Such speculations are not fruitless, since the real story on the late seventeenth century history of The New England Primer Enlarged almost certainly lies in the true explanation for the possession of those almost brand-new woodcuts in 1717 by Benjamin Harris’s former partner, John Allen, twenty-six years after the publication of the original edition which had probably been put out by both men in partnership in 1691.

It should be noted that three editions of The Holy Bible in Verse, presumed by the scholar, Welch, to have been printed by Allen, are still surviving: 1717, 1718, and 1724, as well as Allen’s successor’s 1729 version. All of these used the ten primer woodcuts from The New England Primer Enlarged. Copies of Harris’s work after he returned to Britain in 1695 survive, just as does the 1685 text entitled The Protestant Tutor. Yet we are asked to believe that untold editions of The New England Primer Enlarged were published both in America and in Great Britain since at least 1691, but that not a single copy of any of these many editions or even a single reference to them survived until the 1727 copy turned up which was printed by other publishers than either Allen or Harris. The New England Primer fable is, indeed, utterly ridiculous and it is a scandal that it is still promoted in academia.

On page 160, Welch called the pictures in the 1727 first surviving edition of The New England Primer Enlarged, which was not printed by either Allen or Harris, “crude copies... in the reverse.” If an uncut wood block is placed on top of an inked picture, and if the uncut block is then cut out according to that ink pattern, a block will be produced that is the reverse of the picture. Something like this must have been done to produce the crude 1727 alphabet cuts that were the reverse of the ten clear 1717 cuts. Most probably, the new cuts were made from a paper copy of the original New England Primer Enlarged of 1691. The 1727 edition of the primer, of course, has all of the alphabet woodcuts, of which Allen reproduced only ten in his unrelated 1717 edition of the Holy Bible In Verse. That certainly suggests the 1727 primer publishers were working from a paper copy of the original primer.

Welch stated Harris was in partnership with Allen in 1691 and 1692, citing Evans as his source. After 1692, Allen might still, however, have kept a paper copy of the original printing to which Harris had referred in 1691, even though its set-up type would presumably have long since been recycled for more salable publications. Yet the original cuts prepared for that primer should still have been handily available for newer materials, and should have been either in Harris’s or Allen’s possession. Nevertheless, only ten of those original alphabet woodcuts apparently survived in almost brand-new condition for Allen’s 1717 copy of The Holy Bible in Verse. That certainly suggests that Allen did not have the other alphabet woodcuts. Valuable woodcuts were recycled by printers for decades all through the eighteenth century, and Welch recorded that these particular woodcuts were used for years after Allen’s death, when they passed into the possession of Thomas Fleet. Allen could probably have found many places in The Holy
Bible in Verse that he could have used the rest of those alphabet woodcuts, if he still had possession of more than ten of them in 1717.

If Harris and Allen did split the original cuts between them when terminating their partnership in 1692, neither could print a new edition without making up the missing half of the cuts. That could very well explain the great gap on any traces whatsoever of The New England Primer Enlarged between 1691 and 1727, when a copy finally appeared after Allen’s death, which used poor copies of the original cuts. It is highly likely that The New England Primer Enlarged was never reprinted again until after Allen’s death, which is presumed to have been in 1724. Allen’s death resulted in the dissolution of his printing office and the dispersion of his materials, including the primer woodcuts and, presumably, paper copies of his earlier editions.

Therefore, it was only after the death of Allen, Benjamin Harris’s former partner, in 1724 that a copy of The New England Primer Improved finally turned up. Significantly, it was printed by other Boston publishers, S. Kneeland and T. Green, in 1727. Yet the new publishers clearly did not have those original ten “cuts” used in the 1717 Allen book, which had probably appeared in the 1691 primer, since Thomas Fleet is known to have had them and to have used them on other books for many years, according to Welch. Did Kneeland and Green acquire a paper copy of the New England Primer materials in some arrangement with Allen’s estate after 1724? After all, Welch said Thomas Fleet only got “some of Allen’s business.” Therefore, others must have gotten the rest of Allen’s business. Not having the originals of the wood block cuts, however, Kneeland and Green would have had to improvise, thereby producing the “crude copies” in “reverse” that appear on the earliest surviving copy of The New England Primer Enlarged, which is their 1727 edition.

When Harris returned to England in 1695 after about ten years in America, he continued as a printer for many years but almost certainly never published a New England Primer Enlarged. He did publish his speller using the title, The Protestant Tutor, but it was different in its content from the 1685 text. The fact that Benjamin Harris probably never published a New England Primer Enlarged in England certainly suggests his huge disinterest, after he returned to England, in the American material which he had “enlarged.” Harris’s American material presumably would have been unprofitable in England.

Evans lists the American publications by Harris, and Alston lists the spellers printed by Harris after he returned to England. In connection with this entry, see also the 1683, 1691 and 1727 entries on The New England Primer.

1683 The New England Primer (first existing reference) In Nila Banton Smith’s American Reading Instruction, 1934, International Reading Association, Newark, Delaware, 1965, pages 18-25, she discussed The New England Primer and cited Heartman’s 1922 checklist, which she referred to only as: “Heartman, Charles F. A pamphlet on The New England Primer, Metuchen, N. J., 1922,” failing to give its proper title or to refer to its three editions of 1916, 1922 and 1934. Heartman had said of The New England Primer:

“...the first edition of this book was probably printed in England. In the Stationer’s Register in London under the date of October 5, 1683, a certain John Gaine entered a title in accordance with the statute requiring the registration of all books for sale. This entry reads:

“Mr. John Gaine
Eodem Die et Anno. Entred then for his Book or coppy Entituled the New England Primer or Milk for Babes with Wm. Scoresby.
Jno. Gaine”
An important New York printer in the eighteenth century was Hugh Gaine, possibly a relative. Printing seems to have been a business pursued by families at that time, since so many family names recur as printers, even “Daye” appearing in England in the late sixteenth century. However, all that this particular entry establishes is that two men in England named John Gaine and William Scoresby were selling a book in England in the year 1683 called “New England Primer or Milk for Babes.” There is no indication that they either wrote it or printed it. Furthermore, it would have been very odd indeed for someone in England to put the title “New England” on his own work. The copies they were registering for sale in England might very well have come over by ship from Boston, since copies of the Indian texts printed by the Pilgrims are known to have done so even earlier. Furthermore, “Milk for Babes” was a term for catechism - and so was “primer.” Of course, the two men may also have reprinted a New England original for the English market. Therefore, instead of this entry’s suggesting an English origin, it instead tends to confirm the American origin of the original New England Primer and to suggest strongly that it was only a simple catechism, or “Milk for Babes.”

Reviewing Evans’ records of books published by the Puritans in New England in the seventeenth century suggests that the original New England Primer was only one of the numerous catechisms printed before 1683 by the Puritans, whose titles were shown by Evans only as “A Catechism.”

It was only in 1683 that the title, New England Primer, showed up in England, and that is the only reference to a New England Primer before the enigmatic advertisement by Harris in 1691, claiming he had “enlarged” it. The third occurrence is the still-existing 1727 copy of The New England Primer Enlarged now in the New York Public Library.

John Eliot’s A Primer or Catechism, in the Massachusetts Indian Language, printed in 1654 by Samuel Green who had taken over from Stephen Day, had been preceded by the printing of three catechisms in English in Cambridge, copies of which no longer exist. One was A Catechism by Edward Norris printed by Stephen Day in 1648. One was by Richard Mathew, A Catechism..., printed by Samuel Green in 1650. One was A Catechism by Samuel Danforth, printed by Samuel Green in 1651. Other catechisms appeared after the Indian primer. Presumably, they were all in accord with the Westminster Assembly’s catechism of 1648 in its Shorter Version, the one in general use with the Presbyterians and Puritans and the one which is the principal part of The New England Primer Enlarged. Therefore, catechisms and a spelling book had been printed in Cambridge before the first “primer” in 1654, which was in the Indian language and called not just a catechism, but A Primer or Catechism. The use of the word, “or,” however, meant the two words were synonymous in 1654 Cambridge. (The same “primer or catechism” wording appeared on the Church of England material.) That the words “primer” and “catechism” were synonymous is suggested further by the fact the Primer or Catechism for the Indians was preceded by the three catechisms for the settlers themselves, and they certainly would have provided as complete catechism (“primer”) material for their own children as they provided for the Indians. The large numbers printed in 1654 for the Indians (500 or a thousand) suggest that large numbers had also previously been printed of the three English catechisms for the use of the children of the settlers. Possibly relatively large numbers of the speller had been printed.

In 1662, Evans’ entry No. 70 shows that another fifteen hundred copies were printed of John Eliot’s A Primer or Catechism in the Massachusetts Indian Language, and it was reprinted again in 1669. Evans noted on page 12 that John Small reproduced the 1669 edition of Eliot’s Indian primer at Edinburgh in 1880, so that survived. Actually, a John Small reproduction under the date of 1877 is in the New York Public Library. It shows that Eliot preceded his catechism not only with the alphabet in capital and small letters, but with elaborate syllabary materials. It was obviously Eliot’s intent to teach the Indians to read their language by “sound.”
If the Puritans printed 2,000 to 2,500 copies of the Primer or Catechism in the Indian language, they obviously were attempting and possibly succeeding in teaching at least 2,000 or 2,500 Indians to read their own language, obviously with the fe, fi, fo, fum sound-method syllabary. Logically, the syllabary (probably plus lists of the word spelling patterns necessary to read English) must also have been included in the three earlier Puritan English-language catechisms since they almost certainly had been used as models for the Indian-language version. The Puritans are recorded to have imported horn books, with which their children would have initially learned to read. That the Puritan catechisms also included syllabaries (and word lists like those on the New England Primer Enlarged) appears particularly likely since the catechism titles appear to be synonymous in meaning to the title for the Indian text.

These seventeenth century Puritan catechisms, and the fe, fi, fum syllabaries in the Indian primer-catechism, are the unacknowledged roots of the New England Primer Enlarged, the first surviving copy of which was printed in 1727 and which included the Westminster Assembly’s Shorter Catechism. The only earlier record of a New England Primer Enlarged is Benjamin Harris’s advertisement in 1691. The 1691 material advertised by Harris appears largely to have been an amalgamation of the “Mr. Rogers” material from The Protestant Tutor of 1685 which he is presumed to have written and of the 1683 New England Primer sold in England. That 1683 text was presumably only a version of the Westminster Shorter Catechism, since the words “primer” and “catechism” were synonymous at the time. The roots of the New England Primer are discussed further in the body of this history. See also in this index the 1679 entry for The Protestant Tutor and the 1691 and 1727 entries for The New England Primer Enlarged.

1691 The New England Primer Enlarged, by Benjamin Harris. (Evans recorded under No. 573 the following concerning the 1691 advertisement for The New England Primer Enlarged of which no copy has ever been located:

Evans obviously took this information from Harris’s edition of the 1691 almanac, News From The Stars, written by Henry Newman and published at the beginning of 1691, which almanac had been printed for Harris by “R. Pierce.” Yet the actual advertisement, reproduced by Nila Banton Smith on page 19 of her book, presumably from the surviving copy of the almanac presently held by the Massachusetts Historical Society states nothing about the printer, reading merely:

“Advertisement.

“There is now in the Press, and will suddenly be extant, a Second Impression of The New England Primer enlarged, to which is added, more Directions for Spelling: the Prayer of K. Edward the 6th. and Verses made by Mr. Rogers the Martyr, left as a legacy to his Children.

“Sold by Benjamin Harris, at the London Coffee House.”

Allen still had about half of the woodcuts from the primer in 1717, twenty-six years later, as discussed elsewhere. It appears highly likely that there was a conflict between Allen and Harris concerning The New England Primer Enlarged, and that the conflict resulted in the Primer’s remaining unpublished for many years until after Allen’s death in 1724.

It was the Westminster Assembly’s Shorter Catechism which gave the New England Primer Enlarged its importance after 1727. It is therefore possible that the unlocatable New England Primer which Harris
“enlarged” may well have been only a catechism itself. Harris would have felt no need to mention the word, “catechism,” in his 1691 advertisement, since the words “catechism” and “primer” had become synonymous in New England, as in the “Primer or Catechism” for the Indians. Therefore, could that original “New England Primer” to which Harris referred, presumably the 1683 London entry mentioned above, have itself been based on one of those earlier New England catechisms listed by Evans? Evans did not apparently show complete titles for those catechisms, and probably did not have them. One of these earlier and unlocatable catechisms might have also included the words, “New England Primer” in its title, just as the Indian work included the word, “primer,” in its title.

It clearly was not Mr. Rogers’ verses from The Protestant Tutor, of which Harris was the probable author, and the woodcut alphabet, which was the source of the fame of The New England Primer Enlarged, even though it is largely that material which is emphasized today in references to the primer. The real source of the primer’s fame was the material in the Shorter Catechism. Therefore, the real roots of that late eighteenth-century publishing wonder, The New England Primer Enlarged, very possibly lay in the seventeenth century “catechisms” that were published by and for the Puritans, and not in what was probably Harris’s material.

Evans listed the following publications which may shed some light on the relationships:

“579 - Westminster Assembly of Divines. The Shorter Catechism.... Printed by B. Harris, and J. Allen....1691....”

“587 - Bird, Benjamin - The Jacobites Catechism.... London.... Reprinted at Boston for Benjamin Harris....1692”

The first one of these “catechisms” printed jointly in 1691 by Harris and Allen might very well be part of the first edition of The New England Primer Enlarged, since that “primer” is primarily only a catechism, and used The Shorter Catechism. Evans had shown under No. 387 The Protestant Tutor, by “Benjamin Keach,” printed by Samuel Green in 1685, and added, “Benjamin Harris, the printer of the first London edition of 1679, is also said to be the author.” Yet, as Alston recorded, Harris’s 1679 and 1685 books were the same only in their titles. Nevertheless, Harris is listed as the probable author of the 1685 book, a portion of which appeared in The New England Primer Enlarged. That portion, Mr. Rogers’ Verses, was described by Harris in his 1691 advertisement. See the 1679, 1683, and 1727 entries for a discussion on all of these materials.

1697 An Epitome of English Orthography. Published by B. Green, Boston. (Alston, who said a copy of this spelling book is extant at the American Antiquarian Society at Worcester.)

1698 A New Primmer or Methodical Directions to Attain the True Spelling, Reading and Writing of English. F. D. Pastorius, Printed by Wm. Bradford, N. Y. Sold by the Author in Pennsilvania. (Alston. L. of C. copy. Inept attempt to teach by sound. Code 5.)

1702 A Primmer and Catechism for Children: Or A Plain and Easie Way for Children to Learn to Spell and Read. Instructions for Right Spelling, and Plain Directions for Reading and Writing True English, George Fox and Ellis Hooke, Published by Reynier Jansen, Philadelphia (Quaker text. According to Alston, the English original using this title was published in 1670, but it omitted the last half of the title, from the words, “Instructions for...” N.Y.P.L. 1743 copy was published in Boston by Rogers and Fowle, Code 7. Although no edition of the New England Primer Enlarged survives from before 1727, actual copies of George Fox’s and Ellis Hooke’s Quaker materials from long before that date have survived. The 1670 London edition of Fox’s and Hooke’s A primmer and catechism for children; or a plain and easie way for children to learn to spell and read..., a shorter title than the 1702 copy, is still in
existence as are other seventeenth century English editions of the Fox materials. This American edition printed in Philadelphia in 1702 survives. Even Benjamin Franklin is on record for having printed a Fox speller in Philadelphia in 1737 which survives, and a 1726 copy survives which was printed in Dublin, Ireland.

Heartman showed the following under items 141 and 142:

“141

“Evans No. 9802 says: ‘Over thirty-five thousand copies of this Primer were printed between the years 1749 and 1765.’ No proof is offered for the abbreviated title’s existence. It may refer to a New England Primer.

“142

“Evans No. 10147.

“Between March, 1765 and February, 1766 two thousand Primers were printed.”

Franklin is on record for having printed a Fox speller in 1737 whose title began, “A Primer....” Evans obviously referred to particular 1764 and 1765 copies printed by Franklin whose titles also began with the words, “A Primer....” The numbers printed were sharply dropping off from the 1749-1765 period to the 1765-1766 period. Yet the late 1760’s was the exact time when the known copies of the New England Primer Enlarged begin to increase. Both of these facts seem to preclude the possibility that Franklin was printing The New England Primer on these entries. The title of the New England text began with “The,” and not “A” like the Fox speller. Furthermore, the numbers of surviving New England Primers began sharply to increase in the 1765-1766 period, while the numbers Evans credited to Franklin of “A Primer” sharply decreased. Yet it is precisely in that period, in 1764, that Franklin is first on record for having printed a Puritan New England Primer. The Franklin 1764 copy of The New England Primer Enlarged is only the sixth copy on record that was printed outside Boston, and until the 1750’s, no copies are known to have been printed outside Boston. It appears obvious that the great numbers of copies Evans credits to Franklin in Pennsylvania for “A Primer” refer to the Fox speller written for Quakers. After all, it would have had an excellent market in the Philadelphia area in those early years, since that is exactly where the Quakers were most numerous at that time. Yet it seems likely that the dourness of The New England Primer would have had little appeal to Quakers.

Alston’s records on the Fox speller showed the earliest American edition in 1702, but he showed other American editions of the Fox speller for the years 1737, 1743, and 1769. See the 1779 entry below for “A Primer” which may refer to a Fox speller.)

1704 England’s Perfect Schoolmaster, or Most Plain and Easie Rules for Writing and Spelling True English, Nathaniel Strong, Published by B. Green for Nicholas Boone, Boston. (Alston. Harvard has a copy. Its first edition came out in London in 1674.)

1722 The Art of Reading and Writing English, or the First Principles and Rules of Pronouncing Our Mother-tongue, by Reverend Isaac Watts (1674-1748). A copy of this 1722 London edition is presently in the New York Public Library. Alston lists multiple surviving copies of the original 1721 edition at other locations, and of the later editions as well. It should be noted that this relatively unknown speller in comparison to the New England Primer Enlarged has many surviving copies dating back to its original publication date of 1721, and yet the earliest surviving copy of the New England Primer Enlarged is dated to 1727 (which copy is also at the New York Public Library). Therefore, it appears self-evident that the New England Primer Enlarged was almost unknown until well after 1727. However, very many copies of the New England Primer Enlarged exist with publication dates after 1770, and in numbers that far exceeded the surviving copies of Watts’ speller of any date. That confirms that the New England Primer Enlarged truly was a publishing wonder, but only after about 1770.

Watts’ speller was popular for many years. Among later editions, the New York Public Library card catalog lists a 1770 edition under a different title, Compleat Spelling Book. However, an edition was published the very next year, 1771, by W. & T. Bradford, Philadelphia, under the correct title.)

1727 New England Primer Enlarged, For the more easy attaining the true reading of English to which is added the Assembly of Divines’ Catechism. Boston: Printed by S. Kneeland & T. Green, Sold by the Booksellers. (This copy is in the New York Public Library and is the earliest one in existence. The only earlier reference to the New England Primer Enlarged is the advertisement by Benjamin Harris in 1691, and the only reference to a New England Primer of any sort is the English entry shown previously under 1683. The 1727 New York Library copy has the following contents, listed below by pages. No mention is made of the Prayer of K. Edward the 6th which was cited in Harris’s 1691 advertisement, but it is possible it was on the two pages of the 1727 copy which were mutilated and which are unreadable. The actual pages are unnumbered:

Page 1: Title page. Page 2: Quotations from the Bible. Page 3: Lower case alphabet and vowels, AEIOUY aeiouy. Consonants. Double letters. Italic letters. Italic double letters. Page 4: The Great English Letters. The Small English Letters. [These are in the old English black type.] Great Letters. [These are standard capital letters.] Basic Syllables for Children [Begins with the closed syllabary, ab, eb, ib, ob, ub, to al, el, il, ol, ul.] Page 5: Closed syllabary completed to ax, ex, ix, ox, ux, and then the open syllabary, ba, be, bi, bo, bu, to sa, se, si, so, su. Page 6: End of open syllabary with ta, te, ti, to, tu. Both the open and the closed had used fourteen consonants. The closed syllabary had contained x but omitted h, and the open contained h but omitted x. Neither used the consonants j, q, v, w, or z. The rest of page 6 was “Words of One Syllable,” in ABC order, but without phonic analogies. “Hold” was out of ABC order, appearing in the “b” list, which was probably a misprint from the original 1691 edition, where it was probably bold. The words were arranged in sets of five, going across the page: first the “a” words, then the “b,” “c,” “d” and “f.” There should have been a white margin under the “a” to “f” columns before beginning the next sets going across the page. However, the “g” words appeared directly under the “a” words with no break. That is probably also a printer’s error from the original 1691 copy, in which there was probably a white margin between the first sets of five words (a, b, c, d, f groups) and the next sets of five words beginning with the “g” group. Harris had written a speller in 1679, and undoubtedly would have been familiar with printing clearly separated groups of words according to their function. Yet, with the misprint, “hold” for “bold,” it is obvious Green and Kneeland were not familiar with spelling book formats. The first column contained the “a” words: Are air, add all ape. Going across came the second column, which began “be best bed hold bad.” The next column across began “child,” and the last “face.”

Page 7 had Words of Two Syllables. Ab-sent, and across from it the word was printed without hyphens, Absent. This pattern, showing the word first with hyphens, and then without hyphens, was followed for the rest of the words. The second word was Bold-ly, and across from it Boldly, further suggesting that the word “hold” out of alphabetical order on page 6 was a misprint for “bold.” Then came
Words of Three Syllables. A-ba-sing, and across from it, unhyphenated, Abasing. The list continued down to Ka-len-der, and across from it was Kalender. Page 8 had words of Four Syllables, Ac-com-pa-ny, and across from it Accompany, and so on. Then came Words of Five Syllables. Ad-mi-ra-ti-on, and printed across as on other pages the word without hyphens.

Page 9 started the famous woodcut picture alphabet in large letters going down the page. First came capital A, followed by the woodcut, and then the sentence “In Adam’s fall we sinned all.” Page 9 covered letters A to G of the woodcut alphabet, and the rest of the woodcut alphabet was on pages 10, 11 and 12.

Page 13 read, “Now the child being entred (sic) in his Letters and Spelling let him learn these and such like Sentences by Heart, whereby he will be both instructed in his Duty and encouraged in his Learning. The Dutiful Child’s Promises. I will fear God and honor the King. I will honor my father and mother. I will obey my superiors. I will submit to my elders. I will love my friends. I will hate no man. I will forgive my enemies and pray to God for them. I will as much in me lies keep all God’s holy commandments.

Page 14: “I will learn my catechism. I will keep the Lord’s Day holy. I will reverence God’s Sanctuary for our God is a consuming Fire.” This was followed by “Alphabet of Letters for Youth,” catechetical in intent. Going down on this page was A to G. Next to A was, “A wise son makes a glad father but a foolish son is the heaviness of his mother.” Page 15 had such sayings for letters H to S. Page 16 continued the aphorism alphabet to Z, followed by “Choice Sentences.” “1. Praying will make thee leave sinning, or sinning will make thee leave praying.” This was followed by similar sentences numbered 2 and 3. Page 17 had the Lord’s Prayer and part of The Creed. Page 18 had The Creed continued and The Ten Commandments. Pages 19 and 20 were almost totally missing. Page 21 had more precepts, followed by beginning to name the books of the Bible. Pages 22 and the top of page 23 continued naming the books of the Bible. The rest of page 23 had, “The numeral letters and figures which serve for the ready finding of any chapter... and verse in the Bible,” and this numeral section continued through page 27.

From page 28 through page 35 were “The Verses Made by Mr. Rogers, the Martyr,” which are presumed to have been written by Benjamin Harris about 1685.

On page 36 began The Shorter Catechism Agreed Upon by the Divines at Westminster, and this copy ended on page 74, with the rest of the pages obviously missing. The fact that only the catechism part is missing in this 1727 copy, while the child’s “spelling” section remains in excellent condition, certainly suggests that the copy was used as a catechism, and not to teach beginning reading. The beginning of spellers were often tattered or missing on pre-1826 copies, indicating that the beginning part had heavy use, Yet the pattern of wear on this 1727 book confirms it was used as a catechism, not as a beginning reading book.

It should be noted that the catechism totaled more than 38 pages, and 12 pages were given to numerals and figures meant to help in reading the Bible. The title page and scripture quotations immediately after it accounted for two more pages. That left only 22 pages covering what is commonly thought of as the New England Primer content, out of more than 74 pages in this 1727 book. The Shorter Catechism was overwhelmingly the most important section.

About 1900, Ginn & Company of Boston reproduced a copy of The New England Primer Enlarged which they dated to the years between 1785 and 1790, which copy was owned by G. A. Plimpton of New York. From the fact that Ginn advertised its early 1890’s Cyr readers at the end of the reproduction, that reproduction probably came out about 1900. Yet the 1785-1790 primer they reproduced shows little resemblance to the 1727 New England Primer Improved, except for the inclusion of certain sections like
the woodcut alphabet and the Verses of Mr. Rogers, and the fact that it ends with the Shorter Catechism. What is most noteworthy about the purported 1785-1790 edition is the omission of much of the 1727 material and the inclusion of much later material from John Newbery’s The Royal Primer of about 1750, and the inclusion of later material by Reverend Watts, neither of which could have been in the original New England Primer Enlarged of 1691. However, it obviously was only the last item, the catechism, that really mattered to the vast numbers of buyers of The New England Primer after 1770.

“The first edition of the present compilation was printed in the year 1823, in which the publisher had the use of several ancient as well as modern editions.... Out of the whole, however, the compiler collected about every article that was contained in the New England Primer, as printed so long ago as the year 1770, when the editions were in their original purity, and arranged the matter in the order in which it was then placed, and in this new edition, [1841] several appropriate hymns are added....”

This 1841 edition follows more closely the 1727 edition, but also has many omissions and some additions. However, like the Ginn copy, the “spelling” material at its beginning differs from that in the 1727 edition, using different words and a more complete syllabary. Yet the woodcut alphabet remains much the same, showing the usual 24 letters, and so do the Verses of Mr. Rogers remain the same.

Benjamin Harris’s probable “enlargements,” the woodcut alphabet and the Verses of Mr. Rogers, along with The Shorter Catechism, seemed most immune to change in editions of The New England Primer Enlarged over the years. That is why it is very amusing that Ginn & Company in Boston about 1900 apparently felt so embarrassed by one of Benjamin Harris’s verses that they felt they had to censor it, very much in the way that the Boston fathers had censored Harris’s libelous 1690 newspaper over two hundred years before. Most of the Verses attributed to Mr. Rogers, who Harris said had been a martyr during Queen Mary’s reign, are only religious and ethical advice from a father to his children. But the following verse appears in the 1886 Concord edition, while at that exact point in the Ginn edition about 1900 there is a blank white space in the middle of the page. Something had obviously been censored on that page and removed in the Ginn reprint about 1900. It was obviously the following, which appeared at that exact point in the 1886 edition. It is a verse which certainly has the clear mark of Benjamin Harris on it:

“Abhor that arrant whore of Rome,
And all her blasphemies;
And drink not of her cursed cup -
Obey not her decrees.”

The demands of scholarship and academic niceties notwithstanding, the very large textbook publisher, Ginn & Company of Boston, obviously considered that shockingly bigoted verse of Harris’s too embarrassing to reprint.

As discussed at length in this text, surviving copies indicate The New England Primer Enlarged was in little or no use before 1727 and in only light use in the 1730’s and 1740’s, since only three copies survive from each of those decades, all printed in Boston. Furthermore, it was obviously not normally used to teach beginning reading. As has been discussed at length in this history, from the time of Henry VIII, religious “primers” included the alphabet and syllabary, but were clearly meant to follow the ABC books which initially taught reading. An edict of Henry VIII specifically referred to that sequence: first the approved ABC book, and only then the approved “primer.” Because of the reading difficulties that
had resulted from switching the teaching of beginning reading from Latin to English, it apparently had become necessary to continue ABC drill in the second book, the primer. In the New England Primer Enlarged, after some drill on alphabets, the syllabary and lists of words, this appeared: “Now the child being entred (sic) in his Letters and Spelling let him learn these and such like Sentences by Heart, whereby he will be both instructed in his Duty and encouraged in his Learning.” The catechetical purpose is obvious, from that statement and from the fact that the book contained the Lord’s Prayer, the Creed, the catechism and other religious materials. The New England Primer Enlarged should not be considered a beginning reading book, but should be defined as catechetical material. Surviving copies indicate it began to be widely used in the 1760’s, but its period of massive use was after 1770 until about 1820, as shown by Heartman’s checklist of surviving copies, and the most important constant in almost all of these varying copies was the Westminster Shorter Catechism.

See also the 1679 entry above on The Protestant Tutor by Benjamin Harris, the 1683 entry on a reference to a New England Primer in England, and the 1691 entry on The New England Primer Enlarged.

1731 The Youth’s Instructor in the English Tongue, or the Art of Spelling Improved.... Collected from Dixon, Bailey, Watts, Owen and Strong. Anonymous. Published in Boston, 1731. (Alston stated, “A plagiarism from Dixon’s spelling-book.” Concerning all the authors credited (though Alston referred to the book elsewhere as an “outright plagiarism” from Dixon), see elsewhere in this appendix the 1704 entry on Strong, the 1722 entry on Watts, the 1750 entry on Dixon, and the 1753 entry on Owen. Concerning Bailey whose speller is not listed in this appendix, he was the author of a famous dictionary published in 1721, long before Samuel Johnson’s dictionary. Bailey’s later spelling book, Introduction to the English Tongue, Being a Spelling Book.... is listed by Alston as first published in 1726, but it had only one later edition, so it was apparently not very popular. Concerning this 1731 anonymous Boston plagiarism of Dixon’s speller, between 1731 and 1771 Alston listed fourteen Boston editions. Note the apparent expectation on the part of the Boston publisher that all the authors he listed as sources for his speller would be familiar to his American clientele in 1731. That suggests that their English spelling books must have been well known in America. The public undoubtedly expected any American imitation to be cheaper than such imports. See 1757 and 1770 entries on this title.)

1736 The Second Book for Children, or the Compleat Schoolmaster. In Two Parts. I. Easie and Plain Directions for Spelling, Reading, and Writing True English. Anonymous. Published by J. Draper for D. Henchman, Boston. (Also 1746 and 1750. Alston. First London edition 1704. The first “book” was probably the hornbook.)

1738 An ABC and Spelling Book to be Used by All Religions Without Reasonable Objection, printed by Christopher Sower (Saur) in Pennsylvania. Listed by John Clyde Oswald in his Printing in the Americas. Oswald stated on page 196 that Christopher Sower (Saur) was born in Lauterburg, Germany, in 1694, came to America in 1724 and worked successively as a tailor, farmer, and maker of stoves. Sower then entered the printing business by printing material for the Dunkers (Baptists) on a printing press they had imported. The 1738 text was his first book. The “Dock” ABC mentioned by Klinefelter was in German, so this must have been a different and earlier text in English. That is because Oswald stated

“The first production of the press under Sower’s direction, issued in 1738, was entitled, ‘An ABC and Spelling Book to be Used by All Religions without Exception.’ That same year he published an almanac in German....”

Oswald certainly implied the 1738 ABC was in English, so it is unlikely that it was written by the German, Dock. As mentioned, German-American texts are not included in this bibliography as the
Klinefelter history covers them so very well. For further information dating from the eighteenth century on the Sower printers who were in business for so many years, see the entries for Sower in Appendix C.

1744 The Child’s New Play-Thing; Being a Spelling Book Intended To make the Learning to Read a Diversion instead of a Task. Consisting of Scripture-Histories, Fables, Stories, Moral and Religious Precepts, Proverbs, Songs, Riddles, Dialogues, &c. The Whole adapted to the Capacities of Children, and Divided into Lessons of one, two, three, and four Syllables. To which is added Three Dialogues; 1. Shewing how a little Boy shall make every body love him. 2. How a little Boy shall grow wiser than the rest of his Schoolfellows. 3. How a little Boy shall become a great Man. Designed for the Use of Schools, or for children before they go to School.

(Published by Joseph Edwards, Boston. The wording of the title was taken from the fourth Cornhill (Boston) edition of J. Edwards in 1750, which was the first edition Welch cited in his bibliography. Alston cited the 1744 Edwards edition, which presumably would have used the same wording as the 1750 Edwards edition. Alston also listed 1750 Boston, 1757 Philadelphia, 1761 Wilmington and 1765 Philadelphia editions. The 1765 Philadelphia edition was by W. Dunlap. However, the Library of Congress Rare Book Room has a March 3, 1763, edition by W. Dunlap not listed by Alston, which rates a Code 7, and which carries on the inside cover, in ink, a girl’s name (Mary Lilla?) and the date, 1772. W. Dunlap is possibly the predecessor to John Dunlap of Philadelphia, entered below under 1769. Welch also quoted the title of the 1763 Philadelphia edition. It differed slightly from the Boston edition and increased the number of spelling lessons to include words up to seven syllables. In all, Alston listed ten editions, of which five are American. With the Library of Congress 1763 copy, that makes eleven editions for which there is documentation. Alston listed the first London edition by T. Cooper in 1742.

Note that this playful and supposedly uninfluential “speller” had four editions in blue-nose Boston by 1750, the first of which was published in Boston only two years after the initial London edition of 1742. Yet the supposedly massively influential New England Primer which was supposedly massively used to teach children beginning reading ever since 1691 in America, and even in Great Britain, has only seven surviving copies before 1750, with the first surviving copy published in 1727.

On pages 44 and following of From Primer to Pleasure in Reading, Mary F. Thwaite made the following remarks concerning this and other children’s books of the period:

“A greater influence on Newbery’s early publications for children than either Defoe or Swift was undoubtedly John Locke and his ideas about education.... It was probably due largely to Locke’s suggestions, that the task of reading should be made interesting to children by letting them play their way to learning, that a new kind of book had already appeared on the market when Newbery arrived in the metropolis.”

This observation is only partly true. Locke had himself cited the already existing use of dice to teach children the alphabet and syllables, a playful practice used in France since at least the mid-seventeenth century, as discussed elsewhere, and actually in use since ancient times. Cited earlier was the following quotation by Davies from page 71 of his book. The quotation referred to early Christian concern for the education of women, demonstrated by St. Jerome’s matter-of-fact correspondence with a Christian woman concerning teaching reading to her little girl. On page 71 of Davies’ book, he wrote:

“About teaching methods themselves, little can be found in this early period apart from some snatches of practical advice offered by St. Jerome in his letter to Pacatula. Before she could read, he advised, Pacatula would have to learn her alphabet, spelling and grammar and, to help her with the alphabet, he said in another letter to Laeta (Ed.: her mother), she should be given a set of ivory or boxwood letters.... From Quintilian’s precepts it showed a difference only in minor
St. Jerome proposed that ‘little gifts’ (munusculis) should be distributed as prizes for successful spelling, and in the letter to Pacatula he varied the reward by giving a honey-cake (crustula mulsi) or something like a flower, a toy or a pretty doll.... This too he borrowed from the ancients."

Since children’s toys are known to have existed from classical times, and almost certainly from before that time, and since playful approaches to learning are on record since classical times, it is certainly unreasonable to attribute the use of a playful approach in the teaching of beginning reading primarily to the advice of John Locke at the end of the seventeenth century! This is just another instance of the ridiculous “progress” fallacy: “old” is almost always supposed to be bad, but “new” is almost always supposed to be better, because of the powerful effect of that totally imaginary force for cultural good, “progress.” Instead, what seemed to be happening was that, as the grim Puritan influence of the previous century or so began to fade, which influence had so wrongly equated faith with gloom instead of joy, and which had implicitly branded pleasure as wrongful, normal human warmth was beginning to return. It was returning in more areas than in children’s spelling books in the English-speaking world.

Thwaite continued:

“...In the reign of Queen Anne the breakaway from didacticism has already been noted in the form of a little reading and spelling book of twelve pages - A Little Book for Little Children, By ‘T. W.’ (ca. 1702). Very different from the Puritan volume with the same title, by the minister, Thomas White, this is a light-hearted composition, proffering alphabet, spelling lesson, rhymes and riddles in happy style. The beginning of the alphabet rhyme ‘A was an Archer and shot at a frog’... makes its first appearance here in a children’s book... Whether Newbery came across this impressive trifle is uncertain. It is much more likely that he knew the work of Thomas Boreman (who) launched a number of tiny books for boys and girls, between 1740 and 1743, humorously dubbing them ‘Gigantick Histories’... being only two inches high... addressed to ‘Little Masters and Misses.’ ‘During the infant age, ever busy and always inquiring’, writes Boreman in one of his prefaces, ‘there is no fixing the attention of the mind but by amusing it’.... Boreman’s small volumes are mainly concerned with London and its history and description....

“About the same date another publisher was showing similar ingenuity in providing attractive forerunners of Newbery. This was T. Cooper at ‘The Globe’ in Paternoster Row. In 1742 he advertised The Child’s New Play-thing, a little work ‘to make learning to read a Diversion instead of a Task’.... Included were scripture-histories, fables, songs, proverbs, moral precepts, and most notable, stories - shortened versions of the long established favourites, St. George, Fortunatus, Guy of Warwick, and Reynard the Fox....

“St. George and his companions might give this Play-thing a flourish, but after all it was mainly a lesson book. There was more originality in another little work which Mrs. Cooper [T. Cooper’s widow] advertised in the London Evening Post for 22nd-24th March 1744, only three months before Newbery was to set a new standard in beguiling advertisements with his notice for A Little Pretty Pocket-Book [Ed.: his first child’s book]. Mrs. Cooper’s announcement ran -

“‘This Day is published, Price 6d, bound, Tommy Thumb’s Song Book for all little Masters and Misses... by Nurse Lovechild.’

“It heralded the first nursery rhyme book for children, and so marked a red letter day indeed in the history of their literature... the verses... are chiefly the familiar favourites of infancy - ‘Hickory, Dickory, Dock’, ‘Little Tommy Tucker’, ‘Baa, Baa, Black Sheep’ and similar ditties.”
Thwaite pointed out that the latter book was primarily meant for nursemaids to read to children. Citing Peter and Iona Opie’s The Oxford Dictionary of Nursery Rhymes, Thwaite said such rhymes:

“...had long been sung or chanted to babies, as Nurse Lovechild intended, before they found their way into print. From this time onwards, after Tommy Thumb’s debut, they became a regular feature of publishing for children.”

That establishes, of course, that “entertainment” in verses for very little children was ages-old. It simply had not found its way into print, as least so far as Thwaite’s references indicated. Also ages-old were the stories which appealed to older children and which were everywhere in the chapbooks. Those stories had also been in print before the arrival of the chapbooks. They appeared on the ballad sheets of the 1600’s, as discussed by Victor E. Neuburg in his history of chapbooks, The Penny Histories, Oxford University Press, 1968. Even long before the ballad sheets, the famous Caxton had published a few old stories in the late 1400’s.

Furthermore, Thwaite failed to make a distinction between the motivation for the Cooper and Boreman books, and Newbery’s apparent motivations. It is true that all three concerns published children’s books that are delightful and that were very popular. The Coopers and Boreman had used amusing material in order to focus young children’s attention on reading and learning, as Locke had suggested, which suggestion Newbery also was presumably following. However, The Child’s New Play-thing by the Cooper press in 1742 had included scripture histories, which gave the little book a clearly religious emphasis. Since it would have been difficult for Boreman to give any “history” of London without making some reference, like Cooper, to religion, it is presumed Boreman’s books from 1740 to 1743 for little children also included some reference to religion. In 1744, almost immediately after Newbery arrived in London following a few years of publishing in a small way elsewhere, Newbery published his very first book, and it was a book for little children, A Little Pretty Pocket Book. It obviously was meant to imitate those children’s books already put out by the highly successful Cooper and Boreman. Newbery certainly shared the Cooper and Boreman purpose of capturing children’s attention by providing interesting material. Yet it is extraordinary that Newbery’s very first book for little children, unlike the Cooper book, and probably the Boreman material as well, was totally devoid of religious content. (Newbery’s later materials for children, however, did include religious material.) Also very meaningfully, Newbery cited a motivation for his work that did not appear on the Cooper and Boreman material.

Edward Percival Merritt in his history of The Royal Primer printed at the Harvard University Press, Cambridge, Massachusetts, said that Newbery’s biographer, Charles Welsh, wrote;

“...on the frontispiece of the Royal Primer.... [was] ‘Children like tender Oziers take the Bow, And as they first are fashion’d always grow, for what we learn in Youth to that alone, in age we are by second Nature prone.’

“The first couplet of the second set of verses, ‘Children, like tender Oziers, take the Bow’ had also been employed as early as 1744, when it appeared in an advertisement of the Little Pretty Pocket Book... of June 18, 1744 (Booksellers of the Last Century p. 117, Welsh, 1885, New York). ...at the very beginning of his career as a publisher of children’s books, Newbery had proclaimed the standards which he constantly maintained thereafter.’

Therefore Newbery stated, in 1744 and later, that he was trying to shape the minds of children: “Children like tender Oziers take the Bow, And as they first are fashion’d always grow, for what we learn in Youth to that alone, in age we are by second Nature prone.”
That was an extraordinary and unprecedented statement from a publisher, particularly since Newbery’s emphasis was, as has frequently been pointed out, away from heavenly and toward earthly rewards in a time when such an emphasis was revolutionary. It is truly extraordinary that NEWBERY’S VERY FIRST BOOK for children totally lacked what had been the ages-old religious content given to children!

That may very well be because Newbery can reasonably be numbered among the promoters of eighteenth-century “Enlightenment.” An undated cover of Newbery’s Lilliputian magazine for children suggests that fact, since the following appears under the title:

“...being the attempt to amend the World, to render the Society of Man more Amiable, and to establish the Plainness, Simplicity, Virtue & Wisdom of the GOLDEN AGE so much celebrated by the Poets and Historians, ‘Man in that Age no Rule but Reason Knew, and with a native bent did Good pursue....’“

The message in that poem agreed with the eighteenth-century French “philosophers” like Voltaire. The magazine was published in 1751-1752, which issues Newbery later sold in bound volumes. Saying that men have a “native bent” for “Good” anticipated by ten years the same message in Rousseau's Emile. Rousseau denied the Christian and Judaic teaching that mankind is not naturally “good” but instead has a fallen nature which inclines it towards evil as well as towards good.

Only six years after arriving in London in 1744 and beginning to publish children’s books, for which Cooper and Boreman had demonstrated that a ready market already existed, Newbery was successfully consigning shipments to America of a long list of children’s books (which the records suggest that the previously successful Cooper and Boreman were not doing). Yet, despite the superficial resemblances between Newbery’s very appealing materials and the appealing materials of publishers like Cooper and Boreman, Newbery’s motivations were very different, since, unlike Newbery, Cooper and Boreman apparently never said they were promoting the arrival of a better and Newer Age by trying to shape the minds of little children. (Newbery’s aim, of course, was the same as that expounded some fifty years later by the atheist/socialist, Robert Owen, when he founded the first infant schools - and then shortly afterwards by Brougham and others, in promoting the infant schools.

1747 A New Guide to the English Tongue, Thomas Dilworth, Pub. by Benjamin Franklin, Philadelphia (English original was 1740, L. of C. 1758 London copy. Code 7. Alston listed about 86 different American editions from many American cities by 1799. Noah Webster said this was the speller in use in Connecticut when he was a boy. Dilworth’s speller is discussed in the body of this history. See the later Dilworth entry in this appendix.)

1747 New York Primer, Printed by Henry de Foreest, September 7, 1747. (Cited by Heartman, referring to an advertisement from the New York Evening Post, “Just published, N. Y. Primer, And to be sold by the Printer hereof, by the Wholesale or Retail.”)
1748 The Instructor, or Young Man’s Best Companion, Containing Spelling, Reading.... George Fisher. Published by B. Franklin and D. Hall, Philadelphia, Ninth Edition. (Alston. First London edition was 1733(?). Alston listed Franklin’s and Hall’s tenth edition in 1753. The original Franklin and Hall edition was obviously some time before 1748. Alston also listed these other American editions: It was published by John Dunlap in Philadelphia in 1770; by John Boyle and J. D. M’Dougal in Boston in 1779; by Isaiah Thomas in Worcester in 1785 and 1786, and by Isaiah Thomas and David Carlisle at Walpole in 1794; and by Peter Brynberg in Wilmington in 1797. It was published in “Burlington” by Isaac Collins either in 1775 or 1787. It was reprinted in Philadelphia in 1801, 1810, and 1812. It was also published as The American Instructor by Hugh Gaine in New York in 1760, 1766, 1770, 1778, 1785 and 1792 and as The American Instructor in Philadelphia in 1787 by Joseph Crukshank. Alston showed information on 52 known editions to 1799, and briefly listed dates of others from 1801 (Philadelphia) to 1862 (London). The last known American edition he showed was that in Philadelphia in 1812, but that obviously does not prove that the last American edition was in 1812. Its use apparently faded in America when the activism for government schools began about 1817 or so. Whether it was, objectively speaking, a good or a poor textbook is unknown. However, it obviously was a very important textbook for very many years, although meant for older boys and not for beginners. Yet reference is almost never made to it, despite the fact it was published for many years by Benjamin Franklin, himself, who put out at least ten editions, and probably more editions on which no record survives.

In contrast, the fable persists that the New England Primer was the dominant eighteenth century American textbook, even though Noah Webster’s recorded comments on textbooks used about 1760 in Connecticut schools omitted any mention of its use. Heartman listed a New England Primer edition by Webster about 1800, which Webster prepared to make the primer suitable for school use, an apparent confirmation that it was NOT being used in schools before 1800. Its real use, of course, was as a catechism.

(This description is given by Heartman, who said copies had not been located, but it was advertised in the Pennsylvania Gazette on November 15, December 11, and December 25, 1750, and on January 1 and June 13, 1751. The Royal Primer was specifically labeled the second book for children, meant to follow Newbery’s battledore, so it was clearly not meant to teach children beginning reading, any more than The New England Primer was meant to do so.

Heartman had many entries for The Royal Primer, with the earliest American printing by James Chattin in Philadelphia in 1753, a copy of which was in the Rosenbach collection in Philadelphia. Heartman’s comments included the following, although there were far more “differences” between The Royal Primer and The New England Primer than he credited. Actually, they were almost totally different and unrelated books. To demonstrate that they were unrelated, The Royal Primer first appeared in England in 1750. Although hosts of New England Primers Enlarged survive which were printed after 1760, only seven copies of the New England Primer Enlarged survive which were printed before 1750, the year The Royal Primer first appeared. All of the pre-1750 copies of The New England Primer Enlarged were printed in Boston, the earliest of which is 1727, and no earlier mention occurs anywhere of The New England Primer Enlarged except the 1691 Boston advertisement referred to elsewhere. As mentioned elsewhere, an advertisement appeared in England a few years before that for an unlocatable “The New England Primer,” the book that Benjamin Harris presumably “enlarged” by 1691. Therefore, it is really ridiculous to claim that The Royal Primer was consciously meant as a variation of The New England Primer Enlarged, since the latter was obviously confined to New England until the 1750’s. Furthermore, Harris apparently never even bothered to print The New England Primer Enlarged, which he
is credited with compiling, after he returned to England in 1695. Yet Harris was a very active publisher in London in the early 1700’s, and certainly would have reprinted it if there had been an English market for it.

Heartman wrote:

“...an advertisement of the [Newbery] Battledore in 1750 [was] accompanied by the statement: ‘after which the next proper Book for Children is The Royal Primer....’ The outstanding differing feature between the early New England Primer and the Royal Primer was the insertion of a description of A Good Boy, A Bad Boy, A Good Girl, A Naughty Girl, and promising credit, reputation, oranges, apples, cakes or nuts to the good ones and threatening the others with beggary. Mr. Newbery would not stand for such nonsense as salvation or unending fire which was the promise or the threat the Puritans held forth in the New England Primer....”

Heartman referred his readers to Perceval Merritt’s Bibliographical Essay of 1925, written as a tribute to Wilberforce Eames, in which Merritt outlined his careful research on the Royal Primer. Heartman commented that American publishers had soon realized the market value of the Royal Primer and reprinted it, to such a large degree that, in Heartman’s opinion, more were probably printed in America than in Britain. Heartman said that, starting about the time that Franklin and Hall reprinted it, most American newspapers carried advertisements about the Royal Primer, and a great many were imported from Great Britain. He remarked that it was unfortunate that collectors had never valued the Royal Primer as they had the New England Primer.

Heartman’s powerful anti-religious bigotry, demonstrated by his words, “such nonsense as salvation,” may have been the reason that his judgment was so very bad on the nature, history and use of The New England Primer. It may also explain in part why Heartman’s judgment was so very bad on the nature and use of the other American so-called “primers” on which he so painstakingly compiled accurate checklists. Yet his remarks confirm that many primers were being imported from England in mid-eighteenth century America, before the spread of The New England Primer Enlarged which is so wrongly considered the dominant American children’s book of the period. Furthermore, Heartman’s checklist on a Royal Primer for entry 164 inadvertently confirms that children had access to many books in Puritan Boston in 1773, many years before Isaiah Thomas had begun reprinting Newbery’s children’s books: “...Boston/Printed and Sold by William McAlpine,/ in Marlborough-Street; where may be had a Variety of entertaining and instruc/tive Books for Children. MDCCXXIII.”

1750 The English Instructor; or, the Art of Spelling, Improved.... Henry Dixon. Published by D. Henchman, Boston. (Alston. First London Edition 1728. See entry under 1731, The Youth’s Instructor in the English Tongue... published in Boston in 1731, and which then had fourteen more editions by 1771. Alston stated the 1731 entry was:

“A plagiarisism from Dixon’s spelling-book.”

1753 The Youth’s Instructor in the English Tongue: or, A Spelling Book,... John Owen, Third Edition. To Which is Added, a Practical English Grammar. by Thomas Dilworth. Published by James Chattin, Philadelphia. (Alston’s entry, on Addenda, page 152, stated it originally was published in London by J. Oswald and J. Huggonson in 1732. Alston said:

“The spelling lists are arranged alphabetically, so that the work could serve as an elementary spelling-dictionary (the first of its kind produced in the eighteenth century).”
It was probably not meant for beginners. Wickersham cited a Spelling Book by Owen published in Philadelphia in 1754 or before, and it was probably this. The original edition may have come out before the 1732 date cited by Alston, as the 1731 Boston “collection” cited above gave an “Owen” as one of its sources.

1755 The Pennsylvania Primer, Lancaster, Pa. (Mentioned by Wickersham)

1757 The Youth’s Instructor in the English Tongue, or the Art of Spelling Improved (According to page 87 of Reeder’s book, this was in George A. Plimpton’s New York collection. See 1731 entry and 1770 below.)

1762 A Little Pretty Pocket Book, Intended For The Instruction and Amusement Of Little Master Tommy, And Pretty Miss Polly. With Two Letters from Jack the Giant-Killer. New-York: Printed by Hugh Gaine, 1762. (This edition is cited by Welch, referring to “Evans 9159.” The Library of Congress has the First Worcester Edition, published by Isaiah Thomas in 1787. The London original was published in 1744, and is discussed above in the 1744 American entry on The Child’s New Play-Thing; Being a Spelling Book... originally published in London in 1742 by T. Cooper. A Little Pretty Pocket Book is not really a beginning reading book, although it contains alphabets, but apparently was meant to be read to a little child by an adult or to be given to a child who could already read. Isaiah Thomas published much of John Newbery’s material from England, including A Little Pretty Pocket Book. Mary F. Thwaite stated in From Primer to Pleasure in Reading, The Horn Book, Inc., Boston, 1963, that this successful book was Newbery’s:

“...first little book for the amusement of children, which the unknown publisher brought out within a few months of coming from London.”

Newbery had previously been in Reading, where he had published in a small way since 1740. The foreword on page 10 stated:

“... Let him read and make him understand what he reads. No sentence should be passed over without a strict examination of the truth of it; and though this may be thought hard at first and seem to retard the boy in his progress, yet a little practice will make it familiar, and a method of reasoning will be acquired which will be of use to him all his life after.”

It is of great interest that “reading for meaning” as the primary objective in a little child’s book was proposed, apparently for the first time anywhere, in the very first of Newbery’s publications for children, within a few months of Newbery’s arriving in London in 1744. So many of Newbery’s books for children were watershed materials, and, as noted elsewhere, Newbery specifically stated he was trying to influence children’s development. However, it was not until after 1818, after the extensive and widespread wars of the ensuing period had subsided, that “meaning” as the primary aim in beginning reading instruction began to take over from “sound” in beginning reading instruction in the English-speaking world. The real change came in America in 1826, but earlier in England with the publication some time unknown before 1823 but after 1808 of Andrew Bell’s revised material for monitorial schools.)

1766 The Child’s Best Instructor in Spelling and Reading, by John Gignoux. (The later Library of Congress 1769 copy was “Revised by John Entick, Author of the New Spelling Dictionary.” This 1766 edition, published by William Bradford, Philadelphia, and Garret Noel, New York, was listed by Alston, which listing he took from Evans, although Alston said the 1766 copies cannot now be located. The book was published first by Edward Dilly in London in 1757 according to Alston or 1758 according to the Library of Congress fifth London edition in 1769. Code 8. As discussed elsewhere, the French Gignoux was attempting to show English pronunciation, so difficult for foreigners to learn. Yet he only showed
accentuation of syllables, not synthetic phonics. Curiously, Thomas Sheridan, Jr., began his work on true synthetic Pascal-type phonics in 1758.)

1768 The Art of Reading: Or, The English Tongue Made Familiar and Easy to the Meanest Capacity...., by Philip Sproson, Published First by J. Clarke & C. Hitch, London, England, 1740. (The 1740 edition was listed by Alston, which has surviving copies. Alston listed a second London edition of 1752 which has no surviving copy, but which was mentioned in Scots Magazine, XIV, 1752, 320. The Williamsburg Gazette in Williamsburg, Virginia, advertised for sale “new” arrivals of books by ship, reading “Alex. Purdie and John Dixon, at the Post Office. ...we have imported the following books.” Sometimes a list read, “for the use of schools, viz.,” followed by a long list of titles. The general list of books for sale in the February 25, 1768, edition included Philip Sproson’s spelling book, as well as Dilworth’s spelling book, Dyche’s spelling book, Fenning’s spelling book, Johnson’s spelling dictionary and Johnson’s dictionary, Sheridan on education, and Sheridan on elocution. A separate section showed books for children and 37 were listed, including “Primmers” with no titles, Horn Books, Infant Tutor, Lilliput Magazine, Pretty Plaything, Pretty Pocketbook, Robinson Crusoe, Royal Battledores, Tom Thumb’s Folio, Goody Two Shoes, etc. The children’s books were apparently almost all Newbery’s, plus Exposition of the Book of Common Prayer, History of England, and Lives of the Apostles. It is obvious a lively book market existed in Virginia, and that one of the books being imported from England in 1768, and probably earlier, was Sproson’s spelling book.)

1769 The Spelling Book, and Child’s Play Thing.... , Anonymous, Published by Timothy Green, New London. (Alston. Possibly related to The Child’s New Play-Thing; Being a Spelling Book Intended To make the Learning to Read a Diversion instead of a Task, listed above under 1744, which was first published in London in 1742 by T. Cooper.)

1769 The Universal Spelling Book; or, A New and Easy Guide to the English Language, Daniel Fenning. Boston. (Alston. First Published in London in 1756. Also published in Boston in 1771 by Edes and Gill, in Providence in 1773 and 1784 by John Carter, in New York in 1787 by Samuel Campbell and in 1788 by Hugh Gaines, and in Philadelphia in 1799 by John Bioren for G. Douglas (Peterborough).)

1769-1773 - A New Primer, Or, Child’s Best Guide. Containing, The most familiar Words of one Syllable, ranged in such order as to void (sic) the Jingle of rhyme, which draws off Children’s Attention from the Knowledge of the Letters to the sound of the Words. The Method here pursued being found, by experience, to render Spelling more easy to the Learner, and less troublesome to the Teacher, then (sic) the common one heretofore practised. With Variety of Reading Lessons. By David Manson, Schoolmaster in Belfast [Ireland]. Philadelphia: Printed by John Dunlap, at the Newest Printing Office, in Market-street. (1769-1773).64 pages; 32 leaves. (The foregoing is from Heartman’s listing. Alston said it was advertised in Belfast, Ireland, in 1758, so it dates at least from that year. Alston listed 8 other editions, one in Philadelphia in 1779, and the last Irish editions with some change in title were 1798, 1826 and 1845. Alston did not list this edition which Heartman saw, held by the Historical Society of Pennsylvania in Philadelphia. Heartman wrote, concerning the title, The New Primer, on which he entered six unrelated texts, only one of which was by Manson:

Heartman said that the first three with this title were greatly like the New England Primer type, but the others he described as “the hybrid type of this time.” Heartman noted that a very active Philadelphia printer, John Dunlap, had never printed a New England Primer. It is astonishing that with such information it never seemed to occur to Heartman that the reason for Dunlap’s failing to do so, and for the “hybrid type of this time” is that the idea of a New England Primer monopoly in the eighteenth and early nineteenth centuries is only a latter-day myth.
Yet Heartman was not a judge of what constituted a spelling-book so-called “primer,” in comparison to the religious catechism type of primer. However, it is obvious from the information in this title, and from the fact that its author was a schoolmaster, that this was meant primarily as a spelling book. That Alston included it in his listing of spelling books further confirms that it was truly a spelling book. See the 1763 entry for W. Dunlap of Philadelphia, possibly the predecessor to John Dunlap at the “Newest Printing Office” in Philadelphia about 1769.)

