper with lines 5/8-inch apart. Wider spacing forces children to draw letters instead of writing. For third grade and above, use paper with standard 3/8-inch spacing between letters.

Forget Me Not

“In writing the brain directs the hand. This cannot be done correctly unless there is a thorough knowledge of how each letter and number is made.” (Spalding WRTR 81). Spalding is absolutely correct, contra the Whole Language movement deeply misguided contention that children would pick up correct writing without direct instruction.

Why Include Handwriting with The Blend Phonics Pre-Primer

About ten years ago, Dr. Bob Rose explained to me the importance for beginning readers to know how to write all the letters of the alphabet fluently. Kindergarten students who can write all the letters fluently (40 letters per minute minimum) in alphabetical order can ALWAYS identify them fluently and make FAR better progress in reading than those who do not. I have included detailed instructions on the method I personally use to teach fluent handwriting. This is an important part of the Blend Phonics Pre-Primer method. The letters can be taught in ABC order or the order they are introduced in the program.

To calculate letter writing fluency, time the students writing the alphabet from a to z from memory and divided the 1560 by the time in seconds. Writing the alphabet daily is all it takes to achieve fluency.
Instruction for Teaching the Lowercase Manuscript Letters

General Rules:

All letters set on the base line.

Letters or parts of letters are of two sizes. They are either tall or short. Tall letters or tall parts reach to the line above but do not touch it. Short letters or short parts are half as high as tall letters.

Manuscript letters are made from the clock face or parts of it, and straight lines.
Teacher says, “The letter \( a \) is a short letter. Short letters fill the space halfway up to the line above. Start far enough in from the edge of the paper to make a clock face. Start at 2, go up around the clock to 2 and, without lifting the pencil, pull a line straight down to the baseline.”

“The letter \( b \) is a tall letter with a short part. It starts at the top with a line. Start just below the line above and pull the pencil down to the baseline and, without lifting the pencil, go back up almost half way to the line above and, going in the direction in which we write, make the short part starting from 10 and rounding to 8 on the clock. Note that the lips make a line when saying the /b/ sound.”

**Special note regarding all letters starting with a line:** Letters which start with a line sit close to the preceding letter. No part of a letter should ever be put before this beginning line. All beginning vertical or slanted letters start at the top. These are two important rules. Do not take the pencil off the page to complete any of the lowercase letters except in making the second part of \( k \), to put the crosses on \( f \), \( t \), and \( x \) and to put the dots on \( i \) and \( j \). Horizontal lines are always drawn in the direction of writing. Do not use the words left or right. Instead establish very firmly from the start the direction in which we write (and read). Many remedial children, both left- and right-handed, learned go make this line correctly, but before lifting the pencil they retrace it backwards. Make certain that no child does this, for it causes him or her to see the letters backwards, reversing the habit will help the student learn to write and read correctly.

“The Letter \( c \) is a short letter. It starts just far enough from the edge of the paper to make a clock face. Began at 2, go up and around the clock and stop at 4. It has two sounds /k/ and /s/.”

“The letter \( d \) is a short letter with a tall part. Start at 2 to make the short part, go up and around the clock to 2, go straight up to the line above but do not touch it, and pull a line straight down to the base line. This is all done without lifting the pencil. Tall parts are twice the height of short parts. Note that the lips form a circle when you make the /d/ sound.
“The letter \( e \) is a short letter. It starts with a straight line drawn from 9 to 3 through the clock. (Put 9 and 3 on the clock face to show this). Without lifting the pencil, continue \( up \) around the clock from 3 and stop at 4. Note that \( e \) is the only letter for which a line is made in reference to the clock face.

“\( f \) is a tall letter. It starts below the line above, at 2. Go \( up \) around the top to 10 without touching the top line, pull straight down to the base line. Lift the pencil to put on a tiny cross in the direction in which we write. The cross is placed just above the middle.”

The left–handed child’s normal direction in using his or her hand is away from the body (to the left). Explain this to the child. Then teach the child from the start that writing English requires that he or she makes all horizontal lines go in the direction in which we write. This training can save the student from developing dyslexic tendencies.

“\( g \) is a short letter. It starts at 2. Go \( up \) and around the clock to 2 and make a line down below the baseline so this part is the same size as the part above the line. Round it from 4 to 8. A short letter should be able to set beneath it without touching it.

“The letter \( h \) is a tall letter with a short part. It starts at the top with a line. Start just below the line above and pull a line down to the baseline and without lifting the pencil, go back up almost halfway to the line above, and going in the direction we write, make the short round part start from 10 to 2 and finish with a line down to the base.”
“The letter \( i \) is a short letter. It starts at the top. The dot is made last by setting the pencil above the letter and taking it off.”

“The letter \( j \) is a short letter. It goes below the baseline. Since it begins with a line it starts at the top. It goes down the same distance below the line as the short part goes above. The bottom part is rounded from 4 to 8. The dot is put on last.”

“The letter \( k \) is a tall letter and starts at the top. The second part is separate. It starts at the top, going in and out the same distance.

“The letter \( l \) is a tall line. It starts at the top and sits on the baseline.”

“The letter \( m \) is a short letter. It begins with a line. It starts at the top and is drawn straight down to the baseline. Retrace from the top and round it on the clock from 10 to 2, continue by making a straight line to the baseline, retrace to the top of the line, round again from 10 to 2 on the clock and finish with a straight line which ends at the baseline.”