1769 A New Book for Children to Learn In; With Many Wholesome Meditations. Stephen Crisp, Published by Solomon Southwick, Newport. (Alston lists this as a spelling book)

1770 The Youth’s Instructor in the English Tongue, or the Art of Spelling Improved, Boston (per C. Johnson, p. 61. See 1731 and 1757 above.)

1776 A New Primer. Norwich - Printed by John Trumbull; Bound and Sold by Henry Spencer at East-Greenwich in Rhode Island, 1776. 32 leaves. (This information was given by Heartman, who said a copy was available at John Carter Brown Library in Providence, Rhode Island. Whether it is a catechism type of “primer” like the New England Primer or a true beginning spelling book is not known.)

“In the course of above thirty years teaching.... I have also observed, that some of our longer words made up of short syllables were more easily managed, by beginners, than many shorter ones: which has induced me to select and place the more familiar words of two, and even three syllables, before some words of one syllable, which are more difficult to be pronounced and understood. The columns of words undivided into syllables, I have found very useful in forwarding pupils, as well as preventing the bad habit many children fall into, of reading falsly, (sic), by guessing at words of several syllables, which may, in a great measure, be prevented, by being made careful to divide those undivided words, and afterwards to read the same words leisurely, by syllables....”

Benezet obviously taught beginning readers how to syllabicate undivided words for themselves, just as the ancient Romans had done, which was a heavy emphasis on “sound.” Syllabication had been clearly explained in the Irish Spelling Book of 1740, discussed elsewhere, so probably still had been in wide use about that time, but that ancient practice was apparently gradually dying out, as a pronounced shift appeared from emphasis on the sound-bearing syllable to the meaning-bearing word. For instance, Noah Webster did not teach syllabication in his 1783 speller, merely showed multi-syllable words already divided. Noah Webster’s excellent Code 10 speller must therefore be acknowledged as one of the primary culprits responsible for the shift from the syllable to the word in the teaching of beginning reading in English.

1778 A New Guide to the English Tongue, Thomas Dilworth (English original was 1740). Wickersham cited an American edition of Dilworth’s speller printed by Francis Bailey at Lancaster, Pennsylvania, in 1778. “at the darkest period of the Revolutionary War....” That edition referred to the cutting off of imports during the war as the reason for its publication. Wickersham’s remarks on that edition have been quoted at length in the body of this history. See the earlier 1747 entry for Benjamin Franklin’s American edition of Dilworth’s speller.
1778 A Guide to the English Tongue, Thomas Dyche, Newbern (North Carolina? It was published during the American Revolution so was probably American. Listed by Alston. First London Edition 1707.)

1779 A Primer. Adorned With A Beautiful Head Of General Washington And Other Copper Plate Cuts. Philadelphia: Printed for Walters and Norman, June 23, 1779. (This information is given by Heartman, who cited Evans No. 16480 and Hildeburn No. 3933, one of whom apparently gave the sentence Heartman placed in quotations, “This contains the first portrait of Washington engraved in America.” He also cited the Pennsylvania Evening Post, June 23, 1779. Considering its origin in Pennsylvania, it might be a Fox speller, discussed in this appendix under the date of 1702.)

1779 The Newest American Primer. Philadelphia, Styner & Cist. 1779, Hildeburn No. 3914. (Heartman listed the previous information, presumably taken from a catalog by “Hildeburn.” Heartman listed no surviving library copies.)

1782 The New American Spelling Book... John Peirce, Junior, Published by Joseph Crukshank, Philadelphia (Alston said, “The spelling-lists are confessedly based on Dilworth.”) Per Alston, seven editions in all to 1800, all Philadelphia except the seventh in Wilmington in 1800 by Peter Brynberg. Early American Textbooks shows on page 119 a sixth revised edition of 152 pages by Joseph Crukshank of Philadelphia in 1808. Nietz wrongly stated The New American Spelling Book was first published in Philadelphia in 1795, and had a sixth printing by 1808. Wickersham also listed this book.)

1783 A Grammatical Institute, of the English Language, Comprising, an Easy, Concise, and Systematic Method of Education... Part I. Containing, a New and Accurate Standard of Pronunciation... Noah Webster, Published by Hudson & Goodwin, Hartford, for the Author. (The title became shortened to The American Spelling Book by the 1787 Young & M’Culloch Philadelphia edition. Alston lists about 64 editions by 1800 and about 166 afterwards, most before 1829 when Webster’s revised speller was first published, which is entered later under 1829. Harvard 1807 copy was published by John West, Boston. Code 10.

R. R. Reeder quoted Webster on page 29 of his history of reading, referring to The District School as It Was, page 24. Webster was reported to have said:

“In the year 1782, while the American army was lying on the bank of the Hudson, I kept a classical school in Goshen, Orange County, New York. I there compiled two small elementary books for teaching the English language. The country was then impoverished, intercourse with Great Britain was interrupted, schoolbooks were scarce, and hardly attainable, and there was no certain prospect of peace.”

Webster’s 1783 series eventually grew into four books. The First Part was his speller, and the Second Part his grammar, both apparently published in 1783. Webster’s first reading book was published in 1785, the Third Part of a Grammatical Institute of the English Language. His reader was titled, An American Selection of Lessons in Reading and Speaking. In 1790, Webster wrote The Little Reader’s Assistant to come after his speller, which speller also included reading selections. Therefore, in addition to his grammar, his series, in effect, had three books to practice reading, The American Spelling Book, The Little Reader’s Assistant, and An American Selection of Lessons in Reading and Speaking.

Numerous copies of the Webster spellers with different publishing dates are in the New York Public Library. Interestingly, one early copy shows pencil notations which were obviously made by a speaker of German. The Webster “pronouncing” speller was apparently being used to learn English spelling and pronunciation. It seems highly probable that for many years large numbers of Webster’s cheap
“pronouncing” spellers were bought by poor but educated immigrants so that they could learn how to spell and how to pronounce English. Copies of his spellers could serve that purpose very well today!

1784 A New Primer, or Little Boy and Girl’s Spelling Book, Robert Ross. Published by Haswell & Russell, Bennington. (Alston. Lists ca. 1786 edition at Springfield, 1788 at Boston, and 1790 at Middletown.)

1785 The New American Spelling Book, or the Child’s Easy Introduction to Spelling and Reading the English Tongue... Isaiah Thomas, Published by Isaiah Thomas, Worcester. (Alston said that it was Evans who attributed this to Isaiah Thomas in Evans’ listing, which listing from Evans Alston presumably just copied, no paper copy presumably being extant.)

1785 The New American Spelling Book; or A Complete Primer:... Robert Ross, Published by Thomas & Samuel Green, New-Haven. (Alston said this was “a different work” from the 1784 Ross entry.)

1785 The Vermont Primer, or Young Child’s Guide to the English Language, Anonymous. Published by Haswell & Russell, Bennington. (Alston.)

1785 The Art of Speaking, Hugh Gaine, Printed in New York (Nietz showed on page 62. An upper-level book.)

1787 An Introduction to Reading and Spelling, William Scott, Published by Thomas Dobson, Philadelphia. (Alston. First edition in Edinburgh in 1776. Scott also wrote Lessons in Elocution, Edinburgh, 1784, used in America.)

“Often attributed to Oliver Goldsmith and originally issued by John Newbery in 1765, this chapbook, published in America in 1775 by Hugh Gaine of New York, is one of the most popular and longest lived of the Newbery publications. It is still available today....”

The entry stated that it marked a turning point toward entertainment in children’s literature, and an earlier entry stated that The New England Primer “was the American children’s book most widely found in the early colonies.” It is startling that librarians who have access to so much information on early books still docilely accept The New England Primer fable, and the fable that America was otherwise a bibliographical wasteland until well after the American Revolution, as far as books for children were concerned, whether printed domestically or imported. Yet in “the early colonies” there is absolutely no record whatsoever of The New England Primer Enlarged, other than the 1691 Boston advertisement quoted earlier, and the sole surviving 1727 copy now in the New York Public Library, while there are records of at least six spelling books published in America before 1730. Furthermore, since it is certain that America was largely dependent on London for almost all of its books, it almost certainly must have been buying many of the numerous spellers being printed there. How then can the statement be made that The New England Primer was the “book most widely found in the early colonies,” particularly since there does not exist even a single contemporary source confirming that statement?

Furthermore, how can the appearance of Goody Two Shoes in 1765 mark “a turning point toward entertainment in children’s literature,” even in America, since the eighteenth century was awash with chapbooks printed in English? They were widely sold, even to the very poor. It is simple-minded to presume that none of those chapbooks found their way across the Atlantic for sale in America, even as early as the first years of the eighteenth century. Oliver Goldsmith, himself, the presumed author of Goody Two Shoes, would have teethed on the chapbooks himself, as a boy in Ireland. The 1740 Irish Spelling Book referred with enormous disapproval to such books which had been popular with children in Ireland for some time before 1740. That was many years before that supposed 1765 “turning point.” In addition, the above 1768 entry on Sproson’s speller listed a host of Newbery’s children’s books imported to Williamsburg and on sale there in 1768, many of which must have been written before 1765, and most of them were meant only to entertain. In addition, the eventual publishing flood of New England Primers after 1770 did not precede but actually paralleled the great success of Isaiah Thomas’s spelling books and story books for children. As discussed elsewhere, those New England Primers were obviously being used as church catechisms, not schoolbooks.

Note in the entry above that Goody Two Shoes was being sold wholesale and retail in 1787 at Thomas’s book store in Worcester, Massachusetts, deep in blue-nosed New England, in which children at that time were supposed to be almost totally dependent, according to the “experts,” on the Bible and the New England Primer for their reading matter. Yet, obviously, those conservative old New Englanders buying those New England Primer “catechisms” must also have largely approved of Isaiah Thomas’s materials being sold in his Worcester, Massachusetts, bookstore, because Thomas became enormously successful in Massachusetts, eventually opening offices elsewhere in the United States.

As indicated elsewhere, Peter Brynberg in Wilmington was publishing a long list of entertaining books in 1801 for American children. By 1808, Mathew Carey had put out a seventh edition of Parson Weems’ entertaining “biography” of Washington, which was obviously specifically written for American children. The success of the latter book cannot be doubted, because it has become an American tradition every February 22, Washington’s birthday, to refer to the “I cannot tell a lie” fable that Weems’ book contained of little George, his hatchet, and his father’s cherry tree, and on February 22 cherry pies duly appear for sale in almost every American bakery. The very important publisher, Mathew Carey, discussed in the 1787 entry below, was the publisher of Weems’ book, which is also listed in the 1974 Library of Congress publication mentioned above. Yet, unfortunately that unsatisfactory 1974 Library of Congress
pamphlet not only promoted the New England Primer fable but omitted listing Carey’s name as the publisher of Weems’ book, even though Carey had a seventh edition of it in print as early as 1808 (and Washington had only died in 1798), and even though the 1978 Library of Congress pamphlet showed publishers’ names on other books.)

“Elementary vocabulary text used as preparation for the study of classical authors. Illustrations are simple woodcuts for children.”

Note that this text proudly boasted of its having twenty-six simple woodcuts in 1787, while, almost a century earlier, the 1691 first edition of The New England Primer Enlarged must have had at least twenty-four woodcuts. Those 1691 woodcuts must have been not only very valuable, as has been discussed, but their use must have been highly unusual at that early date.

Greenwood who died in 1737 had written “An Essay Towards a Practical English Grammar,” published in London by 1711. The Carey material published in Philadelphia in 1787, a book of 123 pages called “The Philadelphia Vocabulary,” therefore had to be an adaptation of some other very old material by Greenwood. That 1787 adaptation very probably was made by Carey himself, who may have become familiar with the original material years before when Carey had been a student in Ireland. (Carey’s background has been discussed at length elsewhere in this history.) Carey had apparently been a protege of Benjamin Franklin, since he had worked for Franklin as a printer when Franklin was in Paris. Lafayette gave Carey the necessary financial backing which made it possible for Carey to publish news of legislative proceedings after Carey arrived in America. Those legislative news notes were very popular. When Carey published this textbook in 1787, he was apparently starting to work in the new field for him of textbooks. Since Franklin had promoted “English” (non-Latin) grammar schools, it is therefore of interest that one of Carey’s very first books and perhaps even his first book, other than his legislative news notes, was an adaptation of a very old Latin school book. See the 1797(?), 1798(?) and 1800 entries on Carey spellers.

1788 The ABC With The Catechism, with Prayers of Academy of Protestant Episcopal Church, Philadelphia. Church of England, Printed in Philadelphia by Zachariah Pozilson, Jun. (Listed in Library of Congress Catalog under call number BX 5140.A2, 1788, rare book collection. See the 1799 entry, The American Primer; Or Young Child’s HornBook... apparently, like this, another American Episcopal Church version of the ABC with the catechism that had originated in sixteenth-century Elizabethan England.)

1788 The New Primer. Or Little Boy and Girls Spelling Book; Amended, and Enlarged, By The Original Author. Boston: Printed and Sold by B. Edes and Son, No. 49 Marlboro’-Street 1788. 98 pages. (Heartman reported this information, noting that a copy was at the Boston Public Library. See The Columbian Primer of 1790, printed by Edes, listed below.)

1790 The Philadelphia Spelling Book, by John Barry, reportedly the first book entered for copyright in the United States, being registered in the Clerk’s Office of 1st District of Pennsylvania on June 9, 1790, according to the January page of the Monthly Monitor, an appointment calendar copyrighted by Baldwin Cooke Company, U. S. A., 1997. See the 1821 entry for The Philadelphia Spelling Book by John Barry, which was listed by Wickersham in his history as published by David Hogan in Philadelphia. However,
this 1790 spelling book was not listed by Alston in his massive listing of spelling books published up to 1801, which suggests that a review of copyright lists might turn up other forgotten beginning spelling and reading texts.

1790 The Columbian Primer, Or The School Mistresses Guide To Children, In Their First Steps to Learning. Part I. Containing Words of one and two Syllables. With an Appendix, Containing Sundry Matters which Children may be taught to say by Heart. By Samuel Freeman, Esq. Boston, Printed by Edes and Son. Publish’d according to act of Congress. M.DCC.XC. (This information was given by Heartman. C. Johnson on p. 197 listed an 1802 book with this title written by H. Mann, and Heartman also described that book, which is listed later. See also the different 1816 book with the title, The Columbia Primer, published by J. C. Totten. See the 1788 entry for The New Primer printed by B. Edes and Son, No. 49 Marlboro’ Street, Boston, who were the publishers of this text. Heartman indicated that both of Edes’ texts are at the Boston Public Library.)

1790 New Pennsylvania Spelling Book, David Sower, Norristown. (Wickersham gave a 1790 date, and, considering that Wickersham wrote in Pennsylvania about the mid-nineteenth century, Wickersham is likely to be correct. Alston cited two existing copies with a 1799 date for the New Pennsylvania Spelling-Book; Calculated for the Use of Children, in Spelling and Reading, by Anonymous.)

1792 The Child’s Companion, Being a Concise Spelling Book, Caleb Bingham, Published by Samuel Hall, Boston. (Alston lists the seventh edition in 1799, and one in 1819 claiming to be the seventeenth. Harvard copy published in 1808 by Manning & Loring, Code 7.)

1792 The Child’s Instructor: Consisting of Easy Lessons for Children... Volume I, John Ely, Published at Philadelphia (no publisher’s name given). (Alston lists seven other editions by 1800 by named publishers at New London, Philadelphia, Norwich, Mount Pleasant, Newfield, and New York. Alston lists eleven other reprints to 1843. Through 1819, six were in New York, one was in Brooklyn and one was in Salem. In 1831, one was at Canandaiuga, in 1833 one was at Bridgeport, and in 1843 one was at Newark, presumably Newark, New Jersey.)

1793 A New Introduction to Reading: or a Collection of Easy Lessons, Arranged on an Improved Plan, by S. G., Published by Henry and Patrick Rice, Philadelphia. (Alston lists a fifth edition at Philadelphia by Henry and Patrick Rice in 1796, with a copy in the New York Public Library. Alston said it was a spelling book)

1793 The Child’s Instructor, Being an Original Spelling Book, in Two Volumes, Foster Waterman, Published by Isaiah Thomas and Ebenezer T. Andrews, Boston.

1796 The Child’s Instructor: Being an Easy Introduction to the Orthography of the Columbian Language, William A. Sterling, Published by Judah P. Spooner, Fairhaven. (Alston.)

1796 The Scholar’s Primer, or Child’s Best Helpmate to Columbian Literature, Amos Taylor, Published by Anthony Haswell, Bennington (Alston)

1796 A New Pennsylvania Primer. By John Simmons. Philadelphia: Printed by Mordecai Jones. (Listed by Heartman, who said the titlepage only survives at the Library of Congress. He also listed the following, with the same name but no date, possibly unconnected with this:}

1797(?) The American Primer, or an Easy Introduction to Spelling and Reading. Anonymous. Printed and Sold by Mathew Carey, Philadelphia (N.Y.P.L. has “The Fourth Improved Edition” of 1813. Code 7. Alston shows an 1800 date for this book, citing Evans. However, either Carey’s American Primer or his Columbian Spelling and Reading Book, shown below under 1798, were certainly in print by 1797 or before. That is proven by the memoirs of an Englishman who was a tutor in America in 1797, at which time a spelling book of Carey’s was mentioned to him, but the title was not given. Those memoirs have been cited in the body of this history. Carey was presumably not the author of either book but only the publisher. See the entries below for Carey’s Columbian text and one other text of his. See the discussion on Carey in the body of this history.

The American Primer is listed by Heartman under his entry 15 dated 1800, citing a title page that survived at the Library of Congress. Apparently the Pennsylvania copyright office long ago threw away the body of the books in their copyright collection, retaining only the title pages! That is because they apparently sent only the title pages to Washington, after Washington took over issuing all American copyrights. Heartman also listed many surviving copies of the fourth edition of 1813 under entry 24. Heartman quoted Dr. Rosenbach’s description:

“...the text consists of syllabaries and reading lessons, with an alphabet illustrated by oval woodcuts as the running headline to each page.”

1797 An Introduction to Reading and Spelling. Being the First Part of a Columbian Exercise.... Abner Alden. Published by Isaiah Thomas and Ebenezer T. Andrews, Boston. (Alston, citing reprints to 1824. Harvard has a copy of Part II with an 1812 copyright date published in 1826, but the title reads, “An Introduction to Spelling and Reading, Columbian Exercise, Volume Second.” From the Volume II content, it is probable that Volume I used a Code 10 approach.)

1797 An American Spelling Book, Asa Rhoads, Published in 1802 by Daniel Lawrence, Stanford, New York. (Harvard copy. Code 10.)

“Enfield, William. 1741-1797. The Speaker, or Miscellaneous Pieces Selected from Various Authors, and Disposed under Proper Heads, with a View to Facilitate the Improvement of Youth in Reading and Speaking. To which is Prefixed an Essay on Elocution. by William Enfield... from the Sixth European Edition.... Philadelphia. Printed by W. W. Woodward, 1799.”

The dates of the original English editions of Enfield’s books are unknown. The first Enfield book shown above was obviously meant by Enfield to precede his latter book, forming a series, just as William Scott’s Introduction to Spelling and Reading was meant to precede his Lessons in Elocution, so popular in
America. Therefore, when Noah Webster produced his school series which also started with a speller in 1783, he was only following a norm.)

1797-1798 The American Orthography, in Three Books, Enos Weed, Published by Douglas and Nichols, Danbury. (Alston)

1797 The Orator’s Assistant; Being a Selection of Dialogues, Alexander Thomas (Listed by Nietz. An upper-level book.)

1798? The Columbian Spelling and Reading Book: or, an Easy and Alluring Guide to Spelling and Reading.... Anonymous. Printed for Mathew Carey, Philadelphia, by W. & R. Dickson, Lancaster. (Alston. Also Nietz, p. 17. Alston cited a sixth edition in Philadelphia in 1811. See comments under 1797 date on Carey’s American Primer, and the possible date for this one. See the discussion on Carey in the body of this history.)

1798 The Child’s Spelling Book, Calculated to Render Reading Completely Easy to Little Children;... Elisha Babcock. Compiled by a Printer. Published by John Babcock, Hartford. (Alston lists four editions to 1802; C. Johnson lists on p. 191)

1798 The Kentucky Spelling Book: or, Young Scholar’s Assistant. Containing a Variety of Easy Lessons.... Anonymous. Published by Hunter and Beaumont, Washington, Kentucky. (Alston cited Evans. No copy located.)

1798 (Should be 1797) An American Spelling-Book Designed for the Use of Our Common Schools, Asa Rhoads, (No publisher indicated), New York. (Alston cited Evans as his source, and said that no copy had been located. However, Harvard library has a copy under a copyright date of 1797, not 1798 as cited by Alston. It was published in 1802 by Daniel Lawrence of Stanford, New York, and rates a Code 10.)

1798 The Natural Teacher; or, the Best Spelling Book for Little Children. The Second Edition,... Noah Worcester, Published by George Hough, Concord, for the Author. (Alston.)

1798 Essays on Practical Education - Richard and Maria Edgeworth, Dublin (A famous education guide. See comments on Richard Edgeworth, an Anglo-Irishman, later under Bumstead (1838), in Part 4, in Part 5, and in Appendix E. Maria Edgeworth, Richard Edgeworth’s daughter, became a renowned author of children’s stories. See the 1799 entry, below, for their beginning reading book, A Rational Primer.

1799 A Rational Primer. By the authors of Practical Education... Bristol, Biggs & Cottle for J. Johnson, London. This work by Maria and Richard Lovell Edgeworth is shown by Alston in his list of works on “Pronunciation,” not on his list of spelling books. Alston described it as:

“[Pronunciation; phonetic spelling.] The pagination is erratic. Pronunciation indicated by the use of diacritical marks. See Plate XXVIII.”

In Practical Education written in 1798, Richard Lovell Edgeworth said he prepared his phonic materials before he saw Sheridan’s, which certainly suggests that Edgeworth of Ireland, probably like Sheridan of Ireland, might have had a copy of The Irish Spelling Book of 1740. Nevertheless, Sheridan’s lectures on pronunciation were famous all over the British Isles after about 1758, so Edgeworth may
merely have heard of Sheridan’s work second-hand and invented his own method, once he had the
general idea. The very fact that Edgeworth gave that disclaimer in 1798 establishes that Sheridan’s work
was generally acknowledged in 1798 as the original work on synthetic phonic pronunciation in English.
However, Noah Webster, obviously using Sheridan’s work, produced a spelling book in 1783 which was
highly phonic and which Alston listed as a spelling book, and Alston also listed Perry’s pronouncing
spelling book as a spelling book. The fact that Alston did not list Edgeworth’s pronouncing book as a
spelling book raises unanswered questions about its nature for beginning reading. In his 1798 book,
Edgeworth had strongly opposed the use of the syllabary in beginning reading, so it is highly probable
that he would not have included the syllabary in this book which was presumably meant as a beginning
book. Edgeworth may also have avoided the columns of spelling words, as well as avoiding the syllabary.
If that were the case, then Edgeworth’s 1799 book would have the first whole-word “primer” approach to
the teaching of beginning reading in English and would have been intentionally meant to replace the use
of a spelling book for beginners. It would therefore have been of far, far more long-term influence than
has ever been recognized. See also the 1798 entry on the Edgeworth’s book, Essays on Practical
Education.)

1799 The American Primer; Or Young Child’s Horn-Book; Where he may learn the Alphabet, and
the rudiments of Spelling & Reading. To Which is Added, The Catechism of the Episcopal Church, And
That Of The Assembly Of Divines, With many other things instructive and entertaining to children.
Newfield: Printed And Sold By Lazarus Beach.

(Listed by Heartman in American Primers, Indian Primers, Royal Primers and Thirty-Seven Other
Types of Non-New England Primers Issued Before 1830. Heartman indicated a copy is in the American
Antiquarian Society. Heartman’s description indicates this was probably meant as a beginning book for
children. Yet, as discussed at length in this history, the New England Primer was clearly not meant to
teach children initially to read, but only for children to practice reading and to study their catechism once
they already knew how to read. Even the commonly used sub-title of the New England Primer suggests
that it was intended for reading practice: “An Easy and Pleasant Guide to the Art of Reading.” Note the
use of the word, “art.” In contrast, the title of this 1799 book clearly indicates it was meant for beginners.

See the entry for 1788 of The ABC With The Catechism, with Prayers of Academy of Protestant
Episcopal Church, Philadelphia, Church of England, apparently like this another American Episcopal
Church version of the ABC with the catechism that dated back to sixteenth-century Elizabethan England.)

1799 The Young Ladies and Gentlemen’s Spelling Book... Containing a Criterion of Rightly Spelling
and Pronouncing the English Language, Caleb Alexander, Published by Carter & Wilkinson of
Alexander taught for 30 years. Alexander of Massachusetts showed pronunciation in his dictionary
published in 1800 by respelling, rather than by diacritical marks as had the 1798 dictionary by Samuel
Johnson, Jr., of New Haven, Conn., who almost certainly had no connection to the famous English
dictionary author of the same name, Samuel Johnson. That 1798 dictionary had carried endorsements by
Noah Webster and 18 others, according to the 1963 Encyclopedia Britannica article, “Dictionary.” The
article said, however, that Webster stated a few weeks before Alexander’s dictionary came out that
Webster, himself, intended to prepare a dictionary series. Webster’s first dictionary in 1806 had 40,000
words and his 1828 masterpiece had 70,000.)

1799 The Columbian Spelling Book, Benjamin Heaton, Published by the Author, Wrentham, Mass.
(Alston listed a Fourth edition in 1800 but follows that with a question mark. C. Johnson mentioned on p.
195. Harvard library has an 1801 copy of Heaton’s higher level book, The Columbian Preceptor.)
1799 A Spelling Book or The First Part of a Grammar of the English Language, as Written and Spoken in the United States, Enoch Hale, Published by William Butler, Northampton. (Alston.)

1799 The Maine Spelling Book, Thomas Mellen Prentiss, Published by Charles & John Prentiss, for the author, Leominster. (Alston.)

1799 The Young Child’s Accidence; Being a Small Spelling Book for Little Children, Jonathan Grout, Published by Daniel Greenleaf, Worcester. (Alston, who said it was reprinted in Montpelier 1808 but placed a question mark after that date.)

1799 New Pennsylvania Spelling-Book; Calculated for the Use of Children, in Spelling and Reading.... Anonymous. Norristown, David Sower. (Listed by Alston.)

1800 The Child’s Guide to Spelling and Reading, Fourth edition printed by Mathew Carey in 1810. (L. of C. copy, Code 7. Alston cited Evans but said that no copy had been located, obviously not having been told of this copy. See the discussion on Carey in the body of this history.)

1800 The Modern Primer, or a New and Easy Guide to Spelling and Reading. Anonymous. Published by Thomas Grieves, Elizabeth (Hager’s Town). (Alston cited Evans but said that no copy had been located.)

1800 The English Orthographical Expositor, Being a Compendious Selection of the Most Useful Words in the English Language.... Third Edition. Daniel Jaudon, Published by D. Hogan, Philadelphia. (Alston.)

1800 The First Step to Learning: or, Little Children’s Spelling and Reading Book, Abner Reed. Published by Luther Pratt for the Author, East Windsor. (Alston.)

1800 The Young Child’s Easy Guide to the Seats of Science, Andrew Selden. Published by Anthony Haswell, Bennington. (Alston.)

1800 The Plain Spelling Book, and Easy Guide to Reading:... William Woodbridge, Published by Tertius Dunning, Middletown. (Listed by Alston, who said it was also listed by Evans, so “Middletown” is American, but in what state is unknown. Alston listed copies at four American libraries.)

1800 The Child’s First Primer; or, A new and Easy Guide To The Invaluable Science of A. B. C., Philadelphia: Printed for W. Jones, Stationer, No. 30, North Fourth Street. 1800. 28 pages; 16 leaves. No signatures. Copies: Pequot L. (Quoted from Heartman’s citation. This book may be largely a variation on English materials such as Newbery’s. Certainly the phrase, the science of A. B. C., appears in Newbery’s Little Goody Two Shoes. Heartman said that this contained the nursery rhymes, ‘A was an Apple-Pye,’ and ‘A was an Archer.’ He quoted Luther M. Livingston, who said this book was:

‘Possibly the first to contain these rhymes, and a very early specimen of a radical departure from the thraldom of the famous but dreary New England Primer.’

Yet there had been no publishing “thraldom” to the New England Primer either before or in 1800, but both Heartman and Livingston apparently had an unshakable mindset on the central importance of that publication in children’s books. To show how ludicrous that mindset was, in the New York Public Library are two copies of Mrs. Barbauld’s Lessons for Children from 4 to 5 years old (New York Public Library Call Number *KVD Barbauld). The little “books” are obviously chapbooks. They were published in Wilmington, Delaware in 1801, “Printed and sold by P. Brynberg.” On the last page is an
advertisement for 23 OF BRYNBERG’S OTHER PUBLICATIONS FOR CHILDREN IN 1801! That advertisement obviously confirms the existence of a very lively and obviously profitable children’s book market in the United States in 1801, and that was only one year after publication of the book listed above which was supposed to challenge the imaginary “thraldom” to the New England Primer. Brynberg’s advertisement read, “Books Printed and Sold by Peter Brynberg, Market Street, Wilmington, for the Entertainment and Instruction of the Little Masters and Misses in the United States,” and his list consisted of these titles:

Therefore, Brynberg, who was only one of America’s many publishers at that time, was producing 23 different “Entertaining Tales for Children” by 1801. Obviously, he only did so because a lively market for children’s books must have been in existence for some time before 1801. That fact alone certainly refutes the idea that there could have been any American “thraldom” to the “dreary” New England Primer. (The fact that it was “dreary,” however, is not being challenged!)

Livingston was in error concerning the original dates of the alphabet verses. Mary F. Thwaite stated on page 6 of From Primer to Pleasure in Reading that “A was an Archer and shot at a Frog” had appeared in “T. W.”’s reading and spelling book of eight pages, A Little Book For Little Children (ca. 1702). Very probably the other verse also was earlier than this 1800 book.

1802 The Columbian Primer, or an easy, systematic introduction to the English language, intended for the use of schools in the United States. By Herman Mann. Dedham: printed & sold by H. Mann. 1802. Published according to act of Congress. Sold also by the booksellers in Boston, Salem, Worcester, Portsmouth (N. H.) Hartford, (Con.) Providence (R. I.) and at other principal places in the United States.

(The foregoing quotation, obviously from the title page, was given by Heartman, who listed a copy at the American Antiquarian Society in Worcester. C. Johnson mentioned this book on p. 197. See the 1790 entry for The Columbian Primer written by Samuel Freeman, a different book, and the 1816 different book published by J. C. Totten.)

1802 The Franklin Family Primer, Containing A New and Useful Selection of Moral Lessons. Adorned With A Great Variety Of Elegant Cuts; Calculated To Strike A Lasting Impression on The Tender Minds Of Children. By a Friend to Youth. (Rev. Samuel Willard. L. of C. 1803 copy, the fourth edition. Code 7. 1802 edition and eight other editions listed and discussed by Heartman, the last in 1812. The 1802 edition and most others were published by J. M. Dunham, Boston. Heartman said Willard was born in Petersham, Mass., in 1775 and died in 1859, being sightless the last thirty years of his life. Heartman said the publishers of other primers, Manning and Loring, apparently purchased this primer from J. M. Dunham, and then called their publication, “Improved.”

The Franklin Family Primer has been discussed at length in this history. It is of interest that, in 1868, the Loring company of Boston, presumably the successor to Manning and Loring, published the first of
Horatio Alger’s fantastically successful children’s books, Ragged Dick; or Street Life in New York with
the Bootblacks, according to the 1974 Library of Congress pamphlet, Americana in Children’s Books.)

1802 Art of Reading, Daniel Staniford, Published by West and Richardson, Boston, in 1814 (Harvard
copy. An upper-level book.)

1802 The Union Primer: or, an easy introduction to reading and spelling. to which is added The
Assembly’s Catechism. Philadelphia: Printed And Sold By Joseph Charless, North West corner of Market
and Fourth-streets. May, 1802. (This is cited as item 178 by Heartman, who said the title page only
survives at the Library of Congress, like so many other early primers originating in Pennsylvania.)

(Harvard copy. Code 6. Discussed in this history. Hough had a second edition in 1814, third in 1820, and
this fourth edition in 1826, showing the original date of the book as 1802. Harvard has a card for The
Therefore, presumably the first edition in 1802 was by Kingsbery & Blake.)

1803 The Understanding Reader, or Knowledge before Oratory, Being a New Selection of Lessons,
Wilder of Leominster, Mass., is on page 75 of Early American Textbooks, with an 1804 second edition by
them, and a 9th edition by Isaiah Thomas, shown as at Boston, 1819. E. B. Huey wrote in The Psychology
and Pedagogy of Reading, 1908, page 253, “Reading books had been taken into the service of the school
subjects as early as 1824, in the “Agricultural Reader” by Daniel Adams.” Therefore, Adams wrote that
later book as well.)

1803 New England Spelling Book, by Fiske, Brookfield, Massachusetts (Nietz, C. Johnson, N. B.
Smith. See the discussion on Fiske and the Pickets, under the 1815 Picket entry.)

1803 Johnson’s Philadelphia Primer. or a First Book for Children. Published at the Book-Store of
Jacob Johnson, No. 14, Market-Street.

(Listed by Heartman who said the University of Chicago copy has 36 pages, and at the bottom of the
last page is shown, “J. Bioren, printer.” Heartman lists a Second Edition, Improved in 1804, a Fourth
1806. See the 1810 edition below. See the 1821 edition by Benjamin Warner, and 1807 and 1824 editions
of similar titles.)

Code 7. See the text of this history for a discussion of Murray’s popular spellers and readers. On page 13
of Old Textbooks, University of Pittsburgh Press, 1961, John Alfred Nietz stated that Lindley Murray
was:

“...born and educated in America, but after a rather successful business career moved to
England in 1784. There, after teaching for some time, he became one of the most successful
textbook writers in both England and the United States. His English Reader and grammar were
the most widely used in the United States during our early national period. After writing the
grammar and reader, he published The English Spelling Book with Reading Lessons in 1804... to
be used by beginners and to precede his English Reader....”

Murray’s English Reader was first published in 1799.)
1805 The Columbian Primer for Children. In which they are taught to read English easily and properly. To which is added, a catechism for children of four or five years old. And also, a larger catechism, Formed by the stchester Associated Presbytery. And approved of by the Morris-County Association Presbytery. New York: Printed by L. Nichols, No. 308 Broadway. 1806. 71 pages.

(This listing was given by Heartman, who said a copy is in the Watkinson Library, Hartford, Connecticut. He said the title probably should have been Westchester Associated Presbytery, but the first two letters of Westchester did not print up.)

1805 First Book for Children, Lindley Murray, Pub. 1805 by Collins, Perkins & Co., New York (Harvard copy. Code 7. This was the first part of the 1804 speller listed above. See the text of this history for a discussion of Murray’s popular spellers and readers.)

1805 The Union Spelling Book, by Albert Picket, New York (Listed by Nietz. Nietz said:

“The Union Spelling-Book printed in New York in 1805 was already the third edition.....”

For information on Picket and his books, see the 1815 entry.)

1806 The Young child’s A B C; or, First book. New York, Published by Samuel Wood, no. 362 Pearl-Street, 1806. 16 p. illus. 10 cm. PE1119.A1Y63 JuvColl Rare Bk.

“The first of Samuel Wood’s many nursery books, this small chapbook has finely engraved woodcuts believed to have been made by Alexander Anderson.”

This book was also listed by C. Johnson, Nietz, and Reeder. Scribner’s reproduced a portion on an old brochure, and a portion was reproduced on page 74 of Early American Textbooks, with no date. Pages 4 and 5 from The Young Child’s ABC, or, First Book, were reproduced in Dr. Susan Steinfirst’s unpublished doctoral dissertation at the University of Pittsburgh in 1976, The Origins and Development of the ABC Book in English from the Middle Ages through the Nineteenth Century. Dr. Steinfirst took the illustration from Yankee Doodle’s Literary Sampler of Prose..., by Virginia Haviland and Margaret Coughlan, New York: Thomas Crowell, 1974, page 27. The two facing pages shown, pages 4 and 5, contained the complete open and closed syllabary, as well as picture examples and words for the letters A, B, C, and D: Ants, Bell, Cat, and Dog. Obviously, by beginning with the whole two-letter syllabary, Samuel Wood’s spelling series began with a firm emphasis on sound. This was the first book in Wood’s four-book spelling series, which would have an over-all rating probably of Code 7.

See the 1811 entry for The New York Primer or Second Book, and the notation that it had an earlier edition of unknown date, and the 1810 entry below listing the whole series. It is possible that the first edition of these four sequential spelling books came out in 1806, since the first book in the series came out in 1806. When Samuel Wood later produced his readers, he said they were to follow his spellers. He also published in 1821 an 1819 speller by R. Wiggins, listed below under 1819.
Samuel Wood of New York City, circa 1806 and later, should not be confused with John Wood of Edinburgh, circa 1828 and later.

1806 The American Spelling Book, or Youth’s Instructor, With Reading Lessons Adapted to the Capacity of Children, Calculated to Advance the Learner by Natural and Easy Gradation, Designed for the Use of Schools in the United States. By Job Plimpton, Teacher. Printed by H. Mann, Dedham, Massachusetts, 1807.

Library of Congress copy, Code 9. The Introduction is signed, New York, May 5, 1806, and reads:

“As soon as a child has learned to read, it will be of great service to learn the Introduction of this work as it contains the different sounds of the vowels, diphthongs, consonants and many other useful subjects.... a plan whereby youth can acquire a just pronunciation of the language with the greatest ease....”

Since this book actually taught the beginning child to read by the sounds of the letters, the above remark seems to be a senseless contradiction. However, as other quotations from the period establish, once children had learned to read, they were then told to memorize and actually to recite the Introduction to such spellers. (See William Andrus Alcott’s comments, and William Russell’s on Memorus Wordswell.) Memorizing and reciting is apparently all that the author meant by “learn” in the above comment.

1807 The New American Primer; Or, An Easy Road to Learning. Philadelphia: Published by Bennett And Walton, No. 31, Market Street. “(Copyright-secured, as the Law directs.)” (Heartman indicated that only the title page of this book survives at the Library of Congress and there is no other record of it anywhere, so far as is known. As mentioned earlier, the Pennsylvania copyright office apparently only kept title pages and threw away the body of the books they had copyrighted. When Washington became the central copyright office, Pennsylvania apparently sent all these pathetic title pages on to Washington. The title of this book suggests it may have been meant for beginners and not older children.)

1807 The Philadelphia Primer. Or, A First Book For Children. Albany: Printed For Backus And Whiting, E. & E. Hosford... Printers. 35 pages. (The previous information is from Heartman, who cited a copy at Time Stone Farm, Marlborough, Massachusetts. It is probably related to Johnson’s Philadelphia Primer, entered in this appendix under 1803, 1820 and 1821, and to Robert Porter’s book entered under 1824.)

1808 The Child’s Instructor, Philadelphia (Listed by Clifton Johnson)

(Heartman reported this as his item 182, and said copies were held by the American Antiquarian Society and Time Stone Farm, Marlborough, Massachusetts. As reported by Mary F. Thwaite in From Primer to Pleasure in Reading, many children’s books in the late eighteenth and early nineteenth century carried an alphabet, but they were not beginning reading books. Children continued to “spell” all the time they were in school, not just when they were learning to read. It seems probable from the title that this was essentially only a copy of Watts’ highly popular religious poems for children, with his catechism and a little useful “spelling” practice thrown in for good measure. It seems highly unlikely that this book was meant as a beginning spelling or reading book, particularly since Watts, himself, wrote a very thorough speller for beginners.)
1809 The United States Speller, by Sundry Experienced Teachers, Being an Easy Standard for Pronouncing, Pittsburgh (Nietz. Note the 1809 emphasis on “pronouncing” and an easy method to do it).

Circa 1810 - The Uncle’s Present, A New Battledoor. Published by Jacob Johnson, 147 Market Street, Philadelphia. 5 p. illus. 18cm. PE1119.A1U5 JuvColl RareBk (The preceding information is taken from Americana in Children’s Books, a pamphlet published by the Library of Congress in 1974. It continued:

“Each letter of the alphabet is illustrated with a small picture from the Cries of London.”

Part of the material was shown in the 1974 pamphlet. A series of boxes each contained in alphabetical order a capital and small letter, an illustration and a sentence. For “A” appeared a picture of a salesman with a book, and the sentence, “Almanack, will you buy an Almanack?” The various versions of The Cries of London were pictures and sentences illustrating London trades. The earliest known was dated to at least 1771 by Mary F. Thwaite in From Primer to Pleasure in Reading. It later had many variations such as the Cries of New York published by Mahlon Day. Battledores normally included the syllabary and the Lord’s Prayer. Whether this did is unknown.)

1810 Poor Boy’s Pocketbook, Phineas Davison, Pub. by John Howe, Greenwich (Harvard copy. Code 7.)

1810 Elements of Elocution, John Walker (Listed by Nietz. An upper-level book.)

1810 Johnson’s Philadelphia Primer, or A First Book for Children, llth Edition Improved, Published by Johnson and Warner.

(A Code 8 speller. Library of Congress copy had belonged to Will Culbertson, born March 30, 1805, died 1813, 7 years, 6 months. Note that poor little Will Culbertson had been given a speller probably some time before he was seven years old. The 1810 Philadelphia publisher, Johnson and Warner, may have been successors to the circa 1810 Philadelphia publisher listed above, Jacob Johnson. Since this was the “llth Edition Improved” in 1810, the original edition must have come out a considerable time before 1810. See the 1803 entry on this title, and the 1807, 1822, and 1824 related titles.)

1810-1820 Western Spelling Book, Rev. Joseph Stockton, Pittsburgh (Wickersham)

1810 Brochure - School Books Printed and Sold By Samuel Wood, New York (Harvard copy. Lists Samuel Wood’s four small, sequential spelling books described elsewhere in this appendix: The Young Child’s A, B, C or First book, sometimes called Young Child’s ABC - New York Primer; The New York Primer, or Second Book; The New York Preceptor, or Third Book; and The New York Spelling Book, or Fourth Book.)

1811 The New York Primer or Second Book (Harvard copy published in 1837 by Samuel S. and Wm. Wood, New York but copyrighted in 1823. This 1837 Wood speller must have been revised from the material in print by 1810, but no earlier issue is available. Heartman said an 1811 copy stated that an earlier edition existed. Since the first book in Wood’s spelling series came out in 1806, as listed above, it is possible that the others came out in 1806. Heartman also cited an 1815, three 1823, and one 1829 editions of this Second Book. He showed that, in 1811, Samuel Wood was at 357 Pearl Street. No address
was given for Samuel Wood & Sons in 1815. In 1823 and 1829, Samuel Wood & Sons were at 261 Pearl Street.

The 1837 copy teaches sounds by analogy a la Dilworth, but mixes analogies on long vowels and diphthongs. The 1837 copy could be only Code 6 unless the syllabary were taught earlier. The probability is that earlier editions of Wood’s Second Book, such as in 1806 or so, were far more “sound” oriented than this 1837 edition which came out years after “meaning” method primers had arrived in 1826. The earlier edition, and even the 1823 copyrighted edition, almost certainly would have rated a higher Code number.)

1811 The Child’s Primer. Containing Easy Words From One to Four Syllables Intermixed With Easy Lessons, Fables &c. &c. By Silvanus Shepherd. Learn this Book, and you shall have one bigger. Windsor: Published By The Author. May, 1811. (This entry is copied from Heartman. Heartman also said its cover read, “S. Wood’s New-York Primer. New-York: Printed and Sold by Samuel Wood At the Juvenile Book-Store, No. 357, Pearl Street. 1811.” That note advertising Wood’s primer suggests Wood may have been Shepherd’s publisher. Nothing else is known on this curious book.)

Circa 1812 A Picture Book for Little Children. Philadelphia. Published by Kimber and Conrad, No. 93, Market Street; Merritt, Printer. 23 p. illus. 14 cm. PZ6.P583 JuvColl Rare Bk (The preceding information is taken from Americana in Children’s Book, a Library of Congress 1974 pamphlet. It also stated:

“A tall, narrow chapbook containing alphabets and illustrated moral precepts (e.g. “Do not drink too much”).

Kimber and Conrad of Philadelphia may be the predecessors to Kimber and Sharpless of Philadelphia, shown later as publishers of Comly’s 1820 revised speller.)

1812 Oram’s American Primer, James Oram. Pub. 1829 Geo. Long, New York (Library of Congress, Code 7. Heartman listed other editions of 1812, 1813, 1816, and 1820, and this one of 1829. All have 36 pages and 18 leaves except the 1829, which has 35 pages and 18 leaves. Something has therefore been omitted in this late 1829 copy, the one which I examined, which might raise the Code from 7.

Heartman said the cover of the 1812 copy read, “Printed by James Oram, No. 70, John-Street, For Griffin & Rudd, Booksellers, No. 189, Greenwich Street.” Therefore, the New York printer, James Oram, was apparently the first publisher as well as the probable author. The 1813 copy was also printed by Oram, but the 1816 copy was printed and published by George Long, No. 71 Pearl-Street. The 1820 and 1829 copies were also published by George Long, but at 161 Broadway.)

1812 Allinsons’ New-Jersey Primer. From the Press of D. Allinson & Co. Burlington, N. J. (Heartman listed this as possibly simply a variation on the New England Primer. He said a copy was held by the American Antiquarian Society in Worcester.)

1814 M’Carty’s American Primer: being A Selection Of Words The most easy of Pronunciation. Intended to facilitate the Improvement of children in Spelling. Philadelphia: Published By William M’Carty. (This is listed by Heartman, who noted that only the title page of this 1814 edition survived at the Library of Congress. As noted elsewhere, the early Pennsylvania copyright office apparently simplified their files by throwing away everything except the covers of the books they copyrighted, and when their files apparently were later sent to Washington, the covers were all they had left to send.

1180
See the entry for the 1828 version of this material, after a change in company name. The 1828 version is very poor material rating only Code 5. It very probably is an alteration of the original 1814 material, since it carries an 1828 copyright date and had multiple surviving copies according to Heartman, while the 1814 version has only one surviving cover.)

(Welch has a lengthy listing of various American editions beginning in 1787 of this title, which was rewritten from an anonymous 1654 English version entitled, The Beginning, Progress and End of Man. London: E. Alsop for T. Dunster. The moral subject matter was presented in a very entertaining fashion, in which pictures, when folds were changed, turned into other pictures. The 1814 edition listed here was included in Americana in Children’s Books, a pamphlet published by the Library of Congress in 1974. The following was added:

“The text for this earliest Library of Congress edition is one rewritten from an English edition of 1654.”

That note is particularly interesting, considering that entertaining materials for children are supposed to have been almost unavailable in 1654. In the late 1600’s in France, the famous Perrault fairy tales for children appeared and were later adapted for English chapbooks, the market for which consisted of the poor and children. Despite the existence of such entertaining materials bought for children (and Johnson’s Boswell recounted how he had loved them as a child in the early eighteenth century), the propaganda nevertheless persists not only that amusing literature for children was almost non-existent in the eighteenth century, but that children in England, America, and France generally were not literate before the firm establishment of the glorious government schools about the mid-nineteenth century.)

1814 Lessons in Elocution, William Scott. (See earlier entry for Scott. An upper-level book. Nietz stated on page 67 that Scott’s book had been used in Boston schools, but John Pierpont “succeeded in having the School Committee of Boston adopt (his 1823 The American First Class Book; or Exercises in Reading and Recitation) to replace Scott’s Lessons.”

1815 The Windsor Primer. A Useful Book For Children. Ornamented with Cuts. Windsor: Vt. Printed And Sold By Jesse Cochran. 1815. 35 pages. (Heartman listed this as item 184, saying copies were held by Time Stone Farm, Marlborough, Massachusetts, and by Harold Rugg of Dartmouth College.

Heartman added that Rugg, of Dartmouth College, had another Windsor Primer which was set up differently, but it was mutilated with the imprint ripped off. In the Preface to his 1935 book, Heartman thanked Rugg among many others for help, listing him as Harold G. Rugg. If that listing is correct, then he could not have been the Harold O. Rugg who was at Lincoln School of Columbia University, from 1921 or before to 1929 or later, and whose textbooks were subject to a heavy attack in the 1930’s.)
THE PICKET SPELLERS AND READERS ARE ALMOST UNKNOWN TODAY BUT WERE OF REAL IMPORTANCE. THEY WERE WIDELY USED FOR MANY YEARS AND WERE WRITTEN BY PROMINENT GOVERNMENT-SCHOOL ACTIVISTS.

IN AN ATTEMPT TO PROVIDE BACKGROUND INFORMATION, ALL REFERENCES TO THEIR BOOKS EXCEPT FOR THE 1805 SPELLER IS SUMMARIZED AT LENGTH BELOW.

(Harvard copy, Code 7. Copyrighted in the New-York District on February 3, 1815, by Albert Picket as “American School class-book No. 1. The Juvenile Spelling-Book: being an easy introduction to the English language. Containing easy and familiar lessons in spelling, with appropriate reading lessons, calculated to advance the learner by easy gradation and to teach the orthography of Johnson, and the pronunciation of Walker. By A. Picket, Author of the “Juvenile Expositor,” &c....” Preface - “The very favourable reception which the Juvenile Spelling-Book has met with, and the consequent increased demand for it, have induced the Publishers to put a finishing hand to its correction, and secure its accuracy, in all future editions, by causing the whole work to be cast in Stereotype....” The Preface is dated Manhattan School, New-York, Feb. 1815. Because of this note concerning stereotyping, it is reasonable to conclude that the 1821 edition was essentially identical to that of 1815. Pages are missing to page 9, at the top of which is the closed syllabary in sequence from l to x for the vowels, a, e, i, o, and u.

The Harvard copy of the 1823 revised edition with a slightly different title shows essentially the same material as on page 9 of the 1815 edition, but it is on page 13 in the 1823 edition. The 1823 edition had a four-page illustrated alphabet (pages 7, 8, 9, and 10), taken from the Juvenile or Universal Primer. If the assumption is made that the illustrated alphabet was missing from the 1815 edition, it is then possible to reconstruct the content of the missing 1815 pages from that 1823 revision. In the 1823 revision, page 5 showed the alphabet and the names of the letters, and page 6 had “A Table of the Various Sounds of the Vowels.” Presumably the same pages 5 and 6 were in the 1815 edition. Pages 7, 8, 9, and 10 in the 1823 edition had the pictured alphabet, which must have been omitted in the 1815 edition. Page 11 in the 1823 edition (which presumably would therefore be page 7 in the 1815 edition) had material on punctuation marks and numerals. Page 12 (presumably page 8 in the 1815 edition) had the open syllabary and part of the closed syllabary. However, in the 1823 edition on page 12, the open syllabary was partially incomplete, and the closed syllabary was even more so, and even partially irregular. Whether these flaws in the classic syllabary appeared on the corresponding page 8 of the 1815 version is unknown but appears unlikely. The incomplete and irregular syllabary may have appeared only in the 1823 edition, since such a flawed syllabary would have been exceptional in 1815. However, since page 8 with most of the syllabary is missing on the 1815 copy, that copy will be rated Code 7, the same as the 1823 copy. Nevertheless, it should be particularly noted that the alphabet and most of the syllabary pages were missing on the 1815 copy printed in 1821, presumably because they worn out by a young beginner, but they are pristine and unharmed on the 1823 copy printed in 1841. That is more proof that drill on the “sound” syllabary had been the norm before 1826 but had disappeared after 1826.

The content of some of the stories in the 1815 edition was exceedingly ugly, and totally unsuitable for little children. The stories were obviously introduced for the “morals” they were supposed to contain, but hideous stories of animal abuse are totally unsuitable to teach children anything that is desirable.
On the 1823 version printed in 1841, a footnote on page 12 read in part, “Here the author begs leave to recommend to the attention of Parents and Teachers his Universal Primer, improved edition, which is intended to accompany and precede this volume.” The revised version of the primer was dated to 1830 by Heartman. At what date the original version of Picket’s primer appeared is unknown. The Juvenile Spelling Book, the Juvenile Expositor, and possibly others still in print in 1841 had originally appeared some time before 1815, which fact is confirmed by the February 3, 1815, copyright on The Juvenile Spelling Book and the Preface to that book.

Listings in Early American Textbooks, when compared to the listings of the books in the American School Class-Book series printed in the 1841 New York copy of The Juvenile Instructer (sic), suggest that two parallel Picket series were being published after 1830: a “new” version with slightly different titles published in Cincinnati, Ohio, and Wheeling, West Virginia, and the “old” one still published in Eastern cities as late as 1851. Presumably an Eastern publisher had the copyrights to the older editions, and some arrangement had been made to permit the Pickets to publish the “new” edition from Cincinnati and Wheeling. Yet it is impossible to straighten out the facts from the little information available, so all the known copies and publishers are listed below for the reader’s information. They should be evaluated in view of Vail’s and Reeder’s second-hand and obviously somewhat inaccurate comments, made many years later, which are also summarized below, and in view of Bardeen’s far more reliable remarks, also given below.

The cover title of the 1823 revision printed in 1841 differed from the 1815 version, stating, American School Class Book, No. 1. Picket’s Juvenile Spelling Book, or, Analogical Pronouncer of the English Language, Conforming to the Standard Orthography of Johnson, and Classic Pronunciation of Walker; with Appropriate Definitions and Reading Lessons. Comprising A Systematic, Progressive, and Practical Course of Instruction for Primary Schools. By A. Picket, Author of The American School Class Books, Essentials of English Grammar, &c. Last Corrected Edition. Printed and Published by H. & S. Raynor, Booksellers & Stationers, No. 76, Bowery, New York, 1841. Although this copy was published in New York, the book had been copyrighted in the District of Virginia, West of the Alleghany Mountains, on January 14, 1823, by Charles H. Picket. Presumably that copyright was originally for publication in Wheeling, West Virginia, where a Picket text was published in 1831 by “A. & E. Picket,” according to Early American Textbooks. If the “E.” is correct, it means there was another Picket relative, “E.” It is known that Albert and John W. Picket went “West,” eventually to Cincinnati, but the 1823 copyright date suggests they had possibly first gone to Wheeling, West Virginia, as early as 1823, and that there was a fourth Picket relative, Charles H., in addition to Albert, John W., and “E.”

The Harvard copy published in 1841 of the 1823 revision of this book carries an advertisement listing the sequence of Albert Picket’s books, presumably for sale by the Eastern publishers in 1841, and does not include the titles shown in Early American Textbooks as published in Cincinnati and Wheeling. It omits The Union Spelling Book of 1805, which presumably was replaced by the “Juvenile” books, and the geography listed in Early American Textbooks. The advertisement read:

“Picket’s American School Class Books.

“The Juvenile or Universal Primer, being a First Book for young children: introductory to the Juvenile Spelling Book- 48 pages.

(Since Heartman showed the 1830 revised edition as containing 48 pages, this most probably is the revised edition.)

“The Juvenile Instructer (sic); being a Natural Grammar and Reader, designed to succeed the Juvenile and other Spelling Books, and as an Introduction to the Juvenile Mentor and Expositor. - 214 pages.

“The Juvenile Mentor Or Select Readings, containing progressive lessons in Orthoepy, Reading and Spelling. - 248 pages.

“The New Juvenile Expositor, or Rational Reader, and Key to the Juvenile Spelling Book; comprising the definitions of all the syllabic words in that work, with copious illustrations in English etymology. - 384 pages. To this new Expositor, the attention of intelligent teachers is particularly invited.

The title page to this book copyrighted in 1823 carried a date of 1841, and it was obviously more up to date than the page listing Picket’s books, as it showed “A. Picket, Author of the American School Class Books, Essentials of English Grammar, &c.” Therefore, the grammar must have been published by 1841.

Concerning information on the first book in the Picket series listed above, according to Heartman’s checklist, a revised edition was published in 1830 of Picket’s Juvenile or Universal Primer, “being A first book for young children” meant to precede The Juvenile Spelling Book. It appears likely from information on its title page quoted by Heartman that the 1830 revision of that beginning book represented a shift from “sound” to “meaning.” Since the Pickets were highly active in promoting government schools for many years, they may well be associated with the related change in reading methods that arrived in 1826.

Heartman listed no earlier edition than the 1830 revised primer. His listing showed the following information on its title page:

Heartman said the book had 48 pages, and copies were held by the New York Public Library and Columbia University Library. Heartman said the cover of the book read, “Picket’s Universal Primer, or first spelling-book; 48 pages; - containing easy lessons in spelling and reading: Designed to accompany, and precede the Juvenile Spelling-Book; 216 pages; - forming an extensive, progressive, and practical course of elementary instruction for Primary Schools. By A. Picket, author of the American school class-books. New-York: Printed and published by Caleb Bartlett, Bookseller and Stationer, No. 76, Bowery, 1830.”

It seems probable that Picket’s original primer was largely just an ABC book meant to teach the alphabet, as the beginning step in spelling. Yet from the title in this 1830 revision, it appears Picket may have been conforming to the 1826 shift from “sound” to “meaning,” making his introductory book into a “primer” that taught beginning reading by whole words and meaningful stories. What the original date of his first primer was is unknown, but it presumably was some time after he published his first speller in 1805. Picket’s spellers were still on sale in New York in 1837, as shown by the later 1837 entry on Mahlon Day’s book store textbook list.
In addition to the two surviving Harvard copies of The Juvenile Spelling Book discussed above, and the revised Juvenile or Universal Primer described by Heartman, information on surviving Picket copies appeared in Early American Textbooks 1775-1900, Office of Educational Research and Improvement, U. S. Department of Education, Washington, D. C., 1985. The titles are listed below, with those published in Cincinnati and Wheeling listed last:

The Juvenile Spelling-Book. Stereotype edition. Exeter, New Hampshire: John J. Williams, 1821. 228 pages. (This was the second book in the American School Class-Book series which actually began with the primer, but this second book was nevertheless labeled “No. 1.”)

Picket’s Juvenile Spelling Book, by Albert Picket. New York: R. Bartlett & S. Raynor, 1836. 214 pages. (This was presumably the 1823 revised edition of the above 1821 book. Presumably the 1821 book had been stereotyped in 1815 like the Harvard copy. Two later editions were listed in Early American Textbooks under this revised title, both in New York: H. & S. Raynor, 1839. 214 pages, and Samuel Raynor, 1851, 208 pages.

The Juvenile Instructer (sic), or American School Class-Book, No. 2 Being a Natural Grammar and Reader, by Albert Picket. New York: Caleb Bartlett, 1826. 214 pages. (This was the third book in the series which began with the unnumbered primer, making this “No. 2.”)

The Juvenile Expositor, or, American School Class-Book, No. 4, by Albert Picket. New York: C. Bartlett, 1827. 381 pages.

Early American Textbooks showed the following “Western” editions of Picket’s books, with slightly different titles, suggesting they were revisions:

The New Juvenile Spelling Book and Rudimental Reader, by Albert Picket and John W. Picket. Cincinnati: C. P. Barnes, and Morgan and Sanxay, n.d., 168 p. (paralleled American School Class-Book No. 1, which followed the primer.)

The New Juvenile Expositor or Rational Reader, by Albert Picket and John W. Picket. Cincinnati: Picket & Co.; Wheeling, W. Va.: A. & E. Picket, 1831. 384 p. (paralleled American School Class-Book No. 4, the last in the five-book series. Presumably all five books of the parallel series were in print in Cincinnati and Wheeling by 1831. Vail said they had been published in Cincinnati as early as 1832. The Pickets had published the 1831 text listed above, but Josiah Drake published the 1834 text listed above. That suggests the Pickets ceased publishing before 1834. If that is true, the “n.d.” spelling book listed above was published possibly as early as 1832.)

Rudolph R. Reeder, in his 1900 book, The Historical Development of School Readers and of Method in Teaching Reading, The Macmillan Co., New York: 1900, claimed that the Pickets published in 1818 a series of seven books, of which the primer was first and the speller next. Reeder said the compilers of the seven-book 1818 series were A. and J. W. Picket, principals of the Manhattan school, New York, and cited the journal, The Academician, 1818, pp. 12-14 as his source, presumably for their identity. Yet the
1823 spelling book shows it was written only by A. Picket, and it was copyrighted by Charles H. Picket. This 1823 edition reprinted in 1841 advertised the six books listed above. Yet Reeder had called it a seven-book series, presumably meaning that a dictionary should complete it, from a comment he quoted, that the books “form a systematic gradation from the alphabet to Walker’s Dictionary.”

According to C. W. Bardeen’s The School Bulletin, Syracuse, New York, July, 1893, The Academician was published semi-weekly in New York City from February 7, 1818 to 1819, for a total of 25 issues. Albert Picket was president of the Incorporated Society of Teachers, and John W. Picket was corresponding secretary of the group. The publication carried a series of articles on the Lancastrian and Pestalozzian methods, among other things, before the Pickets abandoned the work. Bardeen included this information in a paper he gave at the 1893 Chicago World’s Fair, which was an excellent history of education journals in New York State. It is very clear that education journals were widespread in the nineteenth century, being published in many other states after 1840, but The Academician was apparently the first education journal in America, and it failed, presumably because of a lack of interest.

The date of the paper’s publication suggests that the first real push for government control of private education had begun by 1818, and that the Pickets were associated with it, apparently along with someone named Fiske, from the very beginning. That both Fiske and A. Picket independently wrote spellers, and that the Pickets retained their interest in education after dropping publication of The Academician, is obvious from comparing two statements, one below by John A. Nietz (in Old Textbooks, University of Pittsburgh Press: 1961, page 18) and the other by H. H. Vail in 1911, quoted later:

“Fiske’s (1803 speller) was followed by several different spellers written by A. Picket. The Union Spelling-Book printed in New York in 1805 was already the third edition.... A second one was The Juvenile Spelling-Book... followed by a much larger and more advanced book entitled, The Juvenile Expositor, or Sequel to the Common Spelling Book.... Incidentally, later in life Fiske went west and helped found The Western Literary Institute and College of Professional Teachers in Cincinnati. This organization did much to advance and improve education in the Ohio Valley.”

Henry H. Vail, in A History of the McGuffey Readers, Cleveland: The Burrows Brothers Co., 1911, adds additional information which seems to confirm that the Pickets were very important early organizers along with Fiske of those peculiarly un-American institutions, government schools.  

“While Dr. McGuffey was still at Oxford, Ohio, he took part in the formation of probably the first extended Teachers’ Association formed in the West. There had been a previous association of Cincinnati teachers organized for mutual aid and improvement. This was about to be given up; but at their first anniversary on June 20, 1831, Mr. Albert Pickett, (sic) principal of a private school in Cincinnati, proposed a plan for organizing in one body the instructors in public and private schools and the friends of education. Circulars were sent out and the first meeting of the College of Teachers was held October 3, 1832. A great number of teachers from many states (in) the West and South attended these meetings and took part in the proceedings. Through its (continuance) Dr. McGuffey took an active part in the work. (pages 30-31)

“Cincinnati, in 1837, was the largest city in the West excepting New Orleans and was the great educational center of the West.... The public schools of Cincinnati were then more highly developed than those of any other city in the West. (page 34-35)

“At no time in the history of (the McGuffey) readers have they been without formidable competition. Pickett’s (sic) Readers were published in Cincinnati as early as 1832. Albert Pickett was at one time president of the College of Teachers and his books were published by John W.
Pickett (sic), who was probably his brother. The Pickett Readers, Cobb Readers, Goodrich Readers... were all swept out of the [Ed.: “Western”] schools by the superior qualities of the McGuffey Readers and the persistent energies of their publishers.

“In these books the publishers found space for a little advertising of their wares. In Pickett’s Readers there is printed conspicuously at the top of a page a warm commendation of Pickett’s Readers, written in 1835 by William H. McGuffey, Professor at Miami University, in which he “considers them superior to any other works I have seen.” That was before he made his own readers. Mr. Smith [Ed.: McGuffey’s publisher] responded by publishing a strong commendation of one of his books signed by Mr. Albert Pickett. (pages 61, 62, 63)”

1815 Pennsylvania Spelling Book, by An Association of Teachers, Copyright by Maskell M. Carll, Daniel L. Peck (Harvard copy. Code 6, discussed in this history. According to Nietz, p. 21, in 1820 Stephen Byerly revised this which he had assisted in writing and renamed it New American Spelling Book, listed below.)

1815 An Improved Spelling Book, Joshua Bradley, Pub. by Oliver Farnsworth, Windsor, Vermont (Harvard copy. Code 7. See the entry for O. Farnsworth & Co. of Cincinnati in 1822, perhaps the same Farnsworth. If so, he moved to the important city of Cincinnati in the developing “West” some time after 1815.)

1816 The Columbian Primer, or Ladder to Learning. Third Edition, Improved. New-York: Printed and Published By J. C. Totten, No. 9 Bowery-Lane. 1816. (This listing was given by Heartman, obviously from the title page. He said a copy is at the Library of Congress. See the different Columbian Primers of 1790 and 1802, apparently unconnected with this primer or each other.)

1817 An Improved Method of Education Instituted by Dr Bell... Also Joseph Lancaster’s Method of Teaching, James Kelly, Philadelphia. (A Teacher’s Guide. Uses Code 7 approaches. N.Y.P.L. copy.)

1818 Rules and Regulations for the Primary Schools of the Primary School Committee. Revised August 1825. (Primary schools established June 1818.) True and Green, Boston, City Printers, 1825.

(On page 3, the ages of the children to be enrolled in the Boston Primary Schools were given as 4 to 7. Page 10 stated about 50 students should be in each “school,” which meant in each classroom under one teacher. Pages 11 through 13 included the following comments. The syllabary may have been dropped for beginners by 1825, but not the speller. However, the 1825 reference to “words” may also refer to parts of the syllabary, such as ba, be, bi, etc., since they were sometimes referred to as “words.”)

“Section VI. Course of Instruction.

“Classification of the Pupils. Each of the Schools shall be arranged into four Classes; and the third and fourth Classes into two Divisions each, viz; 4th class, 2d div. - Cards; Alphabet; 1st Div. - Cards continued, Monosyllables and Disyllables.

“3d Class, 2d Division - Spelling Book; Words of two or more syllables. 3d Class, 1st Division - Spelling Book continued, Spelling and Easy Reading Lessons; the Lord’s Prayer; Abbreviations and Numbers Commenced.

“2d Class, Spelling Book continued; Spelling, Reading, and all the other lessons in the same to the end; the Commandments; Reading Book.
“1st Class. Spelling Book continued; Spelling, Punctuation, Abbreviations, Numbers; Words of similar sound but different in spelling and signification, capitalizing; Reading Book continued; New Testament.

“RULE 1. The Second Division of the fourth Class shall first stand up, and after an appropriate address, shall read from the Cards with a distinct and audible tone of voice, the letters of the alphabet: in like manner the First Division of the same Class, shall read in words of one or two syllables and no one of this Class shall be advanced to the third or higher Class, who cannot read deliberately and correctly in monosyllables and disyllables.

“RULE 2. The third Class must be furnished with the Spelling Book adopted by the Board and the Second Division of it must be taught to read therefrom in words of three, four and five syllables. The First Division of the same must be continued in their spelling and advance to the easy reading lessons of the same book, and learn the Lord’s Prayer: the learning of Abbreviations and Numbers is to be commenced and no one is to be promoted to the second Class, who cannot spell, easily... words of the above syllables, and read well in the easier lessons of the said Spelling Book.

“RULE 3. The second Class must proceed in the Spelling Book through all the spelling, reading and other lessons of the same; and be taught to recite well the Ten Commandments; must be provided with the book of Reading Lessons, and make progress therein; and no one of this Class can be advanced to the first, who has not learned and recited, as far as practicable, all the lessons in the Spelling Book, including the stops and marks, and their uses in reading; the use of the common abbreviations; the letters used for numbers and their uses; and the catalog of words of similar sound, but different in spelling and signification. They must be able also to recite the Ten Commandments and the Lord’s Prayer and to read correctly and readily in the book of Reading Lessons.

“RULE 4. The first Class shall be continued and perfected in the lessons of the Spelling Book and book of Reading Lessons; be furnished with the New Testament, and be taught to read therein fluently and correctly; and no one of the first Class shall receive the highest reward, the recommendation of the examining Committee, to be passed into the English Grammar School, unless he or she can spell correctly, read deliberately and audibly, as learned in the several lessons taught in the... grade, and is of good behavior.”

(The 1818 curriculum for the first primary grade schools in Boston was mentioned in Superintendent Philbrick’s “Report” in the Annual School Report for Boston of 1874, pages 374-375:)

“Those who read in the Testament shall be in the First Class; those in easy reading, in the Second Class; those who spell in two or more syllables, in the Third Class; those learning their letters and monosyllables, in the Fourth Class; and that the books be the same in every school, for each pupil hereafter entering.”

Philbrick added this further quotation on the 1818 material:

“A card, a small spelling-book (Kelley’s) and the New Testament were the books originally used.”

It is evident that the “easy reading” was to be the short selections routinely included in the spelling books. The “card” most probably was like the battledores then in use in England, which were folded
cardboard sheets, elaborations of the syllabic horn book. Philbrick’s reference to the bottom class’s learning their “letters and monosyllables” suggest that the syllabary may have been on the 1818 card, but it possibly was not on the 1825 card.)

1819 The Young Child’s Primer: or Introductory Spelling-Book. No place; no date. (This was cited by Heartman, who said it was at the Library of Congress, where only the titlepage survived, with writing on verso: Filed March 12, 1819. It appears safe to say that it originated in Pennsylvania, since so many early spellers filed for copyright in Pennsylvania have only their titlepages surviving at the Library of Congress. It must be presumed the early Pennsylvania copyright office threw away all the books but their covers, and later sent the covers on to Washington. Note the equating of a “primer” with a “spelling-book” in 1819.)

1820 A New Spelling Book (revised), John Comly, Pub. 1821 Kimber & Sharpless, Philadelphia (Harvard copy, Code 7. Originally pub. in 1806, per C. Johnson, p. 205. Heartman listed an 1826 copy published by Kimber & Sharpless, no. 3 Market-street, “Stereotyped by J. Howe,” which he said was at the Huntington Library, San Marino, California. See 1842 entries for Comly. A Comly speller was still in print in the 1876 American Catalogue, indicating an extraordinary lifetime for his materials, from 1806 to some time after 1876, when it probably died out because of the Colonel Parker anti-spelling-book influence.)

1820 New American Spelling Book, Stephen Byerly (Nietz, Wickersham. See 1815 entry on which he was reportedly one of the authors.)

1821 Philadelphia Spelling Book, John Barry, Pub. David Hogan, Philadelphia (Wickersham)

1821 Johnson’s Philadelphia Primer. Or, A First Book For Children. Philadelphia: Published by Benjamin Warner, No. 171, Market Street. (Heartman listed this book of 36 pages, which he said had copies in the collection of Dr. A. W. Rosenbach of Philadelphia and the Pequot Library in Southport,
Connecticut. He said the woodcuts were by Alexander Anderson. See the main 1803 entry, and related entries in 1807, 1810 and 1824.)

1821 Mrs. Sherwood’s Primer; Or, First Book for Children. Illustrated By Cuts. Hartford, Published By H. & F. J. Huntington. 1828. P. Canfield, Printer. (Heartman listed this information and said a copy is at Time Stone Farm, Marlborough, Massachusetts. He said the cover reads: “Mrs. Sherwood’s Primer; Or, First Book for Children. From The Fourth London Edition. Hartford, Published By H. & F. J. Huntington. 1828. P. Canfield, Printer.” He also said that Time Stone Farm had a copy which was not printed in America. It was printed at Wellington, by F. Houlston & Son, Salop, in 1821, and he thought it was possibly the first edition.

Heartman noted that a biography of Martha Mary Butt (later Mrs. Sherwood) was given by F. J. Harvey Darton in London, in 1910, and that she wrote a great many books for children. He said she “expurgated” well-known chapbooks and put in material that:

“...seemed more likely to conduce to juvenile edification. So do not expect too much of her Primer.”

The content of Sherwood’s Primer is unknown, but that it had a Fourth London Edition by 1828 suggests it may have been altered from its probable 1821 original. Heartman also listed as item 174 a copy published in 1830 by S. Babcock of New Haven and S. Babcock & Co., Sidney’s Press, in Charleston. He said the cover reads, “New-Haven Toy Books - No. 2’s - New Series. 4. Sherwood’s Primer, Or, First Book For Children...” That suggests her book may have been meant only as a toy book and not a serious text. Since this issue has only 23 pages, and 12 leaves, that seems to confirm that fact. Heartman did not state the number of pages in the 1828 copy printed by the Huntington company. The 1830 copy is held by the American Antiquarian Society in Worcester, Massachusetts.)

1821 A Spelling Book, Thomas J. Lee, Pub. 1838, Munroe & Francis, Boston (Harvard copy, Code 7. See later entry.)

1822 The Primary Instructer and Improved Spelling Book in Two Parts, Jasper Hazen, Pub.1823, Simeon Ide, Windsor, Vt. (Harvard copy, Code 8.)

1822 Griggs & Dickinson’s American Primer Improved: Being A Selection of Words The Most Easy of Pronunciation; adapted to the capacities of Young Beginners. Philadelphia: Printed and Published by Griggs & Dickinson, and for Sale at Whitehall, and the Principal Book Stores in the United States.

(This information is taken from Heartman’s listing. He said the 1822 edition had the title page only in the Library of Congress, but an 1829 edition of 36 pages with a different illustration had all 36 pages. See the 1826 entry for Griggs & Dickinson, not to be confused with John Grigg of Philadelphia.)

1822 The Sunday School Spelling Book, Episcopal Sunday and Day School Society of Philadelphia (Nietz, p. 26)

1822 The National Primer, Adapted to the Capacities of Young Beginners: In Which the Words are Arranged According to the Vowel Sound. York, Pennsylvania. Published & Sold by M. B. Roberts.

“It is quite useless to put a child at reading till he can spell and pronounce without aid, the syllables and words he must meet with.”

See the note on the Pestalozzian grammarian Goold, p. xiii, Early American Textbooks. Heartman listed an 1829 edition “printed and sold by H. H. Brown, No. 15 Market Square,” in Providence, which is also at the American Antiquarian Society, and which is 36 pages long. Heartman did not list the 1840 copy or the 1827 copy.)

1822 Child’s Instructor, By a Teacher of Little Children. Improved, Second Edition. Consisting of Easy Lessons on Subjects Which Are Familiar to Them in Language Adapted to Their Capacities. Published by C. P. Walton, Montpelier.

(American Antiquarian Society copy. Follows the pattern of Code 6 or 7 spellers but much more reading matter:

“It is found by experience that the child will learn to spell the monosyllables when they occur in lessons which contain some meaning, much sooner than when the words are jumbled together, without conveying any ideas.... The child should be taught to spell each word in his lessons before he is permitted to read it....”

Overall Code 3.)

1822 The American Primer, Abridged, Containing Short and Easy Lessons for Little Children. O. Farnsworth, Cincinnati

(American Antiquarian Society copy. Code 6 but only a toy book, not a school book. Essentially a speller. Listed by Heartman. Shown under 1815 in this appendix is a Harvard copy of the Code 7 An Improved Spelling Book by Joshua Bradley, published by Oliver Farnsworth, Windsor, Vermont. Perhaps that was the same O. Farnsworth. If so, he had moved to the important city of Cincinnati in the developing “West” some time after 1815.)

1823 The Primer: Or, Mother’s Spelling-Book For Children, At A Very Early Age. By M. Pelham, author of the Mother’s First Catechism. Second American from the ninety-seventh London Edition. New York: Published by G. C. Morgan, Pearl-St. Franklin Square. Gray & Bunce, Printers. 1823.

(New York Public Library Copy, 36 pages. Listed by Heartman, who also listed an 1830 edition under the name Pelham’s Primer; or Mother’s Spelling Book For Children At a Very Early Age, published by S. Babcock, Church-Street, New-Haven. A copy of that book is also in the New York Public Library and in Columbia University Library, New York. M. Pelham was the pseudonym for Dorothy
Kilner, whose material has been discussed in this history. Her speller rates a Code 7 because of its heavy analytic phonics, despite its somewhat abbreviated syllabary.)

1823 The Critical Pronouncing Spelling Book, Hezekiah Burhans, Published in 1825 in Philadelphia (Harvard copy, Code 8, confused, poor.)

(Heartman listed this which is possibly simply a variation on the New England Primer. He said these publishers had issued a New England Primer in 1818. Heartman listed copies held by Wilbur Macy Stone, New York; New Hampshire State Library, Concord; and the New York State Library, Albany.)

1823 The American First Class Book; or Exercises in Reading and Recitation, John Pierpont (Listed by Nietz. An upper-level text. Nietz stated on page 67 that Scott’s Lessons in Elocution (1814) had been used in the Boston schools, but John Pierpont “succeeded in having the School Committee of Boston adopt (his 1823 The American First Class Book; or Exercises in Reading and Recitation) to replace Scott’s Lessons.”

R. R. Reeder on page 46 of his history quoted the preface to the first edition of the American First Class Book of Pierpont:

“I have observed, however, that that part of school books which consists of a brief treatise upon oratorical rules for reading, and essays on elocution” (are not worn and) “little used... The truth probably is that ...(elocution) is learned from example rather than by rule...”

This establishes that a heavy emphasis on elocution was unknown in America before 1823. It probably first appeared with the arrival of the activist/elocutionist, William Russell, from Scotland, who is discussed at length elsewhere in this history. As mentioned elsewhere in this history, it is an historical curiosity that the famous reading textbook author, John Pierpont, who wrote American reading books that were apparently very worthwhile, was also the grandfather of the famous American financier, J. Pierpont Morgan.)

1823 Easy Lessons in Reading, Joshua Leavitt, Pub. 1826 John Prentiss, Keene, N. H. (Book next after beginning level - Harvard copy. See 1847 entries for a reading series by Joshua Leavitt, probably the same man.)

1824 The Rational Guide to Reading and Orthography, William Bentley Fowle, Pub. 1828 Hilliard, Gray, Little and Wilkins, Boston. (Harvard copy, Code 8. See entry on his 1842 Code 6 speller not meant for beginners, and see comments in this history for Fowle’s about-face on the subject of teaching beginning reading.)
1824 The Catholic School Book, W. E. Andrews, Pub. James Ryan, N. Y. (Harvard copy. Possibly not meant for beginners, but if so, it is Code 4 in its opening alphabets and word lists. This may only have been meant for review, since it constitutes a minor part of the book. However, if meant for beginners, this book’s low-code would suggest the influence of activists, as discussed in this history. See the 1826 entry for the Union Spelling and Reading Book of the American Sunday School Union, a Code 4 book which almost certainly was produced under such activist influence.)

1824 The Red Book of Practical Orthography, William Bearcroft, Pub. 1828 Mahlon Day, N. Y. (Harvard copy. English reprint, not a beginner’s text. Mahlon Day was apparently an important New York bookstore owner and printer. See entries of 1825 and 1837. The first entry for the very important publisher, Cooledge, who first appears in this Appendix B in 1839 when he was located on the second story of Mahlon Day’s building.)

1824 The Lafayette Primer and New Jersey Instructer (sic), No. 1. Carefully Prepared For Teaching The Rudiments Of The English Language. Without the Repetition Of The Alphabet: And Peculiarly Adapted For The Use Of Primary And Lancasterian Schools. By Edward C. Quin, Teacher of the Peckman River Academy, Caldwell, (N..J.) Printed For The Author, By Stephen Gould, Caldwell, N.J. (N.Y.P.L., Library of Congress. Listed by Heartman. Code 3 or 4. This low code book was produced as the result of “help” Quin got from others, as he stated. Quin appears to have been an Irish immigrant schoolmaster, possibly from the hedge schools of the period. As discussed in this history, this is one of the very few pre-1826 texts with a low code. Heartman said that it contained two poems about Lafayette and a dialogue on his visit.

1824 A Pleasing Companion for Little Girls and Boys, Jesse Torrey, Jun., Pub. 1836 by Grigg and Elliott, No. 9, North Fourth Street, Philadelphia. (This was the new company name on the book cover dated 1836, which had been John Grigg, No. 9, North Fourth Street, Philadelphia, on the title page carrying the date of 1835. Harvard copy.

Not a beginning book. Torrey stated that a large part of the material was adapted from Berquin. This book had become the third part of a series by 1836. The series was advertised on this 1836 copy as including Torrey’s Primer or First Book for Children, First Reading Lessons for Children, and this book as the third in the series, with the fourth Torrey’s Moral Instructor or Fourth Book. Probably Torrey’s Primer used a “meaning” approach, since the series was listed in 1836 without mentioning Torrey’s speller of 1825 which had been published by J. Grigg, No. 9, North Fourth Street, Philadelphia, in 1826. See Grigg and Elliott’s later series, still in print in 1876.)

1825 Exercises in Reading and Recitation, Dr. Jonathan Barber, Published in York, Pennsylvania. (Harvard copy. An upper-level book.)
1825 Cobb’s Spelling Book, Lyman Cobb, Pub. Holbrook and Fessenden, Brattleborough, Vermont (Revision of 1821 edition. Harvard copy, Code 8, discussed at length in this history. Cobb campaigned against Webster’s speller. According to page xiii of Early American Textbooks, Cobb’s The Juvenile Reader, Number One, appeared in 1830. See 1842 entry for Harvard’s copy of Cobb’s New Juvenile Reader No. 2, part of the revision of his 1830 series, on which I have seen no copy. See Appendix C under the Worcester/Hillard entries for a discussion of the publishing family, Holbrook, apparently unrelated to Josiah Holbrook.)

?1825? - The Tract Primer, American Tract Society, New York. 108 pages. (According to Lawrence Cremin, on pages 66-70 of his history, the Society was founded in 1825. Early American Textbooks lists an 1830 copy of The Tract Primer, and one undated copy. If the original was not published in 1825, then it probably appeared at least shortly after 1825, and it was definitely in print by 1830, according to the Early American Textbooks entry. See Appendix C for the sequence of known books published by the American Tract Society, at least two of which were written by Reverend Thomas Gallaudet. That being the case, it appears probable that The Tract Primer, in print by 1830 at the latest, would have used Gallaudet’s “meaning” approach to teach beginning reading.)

1825-1832? - The Little Primer. New-York Cries, And many more, Can be bought, At Day’s Book-Store. New York: Printed and Sold by Mahlon Day, At the New Juvenile Book-store. No. 376, Pearl-street. (1825-1832). 8 pages; 4 leaves. Copies: Rosenbach. (The foregoing information is taken from Heartman’s entry, who could not give a definite date for the material. This is probably not a beginning reading book, but an American picture book adapted from the famous English picture book theme, London Cries. The Uncle’s Present, A New Battledore, published in Philadelphia about 1810, which has been listed previously, used the theme to teach the alphabet. Mary F. Thwaite said on page 208 of From Primer to Pleasure in Reading, published by The Horn Book, Inc., Boston, in 1963:

“Perhaps the earliest book to introduce trades to boys and girls were the various little publications on London ‘Cries’. How far these go back in print in children’s literature the writer is uncertain, but Francis Newbery (nephew of John Newbery) advertised a copy in January 1771, and there are copies dated 1775 extant....”

However, Heartman said this book does contain the Ten Commandments in rhyme and the Lord’s Prayer. See entries of 1824 and 1837 for the important book-store owner and publisher Mahlon Day, and the discussion in the text of this history concerning his connection to the important publisher, Cooledge.)

1826 The New Primer. Published by S. King, 150 William Street, New York. 35 pages. (Listed by Heartman, who indicated that a copy is at Harvard College Library. He said the following is on the cover after the publisher’s name: “Of whom may be had the greatest variety of Toy Books in the United States.” Yet I have found no other references to S. King.)

sold by Griggs & Dickinson, back of No. 171 Market Street. Sold also in New Jersey by D. Fenton,
Agent, Trenton, and C. Harrison, Proprietor, Egypt. 1826.

(This information was given by Heartman. It is one of the many primers on which only the title page
survived at the Library of Congress because of the curious practice of the old Pennsylvania copyright
depository. It apparently later forwarded only the title pages on some copyrighted material to Washington.
Heartman noted that it showed on the back that Charity Harrison was the proprietor. See the 1822 entry
for the American Primer published by Griggs & Harrison. The Philadelphia publisher listed under 1824
above, John Grigg, was at No. 9, North Fourth Street, in 1826 and should not be confused with Griggs &
Dickinson at the “back of No. 171 Market Street” in Philadelphia in 1826.)

1826 Willey’s First Spelling Book (mentioned in William Russell’s American Journal of Education,
October(?), 1826)

1826 The First Book or Spelling Lessons for Primary Schools, Sixth Edition (abridged from Lee’s
the School Committee of Boston” according to an advertisement on an 1830 copy of Wood’s 1828
“Account...” listed in Appendix D. (Harvard 1832 copy of Lee’s Code 8 primary speller has, “With
Prefixed John Wood’s Edinburgh Sessional School First Book for Primary Schools” most of which is
missing while the speller portion is intact. That suggests heavy classroom use of the sight-word
“meaning” beginning material, and the neglect of Lee’s “sound” material. However, Harvard’s 1835 and
1836 copies of Lee’s A First Book of Spelling Lessons and an 1838 copy of Lee’s A Spelling Book did
not ever include the John Wood material. See also 1832 entry on a different edition, Boston Primary
Spelling Book, possibly not based on Lee’s. Early American Textbooks shows on page 70 that Thomas J.
No further information is available on that book, which is listed below.)

1826 Marshall’s Spelling Book of the English Language, or The Teacher’s Assistant, First Revised

1826 Union Spelling and Reading Book, American Sunday School Union, Philadelphia (Harvard
copy, Code 4. Both the 1912 and 1928 United States Catalogs listed “Union Primer, Am. S. S. Union,”
presumably prepared after this low-code 1826 spelling and reading book. See Cremin, p. 69, on the work
of the American Sunday School Union. Nietz referred, p. 26, to an 1817(?) Union Speller, revised in 1832
as The Union Spelling Book. If that 1817 reference is correct, the group originated in 1817 or before. The
record suggests such organizations of Sunday schools on both sides of the Atlantic were taken over by
government-school activists after about 1818. That they produced such a low-code beginning book in the
critical year of 1826 seems to confirm that possibility.)

1826 The Franklin Primer, or Lessons in Spelling and Reading Adapted to the Understanding of
Children, Composed and Published by a Committee Appointed for the Purpose by the School Convention
of Franklin County, May 25, 1826. (Attributed to Samuel Willard.) Fifth Edition, Improved, Published
1828 by A. Phelps and A. Clark, Greenfield, Mass.

The next level was published in 1827 and is described later: Secondary Lessons, or the Improved Reader,
Sequel to Franklin Primer. The third book was published in 1828 according to Clifton Johnson, p.
Reader, by 1843. See the 1827 entry on Secondary Lessons concerning that text. Heartman lists a second
1826 The Pestalozzian Primer, or First Step in Teaching Children the Art of Reading and Thinking, John M. Keagy, M. D., Pub. 1827 John S. Wiestling, Harrisburg, Pa.

(Harvard copy. Heartman lists a title page only from an 1826 edition in the Library of Congress. Philosophy in Preface is Code l, but Keagy, a government-school activist for years until his death, claimed the public would not be ready for that pure “meaning” approach in teaching beginning reading until about ten years, so his actual content is strongly sound-oriented, Code 8. Keagy is discussed in this history.)

(Harvard copy, Code l. Its “meaning” approach was praised by the arch-activist, William Russell, in the new American Journal of Education in 1826. Russell was the new journal’s editor. Worcester’s material is discussed in this history. It eventually was part of a series. A Harvard copy by Jenks & Palmer of Boston of uncertain date of the National Spelling Book or Pronouncing Tutor by Benjamin Dudley Emerson advertised Worcester’s Code 1 reading series which Jenks & Palmer were then publishing: First Book, or Primer of the English Language, Second Book for Reading and Spelling, Third Book for Reading and Spelling, and Fourth Book for Reading, with Rules and Instructions. The advertisement stated, “The above make a complete series of Reading Books for youth....”

See Appendix C for the sequence of Boston publishers of the Worcester “meaning” series, which was ultimately replaced by the widely used Hillard “meaning” series from Boston. Heartman listed the 1826 edition and one more, apparently in 1829, which he showed as “(1824-1829).” His title for the 1826 edition was A Primer of the English Language, For the use of Families and Schools, By Samuel Worcester. Stereotyped Edition. Boston: Published by Hilliard, Gray & Co. Yet he said the imprint on the cover read, Hilliard, Gray, Little and Wilkins. Heartman cited copies of the 1826 edition held by Stone and Plimpton. The later copy used the same title and the publisher was also shown as Boston: Hilliard, Gray, Little, and Wilkins. He said the copy of the later edition was held by the Essex Institute, Salem, Massachusetts. Samuel Worcester’s material should not be confused with similar later material by S. T. Worcester, nor should the publisher, Hilliard, be confused with the later author, Hillard.)

NOTE:

IT IS EXTREMELY DOUBTFUL THAT THESE CRITICALLY IMPORTANT TEXTS SURVIVE TOGETHER IN ANY OTHER LIBRARY ANYWHERE ELSE ON EARTH! THE OPPORTUNITY TO EXAMINE THESE 1826 TEXTS HAS BEEN ABSOLUTELY CRITICAL TO MY WRITING OF THIS HISTORY. IT WAS THIS EXAMINATION THAT MADE ME REALIZE THAT THEIR SHARED DATE OF ORIGIN, 1826, MARKED THE BEGINNING OF A DELIBERATE, PROGRAMMED AND EXTRAORDINARILY SUCCESSFUL CHANGE IN BEGINNING READING INSTRUCTION, FROM “SOUND” TO “MEANING,” WHICH CAMPAIGN WAS CARRIED OUT BY THE SAME ACTIVISTS WHO WERE WORKING (ALSO SUCCESSFULLY) TO REPLACE AMERICA’S THRIVING PRIVATE EDUCATION FACILITIES WITH GOVERNMENT SCHOOLS.
THESE 1826 ‘MEANING’-ORIENTED TEXTS HAVE BEEN DESCRIBED AT LENGTH IN THIS HISTORY.

1827 Selections from Scripture Designed as Lessons in Reading for the Use of Adults; with Lessons in Spelling, Charles Folsom, Pub. Hilliard, Metcalf & Co., Cambridge (Harvard copy donated in 1828 by Charles Folson, probably the author. See similar 1828 copy below.)

1827 Infant Schools (on cover) Infant Education (title page), By a Friend to the Poor, Pub. 1828 Shirley and Hyde, Portland (Harvard copy. The book was infant school propaganda and cited the Spitalfields and Bristol schools in England. Wilderspin’s school at Quaker Street, Spitalfields, was opened on July 2, 1820. The book outlined the general nature of his ridiculous “teaching.” After discussing Wilderspin’s school, it discussed the Bristol School, run by a man whose name was blurred (possibly Goyder). The reading methods at that Bristol School were described: an incomplete, alphabetically mixed syllabary, a vowel table omitting diphthongs, a picture alphabet with non-phonic examples (owl for o, ship for s, and wheel for w), and sight-words given for numerals at the beginning of the book along with the digits (one, two, three, etc.), something which is characteristic of a “meaning” method but which is never done with a “sound” method. By the 1820’s, it is obvious the infant schools had moved from “sound” towards “meaning.”

1827 The Primary Class-Book, (127 pages), Thomas J. Lee, Glazier & Co., Hallowell, Maine. (Listed on page 70 of Early American Textbooks. A speller was written by a Thomas J. Lee, entered earlier. This book may have been one of the new “meaning” primers by the same man.)

1827 First Principles of English Spelling and Reading, Caleb H. Snow, M. D., Pub. James Loring, Boston (Harvard copy, Code 8, reads: “...an attempt to bring together all the words of the New Testament to... progress... from the alphabet... to the more difficult parts of orthography and pronunciation.” Obviously not the philosophy of the government-school promoters of 1826 and 1827, as quoted in American Journal of Education.)

1827 The Maine Primer; Or, Child’s Second Book. “Tis education forms the youthful mind; Just as the twig is bent, the tree’s inclin’d.” Published by Amos B. Parker, Boston, & E. Fellowes, Belfast. 1828. 36 pages; 18 leaves.

(Heartman listed this copy at the Library of Congress, and stated the cover showed E. Fellows, not E. Fellowes. It had been copyrighted on 24 January, 1827, and had an “Introduction: To Parents And Teachers.” Presenting a primer as the child’s second book was out of step with the movement in 1827 to publish primers for use as the first book, instead of a speller. Whether this was expected to be preceded by a speller, or by a simple ABC book almost solely meant to learn the alphabet, is unknown.)

1827 Kelley’s First Spelling Book or Child’s Instructor; Designed for Sunday and Common Schools, Hall Jackson Kelley, Revised 7th Edition, Pub. Lincoln and Edmunds, Boston (Harvard copy: Code 8. “Advertisement (Jan. 9. 1827) This spelling book prepared particularly for Sunday and primary schools has passed through seven large editions....” According to Philbrick, it (not Webster’s) was used when the Boston primary schools first opened in 1818. The hostility to Webster’s in Boston dates at least from 1818.)

1827 Secondary Lessons, or the Improved Reader, Intended as a Sequel to Franklin Primer, by A Friend of Youth [shown as Samuel Willard by the Harvard library], Fifth Edition, Pub. 1831 by Durrie and Peck, New Haven
(Harvard copy. Title page shows:

“I would rather speak five words with my understanding than ten thousand words in an
unknown tongue. Paul.”

American Antiquarian Society has a copy of the second edition of 1828 published by A. Phelps and
A. Clark, Greenfield, Mass. This became the second book in the reading series, the Franklin Primer being
the first. The third book in the three-book reading series was published in 1828 according to Clifton
Lessons, the publisher, Ansel Phelps of Greenfield, Massachusetts, listed the foregoing three books plus
the fourth book in the series, The Popular Reader.)

1827 Sequel to American Popular Lessons. Collins and Hannay, New York. 376 pages. (Listed on
page 106 of Early American Textbooks. See under 1831 for Introduction to American Popular Lessons.
Author appears to be Eliza Robbins.)

1828 The Child’s Primer or First Book for Primary Schools, by Jonathan Lamb. Published in 1831 by
in 1833. Code 4. Heartman lists editions of 1828, 1830, and 1831, and added that it was reprinted. He also
lists an 1830 version published by Chauncey Goodrich, shown later in this appendix.)

1828 Child’s Companion, Enoch Lewis, Pub. in Pennsylvania (Mentioned in James Pyle
Wickersham’s History of Education in Pennsylvania, 1886.)

1828 Gradations in Reading and Spelling, Henry Butter, Pub. 1836 Henry Perkins, Philadelphia
(Harvard copy) (Preface to this 1828 English book is obviously American, presumably from 1836 and the
book may have been altered also. The presumably American “Hint to Teachers” says in teaching
beginning reading teachers should read the lesson over and over and also the spelling lessons:

“...to ascertain that they know the words before requiring them to learn to spell them.”

It also says children can read small words before knowing all the alphabet:

“The earlier tables of spelling are to be used as reading lessons; and at first they may be used
only as such.”

By recommending that children not be permitted to decode new material by themselves, the book’s
emphasis on “meaning” and away from “sound” is obvious. If used as directed, it would be a Code 1
book.)

1828 Introduction to the National Reader, John Pierpont, Pub. 1830 Richardson, Lord and Holbrook.

(Harvard copy. A nice collection of stories, not for beginners, but with pronunciation markings on
long words:

“It is hoped that the lessons, in the beginning of the book, are, none of them, so difficult as to
dishhearten any child, who has mastered the reading exercises that are to be found in his Spelling
Book and that, as the young learner proceeds, if he finds some hard reading, he will at the same
time, find the subject so interesting, as to make him disregard the labor of spelling the long
words....”
Pierpont’s reading materials were massively used in America, perhaps being equaled only by Murray’s. From the remark just quoted, it is obvious that as late as 1828 Pierpont clearly expected children to learn to read independently in the spellers before beginning his reading series, and then to use his pronunciation markings to sound out hard unknown words for themselves in his readers, which sounding-out he called “spelling.” Yet by 1839 Pierpont added a Code 1 sight-word primer, The Little Learner or Rudiments of Reading, as the first book in his reading series. Harvard has a copy of an 1854 edition published by Lippincott, Grambo & Co., Philadelphia. That Pierpont, the author of a widely used reading series, wrote such a sight-word primer by 1839 as an addition to his reading series, confirms that there had been a shift away from the speller as the beginning book considerably before 1839. It confirmed the shift away from the practice of teaching beginning readers how to sound out words, or how to “spell” words by themselves.

Pierpont’s series was still being sold by Lippincott in 1876 according to the American Catalogue, but the names of the first and second books were apparently changed: The Young Reader, 15c, New Reader, 45c, National Reader, 63c, and American First Class Book, 95c.)

1828 Boston Reading Lessons for Primary Schools, copyright March 22, 1828, Pub. 1830 Richardson and Lord, Boston (The name, Holbrook, does not appear in the publisher’s name on the 1830 Harvard copy of 142 pages plus table of contents but does on the American Antiquarian Society 1830 copy and on Pierpont’s book, above, as Richardson, Lord & Holbrook. The American Antiquarian Society 1830 copy shows the author as Sarah Preston (Everett) Hale. Not a beginning book. The Harvard copy noted it had been adopted by the Boston Primary School Committee and “many other schools in various parts of the country.” Early American Textbooks lists on page 78 an 1837 edition of 142 pages published by Charles J. Hendee of Boston, their catalog number PE 1120, so it was in use for at least ten years.

Very poor content. Largely horrid, upsetting stories with “morals,” but even when not horrid, still with “morals.” The inclusion of such nasty content in books for little children is curiously characteristic of change-agent materials. By contrast, Thornton Burgess, the early twentieth century author of highly successful nature stories for children, refused to include any upsetting content because he thought it unsuitable for young children. Yet Burgess managed to cram his stories with vast amounts of scientific data, beautifully sugared for the little unsuspecting learners.)

1828 National Spelling Book or Pronouncing Tutor, Benjamin Dudley Emerson, Principal of Adams Grammar School, Boston. Published by Jenks & Palmer, Boston (Apparently copyrighted in 1828 but the actual publishing date of this 170th edition uncertain. Harvard copy, code 10 if used for beginners, but not a beginning book. Early American Textbooks shows a 160th edition and 170th edition of this book, both under 1828, just as 1828 is the only date printed on this one. It seems probable that date appeared on many later editions by Jenks & Palmer. Yet Early American Textbooks also shows an 1829 copy (apparently from Jenks & Palmer) with no note on an edition number, and an 1829 copy and an 1830 copy published by Richardson, Lord & Holbrook of Boston, also with no notes on edition numbers.

The American Society for the Diffusion of Useful Knowledge published in 1843 a 32-page pamphlet, Report of the Committee on Spelling Books, a copy of which is presently in the American Antiquarian Society library. It confirms that Emerson’s speller was the most used in Massachusetts in the 1830’s and had displaced Webster’s. Emerson also wrote reading books (listed under 1835 and 1846) and The Introduction to The National Spelling Book, for the Use of the Youngest Classes and Primary Schools. They may have appeared after this speller was printed, as this Harvard copy by Jenks & Palmer of uncertain date advertised only Worcester’s Code 1 reading series, First Book, or Primer of the English Language, (listed under 1826), Second Book for Reading and Spelling, Third Book for Reading and Spelling, and Fourth Book for Reading, with Rules and Instructions. The advertisement stated
“The above make a complete series of Reading Books for youth, which are not surpassed by any other works for this purpose now before the public. This series of Readers has been introduced into numerous Seminaries and Schools in the United States, and wherever used, the books have given satisfaction.”

See Appendix C for the sequence of publishers of the Worcester readers.)

1828 The American Primer, Designed as the First Book for Children. Published by E. & G. Merriam, Brookfield, Massachusetts. (American Antiquarian Society copy. Code 3. Listed by Heartman, who also showed a second edition in 1829. Note the presumption by 1828 that a speller was not to be the first book.

The successor company, G. & C. Merriam of Springfield, later became the publisher of Webster’s dictionary, so obviously the company prospered. Webster’s 1828 American Dictionary of the English Language had originally been published by S. Converse in New York, and printed by Hezekiah Howe at New Haven. An extraordinarily beautiful reprint of that 1828 Converse edition, with an extraordinarily scholarly preface by Rosalie J. Slater, was published by the Foundation for American Christian Education, P. O. Box 27035, San Francisco, California, 94127, in 1967 and 1983.

See the 1830 entry for G. & C. Merriam’s Child’s Guide, which gives more information on reading books published by Merriam, including the fact that in 1821 E. & G. Merriam had published The American Reader, Containing Extracts Suited to Exciting a Love of Science and Literature, to Refine the Taste and to Improve the Moral Character, Designed for the Use of Schools. The 1821 book was obviously later part of Merriam’s American Readers. Also see the 1833 entry. This 1828 book must have been the first in that series. No information is available on other books which may have been in Merriam’s American Readers series, besides the 1821 and 1828 books.)

1828 M’Carty’s American Primer, Being A Selection Of Words The Most Easy Of Pronunciation. Intended To Facilitate the Improvement of Children in Spelling. Philadelphia: Published and Sold by M’Carty & Davis. (Successors to the late Benjamin Warner.) No. 171 Market-Street. Stereotyped by J. Howe Philadelphia. (Harvard copy. Apparent English content - Code 5 - a mixed-up mess. Considering the post-1826 shift to “meaning” in beginning reading books, this may be different from the 1814 M’Carty’s American Primer listed earlier, published only by William McCarty of Philadelphia. According to Heartman, only the title page of that version survives in the Library of Congress, like so many other Pennsylvania spellers of that period, so its content is unknown.)

1828 Introduction to the Analytical Reader, Samuel Putnam, Pub. Whipple and Lawrence, Salem (Harvard copy. See Putnam’s 1826 entry. This book is also meant for children who can already read, and then teaches true phonics to children who already can read words as wholes. It phonetically marks words children should long since have learned. Like so many other books connected with the change-agents, this has some very ugly content for little children, such as a story of a lamb being eaten alive! Such nasty publications form quite a contrast to Oliver Goldsmith’s charming tale for little children of Goody Two-Shoes.)

1828 Selections from the Scriptures, Designed as Lessons in Reading for the Use of Children, Hilliard & Brown, Cambridge (Harvard copy. Straight short reading paragraphs, preceding each with word lists, with no marking for phonics. See related entry for 1827 published by Hilliard, Metcalf & Co. of Cambridge, Selections from Scripture Designed as Lessons in Reading for the Use of Adults; with Lessons in Spelling. The words, Lessons in Spelling, were omitted in this title. If meant for beginners, it
was a Code 1 text. One of Hilliard’s companies was also the publisher of Harvard’s materials, as discussed elsewhere in this history.)

1828 Account of the Edinburgh Sessional School, John Wood of Edinburgh, Scotland, Second Edition Reprinted 1830 by Munroe and Francis, Boston. (N.Y.P.L. copy. Recommends teaching whole words and dropping the syllabary: Code I, pure “meaning.” This was an exceedingly influential book on both sides of the Atlantic Ocean, and is discussed elsewhere in this history.)

1828 The Pennsylvanina Primer. Carefully Compiled By James Martin, Practical Teacher of Children. Philadelphia: Mifflin and Parry, Printers, 1828. Listed as item 126 by Heartman, who said the Library of Congress had only the title page, with an entry stating James Martin was the author. An 1829 title page is also at the Library of Congress, with slightly different wording: The Pennsylvania Primer: Designed to Render Both Sight and Sound Subservient To The Juvenile Understanding. Carefully Compiled, By James Martin, Practical Teacher of Children. Philadelphia: Mifflin And Parry, Printers. It is obvious Martin’s emphasis was on “meaning,” and not on “sound,” as might have been expected in 1828 and 1829.)

1829 The Pittsburgh Primer containing three thousand familiar words, ranged in tables, according to the various tones of the vowels, with due regard thereby ascertaining the Pronunciation. Together with Easy reading lessons. Pittsburgh, Printed and published by Cramer and Spear, Franklin Head, Wood Street. 1829. 36 pages. Copies: Ernest J. Wessen. Cover title: The New Primer, Pittsburgh. Printed and Sold by Johnson and Stockton. (This was cited by Heartman. It apparently was a “sound”-oriented spelling book, presumably meant for beginners, and as such was very much out of date in 1829 when the shift toward “meaning” for beginners was almost triumphant.)

1829 The Elementary Spelling Book, Being an Improvement on the American Spelling Book [Ed.: of 1783], Noah Webster.

(Apparently many printers originally. However, at least by 1847 but probably shortly after Webster’s death in 1843, G. F. Cooledge & Bro., New York, became its sole publisher. Yet the Cooledge company sold Webster’s speller for use at the upper grades, producing cheap sight-word “primers” instead for the primary level. In 1855, D. Appleton of New York became the publisher, and in 1890 American Book Company, New York, became the publisher.

The 1829 revision was still a Code 10, heavily phonic one, but it obviously was meant to meet the strident change-agent opposition to the 1783 Webster American Spelling Book that had surfaced after about 1818 and that had become enormous after 1826. That Webster’s 1829 The Elementary Spelling Book was meant as an answer to that opposition seems to be confirmed by Webster’s publishing in 1832 The Elementary Primer (listed later), whose stated purpose was to precede The Elementary Spelling Book of 1829. Yet, in 1783, Webster’s American Spelling Book had been the first book in his series, followed by his grammar, and, ultimately, two reading books, The Little Reader’s Assistant, and An American Selection of Lessons in Reading and Speaking. Therefore, when Webster in 1832 said that his primer reading book should precede, and not follow, his new spelling book, he was falling in line with his opposition. Webster obviously had been defeated in the market place some time before 1832.

It is possible that the Cooledge company only had the rights to the Webster’s The Elementary Spelling Book of 1829, but not the original The American Spelling Book of 1783. No where in the material I have seen does Cooledge refer to that earlier book which has a different title. Yet, in the 1844 list of textbooks in use in Virginia, quoted in Part 4, the three most widely used spelling books were “Webster’s” in 63 counties, Comly’s in 31 counties, and “Elementary” (probably Webster’s 1829 title) in 20 counties. Other spelling book titles were far less used. Webster’s 1783 spelling book had always been
licensed to many printers all over the United States. The Virginia figures suggest that many of those printers were still supplying the 1783 edition in 1844, and that it was still the most used, but that the “Elementary” (presumably Webster’s 1829 edition) was also in use. Only a year after Webster’s death in 1843, the arrangement with Cooledge might not yet have been operative. However, if “Webster’s” on the Virginia list meant the 1783 edition, and “Elementary” meant Webster’s 1829 edition, then the Virginia listing may be the last time that Webster’s 1783 edition appears in the records.

The Elementary Spelling Book of 1829 was “revised” again in 1857 after Webster’s death, and its Code 10 nature for beginners was gutted. The 1876 American Catalogue listed Noah Webster’s Elementary Spelling Book (obviously the gutted 1857 edition), his Elementary Reader (but which one is not clear), and his son’s Speller and Definer as available from Appleton.

1829 Boston School Primer; or First Book for Children, with Watts’s Catechism, Pub. 1831 by Munroe and Francis, Boston; C. S. Francis, New York (American Antiquarian Society copy. Code l. This was apparently a very important book. See the edition below.)

1829 Boston School Primer, or First Book for Children, Pub. 1831 by Munroe and Francis, Boston; C. S. Francis, New York (Harvard copy, without Watts’s catechism which is present in the American Antiquarian Society copy. Code 1. Preface in both Harvard’s and American Antiquarian’s copies discusses and praises Wood’s Edinburgh school which dropped the syllabary for beginners. See the discussion of this book in Part 4.)

1829 National Spelling Book and Scholar’s Guide on a New Plan, Pub. Charles Hoag, Concord, New Hampshire (Harvard copy, Code 7. A written note in the front indicates that in 1861 it was a gift to Harvard, by the family of Reverend Samuel Hillard or Willard of Deerfield, an 1808 graduate of Harvard. Possibly it was the Reverend Samuel Willard of Deerfield who is credited with writing the Franklin Primers of 1802 and 1826. See the further discussion at the beginning of Appendix C. See the 1829 entry below for The Progressive Primer published by Hoag, which specially stated it was to be used before this speller.)

1829 The Progressive Primer, being an easy introduction to the Scholars Guide, for the use of schools in the United States. Concord, N. H. Published by Charles Hoag. 35 pages. (This was cited by Heartman, who said a copy was in the New Hampshire Historical Society Library in Concord, New Hampshire, and that it was also issued after 1830. Heartman had no understanding of beginning reading practices, with his mindset on the New England Primer, and therefore wrote concerning this book that it was “A regional issue of no special features.” Yet it had extremely interesting features. This 1829 “primer” was almost certainly one of the many low-code sight-word meaning-emphasis “primers” that were being published starting in 1826 to displace the use of high-code sound-emphasis spellers for beginners. It should be noted that the title to this primer indicated that Hoag’s National Spelling Book and Scholar’s Guide, listed above under 1829, was meant to be used only after this primer.)

1829 The Atlantic Primer Or Child’s First Book (cut of flowers in basket) In Easy Spelling and Reading. Adorned With About 70 Cuts. Dover, N. H. Samuel C. Stevens - Washington-Street. Printed by George W. Ela. 1829. 34 pages; 18 leaves. Irregular signatures. Copies: NHSL AAS. (This information is given by Heartman, but I have not seen this text, available at the New Hampshire Historical Society in Concord, New Hampshire, and the American Antiquarian Society in Worcester, Mass. That two copies survive in that area and that both have more pictures (70) than pages (34) suggests two conclusions. It was probably popular there in 1829 and it most probably is a low-code “meaning” approach beginning book.)

1829 The Symbolical Primer, or Class Book No. 1. Designed To Render The Progress Of Beginners, In Spelling And Reading, Easy And Agreeable. By E. Hazen. Philadelphia: Published By The Author. Stereotyped by J. Howe. (Heartman cited this 1829 copy, which he said was in the library of the Historical Society of Pennsylvania, Philadelphia. He also said the Library of Congress had the title page only with a Ms. entry on verso giving Edward Hazen as the author. Heartman listed two other editions, but not Harvard’s copy. The Harvard copy shows it was published in 1830 by many publishers. The material is Code 1 (or 3 if its syllabary were used but Hazen said it would be better to omit it). Poor Heartman obviously knew very little about teaching beginning reading, because he actually commented about this incredibly bad “meaning” text which taught reading by pictures of objects as a deaf-mute was taught:

“...A Primer in name only. This is really a schoolbook but not without merit.”

On the Harvard copy appeared the words, “...for the use of Infant and Monitorial Schools” and in smaller print, “common schools.” See 1829 entry for Book No. 2, a speller, which is actually the third volume as Book No. 1 has two parts. Book No. 1 after the syllabary teaches words only by pictures, all pure “meaning.” By the time E. Hazen wrote his Preface to his 1845 The Grammatic Reader, No. 1, (Harvard copy), and “meaning” had triumphed over “sound” in the teaching of beginning reading, he said, not surprisingly, “...much of the first and second year [is spent] learning to read and spell....”

When it is contrasted to some comments in pre-1826 spellers, that 1845 comment corroborates that a sharp drop in achievement had taken place because of the 1826 switch from “sound” to “meaning” in teaching beginning reading. In 1804 Lindley Murray wrote An English Spelling Book with Reading Lessons, a Code 7 book. Its first part was reproduced as A First Book for Children. On page 29, after a child would have been in the book perhaps a few months, Murray wrote for the child to read: “In a few weeks, I hope to read well. I will make the best use of my time.” Some spellers published in the next twenty years after Murray’s 1804 spelling book copied Murray’s words as quoted above exactly, such as Elihu F. Marshall’s 1819 A Spelling Book of the English Language and Jasper Hazen’s (not E. Hazen’s) Code 8 1822 The Primary Instructor and Improved Spelling Book, Being an Easy System of Teaching the Rudiments of the English Language in Two Parts, The remarks confirm that teaching to read before the change-agent date of 1826 was expected to take a few months. After 1826, it was expected to take at least two years. Yet, as indicated by Philbrick, even two years were not enough. In the Boston Annual School Report for 1874, pages 283-285, Superintendent John Dudley Philbrick recorded what he found to be the practice in his first inspection of the Boston Primary Schools in 1857:

“In respect to the initiating of children into the art and mystery of reading, - the teaching of them the elements of the art, the enabling of them to pronounce at sight the words of easy prose or verse, - I found the Primary Schools on my first inspection of them in 1857, in a deplorable condition. The old-fashioned method, by ABC syllables and spelling, had been nominally abolished by the abolition of the usual appliances for teaching it, and it had been so much ridiculed that the teachers were very shy in using it in the presence of visitors. The reading books and charts in the schools were designed for the ‘word-method,’ a method of very limited capabilities.... In recalling the slow and tedious processes by which they brought their pupils up into only semi-fluent reading, I am reminded of what Milton says of an arduous path, -

‘Long is the way,
And hard, that out of hell leads up to light.’

“Some other common defects [of spellers] are... the elements of spelling are expected to be attended to before the elements of reading. The author begs leave to refer to his Primer, which was designed as the child’s first book and as a suitable introduction to all Spelling Books, as illustrating the mode of instruction which he thinks is to be preferred.”

Worcester’s 1826 sight-word primer listed earlier was a straight Code I book. This book meant to teach older students to spell included alphabets and phonic notations, but NOT the syllable tables that had always been included in spellers.

1830 The Abecedarian, Samuel W. Seton, Pub. J. R. Roqua, New York. (Harvard copy, effectively Code I. This is a teacher’s guide, and the directions for teaching beginning reading are unspeakably obscure, convoluted and bad. Samuel W. Seton was on the committee for the original and enormously influential American Lyceum organized by the arch-activist Josiah Holbrook, per Blumenfeld, p. 130.)

“Preface...Too great pains cannot be taken to prevent the formation of a ‘habit of reading without thinking’....”