“The letter \( n \) is a short letter.” Repeat the directions for making the first part of the \( m \).
“The letter o is a short letter. It starts at 2 on the clock, and goes up and around and closes at the 2. Make it sit on the line.”

“The letter p is a short letter. It starts with a line and therefore sits close to the letter in front of it. The line starts at the top and goes the same distance below the baseline as the short part goes above it. Retrace from this line to the top and round the second part from 10 to 8 on the clock.”

“The letter q is a short letter. It starts at 2 and goes up and around to 2. Without lifting the pencil make a straight line go below the baseline the same distance as the round part went above the line. Make a tiny flag in the direction we write.”

“The letter r is a short letter. It starts at the top. Make the short line go to the baseline, retrace to the top and round it from 10 to 2 on the clock.”

“The letter s is a short letter. It starts at 2 on the clock, goes up around to 10, slides across to 4 (which is below 2) and back around to 8 (which is below 10).”
“The letter t is a tall letter. It begin at the top. The cross is small and drawn just above the center, in the direction we write.” Make sure they do not retrace backwards!

“The letter u is a short letter. It starts with a line at the top. Bring the line almost to the baseline and round it from 8 to 4, continue up with a straight line, and retrace with a line to the base line.”

“The letter v is a short letter. It starts with a line and therefore it is started at the top and sits close to the letter in front. The first line slants in the direction in which we write. Finish without lifting the pencil.”

“The letter w is a short letter. The instructions are the same as for v, except repeated for the second half of the letter.”

“The letter x is a short letter. It starts with a line, which starts at the top, sits close to the letter in front and slants in the direction in which we write. Its cross starts at the top and goes through the middle of the letter.”

Note: Make sure all the children write each of the letters f, t and x before putting on their crosses.
The letter \( y \) is a short letter. Start it at the top with a straight line, then round the bottom from 8 to 4, go up with a straight line and straight down the same distance below the base line as the short part when above. The bottom part is rounded from 4 to 8 on the clock.” This form for the lowercase \( y \) is taught in anticipation for teaching cursive, instead of the two-line form.

“The letter \( z \) is a short letter. It starts with a line. Therefore it sits close to the preceding letter and the top line is made in the direction in which we write. Without taking the pencil off the paper make a slant to the base line at the point under the beginning of the top line, and finish with a line drawn in the directing in which we write.” The top and bottom lines should be parallel.

The teacher’s explanation of how to use the numbers on the clock is indicated above. These letters start at 2 on the clock and go up. They start just far enough out to make the circle.
These are the letters that begin with a line. The teacher is to explain how the clock is used for the round parts.

This is how the alphabet should look when the students write all the letters from a to z in lower case letters.

Romalda Spalding was correct when she wrote, “I have gone into great detail in what to say to children who are learning to write because it is necessary to be specific if handwriting is to become a correct and facile tool for learning. (Cursive or connected writing is easily learned from correct manuscript writing). If letters are made incorrectly, they are mentally pictured incorrectly also. This is a serious cause of failure in both reading and written spelling. It develops dyslexia or perceptual handicap.”

Spalding continues, “Have the letters written across the page to teach the spacing of both kinds of letters (Letters starting at 2 and with a line). Letters that begin with 2 on the clock start just far enough from the preceding letter to form the clock. Letters that begin with a line sit very close to the preceding letter.” I have the child say the letter name when practicing writing the alphabet for fluency.
Techniques for Teaching the Manuscript Uppercase Letters

All capital letters are tall. They almost fill the space between the baseline and the line above.

The rules for round lowercase letters also apply to the uppercase letters: C, G, O, Q, and S. Each starts at 2 on the clock and goes up. Since these are tall letters the round parts are somewhat elongated vertically. Have the students say the letter names as they write the letters to establish a strong associative link between letter shape, motor movement, and letter name. The cross on the Q starts at the top and slants in the direction we write.

In writing uppercase (capital) letters beginning with lines make the vertical line first, starting at the top. The horizontal lines of A, E, F, H, I, T are made in the direction in which we write. Where there is more than one horizontal line, make the top one first (E, F, I). The pencil is lifted before making the second line of A, B, D, E, F, H, I, K, M, N, P, R, T, and they also begin the top.

The uppercase letters V, W, and X are made just like the lowercase letters. First make the line which slants in the direction in which we write, starting at the top. V and W are made without lifting the pencil. The second line of X starts at the top. Y is the only uppercase letter that is finished below the baseline. Z is formed the same as its lowercase letter. The top line is drawn in the direct in which we write and it is finished without taking the pencil off the paper.
Blend Phonics Pre-Primer

Decoding Fluency Cards

SAMPLE FLASHCARDS

Note from Internet Publisher: Donald L. Potter
April 14, 2016

Permission is hereby granted for non-commercial reproduction for educational purposes. Just cut out the cards on cardstock. You can laminate them for hard classroom use.

These flashcards have the opposite goal from sight-word flashcards. We are interested in fast decoding, but not instant whole-word identification that can lead to the development of the dreaded guessing habit. Sight words such as Dolch or Fry are designed to teach instant word identification with reference to the shape of the word and not the individual letters. Our cards are designed to teach students to look at every letter and sound out the words with lightening speed. It may appear that the children are recognizing the words at sight without reference to the letters, but this is a deceptive illusion due to the brain modular design, which allows it to do parallel distributed processing.

The Steps can be used to group the cards in a card file. They should first be taught in order, but then practiced out of order as the students gain accuracy and speed. This discrimination practices is vital for the development of automatic. The cards can be used to play many fun games.