Quoted “Babington”:

“To prevent... this habit they should be questioned as to the subject of each lesson, whether questions are annexed or not.”

(The back of this Child’s Guide advertised their 1833 Easy Primer, meant to precede this book, and the Intelligent Reader, “Designed as a sequel to the Child’s Guide.” The New York Public Library card catalog credits Charles Merriam (1806-1887) and Geo. Merriam (1805-1880) of Springfield with “The Child’s Guide comprising familiar lessons designed to aid in correct reading, spelling, defining, thinking and acting.” The catalog also credits them in 1841 with “The Village Readers, Designed for the Use of Schools, by the Compilers of the Easy Primer.” On page 111 of Early American Textbooks appears The Village Reader. Springfield, Mass., G. & C. Merriam, 1846, of 300 pages. Also listed is an 1849 copy from Springfield, Mass., published by Merriam, Chapin & Co. E. Merriam was an earlier member of the company when it was in Brookfield, and the catalog credited E. and G. Merriam in 1821 with “The American Reader, Containing Extracts Suited to Exciting a Love of Science and Literature, to Refine the Taste and to Improve the Moral Character. Designed for the Use of Schools. Second Edition, Brookfield, Mass.” At the head of that title appeared “Merriam’s American Readers.” Entered previously, above, for 1828 was The American Primer, Designed as the First Book for Children, by E. & G. Merriam. That American Primer was obviously added by 1828 to Merriam’s American Readers series, which presumably had other books in the series besides the 1821 reader, but the Easy Primer listed later dates from 1833. The Merriam company of Brookfield, and then Springfield, which had been publishing reading books since at least 1821, later became the publishers of Webster’s dictionary, as discussed under the 1828 entry above.)

1830 An Easy Primer, Adapted To The Capacities of Children. By Charles C. Guenther. No place. (1830) Copies: LC [Library of Congress]. Titlepage only with Mss. entry on verso: 1830, Oct. 7, Deposited by Chas. C. Guenther as Author. (The foregoing is given by Heartman. This pathetic remnant
is almost certainly from the old Pennsylvania copyright office which sent only title pages of spellers to Washington, throwing the rest of the books away.)

1830 First Lessons in Reading and Grammar, Chiefly from the Works of Miss Edgeworth. By Warren Colburn. (Harvard copy. Not a beginning book. Colburn, who was reportedly a “Pestalozzian,” had also written an enormously widely used and reportedly highly effective arithmetic book teaching mental arithmetic to beginners, which not many years later met a series of “revised” editions that apparently spoiled its utility. The existence of such opposition to Colburn’s arithmetic book tends to promote this researcher’s confidence in the value of Colburn’s original arithmetic text, sight unseen. (I have not seen either Colburn’s original text or its various “revised” editions.) Mark Sullivan’s Our Times, Volume II, page 10, implied that Colburn wrote a reading series, in “1833,” but this 1830 reading book is the only reader of Colburn’s on which I have found a record. As mentioned earlier in Chapter 50 and at length in Appendix E, Warren Colburn wrote materials on the teaching of mental arithmetic to beginners, and the results were spectacular. On pages 84 and 85 of the 1883-1884 volume of The American Teacher appear the following comments from an October, 1883, letter from Iola Rounds of Wellesley, Massachusetts, who was a teacher:

“Dear Editor: Moses, Jr., speaks feelingly of Warren Colburn’s mental arithmetic. As I read his earnest appeal in behalf of that good old book, memories come to me of days long gone by, when through suffering and tears I was drilled through it. In later years the sorrow has changed to a feeling of joy and exultation, for I am constantly reminded of my superior education as I see my friends laboriously ‘reckoning’ small bills with pencil and paper. It is painful, but amusing to me when, in one of our large stores, having reached the end of a long shopping-list, I proceed to pay my bill. ‘I owe you this amount,’ I say, handing out a bill to be changed. The clerk takes his pencil from behind his ear, looks at me as if I meant to cheat him, and after a prolonged ‘ciphering’ which takes the time I had allowed to catch a train, comes to the conclusion that I am right. My ability in that direction is not in the least due to quality of brain. Colburn’s Arithmetic deserves the whole credit, detestable as the book seemed when I studied it.”

1830 American Definition Spelling Book, Moses G. Atwood, Concord, New Hampshire. (Harvard copy. Code 9, obviously heavily emphasizing “meaning” also, despite the Code 9 evaluation. Claimed it was based on an 1802 work, probably Kneeland’s which had been only a Code 6.)

1830 Cobb’s Juvenile Readers, by Lyman Cobb (See 1825 entry on Cobb’s speller, which entry notes his original reading series came out in 1830, but I have seen no copies of the 1830 reading series. See the 1842 entry for Cobb’s New Juvenile Readers, a revision of Cobb’s original series of reading books. The 1830 series, like the 1842 series, was perhaps Code 3.)

1830 Union No. 1, or Child’s First Book, Oliver Angell (1787-1858) Preceptor of the Franklin High School, Providence, Rhode Island, Pub. 1848 E. H. Butler, Philadelphia.

(Harvard copy of 1848. However, the Library of Congress has an 1830 copy with an historically important preface that was omitted on later editions. It was published by Cory, Marshall & Hammond, and copyrighted by them in Rhode Island in 1830. Parts of that preface have been quoted in Part 4 of this history in the discussion of Angell’s readers. Angell’s Code 1 sight-word series was published starting in 1830 and had readers in levels from the first to the fifth. Angell’s long-lived and widely used series is virtually unknown today although copies of the upper-grade readers turn up in used book stores. I bought one in such a store, an 1850 copy of Angell’s Fifth Reader, with “reading comprehension” questions annexed to its stories. Yet Angell’s virtually unknown 1830 series is historically of great importance, as it was perhaps the first sight-word reading series ever published in America, possibly preceding Lyman Cobb’s which also began to come out in 1830, copies of which I have not seen. Cobb’s 1830 material was
probably not a straight Code 1 as Angell’s was, since Cobb’s later material (part of which I have seen) appears to rate Code 3, as discussed elsewhere. Angell’s material undoubtedly produced veritable phalanxes of functional illiterates. See further entries on Angell’s material in Appendix C.)

1830 The North American Spelling Book or the Youth’s Instructor in the Art of Spelling and Reading, Rev. J. G. Cooper, Pub. Towar, J. & D. M. Hogan, Philadelphia; Hogan & Co., Pittsburgh. (Harvard copy. Very poor - only as high as Code 5 because syllabary included. “The work was prepared several years ago as will appear from the date of the recommendations.... I purpose shortly to furnish you with a second part, designed as a connecting link between the spelling book and those consisting exclusively of reading lessons.” Remarks dated July 20, 1830.)

1830 The American Primer; or First Book For Primary Schools. Burlington: Chauncey Goodrich. 1830. 36 pages. (This listing was given by Heartman, who said a copy is in the Library of Congress and its Preface states, “The following work might, perhaps, have been more justly entitled a new edition of ‘Lamb’s Primer’ etc.” See the entry in this appendix under 1828 for Lamb’s primer.)

1830 Pelham’s Primer; or Mother’s Spelling Book For Children At a Very Early Age, by M. Pelham, published by S. Babcock, Church-Street, New-Haven. (A copy is in the New York Public Library and Columbia University Library, and it is listed by Heartman under item 123. His item 147 lists the same material in an 1823 edition, also in the New York Public Library, The Primer: Or, Mother’s Spelling-Book For Children, At A Very Early Age. By M. Pelham, author of the Mother’s First Catechism. Second American from the ninety-seventh London Edition. New York: Published by G. C. Morgan, Pearl-St. Franklin Square. Gray & Bunce, Printers. M. Pelham was the pseudonym for Dorothy Kilner, whose material has been discussed in this history. Her speller rates a Code 7 because of its heavy analytic phonics, despite its somewhat abbreviated syllabary.)

1830 The Child’s Picture Defining and Reading Book, Rev. Thomas Hopkins Gallaudet, Principal of the American Asylum for the Education of the Deaf and Dumb. Published by H. & F. J. Huntington, Hartford; Richardson, Lord & Holbrook, and Carter & Hendee, Boston; Jonathan Leavitt, New York. (Harvard copy. Bookplate states, “The Essex Institute Text-Book Collection, Gift of George Arthur Plimpton of New York, January 25, 1924.” On the flyleaf opposite in ink is shown, “Miss Elisabeth A. Brooks from her Father, Dec. 12. 1830.” The first “s” in the cursive “Miss” is the outdated long “s,” confirming it was written by an adult who would have learned to write twenty or thirty years previously. The back cover was headed, “Juvenile Books, for Infant and Primary Schools. Published by H. and F. J. Huntington, Hartford.” It advertised four of the Hartford publisher’s books. One was The School Dictionary by the Rev. Wm. W. Turner, Instructer (sic) in the American Asylum, which carried a long endorsement from Gallaudet. Another was Peter Parley’s Method of Teaching Geography to Children, with a quoted endorsement from the American Journal of Education. William Russell was the editor of the American Journal of Education from its beginning in 1826 to 1830, but during 1830 the title was changed to American Annals of Education and its second editor became Gallaudet’s former assistant, William Channing Woodbridge, who had been an instructor at Gallaudet’s school. Peter Parley was the pseudonym of the publisher, Samuel Griswold Goodrich, who became the third editor of the journal immediately after Woodbridge and who also wrote a “meaning” series of readers in which one story belittled Webster’s speller, as discussed in this history. Another text advertised on the back cover was The
Child’s Arithmetic, by Ingr....(letters blurred) Cobein, “First American from the Second London Edition, Improved and enlarged by the Rev. William W. Turner, A. M., Instructer in the American Asylum,” carrying a paragraph endorsement from Gallaudet. (Note the resemblance in the title to Gallaudet’s The Child’s Picture Defining and Reading Book, suggesting a kind of American Asylum series.) The last was the National Spelling Book by B. D. Emerson, Principal of the Adams Grammar School, Boston. Emerson’s speller was being promoted widely as a replacement for Webster’s. The presence on the advertising back cover of Emerson’s spelling book and of all the ties to Gallaudet and the Journal of Education confirms that the publisher, H. & F. J. Huntington of Hartford, was handling the activists’ materials.

Furthermore, the widespread publication of Gallaudet’s book the first year it appeared, even showing TWO publishers in Boston, suggests it had been widely and successfully promoted even before it had appeared in print. The ink inscription on the flyleaf which is dated December 12, 1830, proves that the copy showing those other publishers had to have been in existence in that first year of publication. As shown elsewhere in this appendix, two of those other publishers, Richardson and Leavitt, handled other noteworthy “meaning”-oriented reading materials which helped to displace Webster’s “sound” speller as the beginning reading text in American schools.

Gallaudet’s The Child’s Picture Defining and Reading Book was not a book for beginners, but was meant for both deaf and hearing children. It contained pure Code 1 “meaning” philosophy. A “Note” on the copyright page read, “This little volume, although originally prepared for the Deaf and Dumb, will be found to be equally adapted to the instruction of other children in families, infant schools, common schools, and Sunday schools.”

Gallaudet’s written comments on reading instruction are few. Therefore, his comments in the “Preface” to this reader are of importance. It will be evident that some of his themes are like those of so many other activists of the period who have been quoted elsewhere in this history. His comments on “progress” parallel those of Angell and others, and his comments on “science” in education and the use of “sense” objects in education parallel those of Keagy, and, to some degree, Pestalozzi. Although lengthy, most of the “Preface” is quoted below because of its importance and its relative unavailability to most researchers.

The 1830 comments of the American teacher of the deaf, Gallaudet, should also be compared to the remarks made by a teacher of the deaf in England, Charles Baker, Headmaster of the Yorkshire Institution for the Deaf and Dumb, which have been quoted at length in the British section of this history. Baker began teaching the deaf about 1831 and in 1864 said he had promoted the deaf-mute method for hearing children for 30 years. Gallaudet first openly promoted the deaf-mute method for hearing children in America in a paper he contributed to the journal in 1830 after Woodbridge, his former assistant, took it over. Woodbridge’s American Annals of Education was apparently widely read in England. Gallaudet began his promotion of the deaf-mute method for hearing children in America in 1830, about four years before Baker began his promotion of the deaf-mute reading approach for hearing children in Great Britain. Yet Baker made no mention of Gallaudet’s parallel activity in America at about the same time, despite the fact that written records demonstrate that a lively trans-Atlantic traffic existed at that time in ideas on education. Baker’s paper is filed with other papers in a volume which was stamped by the British Library July 14, 1864. Baker’s paper is titled, On Teaching Reading, - A Paper Read to the Church Schoolmasters’ Association, Doncaster, London: William Macintosh, 24, Paternoster Row, and is dated March 31, 1864. It is discussed at length in Part 6 of this history.

Gallaudet’s comments follow:
“This little book was originally designed for the use of some of the younger classes in the Institution with which the author is connected. His experience, for a long course of years, in the instruction of the Deaf and Dumb, has fully convinced him, that most, if not all, the principles on which the gradual development and cultivation of their powers, both intellectual and moral, is conducted, may be applied with equal success, in the education of children and youth who can hear and speak. That enthusiasm in his profession, which it is well suited to inspire, has led him to go still farther in his speculations, and to think, that if these principles were thus applied, a new era would commence in the whole process of education, from its earliest stages upwards and that a system of instruction might be devised, with a regular series of books corresponding to it, more true to Nature, and better adapted to the rapid and successful cultivation of both the mind and heart, than any other now in existence. While, within the last half century, so many astonishing discoveries and improvements have been made in the various sciences and their practical applications to the business of life, does it comport, either with the past history, or the future prospects, of our species, to suppose, that the science of education, on which, in fact, these very discoveries and improvements depend, has already attained to that degree of excellence of which it is susceptible?

“In all the arts and sciences, experiment has led the way to improvement. Results have been laboriously obtained and carefully examined; then compared, arranged, and classified. Thus Genius has embraced within its scope of clear and extensive vision a host of particulars, noticing with rapid and intuitive glance their respective resemblances, and differences, and relations; and perceiving these few and simple principles by which the causes of the various phenomena that they exhibit, are to be explained. Invention takes these principles and applies them to the production of new and wonderful results. Is not this the only way in which the science of education can ever be elevated to an equality of rank with other sciences, and have its elementary principles accurately defined and successfully applied? Why, too, it may be asked, is the discovery of elementary principles in every other science - in Geometry, for instance, considered as entitled to rank among the highest efforts of genius, while those that relate to the science of Education continue to be so much overlooked and neglected?

“But the preface of a child’s book, is hardly a suitable place for a philosophical disquisition; and the remainder of it must be devoted to stating the object for which this little work is designed, and the manner in which the author would recommend it to be used. It is formed on two simple principles, - that children almost immediately refer to some sensible object, or visible occurrence or transaction, in their first efforts to acquire the meaning of words, and even those whose import is of an intellectual and elevated kind; - and that the language of pictures, being founded in Nature, and thus a Universal Language, may, like the signs and gestures and pantomime employed in the instruction of the deaf and dumb, be used, as a key or translation to illustrate and explain written or printed language, and this probably to an extent that has, hitherto, scarcely been imagined.

“The first part of the book is intended to show, how a reference to some sensible object, with a suitable explanation upon the part of the teacher, is vastly better adapted to give a child the precise import of terms, than the common, and very absurd mode of attempting this by definitions in a dictionary. The youthful mind needs illustrative examples, and a gradual induction of particulars, in order to enable it to understand the meaning of words.

“It will be seen, that with each of the pictures of sensible objects, are associated an adjective, a verb, and a short phrase in which most of the pronouns and prepositions are introduced and the various tenses of the verbs illustrated. These should all be made intelligible to the child by oral explanation on the part of the instructor. For instance, suppose we refer to the word tent. The
child sees the picture of a tent. This will aid him in forming a just conception of it. But this is not
enough. Let the materials out of which a tent is formed be described to him; the manner of
erecting it; its size, and its design. Then explain to him, that a tent is a temporary dwelling; unlike
the house in which he lives for months and days and years; that it is put up often only for a night;
and so on, referring to all the particulars which constitute the correct import of the word. Give
him another example of the use of the word temporary, and another, and another; endeavouring
all the while, to make these examples of a more elevated and general kind. Then ask him to
furnish some examples. If they are well chosen, let him know it; if they are not, correct his
mistakes. Proceed in the same way to explain the word remove; illustrating its meaning, at first,
by the removal of a tent, and then, of other objects. After this, as before, let the child furnish
illustrative examples. Explain the import of the little phrase. Then a variety of questions may be
asked with regard to each of the single objects, of which some examples will be found prepared,
at the end of the first part, as a specimen.

“The first part of the book may also be used for lessons in spelling; the child learning to spell
the names of the objects, the adjectives, the verbs, and the words in the phrases. He may thus,
also easily be taught the different parts of speech, by being told which are called nouns,
adjectives, verbs, &c.

“It will be noticed that most of the adjectives are contrasted with each other, - a very useful
mode of teaching their meaning, as is abundantly exemplified in the instruction of the deaf and
dumb.

“The second part of the book consists of reading lessons, each explained and illustrated by an
appropriate picture. Let the child attempt the reading of these lessons, without any assistance on
the part of the teacher in regard to the import of the words contained in them. The object here is,
to exercise the thinking powers and ingenuity of the child, in endeavouring to understand the
story, by the mere inspection of the picture. After he has done this, the inquiry should be made, if
there are any words or phrases which he does not fully understand. If so, they should be explained
to him by illustrative examples, as in the case of the pictures of single objects. Then let a variety
of simple questions be put to him, with regard to the agents, the actions, and the occurrences
described, such as, “Who is that man?” “Where is he?” “What is he doing?” “Why is he doing
it?” and the like.

“A regular set of questions has not been prepared for the stories in the second part of the
book. The author would rather leave this to the ingenuity of the teacher....

“It ought to be stated, that this book is intended for such children as are already able to read
what is written in a very simple and easy style.

“Should this experiment prove to be conducive to the object which the author had in view, he
may attempt a primary book, on the same plan, and, indeed, a series of books, embracing subjects
of a more elevated and important kind.”

The resemblance to Keagy’s material quoted earlier is very great. Gallaudet later wrote the primary
book, The Mother’s Primer, in 1835, and he wrote a series of books on Scripture history, two of which are
shown in Early American Textbooks, on page 247. One is The History of Jonah, American Tract Society,
N. Y., 156 p., no date, and the other is Scripture Biography for the Young, 200 pages, American Tract
Society, New York, 1896 (obviously published long after his death). Gallaudet’s The Child’s Picture
Defining and Reading Book of 1830 also has page-length Scripture stories at the end, with illustrative
pictures. What is surprising since Gallaudet was a Christian clergyman is that his Scripture material seems
primarily (and perhaps only) to concern the Old Testament. Was Gallaudet an orthodox Christian clergyman? His fellow clergyman of the general period, Ralph Waldo Emerson, certainly was not. Emerson more appropriately should be called a pantheist. Gallaudet’s The Child’s Picture Defining and Reading Book was discussed by Blumenfeld in The New Illiterates. Clifton Johnson on p. 86 of 1904 Old-Time Schools and School-Books (1904, 1935) duplicated a page. See later entries on Gallaudet of 1835 and 1840.)

1830 Key to the First Step in Teaching Children to Read, According to the Lesson System of Education. First American from Third Edinburgh Edition. Pub. 1831 by Jonathan Leavitt, New York; Crocker and Brewster, Boston. (Harvard copy. Code 1 and can only be described as ghastly. It is a teacher’s guide, teaching words with no reference to sound, right after the alphabet. All is “reading for meaning” and the text contains more questioning than even one of W. S. Gray’s Scott, Foresman 20th century first-grade teacher’s guides.)

1830 Ninth Edition of 1826 Franklin Primer. (See earlier entry. Library of Congress copy: syllable tables replaced with syllabicated whole-words as examples of only some syllables: “ba-by, la-zy,” etc., increasing further the move away from “sound” and toward “meaning” for teaching beginning reading. Code 3.)

“A series of first lessons with cuts for little children designed to prepare them for entering upon the study of the first part of the Common School Manual. It will also be found well adapted to the purposes of instruction in infant schools and private families.”

The 1832 copy changed the name of the upper level material from the Common School Manual to the National School Manual, stating:

“This work of which the Clinton Primer is the incipient branch will include nearly 1400 pages and embrace a comprehensive and practical system of English education, the cost of which will be about three dollars. The parts of the work will be retailed at the following prices: primer, 48 pages, 6 1/4 cents; 1st part, 108 pages, 18 3/4 cents; 2nd part, 302 pages, 62 1/2 cents; 3d part, 380 pages, 75 cents; 4th part, 550 pages, $1.00; Atlas, 75 cents. Primer with the first, second and third parts are completed and now(?) offered for sale by ALL booksellers.”

Bartlett’s materials certainly sound like a reading series, or like a series meant to replace existing reading series, but no other information has surfaced concerning any part of it except The Clinton Primer. The 1832 copy was published by Carey & Lea at Chestnut Street, Philadelphia and stereotyped by James Connor. Heartman lists an 1830 edition “Stereotyped by James Connor. New-York: Published For The Author. 1830,” on which Heartman stated that the Library of Congress had only the title page. That suggests the copy Heartman cited originally came from the old Pennsylvania copyright office, which apparently was the source for the many spellers published in Pennsylvania on which only title pages reached the Library of Congress. However, the Library of Congress also has the complete Carey & Lee copy, with the note, “Rec’d 10/27/1830.” That copy apparently reached Washington in 1830 directly from the publishers.

1830 The Progressive Reader or Juvenile Monitor, Concord, N. H. (Listed by C. Johnson, p. 248. Johnson also discussed on pages 298-299 Adams’ The Monitorial Reader, published in Concord, New Hampshire, in 1839. That book may have been related to this 1830 book. It is unlikely that the 1839 text
was related to the 1831 Monitorial Primer by J. A. Prest, listed later, which was presumably using the term, “monitorial,” in connection with the schools of that name. An 1806 reading book for older students is listed in Early American Textbooks on page 50, and its title page is reproduced on page 103. It was entitled The Young Gentleman and Lady’s Monitor, and English Teacher’s Assistant: Being A Collection Of Select Pieces From Our Best Modern Writers... by J. Hamilton Moore, “Author of the Practical Navigator, and Seaman’s New Daily Assistant,” New York: Printed by A. Forman. The 1806 book had no apparent connection to the 1830, 1831 or 1839 books. The term, monitor, obviously did not have to relate only to monitorial schools.)

1831 Introduction to American Popular Lessons, By the Author of American Popular Lessons, Pub. of 9th edition, Roe, Lockwood, N. Y.

(Harvard copy. See under 1827 for Sequel to American Popular Lessons, which indicates obviously that the series dates at least as far back as 1827 and probably farther. Introduction to American Popular Lessons is not a beginning book. The author was Eliza Robbins. The publisher advertised on this 1831 copy Robbins’ The First book, or Primary Lessons, original publishing date unknown, making this a four-book series with Introduction to American Popular Lessons, American Popular Lessons, and Sequel to American Popular Lessons.

Early American Textbooks lists American Popular Lessons, published by Roe, Lockwood, New York, in 1829 (251 pages) but credits it to Barbauld, Mrs. (Anna Letitia) and Miss (Maria) Edgeworth. The probability is that Eliza Robbins reproduced many of their stories, which was the common practice in such readers. That book obviously was published originally before 1829, the date of the copy in Early American Textbooks.

Robbins also wrote The School Friend published by Robinson and Franklin, Successors to Leavitt, Lord & Co., New York in 1839. As a teacher, she praised a German (128th edition) text from Saxe-Weimar, and imitated it in her 1839 text. In this upper-level 1839 book, she also quoted “Cousin,” a pivotal change-agent. Therefore, Eliza Robbins seemed “au courant,” so she probably used a “meaning” approach in her beginning level book of unknown date, Robbins’ The First book, or Primary Lessons, which was in print by 1831.)

On the title page of this 1831 book, Prest wrote:

“To the American Institute of Instruction (established at Boston), this effort to be useful is respectfully inscribed, by one of their members, THE AUTHOR.”
The connection of this “meaning” text with the influence of the activists in Boston is clear. The writing of such a Code 2 “meaning” text for American beginners would have been almost inconceivable only seven years before, in 1825, the year before the organization of such institutes began. Keagy had left his Harrisburg monitorial school by 1831. It is possible that Prest was a teacher at that Harrisburg monitorial school in 1831 when he wrote his “monitorial” primer, since his book was printed in Harrisburg.

1831 The Picture Primer, Intended as A First Book for Children, and as an Introduction to the Picture Reading Book, By A Friend to Youth, Pub. S. Babcock Co., New Haven. (Harvard copy. A weak Code 5, actually a weak speller. An 1833 copy of The Picture Reader - note the difference in title - advertised “Juvenile and Toy Books,” including Sherwood’s Primer, or First Book for Children, probably that of the prolific English author of children's books by the 1820’s, Mrs. Sherwood, which is entered here under 1821; Blair’s First, or Mother’s Catechism; South Carolina Primer, Child’s First Book. No other information is available on those titles, which presumably resembled The Picture Primer, above, which was also included in the list on the Picture Reader. The Picture Primer itself, above, advertised for sale The Picture Alphabet, or ABC in Rhyme, “one-cent toy.” The Picture Primer showed that the company sold many such toy books, including The Infant Primer, or Picture Alphabet, “two cent toy,” and Child’s First Lessons, or Infant Primer, one-cent toy. Picture Primer and Picture Reading Book were not listed with their toy books so were presumably meant for serious home or school instruction. Harvard library also has a copy of Little Lessons for Little Learners, in Words of One Syllable, published by S. Babcock of New Haven in 1840, but it is a story book, not a beginning book.)

1831 Juvenile Lessons, or the Child’s First Reading Book, J. K. Smith, Pub. 1832 J. and J. W. Prentiss, Keene, New Hampshire. (Harvard copy. Not for beginners - nice content. Referred to a book he quoted from, Juvenile Miscellany. Company also published Easy Lessons in Reading “By Rev. Joshua Leavitt,” listed previously under 1823. See 1847 entries for a series by Joshua Leavitt, possibly the same man. Preface said Smith’s intent was to use short words as children did not understand long words (“the meaning”) and lost interest.)

1832 Barnum's Introductory School Books, Specimens of Barnum’s Introductory School Books, H. L. Barnum. (Harvard copy. Reading material was Code 1, and other subjects were covered. Took a “core curriculum” approach to all subjects. Exceedingly poor materials.)

1832 Blake’s First Reader - A Class Book for Schools, To Be Used Next After the Spelling Book. By the Author of the Second Reader, the Historical Reader, and the High School Reader. On the cover: pub. 1838 John F. Brown, Concord, N. H.; on the title page: pub. 1832, Horatio Hill, also with the changed phrase: After the Spelling Book or in Connexion with It. (Harvard copy. Used a greatly outdated print of a man in knee trousers and wig, which suggests cheap publishing.

According to Nietz, p. 61, Blake’s Historical Reader had been published in 1822. Early American Textbooks on page 77 reproduces the cover of The Historical Reader. It reads, “The Historical Reader, Designed For The Use Of Schools And Families On A New Plan. By Rev. J. L. Blake, A. M., Minister of St. Matthew’s Church, and Principal of a Literary Seminary, Boston. Concord, N. H., Published by Horatio Hill & Co.” On page 78, Early American Textbooks dated that edition of The Historical Reader to 1825. On the back cover of Blake’s First Reader, this appeared, dated October, 1837, Concord:

“This little book has recently been adopted into all the primary schools in the City of Boston, also at New York City and Cincinnati, Ohio, and is also extensively used in the State of New Hampshire.”
The publishers also sold The Infant School Alphabet and Marshall’s New Spelling Book.

1832 First Book for Primary Schools, Reprinted from One Prepared by John Wood, Esq., for the Edinburgh Sessional School and Prefixed to the Boston Primary Spelling Book, at the Request of the Committee, Pub. by Munroe and Francis, Boston (Harvard copy, Code I. See 1826 entry for a different 1832 edition of the same material with different arrangement of the titles.)

(This is not a reading text. Numerous copies with publishing dates over many years appear on the Harvard bookshelves. Early American Textbooks shows a 39th stereotype edition in 1843, a new stereotype edition from the 55th edition in 1850, and a revised and enlarged edition in 1872. Yet, not long ago, an “expert” made the claim that, until about World War II, teaching composition had not been a concern of American schools! R. G. Parker later wrote a reading series, grammar books and other books, and then with J. Madison Watson the extremely widely used Code I sight-word National Series published by Barnes. The Parker-Watson series originally appeared from 1857 through 1866. Parker also wrote Part I of Introductory Lessons in Reading and Elocution, A. S. Barnes, New York, 1852. Part II was by J. C. Zachos, who wrote the phonic material listed later. Zachos apparently wrote his phonic material after he taught beginning reading to freed slaves in the South during the Civil War and found that phonics worked far better than sight-words.

Early American Textbooks shows on page 269 that Parker wrote The Boston School Compendium of Natural and Experimental Philosophy, 6th ed. Boston, Marsh, Capen, Lyon & Webb, 1841. It was a physics text, and the same publisher also published Horace Mann’s Common School Journal. By 1842, that company became Wm. B. Fowle & N. Capen. See elsewhere in this history for comments on William B. Fowle, a promoter of sight-words. Parker used the whole-word method for teaching reading. Parker also wrote one of the new “scientific” texts (although it may, indeed, have been good) so beloved by the change-agents, and he did so considerably before 1841 when its sixth edition appeared. Parker also used Horace Mann’s publisher for his “scientific” schoolbook, at a time when Boston was full of publishers. These facts certainly suggest that Parker was a member in good standing in the influential change-agents’ circle by at least 1832, when the second edition of his composition book appeared, which later prospered so mightily. Parker’s association with the change-agents may well account for his later great success.)

(Copy in American Antiquarian Society library, and a later copy in New York Public Library. The book is rare and so obviously was seldom used. It was a pathetic Code 10, Webster’s inept attempt to meet the rampant whole-word “primer” competition by 1832 by producing his own whole-word “primer,” partly using diacritical marks. His “primer” was meant to precede his Code 10 speller, which was no longer being widely used as the beginning book in teaching reading. A truism applies to Webster’s writing his own “primer”: “If you can’t beat them, join them.” Yet, only seven years previously, in 1825, such “primers” had been unheard of! The Boston primary school curriculum of 1818 had still made no mention of such primers in its revision of 1825. The world of teaching beginning reading had been turned upside down by the government-school activists in only six years, from 1826 to 1832. Yet virtually no one today knows that it ever happened!)

1833 The Columbian Spelling-Book. Cooperstown, N. Y.: H. & E. Phinney (In Early American Textbooks, p. 115 - same as 1819 above?)
1833 The Easy Reader, or Introduction to the National Preceptor, Consisting of familiar and progressive lessons, designed to aid in thinking, spelling, defining & correct reading. Jessie Olney, A. M. (1798-1872), Pub. 1833 by Durrie & Peck, New Haven, Conn. (Harvard copy. See text of this history concerning Olney and his ties to government-school activists Holbrook, etc. This was not a beginning book, but the preface of July 20, 1833, complained about habits acquired by “reading without thinking.” Olney obviously wrote at least two sequential readers, The Easy Reader and The National Preceptor, the latter presumably published before 1833. Since Olney referred to another book of his, The Child’s Manual, that may have been the first book, probably also published before 1833, in what comprised at least a three-book reading series.)

1833 The Easy Primer, Containing Children’s First Lessons in Reading and Spelling. Pub. 1836 by G. & C. Merriam, Springfield, Mass. (Harvard copy. See earlier entries of 1828 and 1830 for the Merriam company. This Code l material is arrogant in not even referring to its dismissal of all “sound” and in its not even discussing how to teach its pure sight-word content. Its Preface said, “to excite a love for school” teachers should suggest that every parent read The Little Philosopher, or Infant School at Home, by J. Abbott, Hall’s Lectures on School-Keeping, and Davis’ Manual for Teachers of Common Schools. These texts were obviously from the same change-agent group which had been attacking Webster’s speller for the previous ten years, to which attacks Webster had so pathetically replied in print by 1826, as discussed elsewhere. Long before 1833, the change-agent group had succeeded in displacing Webster’s “sound”-approach speller with their “meaning”-approach sight-word “primers” at the critical beginning reading level. The Merriam company was not only promoting the change-agents’ works but was also publishing its own sight-word primer, The Easy Primer. Since Webster’s 1828 dictionary was the culmination of Webster’s life’s work, it certainly is inappropriate that it was the Merriam company, who had worked in clear opposition to Webster’s famous spelling book, who eventually took over the publication of that dictionary, which fact is reported in the 1828 Merriam entry.)

“This little work is designed as a suitable introduction to the ‘Sequel to the Spelling-Book.’ It is intended to be used in teaching children the rudiments of Reading and Spelling by a series of lessons address'd to the understanding as well as to the eye and memory. No words have been admitted into the Reading lessons of which the learner may not readily form a clear idea, and no ideas which he will not easily comprehend.... It is however recommended that the learner, as he spells [such words as are most common and familiar] should be required to give their meaning in his own language. The words defined will be found somewhat less familiar than those not defined, although... in common and daily use.... Spelling-Books are commonly the first books put into the hands of learners in our public schools.... they might... with equal facility and profit [learn] the Orthography of any foreign tongue, with which they are wholly unacquainted. If instead of the course usually pursued, they can be taught to associate some distinct idea with the order of the letters in each word, their progress will be much more sure and rapid.... Whether this little book shall prove a successful attempt to remove the evil complained of, experience must decide.... Cambridge, March 1833.”

Presumably S. T. Worcester, whoever he was, taught at Harvard. Perhaps the tide of literacy that had resulted from the use of Webster’s old-fashioned speller for beginners was not receding as fast as S. T.
Worcester and the others in the Boston/Cambridge area wished, so he wrote this speller and its sequel to masquerade as real spellers. His “speller” began with a disarming and complete alphabet, syllabary and phonic analogies, rating at least a code 8 on pages 6, 7, 8 and 9. However, it then plummeted to a pure Code 1 for the rest of the book. From S. T. Worcester’s advertised description of his ‘Sequel to the Spelling Book’ at the end of this book, his “Sequel” would provide more of the same deadly (and deadly dull) Code 1 approach, even though he claimed in the Preface that his Primary Spelling Book would instead make children’s “lessons incomparably more interesting.” His advertisement for that “Sequel” was followed by gushing endorsements from American Monthly Review, Cambridge; B. Abbott, Principal of Phillips Academy; H. Humphrey, President of Amherst; and S. M. Worcester, Professor of Rhetoric and Oratory there; Calvin Park, Late Professor at Brown University; J. L. Kingsley, Professor of Greek and Latin, Yale College; and C. G. Putnam, Secretary of the Salem, Massachusetts, School Committee.

A further advertisement from Lilly, Wait, & Co., at the end was of great interest:

“New and Cheap Periodicals.... One is designed for children and youth, and the other for general readers. Parley’s Magazine for Children and Youth will be published every fortnight.... About 12 English, Scotch, and Irish juvenile periodicals are regularly received to assist in the undertaking.... The People’s Magazine. This will comprise, besides many new articles, a careful selection from the London Penny Magazine, The Tourist, The Christian’s Penny Magazine, The Saturday Evening Magazine, Chambers’s Edinburgh Journal, and various other British periodicals, designed for all classes of readers, and now circulate to a prodigious extent in every part of Great Britain, surpassing any thing before known... It will be issued once a fortnight...”

That comment on contemporary journals certainly is a contradictory footnote to the illiteracy we are told was rampant in Great Britain and America before the advent of the glorious government schools, and the “meaning” method in teaching beginning reading.

1834 Mamma’s Lessons for Her Little Boys and Girls, Chiefly in Words of One Syllable, Embellished with Cuts, Pub. Cory and Daniels, Providence, R. I. (Harvard copy, Code 1 if for beginners. Has alphabet and little reading lessons. Probably meant for home use. It was probably meant as a beginning book, considering the date of its publication.)

1834 Peter Parley’s Spelling Book, by “Peter Parley” (Samuel Goodrich, the prolific publisher and author discussed elsewhere in this history. Speller discussed by Nietz, page 26, and illustrated on page 27. It looks like a Code 2 speller.

The Library of Congress has Peter Parley’s Primer, 1835, hard to rate but perhaps Code 3, since it starts with alphabets and incomplete syllabaries but is afterwards a straight Code 1 book. The syllabaries could, of course, be ignored in teaching.

Harvard has Little Reader for the Use of Schools, Peter Parley, published by R. W. Pomeroy, Philadelphia, copyrighted in Massachusetts in 1836. Peter Parley’s series of readers advertised on the Harvard copy consisted of: Parley’s Picture Book, or First Reader (possibly the same as Peter Parley’s Primer); Parley’s Little Reader; Parley’s Common School Reader; Parley’s School Library, or Universal Reader.

The series was revised by Noble Butler about 1857 (Nietz, page 80) and published by Morton of Louisville, Kentucky. It was still in print by Morton in 1928, per the United States Catalog and appears always to have been almost a pure Code 1 approach, The series published by Morton based on the Parley material is discussed at length in Appendix C.)
1834 The Young Tyro’s Instructor, New York (Mentioned by C. Johnson, p. 224 and N. B. Smith, p. 66. From its description, it sounds like a low code book.)

1835 Emerson’s Progressive Primer and Fourth Class Reader, A First Book for Children, To Be Used Introductory to His Spelling Book and Third Class Reader or Similar Books, by Benjamin Dudley Emerson. Published by Carter, Hendee & Co., Boston

(Harvard Copy. Code I “meaning” material, obviously meant as a beginning step in learning to read, to replace spellers at that level. See 1828 and 1846 entries for Emerson. The back cover of this book advertised Emerson’s First Class Reader, Emerson’s Second Class Reader, Emerson’s Third Class Reader, Emerson’s Progressive Reader, and mentioned his spelling book. Harvard library has a copy of his Third Class Reader, which carries an ink notation stating it was published in 1820. That is highly improbable, particularly since its cover carries a picture, which was not generally a publishing practice as early as 1820. However, that Third Class Reader, which was the lowest in the Emerson series when it was originally published, obviously came out some time before 1835 and was never meant for beginning readers. The 1835 Primer and Fourth Class Reader stated, “These works are prepared by B. D. Emerson, late Principal of the Adams Grammar School, Boston, and Author of the National Spelling Book and Pronouncing Tutor, with progressive reading lessons, a work extensively known, and one of the most popular used in American schools.”

Emerson’s 1835 “primer” confirms the banishment of the spelling book, particularly Webster’s Code 10 speller, from beginning reading instruction by that date, and its replacement by that new invention, the sight-word so-called “primer.” Early American Textbooks lists a copy of Emerson’s The Second Class Reader printed in Philadelphia by Crissy & Markley in 1854, so his materials were used over a long period. See the 1846 entry for his apparently later speller published by Hogan and Thompson of Philadelphia. His books were not listed in the 1876 American Catalogue so apparently were out of print before 1876.)

1835 National Primer or Primary Spelling Book Upon a New Plan, By Which Young Children May More Easily Learn Words of Two Syllables Than They Have Generally Learned Words of One Syllable, (No author cited.) Published by Wm. Pierce, Boston. (Harvard copy. A Code 8 speller, with complete syllabary, vowels later, and McGuffey-like reading. Yet, if taught as recommended in the following instructions, it was turned into a memorized Code 1 sight-word book, with some words learned even before the alphabet was learned. The teacher was specifically told not to let children attempt to sound out words for themselves:

“In teaching, the instructor should first read the lesson to the pupils, over and over, both the reading and spelling lessons. They should be frequent, and very short. The words of two letters may be resorted to, before the alphabet is perfectly obtained.”),

In this book, Gallaudet did not begin with the alphabet, and only taught it later from the base of whole sight-words which the book taught first.

As discussed in this history, Gallaudet’s Code I book for beginners with normal hearing used a rigidly controlled sight-word vocabulary, and generally observed the 90% frustration level (using 90% of “old” words when introducing “new” words). This approach was obviously based on the deaf-mute “guessing” method. It is remarkable that Gallaudet’s book appeared just about ten years after Keagy’s remark in his Pestalozzian Primer written in 1826 that it would take about “ten years” for the public to be ready to use the presumed benefits of the pure deaf-mute “meaning” approach to teach hearing children to read. Keagy had also referred in 1826 to the “engine of reform.” That change-agent mechanism appears to have been active in producing many of the “meaning” reading methods listed here for the years between 1826 and 1835, but Gallaudet’s was apparently the first “primer” to drop completely the teaching of the alphabet as the first step.

Gallaudet had a brief appointment at New York University, and his use of the title, Mother’s Primer, for his 1835 book possibly had some connection with The Mother’s Magazine published in New York. Page 112 of Early American Textbooks lists an 1841 288-page edition of The Mother’s Magazine published by S. Whittelsey, Brick Church Chapel, New York, on which A. G. Whittelsey was the editor, and an 1843 382-page edition on which A. G. Whittelsey and D. Mead were editors, also published by Brick Church Chapel, New York.

Teaching Reading, A Phonic/Linguistic Approach to Developmental Reading, by Charles Child Walcutt, Joan Lamport, and Glenn McCracken, with Robert Dykstra, published by Macmillan Publishing Co., Inc., New York, in 1974, reproduced material from the reading controversy in Massachusetts in the 1840’s. It showed that the Boston Primary School Committee had reported favorably on Gallaudet’s The Mother’s Primer in November, 1837, and Horace Mann endorsed it enthusiastically in his 1838 Second Annual Report. Boston used it for six years. In Mann’s Seventh Annual Report, he praised the sight-word method warmly and denounced any method beginning with the alphabet.

In 1844, an Association of 31 Boston Schoolmasters authorized a rebuttal of Mann’s position, which rebuttal was written by Samuel Greene of the Phillips Grammar School. Mann’s reply showed that his support for the sight-word method had been inspired by Gallaudet’s Mother’s Primer. Samuel Blumenfeld’s The New Illiterates reports thoroughly on that Boston controversy.

Concerning Gallaudet, also see entries of 1830 and 1840.)

(This was listed by Heartman, who gave no date for this item 183, saying it had 35 pages, and that its cover read, “The Washington Primer. Philadelphia. Published By G. Strong, No. 44 Strawberry Street.” Heartman said that another issue came out in 1836, implying that the issue he described as having no date had been published before 1836. He said a copy was held by the Historical Society of Pennsylvania, in Philadelphia. Its content is unknown, but its date, 1836 or probably earlier, and its description as a primer meant as a first book for children, certainly imply that it is one of the many post-1826 books that used the “meaning” approach for beginners.)
1836 The Scholar’s Progressive Etymological and Spelling Book, by [Samuel or John] Gummere. (Referred to as Samuel Gummere by Nietz on page 26 of his book, on which page he gave the 1836 publishing date. Gummere’s books (no first name given) were advertised on the back cover of Harvard’s 1846 copy of John Comly’s 1842 A New Spelling Book, published by Kimber & Sharples, Philadelphia. It stated Gummere’s Progressive Spelling Book contained “Spelling, Pronunciation and Derivation. Extensive tables of words deduced from their Greek and Latin Roots.” Kimber & Sharples in 1846 also published Gummere’s books on astronomy and surveying, according to the advertisement on the Comly text. The astronomy and surveying texts are listed on pages 232 and 253 of Early American Textbooks but the author’s name is given as John Gummere, not Samuel Gummere.)

1836-1838 McGuffey Readers, Original Edition, William Holmes McGuffey and Alexander Hamilton McGuffey, Published by Truman and Smith, Cincinnati, Ohio (Mott Media of Milford, Michigan, have reproduced this first edition. Two other major editions were made, one in 1879 which is the most commonly sold today, and one in 1901 which is virtually unknown. These three editions, the changes in company names, some other materials published by these publishers, and the background on this series is discussed at length elsewhere in this history and in Appendix C. The series was originally a sight-word series, but two years after it began to appear, Alexander Hamilton McGuffey wrote a phonic speller, stating it should be used before the readers. The series then technically became a “sound” approach, but it is highly doubtful that the speller was used as the first book in most places by 1840, despite Alexander McGuffey’s good advice in 1838.)

1836 The Young Pupil’s Second Book, Lovell, New Haven (Per Clifton Johnson, p. 261. On page 300, he mentioned Lovell’s The Young Speaker, New Haven, 1844. See later entry for Harvard 1855 copy of Lovell’s Progressive Readers, No. 1, by J. E. Lovell. The 1836 copy was apparently part of the first series, and the second Code 7 phonic series dated from 1855 to 1857, according to the 1876 American Catalogue, and it was still in print in 1876. Whether the 1836 series was phonic is not known but appears unlikely.)

1836 Town’s Spelling Book, Designed to Import a Distinct Idea While Learning Every New Word, by Salem Town (1779-1864). (Harvard copy. Published or sold at a long list of New York State locations, plus Boston and Philadelphia. See entry under 1847 for an apparent revised edition, and the entries for his readers. Nietz said (p. 27 and elsewhere) that Salem Town was principal of Granville Academy from 1807 till 1822 when he observed students had trouble with Greek and Latin derivations, so he wrote Town’s Analysis of Words (prefixes and suffixes, etc.) in 1835, and the next year his Spelling and Defining Book, Being an Introduction to Town’s Analysis, followed by his Speller and Definer in 1847, Progressive Speller by Town and Holbrook in 1859, and Town’s New Speller and Definer in 1863. Nietz said that was still in print in 1890. The title Nietz gave for Town’s 1836 book is different from the Harvard copy, but is apparently the same book which was obviously very widely published.)

1836 The Little Franklin, Teaching Children to Read What They Daily Speak and to Learn What They Ought to Know, By (my note not clear), Published by S. Babcock (Presumably in New Haven. New York Public Library has a copy in its rare book room about which I made pencil notes:

“Preface. The following lessons begin with words, for the most part of one and two syllables and with subjects familiar to children. The desire is to amuse and please the pupils while they are learning to read, and to make them familiar with words of daily use and with their true spelling.
These lessons are also intended to impress upon these young minds some truths which may be useful in the common affairs of life. Dr. Franklin was an eminent teacher of common sense...."

This “meaning”-oriented text probably had no connection with the 1826 Franklin Primer and was probably named after Benjamin Franklin. See other books published by S. Babcock.)

1837 or Before - Cardell’s Spelling Book - On the back cover of The Infant School Primer, which Mahlon Day published in 1837, Mahlon Day of New York listed “School Books” which he sold in twenty-one categories. The first was “SPELLING BOOKS, by Webster, Marshall, Burhans, Bentley, Bolles, Cardell, Cobb, Cummings, Emerson, Hazen, Jones, Peter Parley, Picket, Sears, Worcester, Wood.” Next came “READING BOOKS - all the varieties...” No other material has surfaced on a spelling book by someone named Cardell which was in print in 1837. Mahlon Day also advertised a grammar by Cardell, in his list of grammars for sale.)

1837 (approximate date) Sigourney’s Girl’s Reading Book and Boy’s Reading Book. According to C. W. Bardeen in his 1893 report at the Chicago World’s Fair on educational journals in New York, The Common School Assistant of J. Orville Taylor had listed these books among the texts available after 1837 from Taylor’s American Common School Union, New York City. See 1844 and 1846 entries on Lydia Sigourney, a member of the household in which was the first deaf-mute child with whom Galladet had contact, as discussed elsewhere.

1837 Infant School Primer and Arithmetic Tables in Verse, With a Simple Catechism for Infant Schools, Suited to Children of Four or Five Years of Age, Published by Mahlon Day, New York

(Possibly Code 3, a mish-mash mess and obviously very cheap. However, this book was the predecessor to the Cooledge company’s obviously cheap primers advertised for school use, to precede Webster’s speller. Cooledge began publishing Webster’s speller probably shortly after Webster’s death. See the discussion in this history on these materials. The back cover read, “Mahlon Day, at his long established stand, No. 374 Pearl st., a few doors above Franklin Square, has for sale, in quantities or by retail, the best editions of School, Classical and Miscellaneous BOOKS, INCLUDING toy books....”

Cooledge’s 1839 United States School Primer showed Cooledge’s location as “Second Story of M. Day & Co.’s Book Store,” so Day apparently had expanded by 1839, becoming “M. Day & Co.” Heartman lists as item 181 The United States School Primer, giving Cooledge’s address as 323 Pearl Street and the date of The United States Primer as 1830. Obviously that is wrong, since Coolege almost certainly was not at that address in 1830. By 1840 Cooledge had moved to 323 Pearl Street. Judging from Heartman’s entries, Mahlon Day was located at No. 376 Pearl Street at least from 1825 to 1832, and in business at least from 1815 to 1836. The correct address, however, is apparently 374 Pearl Street which was listed by Mahlon Day on his 1837 Infant School Primer. Day remained in business to at least 1839, when Cooledge showed that address as M. Day and Co.’s Book Store. The toy-book publisher/book store owner, Richard Marsh, was at that address by 1845 or before, since Marsh published The Mother’s
Primer (not Gallaudet’s) with that address in 1845. Possibly, however, Marsh had bought out Day about 1839 and did not change the name of the publishing company/store to his own name until some time after 1839.

Early American Textbooks listed on page 70 “The Infant School Primer. Philadelphia: Thomas T. Ash & Co., n.d. [22 p.]” The probability is that it had nothing to do with Mahlon Day’s material, but most probably appeared about the same time, during the 1830’s.

1837 The Primary Reader, William Bentley Fowle, Late Principal of the Boston Female Monitorial School. Pub. 1843 by William B. Fowle and N. Capen, Boston.

(Harvard copy. Most selections were Fowle’s own. Was he related to Bentley Rensselaer? Fowle also wrote The Common School Speller of 1842, recommended by Horace Mann, and the 1824 speller listed earlier, as well as other books. The Primary Reader is shown in Early American Textbooks with an 1840 copy published by Henry B. Williams, Boston. See other entries for Fowle in this listing, and comments on Fowle in the body of the history.)

1837 The Child’s First Book, Comprising Exercises with the Alphabet on an Improved Plan Adapted to the Capacity of small Children, By a Teacher. Published by R. White and Sold by the Booksellers Generally. (Harvard copy. NO “letters of recommendation” on this excellent, Code 10, book, which would work today. A very thorough phonic approach, and comprehension questions on selections in the latter part of the book.

“Prefatory Notice: This book is not a competitor of the spelling book, but is THE CHILD’S FIRST BOOK, or INTRODUCTION to such a work. The difficulty of learning the young child the letters arises wholly from the ... method of teaching the alphabet by course,...which difficulty is remediated by a good arrangement of the alphabet....”

1837 The Juvenile Primer and Child’s Own Progressive Guide to Learning, Carefully Arranged on a New, Simple and Interesting Principle, Published by Bayly and Burns, Baltimore

1838 My First School Book for Reading and Spelling, By A Friend of Mine [Josiah F. Bumstead], Published by T. R. Marvin, Boston Inside Title: My First School Book to Teach Me to Read and Spell Words and Understand Them. (Code 1. Harvard copy of 1851. Harvard’s 1871 copy is shortened and somewhat changed in the section, “To the Teacher,” and slightly different elsewhere. The book had an 1852 revision which stated that its multi-syllable spelling words had been divided between syllables. Both the 1851 and 1871 copies quoted the following above the copyright notation. The “third and fourth classes” it mentioned were the beginning and lowest classes in the primary school:

“At a meeting of the Boston Primary School Committee, held on the 4th instant, it was voted that the book called ‘My First School Book’ be introduced into the Primary Schools for the use of the third and fourth classes. Joseph Curtis, Secretary. Boston June 5, 1839.”
The section, To the Teacher, began with the sla/sleigh story quoted by Nila Banton Smith, which belittled learning to read by sound. However, the 1851 Harvard copy of the 1838 text included an opening paragraph which was omitted in Harvard’s 1871 copy of the 1838 text, reflecting the fact that the 1838 comments about the use of the syllabary would have become meaningless by 1871 since the syllable method was forgotten by that time. The 1851 section, To The Teacher,” read:

“A little boy, who had been a long time plodding his dreary way through the alphabet, and had finally reached the columns of three-letter syllables, one morning, (the first snow of winter having fallen during the night,) on rising from his bed, and looking out at the window, exclaimed with ecstasy, “Hurrah! There’s a sleigh! S-l-a, sleigh! S-l-a, sleigh!!

“John,” said his father, “that doesn’t spell sleigh.”

“Don’t it! What does it spell, sir?”

“O, I don’t know - it don’t spell any thing.”

“Why, father? What is it in my book for?”...

“....For this reason, there is here an exclusion of that chaotic mass of fragments of words, which it has been usual to present to the eyes and ears of children in their first exercises. Such lessons, it is believed, are as unnecessary as they are uninteresting. They convey no thought; they rather teach a child not to think”.

The 1871 version of the last paragraph also had to be changed to reflect the dropping of the syllabary. It simply read:

“There is here an exclusion of those fragments of words which have usually been presented to the eyes and ears of children in their first exercises....”

Something else was omitted in the 1871 copy, and it was a comment by Horace Mann which appeared in the 1851 listing of the books in Bumstead’s series. After the listing for The Black-board in the Primary School, A Manual for Teachers, the quotation from Horace Mann read:

“Perhaps ingenuity has seldom, if ever, rendered a greater service to mankind, than when it turned a few feet of deal board, and a little black paint, into one of the most effective of all instruments for the rapid and vivid communication of knowledge”

Another comment on the list of Bumstead’s books, however, appeared in both the 1851 and 1871 editions. It followed the listing for the last book in the series, Spelling and Thinking Combined, or, the Spelling-Book made a Medium of Thought. The remark was from The Schoolmaster, by George B.Emerson:

“How do you teach spelling? Cannot the Nonsense Columns in Spelling-Books be dispensed with? * * * In every stage we should avoid, as the bane of good habits of thought, the common use of the nonsense columns of a spelling book. Nothing more pernicious could be contrived. The use of them; prevents thinking, without teaching to spell.”

Bumstead obviously agreed with Emerson. One of his comments in the section, “To the Teacher, read:

“The main point, in the arrangement of the columns, has been the sense, and not the sound.”
The title page of Bumstead’s book supplied a surprising fact. It was the surprising name of the unidentified person, who had been quoted elsewhere, who had made the comment that learning to read was “the most difficult of all human attainments.” Pre-1826 testimony, when children were virtually always taught to read by “sound” and not “meaning,” and which testimony was always casually given, had always indicated that learning to read was an easy task. That had been the case from the days of the ancient Greek, Dionysius, to the days of the anonymous Scottish Schoolmaster. Speaking in 1829 about his thirty years of experience in teaching children to read, the Scottish Schoolmaster said that a child can be taught to read anything fluently by the time he is seven years old. That had been the case with William Andrus Alcott, who had also been a schoolmaster for some ten years or so, and who unwittingly confirmed that learning to read was easy and quick before 1826 by his many remarks about his days as a schoolmaster when he said that the children at that time read without “expression.” Because of those comments and many others, a reasonable assumption would be that the remark that learning to read was “the most difficult of all human attainments” had to be a post-1826 one, after “meaning” had replaced “sound” in the teaching of beginning reading and when reports of reading disabilities began to surface.

It is therefore astonishing to learn from the title page of Bumstead’s book that the remark was made by Richard Edgeworth, presumably in his 1798 book, Essays on Practical Education, which he wrote in Ireland with his daughter, Maria. In that book, Edgeworth was the first person writing in English to recommend the dropping of the syllabary in beginning reading. Edgeworth would have had to know that his remark that reading was “the most difficult of all human attainments” was absolutely senseless in his 1798 time frame. The fact that he made such a senseless remark suggests that the remark may have been meant to be one of the entering wedges of the change-agents who were to begin promoting the “meaning” method in beginning reading. The “meaning” method had become a fait accompli on both sides of the ocean only shortly after 1826. Besides making the “most-difficult-of-all-human-attainments” remark and besides advocating the dropping of the syllabary, Edgeworth was also a promoter of government schools for Ireland, as discussed elsewhere. Those schools, founded after 1830, and discussed elsewhere, were appalling.

Edgeworth’s remark was presumably from his 1798 book, but it was possibly from his 1799 pronouncing beginning reading book, discussed in Appendix B. Alston curiously did not include that book in his list of spellers, although he included the pronouncing spellers of Webster and Perry. Edgeworth must have omitted in his 1799 book, not just the syllabary, but the usual columns of spelling words given to beginners. If that were the case, then Edgeworth’s 1799 book would have been the first sight-word primer in English, even though it used pronunciation marks. It would have been a ground-breaker, the first sight-word primer in English intentionally meant to replace spelling books. However, since it has not been possible to see Edgeworth’s 1799 book, it has not been possible to evaluate its real nature. Edgeworth’s remarks are quoted on Bumstead’s title page, as follows:

“We think that nine tenths of the labor and disgust of learning to read may be saved; and that, instead of frowns and tears, the usual harbingers of learning, cheerfulness and smiles may initiate willing pupils in the most difficult of all human attainments. - Edgeworth.”

Bumstead’s text endorsed written, not oral spelling, which, of course, further buries awareness of the “sound” nature of syllables, just as for Gallaudet’s deaf-mute students, who wrote letter sequences without any awareness of syllables. Although the reading lessons follow the spelling columns, Bumstead’s directions said that the reading lessons should be started after only a few pages of the spelling columns. The emphasis, of course, was consistently on “meaning,” to the avoidance of “sound.”

The 1871 copy listed the finished Bumstead’s Primary School Series: I. My Little Primer - to teach a few words and the alphabet... II. My First School-Book [the above 1838 book], III Second Reading-Book
in the Primary School... IV. Third Reading-Book in the Primary School. V. Spelling and Thinking Combined, or The Spelling Book Made a Medium of Thought.

VI. Table for Training the Organs of Speech in Articulation..... VII. The Blackboard in the Primary School. A Manual for Teachers.... VIII. My First Arithmetic..... IX. Reading Table for the youngest scholars. X. Punctuation Table. XI. Numeration Table. “The last three are Wall Tablets.”

The 1851 copy listed the items through number VII, which were obviously all available by that date.

The 1876 American Catalogue listed as still in print in 1876 J. F. Bumstead’s My First School Book; for Reading and Spelling, published by Marvin, obviously the 1838 edition, but they dated it to 1841.

In 1850, Bumstead published the book meant to be used as the first book in the series, entitled My Little Primer, to Teach a Few Words and the Alphabet. The Harvard copy was published in 1851 by T. R. Marvin, Boston. Letters were to be learned from whole words. It is Code 1 material, with vocabulary control and repetition Reeder mentioned it on page 53.

Harvard library has an 1842 copy of the 1841 book, Bumstead’s Spelling and Thinking Combined, the highest book in the series, which carries the note:

“This book was introduced into the Boston Primary Schools for the first and second classes by the unanimous vote of the Primary School Committee. September 21, 1841.”

This fifth and highest book in the Bumstead series used a Code 1 approach to spelling. The teacher pronounced the words, and the pupils were to imitate her. It had “elocution” at the end. It stated, “The acquirement of pronunciation and spelling is the main object of every spelling book.”

Bumstead’s material is discussed by N. B. Smith, p. 87 and following, but it is not in Early American Textbooks.

Of all the appalling sight-word materials that came out of Massachusetts starting in 1826 and which were promoted so assiduously by the change-agents, Bumstead’s materials are indisputably the very worst and the most harmful. This Bumstead series of criminally defective books which were in unchallenged use over so many years, particularly in Boston, the “intellectual” capital of America at that time, constitute a national disgrace.

A tie exists and should be mentioned, even though it may possibly be of no importance, between the publisher of the Bumstead books, Marvin, and Josiah Holbrook, the arch-activist, since Marvin, who put out Bumstead’s materials, had previously printed some of Holbrook’s. The activities of Josiah Holbrook (1788-1854) have been outlined very well in Samuel Blumenfeld’s book, Is Public Education Necessary?

The following biographical information on Josiah Holbrook appears on pages 656-657 of Biographical Dictionary of American Educators, Volume 2, edited by John F. Ohles, Greenwood Press, Westport, Connecticut. It stated that Holbrook wrote an article for the American Journal of Education in October, 1826, entitled “Association of Adults for Mutual Education” which recommended that:

“...public education should be organized in mutual learning associations in towns and villages in the Northeast. His plan, which became known as the American lyceum, was implemented one month later at Millbury, Massachusetts. The movement sought... [also] to encourage and support the establishment of tax-supported common schools... Holbrook built and supplied local lyceums with scientific apparatus needed to assist in conducting educational activities. He lived at Lyceum
Village in Berea, Ohio, where he manufactured and sold equipment (1837-42). Holbrook lived in New York City (1842-49) when he was executive secretary of the American Lyceum Association. He moved to Washington, D.C., in 1849, where he promoted the lyceum system until his death in 1854. Holbrook wrote many pamphlets on geology and education. He drowned in Blackwater Creek near Lynchburg, Virginia, on an outing to collect specimens of minerals and plants indigenous to the area. Holbrook was the author of Easy Lessons in Geometry (1829), First Lessons in Geology (1833), First Lessons in Geometry (1833), Penny Tracts for Children (1833), Apparatus for Schools, Academies, and Lyceums (1837)....”

An 1829 Pamphlet in the New York Public Library was published by Perkins & Marvin of Boston, the apparent predecessor to T. R. Marvin of Boston. It is entitled American Lyceum, or Society for the Improvement of Schools, and Diffusion of Useful Knowledge. Appended on pages 23 and 24 is “Apparatus for Schools, Academies, and Lyceums,” reading:

“To advance the general interests of popular education, and especially to facilitate the progress of Lyceums and Infant Schools, various articles of apparatus for familiar and practical illustrations, are prepared under the direction of Mr. Holbrook. The subjects which the apparatus is designed to illustrate, are geometry, arithmetic, natural philosophy, chemistry, and astronomy.”

Listed were not only many concrete materials but some charts and books, including Holbrook’s Easy Lessons in Geometry. The materials were listed under separate headings: “For Geometry,” “For Arithmetic,” “For Natural Philosophy” (physics), “For Chemistry,” “For Astronomy,” “For Infant Schools,” and “For Geology.” The next to last entry read:

“For Infant Schools, all the necessary apparatus, consisting of prints for Natural History, accompanied with spelling and reading lessons, illustrations in Geometry, Arithmetic, and Astronomy, is prepared, and those articles of the Infant school apparatus fitted for common schools, can be furnished in any quantities.”

At the bottom of page 24 appeared, “The above articles are kept for sale by Perkins & Marvin, 114, Washington Street, Boston.”

Holbrook, therefore, showed some interest in “reading” and “spelling” in infant schools by preparing natural history prints “with spelling and reading lessons.” However, it is of interest that the probable successor to Perkins & Marvin of Boston who had handled Holbrook’s materials, including “spelling and reading lessons,” was T. R. Marvin of Boston who published in 1838 My First School Book for Reading and Spelling, By A Friend of Mine (Josiah F. Bumstead). That famous, enormously used, and criminally harmful Code 1 book for beginners which was first published in 1838 was still being printed at least as late as 1871.

However, Josiah Holbrook at some point after 1829 began to publish and market his materials himself instead of having the Perkins & Marvin company (and possibly the T. R. Marvin company) handle them. On page 137 of the 1862 Object Lessons for Teachers, published by A. S. Barnes & Company, A. S. Welch referred to models in wood of solid geometrical shapes, and said:

“A large assortment of such models can be obtained from Holbrook & Co., Hartford, Connecticut, or from Sherwood & Company, Chicago. These firms have agencies in all our large cities.”
It is of interest that the Sherwood company which sold models like Holbrook’s and which also published the dreadful Edwards/Webb “word method” readers were bought out in the early 1890’s by Scott, Foresman, who later published the dreadful 1930 “Dick and Jane” deaf-mute-method series.

1838 Sanders Spelling Book, Charles W. Sanders, Published by Gould, Newman, and Saxton, New York, and for Sale by the Principal Booksellers in the United States. (This Harvard copy, apparently an 1844 reprint, said two million copies of Sanders’ books had been sold by that date. This included his reading series listed below. His speller was Code 10 but was not intended as a beginning book. This speller read, “It is hoped that the subject of elementary orthography will soon receive its appropriate attention in our primary schools,” which confirmed the speller was not being used at the primary level in 1838.)

1839 The United States School Primer Designed for Schools and Families, Copyright 1839 (possibly 1830) by William W. Allen, Published by George F. Cooledge, Second Story of M. Day & Co.’s Book Store, 374 Pearl Street, New York.

(Harvard copy. Code 3. Cooledge soon moved to another Pearl Street address, 323 Pearl Street. C. F. Heartman dated this primer to 1830, but gave Cooledge’s address as 323 Pearl Street. Obviously, the copy Heartman saw, presumably one of the five copies he listed, was printed after Cooledge moved, but it possibly carried a copyright of 1830. That seems very possible, since the blurred copyright on the Harvard copy which looks like 1839 could be 1830. Heartman listed the title as:

“The United States School Primer; or the First Book for Children: designed for home or parental instruction. Embellished with numerous engravings, and pretty stories, Which will please the children amazingly.... New York: Published by George F. Cooledge & Brother, 323 Pearl street, Franklin Square, And also published and for sale by all the principal Booksellers throughout the United States of America, and its territories.”

C. F. Heartman had listed Day at 376 Pearl Street at least from 1825-1832, and in business at least from 1815 to 1836. See 1824, 1825 and 1837 entries on Mahlon Day. This material rates a Code 3. It has an incomplete syllabary, sight words and “stories,” with some blends and analogous short-vowel words, and more “stories,” with analogous spellings under stories. It is a mixed-up 47-page picture-book mess, resembling but better than most cheap toy books and apparently meant as a cheap school beginning book. This publisher soon became the sole publisher of Webster’s still massively-sold speller which the publisher advertised for use as an upper-grade book after his “primers,” which seem to be only variations of this book with different titles. See other Cooledge entries and the discussion on Cooledge in the text of this history.)

1839 The Pictorial Spelling Book, With Reading Lessons... (etc.), by Rensselaer Bentley, Published in 1853 by Pratt, Woodford, & Co., New York. (Harvard copy, Code 8. Not a beginning book. Showed Ward School Teachers’ Association’s 7/23 1845 recommended adoption of: 1. The Pictorial Primer, 2. The Pictorial Spelling Book, 3. Introduction to the Pictorial Reader, “a continuation of this system of spelling and reading books...” The Preface reads, “The Spelling Book being usually the primary book of instruction, is, perhaps, the most important one... that is ever put into the hands of the pupil....” (said it bored children, and then) “Aware of these evils from personal experience in the business of instruction, the author has been induced to attempt a remedy....” His approach: “ideas” from words. However, that others already had such a “remedy” and that the spelling book was no longer used for beginners was shown by his next remark. He said, page 6, under date of May, 1839, New York: “Many excellent primers, or picture books, have been published for the use of children, with a view of substituting them for the spelling-book; but they seem to have entirely failed in their object, in consequence of the great deficiency in the variety of spelling lessons....” See other Bentley entries.)

1839 Kay’s Progressive Infant and Primary School Reader and Speller, No. 1, in Words of Two or Three Letters Only, Together with Elementary Lessons in Drawing. A Course of Progressive Lessons in Reading, Spelling, and Pronunciation. Published in 1840 by James Kay, Jr., and Brother, Philadelphia; C. H. Kay & Co., Pittsburgh. (Harvard copy. Referred to late Mr. Ballantine’s reader, apparently British, before 1832. Recommended teaching 200 words before the alphabet is introduced. Vowels taught for elocution. Still in print in 1876 per American Catalogue, by C. H. Davis as Kay’s Infant and Primary School Reader & Definer, three volumes. Vol. 1. In words of 2 and 3 letters, 25c. Vol. 2. In words of one syllable, 30 c. Vol. 3. In words of one and two syllables, 37c. The publishing date was given as 1840-1842.)

1839 The Southern Primer, or Child’s First Lessons in Spelling and Reading, by T. N. M., Published in 1860 by W. R. Babcock and M’Carter & Co., Charleston, South Carolina and Sold by All the Principal Booksellers in the Southern and Southwestern States. Inside cover: Richmond: Adolphus Morris, 1860. Copyright S. Babcock & Co., 1839. (Harvard copy. Code 5. For the most part the 1860 edition was the same as Harvard’s 1841 edition, which was the fourth edition, “Printed and Published by S. Babcock & Co.” of Charleston, but the later edition omitted consonant blends. Both had the syllabary. The Southern Primer was sharply superior to the material being published in 1839 in the North but far weaker than Noah Webster’s speller that had previously been sold all over the United States. The Southern Primer listed in the 1876 American Catalogue was written by R. Sterling and seems to be unconnected with this book.)

1839 Young Child’s First Reader, or Dialogues in Short Sentences - Adapted for Children From the Age of Three to Eight Years, Anonymous (but obviously written by a woman), Published at the Brattleboro (Vermont) Book Store. (Harvard copy. Code 1. Totally devoid of “spiritual,” and has some ugly content. Overall, it is a terrible book.)

1840? The American Illuminated Primer Designed for the Use of Schools and Families, Published by Wm. H. Murphy, New York. (Harvard copy. A truncated toy book, truncated syllabaries, three-letter words arranged by sound analysis, then 4 letter by sound analysis, then 5 letter by sound analysis, and three pages of stories by syllabication. If it were a serious book (which it is not) it would rate about Code 5. Despite its inadequacy, it was sharply more “sound” oriented than the serious school primers of this period. “Toy” books seemed to lag behind in adopting “improved” methods.)

(1840)? The Boys and Girls’ Own Primer, or First Step to Learning, Published by William Raine, Baltimore (Harvard copy. A sixteen-page toy book, with alphabets, partial syllabary and blends, with pictures on top of most pages, page of three-letter words, two pages of reading with syllables divided at end, misprints in book. Cheap, low quality toy book.)

1840 Child’s First Primer or A, B, C. Book, Published by H. & S. Raynor, New York. (Harvard copy. Obviously a toy book. Advertises “School Books, All the different kinds of Primers, Spelling Books, Readers, Grammars...” etc. Raynor’s obviously was primarily a book store, not a publisher. This book has complete alphabets, almost complete syllabary, words arranged by sound analogy, in sequence of 3-4-5
letters, and then two-syllable words. Pictures with words at top of pages. Ends with one-page of connected sentences. Despite its short “toy” nature, it is a Code 6.

1840? Child’s First Lessons, or Infant Primer, Published by S. Babcock, New Haven, Conn. (Harvard copy. Toy book, about 3 by 2 inches, with pictures. Whole alphabets given in small and capital letters, followed by eight pages of words beginning “am, an, as, at....” Code 1.)

1840 Sanders Series, 5 vols. (By 1876, when sold by Ivison: 1st 28c, 2d 50c, 3d 75c, 4th $1.20, 5th $1.25.) Charles Walton Sanders. Published in 1844 by Mark H. Newman, New York, New York (In 1876 American Catalogue, the Primer shown below was not listed but it was listed in the 1912 U. S. Catalog with the other two Sanders’ primers. It is possibly one of the two Sanders’ primers listed as sold by American Book in the 1928 U. S. Catalog.)

1840 Sanders’ The Primary School Primer, Charles W. Sanders, Published in 1843 by Mark H. Newman, New York; W. H. Moore & Co., Cincinnati. (Harvard copy. Code 3 phony phonics, after Code 1 beginning. See other entries on Sanders, whose materials were vastly used.)

(Listed on page 116 of Early American Textbooks. Harvard library has an 1856 copy published by Wm. James Hamersley of Hartford who also published in 1856 Gallaudet’s Mother’s Primer of 1836, still in use twenty years after it first appeared. The speller would be a Code 8 book, but obviously when it was finished in 1840 it was meant to be preceded by the Code 1 Mother’s Primer or similar book, even though the speller gave practice on learning letters. The Mother’s Primer taught the alphabet eventually, but, as Green said in the early 1840’s, quoted in Blumenfeld’s Is Public Education Necessary?, some children at that time were being taught pure sight words. In the early 1840’s, Greene said Boston children were leaving the primary schools and entering the grammar schools reading whole words without having learned the alphabet.

Concerning Gallaudet’s intent for the use of his speller, he would hardly have produced his Code 1 The Mother’s Primer for rank beginners in 1835, and then in only a year or so have started working on a Code 8 speller meant for rank beginners. Yet that would have to have been the case since his speller, which would have taken a long time to prepare, appeared in print only five years after his primer. The speller’s preface said the authors had examined 40,000- to 50,000-word dictionaries and had separated out
the easy words for the first part of the speller, the harder ones being given later. The speller was intended for common schools and above. It recommended that the teacher explain the phonic markings.

According to an advertisement on Harvard’s 1852 copy of J. S. Denman’s 1850 The Student’s Primer, Pratt & Woodford of New York were selling Gallaudet’s School and Family Dictionary in 1852. It is therefore evident that Gallaudet had gone in deliberate competition with the famous Webster, eventually producing not only his sight-word Mother’s Primer but a speller and a dictionary in competition with Webster’s. Webster had in a sense competed with Gallaudet, since he eventually put out a primer to precede his famous speller, when primers were taking over beginning reading by about 1832, displacing spellers at that level. Also see entries on Gallaudet for 1830 and 1835."

1840? The Christmas School Primer, Published by George F. Cooledge (American Antiquarian Society copy. Code 3, almost identical to other Cooledge primers discussed elsewhere in this listing. Mentioned by Nila Banton Smith.)

1840 The Progressive Primer, Adapted to Infant School Instruction, Mrs. Goodheart, Published by John F. Brown, Concord. (Harvard copy. A 35-page toy book, presumably not for schools, despite its title. Code 3. Pictures at top of pages, short, mixed-up, incomplete syllabary, followed by lists of consonant blends. Then pictures with words, 3 to 4 to 5 letters, then two syllable words, and sentences at end, with syllables divided. This is the general pattern of the circa 1840 short toy books, usually with alphabets at the beginning, as in this book.)

1840 New National Primer, Published by Turner & Fisher, New York and Philadelphia (Harvard copy. See American Antiquarian’s Turner & Fisher material listed under 1838. The Harvard copy is a 24-page toy book, possibly Code 4, but an incomplete mish-mash like so many toy books, starting with a mangled syllabary and followed by consonant blends, large and small alphabets, 3 - then 4 - then 5 letter words arranged partly by analogy, pictures on the top half of pages, and a sight-word approach with “new words” on stories, etc.)

1840 New Juvenile Primer and Child’s Own Progressive Guide to Learning, Published by William Raine, Baltimore. (Harvard copy. A 22-page toy book, Code 3. This toy book publisher also put out Goody Two Shoes of the eighteenth century and Butterfly’s Ball of the early nineteenth, two superb children’s books. Yet his art work was often poor and his spellings sometimes bad. He advertised, “Lower prices than any other establishment in the United States.” This work began with jumbled syllables, and then followed the general pattern of the other toy books, with pictures on the top of each page, and words introduced in 3- and then 4-letter lengths, and then two syllable words, a parody of the old spellers.)

1840 The Infant School Primer, Published by George F. Cooledge, New York, with this caption on interior pages: Day’s New York Infant School Primer. Listed elsewhere appears, “Approved by Samuel W. Seton.”

(Harvard copy. Code 3. About 32 pages long, and in toy book pattern, but markedly superior to other publishers’ toy books, although unsuitable for teaching beginners. It was based on an 1837 version published by Mahlon Day, which appears to have been actually used in the infant schools and to have been endorsed by the activist, Samuel W. Seton, as discussed in the text of this history. The previous year, on The United States School Primer, Cooledge gave his address as the second story of M. Day & Company’s Book Store, 374 Pearl Street, but on this issue his address was 323 Pearl Street. Cooledge’s primer versions, with various names, apparently also were used in schools. The Cooledge company had become the publisher of Webster’s speller at least some time before the late 1840’s, but more probably by the early 1840’s shortly after Webster’s death, so Cooledge obviously was an important publisher.)
This text has pictures at the top of pages, alphabets, incomplete syllabary, rhyming-word lists, three-letter-word lists followed by stories, four-letter-word lists followed by stories, five-letter-word lists followed by stories, and then a two-syllable story followed by two-syllable word list, and more stories with divided syllables. All the Cooledge primers with varying names appear to be variations of the same kinds of materials. Cooledge was still publishing in 1851, according to an entry in Early American Textbooks, page 92.)

(Harvard copy, 35 pages. From page 28, contains material on arithmetic and geography. Code 3, resembling a “toy” book. Some spelling by analogy, but too sparse. Page 130 of Blumenfeld’s The New Illiterates states Dwight was a corresponding secretary with Josiah Holbrook (Massachusetts) and Samuel W. Seton (New York) of the national American Lyceum, organized in May, 1831. Since Seton wrote his appalling “primer,” The Abecedarian, in 1830, it appears likely that Dwight’s primer may also originally have been published about 1830, reflecting the intense interest of the change-agents at that time in beginning reading materials.)

1841 Primer, Mrs. Horace Mann (Mary Peabody) (Discussed by Mitford Mathews in Teaching to Read, Historically Considered, The University of Chicago Press, 1966. See Mathews’ comments under the 1851 entry for what appears to be a revision of Mrs. Mann’s Primer.)

1841 The Pictured ABC, Turner & Fisher’s Brilliant Colored Toys; Turner & Fisher, New York and Philadelphia; J. Keller, Baltimore; James Fisher, Boston. (They sold a huge number of toy books. This was not a reading primer, but a true ABC book for home use, primarily only with the alphabet and digits, plus one page of words and pictures. See 1845 entry and 1855 entries on Fisher & Brother.)

1841 The Gradual Reader, First Step in Exercises in Articulation, Designed to Develop and Strengthen the Organs of Speech and to Facilitate the Correct Utterance of the Elementary Sounds and their Combinations, with Simple Reading Lessons for Pupils in the Younger Classes, David Bates Tower, Principal of the Eliot Grammar School, Boston. Fourth Edition; Charles Stimpson, Boston.

(Harvard copy. Page ii: voted for use in fourth class of Boston Grammar Schools. Used for seven years in Tower’s grammar school, i. e., since 1834. “The reading lessons are adapted to the capacities of the pupil on leaving the grammar schools.” Teaching “reading” meant elocution: see p. v and elsewhere. Refers to Sheridan, p. vi. Not a beginning book, but meant for elocution. A letter appears on the back cover dated April 28, 1841, from thirteen Grammar Masters of thirteen Boston schools endorsing this book with its apparent innovation of systematic vocal “exercises” to aid elocution. It is illuminating concerning the importance of elocution in the schools in 1841:

“Practical ‘EXERCISES,’ so requisite to the development of the Organs of Speech, are now, for the first time, offered to the public, in the ‘GRADUAL READER,’ - a work admirably adapted to the wants of our School, and which will entitle the author to the gratitude of all, who are interested in the cause of Education. As the continual practice of the Elementary Sounds and their combinations is absolutely essential to good articulation, these “EXERCISES,” so long needed, will be found invaluable to the teacher of the Primary or High School, and should be in the hands of every pupil. The “READING LESSONS” are the best we have ever seen, for the class of pupils for whom they were selected. They are simple, easy to be understood, conveying moral truths in an impressive form, and at the same time well suited to interest the youthful mind.”
R. R. Reeder mentioned Tower’s books on page 50. The 1876 American Catalogue shows D. B. Tower’s Readers, 7 volumes, First reader, 25c. - Second, 45c. - Intermediate, 50c. - Third gradual, 60c. - Fourth, 75c. - Fifth, 90c. - Sixth. $1. for sale by Lee & Shepard, Boston. The date Lee & Shepard took over publishing the Tower readers is unknown but was apparently long before 1876. See later entries on Tower’s books.)

1842 The Pictorial Primer, Being an Introduction to the Pictorial Spelling Book, Designed as a First Book for Children in Families and Schools, Rensselaer Bentley, Published in 1857 by Brown, Taggart & Chase, Boston, Successors to W. J. Reynolds & Co.

(Harvard copy. Pratt and Woodford were still publishing Bentley’s books in 1852, and perhaps also as late as 1857, when this copy came out by Brown, Taggart & Chase of Boston. The 1876 American Catalogue lists R. Bentley’s Pictorial Primer, published by “Thompson,” so it was still in print in 1876. Also listed as in print in 1876 was his Pictorial Definer of 1852, published by Claxton and by Lippincott, and his Pictorial Spelling Book, published by Sheldon. His readers were not in print in 1876. Bentley’s 1842 Boston publisher, Brown, Taggart & Chase, also put out Rollo stories, Peter Parley stories, and Colburn’s arithmetic, and gave a whole page of that famous arithmetic’s history and testimonies.

The Preface to Bentley’s Pictorial Primer was signed New York, 1842, and said the book was meant to interest a child. It had pictures to help a child pronounce the words and get the meaning. The picture alphabet showed O for owl and S for shoe, so phonics was not intended. However, it had an incomplete syllabary, and word lists by length, such as four-letter words, then five-letter words, and then two-syllable words followed by three-syllable words. Despite giving consonant blends, and some sound analogy in the arrangement of words, first short vowels, and then silent “e”, its heavy use of pictures for word identification lowers the code to perhaps a Code 3 or 4. By page 16, straight five-letter word lists are given with no sound analogies. See other entries on Bentley.)

1842 Cobb’s New Juvenile Reader, No. 2, Lyman Cobb; Pub. 1845 in New York by Caleb Bartlett. Cobb’s Series of Reading Books, in Five Numbers. Second Reading Book, “composed of Easy Words of One, Two, and Three Syllables in Which All the Words in the First Reading Lesson not Contained in any Reading Lesson in No. I, and all new words in each subsequent Reading Lesson throughout the Book, are placed before it, with the division, pronunciation, accentuation, and definition noted, and the part of speech designated, designed for the use of small children, and, in connection with No. I, to accompany the Spelling Book in Schools and Families.”
(See 1825 entry on Cobb’s speller, which entry notes his original reading series came out in 1830, but I have seen no copies. Cobb’s revised No. 2 text and possibly the 1830 text used dictionary markings on respelled words, useless for teaching children decoding skills on any new material. The vocabulary was stringently controlled. Children could go through the series without ever learning to read independently. The 1830 and 1842 series probably rate Code 3 if the first books in those series used dictionary respellings on new words, like the 1842 No. 2 book, though I have not seen the first book in either series. The back cover of this 1845 copy advertised Cobb’s New First Book or Introduction to the Spelling Book, and New Juvenile Readers #1, 2, 3, New Sequel (fourth reader), and New North American Reader (fifth reader). Therefore, by 1845 or before, Cobb expected the speller to follow, not accompany, the New First Book.

See negative comments in the body of this history on Cobb’s attack on Noah Webster, which attack suggests Cobb was one of the activists. Cobb’s reading and spelling books were spectacularly successful, displacing Webster’s speller in many places, which also suggests Cobb’s access to “influence.”

(See body of this history on Cobb’s speller, which entry notes his original reading series came out in 1830, but I have not seen copies. Cobb’s revised No. 2 text and possibly the 1830 text used dictionary respellings on new words, useless for teaching children decoding skills on any new material. The vocabulary was stringently controlled. Children could go through the series without ever learning to read independently. The 1830 and 1842 series probably rate Code 3 if the first books in those series used dictionary respellings on new words, like the 1842 No. 2 book, though I have not seen the first book in either series. The back cover of this 1845 copy advertised Cobb’s New First Book or Introduction to the Spelling Book, and New Juvenile Readers #1, 2, 3, New Sequel (fourth reader), and New North American Reader (fifth reader). Therefore, by 1845 or before, Cobb expected the speller to follow, not accompany, the New First Book.

(See body of this history on Cobb’s speller, which entry notes his original reading series came out in 1830, but I have not seen copies. Cobb’s revised No. 2 text and possibly the 1830 text used dictionary respellings on new words, useless for teaching children decoding skills on any new material. The vocabulary was stringently controlled. Children could go through the series without ever learning to read independently. 1842 (?) Southern Spelling Book, Charleston, South Carolina (Referred to on page 186 of A. B. Chapin’s 1842 The New Classical Spelling Book, reviewed above.)
1842 Comly’s Spelling and Reading Book, With Notes for Parents and Teachers, Adapted to the Use of Public Schools and Private or Family Instruction, Bonsal’s Edition, By John Comly.

(Harvard copy. Pub. by Thomas L. Bonsal, Philadelphia, in 1848 and copyright in 1842 by Bonsal. Also published Cobb’s Juvenile Readers, Nos. 1, 2, 3, and Sequel to the Juvenile Reader. See 1820 entry on Comly Speller. Clifton Johnson referred to an 1806 Comly speller. Despite the great gap in time between 1806 and 1842, this book was signed John Comly, Byberry, 1842. In the back of the book, the date of 1845 was given for Comly’s Reader and Book of Knowledge. Claimed defects were caused by not “spelling out of book.” This 1842 book was not like Comly’s 1820 book, lacking vowel markings. Words were arranged by phonic analogy. It was fairly thorough for that approach and rates at least a Code 6.)

1842 A New Spelling Book, Compiled with a View to Render the Arts of Spelling and Reading Easy and Pleasant to Children, To Which Is Added A Variety of Useful Exercises So Arranged As to Familiarize the Pupil With The Correct Spelling, Pronunciation and Meaning of About Two Thousand ... or Difficult Words. John Comly.

(Harvard copy. Pub. in 1846 by Kimbler & Sharples, Philadelphia, and copyrighted by them in 1842. They also published among other books advertised on the back cover Comly’s Primer, Spelling Book and Grammar, Gummere’s Progressive Spelling Book, and Comly’s Spelling Book Enlarged. This book which rates a Code 6 has an incomplete syllabary, blends, short vowels by analogy in grouping, and the same on silent “e,” but mixed groupings later. Groupings by sound continued to page 13. On two-syllable words, vowels were marked.)

1842 The Common School Speller, William B. Fowle, Late Principal of the Female Monitorial School in Boston, Pub. 1849 by Lemuel N. Ide, Boston.

(Harvard copy. The back cover stated Wm. B. Fowle, Boston, published the following school and educational books. The Common School Journal, ed. Horace Mann. Lectures on Education - Mann, The Common School Speller by Fowle, recommended by Mann, “and in The School and Schoolmaster of Geo. B. Emerson and Dr. Potter, used in Salem, Newburyport, Portsmouth” and more places specifically named, “and hundreds of other towns, the work having passed through about thirty editions already.” Fowle’s The Companion of Spelling Books was “...recommended by William Russell and others...” Fowle also published The Common School Grammar by Wm. B. Fowle, The Common School Geography and The Elementary Geography by Fowle, The Bible Reader, selections by Fowle, The Primary Reader by Fowle, The Child’s Arithmetic by Fowle, and A Practical French Grammar by Fowle. The Primary Teacher of October, 1878, p. 57, also listed The Teacher’s Institute by Fowle. See other entries on Fowle’s books and comments in this history on Fowle. His 1842 speller, above, was not a beginning book. It had no syllable tables and used an unsatisfactory phonic approach, but rates perhaps as high as Code 6.)

1842 The Second Book of Reading Lessons. Brothers of the Christian Schools. Eugene Cummiskey, Philadelphia. (This text is listed on page 78 of Earlier American Textbooks. The series is listed for sale by others in the 1876 American Catalogue as Christian Brothers. Readers. 3 v., First Reader, Second, Third. Those later editions were by D. & J. Sadlier, the O’Shea company, and the Strong company who
published a fourth reader as well. The series was revised in 1884 by John P. Murphy. The material is discussed at greater length in Appendix C. Its approach is unknown.)

1842 The New American Primer, Containing Short and Easy Lessons for Young Children. Published by E. Morgan and Son, Cincinnati. (Harvard copy. Toy book. Code 7 overall. Complete syllabary and blends. Three-letter words by sound analogy on consecutive short vowels: a, e, i, o, u, but not marked. Then four, then five letter words, most by sound analogy. Then two-syllable words and stories.)

(Harvard copy. Pathetic content. Not a beginning book, but meant for use AFTER “...they have to learned to read.” It “teaches” what rank beginners had formerly learned from Webster. Originally written between 1832 and 1838, per page 4, and published in 1839. “Part I, Elementary Sounds,” was not in the first edition but in this one of 1842. Page 34: “First Exercises in Synthesis...” Elements, m - e, then pronounced “me” (!). This was intended as elocution for those who obviously previously knew no phonics. Per Early American Textbooks, page 124, this was still published in 1859 by A. S. Barnes & Co., New York, but it was not listed in the 1876 American Catalogue as in print in that year.

Wright’s Primary Lessons, or Child’s First Book, was listed in the 1876 American Catalogue as on sale for 25c, apparently the same book as that in the Rare Book Division of the Library of Congress under the date of 1846, call number PE 1119.A1W86 Office. It was possibly first published in 1842. The purpose of Wright’s “phonics” at the primary level in 1846 was probably elocution, not decoding, as was the case with the Swan and Tower materials of the same period. The following title appeared on the Library of Congress copy of 1846: “Primary Lessons - Being a speller and reader, on an Original Plan in which one letter is taught at a lesson with its power, an application being immediately made of each letter thus learned and those words being distinctly arranged into reading lessons,” by Albert D. Wright, New York, D. Appleton & Co.; Philadelphia, G. S. (?) Hall.

1843? The American Pictorial Primer, or the First Book for Children, Designed for Home or Parental Instruction, G. F. Cooledge, New York, and also published and for sale by all the principal Booksellers throughout the United States of America and Its Territories.

(Harvard copy. Across the top of cover: “Take It Home.” At top of inside pages: “Infant School Primer,” indicating it is a revision of the 1840 Cooledge Infant School Primer described previously. Code 3 and a typical toy book, very roughly following skill sequence in old spellers and very like the 1840 Infant School Primer previously described. Like that book, most pages have pictures at the top. It begins with a pictured alphabet and incomplete syllabary, shows sight words under some pictures, has three-letter words with sound analogies, “stories,” finally progressing to two-syllable words. See other Cooledge entries and the section in this history concerning the Cooledge company.)

1843 Mrs. Barbauld’s Easy Lessons, For the Use of Schools - Improved Edition, Pub. A. Phelps, Greenfield, Mass. (See comments in this history on this edition, and previous entries and comments on the publisher, A. Phelps, who published the critically important 1826 Franklin Primer.)

1843? My Little Primer, Published by S. A. Howland, Worcester (Toy book, probably English. Code 1. In sections: My Little Alphabet - pictures, words and sentences to be read to children; My Little Primer - alphabet in print, followed by pictures and words plus word lists, straight sight words and short stories; Easy Lessons for Young Readers - mentions four-year-old boy reading.)
1843 New English Spelling Book and Child’s First Reading Book, Revised and Improved, Designed for Schools and Private Families Where the English Language is Spoken. John G. McCall. Published for the Author, Hartford, 1846. (Harvard copy. Code 6, by sound analogy, with syllables. Reading with “understanding” for beginners. Rehashed stuff, probably for sales as a toy book. Pointless effort, apparently not by a teacher.)

1843 The Primary School Reader, Part First, William D. Swan, Principal of the Mayhew Grammar School, Boston. Published 1844 by Charles C. Little and James Brown, Boston. (Harvard copy. Code 5, because of oral vowel practice, though decoding was NOT Swan’s purpose, but elocution was. His purpose was to write an elocutionary reader composed of sight-words. Mentioned by Reeder, page 50. See later entries in this list for Swan.)

(Harvard copy. On the cover, blurred, is what appears to be an 1828 or 1838 statement of the U. S. House of Representatives recommending this ridiculous work as the National Uniform Spelling Book. Yet Town’s definitions were so very bad that Noah Webster spoke against this book, as quoted in J. Orville Taylor’s newspaper, referred to elsewhere in this history. Putting little children through such silly exercises was an extension of John Wood’s “meaning” nonsense. Harvard library has another version, copyrighted in 1843 and published in 1848, which is completely different, with the title, Town’s Speller and Definer, Revised and Enlarged, published by Sanborn and Carter of Portland. That 1848 copy advertised “Town’s School Books, Revised,” consisting of Town’s 1st, 2nd, 3rd, and 4th Readers, Speller and Definer, Town’s Analysis of Words, and Town’s Chart of Elementary Sounds and Substitutes. See other entries on his materials and on his reading series, apart from his spellers. What appears certain is that Town’s “meaning” speller was being massively promoted in government schools, while Webster’s “sound” speller was losing ground, though Webster’s still had very large sales for use above the beginning level, possibly because it was very cheap.)

1844 Town’s First Reader, To Be Used in Connection with Any Speller, Salem Town, Published 1846 by H. & E. Phinney, Cooperstown, New York.

(Harvard copy. Town’s reading series, which appeared apparently from 1844 to about 1846 or so, consisted of first through fifth readers, plus a Grammar School Reader, and has multiple copies listed in Early American Textbooks, indicating it was published in Portland, Buffalo, New York City, and Cincinnati. Harvard also has a “Revised Edition” of The Child’s First Reader dated 1848, published by Sanborn & Carter of Portland, Maine, and an 1854 copy of the 1848 revised edition published by Blake and Carter, Portland, Maine. Town’s whole series was still in print by “Mason” in 1876, according to the American Catalogue, but out of print when the 1912 United States Catalog was published. In 1866, Mason Brothers, N. Y.; Mason & Hamlin, Boston; and Geo. & C. W. Sherwood, Chicago, published Webb’s readers. The New York Mason appears to have been taken over by Taintor about 1867, so possibly the Mason publishing Town’s readers in 1876 was Mason & Hamlin of Boston.

Town’s First Reader rates a Code 4, only because of two pages of vowel practice, which was obviously oral and obviously meant for elocution, not decoding, though it accidentally might teach some phonic decoding. The preface to the 1848 edition said

1234
"This book is designed as the First Book for children. It comprises a series of progressive lessons, commencing with the Alphabet and advancing to words of two syllables. The words composing the Reading Lessons, are first presented in spelling columns. With these the child should be made familiar before he is required to pronounce them in sentences. This arrangement is calculated to prevent hesitancy in reading, and to secure an easy and natural utterance of words.... The use of the “abs” [Ed.: the syllabary] is now very generally discarded by practical teachers. They are, therefore, omitted in this work, and such significant words introduced as the child can understand. The exercises on the Vocal Elements are introduced for the use of such teachers as consider it important for children to be instructed in them, at this early stage of their education.”

Note that the “Vocal Elements” (phonics) were meant only for “exercises,” or elocution, and were not used to teach decoding to beginners. Even so, such “exercises” were not mandatory. Note the confirmation in 1848 that the “abs,” the “sound” syllabary, had been generally discarded by that date, although it had been in universal use only 22 years earlier, in 1826, and instead in 1848 the child was only being taught “significant words... the child can understand” (“meaning”). The 1876 American Catalogue shows that the six volumes of Town’s readers were on sale in that year by Mason. See the later entry for the Town and Holbrook reading series.

1844 The Boys’ Own Primer, By A Friend to Youth, Pub. by William T. Truman, Cincinnati, Ohio. (Harvard copy. Toy book. Imitates in form, greatly abbreviated, content of Dilworth-style spellers. Shortened syllabary and blends, three-letter words, etc. Clearly not a serious attempt.)

(Harvard copy. Not a beginning book. “This little volume is intended to be used as a First Reading Book, after the Spelling Book.” First story syllabicated. Some selections that are really object lessons. Per the 1876 American Catalogue, this series had four books by 1876 and was published in 1876 by Lippincott as Grigg and Elliot Common School Readers. Grigg and Elliot also published many other books: The Primer, or First Book for Children. Moral Tales, or First Steps in Reading for Children, and First Lessons in Reading for Children, as well as Grigg & Elliot’s New Series of Common School Readers, Nos. 1, 2, and 3 (and a 4 by at least 1876). See also entry under 1824 for Jesse Torrey’s series which was published by Grigg in 1835. Many of the above titles appear to be variants on the names for Torrey’s 1835 series, which were: Torrey’s Primer, or First Book for Children; First Reading Lessons for Children; Torrey’s Pleasing Companion for Little Girls and Boys, and Torrey’s Moral Instructor. See also Torrey’s 1825 speller.)

(Harvard copy. Code 5, and apparently not successful, despite many curious hints of ties to change-agents. Same title as Kneeland’s 1802 book. Apparently a deliberate sight-word version of Webster’s which it tried to replace. Referred to Webster’s popularity (p. 5.) One testimonial was from Phillips Academy. Another was from U. S. Senator Samuel S. Phelps, Vermont: “It is designed, and I think will prove effectual, to relieve the child from the tedium of dealing with sounds to him
unmeaning.... In mature life we find it extremely difficult to remember what we do not understand, and it
must be so in childhood.... Although I have never devoted much time to the subject of the education of
children, yet I take the liberty of saying that I consider your plan as a decided improvement.” Many were
local testimonials, apparently canvassed. From the St. Johnsbury Caledonian: “We venture to express the
opinion that the work is a decided improvement, in the arrangement at least, upon Webster’s Spelling
Book, for new beginners.” Another testimonial from the Vermont Chronicle said, “....we do not think that,
in the whole, a better will be found. It is already in general use in many of our large villages.”

The book is a hopeless mixture of sight-words and “sound” at the beginning, but the effect is
probably Code 5 because it does have the syllabary. Ormsby’s second book was listed on the cover: “The
American Reader, or exercises in reading designed to accompany the American Definition Spelling Book,
to be put in the scholar’s hands as soon (as he) has finished the reading lessons in that book....”

1844 New Spelling Book, or Second Course of Lessons in Spelling and Reading, Enlarged Edition,
William Russell, Principal of Merrimack, N. H., Normal Institute. Pub. 1855 by Tappan and Whittemore,
Boston.

(Harvard copy. Code 10, but not a beginning book. Harvard also has an 1850 copy published by
Charles Tappan, Boston. The Introduction makes it clear the purpose of the phonic instruction was correct
pronunciation, NOT DECODING. The 1850 copy by Charles Tappan advertised Russell’s Elementary
Series - Russell’s Primer, Russell’s Spelling Book, Russell’s Primary Reader. He also wrote The
American Common School Reader and Speaker. The 1876 American Catalogue listed two books by
“Russell, W.,” probably the same man, and possibly his older readers under new titles. They were
Introduction to Reader, 63c, and Elocutionary Reader, $1.25, both published by “Dennet” about whom I
have no information.

Russell was the quintessential “expert.” On page 18, he endorsed the teaching of reading BEFORE
spelling. A page at the beginning said more books are “now” available: Introduction to Primary Reader,
and Sequel to Primary Reader, the former for schools with another speller, to accompany it, “and the
latter to connect the author’s Elementary Series with Goldsbury and Russell’s Series for Common
Schools. For classes still further advanced, the author has prepared in conjunction with Mr. John
Goldsbury the Introduction to the American Common School Reader and Speaker... and the American
Common School Reader and Speaker.”

Being an “expert” and a promotor of government schools apparently paid very well for such prolific
“authors” as Russell. See other entries on Russell and discussion of change-agent Russell in the body of
this history.)

1844 Primer, or First Steps in Spelling and Reading, William Russell. Published in 1846 by Charles
Tappan, Boston. (Harvard copy. Code 4. See previous entries on Russell and his spelling and reading
books. This copy said his Third Book had been endorsed in 1843 by Horace Mann’s Common School
Journal. The Third Book was also endorsed by N. Y. State Superintendent of Common Schools and
“meets with a very favourable reception in our common schools.” The change-agents were very well
organized and apparently knew how to promote one another’s interests.)

1844 Primer or First Steps in Reading and Spelling, Improved Edition, Accompanied by A New
Spelling Book. William Russell. Published 1850 Tappan, Whittemore and Mason, Boston and possibly
revised in that year. (Harvard copy. Inexplicably bound with a play in the middle from London, 1859: Ici
On Parle Francaise. Code 4, with massive amounts of sight reading for beginners and totally inadequate in
dealing with short vowels or closed syllables. It is a confusing mess for children, and yet, in some of his
comments, Russell seemed to endorse “sound.” Russell was a strange person, as the comments in the
body of this history demonstrate. In this very poor Code 4 book teaching in effect by “meaning,” Russell
nevertheless said, “As spelling is the only sure method of teaching reading... the teacher should be careful
to teach the sounds of letters....” After this, Russell endorsed sounds for enunciation. Yet he endorsed
sight words for irregular spellings, and considered reading should be taught initially by a primer, not a
speller, obviously favoring the “sight” approach in the climate of the day.)

1844 The Illuminated American Primer, Being an Introduction to Mrs. Sigourney’s Pictorial Reader,
For the Use of Schools. Published by Turner & Hayden, New York.

( Harvard copy. Code 5 or less. Toy book. See 1846 entry for later edition and see 1837 entry for
earlier books. Presumably Mrs. Sigourney was Lydia Huntley Sigourney. As discussed in this history, in
Dr. Alcott’s short biography on Gallaudet, he referred to her. Alcott told of Gallaudet’s initial meeting in
1814 with the little deaf-mute girl, Alice Cogswell:

“...the daughter of an eminent citizen of Hartford... at play with the rest of the children, in her
father’s garden. Mr. Gallaudet, having succeeded in gaining her attention by signs, proceeded to
give her a lesson in written language, by teaching her that the word hat represented the thing hat,
which he held up in his hand. Following up this first step as well as he was able, he succeeded in
importing to her a number of many simple words and sentences. His ingenuity was also greatly
assisted by a publication of the Abbe Sicard of France, which Mr. Cogswell, the father of the girl,
had received from Paris, as well as by the efforts and cooperation of other individuals residing
with her in the family, among whom was Lydia Huntley, afterwards Lydia H. Sigourney, the
poetess....”)

1844 Very Little Tales for Very Little Children, in Single Syllables of Three and Four Letters. First
Street, Philadelphia.

( Harvard copy. Code 1. This copy reports that it was the fourth Appleton edition in eighteen months.
“Appleton, Daniel, 1785-1849, American publisher, founder of a large publishing house.” This is the
earliest Appleton reading text I have found. Yet D. Appleton would have been 59 by 1844, so presumably
he had published other materials for some years and had entered the reading book field about 1840
squarely on the side of “meaning” to teach beginning reading. Later entries show Appleton produced
other “meaning” beginning reading books which had originally been published in England. All were
presumably pirated editions, which were common at that time on both sides of the Atlantic because of the
absence of international copyright laws.

The author of this book referred to “her” self and said it was hard to write stories of three or four
letters for infants. “It is meant only for children who have just acquired their alphabet.” She said nothing
like it had been available before, but that was not strictly so, unless her original book was VERY old,
dating back to the mid-eighteenth century. Three- and four-letter stories are described elsewhere in this
history dating to the late eighteenth century, but they were meant to follow “spelling” of syllables and
words, which this author was obviously omitting. She said the book was “designed to lead the young
learner to the various early lessons provided by many excellent writers for the more advanced states....”
See later Appleton entries similar to this one.)

1845 Gradual Speller and Complete Enunciator, showing the Orthography and Orthoepy of All
Words in Common Use... arranged in accordance not only with the vowel sounds, but also with their
consonant elements and their various combinations, giving a correct pronunciation.... David B. Tower.
Published by Sanborn, Bazin and Ellsworth, Boston (according to Harvard notation, in 1857).
(Harvard copy. Code 10 if for beginners, but as Tower’s quotation later makes clear, spellers were not used for beginners at that time. The speller used an analytic-synthetic approach. The publisher, presumably in 1857, was printing Tower’s Series: Tower’s Gradual First Reader, Tower’s Gradual Second Reader, Tower’s Gradual Third Reader, Tower’s Intermediate Reader, Tower’s Gradual Fourth Reader, Tower’s Gradual Fifth Reader, Tower’s Gradual Sixth Reader, Tower’s First Steps in Articulation, Tower’s Progressive Speller and Definer, Tower’s Gradual Speller. The full title of the first book was Tower’s First Reader. The Gradual Primer, or Primary School Enunciator, so no “Gradual” primer existed apart from the first reader. Tower also wrote algebra and grammar books. Sanborn, Bazin and Ellsworth also published Salem Town’s and N. M. Holbrook’s series, the Progressive Primer, Progressive First-Fifth Readers, and Progressive Speaker. Tower was credited on its title page as having written the December, 1856, Pictorial Primer of the Town and Holbrook series, but it was NOT a phonic primer, and the possibility exists, as discussed later, that it was prepared in his name after his possible death towards the end of 1856. In the preface of the 1845 Gradual Speller, page 7, Tower had said:

“The spelling book was formerly the only text-book used in teaching a child to read. Its place in that respect, is now supplied by Primers and Reading Books, expressly adapted to that end and better suited to the purpose. The Spelling Book now falls into its appropriate sphere of giving the learner the orthography and orthoepy of the language; and it should be confined to these specific objects. Nor is it by any means to be neglected in its proper place; it should go with the pupil through his school days, and be the last book to leave his hands. December 1, 1845.”

Tower therefore confirmed that the use of the spelling book for beginners was a thing of the past by 1845. He also confirmed that it had taken the “experts” less than twenty years, from 1826 to considerably before 1845, totally to change the practices of millennia!

(Harvard copy. Daniel Burgess & Co. published other Tower’s readers. Nila Banton Smith showed 1853 as the date (page 99-100 of her book), wrongly claiming Tower’s was a truly phonic series for first grade. Yet a review of his book makes it clear his purpose was only elocution, although he therefore accidentally taught decoding at a Code 8 level. This book spoke of the “new feature” of giving only a few letters before reading words composed of these letters. See other Tower entries.)

1845 A, B, C, With Pictures and Verses. Published by A. Phelps, Greenfield. (Harvard copy. Toy book, about four by two inches, and useless except for teaching the alphabet. What is notable is the fact that books meant solely to teach the alphabet, without the syllabary, spelling and reading, were a novelty about 1845, but became common later. Note the change-agent publisher discussed elsewhere in this history: A. Phelps of Greenfield.)

1845 Comly’s Reader and Book of Knowledge, With Exercises of Spelling and Defining, for the Use of Schools and for Private Instruction. John Comly. Published by Thomas L. Bonsal, Philadelphia. (Harvard copy. Meant to follow spelling and reading book. Questions at end. Publisher also published Cobb’s Juvenile Readers 1, 2, 3 and Sequel.)

1845 The Grammatic Reader, No. 1. Edward Hazen. Pub. J. S. Redfield, New York. (Harvard copy. Code 3. Exhausting, pathetic. Some phonics through sound analogy on other whole words. “Preface: Much of the first and second years of the scholastic course is wasted in learning to read and spell....” Hazen’s comments indicated here should be contrasted to his earlier “meaning” works, described
previously. Hazen mentioned working “for 17 years” which would presumably be since 1828, the copyright date on his first book, which would have produced the problems he complained about in learning to read and spell.

1845 The Little Child’s ABC, Published by Geo. P. Daniels, Providence. (Harvard copy. Colored toy book. Code l. Arranged in paired boxes running down the page, with a capital and small letter in each left-hand box plus a sample word beginning with that small letter, and a capital letter in the right-hand box, with sample whole words beginning with that capital letter. Sequence in alphabetic order. For A, the sample small letter word was archer, and the sample words beginning with a capital letter were Ant, Arm, Apple, Amuse, Awake. Unphonic sample words: for W, What, Who, etc. Apparent purpose: home practice on alphabet, plus learning sample sight words.)

1845 The Mother’s New Primer, or The Infant's Library, Published by Richard Marsh, New York, New York.

(Harvard copy. Toy book which looks like an English reprint: shows officer’s funeral with kilts, so apparently British import with some changes. Usual abbreviation of syllabary and blends, and very little spelling by analogy, the standard toy book approach after about 1830. Three, then four-letter word lists, then two syllable words and stories. See similar one by the same publisher in 1850, titled The Infant’s Book, and another in 1856, entitled Mother’s Primer. Publisher advertised for sale toy books, stationery, ink, sealing wax, etc. His address was 374 Pearl Street, the same as Mahlon Day’s address when he published the 1837 The Infant School Primer. Day also had a stationary and book store, so it is reasonable to assume that Richard Marsh bought out Mahlon Day, some time after 1839, in which year George F. Cooledge showed his address on his own version of The Infant School Primer as the second story of M. Day & Co.’s book store. By 1840 or so, Cooledge was at 323 Pearl Street, and was still publishing in 1851, if an entry on page 92 of Early American Textbooks is correct for Henry B. Maglathlin’s The National Speaker.

American Antiquarian Society has a copy of a 24-page undated book, with a pencil notation, “1863,” entitled The American Pictorial Primer, constructed to Allure Children....” published by Richard Marsh of New York, the book’s name being a variant on others of the 1840’s. It is not known if Richard Marsh was related to the Marsh of the 1841 Boston company, Marsh, Capen, Lyon & Webb, which published Horace Mann’s Common School Journal. That company by 1842 became Wm. B. Fowle & N. Capen. See later entries on Marsh.)

(Harvard copy. Also listed publishers in Chicago, Detroit, Auburn, Cincinnati. Also published Joshua Leavitt’s American Lessons in Reading and Speaking and Stone’s Child’s Reader (of which I have no record). Like 1845 McElligott text, this was not for beginners. It attempted to teach the meaning and spelling of words through roots, prefixes and suffixes. Claimed spelling is visual, not to be learned by sound, and needs “rules.”)

1846 John’s First Book or the Child’s First Reader, John Russell Webb (1824-1887), Per Nila Banton Smith. Webb’s various “word method” readers are discussed at length in the body of this history, in Appendix C and elsewhere in this appendix, particularly in the 1851 entry for the United States Spelling Book.)

(Harvard copy. Toy book, Code 5 or less. See 1844 entry for earlier edition and an 1837 entry for earlier books. Religious at end. Hopeless for teaching reading, but has syllabary. See Progressive First, by Salem Town and Nelson M. Holbrook. 1867, Oliver Ellsworth, publisher, for a testimonial on the inside cover from a “Mrs. Lydia H. Sigourney, 1864.” She was possibly well known in 1864.)

(Harvard copy. Harvard also has another copy printed in 1847 by Leavitt, Trow & Company, 191 Broadway, which showed the 1846 copyright was taken out in that name. Code 5 or 6. See the body of this history for the opportunistic money-making nature of this small group, which conclusion was based on printed testimony from the period against the men adopting this organization name. The very small group had no apparent connection to the famous English society. However, the book refers to the society’s Report on the Subject of Spelling Books, which, although seriously flawed, is a very important historical source, as discussed in this history. Both the Report.... and the printed statement against the American Society.... are presently held by the American Antiquarian Society, Worcester, Massachusetts. The Report.... stated that 110 different spelling books had been published in America from 1804 to 1846, and attempted to list them. The list, although obviously faulty with a confusion on names, is nevertheless invaluable. The Report.... also gave some information on the spellers most used in some states for some years previously.

Noted on this speller was the information that the publisher, Leavitt & Company of New York, also published the American School Series, of which this book was a part. The series included the First
American Reader, the Second American Reader, and the Third American Reader. I have no further information on the Leavitt & Company American School Series in print by or before 1849.)

1846 First Book of English for Children, Charles Kraitsir, M. D. Published by Elizabeth P. Peabody, Boston. (Harvard copy. Sheer nonsense. Refers negatively to Pitman phonics. Opposes letter spelling and endorses Kraitsir’s conception of “sound” spelling, which is by LATIN phonics, since he assumed English has been corrupted. Words not following Latin pronunciation were to be taught as corruptions, as sight words!)

(Harvard copy. If used as he said, with his speller, or after others, it would be acceptable, but not as a beginning book. This copy carried the following: “Advertisement - The present volume consists, principally, of the course of reading lessons included in the author’s Spelling Book....” - said so it could be used in schools with the spelling book, to follow the speller “to render progress in reading, sure, easy and rapid, by placing it on the safe foundation of spelling.” Reading some of Russell’s remarks out of context suggest he endorsed “sound” in beginning reading. The reverse was true: he endorsed “meaning,” and promoted “spelling” to fix sight words in mind, and letter sounds to promote proper enunciation of already memorized sight words.)

1846 English Spelling Book and Child’s First Reading Book, by John G. M’Call, Hartford: Published for the Author. Note that its title begins the same as the 1846 speller published for the Society for the Diffusion of Useful Knowledge. The latter is only a Code 5 or 6 speller. That 1846 Code 5 or 6 speller certainly is not described as a child’s “first reading book,” which spellers were supposed to be twenty years earlier, before 1826. However, M’Call’s book is a throwback to those pre-1826 spellers. It is clearly meant for beginners and it teaches by “sound,” a Code 10. What is really astonishing is that, in 1846, M’Call said he was surprised to find that his approach was the same as that in Webster’s spelling book. That certainly suggests that by 1846 very few people were paying any attention to or even reading Webster’s preface to his speller which had the directions for its use.

1846 The American Inductive Spelling Book, Containing A Progressive Series of Lessons in Syllables and Words and in Easy Reading. Also Exhibiting the Proper Pronunciation of Words.... Designed as Preparatory to the Use of Emerson’s Readers, Benjamin Dudley Emerson, Pub. by Hogan and Thompson of Philadelphia

(Harvard copy. A Code 10 speller, apparently different in content and purpose from Emerson’s 1828 speller, since the advertisement claimed it was to be used before all his readers. The use of the spelling book as a first step seems to have lingered in Pennsylvania after 1826, as with Comly’s speller, referred to elsewhere. The advertisement on the back cover of this 1846 speller read:

“The Emerson Books are published by Hogan and Thompson, Philadelphia. They are for sale by the principal booksellers throughout the United States, and can be had easily by the schools in the interior of the South and West by giving their orders to the merchants with whom they deal.... The Emerson Series of School Books has been introduced extensively into a great number of the best schools, public and private, of the United States. The Books are used to a large extent in the Massachusetts, New York, Vermont, New Hampshire and Pennsylvania Public Schools, and in those states where the general Public School system is not established, they are used with much approbation by various private institutions of the best character.”

1241
Note the confirmation of widespread private schools in 1846 where government schools had not displaced them. Note also that the “general Public School System” by 1846 was limited to Massachusetts, New York, Vermont, and New Hampshire, and to Pennsylvania which had only joined it after enormous opposition to the change-agents in the early 1830’s. See Samuel Blumenfeld’s Is Public Education Necessary? for the background. The advertisement continued:

“The series consisting after the spelling book, of Four Reading Books... geography and arithmetic by Frederick Emerson... Of the Class Readers immediately following the use of the Spelling Book, we shall here particularly speak. The most elementary Book is the Fourth Class reader, intended for the youngest class of readers...”

It is evident that by the time Emerson published his newer speller by 1846, he had gone back to teaching beginning reading by “sound” and not by “meaning.” That possibly accounts for his new publisher’s being located in Pennsylvania, where the use of the speller as a beginning book was lingering, and possibly also accounts for Emerson’s series dying out not long afterwards. It would not have met with the approval of many old activists. See the 1848 entry on Swan concerning Swan’s displacing Emerson’s in Boston in 1849. See other Emerson entries under 1828 and 1835.)

1847 Hemans’ Young Ladies’ Reader. T. S. Pinneo. $1.25. Wilson, Hinkle & Co., Cincinnati, Ohio. (Listed in 1876 American Catalogue under Readers.)

1847 Exercises and Illustrations on the Blackboard, John Goldsbury. Published by Geo. Tilden, Keene, New Hampshire. (Harvard copy. Not a beginner’s book. See Russell’s entries for collaboration with Goldsbury on American Common School Reader and Speaker, and see page 133 of this book for reference to Russell. The Preface quotes Horace Mann on the use of the blackboard in Prussia.)

1847 Infant School Alphabet, Published by Henry M’Grath, Philadelphia. (Harvard copy, Eight-page toy book, Code 4. See other 1847 entry.)

1847 The Inductive Primer, Constructed to Allure Children By the Quickest Steps To An Acquaintance With The Letters, To Form Syllables, And To Read, Published by Henry M’Grath, Philadelphia. (Harvard copy. Code 3 toy book, 24 pages. Also published the Infant School Alphabet, above, The Child’s Own Primer, 37 pages, The Child’s Primer; or My Darling’s ABC, 16 pages, The Infant School Primer, 8 pages, M’Grath’s New Picture Books, 12 different kinds, 8 pages, Public School Arithmetical Table Cards, Juvenile ABC Cards, large size, Juvenile ABC Cards, small size. “Has always on hand a general assortment of Medical, Theological, Law and Miscellaneous Books, and Blank Books, School Books, Toy Books, Coloured and Plain; and Primers, From One to Six Cents, Which Will Be Sold, Wholesale or Retail, On the Most Reasonable Terms.”)

1847 My Little Primer with Many Engravings, Published by J. Grout, Jr., Worcester. (Harvard copy. Toy book, 24 pages, Code 1.)

1847 Primary Reader, A Selection of Easy Reading Lessons, With Introductory Exercises in Articulation, For Young Classes. Improved Edition. William Russell, Former Editor American Journal of Education, Author of Lessons in Elocution, Etc. (Harvard copy. Gives articulation exercises. Page 8: Refers to “prevalent fault” of stumbling in reading. Contrasting Russell’s 1847 remark to the testimony given on pre-1826 reading fluency by William Andrus Alcott, quoted elsewhere in this history, demonstrates a sharp deterioration in reading ability by 1847. The deterioration in reading ability was the result of shifting from the “sound” spellers to teach beginning reading before 1826 to the “meaning” primers to teach beginning reading after 1826.
1847 The Illustrated Primer, or Child’s First Book, Designed for the Earliest Instruction in Schools and Families, Published by George F. Cooleedge & Bro., New York, Booksellers and Publishers.

Early American Textbooks also lists on page 70 a copy of The Illustrated Primer, or the First Book for Children, published by George F. Cooleedge & Bro., New York, 47 pages, no date. Harvard’s copy of The Illustrated Primer carries many testimonial letters on Webster’s speller published by Cooleedge and refers to the practice of children’s memorizing the dictionary. The back cover said they published Cooleedge’s Pictorial Edition of Webster’s speller, and “A New and Cheap Common School Dictionary by Wm. G. Webster, Noah’s Son.” They also published:

“A Beautiful Primer, The National Pictorial Primer, or the Child’s First Book. This primer is arranged progressively, beginning with the alphabet, and ending with words of three syllables. It is also interspersed with Reading Lessons....”

Cooleedge also listed:

“Valuable and Popular Reading Books, Pierpont’s Series of Reading Books.... 1. The Little Learner or Rudiments of Learning; 2. The Young Reader to Go with The Spelling Book; 3. Introduction to the National Reader; 4. National Reader; 5. The American First Class Book.”

Also on the back cover appeared:

“Valuable and popular school books, published by Geo. F. Cooleedge & Bro., N. Y., and for sale by the principal Booksellers throughout the Union: The cheapest and most popular Spelling Book published in the United States - Cooleedge’s Edition of Webster’s Elementary Spelling Book, The Last Revised Edition.... This Spelling Book... is in almost universal use throughout the United States, the sale of it being about One Million Copies per Annum. This book has more influence than all other others on a national language, and the effects of its general use for more than forty years, are visible to this day, in the remarkable uniformity of pronunciation among the citizens of the United States.”

See the text of this history for the worth of such overblown publishers’ claims, which claims were also parodied in the story published in the School Bulletin, included in Appendix A. Nevertheless, Webster’s was possibly the best-selling spelling book among the many on the market about 1847, possibly because, as its publisher admitted, it was the cheapest. Concerning the credibility of the general claim, however, it should be noted that the publisher, George F. Cooleedge & Bro. of New York, is virtually - and possibly almost totally - unknown today. How could a company claiming such monumental importance fade into almost total oblivion, unless the company was not so important as it claimed?

1847 Leavitt’s Reading Series, Part 1 - Primer, or Little Lessons for Little Learners, by Joshua Leavitt. Published in 1851 by John P. Jewett, Boston.

(Two Harvard copies, the other published by Jewett in 1850. Some books of this series are listed in Early American Textbooks, pages 70, 90 and 91. The material could be Code 5 if taught in sequence, but was adaptable to Code 3 or 4 or even Code 1. The Preface, page 4, discussed prevalent methods. On page
It mentioned reading at age 6, and page 42 mentioned age 3 at infant school. It considered optional the use of the syllable method, but nothing was mentioned about teaching the phonic decoding of words. Page 60 showed that the book’s use of phonics was only for elocution. Page 4 described the “old way,” the syllable method.

This text listed high frequency words (which was extraordinary!) It showed eleven words that it claimed composed one quarter of all reading, and another page of words presumed to form another quarter. The first quarter is almost identical to Ayres’ first quarter published in 1915.

In the 1846 book, the Young Analyzer, by James N. McElligott, published in 1855 by Ivison and Phinney, New York, which has been listed previously, Ivison and Phinney were shown as publishing Joshua Leavitt’s American Lessons in Reading and Speaking, perhaps the material listed below from Early American Textbooks. It is unknown whether Ivison and Phinney were only the New York publishers, or whether they actually took over from the Jewett company by 1855. The Jewett company 1851 copy of the Primer shows that Jewett published Leavitt’s First Book (which was the Primer), and Leavitt’s Second, Third, and Fourth Books. Possibly the Ivison and Phinney title applies to that Fourth Book, when Ivison and Phinney presumably were at least the New York publishers.

Early American Textbooks lists Primer: or, Little Lessons for Little Learners, Boston: John P. Jewett & Co., 1854, 72 p.; Leavitt’s Reading Series, Part II. Easy Lessons in Reading, also Jewett, 1850, 180 p.; Part IV. Selections for Reading and Speaking, also Jewett, 1847, 312 p.; Part V. Selections for Reading and Speaking, also Jewett, 1849, 312 p., and another copy of Part V by Jewett in 1850. The reason for the difference in the numbering of the books, in comparison to those listed on the Harvard primer published by Jewett in 1851, is unknown. Also listed in Early American Textbooks is what is obviously an upper-grade reader published by Jewett: The Literary Reader. Miss A. Hall. Boston: John P. Jewett & Co., 1851. 408 p.)

(Harvard copy. Code l, pictures match “key” words and sentences, presumes alphabet learned first. Book is probably a pirated English edition, which Appleton copyrighted in America in 1848. Appleton’s 1850 children’s book-list largely represented wholesale raiding of British publishers. Also published Very Little Tales for Very Little Children, in Single Syllables of 3 and 4 Letters; Little Lessons for Little Learners, in Words of One Syllable, by Mrs. Barwell, author of Mamma’s Bible Stories. See Joshua Leavitt’s book with the same subtitle, Little Lessons, etc. Also published Little Annie’s Second Book, in Words of One Syllable; Mother Goose in Hieroglyphics. This 1850 edition of Little Annie’s First Book included a catalog of Appleton’s books, which also showed Miss Sinclair’s A Series of Tales with a review from the Edinburgh Advertiser; Divine and Moral Songs by Isaac Watts; Maria Edgeworth’s books; and Mrs. Sherwood’s books, all old British materials. See 1844 Appleton entry and later Appleton entries, and entry on the American, Mandeville, whose readers Appleton published.)

1848 The Spelling Book, Consisting of words in columns and sentences - as oral and written exercises together with prefixes, suffixes and roots from the Greek and Latin languages, William D. Swan, Principal of the Mayhew School, Boston, Published in 1852 by Thomas Cowperthwaite & Co., Philadelphia.

(Harvard copy. Not a beginning book, but Code 10 for upper levels. Back cover shows publisher dealt in higher grade textbooks. Preface endorses written instead of oral spelling. Re misspelling in writing, “The recent reports of school committees upon this subject bear witness to the truth of this conclusion.”
Publisher also sold Swan’s series of reading books: Revised Primary School Reader, Part I. Primary School Reader, Part II, Primary School Reader, Part III, Swan’s Grammar School Reader, Swan’s District School Books, Swan’s Young Ladies’ Reader, Swan’s Instructive Reader, Swan’s Introduction to the Instructive Reader, Swan’s Speller, Swan’s Primary Speller, “Series recently revised.”

Shown under the copyright was the statement that the book was adopted in Roxbury on January 1, 1848, and in Boston, to replace B. D. Emerson’s on March 7, 1849, “subject to the conditions prescribed by the regulations.” Cincinnati on March 9, 1850, had a resolution to adopt it for the Common Schools of Cincinnati. In Rochester, (no date given) was reported to have said “that Swan’s Spelling Book be adopted as the textbook in orthography in our Public Schools, in the room of Cobb’s, or others now in use.” In Schenectady on June 21, 1850, “Swan’s text-book was unanimously adopted as the text-book for spelling in the schools under charge of the trustees.” The book’s comments referred to Swan’s “long experience and great success as a teacher of reading... for many years principal of the Mayhew School, Boston, and who is well known throughout the United States as an earnest laborer in the cause of popular education.” Note how many “laborers in the cause of popular education” so frequently acquired massive textbook sales to the very same nation-wide government schools for whose establishment they “laboried.” The text referred to “...the extensive sale” of these books “recently undergoing an entire revision.”

The book also referred to a grammar by “Samuel S. Greene, A. M., Supt. Public Schools, Providence, and professor of the Normal Department of Brown University.” Greene wrote Greene’s Analysis, and Greene’s First Lessons in Grammar, also published by Thomas, Cowperthwait of Philadelphia. See further comments on materials by Greene listed in Appendix D. The book stated that The Primary School Reader, Part I, was intended for beginners:

“It contains a lesson upon each of the elementary sounds of the language. The design of the author is to teach the form, name, and power of each letter separately, and then its use in combination with other letters in the formation of syllables and words. By adopting this process, the pupil will acquire the habit of a distinct enunciation, at an age when the organs of speech are the most flexible, and much labor will be saved in his future progress in education.... The Primary School Reader, Part II, contains exercises in articulation arranged in connection with easy reading lessons.”

The approach was teaching phonics from known whole words, and only then to “sound,” not “sound” to identify words, See other Swan entries.)

1849 The Second Round in the Ladder of Education, James Brown, Published by John T. Lange, Philadelphia. (Harvard copy. Unspeakably awful, and sheer nonsense. Code I, if possible to code at all. It is to be hoped that no one ever tried to teach any little children with this insane opus. It did make a good point: a contemporary defect with common primers was that they did not teach syllable reading. It had a ludicrous kind of teaching of meanings of prefixes and suffixes, and no syllabary, but a ludicrous substitution which was, in effect, non-phonic.)

1849 Child’s ABC Book, Published by Rufus Merrill, Concord, New Hampshire. (Harvard copy. Tiny toy book, about 3 1/2 by 2 inches. It had the alphabet, a few pictures, and words, and an alphabet rhyme, out of normal order. If meant to teach reading, Code 1.)

(In 1876 American Catalogue under Primers and Readers: School Primer 12c, 1st 20c, 2nd 35c, 3rd 50c, 4th 75c, and Rhetorical $1. See other entries on Parker, who wrote Progressive Exercises in English
Composition in 1832, a composition book which was in wide use over a long period of time. Parker later wrote another widely used series of readers with J. Madison Watson.)

1849 McGuffey’s Newly Revised Eclectic Primer, Eclectic Educational Series, Copyright by Winthrop B. Smith, Ohio, Published by Clark, Austin and Smith, New York.

(Harvard copy, Code I. It makes no pretense to be anything special and is very poor, even in comparison to other primers of the period. The Preface said it could be used for the pupil to “instruct him in the use and meaning of language...an introduction to ‘McGuffey’s Eclectic First Reader.’” Its non-phonetic nature is confirmed by the alphabet picture which shows the word “wren” for the letter “w”. See extensive comments in this history, the 1836 entry in this appendix, and the material in Appendix C on the McGuffey readers.)

(Harvard copy, Code 4, only because of word arrangement, NOT its philosophy and use of sight words. Abbreviated syllabary and blends, which it said it was optional to skip. No phonics per se but words arranged at beginning as short a, then short e, i, o. and u. Some words grouped by phonic analogy at beginning, then sight words. Emphasis on elocution. A pamphlet in the American Antiquarian Society Library reviewed Mandeville’s readers scathingly, condemning them for coarseness and vulgarity, which comments were, in part, justified. The pamphlet is entitled “A Review of Mandeville’s Series of Readers for the use of Common Schools, By A Friend of Education,” Portland: Advertiser Office - Foster & Gerrish, Printer, 1851. The pamphlet indicated it also had an 1849 edition. Mandeville in a letter from Albany dated July 22, 1850, said he had made 12 out of 21 recommended changes. Mandeville’s 7-volume series was still on sale by Appleton in 1876 according to the 1876 American Catalogue: first reader, 20c, second 40c, third 60c, fourth 60c, fifth $1, Course of Reading, $1.25. Elements of Reading and Oratory. $1.25. Possibly the Primary Reader listed above became the first reader by 1876, since no “Primary Reader” was listed in the 1876 Catalogue.)

1849 The Second Reader (252 pages), Oliver Beale Peirce, Published by Gates, Stedman & Co., New York (Listed in Early American Textbooks, page 101. Early American Textbooks shows on page 54 that Peirce wrote The Grammar of The English Language, Impr. ed., Watertown, N. Y.: Knowlton & Rice, 1843, 192 pages. No further information is available on Peirce’s material which was apparently a complete reading series.)

1849 Columbian Spelling Book - Ticknor’s (Listed by Nietze on page 26. Presumably the publisher was Ticknor, Reed & Fields of Boston. See 1852 entry.)

(Harvard copy, Code 4, because it does have blends and consonant sounds, but if taught by sight as recommended in note on bottom of page 12, it would Code 2. It is a crazy, mixed-up mess pretending to be phonic. It uses Latin vowel sounds. She had published the book by Charles Kraitsir, M. D., with these ideas, listed previously. Peabody wanted these sounds learned from sight words.)
To the Mother.... The words being learnt as wholes, they can afterwards be pronounced slowly which analyses, or spells them (spells means separates) into the elemental sounds, and these elemental sounds are the true names for the characters.

Refers to articles in the North American Review, January and April, 1849, “Significance of the Alphabet.” Peabody’s book teaches Latin vowels, with no distinction between long and short - a ludicrous approach for English. Elizabeth Peabody, who was Horace Mann’s and Nathaniel Hawthorne’s sister-in-law, and who was a highly visible “literary” personality for decades in her own right, also had an article in Primary Teacher, December, 1875, page 108.)

1849 North American Review, January - April, “Significance of the Alphabet,” articles referred to on page iv of Elizabeth Peabody’s First Nursery Reading Book

1850 Picture Alphabet, Published by American Tract Society, New York. (Harvard copy. Toy book, about 2 1/2 by 4 inches. Intent obviously to teach alphabet only, as first pages are completely reading, with initial letters obviously only to teach the alphabet while the book is read to beginners.)

1850 The Student’s Primer, Designed as a First Book for Children - The Student’s Educational Series. J. S. Denman. Published in 1852 by Pratt, Woodford & Co., New York.

(Harvard copy, Code 3. Begins with a little analytic phonics, but goes rapidly downhill. Exceedingly ugly content on “stories” for little children, as on page 74. Denman’s series was The Student’s Primer, The Student’s Spelling Book, The Student’s First Reading Book (and Second, Third, and Fourth volumes), and The Student’s Speaker for Young Pupils. This publisher also published Olney’s geography books, Comstock’s science books, Bullions’ grammars, etc., including Gallaudet’s School and Family Dictionary and Bentley’s Pictorial Spelling Book. The material in Denman’s reading series was based on Denman’s 1846 articles in “The Student,” a monthly paper. Praised by David P. Page, then principal of the State Normal School at Albany. Note the numerous ties to personalities associated with the movers-and-shakers. See other entries on Denman.)

(Harvard copy. Not a beginning book. See entry above on Denman’s reading series. This edition of Denman’s speller has a “new” section 3, moving it up to a Code 7, although not for beginners. Without it, earlier editions might be as high as Code 5 because of vowel markings. Denman indicated it was intended to teach correct pronunciation. “Contains about 23,000 words, nearly all the words in common use in the English language.” Begins by teaching short-vowel words by pictures, but with some analogy (ox, box, fox). This is Gallaudet’s visual analogy on learned sight words. Page 22:

“The great popularity of this work has induced the author to comply with the request of numerous teachers and revise this section, for the purpose of making the lessons easier than they
were in the first editions and adapting them to... those who are just commencing the study of this branch of education.”

That remark confirms that spelling was not meant to be the beginning step. In the School Bulletin (Harvard copy, page 177, 1876?) on the history of teachers’ institutes, the statement is made that the first teachers’ institute ever held was at Ithaca, New York, on April 14, 1843, organized by J. S. Denman, the “honored superintendent of Tompkins County.” The textbook author Denman was obviously an important mover-and-shaker, and therefore in a position to profit financially from his connections. It is obvious that his 1843 “teachers’ institute” would have promoted teaching beginning reading by “meaning” instead of “sound.”

1850 The Book of Elements, Embracing a Scientific Analysis of Elementary Sounds - Elocution and Versification. Spelling, Abbreviations, Capitals, Punctuation, in a concise form, indeed all the laws of: Reading and Writing. B. Smith Goodenow, A. M., Former Principal of Bath High School. Third edition published by Phillips, Sampson, and Company. (Harvard copy. Not a beginning book. Divided into Part I, Orthoepy, and Part II, Orthography. In Appendix, it gave the “Lord’s Prayer” as it claimed it had been said from 700 A.D. to 1537. The Appendix recommended Pitman’s Phonography. “The common method of teaching children to read is also very erroneous, and is made so, in a great measure, by the usual process of naming the letters, instead of learning their sound.” This is further confirmation that in 1850 children learned by “meaning” and not by “sound.”)

1850? The Infant’s Book, Published by Richard Marsh, New York, New York. (Harvard copy. Toy book, about 4 by 5 inches. Begins with oversized large and small alphabets, then more alphabets with pictures and sentences for each letter. By page 12 “w”, “Whales in the sea, God’s voice obey,” abbreviated syllabary and blends, 3-letter words in five columns by short vowels, and on the next page 4-letter words with no “u” column. Toy books before 1850 were often such abbreviated and mixed-up parodies of the sequence in early 19th century spellers.)

1850 Little Annie’s ABC, Showing the Use and Sounds of the Letters, in Words of One Syllable, (Inside title page reads, Little Annie’s Primer). Published by Geo. S. Appleton, 164 Chestnut Street, Philadelphia, and D. Appleton & Co., New York. (Harvard copy. Philosophy is Code 1, but in practice it could be used differently solely to teach the letters from sample words, without teaching the words as sight-words, to be memorized. Not really meant as a beginning reading book, but only to learn ABC’s, except for a few sight words and pictures at the end. “Advertisement” reads:

“The idea on which this little book is founded, although not an original, is a useful one. It was suggested by Mr. Wood, of the celebrated Edinburgh Sessional School. It is simply this: that as soon as a child learns the letters of the alphabet, and even while engaged in learning them, he should be taught their use and sound in real words, such as he is uttering every day, and not in unmeaning syllables, which convey to his mind no ideas, and are associated with no real objects... Uttering sounds without meaning and being told that b, a, spells ba, he justly esteems rather dry work. But at the moment he is able to connect the sounds he is acquiring with the objects he sees about him, he becomes interested, and in this way he may easily be induced to learn his letters without repugnance.”

This book also carried a catalog of Appleton’s books at the end. Juvenile Publications included Appleton’s New Cheap Juvenile Library of 12 volumes, Little Annie’s ABC Book, followed by Little Annie’s Speller, Mother Goose, Little Annie’s Second Book (and presumably Little Annie’s First Book), Mrs. Sherwood’s books, Miss Edgeworth’s books, etc. See other entries in this appendix on Appleton’s books from 1844 on.)
1850 Furst Fonetic Redur (fourth edition), Elias Longley. Published in 1851 by Longley & Brother, Cincinnati.

(Also see later Longley entries and text of this history. This book was a Harvard copy with Pitman special alphabet, Code 10:

“Introduction: The phonetic alphabet... is the joint invention of Isaac Pitman and Alexander John Ellis, B. A., of England... (finished) in 1847.... It is a universally acknowledged fact, that the acquirement of a knowledge of the art of reading, according to the common (or Romanic) manner of spelling, is a very difficult task. Years are spent in learning the mere mechanical art of reading. The cause of this difficulty is, that the letters have no fixed power or sound.... No one can tell the spelling of a word from hearing it pronounced, or its sound from seeing the manner in which it is spelled.... the Phonetic method of spelling... is the work of a few weeks instead of years...[Otherwise] every word in the language must be learned separately, and consequently learning to read is very laborious... and still worse, a slow process.”

Note the almost unbelievable fact that by the 1840’s learned Englishmen like Pitman and Ellis, and their American imitator, Longley, were totally ignorant of the fact that with the ancient syllable “sound” method children had once learned to read “in a few weeks.” A sentence reading roughly, “In a few weeks, I shall read well,” actually appeared in pre-1826 American “sound” spellers, from Murray’s onwards, and the anonymous Scottish Schoolmaster in 1829, after thirty years experience in teaching beginners to read, felt it was standard for little eight-year-olds to be able to read fluently anything in print. Such expectations were before the ancient “sound” method first began to be changed about 1818 and was finally totally discarded for “meaning” after 1826, creating massive reading disabilities on both sides of the Atlantic Ocean because of the establishment of wrong conditioned reflexes in reading. See the 1857 entry on Longley.)

1850 Primer (on cover), Illustrated Primer (title page), Published by D. Lothrop & Co., Boston. (Harvard copy. Apparently not meant to teach reading, but only the alphabet. If for teaching reading, it is Code 1. Alphabet followed with pictures with phrases under them, then pictures with excerpted paragraphs apparently lifted completely out of sequence from other stories. Disconnected, disorganized, and its purpose is puzzling. The pictures are EXCELLENT. See later entries in this and Appendix C on Lothrop.)

1850 The New American Primer, or Child’s Companion, Designed for Young Beginners, Carefully Compiled, Containing Near Fifty Engravings, Published by John Moore, Baltimore, Maryland. (Harvard copy. A toy-book mess, possibly Code 3. So “carefully compiled” that it had an upside-down alphabet. It contained alphabets, then pictures and words, incomplete and mixed syllabary, sight-word paragraph above blends, and a reading paragraph above short-vowel words, etc. It was a mixed-up parody of the old spellers, like other toy books of the post-1830 period in the Harvard library. A large market must have existed for such toy books attempting to teach reading which were sold to parents by 1850. The apparent existence of that market raises a question: Were American parents finding that their little children were having trouble learning to read in the new government schools which were enrolling most beginning American students after 1830?)

1850 Webb’s Normal Reader No. 1, John Russell Webb (1824-1887). Huntington & Savage, New York; H. W. Derby & Co., Cincinnati; H. Crittenden, St. Louis. (In Early American Textbooks, p. 111. See the discussion of the various Webb readers in the 1851 entry for the United States Spelling Book, in the body of this history and in Appendix C.)

1249
1850 The Primary School Spelling Book, Designed for Primary and Intermediate Schools, by William D. Swan, Principal of the Mayhew School, Boston, Published in 1852 by Thomas Cowperthwaite & Co., Philadelphia. (Harvard copy. Depending on how it was taught, could be Code 4 to 6, probably 5, but not meant for beginners. Lists other publishers in other cities: New York - Geo. F. Cooledge; Boston - Phillips, Sampson & Co.; Baltimore; Charleston (S. C.); Louisville; St. Louis; Cincinnati; Nashville; Memphis; Lexington; Macon; Buffalo. Shows it was adopted in Cincinnati and elsewhere. See other entries on Swan.)

1851 Aunt Mary’s Primer, Adorned with One Hundred and Twenty Pretty Pictures, by “J. C.” Published by Mather & Burr, Providence, Rhode Island. (Harvard copy. Code 2 because of some two-step word building at beginning, but not because of its philosophy which is Code 1. An obvious English reprint, about 5 by 7 inches. Discussed at length in the body of this history. A “meaning” approach.)

1851 A Primer of Reading, Spelling, and Drawing, Rev. Ed., Mrs. Horace Mann, Pub.: Willis P. Hazard, Philadelphia, 113 p. (In Early American Textbooks, p. 71. Although it is possibly the same general material, this does not sound much like Mrs. Mann’s sight-word primer described by Mathews, in Teaching to Read, Historically Considered, The University of Chicago Press, page 67:

“About 1841, Horace Mann’s second wife, Mary Peabody, brought out a little book entitled Primer. Mann described it as a ‘beautiful book... published in Boston. It is prepared on the same general principles with those of Worcester, Gallaudet, and Bumstead; and it contains two or three reading lessons and a few cuts for drawing, in addition to a most attractive selection of words. It is the result of many years’ successful efforts in interesting young children in reading and spelling.’”

For this quotation, Mathews cited Horace Mann’s Spelling Books (Boston, 1841), p. 36 n. Mrs. Mann’s 1841 book obviously would have used a Code 1 “meaning” approach. This 1851 book, therefore, may also have used a Code 1 approach. Mary Peabody Mann also wrote with her sister, Elizabeth Palmer Peabody, A Primer of Reading and Writing for the Intermediate Class and Primary Schools, Generally, which is shown in Early American Textbooks, page 73, as published by E. Steiger, New York, in 1878, 110 pages.)

1851 First Reading Book, Containing Easy, Progressive Lessons in Words of One Syllable - The Student’s Series, J. S. Denman, Published in 1852 by Pratt, Woodford & Co., New York. (Harvard copy.

“Preface... [This book progresses from] sentences composed of the most simple words, of two or three letters, to those containing words of a greater number of letters and somewhat more difficult of pronunciation but of so common use that their signification is readily comprehended by the children.... Those who are engaged in instructing the young, should bear in mind that the practice of reading without comprehending what is read (a habit frequently acquired in school) is highly injurious to the learner, and should never be allowed in the smallest child.”
Contrast this Dugald-Stewart-style psychological nonsense apparently first proposed by Stewart in the 1790’s to the diametrically opposite 20th-century definition of reading given by the Russian psychologist, Elkonin, which has been quoted elsewhere in this history. At the bottom of page ll of Denman’s book, this appeared: “Children should always be questioned after reading a lesson.” Sample reading comprehension questions appeared at the bottom of some pages.

The purpose of the phonetic keys in Denman’s book was obviously elocution, not decoding. Yet bright children might learn vowel sounds for use in decoding, since one each appeared on succeeding pages, along with connected print of sight words. Yet the average child would not have enough exposure to the vowel patterns and would therefore read the material as “whole words.” Some words were arranged by sound and spelling analogy. Children could learn the “sound” material for decoding if not exposed to it too late, but this book is not the beginning book in the Denman series. However, constant “sentence” reading might destroy that “sound” effect because not enough practice was provided. The effect more likely would be visual analysis of whole words.

A very curious “religious” poem was on pages 107-108, the only religion in the book. The book contained gentle stories to page 44, and then very ugly material, as in another book in this series. Ugly word-play was on page 50.

A note was on the inside cover concerning The Student’s Primer, which has been reviewed in this appendix, earlier: “...designed as an aid to those... teaching children the first principles of written language. The late David P. Page, then Principal of the Normal School at Albany, N. Y., said... ‘It is the best system I ever saw for teaching the first principles of reading.’"

Denman’s name does not appear in Nila Banton Smith’s “history,” nor in Reeder’s. Also, Denman’s name apparently does not appear in Nietz’s book. In Early American Textbooks, two of Denman’s books are listed on page 81: Second Reading Book (1851) and Fourth Reading Book, 2nd ed., 1852, both published by Pratt, Woodford & Co., New York. See other Denman entries in this appendix. Denman’s books were obviously important although almost totally forgotten today.

“Preface: ...there is no spelling book at this time that fully meets the wants of the people of the United States. The first spelling exercises, instead of what are commonly called “a-b - abs,” are composed of entire words, the most of which are among the first that children become familiar with in vocal language so that, in the outset, the young pupil is not disgusted with that which to him is an irksome task and without meaning. by his system of notation for pronouncing, the sound of any vowel, distinct or obscure, is manifest to the pupil.”

The purpose of the phonics in this book, not meant for beginners, was obviously elocution. Much discussion of vowel sounds follows. Testimonies came from Principal Farnham, Public School No. 8, Syracuse, February 21, 1851, before he became superintendent, and others, including one in 1845 from Chairman of the (Schools) Committee, New York State Legislature. The publisher also put out Webb’s Normal Primer, Primary Lessons, “A Series of Cards to be used with Primer and No. 1, Normal Reader,” and also published Webb’s Nos. 2, 3, 4, 5. The back cover of Miles’ speller read re Webb’s:
“These readers are used in the principal cities and villages throughout the United States and are rapidly coming into use in the smaller towns of the country... the system of teaching... is the... WORD METHOD...”

Hon. S. S. Randall, Deputy State Sup’t., Common Schools said of the Webb readers, “They are the best practical readers that have come under my notice; they are all and everything they should be.” Josiah Miles was from Watertown, New York, and Webb “invented” his word method in a country school near there. Farnham also had a tie to Watertown, as discussed in the body of this history. See Webb entries in this and the other appendix.)

1851 My New Picture Alphabet and Primer, Pub. C. S. Francis & Co, New York. (Harvard copy. Effect, if used to teach reading, about Code 4. Toy book, apparently an English reprint, about 6 by 7 inches. The 1829 Boston School Primer had been published in 1831 by Munroe and Francis of Boston and C. S. Francis of New York, as listed earlier. C. S. Francis, therefore, had been in business at least twenty years with a long-standing association with the “meaning” method in readers.)

1851 The North-Carolina Reader, Calvin Henderson Wiley, Lippincott, Grambo & Co., Philadelphia (Early American Textbooks, page 112. Published in 1855 by Barnes. From entry for 1855, this was book 3 in the series.)

1852 The Indestructible Reading Book Chiefly in Words of One Syllable (In Coated Cloth), Published by Ticknor, Reed and Fields, Boston. (Harvard copy. Also published the Indestructible Alphabet, the Indestructible Primer, the Indestructible Spelling Book, and the Indestructible Reading Book. They were combined in the Indestructible Lesson Book: The Four Parts Bound in One Volume. The Indestructible Reading Book carried this note:

“To the teacher: In describing the pictures, many words are used that are too difficult for young beginners. The teacher, in such cases, is requested to help the child by pointing to the object named, or by repeating the word two or three times.”

That is obviously a pure “meaning” approach. The material was evidently English, with references to May Day, to a cottage with an “old dame,” to a “barrow” and “water pot.” It also used the term, “hay cock” instead of hay stack. Ticknor, Reed and Fields were apparently printing for home use in 1852 an English Code I series, also intended for home use. See earlier entry on Ticknor.)

1852 The Picture Primer, Published by Huestis and Cozans, New York. (Harvard copy. Toy book. Cannot seriously be considered for instruction. American Antiquarian Society has another book I saw, with no date, published by Huestis and Cozans, or possibly just Philip J. Cozans. Company sold toy books, stationery, etc. See two other entries for this concern.)

1852 New Juvenile Reader, No. 1., Lyman Cobb. Published and copyrighted in 1852 by J. C. Riker, New York.

(Harvard copy. See earlier entries on Cobb’s books. Cobb, who wrote his series in 1830, revised this 1852 edition himself. “This edition recently revised and improved by the author.” It carried Cobb’s note that the vocabulary was totally controlled, and he wanted all new words pronounced at sight before reading the selections. Reading comprehension questions were included. Because of controlled vocabulary and phonic respellings, Cobb’s text rates only Code 3, but it is not a beginning book.
Cobb’s spellers appeared from the 1820’s and his readers from 1830 until the 1850’s or so. Yet Cobb is discussed by Nila Banton Smith, incredibly, in the same time-frame as Bingham whose books appeared beginning in the 1790’s and were apparently in use only until about 1820 or so.

On the back cover appeared, “The above series of books by Mr. Cobb... are already adopted in many of the principal cities of the Union, and are rapidly finding their way into the common schools generally.” The claim on an 1842 Cobb copy, quoted earlier, was that Cobb’s books had sold 7,000,000 copies. Now, on this 1852 book, a decade later, the statement was made, “More than 6 millions of Cobb’s Old and New Series of School Books have been published and sold.” Publishers’ claims about the numbers of books sold, like those about McGuffey’s, are apparently not worth much. This copy claimed Cobb’s books had replaced Sanders in Brooklyn, and were adopted in Baltimore and Lancaster, etc., from about 1845 on.

1853 Union Primer, Published by American Sunday School Union, Philadelphia. (Harvard copy. Gives listing of other locations and sects comprising the American Sunday School Union. Code 1, with remarkably little religious material. Both of these facts suggest that John-Wood-Sessional-School-type activists may have comprised the Committee of Publication, which consisted of 14 members from various denominations.)

1853 Tower’s First Reader, The Gradual Primer or Primary School Enunciator, David B. Tower. (Shown elsewhere as formerly Principal of the Eliot Grammar School, Boston, and Late Principal of the Pennsylvania Institution for the Instruction of the Blind. This 1853 revision of Tower’s original 1845 first-reader/primer was published by Daniel Burgess & Co., New York. The Harvard copy shows that at the time, presumably 1853, Daniel Burgess & Co. published Tower’s other readers.

Nila Banton Smith showed 1853 as the original date (page 99-100 of her book), wrongly claiming Tower’s was a truly phonic series for first grade. Yet a review of Tower’s first-reader/primer makes it clear his purpose was only elocution, although he therefore accidentally taught decoding at a Code 8 level. This book spoke of the “new feature” of giving only a few letters before reading words composed of these letters.

Harvard has at least two other copies of this first-reader/primer. One carries the edition date of 1853, and was published by Crosby, Nichols & Co., Boston; and Mason Bros., New York, but it also carries the printed notation, “Boston School Edition,” with a penciled publishing date of 1859 written in by the Harvard library. The other copy with the printed notation, “Boston School Edition,” was published by Sanborn, Carter, Bazin & Company, and has a written-in publishing date of 1857. The omission of Ellsworth’s name on the company title, Sanborn, Carter, Bazin & Company, suggests the book was printed in the early part of 1857, while an 1857 speller carrying Ellsworth’s name in the publisher’s title was probably printed in the latter part of 1857. The text is a Code 8 book but only by accident, since its intent was to teach elocution of “words” to beginning readers. The preface and content make it crystal clear the phonics was for elocution and had nothing to do with decoding. To satisfy some teachers, the two copies titled Boston School Edition, with the penciled dates, 1857 and 1859, had five straight pages of sight-word running text at their beginning.

As noted elsewhere in this history, Philbrick of Boston had written in the Boston Annual School Report for 1874, pages 283-285:
“In respect to the initiating of children into the art and mystery of reading, - the teaching of them the elements of the art, the enabling of them to pronounce at sight the words of easy prose or verse, - I found the Primary Schools on my first inspection of them in 1857, in a deplorable condition. The old-fashioned method, by ABC syllables and spelling, had been nominally abolished by the abolition of the usual appliances for teaching it, and it had been so much ridiculed that the teachers were very shy in using it in the presence of visitors. The reading books and charts in the schools were designed for the ‘word-method,’ a method of very limited capabilities... All that has been changed, but long and hard has been the road by which the change has been reached: A publishing interest joined hands with old-fogyism in interposing obstacles in the way of progress. But, at length, books and appliances for teaching reading phonically were introduced, and the teachers were gradually initiated into the phonic method. Then came Dr. Leigh with his ‘pronouncing type,’ the result of years of study and labor, a new and valuable instrumentality for facilitating the teaching of the phonic method. The use of this is now [Ed. 1874] nearly universal in our schools.”

Probably the first book introduced in the Boston schools which could be used to teach phonics was Tower’s first-reader/primer, even though its intent was to teach elocution. That Tower’s was the first such book introduced is suggested by a notation on the copyright page of Tower’s Pictorial Primer, a different book from Tower’s Gradual Primer, copyrighted in 1856. The notation reads as follows: “City of Boston, In School Committee, September 2, 1856. Ordered, That Tower’s Gradual Primer be the Text Book of the Third, Fourth, Fifth, and Sixth Classes in the Primary Schools. Attest: Bernard Capen, Secretary.” This may very well have been prior to Philbrick’s arrival which was about 1857, and the introduction for beginning readers may have been meant to benefit elocution, not decoding.

What makes Tower’s Pictorial Primer which carried this notation so interesting is that Tower’s Pictorial Primer was NOT copyrighted by David B. Tower, although his name HAD appeared on the 1853 copyright for Tower’s Gradual Primer. Instead, Tower’s Pictorial Primer was copyrighted by Anna E. Tower, whoever she was, and carried a Preface reading:

“At the request of several gentlemen of the School Committee, and of many Primary School Teachers, this book has been prepared, in which all the text is drawn from pictures. During the last fifteen years dozens of Primers have been issued, wherein a part, and even the greater part, of the text is thus drawn from the cuts. This book goes only a step farther, and has all the text illustrated. It will be seen that LETTERS or WORDS can be taught first from it, just as the teacher pleases; but it does not begin with long and difficult words, and gradually progress to short and easy ones, to avoid the beaten track, as one author, not a teacher, rather boasts of doing. Verily, this is new. Boston, December, 1856.”

The Preface is unsigned. Was it perhaps written by Anna E. Tower, who took out the copyright? Had David B. Tower perhaps recently died? After all, on September 1, 1856, the Boston School Committee had ordered the use of Tower’s Code 8 Gradual Primer in the beginning grades, which could be used to teach elocution. Yet now, in December, 1856, Anna E. Tower was copyrighting a Code 1 pictorial primer, purportedly by David B. Tower, “at the request of several gentlemen of the School Committee, and of many Primary School Teachers....”

It could not be used to teach elocution in the beginning grades and thereby frustrated the September, 1856, school regulation mandating the use of the Tower Code 8 first-reader/primer.

That December, 1856, Code 1 primer, obviously intended for use in the Boston schools instead of the Code 8 primer authorized in September, 1856, was published by Sanborn, Carter, Bazin & Company. Only a month later, in January, 1857, Anna E. Tower published her OWN Tower’s Little Primer for the
Youngest Class in Primary Schools, a phony phonics Code 3 work, although this was under her own name as author, clearly demonstrating that she had been capable of writing the pictorial primer. However, her publisher was Brown, Taggard & Chase of Boston. Its preface (also unsigned) said, “This book will be an easy introduction to the ‘GRADUAL PRIMER,’ the First Reader of Tower’s Series; also to his ‘PICTORIAL PRIMER;’ and, in short to any Series of Readers.”

Therefore, in 1857, Sanborn, Carter, Bazin & Company were publishing the unauthorized Code 1 picture primer to precede David B. Tower’s authorized Code 8 primer, which they also published! They were very possibly the publishers referred to by Philbrick who had joined with “old fogies” to defeat the teaching of phonics. However, that publisher may have paid dearly for its activism. Only two years later, it was no longer the publisher of David B. Tower’s series of Gradual readers. Another Boston publisher was producing the Tower’s series, including all those copies meant for the Boston schools, although the five sight-word pages were still inserted at the beginning of each Gradual primer. In 1859, the Tower series was being published by Crosby, Nichols and Company of Boston. Sanborn, Carter, Bazin & Company, became Sanborn, Bazin & Ellsworth, then Bazin & Ellsworth, and then, sometime after 1862, simply Oliver Ellsworth. However, the concern was apparently out of business by the time the 1876 American Catalogue was published.

The “old fogies” referred to by Philbrick might very well have been those people who insisted, and succeeded, in inserting those five pure sight-word pages at the beginning of Tower’s Code 8 primer, and the publisher who cooperated with them very probably was Sanborn, Carter, Bazin & Company who published the unauthorized pictorial Code 1 primer meant to displace the authorized Code 8 primer. The publisher and the “old fogies” were very possibly also the people who managed to have that curious book prepared by December, 1856, Tower’s Pictorial Primer, meant to be used before the Gradual primer which had been authorized for the Boston schools in September, 1856. Tower’s Pictorial Primer was pure Code l material attributed to David B. Tower, even though he had only written Code 8 material before that. It should be noted it was copyrighted by Anna E. Tower, not David B. Tower, at the end of 1856. Therefore, it is not surprising that in January, 1857, only a month later, Anna E. Tower published her own phony phonics Code 3 primer, which aped David B. Tower’s synthetic phonics approach at its very beginning, and which demonstrated that she had the ability to write a primer herself. In the 1876 American Catalogue, A. E. Tower’s Little Primer is shown as available from “Thompson” in quantities of a dozen for $1.25. It obviously remained in print for a long time.

Tower’s Gradual series was being marketed by Lee & Shepard of Boston in 1876, according to the American Catalogue, and that company was the probable successor to Crosby, Nichols and Company. See the 1857 entry on another primer published by Bazin and Ellsworth with no author’s name but which they later credited in an advertisement, probably wrongly, to Tower. See the discussion in Appendix C concerning the pro-phonics history of Lee & Shepard, which pro-phonics attitude was not a permanent one. See other Tower entries.)

1853 Rhetorical Manual; or Fifth Reader, Fifth Edition. D. B. Ross. Claxton. (Listed in 1876 American Catalogue. Presumably Claxton is Claxton, Remsen & Hasselfinger, listed in Early American Textbooks as the Philadelphia publishers of two of Ray’s arithmetics. Claxton apparently had a complete reading series. See other entries below taken from the 1876 American Catalogue.)

1853 Comstock’s Juvenile Reader No. 1, Andrew Comstock, Published by the Author, Philadelphia, “Elocution taught, and stammering, lisping and other defectave articulations are corrected, by Dr. A. Comstock, at his Vocal Gymnasium, Philadelphia.

(Harvard copy. His “phonetic alphabet” discussed on page 6. This was the first book in a reading series that Comstock intended to publish. Whether he ever did is unknown. It was written in ordinary
type, except for showing accent and inflections, but was meant to follow his Phonetic Reader No. 1, which was written in his phonetic type, and which had used exactly the same stories. Comstock’s accent and inflecting material was first published in the author’s System of Elocution, 1841. According to Clifton Johnson, page 293, Comstock published a book of symbols in Philadelphia in 1832 whose purpose also was tone or pitch, not phonics. Comstock’s material provides further confirmation that “phonics” was not the norm in the nineteenth century. It appears probable that Comstock added his phonic alphabet to his accent and inflecting material because of the influence of the Pitman phonetic type.

1853 The Sentential Reader, By a Literary Association, Published in Boston by Frederick Parker, and in New York by Alexander Montgomery, Copyrighted by John L. Chapman and James Scott, “For a Literary Association, New York.” (Harvard copy. This is a bizarre and ridiculous book, but it was meant as a second book, the first in the series having taught the alphabet and words. See the discussion in the text of this history.

On page 16, the father said, “A SENTENCE, my son, IS TWO OR MORE WORDS BY WHICH WE SAY SOMETHING. A great man in Germany, called Becker, says it is ‘a thought made known in words’. Here, my son, are three sentences: Rain falls. The night is dark. The moon is not bright.” On page 20, the child Wilmer spoke: “A sentence is made up of words. When I speak or write, I put words together. When I put them together, and say something, I make a sentence.” On page 21, the father said, “So you must mark your steps as you pass from sounds and letters to words, and from words to sentences”

Despite the isolated quotation from someone named “Becker,” the book was obviously not promoting the unbreakable sentence thesis of William James. Yet some of the vocabulary resembled James’ vocabulary, as in the following:

On page 114, “Remember that sentences are the instruments of thought.... Remember ever that sentences are thoughts made known in words, and that you must understand their form and make in order to understand their thoughts. Sentences, my son, are great things.”

1853 The New American Primer and Juvenile Preceptor, Martin Ruter, D. D., Published for the Sunday School Union of the Methodist Episcopal Church by Carlton and Phillips, New York. (Harvard copy. Code 7, very like old analytic phonics spelling books, and beginning with syllabary and blends. Much gentle, true religious content. Sharp contrast in religious tone and instructional Code to the Code 1 Union Primer of the American Sunday School Union which had been prepared by a nameless committee instead of a named minister like Reverend Ruter.)

1853 The Spelling Book Superseded, by Robert Sullivan, Published in Rochester.

(Harvard copy No indication was given on whether “Rochester” was in England or America, but it was most probably in America. No information was given on whether this was the same Sullivan whose “meaning”-method materials, from government schools in Ireland, are discussed elsewhere in this history. However, with the title, “Superseded,” it appears probable that it was the same Sullivan who endorsed John Wood of the Edinburgh Sessional Schools and his Code 1 approach. According to the 1876 American Catalogue, Sullivan’s new edition was being sold by Sadlier for 32 c. Sadlier published Catholic school books, so Sullivan’s dreary material was unfortunately ending up in American Catholic schools in the 1870’s as well as in Irish government schools before the 1850’s. Irish government schools, established shortly after 1830 were the very antithesis of Catholic schools. See the discussion in the text of this history on the Irish government schools.

Excerpts from “Professor Sullivan’s ‘Outline of the Regulations and Methods of Teaching in the National Model Schools of Ireland,’” are given in Henry B. Barnard’s American Journal of Education
article, “A-B-C Books and Primers,” 1863-1864, Volume XI, pages 593-604. It is likely that the material was written by the same “Sullivan” as the man in the above entries, and that “Outline…” obviously had to have been published some time before the 1865 date of Barnard’s article, possibly as early at the 1840’s or even 1830’s. In Barnard’s excerpt from Sullivan’s work, Sullivan quoted extensively from Richard and Maria Edgeworth’s Essays on Practical Education (1798) concerning phonics in beginning reading. Yet Sullivan did not endorse Edgeworth’s phonic method. See the material quoted elsewhere in this history concerning the highly unsatisfactory government schools established by the British in Ireland, with which unacceptable schools Sullivan was associated. The schools were largely boycotted originally by the Catholic Irish majority because of bigotry in the curriculum.

1854 or Before - Webb’s Series of Normal Readers l-5, plus Normal Primer and Primary Lessons: A Series of Large Cards to be Used in Connection with the Primer and No. l, by John Russell Webb (1824-1887), Lamport, Blakeman & Law, 8 Park Place, New York.

(From an advertisement on the back of Harvard’s 1854 copy of Miles’ United States Spelling Book. See the discussion of the various Webb readers in the 1851 entry for the United States Spelling Book in this appendix, in the body of this history and in Appendix C.)

1854? Every Child’s Primer, Published by Richard Marsh, 374 Pearl Street, New York, New York. (Harvard copy. Tiny toy book, too short for instruction, but content in Code 6 category. See other Marsh entries. As noted, this address had been Mahlon Day’s Book Store as late as 1837.)

1855 Practical Reader. 504 p. Richard Culver. $1. Lippincott. (Listed in 1876 American Catalogue and Early American Textbooks. See another 1876 entry for Culver.)

1855-1858 - Progressive Readers, by Lucius Osgood.

(1855 publisher unknown. John A. Nietz said this series was first published from 1855 to 1858, and Nietz mentioned it on pages 93-94 and 103 of his book, Old Textbooks, University of Pittsburgh Press, 1961. Nietz said, “These constituted the most popular series of textbooks ever published in Pittsburgh.” The series was unrelated to the once very widely used The Progressive Series by Salem Town and Nelson M. Holbrook which was being published by 1859. See the 1870 entry for the revision of the Osgood Progressive Series as Osgood’s American Series. From Nietz’ description, both the 1855 and 1870 materials appear to have used the meaning approach.)

1855 Lovell’s Progressive Readers, No. 1, J. E. Lovell. Published by Durrie & Peck, New Haven.

(Harvard copy of book one of the second series. It uses a Code 7, phonic approach to words. See 1836 The Young Pupil’s Second Book, Lovell, New Haven, per Clifton Johnson, p. 261. On page 300, Johnson also mentioned Lovell’s The Young Speaker, New Haven, 1844. The 1836 and 1844 copies were part of the first series. Whether the first series also rated a Code 7 phonic code is unknown, but Lovell’s second and phonic series was unusual even in 1855, since the similar series (Swan’s, Tower’s), used phonics intentionally at the first grade only for elocution, not decoding. Perhaps Lovell was inspired by the new Pitman print to write a beginning phonic reader in regular print. Lovell’s second series dated from 1855 to 1857, and was still in print in 1876, according to the 1876 American Catalogue. The American Catalogue listed J. E. Lovell’s Progressive Series of Readers, five volumes, for the years 1855-57, being published

It is surprising that the Lovell’s ground-breaking “sound”-oriented readers were printed in Yale’s New Haven, since so many “meaning” oriented people were associated in some way with Yale over the years. Those “meaning” oriented authors included the Scot, William Russell, in the 1820’s. Barnard recorded that when Russell was in New Haven, he taught in the New Township Academy and the “Hopkins Grammar School - the preparatory classical seminary connected with Yale College.” Russell became the first editor of the change-agent American Journal of Education in 1826, and in it he vehemently pushed the teaching of beginning reading by “meaning,” and promoted the establishment of government schools in place of private schools. Woodbridge, a Yale graduate and associate of Gallaudet, was the second editor. Holbrook, a Yale graduate, was personally responsible (as recorded by Blumenfeld) for initiating the drive for government schools in America in 1826, which government schools have used the “meaning” method in reading since their very inception. So was Gallaudet a Yale graduate and a tutor there while Woodbridge and Holbrook were students. Gallaudet also worked very hard for the establishment of government schools and promoted the “meaning” reading method for hearing children. Thomas Hopkins Gallaudet, who first introduced de l’Epee’s defective deaf-mute methods in America when he founded his school for the deaf in 1817, wrote a “meaning”-method reader, The Mother’s Primer, for hearing children in 1835, and had a letter promoting the “meaning” method published in 1830 in Woodbridge’s American Annals of Education (formerly the American Journal of Education). So did Russell publish “meaning” approach reading books in the 1840’s, but the books of the “elocutionist” Russell were loaded with “elocution” so accidentally taught some phonics. William Torrey Harris, who attended Yale in the 1850’s, was the principal author of the massively used Appleton phony-phonics “meaning” series in 1878, which series was most responsible for pushing the many Leigh phonic-print series out of the government schools. Frank E. Spaulding, who was on the staff of Yale by the 1920’s or before, was the principal author of the similar and massively used “meaning” method 1907 Aldine readers.

The International Congress of Psychology in 1929, of which J. McKeen Cattell was President, was an exceedingly influential meeting to which Pavlov of the Soviet Union and luminaries from other countries came, and it was held at Yale. The spread of the “global” (“meaning”) reading method all over Europe after 1929 (except in the Soviet Union) and in America (where it was called instead the sight-word (“meaning”) method, may very possibly have been influenced by the ideas of the top psychologists who attended that meeting at Yale. Certainly Cattell’s ideas were out of line compared to ordinary Americans, not just concerning his endorsement of the sight-word method. As quoted elsewhere, The New York Times reported on September 3, 1929:

“Dr. J. McKeen Cattell in his presidential address (said) (t)he objects of the sciences were more ideal than the objects of the churches.... The practices of the scientists, he added, are more Christian than those of the churches.... ‘When in the fullness of time there is a family of the nations, when each will give according to its ability and receive according to its needs... this will be due in no small measure to cooperation among scientific men of all nations in their common work. And it may be that psychology... shall lead them. It is the object of psychology to describe, to understand, and to control human conduct....’”

The phrase, “to control human conduct” should send chills up anyone’s spine who does not look with favor upon rule by “Big Brother.” That Yale University should have, in effect, acted as host to a man making such grossly offensive remarks, which were apparently received without much stir by the audience of psychologists, hardly adds to Yale’s luster, any more than the fact of its having been associated in some way with some of the most prominent promoters of the “meaning” method in teaching
reading for over a century, from at least the 1820’s to at least 1929. Lovell’s phonic reading series of
1855, published in New Haven where Yale is located, was apparently sharply different from those other
“meaning”-method materials which came from men who, at one time, had some kind of association with
Yale in New Haven, Connecticut.

1855 The Young American’s Series, a Catalogue, Farmer, Brace & Co, New York, late Pratt,
Woodford & Co. (Harvard copy. Lists many publications, including Denman’s reading series, and
testimonials.)

1855 Little Teacher, First Book in Reading, on Word Method, 10c. 16c. Wilson, Hinkle & Co.,
Note that it has no connection with the McGuffey series that the company was publishing at the same
time.)

1855 Fisher’s Pictorial Primer, Published by Fisher & Brother, Philadelphia, New York, Boston,
Baltimore. (Harvard copy. This 24-page toy book is too short to code but uses possibly a Code 4
approach.)

1855 Practical Reader. R. Culver. $1. Lippincott. (Listed in 1876 American Catalogue. See another
1876 entry for Culver.)

1855 Fisher’s Holiday Primer, Published by Fisher & Brother, New York, Boston, Philadelphia,
Baltimore. (Harvard copy. Confused content in this toy book, possibly about Code 4 despite total
disorganization of content.)

1855 North Carolina Readers, Frank McKinney Hubbard, Books 1, 2, Calvin Henderson Wiley, Book
3. Published in 1876 by “Barnes,” according to the 1876 American Catalogue. See Early American
Textbooks, page 90, for Hubbard’s The North-Carolina Reader, No. 2. published in 1859 by A. S. Barnes
& Burr, New York; E. J. Hale & Son, Fayetteville, N. C., and W. L. Pomeroy, Raleigh, N. C., and page
112 for Wiley’s The North-Carolina Reader, published in 1851 by Lippincott, Grambo & Co. of
Philadelphia. It was probably much the same as Wiley’s Book 3 listed in the 1876 American Catalogue,
published by Barnes in 1855. Barnes issued an 1886 edition of Hubbard and Wiley’s North Carolina
Readers, listed in the 1885-1890 American Catalogue.)

1856 English Reader. Lindley Murray, Lippincott. 45c.(Listed in 1876 Catalogue under 1856.
Apparently a new edition of Murray’s 1799 text, also published by “Murphy” for 35c.)

1856 Leach’s Complete Spelling Book, by Daniel Leach, A. M., Superintendent of the Public Schools
of Providence, Published in 1857 by H. Cowperthwait & Co., Philadelphia. (Harvard copy. For Upper
Grades.)

1856 The Mother’s Primer, Published by Richard Marsh, 138 William Street, New York, New York.

Illustrated Primer. Similar appearance and size of this book to Cooledge’s primers. By 1856, Marsh had
obviously moved out of the old publishing area of Pearl Street, and out of Mahlon Day’s former premises
at 374 Pearl Street, possibly because of the area’s having becoming an infamous slum, as indicated
earlier. Yet Harper & Brothers were located at 317 to 321 Pearl Street as late as 1860, and possibly after
that date. Early American Textbooks, page 63, shows a title page of a book by A. S. Barnes & Co., 111
and 113 William St. (Corner of John Street), 1866. Therefore, the William Street area was apparently a
new location for New York publishers. See other Marsh entries.)

1856 Tower’s Pictorial Primer, The Child’s Book for Home and School. David B. Tower. Published by Sanborn, Carter, Bazin & Company, Boston. (Harvard copy. Tower’s authorship is questionable if the record shows that Tower died before the end of 1856, which other data suggests. See the discussion under 1853, above.)

1857 New High School Reader, $1.25. W. H. McGuffey. Wilson, Hinkle & Co., Cincinnati, Ohio. (Listed in 1876 American Catalogue. It seems almost certain that the company was only using McGuffey’s name, and that he did not compile the reader.)

1857 Little Boys’ and Girls’ Own Primer by Mrs. Teachem, Kiggins and Kellogg, Publishers, New York. (Harvard copy. Sixteen-page toy book, mixed-up material, Code 4 category. American Antiquarian Society has The American Illustrated Primer, N. Y., no date, Kiggins and Kellogg, 24 pages. Also have the American One Cent Primer, 8 pages, on which one page is printed upside down. Pagination includes cover. AAS also have another toy book by Kiggins and Tooker. Was Kellogg, obviously a low-quality publisher, the forerunner of Colonel Parker’s 1880’s publisher, E. L. Kellogg & Co., who published the School Journal, or of T. D. Kellogg, another publisher listed later in the 1870’s?

1857 Oram’s First Book; an Inductive and Progressive Primer. 128 pages. Elizabeth Oram. Published by D. Fanshaw, New York. (Listed on page 72 of Early American Textbooks, but no further information is available. Should not be confused with Oram’s American Primer of 1811 or 1812, an 1829 copy of which is in the Library of Congress and an 1816 copy of which was in the Lenox Collection per Reeder in 1900, p. 41.)

1857 American Phonetic Primer, Elias Longley. Published in 1860 by Longley & Co., Publishers, Cincinnati, Ohio. (See the earlier entry for Longley’s material. This book was a Harvard copy in the Code 10 Pitman phonetic alphabet. It was reportedly highly successful for teaching reading, which it certainly should have been, but it also reportedly adversely affected children’s later spelling accuracy. Longley had an extensive list of publications, including those on Pitman shorthand. In the 1876 American Catalogue, E. Longley’s Phonetic Primer and Phonetic First Reader of 1857 were being published by “Stevens,” so the publishers apparently had changed by that time. See the previous 1850 entry on Longley and the text of this history for a report on the relatively brief use of Pitman materials in Syracuse and elsewhere.)

1857 The Smaller Standard Speller, Containing Classified Exercises for Oral Spelling; Also, Sentences for Silent Spelling, By Writing From Dictation, Sargent’s School Series, Epes Sargent. Published by Phillips, Sampson and Company, Boston. (Harvard copy. Not intended as a beginning book. See other Sargent entries.)

1857 The Progressive Pictorial Primer, By An Eminent Practical Teacher. Published in 1862 by Bazin and Ellsworth, Boston; Bailey and Noyes, Portland, Maine. (Harvard copy, Code 1. The author’s actual identity is curiously veiled by the publisher. Yet the book is credited to David B. Tower by the same publisher in their promotional literature, perhaps posthumously and wrongly so, from its non-phonic nature. Conceivably Tower contracted to write it, but died and it was written by another. See the discussion under 1853 above on Tower’s materials.)

1857 Tower’s Little Primer for the Youngest Class in Primary Schools. Anna E. Tower. Published by Brown, Taggard & Chase, Boston. (Harvard copy. Code 3. See the discussion on this book under the 1853 entry for Tower’s First Reader, The Gradual Primer or Primary School Enunciator, by David B. Tower. The use of “Tower” in the title of her low-code book suggests a deliberate and dishonest attempt to capitalize on the fame of the well-known Tower high-code readers by David B. Tower.)

(Code 1. Harvard’s 1863 copy gave no author’s name but internal notes show it was written by a woman and was meant to accompany John Russell Webb’s series. Her initials were later given in the 1876 American Catalogue. Controlled vocabulary listed on page 38 (105 words), page 83 (159 words), and page 108 (204 words), totaling 468 words for the whole book.

See note on U. S. Spelling Book, 1851, for earlier publishers of John Russell Webb’s books. Nila Banton Smith dated John’s First Book or The Child’s First Reader by John Russell Webb to 1846, and said Webb completed his series of Normal Readers by 1855. See lengthy discussion on Webb readers in Appendix C and in the body of this history.)

(Harvard copy, perhaps Code 5. About one half of the first pages for the children, pages 16-19, cover the syllabary and blends, while the other half of pages 16-19 are straight sight-word meaning-bearing sentences! The rest of the revised edition has also made a similar mighty shift from “sound” to “meaning.” This gutted 1857 revision carries an:

“Advertisement
The recent publication of the improved abridgments of Dr. Webster’s AMERICAN DICTIONARY has made it necessary to revise the ELEMENTARY SPELLING-BOOK, that in its notation, as well as in Orthography and Pronunciation, the series may be consistent.... by the new system, the nicer shades of difference in the vowel sounds are given....”

It was signed by W. G. Webster, New York, May, 1857. The revision was copyrighted in Connecticut in 1857 by Webster’s children: Emily W. Ellsworth, Julia W. Goodrich, Eliza S. W. Jones, William G. Webster and Louisa Webster, “surviving children of the late Noah Webster, LL. D.”

1261
It seems probable that at the time Webster’s son was busy marking all the speller’s word lists to show “the nicer shades of difference in the vowel sounds,” some educational “expert” was helping him by writing the new sight-word material that was inserted so extensively. Those changes made the 1857 edition unusable as a beginning text to teach reading by “sound.”

Page 14, “Key to the Sounds of the Pointed Letters,” had originally been Noah Webster’s work. The new key dropped the numerals Webster had used and employed symbols (“points”) to indicate the different letter sounds. Yet Noah Webster’s original 1783 key remains one of the most brilliant achievements in the English language. With the use of Webster’s numerals over the letters, once a reader became familiar with them (plus the marking of silent letters), no special alphabet was necessary to teach beginning reading by “sound.” Neither was any respelled pronunciation necessary as with the keys that appear in today’s dictionaries, where one whole word is compared to another, so that the pronunciation from a keyed word can be transferred to the unknown word, which is usually differently spelled from the key word. We all know how difficult and irritating it is to use such dictionaries keys to determine the correct pronunciation of a printed word. By contrast, with the use of Webster’s relatively brief letter key, the pronunciation could be obtained directly from the marked letters on the dictionary’s entry for that word. Neither was any actual respelling of words necessary to show pronunciation with Webster’s key, except for a very tiny handful such as “one (wun)” It is extraordinary - no, it is absolutely mind-boggling - that this sound-key achievement of Webster’s for the teaching of beginning reading - and for the users of adult dictionaries - has never been explicitly acknowledged!

It was Noah Webster’s all-purpose, one-step, do-it-yourself sound key which separated Webster’s speller from the many competing with it after about 1818, when spellers first appeared with a shortened sound key - although Webster’s had not been long. In contrast, after Webster’s had first appeared in 1783, and until about 1818, competing spellers had simply imitated Webster’s extraordinarily original key (although Webster’s 1783 phonic key had itself obviously been inspired by Sheridan’s phonic 1780 dictionary).

Such competing spellers after about 1818 required the mental respelling of vowel letters in unknown words so that the vowels in the unknown words would match the vowel spellings in the key of sample whole words printed by the author at the top of each page. That first mental respelling step was necessary before any unknown words could be decoded and pronounced. Decoding and pronouncing therefore became the second step in what was actually two-step phony phonics.

It was phony, because a habit of thinking was established that, without the use of the author’s sample whole words as a printed key, unknown new words could not be pronounced solely from their spellings. In contrast, Webster’s students memorized Webster’s key with its variant English vowel pronunciations, and carried that do-it-yourself key with them mentally throughout life. (That they memorized the key is confirmed by quotations from that period given elsewhere in this history.) Therefore, after children left Webster’s keyed spelling columns in his speller where pronunciation on all words was precisely given, the mental use of his short, memorized key still enabled them to achieve approximate pronunciations on anything in print.

(Harvard copy. The back of Harvard’s copy of Tower’s 1841 Gradual Reader carries many endorsements, including a letter dated April 28, 1841, from the “Grammar Masters” of the Boston Schools. One of those signing was Richard G. Parker, Johnson School. This Harvard copy of the National speller carries a note dated January 24, 1860, that it was the “Gift of Richard G. Parker of Cambridge,” Class of 1817. See other entries on Parker.)
1857 Fourth School Reader. D. Fellowes, Claxton (Listed in 1876 American Catalogue. No other record. Early American Textbooks shows on pages 221-222 that two of Joseph Ray’s arithmetic texts, on which Wilson, Hinkle & Co. of Cincinnati were the principal publishers, had Philadelphia editions published in 1845 and in 1866 by Claxton, Remsen & Haffelfinger. They are therefore presumably also the “Claxton” indicated in the 1876 American Catalogue. Claxton apparently had a reading series. See other Claxton entries taken from the 1876 American Catalogue on Claxton.)

(Listed in Early American Textbooks, page 188, as published by Lippincott and containing 456 pages. Listed in 1876 American Catalogue as published not only by Lippincott but by Claxton, for $1. See Claxton’s 1857 Fourth School Reader, above, and other entries for Claxton, on whom the only records I have found are their listings in the 1876 American Catalogue, and some Philadelphia reprints of McGuffey’s and Ray’s books listed in Early American Textbooks. Early American Textbooks lists The Practical Reader, 504 pages, by Richard Culver, published by J. B. Lippincott & Co., Philadelphia, in 1855, also listed in the 1876 Catalogue, possibly being part of a Lippincott series along with Tracy’s book in the 1850’s. Early American Textbooks shows on page 84 that Grigg & Elliot’s Third Reader of 299 pages was published in 1857 by Lippincott.)

1857-1866 The National Series [a Code I “meaning” approach]. National School Primer 25c, National First Reader 38c, Second 63c, Third $1, Fourth $1.50, Fifth $1.88, Richard Green Parker and James Madison Watson. A. S. Barnes & Burr, New York (1876 American Catalogue under Readers; Harvard copy of 1858 Primer and 1860 First Reader; Many copies listed in Early American Textbooks. See the discussion in the body of this history on this series, and elsewhere in this appendix and Appendix C.)

1858 The Third Primary Reader, G. S. Hillard. Hickling, Swan & Brewer, Boston; Ingham and Bragg, Cleveland. George S. Hillard (Harvard copy. See discussion in text and other appendix on Hillard. The Hillard series which began to come out in 1855 was the apparent replacement for the Worcester series which had been published by this company’s predecessor, as discussed elsewhere in this history. See Appendix C for the sequence of publishers.)

1858 National School Series - The English Speller, by David Price (Readers by Parker & Watson), A. S. Barnes and Burr, 51 and 53 John Street, New York. (Harvard copy. See the discussion on Parker and the National School Series in the text of this history, elsewhere in this appendix and in Appendix C.)

1858-1867 Union Series of Readers, 7 volumes: Union Pictorial Primer, 20c, In Leigh’s Orthog. 25c, Union Reader No. 1, 28c, In Leigh’s Orthog., 32c, No. 2, 50c, No. 3, 75c, No. 4, $1.25, No. 5, $1.50, No. 6 Rhetorical Reader, $1.88. Charles Walton Sanders. Ivison, Phinney, Blakeman & Co., New York ( In 1876 Amer. Cat.; Nos. 1, 3, 5, in 1912 U. S. Cat. by American Book; Writer has personal copy of Union Pictorial Primer, which is listed here under 1866.)

1858 Pictorial Primer. Charles W. Sanders. 18c. Ivison. (Listed in 1876 American Catalogue. See other entries on Sanders.)

1859 Analytic and Phonetic Word Book. 30c. Rev. J. C. Zachos. Wilstach. (Listed in 1876 American Catalogue under Primers. See other entries on Zachos, here, in Appendix C, and in the text.)

1859 The Idea of a Graded School, Daniel C. Gilman (Harvard copy of speech. See discussion in this history on Gilman and Royce.)

1859 The First Primary Reader, George S. Hillard, published by Hickling, Swan, & Brewer, Boston. (Harvard copy. See discussion in text and Appendix C on Hillard’s first series which began to come out in 1855, and on his other materials. This book, but not the rest of the 1855-1859 series, was listed in the 1876 American Catalogue as still available from Taintor of New York.)

1859 Learning to Spell, to Read, to Write and to Compose, all at the Same Time, J. A. Jacobs, Principal of Kentucky Institution for the Education of Deaf Mutes. (Harvard copy. An advertisement on the back of Johonnot’s The Sentence and Word Book, D. Appleton & Co., Publishers, 1885, lists under Orthography and Orthoepy, Jacob’s Learning to Spell, to Read, to Write and to Compose, All At the Same Time - 332 pages, 514 illustrations. The book, endorsing phonics for hearing children, therefore remained in print for a long time. Jacobs claimed his deaf children made more progress in reading then hearing children using the ordinary methods of the day. See discussion on Jacobs in text of this history.)

1859 The Illustrated Primer, Published by George W. Hobbs, Charlestown, Massachusetts. (Harvard copy. Semi-toy book, some old-speller parody, Code 4.)

1859 The Progressive Speller for Common Schools and Academies, Salem Town and Nelson M. Holbrook, copyrighted in 1859 by Nelson M. Holbrook. Published in 1860 by Bazin & Ellsworth, Boston; and Bailey and Noyes, Portland, Maine. (Harvard copy. See discussion of this series elsewhere in this appendix and in the text of this history.)

1860? First Footsteps in the Way of Knowledge, American Tract Society, 150 Nassau Street, New York. (Harvard copy. Code 1. Apparently totally ignored syllable step. Table of contents shows: alphabet, then in sequence 1, 2, 3, 4, 5, and 6 letter words, all in context, no lists. Book totaled 154 pages. Six-letter words were finished on page 133. Six-letter words like four- and five-letter words sometimes had two-syllables.)

1860? Great Picture A,B,C, Gallery of Animals, Published by Fisk and Little, Booksellers and Stationers, No. 82 State-Street, Albany, N. Y. (Harvard copy. Toy book. Apparently meant only to teach alphabet by amusement. Back cover showed company published many children’s books, including Marks’ Toy Books, and Grandpa Pease’s New and Original Pictorial Books, of which this was one from inside page.)
1860? Little People’s ABC, Huestis and Cozans, Publisher, 107 Nassau Street, New York. (Harvard copy. Sixteen-page toy book, only as high as Code 3 because of abbreviated but mutilated syllabary. Otherwise, Code 1.)

1860 Lu-Lu Tales, The Lu-Lu Alphabet. Howe & Ferry, 76 Bowery, New York. On the back cover, with listing of books including Alphabet Arranged As A Story (this book) appeared “Lu-Lu Books Published by Raynor, Howe & Ferry.” (Harvard copy. Straight ABC book with sentences for letters, not to teach reading but to be read to child. Page 1 of Early American Textbooks lists three books by Mrs. Pamela Atkins Chandler Colman. One is New Stories for Little Boys: Original and Selected. New York: Samuel Raynor, 1852. 96 p. This note follows: “This small (10x12cm.), delightful book aims to entertain boys by writing about animals, birds, and folk heroes. One of the stories in this “Lulu Series” related the adventures of Bucephalus, Alexander the Great’s Horse.” Perhaps Mrs. Colman wrote other Lu-Lu stories for Raynor, Howe & Ferry.)

1860 The National First Reader or Word-Builder, Revised Edition, Richard G. Parker and J. Madison Watson, Copyrighted 1860 by A. S. Barnes & Burr. Published by A. S. Barnes & Company, New York, Chicago, and New Orleans as part of the National Series which appeared from 1857 to 1866. (Harvard copy. Code 1 approach. Uses whole words to build other longer words, which is what was meant by “building.” The error on “sound” is shown when words are built from the word, “one”: one, tone, stone, etc.)

(Harvard copy. Code 1. Preface: “As in the author’s previous work for the young, the principle here adopted, that the system of teaching children familiar words in little stories, at the outset, before drilling them in meaningless syllables, is the most effective process of instruction in reading.” A table gives “exercises” in vowel sounds, obviously for elocution. This was apparently part of Sargent’s “Old ser. of readers” listed in the 1876 American Catalogue as published by Shorey: Standard primer, 24c. - Standard first, 35c. - second 56c. - third, 70c. - fourth, $1.12 - fifth, and first class reader, $1.38. Also listed was Sargent’s “New ser. of readers:” Standard primer 24c. - Standard first, 35c - second 56c. - third, 70c. - Intermediate, 80c, fourth, $1.12. - fifth $1.38. The date of the new series is not known. Starting about 1871 and later, Epes Sargent was a co-author with Amasa May of another series, published by Butler, not Shorey.)

1860 Descriptive Catalogue of Town and Holbrook’s Progressive Series of Textbooks for Common Schools, High Schools and Academies. Published by Bazin and Ellsworth, Boston. (Harvard copy, with annotated comments. See other entries in this appendix on this publisher, and the discussion in the text of this history.)

1860 Reading Without Tears, or a Pleasant Mode of Learning to Read, By the Author of “Peep of Day,” &c., &c. (Mrs. Favel Lee Bevan Mortimer), Harper & Brothers, Publishers, Franklin Square, New York.
(In 1876 American Catalogue: $1.25, in 2 parts, 1, 60c, 2, 75c. Harvard has copy. English reprint, Code 3 at beginning, rhyming-word lists, then used in context, Code 5 later. Introduces syllabary and silent letters on pages 32-33 of 136-page book, too late. Mrs. Mortimer previously wrote Reading Disentangled, widely used in England, discussed in text of this history and in Appendix C, which used two-step phony phonics. Reading Without Tears was in print by Longwood in the 1912 and 1928 United States Catalog, appearing in 1928 after the entry, Reading - Psychology. An 1865 edition by Harper is listed in Early American Textbooks on page 102. See Little Pet Primer under 1863 which uses a variation of this title in its own title.

1860 The First Reader of the School and Family Series, Marcius Willson, Published by Harper & Brothers, 327 to 331 Pearl Street, New York.

(This six-volume series was listed in the 1876 American Catalogue: Primer, 25c, First reader 40c. - Second, 60c. - Third, 90c. - Fourth, $1.35. - Fifth, $1.80. Harvard’s copy of The First Reader shows it rates Code 1 to Code 3:

“Directions to the Teacher. A few general principles that were laid down in the Primer, are repeated here. Children may be taught to call words at sight, as well as letters. They should begin to read at the same time that they begin to learn the Alphabet, and in this way they will probably be able to read, by rote, several pages before they have learned all their letters. When they have completely mastered the Alphabet, (but not till then,) they may be required to spell the principal words in the Reading Lessons.”

To “spell” at this point in time for beginners usually meant only naming the letters in a sight word while looking at it “on the book,” not remembering the letters orally or in writing with the book closed, which was called “off the book.” Obviously, spelling “on the book” was very easy. Reeder discusses Marcius Willson’s books on page 55.)

1860 Willson’s School and Family Series, The Primer, Harper & Brothers, New York. (Harvard copy. Straight Code 1 at beginning, possibly Code 3 later because of some sight-word lists on page 29, page 43, and probably elsewhere, with certain sight words arranged phonically: bat, cat, etc., may, hay, etc. The Pronouncing Lesson, page 10, recommended that teacher pronounce sentences first, children imitating her, before reading words in lists. Opposed “old” method of spelling words first, which only meant naming the letters in the sight words while looking at them, before reading.)

1861 Sanders’ Union Reader, Number One, for Primary Schools and Families - Sanders Union Series, Charles W. Sanders, A. M. Published by Ivison, Blakeman, Taylor & Co., New York and Chicago. (Harvard copy. Code 1. See discussion of Sanders’ books elsewhere in this appendix, in Appendix C, and in the text of this history.)

1862 De Wolf’s Instructive Speller, Designed to Secure a Thorough Knowledge of the Elementary Sounds, and Correct Habits of Pronunciation and Orthography, Containing Dictation Exercises and a Complete Study of Derivative Words. D. F. De Wolf. Published by Sargent, Wilson, & Hinkle, Cincinnati, Ohio. (Harvard copy. Back cover advertises the 11 books of the McGuffey Series, including
McGuffey’s Newly Revised Eclectic Spelling Book, the 10 books of Ray’s arithmetic and algebra series, the three books of Pinneo’s grammar series, Object Lessons of Lilienthal and Allyn, Kidd’s Elocution and Vocal Culture, Chapman’s Agricultural Chemistry, De Wolf’s Instructive Speller, Heman’s Young Ladies’ Reader, The Young Singer (two books), and The Little Teacher or Word Method. That is hardly an impressive catalogue of textbooks in 1862 by a company which has been described as being, about that time, the largest textbook company in the world! Compare that textbook list, for instance, to the list of textbooks given in the 1860 catalog of Bazin and Ellsworth, a relatively small publisher, shown previously, and to others mentioned in this history.)

1862 Truth Vindicated, A Correction of Sundry Falsehoods and Misrepresentations in a Circular Signed by Oliver Ellsworth and Addressed to School Supervisors, Committees and Teachers of the State of Maine, Published by Swan, Brewer & Tileston, Boston. (Harvard copy. Contains their refutation of Ellsworth’s charges concerning Hillard’s 1855-1859 series, which they published. Also contains their annotated brochure on their own publications. Whether “truth” lay on Ellsworth’s side or their side, the fact is that Ellsworth was apparently out of business when the 1876 American Catalogue of books in print was published, while the Swan, Brewer & Tileston books had been those adopted in Boston from the late 1850’s. Those facts suggest the possible use of change-agent tactics by Swan, Brewer & Tileston, the publishers of this brochure. Such tactics have tended historically to be highly successful. However, the Brewer company itself also was out of business by late 1876 or 1877, being replaced in Boston by Wm. Ware, and in New York by Taintor. The record on the Brewer company’s widely used Franklin readers and on Leigh print, discussed in the text of this history, strongly suggest the possibility that the Brewer company was, itself, forced out of business about 1877 on the issue of Leigh print. See earlier entries on Ellsworth.)

1862 Monteith’s First Lessons in Geography on the Plan of Object Teaching, Designed for Beginners - National Geographical Series. James Monteith. A. S. Barnes & Co., New York. (Harvard copy. Note that Barnes was publishing a geography series as well as a major reading series and many other textbooks in 1862. McGuffey’s publishers obviously were far from being the dominant textbook company at that time or later, as has been so wrongly claimed.)

1862 Suggestions on the Principles and Methods of Elementary Instruction, H. B. Wilbur, M. D., Superintendent of the New York State Asylum for Idiots. Published by J. Munsell, Albany, New York. (Harvard copy. Bears the April 6, 1863, notation, “Gift of Thos. Hill., Pres., Harv. Coll. (1843). Wilbur’s comments have been discussed in the body of this history.)

1863 To Readers of the Maine Teacher, Published January 19, 1863, by Brewer & Tileston, Boston. (Harvard copy. Brewer & Tileston’s reply to Oliver Ellsworth’s response to their pamphlet defending their school publications against his charges. See the 1862 entry on the pamphlets.)

1863 Little Pet Primer (on cover, repeated inside, but adding:) “Hobart Hall” Reading Without Tears, for All Good Children, By Their Loving Friend, The Rector. Published by Alexander Fleming, No. 657 Sixth Avenue.
(Honest, inept attempt to teach by sound: Code 6. Early American Textbooks shows an undated copy on page 71. The title its obviously a variation on Favel Lee Bevan Mortimer’s Reading Without Tears, published first in England and republished at least as early as 1860 by Harper, which edition is listed above.)

1864 Easy Lessons: Key to National School Tablets. S. R. Scofield. 25c. Barnes. (In 1876 American Catalogue, presumably part of Barnes’ National series, listed elsewhere.)

( Harvard copy, with a librarian’s notation that it was published cir. 1878. It is notably NOT in Leigh print as were pre-1876 surviving first readers I have seen. It is Code 3. The picture alphabet even has erroneous “sound” entries, as owl for “o” and ship for “s.” Harvard library has Leigh’s Pronouncing Edition of Hillard’s Primer, published in 1872 by Brewer and Tileston of Boston and J. W. Schermerhorn & Co., New York, which edition had been transposed into Leigh print in 1866. Reeder discussed Hillard on page 50. See other comments on Hillard elsewhere in this appendix, and in the body of this history and in Appendix C.)

1864 Hillard’s Second Reader, Leigh’s Hillard’s Second Reader, prepared by Edwin Leigh, Published in 1876 by Brewer and Tileston, Boston, and J. W. Schermerhorn & Co., New York.

(Harvard copy. The reader had first been published in 1864 and had been transposed into Leigh print in 1868. It is also listed in Early American Textbooks. See the many other entries on Hillard, Leigh, Brewer & Tileston, etc., in this and Appendix C and in the body of this history.)

(My copy. In the Preface, Willson referred to his Primary Speller but said in some schools only one Speller is used. This is the probable reason Willson began this book with four pages of straight sight-word material: words and phrases next to pictures illustrating them. He preceded these pages, which had no phonetic arrangement at all, with the following:

“I. CALLING WORDS AT SIGHT. DIRECTIONS. - Direct the attention of the pupil to the pictures in the lessons of the next page: ask him what each represents; lead him to associate the words with the pictures, until he can call the former at sight, first in order, and then promiscuously when the pictures are covered by the hand or a piece of paper.... After the pupil has thus learned to call, at sight, all the words in the first six lessons, let him go back to the word hat, at the beginning of the first lesson, and learn the letters which form the word; let him then spell the word, at first with the aid of the book, and then without it when the word is pronounced by the teacher. Let him go through all the words in lessons 1, 2, 4, and 5, in the same manner. Although these six lessons contain all the letters of the alphabet - most of them repeated many times - yet the pupils may, after this, be occasionally exercised upon the alphabet separately, which will be found on page 12. They should also learn to write the Script letters on their slates.”

Unlike the earlier lessons, Lesson 7 had a phonetic arrangement, beginning with three-letter short “a” words, bat, cat, fat, hat, mat, etc. However, since the beginning students had already been taught “hat,” as
one of the sight words, this phonetic table became two-step whole word phonics, Code 3. Yet even the Code 3 phonetic effect was weakened because of the directions to the teachers:

“Before the words in the following spelling Lessons are studied by the pupils for the purpose of spelling them, the teacher should read them aloud to the class, and the pupils should pronounce each word after him; and this should be continued until each pupil can call the words readily at sight. The sentences in the Exercises should also be read aloud to the pupils before the latter are required to read them. After the pupils have read the sentences in the Exercises, let them spell the principal words in each.”

Whether the teacher was to read later lessons to upper grade students as well is unknown. After the beginning of the book, the speller gave considerable attention to words spelled under particular vowel sounds, as “gulf, dove, monk” and other attempts at patterning. Despite the inadequacy of such tables which mixed together different spellings for the same sound, the book might have rated perhaps Code 6 overall, because of the attention to phonetic elements, if the sight-word beginning had been omitted.)

1864 The Phonic Primer and Reader, A Rational Method of Teaching Reading by the Sounds of the Letters Without Altering the Orthography, Rev. J. C. Zachos, For Sixteen Months a Missionary to the Colored People of Paris Island, Port Royal, South Carolina. Printed by John Wilson and Son, 50 Water Street, Boston. (Harvard copy. Code 10. Discussed in this history. Still in print by Lee & Shepard in 1876 as “Phonic primer, and primary reader” according to the American Catalogue, as well as “Analytic and phonetic word book. ‘59. 39c, Wilstach” about which nothing is known.)

1864 United States Primer. Mrs. O. Bronson. American Tract Society, New York. (Listed in 1876 American Catalogue as in print for 15 cents. No other information on this primer is available. See 1850 entry for their Picture Alphabet and 1860(?)) First Footsteps in the Way of Knowledge, a Code 1 book. Copies of the 1850 and 1860(?)) texts are in the Harvard library. See also the 1867-1868 entries for United States Reading Books, First and Second, by American Tract Society, also known only from the American Catalogue.)

1865 or Before - Southern Series of Readers, six volumes. R. Sterling. (Listed in the 1876 American Catalogue as in print in 1876 by two companies, Agar and Burke. Early American Textbooks lists on page 107 Our Own Fourth Reader, 1865, published by Sterling & Albright, Greensboro, N. C., and Owen & Agar, New York:

“Part of the series of readers especially written for students in the southern schools during the American Civil War.”

Early American Textbooks also lists on page 73 Sterling’s Southern Pictorial Primer, published in 1866 by R. Sterling & Son, Greensboro, N. C., and Owens and Agar, New York. Pages 8 and 9 from Sterling’s Pictorial Primer are shown on page 72, indicating it was a probable low code, “meaning,” text. The primer was listed in the 1876 American Catalogue as the Southern Primer written by R. Sterling and published by Agar. However, this might cause confusion with the book which came out in 1839, The
1865 Chaudron’s Confederate Spelling-Book, by A. De V. Chaudron, Mobile, 5th edition, 40th thousand. (Listed by R. R. Reeder, pages 51-52 who quoted this from its preface written during the Civil War in the South:

“In former times the country was overrun with an endless number of competitive school books in every line of instruction. The present condition of the country has delivered us from this evil. Will that last hereafter?....”

1865 The Normal Speller, Albert N. Raub. (Per Nietz, p. 37. Nietz said Raub published The Normal Primary Speller in 1866, and said elsewhere that Raub later had readers. See Raub’s materials entered later. On page 102, Early American Textbooks lists Albert N. Raub’s The New Normal Fourth Reader, American Book Co., no date, and Fifth Reader, The Werner Co., Chicago and New York, 1878. That 1878 date is almost certainly wrong, as The Werner Co. appears from other sources only in the 1890’s.

1865 Large Letters for Little Ones, Hurd and Houghton, 401 Broadway Corner Walker Street, New York. (Harvard copy. Probably only meant to teach alphabet. Each page has a capital letter, illustration, and sentence. Other children’s books they published were listed on the back cover. Hurd and H(oughton) in Cambridge later was apparently the same company. “Houghton” apparently was the “Houghton” of Houghton, Mifflin, the apparent successor. See the discussion in this history on the background of the New York branch.)

(Harvard copy of Analytical First Reader, Code 1 material. The First Reader, and presumably the second, was not published in Leigh print until 1871. The 1871 Leigh copyright date appears on the Harvard copy of the Analytical First Reader in Leigh print. This series is discussed elsewhere in this appendix and Appendix C, and in the body of this history. Harvard library has another copy of the Analytical First Reader published in 1871 with Geo. and C. W. Sherwood, Chicago, on the cover and on the title page, but followed on the title page with Taintor & Co., N. Y. in small letters. Illustrated on pages 78-79 is the series’ “Sentence Builder” chart for classroom use, in which word cards were inserted by the teacher or children, very like the Breakthrough to Literacy materials of the 1970’s from England, which was also published in the United States.)

678 Broadway, New York, and Geo. & C. W. Sherwood, Chicago. (Harvard copy. See other entries on this series.)

1866 The Union Pictorial Primer (On cover.) Sanders’ Union Pictorial Primer, Introductory to the Union Readers (on title page.) By Charles W. Sanders, A. M. Published in 1867 by Ivison, Phinney, Blakeman and Company, 47 & 49 Greene Street, New York. (Listed in 1876 American Catalogue under Primers for 20c which showed it was also available in Leigh orthography for 25c. My non-Leigh copy. The Preface states, “...The book is so arranged as to be adapted to the word method, the phonetic method, or to the ordinary method, - that of teaching the names of the letters first, - just as the teacher may prefer....” Yet the book is Code 1 material, despite that claim. Sanders’ materials are discussed in the text of this history, elsewhere in this appendix, and in Appendix C.)

(Harvard note on this copy indicated that it was published in 1866. Leigh print turned this Code 3 material into Code 10 material. This series is discussed at length elsewhere.

The back cover of this 1866 Leigh-print phonie edition had testimonies on its effectiveness from many notables: the superintendent (unnamed) of the St. Louis schools; N. A. Calkins who was, possibly then but definitely later, Assistant Schools Superintendent in New York; and S. S. Greene, President of the National Teachers Association and presumably the S. S. Greene who was with the Normal Department of Brown University and who was superintendent of schools in Providence, Rhode Island. Greene gave a luke-warm endorsement: “I believe Dr. Leigh’s plan will be successful.”; Testimonies were also given by Superintendent John D. Philbrick of Boston; Richard Edwards, President of the Illinois State Normal University; Thomas Hill who was the President of Harvard; etc.

Calkins, Greene and Edwards continued to prosper, but their names were associated most with teaching beginning reading for “meaning,” despite their endorsements on this early (possibly initial) Leigh-print edition. It was a different matter for those who had effectively promoted “sound” in beginning reading.

Brewer & Tileston who apparently were the first to publish Leigh-print materials disappeared as publishers after 1876, as discussed elsewhere. The publishers then became Wm. Ware of Boston and Taintor of New York. Taintor was also a publisher of the famous sight-word series by Webb. See the discussion in the body of this history on the post-1876, post Brewer & Tileston non-Leigh editions of Hillard’s materials.

The unnamed St. Louis Superintendent who had endorsed Leigh print was replaced by his subordinate, William Torrey Harris, in 1868. Harris became the principal author of the phony-phonics, Code 3, 1878 enormously successful Appleton readers which crowded Leigh print out of almost all American schools and which, unlike earlier widely used series, apparently never had an edition in Leigh print. Yet, in 1880, Harris “resigned” from St. Louis, which continued to use Leigh print, which means they were not using his Appleton series. That strongly suggests that Harris was no longer popular in St. Louis and did not resign, but was fired. However, Harris prospered mightily in later years, and eventually was appointed head of the Washington, D. C. bureau which was concerned at that time with U. S. education.
Thomas Hill, who had given his endorsement for the use of “sound” in beginning reading on three programs: Pitman’s, Leigh’s and Zachos’, was replaced as President of Harvard in 1869 by Charles William Eliot, who never endorsed “sound” in beginning reading but who campaigned mightily for “meaning” in reading materials for some thirty years. Hill faded almost totally from the public scene immediately afterwards, but Charles William Eliot is famous, even today, in education “history.”

Philbrick, who later said the word method must fall before the phonetic because of the great success of Leigh print in Boston, was fired as Boston superintendent in 1878 and Philbrick’s once-famous name would be recognized today by almost no one. Philbrick was replaced by a superintendent who in effect threw out the phonic Leigh print that Philbrick had introduced in Boston, by distributing guidelines to primary teachers which, in effect, mandated the teaching of beginning reading by “meaning” in Boston.

These developments suggest coordinated and effective change-agent activity in opposition to Leigh “sound” materials and in promotion of “meaning” materials. However, the Harris “resignation” from St. Louis in 1880, and the continued use of Leigh print in St. Louis, suggests the change-agents may have stubbed their toes there.

1866 Kindergarten Spelling Book. Ella Little, Lee & Shepard, Boston. (Harvard copy. Code 10. See discussion in the text of this history and in Appendix C on this publisher of phonic materials.)

1866 First Lessons in Reading On A New Method of Teaching the Reading of English By Which the Ear Is Trained to Discriminate the Elementary Sounds of Words and the Eye to Recognize the Signs Used for These Sounds in the Established Orthography. William A. Wheeler, Associate Editor of Webster’s Dictionaries, and Richard Soule, Associate Editor of Worcester’s Quarto Dictionary. Lee & Shepard, Boston.

(Harvard copy. Code 10. “Preface: This book has been prepared by the subscribers substantially on the plan proposed by the Rev. John C. Zachos, and with his concurrence....” See earlier entries in this appendix on Zachos. This material, Zachos, and Lee & Shepard are discussed in this history and in Appendix C.)

1866 to About 1871 - Some Edwin Leigh editions in his pronouncing print were listed under his name in Early American Textbooks. Others were listed elsewhere in Early American Textbooks. Half of those listed under Edwin Leigh’s name have been clearly dated in error. For instance, Taintor was not in business in New York in 1864, but is listed as having published a Leigh edition there in 1864. Edwin Leigh only published his pamphlet describing his method in 1864, and it was apparently about two years before major publishers hired Leigh to edit their beginning books in pronouncing print. Most such editions apparently came out between 1866 and 1873. Some of the dates shown under Edwin Leigh’s name in Early American Textbooks are apparently the original copyright dates of the books in question, and not the dates at which the materials were transposed into Leigh’s pronouncing print.

Shown below are those texts which appeared directly under Leigh’s name in Early American Textbooks, page 91, and which therefore were obviously among those texts with Leigh editions.

Analytical First Reader. Edwin Leigh. Chicago: Geo. and C. W. Sherwood; New York: Taintor & Co., 96 p. Listed were 1866 and 1886 editions. Taintor did not move to New York until 1867, so that 1866 reference is wrong. More importantly, the Leigh-print edition of Edward’s and Webb’s Analytical First Reader was not copyrighted until 1871, so that is the obvious date it first became available. A Harvard copy in pronouncing print of this text carries Leigh’s copyright date of 1871. The other date shown in Early American Textbooks for this Analytical material in Leigh print was 1886. If that date is
correct, which also seems very unlikely, it would be for a very surprising and very late Leigh edition. Yet I have found nothing published in Leigh print after 1876.

Analytical Second Reader. Chicago: Geo. & C. W. Sherwood; New York: Taintor & Co., 1864. 160 p. The date of the Leigh edition is clearly wrong, since Leigh only published his essay in 1864. Furthermore, Taintor did not move to New York until three years later. Presumably, the second reader became available in Leigh print either in 1871 with the first reader, or slightly afterwards.

Leigh’s Hillard’s Second Reader. Boston: Brewer & Tileston; New York: J. W. Schermerhorn & Co., 1874. 168 p. This is probably the publishing date of this particular edition.

Leigh’s McGuffey’s New Primary Reader. Cincinnati: Wilson, Hinkle & Co., 1868. 144 pages. This is the correct date for the McGuffey pronouncing print edition, since it is also listed in the 1876 American Catalogue under Primers.

1866 The Phonic Primer and First Reader by Theo. E. Heidenfeld. New York: G. Lauter, 13 North William Street, For Sale By Howe & Ferry, No. 76 Bowery, New York. Copyright 1866 Theo. E. Heidenfeld and G. Lauter. (Library of Congress copy. The “Preface” endorsed the German “Phonic Method” and opposed the prevalent American spelling (ABC) method. The Preface stated further, “In this country, several able teachers have attempted to introduce the ‘Phonic Method,’ - but for various reasons very few have succeeded..... there are not many teachers who thoroughly understand the system, - and last, though not least, it is extremely difficult to supersede the old system, which for years has prevailed in this country with regard to primary reading.”

The method used in Heidenfeld’s book was the German analytic-synthetic method, in which words are pulled apart to analyze ALL their phonemes, and then the isolated phonemes are used to build new words. From the first few pages of photocopies which I have, Heidenfeld’s book seems to rate a Code 10. The 1876 American Catalogue listed the 1875 Phonetic Readers: Phonetic Primer and First Reader, Phonetic Second Reader, Phonetic Third Readers, by T. E. Heidenfeld, published by L. W. Schmidt, New York. Therefore, the 1866 material must have been revised in 1875. Heidenfeld’s books are also listed on pages 70 and 87 of Early American Textbooks. His material was one of the many phonetic approaches published in the accelerating shift to “sound” of the 1860s and 1870’s, which naturally-occurring shift abruptly stopped when the widely publicized move back to “meaning” began about 1873. That change-agent move back to “meaning” in the teaching of beginning reading was apparently initiated by Farnham’s paper on the sentence method at the 1873 National Education Association meeting. The move back to “meaning” in beginning reading was then associated from 1875 with Colonel Parker of Quincy, Massachusetts, and his promoters and followers in Boston, and with the Franklin and the Appleton readers, etc. All these developments are discussed at length in the body of this history.)

1866 The Southern Pictorial Primer or First Reader, George F. Holmes, Richardson & Company, New York (Listed in Early American Textbooks) See later entries on Holmes’ materials, and a summary under the 1870 entry.
1866 The Southern University Series: The Southern Pictorial (2nd, 3rd, 4th and 5th) Readers, the last
1869, George F. Holmes, Richardson & Company, New York (Listed in Early American Textbooks). See
other Holmes entries and a summary under 1870.

1866 Elementary Spelling Book, George F. Holmes, University Publishing Company, New York
(Listed in 1876 American Catalogue) See other Holmes entries and a summary under 1870.

1866 Common School Primer, Morton. (In 1876 American Catalogue. Possibly part of a John P.
Morton & Co. series)

1866 The Primary Union Speaker, John Dudley Philbrick, Superintendent of the Public Schools of
Boston, and Author of the American Union Speaker, Taggard & Thompson, Boston.

(The fact that Philbrick wrote these two books demonstrates the importance of teaching “elocution” in
the government schools of the 1860’s, something which is almost totally absent in our schools today.

This Harvard copy of Philbrick’s book was autographed by Philbrick to S. A. Green, Harvard, ‘51.
Green undoubtedly donated it to Harvard, just as he donated so very many beginning reading texts to the
Harvard libraries as shown by their inscriptions. Dr. S. A. Green should NOT be confused with the
pro-sight-word “expert,” S. S. Greene, whose work is discussed in Appendix D.

It should be remarked that the writing of this history, which has been so overwhelmingly dependent
for nineteenth-century materials on Harvard’s extraordinary textbook collections, would probably have
been impossible except for Dr. S. A. Green’s massive donations of reading books of the nineteenth
century to the Harvard libraries, which donations Green made over many decades.

Dr. Green is very likely a descendant of the original Green in the Massachusetts colony in the mid-
seventeenth century, who became the second printer in what is now the United States. Many of Green’s
descendants also became well-known printers in New England.)

1867 Common School Reading. J. Swett. Available for $1.25 from A. S. Barnes & Co., New York,
Chicago and New Orleans, and for $1.50 from A. L. Bancroft & Co., San Francisco. Swett was an author
with Josiah Royce and Charles H. Allen on A. L. Bancroft & Co.’s, 1883 Bancroft’s Readers. (In 1876
American Catalogue)

1867 Pictorial Primer, George F. Holmes, University Publishing Company, New York (Listed in
1876 American Catalogue) See other Holmes entries, and summary under 1870.

1867 Card Primer (Harvard copy. Code 1 toy book, alphabet, short 2-, 3-, 4-, 5-letter word lists and
reading paragraphs. Full high-quality drawn picture on back cover, and high-quality drawn picture on
front cover but bottom missing. Title page missing. Publisher unknown. No record of book entitled, “Card
Primer,” in the 1876 American Catalogue of books in print.)

1867 Davis, Porter & Coates, Philadelphia publisher, put out a series of five little toy books which
run from page 1 on the first book to page 36 on the last book. Obviously, Davis, Porter & Coates broke up
an earlier 36-page toy book into five separate parts, beginning each with a cover and title, and the
alphabet in capital and small letters. One of the five-book series is missing, so apparently it was not in the
Harvard library unless I overlooked it. The series is as follows: 1. The Little One’s Alphabet (pages 1-6);
2. The Easy Primer in Little Words (pages 7-12); 3. Missing; 4. The Easy Lesson Book (pages 20-30); 5.
My Little Primer (pages 31-36). The material is Code 3, two-step whole word phonics.)
1867 A Lecture Before Massachusetts Teachers Association, Henry F. Harrington. (Harvard copy. In 1880, Harrington wrote a meaning-approach speller which was not published by Harper Brothers, New York, until 1884. The delay was presumably caused by the war Colonel Parker et al had declared after 1875 against spelling books.)

1867 The Analytical Speller, Containing Lists of the Most Useful Words in the English Language, Progressively Arranged and Grouped According to their Meaning, Richard Edwards, President of the Illinois State Normal University, and Mortimer A. Warren, Principal of Avery Normal Institute, Charleston, S. C. Copyrighted in 1867 by Geo. and C. W. Sherwood, Chicago. Taintor & Co., 678 Broadway, N. Y.; Geo. and C. W. Sherwood, Chicago. (Harvard copy. This “speller” was meant to accompany the famous “word-method” Edwards-Webb Analytical Series. It was an 1867 curiosity, because the spelling emphasis was not only on “meaning,” which was to be expected, but on sentence-making. The “Preface” stated:

“This book is an attempt to substitute intelligent, thoughtful work for the unmeaning drill of the old fashioned Spelling-books. The spelling lessons, as here given, consist of words related to each other in meaning and so arranged that even where they are not understood by the children, their meaning may be easily learned.... The spelling lesson is an exercise upon which the pupil drills for many years. Whatever it contains, therefore, becomes a fixture in the mind, - it is forever remembered. Even the unmeaning columns of the olden time were thus retained. Who that used the old Webster’s Spelling-book has forgotten that ‘Sha-dy’ came next after ‘Ba-ker’ in the column? [Ed.: This is an exceedingly unlikely claim, that children memorized all the columns of words in the Webster spellers! Anyway, the examples he gave would have been in the far later two-syllable word section, and not at the beginning.] Now, this being so, is it not worth while to give the matter thus remembered as great a value as possible? Is there not a great gain effected when the words are made to have a meaning to the child? when the word to be spelled is associated with an idea of which he is, or must become, the master? Is it not useful to awaken in this exercise as many as possible of his faculties? Is it not a law of the mind that every faculty employed about the acquisition of a thought is a separate link for holding that thought? Is it not true that a word remembered by its form alone is more imperfectly remembered than one that, in addition to its form, has the association with a living idea - to assist the memory?”

This 1868 material, with its “psychological” underpinnings and its use of whole sentences to teach by “meaning” is a curious foreshadowing of the Boston school materials that surfaced about a decade later immediately after Superintendent Philbrick was fired. The general period of 1867 or so appears by other indications to have been the start of the Agassiz-inspired educational reforms, of which firing Superintendent Philbrick who endorsed “sound” for beginning reading appears to have been one in 1878. It would be of interest to see if any recorded tie existed by 1867 between the Agassiz change-agent Cambridge clique and the co-authors of this book, Edwards and Warren, or their publishers, Geo. and C. W. Sherwood of Chicago, and Taintor & Co. of New York.

This book is a failure as a spelling book but has some isolated worthwhile material.)

1867 The Progressive First Reader for Primary Classes in Our Public and Private Schools, New Edition, Revised and Enlarged, Salem Town and Nelson M. Holbrook, Published by Oliver Ellsworth, Boston. (Harvard copy. See earlier entries on the Town and Holbrook materials. The cover shows that by 1867 Ellsworth was publishing not just the Progressive Pictorial Primer but the Progressive Pronouncing Primer, obviously a move toward “sound” in beginning reading in the increasingly “sound”-conscious Boston of the 1860’s. Yet this once very widely used series was apparently out of print when the 1876 American Catalogue was published, only nine years later. This First Reader is not a beginning book, but new words are marked diacritically. In “Remarks to Teacher,” besides discussing the table of elementary sounds on which pupils were to be drilled, it said, “The meaning of the key-marks, and the orthography and pronunciation of the spelling lessons, should be so thoroughly learned that each word can be pronounced at sight.” Was the increased emphasis on “sound” in the newer Ellsworth materials the reason for their apparently rapid demise?

1867 Ragged Dick, by Horatio Alger

(According to Lawrence A. Cremin in his book, American Education, The National Experience, 1783-1876, Harper & Row, 1980, page 260, this was apparently Horatio Alger’s first book, and it was published in 1867. Alger eventually produced 108 novels, with an estimated sale until after World War I of 100 million copies. Compare that possibly reliable estimate for Alger’s books to the obviously inflated “estimate” for the McGuffey readers, discussed earlier, of 122 million! The 100 million figure for Horatio Alger sales obviously demonstrates his enormous success. Of course, all of those sales were made outside of school influence, and only for the reading pleasure of children and adolescents.

Using a rough readability measure, Alger’s books work out to at least the upper eighth grade level, and frequently higher, while novels written for adolescents today rate about a fourth or fifth grade level (as I know from rating such books while taking a course on adolescent literature during the 1970’s). Alger’s novels glorified free private enterprise, hard work, personal responsibility, uncompromising honesty and individualism. These qualities rarely appeared in the adolescent novels I reviewed, but the books did often contain a heavy emphasis on sexual urges, which emphasis was totally missing from Alger’s books.

Alger’s novels disappeared from public libraries about the time of World War I, in the general time-frame when most of America’s intellectual elite were embracing various versions of socialism, the antithesis of the Alger world view. I was able to read some of Alger’s addictive books as a child - and loved them, as did my age-mates - only because some copies were found in the attics of relatives and friends during the 1930’s.

On page 61, Early American Textbooks lists five novels by Horatio Alger, stating he had written over 100.

On pages vi and vii of his Introduction to the 1967 Holt, Rinehart and Winston reprinting of two of Alger’s stories under the book title of Strive and Succeed, S. N. Behrman said:

“When I was a boy in Worcester, Massachusetts, I read Alger as omnivorously as [Henry] Ford and [George] Eastman and the others did, with, alas, less flourishing results.”

He had already listed James B. Duke, James A. Farrell, Darwin P. Kingsley, David Sarnoff, Julius Rosenwald, General Goethals, Thomas A. Edison, John D. Rockefeller, Joyce Kilmer, and John Drew as having been readers of Alger’s books. He continued,
“I read them for excitement, encouragement, and fun. I took an Alger a day from the Worcester Public Library. I read Alger and Shakespeare indiscriminately; I was steeped in both. It was not at all a bad combination.... Since the Algers disappeared from the Worcester Public Library by 1907, I must have gobbled them all before I was fourteen. The Algers disappeared, not by edict, but by passive resistance on the part of the librarians, or, possibly, atrophy of demand. There was a storm of protest in Worcester about the unavailability of the Algers, not by the young, who had picked up other favorites, but by irate oldsters. A stormy article appeared in the Worcester Gazette on August 10, 1907, headed: DEMAND RETURN OF BOYS' BOOKS SOME DIRECTORS OF PUBLIC LIBRARY DIDN'T KNOW POPULAR VOLUMES WERE BEING THROWN IN WASTE HEAP.... Alger helped Shakespeare to make a reading addict out of me very early, so that he did, in a way, as much for me as he did for Henry Ford.... The other day I got a pleasant letter from an unknown correspondent... who confesses to being eighty.... He writes: ‘The first time my brother (who was two years older than I) got his library card, he took a Horatio Alger book out of the Pratt Street library in Baltimore.... We read it while walking home for our Sabbath midday dinner. By afternoon we had finished it and walked back to the library. That was at least a mile. Joe returned the book and asked for another. This was refused: the rules didn’t permit books being taken out more than once a day....’ The Dictionary of American Biography says of Alger that ‘he was the most successful writer of boys’ stories in the whole of American literature.’“

Yet Alger’s novels were read as avidly by girls, such as the few stray copies that my sisters and I found to read in the 1930’s. He continued, saying,

“Well now, after sixty years, I have read two more Algers, the two contained in this volume.” [Ed. Strive and Succeed contains The Store Boy, or The Fortunes of Ben Barclay, and Julius, The Street Boy Out West.] “I hope the Worcester Public Library doesn’t hear about it but, if it does, I can assure it that I have emerged unscathed. I don’t know any comparable reading experience: it is like taking a shower bath in sheer innocence....”

Horatio Alger’s “capitalistic” books have very possibly been on what amounts to a probably unconscious book-burning list of the liberal left for many years, which is a very possible reason that Alger’s novels disappeared from public libraries such as Worcester’s by the time of World War I. Yet, since about the time of World War I, the liberal left hypocritically has been publicly on record as vociferously opposing censorship for ALL books, particularly in government schools, EXCEPT, of course, for the censorship of the Bible in government schools.

1867-1868 United States Reading Books, First 20c, Second 40c. American Tract Society, New York. (In print in 1876 according to the United States Catalogue. No other information is available on them. See 1850, 1860(?), and 1864 entries for the American Tract Society.)

1868 The Phonic Reader, No. 1, A. 112 pages. Knell and J. H. Jones. 27c. Published by Wilson, Hinkle & Co., Cincinnati, Ohio; Claxton, Remsen & Haffelfinger, Philadelphia; Clark & Maynard, New York. (Listed in Early American Textbooks, page 90, and in 1876 American Catalogue. The Knell and Jones Phonic Reader was mentioned by F. Buisson of France in his report of the 1876 Philadelphia
Exposition. See Appendix C and comments in the body of this history. See other entries for Claxton and Clark & Maynard.

1868 The American Speller, Henry N. Day. Charles Scribner & Co., 54 Broadway, New York. (Harvard copy. Code 7, in the very unlikely event it was ever used for any beginners. Preface: “To spell is to name the alphabetic sounds that make up a written word....”)

(Harvard copy. Reynold’s 6-volume series of readers are listed in the 1876 American Catalogue as published by “Duffie,” consisting of Pictorial Primer, Primary Reader, Second, Third, Fourth and Fifth Readers. Early American Textbooks on page 102 lists Reynold’s New Fourth Reader published in 1870 by Duffie & Chapman, Columbia, S. C., and E. J. Hale & Son, New York. From the few photocopies I have available of the Harvard Second Reader, I believe Reynold’s was probably a Code 1 series. Reynold’s series was discussed by Reeder, page 52. See the body of this history for reports on the use of Reynold’s series at teachers’ institutes in the South.)

1868 Parents’ Gift; or Reading Book for Little Children. R. Collins. Claxton. (Listed in 1876 American Catalogue. Claxton is Claxton, Remsen & Haffelfinger, listed in Early American Textbooks as Philadelphia publishers of two of Ray’s arithmetics. See other entries for Claxton.)

1868 Readers, Six Volumes, M. A. Newell and W. R. Creery, P. Kelly & Co.

(Listed in 1876 American Catalogue, as is the Grammar School Spelling Book by W. R. Creery, and the 1871 Illustrated Primary Spelling Book, New Edition by W. R. Creery, both published by P. Kelly & Co. On page 98, Early American Textbooks lists The Fifth Reader by M. Alexander Newell, with no mention of Creery, published in 1883 by John B. Piet & Co. of Baltimore. A later American Catalogue lists the Grammar School Speller by M. A. Newell and W. R. Creery published in 1885, but the publisher is shown as Van Antwerp, Bragg & Co., Cincinnati, the publishers of the McGuffey Readers. No other references have turned up anywhere concerning readers or spellers by Newell and Creery, which is surprising since they remained in print for close to twenty years, from 1868 until 1885. They were out of print by the time the 1912 United States Catalog was published. See the entry in Appendix C.)

1869 Reading and Elocution. Mrs. A. T. Diehl. $1.40. Ivison. (Listed in 1876 American Catalogue. See other entries for Mrs. Diehl.)

1870 Rhetorical Reader. 384 pages. $1.25 Robert Kidd. Wilson, Hinkle & Co., Cincinnati, Ohio. (Listed in 1876 American Catalogue under Readers and in Early American Textbooks. See 1857 entry.)

(The 1855 Osgood Progressive Series, listed previously, was revised in 1870-1872 as Osgood’s American Series of Readers, Primer to Sixth and was listed as such in the American Catalogue for 1876.)
Also printed by A. H. English & Co. was Osgood’s American Primary Speller. The series was apparently being sold by 1881 by Sheldon. It was not in print in 1912 according to the 1912 United States Catalog. From Nietz’s description of the series and reproduction of a primer page, the 1855 series - and probably the 1870 series - was a meaning approach.

Both the 1870-1872 Osgood readers and the 1855 Progressive Series were listed in the 1876 American Catalogue, but the Progressive series appeared as a “new” 1868 edition by English. However, as an apparent misprint, those Progressive materials published by English were not placed under Osgood’s name but under the name, “P. O’Shea.” “O’Shea” published readers with the title, the Illustrated Progressive Series of readers. There is probably no connection between the English and O’Shea materials, aside from the use of the word, progressive, in their titles.

Both the 1855 (as revised in 1868) and 1870 Osgood series were apparently out of print by the time the 1912 United States Catalog was published.

1870 The Golden First Reader (96 pages), Miss Anne M. Mitchell. Presbyterian Publications Committee, Philadelphia; A. D. F. Randolf & Co., New York (Listed in Early American Textbooks, page 95. Listed as in print by “Pres. Bd.” for 25c in the 1876 American Catalogue. Also listed under Primers is her Golden Primer. No other information is available. See entries under 1876.)

(Harvard copy. Listed in 1876 American Catalogue. Preface:

“Teachers’ institutes are now held periodically in nearly every county of the states in which Free Schools have been established, and Normal Schools are annually increasing in number and influence. The Author’s experience in such schools satisfies him that, while there are many excellent works on Elocution, and numerous valuable series of Readers, no single book has yet been presented to the public which contains all the varieties of exercises in the different grades and styles that is necessary in presenting to teachers the subject, How to Teach Reading.... It is mainly to meet this evident want of a reading book for training schools, that the present work has been prepared....”

See comments on this material in Appendix C and in the body of this history.)

1870-1872 Holmes Readers (First to Sixth), George F. Holmes, University Publishing Company, New York (Listed in 1876 American Catalogue)

See the earlier entries on Holmes’ books, dating from 1866. According to Early American Textbooks, 1775-1900, the Department of Education Library has a copy of The Southern Pictorial Primer, or First Reader by George F. Holmes, published by Richardson & Company in New York in 1866, a year before the University edition. Also shown in Early American Textbooks is the Southern University Series, The Southern Pictorial Second, Third, Fourth and Fifth Readers, all 1866 except the last which was 1869, and all published by Richardson & Company, New York. Early American Textbooks also has an entry for University Series - Holmes First Reader, New York and Baltimore, University Publishing Co., 1870, as well as second to sixth readers. The second and third readers have editions of 1870 and 1871, the fourth and fifth an edition of 1870, and Holmes Sixth Reader by University Publishing has an edition of 1872. For the New Edition, Early American Textbooks lists G. F. Holmes’ and L. W. Anderson’s Holmes Third Reader, New Edition, New York: University Publishing Company, 1887.
It appears that the Holmes “University” series had a standard edition and a Southern edition, and the Southern “University” edition was published by Richardson & Co. and moved into the Southern states by 1866, only a year after the Civil War ended, before the standard edition was put out by University Publishing Company. The Holmes readers are Code 2 materials.

(Shown as published in 1871 in the 1876 American Catalogue, but no other record. The company was Claxton, Remsen & Haffelfinger of Philadelphia, who appear in Early American Textbooks as Philadelphia publishers of two of Ray’s Arithmetics. See other entries for Claxton taken from the 1876 American Catalogue.

See the 1851 entry for The Child’s Little Thinker, A Practical Spelling Book, Containing Easy, Gradual and Progressive Lessons in Pronouncing, Spelling, Reading, Thinking, and Composing, Arranged on a New and Original Plan, by Joseph Bartlett Burleigh, LL. D., published in 1854 by Lippincott, Grambo Co., Philadelphia. The Claxton “Thinker Series” was by Burleigh, and was most probably dominantly a Code l approach like the 1851 book. Burleigh’s upper-level reader, The American Manual, was mentioned earlier as published by Lippincott. See the 1876 entry from the 1876 American Catalogue on other Burleigh material published by Lippincott.)

1871 Leigh’s Pronouncing Edition. Analytical First Reader - Analytical Series. Richard Edwards and J. Russell Webb. (Harvard library has two copies of Edwin Leigh’s Code 10 version, one apparently wrongly dated by the library 1870 and one dated 1871. The standard print edition was first published in 1866. This carries a copyright date for the Leigh edition of 1871, the obvious first appearance of the Leigh edition.)

1871 A Juvenile Reader, Which Aims at Securing the Advantages of the Phonetic System By Teaching First the Strictly Phonetic Part of the English Language and Subsequently Some of Its Irregularities, Without Altering the Forms of Our Letters, Including, Also, First Lessons in Drawing. Elizabeth Hoxie. Published by William H. Huse & Co., Printers, Newburyport, Rhode Island. (Harvard copy. Wrong phonic approach, using Latin vowels, and so cannot be given a meaningful code. Like Elizabeth Peabody’s book given earlier, to whom she refers. Confused make-up, apparently meant to teach sounds from whole words.)

1871 Child’s First Lesson-Book. $1.25. Routledge. (Listed under Primers in the 1876 American Catalogue. See other Routledge entries.)

(In 1876 American Catalogue. 6 v.: First reader, 20c - Second 30c - Third 50c - Fourth 60c - Fifth 90c - Etymological reader, 1.50. Harvard copy of First Reader. Not enough photocopies available for me to judge firmly, but an apparent Code 7 which permitted sight teaching if desired. See material on Sargent and May, and the Butler company in Appendix C and the body of this history. See the two earlier series by Sargent alone which were published by Shorey which rated Code 1.)

1872 School Stories with Questions. 101 pages, John R. Keep, Institution for the Deaf and Dumb, Columbus, Ohio (In Early American Textbooks.)

1872 The New American Primary Speller, No Author Given, The New American Series, J. H. Butler & Co., Philadelphia. (Harvard copy. From the few photocopies available, it appears to be analytic phonics.)

1872 The Fourth Reader, Cowperthwait & Co.’s Educational Series. Lewis B. Monroe, Dean of Boston University School of Oratory. Published by Cowperthwait & Co., Philadelphia.

(Harvard copy. Monroe’s materials are discussed in the body of this history and in Appendix C.)

1872 The Rational Phonetic Primer, An Introduction to the Series of Rational Readers. Dr. Ad. Douai, Published by E. Steiger, New York.

(Harvard copy. Code 10. Shown in 1876 American Catalogue as having a second edition in 1874. Also shown were the Rational Readers, 1873-1874: First Reader, Second Reader, and Third Reader. Early American Textbooks, page 81, shows the Manual for Teachers, An Introduction to the Series of Rational Readers, New York, E. Steiger, 1872, and, on page 69, The Rational Phonetic Primer, 1872. The cover of the Harvard 1872 text showed that E. Steiger published other German-American primers and texts. The Ward phonetic series of the 1890’s also used the adjective, “rational.” Ward may have been influenced in writing his 1890’s phonetic series by the 1872 Douai phonetic series, which Douai said was inspired by German materials.)

(Harvard has a copy of the 1875 The Independent Primary Reader; the Library of Congress has a copy of the 1872 Independent Child’s Speller; Barnes’ series were cited at length in Barnes’ advertisements in the back of Barnes’ texts. The Independent Series was listed in the 1876 American Catalog as a seven-volume series: Independent Primary Reader 25c, not published until 1875, First Reader 25c, presumably dating from about 1872, Second 50c, Third 75c, Fourth $1, Fifth $1.25, Sixth
$1.50. At some point before 1876, the original Independent First Reader was published in Leigh type by Barnes, and is shown in the 1876 American Catalogue as Independent First Reader, in Phonetic Type - 25c, by Edwin Leigh. The Independent First Reader had not been strongly phonic and had therefore been published in Leigh type. Presumably, the 1875 non-Leigh-print Independent Primary Reader was meant by Watson to be phonically competitive with his earlier Leigh-print beginning book since the Harvard copy rates a Code 7.)

1873 Nursery Reading Book. 75c. Published by M. Taylor. (In 1876 American Catalogue under Primers. No further information is available on it. See other 1873 entry on Taylor.)

Early American Textbooks reproduced the first page on page 94. That selection indicates the book was preceded by another book which was probably a sight-word primer. That Pomeroy’s material had a fourth edition by 1873 and was still in print in 1876 indicates it had some popularity. It most probably was a reading series, but no further information is available on it. It obviously changed publishers sometime between 1873 and 1878, probably after 1876. See the other 1873 entry on the publisher in 1873 and possibly in 1876, Taylor, who might also have been located in Buffalo like the 1878 publisher, Ulbrich. Whether there was any relation to the Taylor of the Ivison group, listed directly below, or to Baker and Taylor is unknown.

1873 Word-primer: Beginner’s Book in Oral and Written Spelling, by William Swinton. Published by Ivison, Blakeman, Taylor & Co. (In 1876 American Catalogue. See Appendix C for other books by Swinton published by Ivison.)

Early American Textbooks also shows on the same page the First, Second, and Fourth Readers of The American Educational Readers, dating them to 1873, but wrongly showing their 1873 publisher as American Book Co. Since American Book Co. was not formed until 1890, and one of its predecessors was Ivison, it is apparent that American Book reprinted some of Ivison’s materials after 1890, but showed their 1873 copyright date. This material is discussed elsewhere. It was apparently low-code, except in Leigh print.)

1873 The Franklin Primer or First Reader, George S. Hillard and L. J. Campbell.

(The nine-volume Franklin series and the earlier Hillard series, the New Series of Readers, obviously the 1864 one with Campbell, are listed in the 1876 American Catalogue as published by Taintor and Ware. A single text by Hillard, First Primary Reader, obviously from the first 1850’s series, is shown as
published only by Taintor. As mentioned elsewhere, the 1876 American Catalogue was not published until 1880, so it would probably have reflected the change in company names to Taintor of New York and Ware of Boston which probably took place in 1877, not 1876.

Harvard has two copies of The Franklin Primer or First Reader, NOT in Leigh print, which were printed after 1876 by University Press, first when it was held by Welch, Bigelow & Co., and then when it was held by John Wilson & Son. Both copies show the publisher as Taintor Brothers, Merrill & Co., N. Y. and Wm. Ware & Co., successors to Brewer & Tileston, Boston. These two editions with their convoluted backgrounds are discussed at length in the body of this history. The Franklin Primer or First Reader is Code 1 at the beginning, and Code 3 later only because of reviewing some sight words by phonic analogies. The New York Public Library has no Hillard first readers, but does have an Appleton first. The New York Public Library beginning reading book collection is very unsatisfactory and incomplete.

1873 Monroe’s First Reader - Revision. Lewis B(axter) Monroe. Published by Cowperthwait & Co., Philadelphia. (Harvard copy. Mixed sight and sound approach: effect Code 3. Harvard library also has an 1875 copy. See other entries in this appendix and in Appendix C on Monroe, and in the body of this history. The 1876 American Catalogue lists L. B. Monroe’s six “Readers” as published by Cowperthwait.)

1873 The First Reader. Lewis B(axter) Monroe. Edited in Pronouncing Orthography by Edwin Leigh. 96 p. Cowperthwait & Co., Philadelphia. (In Early American Textbooks, p. 95. Also lists a German bilingual edition of 1877. The Leigh edition was not listed with Monroe’s materials in the 1876 American Catalogue so possibly was withdrawn by that date. Monroe was a Bostonian, and that is where the hostility to Leigh obviously originated.)

1873-1876 Model Readers, 4 vols., John Russell Webb (1824-1887), Published by “Sherwood.”

(Listed in the 1876 American Catalogue. Listed under the same initials shown were Normal Readers, Taintor, 5 volumes, no date. See the extensive reporting elsewhere in this history and in Appendix C on Webb’s “meaning” materials and on Sherwood and Taintor.)

(In Early American Textbooks, p. 84, 99, 100, 107. See Appendix C and the body of this history concerning these readers and the 1883 revision on which Josiah Royce worked.)

1874 The Young Catholic’s Illustrated Speller, Published by the Catholic Publication Society Co., Lawrence Kehoe, Manager, 9 Barclay Street, New York. (Harvard copy. Discussed in Appendix C and the body of this history.)
1874 The Catholic National Series - The First Reader, Rt. Rev. Richard Gilmour, Bishop of Cleveland, Published by Benziger Brothers, New York, Cincinnati, St. Louis. (Harvard copy. See the discussion on this material elsewhere in this history and in Appendix C. The 1876 American Catalogue lists Catholic National Readers, 4 volumes, by R. Gilmour. The 1876-1885 American Catalogues show that the fifth reader of this series was published by Benziger in 1877.)

1874 Literary Reader. G. R. Cathcart. $1.60. Ivison, Blakeman, Taylor & Co., New York (Listed in the 1876 American Catalogue.)

1874 Word Method for Beginners, American (Standard) School Series, Wm. J. Davis, Published by John P. Morton & Co., Louisville, Kentucky. (Listed on the back cover of Harvard’s copy of the 1871 The American Spelling Book by Noble Butler. See discussion on the Morton company in Appendix C.)

1875 Illustrated Primer (40 cents) Lothrop (In 1876 American Catalogue. See other Lothrop entries in this and Appendix C.)

1875 Choice Readings, Third edition. $1.50. Mrs. A. T. Diehl. Claxton. (In 1876 American Catalogue. Claxton is Claxton, Remsen & Haffelfinger, listed in Early American Textbooks as Philadelphia publishers of two of Ray’s arithmetics. The March, 1880, Supplement at the end of the 1876 American Catalogue showed Claxton’s address at that time as 624-628 Market Street, Philadelphia. See other entries on Mrs. Diehl.)

1875 Nursery Primer and Self-Teaching Reader, for Beginners. 30c. Shorey. (In 1876 American Catalogue. Presumably this is John L. Shorey who had published the Boston editions of Epes Sargent’s series from 1865, according to the listings in Early American Textbooks. The title of this text is intriguing but the approach and the author are unknown. It was apparently the publisher Shorey’s last effort, as his name seems to have disappeared from the records after this date.)

1875 The Graded-School Third Reader, Eclectic Educational Series, T. W. Harvey, A. M., Published by Wilson, Hinkle & Co., 137 Walnut Street, Cincinnati and 28 Bond Street, New York.

(Harvard copy. Stamped, “Complimentary Copy, M. W. Tewksbury, N. E. Agent, 8 Hawley St., Boston - Opinion Desired.” Also stamped “Harvard College Library, From the Gift of Charles Herbert Thurber, 1927.” The Harvey series put out by Wilson, Hinkle & Co., the publisher of McGuffey’s, is discussed in the body of this history and in Appendix C. It is listed in the 1876 American Catalogue as containing five volumes.)

1875 Macmillan Reading Books, 7 vols., Primer, Books 1, 2, 3, 4, 5, 6, Macmillan, Publisher. (These English materials are listed in the 1876 American Catalogue with American prices: Primer, 10c. - Bk. 1, 15c. 2, 20c. 3, 25c. 4 40c. 5 50c. 6: Introd. to English Literature. $1. See Appendix C and the body of this history for other materials by Macmillan.)

1875 Word Method: A New Method of Teaching Reading, Founded on Nature and Reason, New Edition. 30c. John Russell Webb (1824-1887). Published by E. B. Smith & Co., Detroit; Nichols & Hall, Boston. (In 1876 American Catalogue under Primers, as published only by Smith, this full title being taken from an existing library copy. See other entries on Webb Materials principally by John Russell Webb but also by W. H. Webb.)
1875-1876 Readers - First, Second, Progressive Third Reader, J. M. Elgas. Published by Pustet. (Listed in 1876 American Catalogue with the author’s initials, “J. M.” Early American Textbooks shows on page 82 Third Reader for the Use of Catholic Schools. Matthew J. Elgas. Published by Fr. Pustet, 1875, New York and Cincinnati.)

1876 and Before - Listing of McGuffey’s as it appeared in the 1876 American Catalogue, before the 1879 revision: New Eclectic Series. New Ed. 8 v. - New Eclectic Primer, 16c, First Reader, 18c, Second Reader, 35c, Third Reader, 50c, Fourth Reader, 60c, Fifth Reader, 95c, Sixth Reader, $1.15. Pictorial Eclectic Primer, 12c. W. H. McGuffey, Wilson, Hinkle & Co., Cincinnati, Ohio. Under “Primers” in the 1876 American Catalogue appeared the Leigh-print McGuffey texts published by Wilson, Hinkle & Co., Cincinnati, Ohio.

1876 and Before - American First Class Book, 95c. National Reader. 63c. New Reader. 45c. The Young Reader. 15c, by J. Pierpont. Published by Lippincott. (In 1876 American Catalogue. Lippincott apparently became the last publisher of the famous Pierpont readers dating back to the 1820’s, some under new titles.)

1876 and Before - Elementary Reader. Noah Webster. Per Doz., Net. $1.20. Appleton. (Listed in the 1876 American Catalogue)

(Listed in 1876 American Catalogue, under Spellers. Immediately under it is Speller and Definer, 25c, published by Morton. That would have been the book written by Noah Webster’s son, not Noah Webster, and which was published by Cooledge in the 1840’s, discussed elsewhere in this history. Cooledge about that time had the Webster speller as well, and was publishing sight-word primers, to be used before Webster’s speller. Another undoubtedly popular spelling book before 1876 was W. H. McGuffey’s New Eclectic Spelling Book, listed in 1876 at 18c a copy. Yet that obviously would not have been very competitive with Webster’s 10c a copy, when sold in a package of 12.

Under Spellers, the 1876 American Catalogue listed at least 138 different titles of spellers, or more if new editions are counted. Some of the materials, like Webster’s and McGuffey’s, had been on the market since before 1840. They were meant for levels from primary to high school. The probability is that the sales of most of that vast number of spellers were wiped out by the Quincy anti-speller influence some time after 1876. The 1876-1885 American Catalogue and 1885-1890 American Catalogue listed new spellers published in those intervening years, producing this pattern: 1877-3, 1878-3, 1879-4, 1880-0, 1881-3, 1882-0, 1883-0, 1884-7, 1885-4, 1886-2, 1887-1, 1888-4, 1889-5, 1890 (incomplete) - 2. Except for what may have been three laggard spellers finally published in 1881, the pattern suggests that, starting in 1879 and continuing into 1883, little market existed for spellers. Then there was a sharp increase in the popularity of spellers starting in 1884. Those statistics confirm J. H. Stickney’s statement in Word by Word: Primary Spelling Book of Ginn, copyrighted in 1889, that the speller had gone out of favor because of “expert” influence but was returning because of massive spelling failures.

As discussed elsewhere, by 1885, Appleton’s was speaking of sales of Webster’s speller of over a million a year. It appears likely that Webster’s sales had also sharply declined after 1875 and then picked up again about 1883, possibly in part because many of the pre-1876 spellers had probably gone out of print by 1883. McGuffey’s publisher obviously moved to capture part of that rapidly expanding market, because the price of the W. H. McGuffey “Alternate Speller” published in 1888 by Van Antwerp was only 14c, making it more competitive with Webster’s, which had probably increased in price from the 10c in lots of 12 that had been published for 1876. Webster’s was a heavily phonic speller and so, most probably, was the new McGuffey. As Stickney’s 1889 speller demonstrated, there must have been a
market for such heavily phonic spellers by that date or she never would have written hers, particularly since she was the author of a sight-word reading series. It should be emphasized, however, that the use of a speller as a BEGINNING book had ceased almost everywhere in America not long after 1826. Spellers, after that change-agent period, were not used until after a child had been taught sight-word primers.)

1876 or Before - Young Ladies’ Progressive Reader; for Higher Classes in Cath. Schools, $1.25. P. O’Shea, New York. (In 1876 American Catalogue under Readers)

1876 or Before - Normal Primary Speller, Normal Speller, Rev. Ed. Albert Newton Raub. Sower (In 1876 American Catalogue under Spellers. See Porter & Coates; Werner; American Book)

1876 or Before - Children’s Friend’s Reader. $1. F. P. Wilmsen. Sower. (In the 1876 American Catalogue under Readers.)

1876 or Before - Historical Shakespearian Reader, J. W. S. Hows, $1.50. Shakespearian Reader. J. W. S. Hows. $1.50. Appleton. (Listed in the 1876 American Catalogue. See other entries for Hows by Butler.)

1876 or Before - Biographical Sketches: Designed as a Reader for Schools. Lord T. B. Macauley. $1. Appleton (Listed in the 1876 American Catalogue.)

1876 or Before - First Book of Spelling and Reading Lessons. 18c. Second Reader for Catholic Schools. 33c. Benziger. (Listed in 1876 American Catalogue. See the other entry in this appendix and in Appendix C on Benziger’s series for Catholic schools.)

1876 or Before - Reader and Book of Knowledge. J. Comly. 48c. Lippincott. (Listed in the 1876 American Catalogue.)

1876 or Before - Questional Reader and Union Speaker. R. Culver. $1. See 1855 entry for Culver. Lippincott. (Listed in the 1876 American Catalogue.)

1876 or Before - Phonic Primer, and Primary Reader. 35c. Rev. J. C. Zachos. Lee & Shepard, Boston. (Listed in 1876 American Catalogue under Primers. Also see 1859 Zachos text published by Wilstach, and other entries on Zachos in this appendix, Appendix C, and the text.)

1876 or Before - Nelson’s Picture Primer. 25c Thomas Nelson and Sons, London, Edinburgh and New York (In 1876 American Catalogue under Primers. See Chapter 46 for information on the Nelson materials.)

1876 or Before - Royal Readers (8 vols. # 1 and Sequel, 2 and Sequel, # 3, 4, 5, 6.) Thomas Nelson and Sons, London, Edinburgh and New York (In 1876 American Catalogue. See Chapter 46 for information on the Nelson materials.)

1876 or Before - Senior Reader, $1.25. Thomas Nelson and Sons, London, Edinburgh and New York (In 1876 American Catalogue. See Chapter 46 for information on the Nelson materials.)
1876 or Before - Copy-Book Primer: Elements of Reading and Writing Combined. 30c. J. D. Love. A. S. Barnes & Company, New York, Chicago and New Orleans (Listed in 1876 American Catalogue under Primers.)

1876 or Before - National Primer, in Phonetic Type. A. S. Barnes & Company, New York, Chicago and New Orleans. (Listed in 1876 American Catalogue under Primers. The “Phonetic Type” was undoubtedly Leigh’s material.)

1876 or Before - First Lessons in Spelling and Reading, Methodist Book Concern, Nashville, Tennessee? (Shown there by Vail in McGuffey history, p. 53. Listed in 1876 American Catalogue, Per doz. $1.80. No other information is available on this material.)

1876 or Before - Spelling and Reading Book. Methodist Book Concern, Per dozen, $1.80. (In print in 1876, according to the “Readers” section of the 1876 American Catalogue. No other information is available on this text.)

1876 or Before - Riverside Greeks, Published by Hurd and Houghton.

(Listed in the 1876 American Catalogue, not under “Readers.” Also shown were Riverside Juveniles - House that Jack Built, Riverside Press; Centennial Guidebook - 1876. Hurd and Houghton shown earlier at a New York address were actually a Boston firm, which was the obvious reason for their use of the name, “Riverside.” In the 1883 American Catalogue, “Houghton” (apparently the successor, Houghton, Mifflin) was shown with a Riverside Literature series including works such as Longfellow’s. The literature theme and the “Riverside” press appear to be tied to the drive for the use of “literature” in school readers, promoted by President Charles William Eliot of Harvard, possibly since 1869, as discussed elsewhere. Harvard is, of course, also situated along the Charles River’s “riverside” in Cambridge, across from Boston. See the discussion of the Riverside materials in the body of this history and in Appendix C.)

1876 or Before - Christian School Books, 6 v.: ABC Book, Primer, First Reader, Second, Third, Appendix to Third, Treasures for the Memory and Heart, N. Y. Ref. Ch. Bd. (This church series is listed as in print in the 1876 American Catalogue but no other information is available on it.)

1876 or Before - Step by Step: Child’s First Lesson Book. 25c. Keystone (Publisher. Listed under Primers in 1876 American Catalogue. No further information is available.)

1876 or Before - Crayon Reader. W. Irving. $1.25. Putnam. (Listed as in print in the 1876 American Catalogue. No other information is available.)

1876 or Before - Pretty Primer for Good Children. 10c, 15c. J. E. Potter (Publisher. Listed in 1876 American Catalogue under Primers.)

1876 or Before - Spelling Made Easy. 10c, 15c. J. E. Potter (Publisher. Listed in 1876 American Catalogue under Spellers.)

1876 or Before - Illustrated Primers. Four Volumes: The Alphabet, Little Words, Spelling Made Easy, Easy Lessons in Reading. 25c each. Routledge. (Listed as in print in 1876 in the American Catalogue under Primers. Routledge was presumably George Routledge & Sons, London and New York. See earlier and later entries for Routledge.)

1876 or Before - Little Helps for Our Little Ones; or, Reading a Pleasure, Not a Task. (One syllable). 50 c. Routledge. (Listed as in print in 1876 in the American Catalogue under Primers. Routledge was presumably George Routledge & Sons, London and New York. See earlier and later entries for Routledge.)

1876 or Before - New Colored Illustrated Primer, Comp. Alphabet and Easy Words, and Easy Spelling and Reading. 50 c. Routledge. (Listed as in print in 1876 in the American Catalogue under Primers. Routledge was presumably George Routledge & Sons, London and New York. See earlier and later entries for Routledge.)

1876 or Before - Routledge’s Illustrated Reading Book. $1. Routledge. (Listed as in print in 1876 in the American Catalogue under Readers. Routledge was presumably George Routledge & Sons, London and New York. See earlier and later entries for Routledge.)

1876 or Before - Primary Lessons. 10c. West. Tr. (Listed in 1876 American Catalogue under Primers. No further information is available.)

1876 or Before - Infant Reader. 50c. Pres. Bd. (Listed as in print in 1876 American Catalogue. No other information is available. See Presbyterian Board entries for 1876 and 1870.)

1876 or Before - Pictorial First Book for Little Boys and Girls. 50c. Pres. Bd. (In 1876 American Catalogue under Primers. No other information is available. See other Presbyterian Board entries for 1876 and 1870.)

1876 or Before - Beeton’s Pictorial Speller, Published by American News and Nelson (Listed in the 1876 American Catalogue under Spellers. No further information is available. Nelson is very possibly the famous British publisher.)

1876 or Before - High School Literature: Sel. of Readings. 3d ed. $1.75. J. F. Monmonier and J. N. McJilton, Barnes. (In 1876 American Catalogue under Readers)

1876 or Before - Everlasting Victoria Primer. 50c. W. & A. Scribner. (In 1876 American Catalogue under Primers. See Scribner in Appendix C.)

1876 or Before - Mavor’s Alphabet Spelling and Reading Book. 25c; Mavor’s Illustrated Linen Primer, 25c, Mavor’s Illustrated Primer, 25c. W. & A. Scribner. (In 1876 American Catalogue under Primers. It is very unlikely that these texts are anything but a play on the name of the early nineteenth century books from England by Rev. Mavor. See Scribner in Appendix C.)

1876 or Before - Warne’s Large Type Linen Alphabet, Spelling and Reading. 50c; Warne’s Large Type Linen Primer, 25c; Warne’s Large Type Primer, 25c; W. & A. Scribner. (In 1876 American Catalogue under Primers. These texts by “Warne,” who does not appear in American sources, may also be based on materials from England, as Scribner’s Mavor materials were. See Scribner in Appendix C.)

1876 or Before - American Primary School Reader, 2 v., J. B. Burleigh. Published by J. B. Lippincott & Co., Philadelphia, according to 1876 American Catalogue. See earlier entries on Burleigh.
(In 1876 American Catalogue. See earlier entries from 1829 on by E. Hazen, presumably the same man.)

1876 or Before - American School Primer. Collins & Bro. (Listed in 1876 American Catalogue under Primers. No further information is available.)

1876 or Before - Illustrated Prog. Ser. of Readers. 8 v. P. O’Shea was shown as author and the publisher simply as O’Shea. This was listed in the 1876 American Catalogue and shown underneath this entry for P. O’Shea was an 1868 “new” Progressive series published by English, and not “O’Shea,” Listing a “P. O’Shea” as author of both materials published by “O’Shea” and by “English” very probably is in error. The publisher, “O’Shea” also published three volumes of the Christian Brothers series. See discussion in Appendix C.)

1876 or Before - Cassell “New Code” Readers, 9 volumes. Cassell. (Listed in 1876 American Catalogue with American prices. See the British section of this history concerning the English publisher, Cassell, who apparently did little further business in America after the 1880’s. The March, 1880, Supplement to the 1876 American Catalogue showed the name and New York address of this London, England, company as Cassell, Pelter, Galpin & Company, and included two full pages listing their general publications between 1876 and 1880, suggesting they were making a real attempt in 1880 to enter the American market.)

1876 or Before - Christian Brothers Readers. 4 v. Strong. (Listed as in print by Strong in the 1876 American Catalogue. See the 1842 entry for this series. The 1876 American Catalogue also listed as in print under “Primers” this entry for Strong: C. J. Cannon, Lessons for Young Learners, two volumes. Under “Readers,” besides the above, was listed Universal Reader, Compiled for [Catholic] Schools, 50 cents, Strong. Under “Spellers” appeared C. J. Cannon’s Practical Spelling Book for 25c by Strong, and T. Carpenter’s Speller, 25 cents, Strong. No further information is available on Strong, who published the Christian Brothers readers in 1876 along with O’Shea and D. & J. Sadlier.)

1876 or Before - Metropolitan New Series of Readers, 6 volumes, and Metropolitan Old Series, First and Second, Published by Sadlier. (Listed in the 1876 American Catalogue. They also published the Christian Brothers readers. See the other appendix and the body of this history concerning Sadlier.)

1876 or Before Primary Lessons, or Child’s First Book. A. D. Wright. Appleton. (Listed in the 1876 American Catalogue under Primers. See 1842 entry for another book by Wright, which includes a discussion of this book.)

1876 or Before - Young Ladies Reader. $1.25. Mrs. M. A. Sadlier. D. & J. Sadlier (In 1876 American Catalogue under Readers)

1876 or Before - Introduction to English Reader, Lindley Murray, 31c. D. & J. Sadlier (In 1876 American Catalogue under Readers. Presumably prepared from Murray’s 1799 or later texts.)

1876 Sadlier’s Excelsior Readers; by a Catholic Teacher. 4 volumes. Sadlier’s Excelsior First Reader, 25c, Second 50c. Third 75c Fourth $1. W. H. Sadlier. (In 1876 American Catalogue under Readers)

1876 Select readers, 3 vols. Friends Bk. St., No. 1, 10c. - 2, 20c. - 3, 55c. (In 1876 American Catalogue under Readers, presumably Quaker materials.)

1876 Sheldon’s Readers, E. A. Sheldon, Published by Chas. Scribner’s Sons, New York. (Listed in the 1876 American Catalogue, as New edition - six volumes, 1876 - Primer First through Fifth, “Adapted
to Phonic Mode of Teaching,” which was not true. Sheldon’s phonics, despite his obvious good intentions, rates only as whole-word, phony phonics. The Library of Congress has one of the texts which includes the manual. E. A. Sheldon’s materials are discussed in the body of this history and in Appendix C. His materials should not be confused with the readers published shortly afterwards by the Sheldon company, which company was apparently totally unconnected with the famous E. A. Sheldon of Oswego Normal School, New York State.)

1876 Primary Reader for Deaf Mutes, William H. Latham, Wilson, Hinkle & Co. Cincinnati and New York. (Listed in Early American Textbooks. In print in 1928 according to the United States Catalog by American Book Company, the successor company. No further information is available on this curious book published in 1876 by the publishers of the McGuffey series.)

1876 Illustrated School Books: Readers. (Primer, First-sixth and Young Ladies Illustrated Reader) J. L. Spalding. Cath. Pub. (Listed in 1876-1885 American Catalogue and discussed in the text of this history.)

1876 Pictorial Primer, or First Reader for Parochial Schools. 25c. Barthel. (In 1876 American Catalogue under Primers. No further information is available.)

1876 Good Behavior: First Class Reader for District Schools. 25c. Cheney. (Listed in 1876 American Catalogue)

1877 That Comic Primer. F. Bellew. 50c. Carleton (Listed in 1876-1885 American Catalogue under Primers. Probably not a true child’s primer but a parody, like the 1880 Benjamin Franklin Primer, listed below. The public was possibly being exposed to much publicity on the subject of primers after the Quincy program began in 1875.)

1877 Baby’s Own Primer. Lothrop. (In 1876-1885 American Catalogue under Primers. See other Lothrop entries in this appendix and Appendix C.)

1877 The Phono-Syllabic Reader, Ohio Book Company, Cincinnati, Ohio - 100 pages. (Shown in Early American Textbooks, page 101. No other information is available.)

1877 Kellogg’s Readers, First Reader. (Phonetic.) T. D. Kellogg, New York, ill pages. (Shown in Early American Textbooks, page 90. Also shown is First Reader (Phonic.) Rev. Ed., New York: T. D. Kellogg, 1878, 123 pages, and under it “1887, 194 pages,” inexplicably to be considered the same as the 1878 book. No other information is available on these materials which remained in print for at least ten years but which were not listed in the American Catalogues. Apparently T. D. Kellogg was not connected with E. L. Kellogg & Co., the publisher of the change-agent School Journal.)

1877 A Primary Spelling Book of the English Language, Loomis Joseph Campbell, Published by Wm. Ware & Co., Boston, University Press: Welch, Bigelow & Co., Cambridge. (Harvard copy. This “meaning” -approach material by Campbell, the co-author of the Hillard and Campbell readers, is discussed in Appendix C and in the body of this history. It was not included in the American Catalogue list of spellers published between 1876 and 1885.)
1877 The Anglo American Primer, Elieza Boerdman Burnz, Burnz & Co., Fonetic Publisherz, No. 33 Park Row, New York. (Harvard copy. “Speling taut by pronunsiashun. Pronunsiashun taut by speling.” Appalling material, which remained in print in another version for some years. See the entry in Appendix C. This was not listed in the 1876-1885 American Catalogue.)

1878 Appleton’s School Readers. The First Reader, by Wm. T. Harris, Andrew J. Rickoff, and Mark Bailey. Reading Charts Prepared by Rebecca D. Rickoff. Published in 1883 by D. Appleton and Company, 1, 3, and 5 Bond Street, New York.

(Harvard copy. Listed in the cumulative American Catalogue for 1876-1884 showing first through fifth readers, but nothing was said about a Leigh print edition, although virtually all earlier widely used series had Leigh print editions at the primer levels. The omission of a Leigh pronouncing print edition at the primer levels in 1878 is striking and critical, as Appleton’s was a Code 3 phony phonics reader of enormous influence. The Farnham 1873 NEA paper had initiated the powerful and “respectable” “expert” opposition to Leigh print, but it was the vastly used Appleton series which probably struck the death blow to Leigh print and to most of the movement in America towards real phonics in beginning reading. Phonics survived, however, in much of the Midwest, where the Appleton’s series’ arch-foes, the 1879 McGuffey phonic readers, were widely used.

The New York Public Library catalog shows that the library has a copy of the Appleton First Reader, but not of the first reader of the other critical series of the period, Hillard and Campbell’s Franklin series.

Early American Textbooks, page 86, lists under the Appleton readers The Minnesota Text Book Series by D. D. Merrill of St. Paul, Minnesota, of 1878, so Appleton’s was possibly a Minnesota state adoption in 1878, the very first year that Appleton’s was published. Simultaneous publication in Minnesota recalls the fact that the Bancroft California series of 1883, only five years later, also had simultaneous (though apparently unofficial) state editions in Indiana and Missouri, as discussed elsewhere in this history. Listed for Minnesota Text Book Series are the Second and Third Readers of 1878, as well as the First Reader of 1887. See the discussion on Appleton’s readers in Appendix C and in the body of this history.)

1878 Webster-Franklin Primer or First Reader, G. S. Hillard and L. J. Campbell, Published by Taintor Brothers, Merrill & Co., New York, and Wm. Ware & Co., Successors to Brewer & Tileston, Boston. (Harvard copy. This is an edition in Webster spelling of the Franklin Primer, but not in Leigh print. See the earlier entries on Hillard and Campbell in this appendix and in Appendix C, and in the text of this history.)

1878 Large Picture Primer. 75c, 50c. Routledge. (In 1876-1885 American Catalogue. See earlier entries on Routledge and entries in Appendix C. Routledge was apparently George Routledge & Sons of London and New York.)

1878 Popular Reading. Mrs. A. R. Diehl. $1.50. 2nd Ser. 1882, $1.50. Carleton. (Listed in 1876-1885 American Catalogue. See other entries for Mrs. Diehl.)

1878 After Kindergarten, What? Primer of Reading and Writing. 3 parts. 45c. Elizabeth P. Peabody and Mrs. Mary Mann. Steiger (publisher). (The March, 1880, Appendix to the 1876 American Catalogue shows the company name and address as E. Steiger, 25 Park Place, New York. This entry is shown in the 1876-1885 American Catalogue under Primers. See other entries for Mary Peabody Mann and Elizabeth P. Peabody. See also the 1872 entry for E. Steiger on unrelated books.)
1878 Normal Readers, First through Fifth, Albert N. Raub. (The cumulative American Catalogue for 1876-1884 shows “Normal readers, 5 v. [*78].Porter & C.,” listing Normal first, second, third, fourth and fifth readers. Reported by Nietz on page 102. On page 2082 of the 1912 United States Catalog, under “Readers, Normal,” appears “Raub, A. N. New normal readers...” It lists lst through 5th but gives a publication date of 1906 by American Book, so there was apparently a 1906 revision. See the entry in Appendix C on Raub.)

1878 Easy Reading (25c). Lothrop (In 1876-1885 American Catalogue. See other Lothrop entries in this appendix and Appendix C.)

1879 Linen Primer. Lothrop (In 1876-1885 American Catalogue under Primers. Such “indestructible” primers were apparently popular. See Scribner’s. See other Lothrop entries in this appendix and Appendix C.)

1879 My Indestructible Primer. 60c. Lippincott. (In 1876-1885 American Catalogue under Primers. See other Lippincott entries in this appendix and Appendix C.)

1879-1881 McGuffey’s Revised Eclectic Readers, Henry H. Vail, Editor, Published by Van Antwerp, Bragg & Co., Cincinnati, Ohio. (Code 10. Note the late arrival of the phonic McGuffey material. The McGuffey materials are discussed at length in Appendix C and in the body of this history. Listed in 1876-1885 American Catalogue under Readers.)

1879 Six Popular Tales, Authorized for Use in the Boston Public Schools, Selected and Arranged by Henry Cabot Lodge. Copyrighted by him in 1879 and printed at the Press of Rockwell & Churchill, Boston. (Harvard copy. This was not listed in the 1876-1885 American Catalogue under Readers or Primers. This book is discussed in the body of this history. It obviously was using the “real-literature” approach for beginners. The approach was being promoted by the change-agents who were opposed to Boston Schools Superintendent Philbrick, who had been fired the year before, in March, 1878.

The fact that Lodge, before he was thirty years old, published a book for primary school children in the Boston schools certainly suggests that young Lodge, who was well known by young William James, was part of the Boston-area group which was concerned with “improving” primary school education. That was the group responsible for firing Philbrick. The fact that Philbrick was fired (“lost his place”) because of the efforts of that group (the Adamses being specifically named) is confirmed beyond any doubt by the editorial from a Syracuse newspaper which is quoted in the body of this history.)

1879 Selections from American Authors, A Reading Book, by Samuel Eliot. (Listed in the New York Public Library under call number RNPF, although the writer has not seen the book. It would appear that Samuel Eliot, who replaced Philbrick as Boston Schools Superintendent in March, 1878, prepared “suitable” material for reading instruction by 1879, very soon after taking over as Schools Superintendent. “Selections from American Authors” was obviously “real literature” and not just “scraps” in “A Reading Book,” as might have been expected from Samuel Eliot, the change-agents’ new broom. Boston Schools Superintendent Samuel Eliot’s 1879 book presumably joined the above 1879 book by Henry Cabot Lodge, as also being “Authorized for Use in the Boston Public Schools.”)

1879 Our Baby’s Primer and Pretty Picture Book, by Phillip Findlay, Published in 1880 by Estes & Lauriat, Boston, and printed by University Press: John Wilson & Son, Cambridge. (Harvard copy. This
book is not listed in the 1876-1885 American Catalogue under Readers or Primers. It is discussed in the body of this history. This 1879 book possibly joined Samuel Eliot’s and Lodge’s 1879 books in the Boston primary schools, although it did not carry the notation that it was authorized for use there. However, the fact that it was printed by University Press suggests that it may have joined those books. The connection of the University Press to the change-agents’ work at that time is discussed in the body of this history. 

1880 Stories for Language Lessons: Reading Pastime for Little Beginners (50c) Lothrop (In 1876-1885 American Catalogue under Readers. See other Lothrop entries in this appendix and Appendix C.)

1880, 1883 Little Folks Reader ($1) Lothrop (In 1876-1885 American Catalogue under Readers. See other Lothrop entries in this appendix and in Appendix C.

1880 Words and Numbers. 18c. H. Sawyer. H. A. Young (publisher). (In 1876-1885 American Catalogue under Primers. No other information is available.)

1880 The Benjamin Franklin Primer. 10c. N. Y. News.

(In 1876-1885 American Catalogue under Primers. In October, 1981, it was listed in the Library of Congress catalog, in the section for “Primers, 1870-1950,” as 24 pages, and published in 1880 by Boston School Supply Co., Boston, Mass. The Library of Congress catalog described it as “A satire on the primers and first readers in common use.” Why the American Catalogue, which was a contemporary catalog, listed the original publisher in 1880 as N. Y. News, while the Library of Congress showed the 1880 publisher as Boston School Supply Co., is not known, but the Library of Congress catalog card did refer to another edition.

Some time ago, I saw a copy of this book, and it was obviously not a child’s book but a parody on children’s primers. That suggests that the public had been exposed to considerable and not very welcome publicity on primers by 1880. The period from 1875 to 1880 was Colonel Parker’s “Quincy” era, and the period in which Hillard and Campbell’s 1873 Franklin series was in wide use. It was also the period in which Leigh-print primers were finally chased out of most American schools (and the Leigh-print Franklin edition apparently disappeared from the Boston/Cambridge area by 1878). The use of the word, “Franklin” in the title of this 1880 parody suggests that the parody was quite pointed and referred particularly to that Hillard and Campbell series (and its fading Leigh-print version). The Franklin primer must have been widely publicized by 1880 or the parody would have been meaningless.)

1880 Supplementary Reading - First Book - Primary Schools, Francis W. Parker, Supervisor of Schools, Boston, and Louis H. Marvel, Superintendent of Schools, Gloucester, Massachusetts. Published by Leach, Shewell, and Sanborn, Boston and New York.

(Harvard copy, marked by the library as an 1884 edition, showing 1880 and 1881 copyright dates by the authors. “Rev. Ed. ['82]” of Supplementary Reading for Primary Schools - First Book, and Second Book, were listed in the 1876-1884 American Catalogue as published by “R. S. Davis, (B.)”, about which company no information is available, but the original edition was not listed in the 1876-1884 American Catalogue. Since the revised edition came out in 1882, and the Harvard copy of the original edition carried the library’s note that it was printed in 1884, apparently there were two versions in print by 1882, published by different publishers. This appalling Code I material is also listed in Appendix C and discussed in the body of this history. Marvel was also co-author with Sarah E. Sprague of the D. D. Merrill Readers in St. Paul (listed in Appendix C), according to page 107 of Early American Textbooks.
The name “Sanborn” in the title of the publisher of Parker’s and Marvel’s book also appeared in some of the following sequential companies who published the Town and Holbrook, and for a time the Tower, materials. However, whether the “Sanborn” who disappeared from the following company titles some time before 1860 was related to the Sanborn who appeared in the company name of Leach, Shewell and Sanborn in 1880 and who published Parker’s and Marvel’s book is unknown.

1848 - Sanborn and Carter, Portland, Maine
1856 - Sanborn, Carter, Bazin & Company, Boston.
1857 - Sanborn, Bazin & Ellsworth, Boston.
By 1860 or earlier - Bazin & Ellsworth, Boston.

Some time after 1862, Bazin & Ellsworth of Boston became simply Oliver Ellsworth of Boston. The company was apparently out of business by the time the 1876 American Catalogue was published.

1880 A Graded Spelling Book, by H. F. Harrington. Copyrighted in 1880 but not published until 1881 by Harper & Bros., New York. (Harvard copy. Listed in the 1876-1885 American Catalogue under Spellers as “[‘81 [‘80].” The back cover of this book advertised Swinton’s Language Primer and other Swinton grammars. However, Swinton’s readers were published by Ivison, not Harper. See Appendix C for both publishers.)

1880 Institute Reader, Ivison (Listed in the 1876-1884 cumulative American Catalogue, during the time that teacher-training “institutes” were so very influential in America, as discussed in the body of this history. See a similar book listed in this appendix which was published in 1870 by Wilson, Hinkle and Company, the publishers of the McGuffey Readers.)

***************

By March, 1880: The March, 1880, Appendix to the 1876 American Catalogue contained pages submitted by some publishers (but far from all) of books they had published since the cut-off date for the compiling of the 1876 American Catalogue of books in print in that year. The lists were very extensive. Covering all topics, they undoubtedly also covered some books on reading instruction which may very well not be included in this list. However, those 1880 lists have not been searched for new titles on reading instruction.

THE READER IS CAUTIONED THAT APPENDIX B DOES NOT PRETEND TO BE A COMPLETE LIST OF BOOKS ON READING INSTRUCTION, BUT ONLY REFLECTS INFORMATION FROM THOSE SOURCES WHICH HAVE BEEN AVAILABLE TO THIS AUTHOR. IT SHOULD, HOWEVER, BE REPRESENTATIVE.

FOR MATERIALS AFTER 1880, CONSULT APPENDIX C.
APPENDIX C
A Partial Annotated List of Children’s Beginning Reading Texts Published After 1880 Listed Chronologically Under Publishers’ Names

Table of Contents
Appendix C

Although this appendix concerns books published after 1880, entries before 1880 are given if post-1880 publishers of children’s reading instruction texts had also been in business before 1880 and had published reading instruction texts at that time. Showing the earlier reading instruction texts of those publishers is necessary in order to show the historic influence of those publishers. However, despite the inclusion of pre-1880 texts for long-lived publishers, the fact is that the vast majority of companies which published American reading instruction materials before 1880 were not in business after that date and so do not appear in this appendix.

Furthermore, even most of the publishing companies shown in this post-1880 list are no longer in business, although some of them were once of great importance. However, a small number of the oldest companies shown in this list are still in business today, although usually as divisions of larger and often non-publishing companies. Some of the most prominent of those oldest publishers which still exist, at least in some way, are Ginn, Macmillan, Houghton Mifflin, Harper, Scribner, Heath, Silver Burdett, Rand McNally, American Book Company, and Scott, Foresman.

Shortly after it went into business, Scott, Foresman bought out the earlier Sherwood Company, according to Volume 2 of A History of Book Publishing in the United States, by John Tebbel, published by R. R. Bowker, New York, in 1975. Through that 1894 purchase of the Sherwood company, Scott, Foresman qualifies as one of the oldest surviving and continuous publishers of American children’s readers. That is because by at least 1866 the already existing Sherwood company of Chicago had become the Chicago publishers of Webb’s already famous and widely-used sight-word readers. Webb’s readers originated in 1846, according to Nila Banton Smith, and her claim seems to be confirmed by the fact that a surviving 1850 copy is listed in Early American Textbooks, which is the bibliography published by the United States Department of Education.

The entries in this appendix are arranged by publishing companies, with each company’s published works listed in chronological order in each company’s section. The companies themselves are listed in the order of their first appearance in the sources available to me which have shown the companies to be publishers of children’s reading instruction texts.

Both the most popular authors and the names of their publishing companies have changed very frequently, even though the publishing companies themselves may have stayed in business under new names. Therefore, usually shown below in this table of contents for each company’s series of entries are only the company’s principal author or authors (listed first), and/or the dominant publishing company name (listed last). However, in some cases, only a principal author or a principal company are listed. Because of the constant changes in names and emphasis, it has been very difficult to arrange the material in a more easily usable table of contents. The following table of contents has been the best approach available to deal with the mass of data.

To make that material in the following table of contents somewhat easier to read, the entries have been broken down into ten-year periods, to show the time period in which the company names first appear.
in this appendix. However, it should be emphasized that some of the very oldest companies are continuing
to publish right up to the present time, even though they may be only subsidiaries of other companies, and
some of the far more recent companies have been out of business for a very long time. Furthermore, the
date at which a company first appears in this appendix in no way suggests that the company was founded
in that year, but only that the year was the first time the company is known to have published children’s
reading instruction texts. For instance, the Appleton company had been in business many years before the
year in which a reading instruction text was apparently first published by Appleton.

Although this arrangement in Appendix C is, admittedly, very difficult to use, it is nevertheless the
only arrangement which makes it possible to understand the historical development of the multitudinous
publishers of reading instruction materials for American children, and the relationships of those
publishing companies to each other in the historical record. The necessary and great complexity of this
table of contents should emphasize how utterly ridiculous is the McGuffey Myth.

The explanatory Preface to this Appendix C is its first entry.

The Beginning Reading Instruction Study (A reference for reading series)
Appendix C lists all American texts known to me to have been published since 1880 and so is an extension of Appendix B which lists texts known to me to have been in use in America up to 1880.

As indicated on the Table of Contents, the entries are in a different form. Publishing companies are listed in the order of their appearance in the records available to me of children’s reading instruction texts, and, under those company names (or the names of their successors), their publications are then listed in chronological order. For publishers already in business by 1880, any pre-1880 children’s reading instruction texts known to me are listed again in that publisher’s section of this appendix, even though those titles had appeared in Appendix B.

The year of 1930 marked the advent of the deaf-mute-method W. S. Gray and A. I. Gates readers, which very soon produced legions of functional illiterates in America, as attested by reports by the early 1940’s. (See Mitford Mathews’ Teaching to Read, Historically Considered, The University of Chicago Press, 1966.) The Gray and Gates 1930 deaf-mute-method readers produced an astonishingly massive, incredibly rapid and exceedingly peculiar shift from “sound” to “meaning” in American beginning reading instruction, from the Atlantic to the Pacific Oceans, and from the Canadian border to Mexico. The very numerous earlier beginning reading texts in America, most of which had used supplemental but real phonics, astonishingly went out of use almost totally before about 1933 or 1934, which certainly indicates the massive use of improper influence.

The “experts,” who were largely at American universities insulated from voters at the polls but who were nevertheless in control of American education from the top, had thrown the switch to activate the installation of the deaf-mute-method in American schools in 1930. The current had then flowed obediently through all the “experts’” nasty organized power structure which controlled “teacher certification,” “administrator certification,” “textbook certification,” and a great deal more. The fact that this terrible thing happened after 1930 should remove any support for governmental “certification” of textbooks, texts, teachers, or anything else in education. It should put back into its proper place the Bill of Rights amendment which guarantees freedom of the press and freedom of speech in every area, and one of those areas is most emphatically the education of American children. The Bill of Rights obviously guarantees parental freedom in the choice of textbooks, texts and teachers for their own children, and governmental agencies have no business whatsoever forcing themselves into what is the natural relationship between parents and children. The terrible state of education in America today is the direct result of having permitted that unlawful intrusion.

The “experts” power structure in the early part of the twentieth century was exceedingly effective and has even been labeled the “Education Mafia.” Anyone publicly disagreeing with the edicts of the Education Mafia on beginning reading instruction after 1930, like Mae Carden or Dr. Orton, rapidly became marginalized or discredited. The Saturday Evening Post article of September 9, 1961, “These Children Love to Read,” by Frances Rummel, on Mae Carden’s extremely effective phonic reading materials, gives sad, concrete facts on the influence of that power structure into the 1960’s.

Many of the multitudinous pre-1930 reading texts which effectively disappeared with the 1930 advent of the deaf-mute-method readers had been in print for decades. Many texts published as early as 1880 were still in use as late as 1928 according to the United States Catalog, which was published in 1928. That 1928 catalog is obviously an excellent source for the enormous numbers of titles of reading instruction materials that were still available in 1928 but that disappeared after 1930. That catalog has been drawn on extensively in compiling this appendix.
This appendix also includes titles of materials published after 1930 which were cited in works by Nila Banton Smith, Samuel Blumenfeld, Jeanne Chall and Rudolf Flesch, and titles from some other post-1930 sources. However, other than Gates’ and Gray’s readers, Nila Banton Smith listed almost no materials printed between 1930 and 1940. Despite the fact that an enormous number of different reading instruction materials had been published in 1928, as proven by the United States Catalog, few other reading series were in use from about 1930 to 1940, the years when the Gates and Gray deaf-mute-method readers were invading American schools en masse. Yet, despite the Depression, new textbooks were being published in subjects other than reading instruction. That suggests that the publishers of textbooks in these other subjects were aware that the reading textbook market had been closed to them and that it would be pointless any longer to try to publish for it.

These sources also provide an adequate guide for methods in use after 1930, which have, at all times since 1930, remained overwhelmingly based on the deaf-mute “meaning” method, with context-guessing and so-called “intrinsic phonics.” Since 1981, many reading series have incorporated the so-called “whole language” method in beginning reading, but that should more appropriately be labeled the “educational malpractice” approach. Dr. Patrick Groff of San Diego University, who has written so extensively and effectively on the subject of reading instruction, has discussed many of the current reading materials and methods in his writings, particularly “whole language” materials. There is therefore no necessity to review “whole language” materials here.

Further concerning reading instruction materials possibly published from 1930 to 1940, the 1928-1932 Cumulative Book Index under “Readers” had many titles, but the vast majority were either individual story books, foreign publications, Catholic school series, or reprints of earlier general series. The very few entries after 1930 or for which no date is given in the 1928-1932 Index and which appear to be reading series for general use are vague. In any event, they obviously had little influence so no attempt is made to add them to this list.

Concerning those titles published only after 1932 but before 1940, a review of publishing records after The Cumulative Book Index, 1928 - 1932, might turn up other series before 1940, but it is unlikely they were of importance, which is the probable reason that Smith omitted mentioning any before 1940. Yet two series known to be published in the 1930’s and which Smith did not date to that period were Mabel O’Donnell’s 1936 series and The Child Development Readers by Julia L. Hahn, published by Houghton, Mifflin Company in 1939. Smith did list the O’Donnell 1936 series, dating it to the 1940-1950 period but failed to list Hahn’s 1939 series. Yet Hahn’s 1939 series might well be considered, anyway, to be included appropriately in the 1940-1950 period.

Surprisingly, a virtually useless source for the compilation of this bibliography has been the American Book Publishing Record - Cumulative - 1876-1949, An American National Bibliography, “production for 1876-1949, as cataloged by the Library of Congress and the National Union Catalog.” It was published in 1980 (obviously in a later edition than the original edition) by R. R. Bowker Company, New York, who
may also have published the first and probably far earlier edition. The reason it was useless is not solely
because of the way the entries were catalogued, which made it difficult and for some purposes impossible
to use, but the fact that it contained serious omissions.

For instance, it apparently totally omitted the critically important Appleton Readers of 1878. Furthermore, it showed few other works by the Appleton Readers’ once well-known authors. It listed only
two entries for the enormously famous and prolific author, and principal author of the Appleton series,
William Torrey Harris (one on Hegel), although Harris is reported elsewhere to have published about 500
books and articles. The only entry for Rebecca Rickoff who wrote the once massively used Appleton
charts is #372, “A Sup. First Reader 1892, Amer. Bk.” Mark Bailey, a co-author of the Appleton reading
series, has only two works on elocution listed. Andrew Rickoff, (1824-1899), another co-author, has an
1877 entry for “Past and Present of our Common School Ed.”, and five arithmetic texts, but NO reading
entries. This “record” which dutifully reported on OTHER Appleton books dropped the critically
important Appleton reading series, along with most of the unrelated works by its well-known authors, into
a black hole! Yet, surprisingly, the American Book Publishing Record - 1876-1949, which presumably
only starts its listings in 1876, does have entries for some reading materials published BEFORE 1876!

Another surprisingly insufficient source is the New York Public Library catalog. In 1982, before the
library had converted its index drawers to index volumes, it had two partial drawers of cards under the
heading, “Primers - American.” A rough breakdown of the dates of those primers revealed the following
entries (but I wish to emphasize that this was only a very rough count). The dates used are the original
publication dates of the books, if known:

Before 1800 - 6; 1801-1810, 5; 1811-1820, 7; 1821-1830, 12; 1831-1840, 15; 1841-1850, 16;
1851-1860, 6; 1861-1870, 4; 1871-1880, 1 (McGuffey’s 1879 book one, but not Appleton’s)
1881-1890, 3; 1891-1900, 4; 1901-1910, 5; 1911-1920, none; 1920-1930, 3, 1931-1945, 6.

As is apparent from the listings of primers given in Appendix B and Appendix C of this history, the
New York Public Library holdings of primers in 1982 were not only very inadequate but totally
disproportionate in terms of time periods. From 1851 to 1890, most of the great many possible entries
were missing. Also missing was most of the vast selection of primers (and “book-one” editions,
equivalent to primers) from 1911 to 1928, which were listed in the 1928 United States Catalog. In 1930,
all those earlier primers had been displaced by the Gray and Gates deaf-mute-method primers. The 1982
listings in the New York Public Library card catalog showed the same lopsided, disproportionate pattern
as the bibliography to Nila Banton Smith’s “history,” in which most of the materials published in the
years from about 1860 to 1890 were omitted.

Furthermore, in the 14 entries from 1901 to 1947 , none were for the famous 1930-and-later-editions
of primers by Gates or Gray. Nor did I recognize any of those 1901 to 1947 primer names in 1982, which
means they were not well-known primers (though I probably would recognize some now). Why should a
library collect any primers at all, if most of the historically important and massively used ones are going
to be omitted? The lop-sided inadequacy of the New York Public Library holdings of American reading-
instruction primers in 1982 seems to need an explanation, since, on the face of it, it was irrational.

Omitted from this Appendix C are almost all of the many supplementary reading series which were
issued after about 1880. With few exceptions, those series which are listed in this Appendix C were
intended to be the principal reading materials in American classrooms. Some few series out of the great
number of series published before 1880 are also shown here in Appendix C, as well as in Appendix B, if
they were listed as still in print in the 1912 United States Catalog. Most of these few pre-1880 materials
still for sale in 1912 were also still for sale in 1928 according to the United States Catalog of 1928. The
only other pre-1880 series or reading books shown here in Appendix C as well as in Appendix B are those
known earlier series or reading books put out by publishers who also had post-1880 reading materials, or earlier material which is related in some way to post-1880 material.

The method of listing starts as chronological. However, after a publisher’s name is entered under the first date at which it is known to have published a series or a reader, all of the publisher’s subsequent series or single primers are shown in that same listing. The reason for this is that so many large publishers constantly revised their series that it would be misleading to enter each revision with no reference to its previous editions. Also, such a listing makes it possible to see the relative importance of each publisher at each period of time and the great longevity of some important publishers. Although the frequent company name-changes tends to obscure the fact, some of these companies began publishing reading materials in the early nineteenth century.

One exception to the practice of listing by publishers, rather than authors, is when a publisher, like American Book, reprinted a series which had originally been published by another company. For such reprints, the name of that final publisher is added to the original publisher’s listing. A second exception is in the case of the Webb readers, which appeared to travel from one publisher to another over a period of many years. For this reason, the Webb readers are listed separately. It is evident that publishers often sold the rights to such readers. Furthermore, publishers apparently sometimes licensed other publishers to print additional copies of their materials, in which case the secondary publisher’s name appeared on the editions. With the use of copyright information on such textbooks and other editions, I have attempted to sort out the name of the dominant publisher in such cases.

Further information on the changes in publishers’ names might be obtained from a publication listed in the American Catalogue for 1885-1890: Reference Directory of the Booksellers, Stationers, and Printers in the U. S. and Canada, an annual from 1886 to 1889 and possibly later, published by A. C. Farley & Co. However, tracking such changes in publishers’ names and successors except in an informal fashion is beyond the scope of this appendix. To some extent, more precise information is available from a few reference books on the publishing industry for those who wish to obtain it. An excellent source book which only came to my attention when my book and its appendices were almost completed is A History of Book Publishing in the United States, by John Tebbel, in four volumes, published by R. R. Bowker, New York, starting in 1972. Tebbel states, however, that very great deficiencies still exist in the history of American publishing.

This listing is only tentative and is certainly not presented as final and authoritative. The reason for this is not solely because more time would be required to prepare such a list. Almost the only materials available to prepare this list have been copies or photocopies of surviving textbooks, some entries in nineteenth century journals, incomplete catalogs such as the American and the United States, Early American Textbooks (1775-1900) which I have found sometimes to be in error, and a few very inadequate books written on early American textbooks. Therefore, not enough material has been available to prepare such a definitive listing.

The great numbers of educational journals in the nineteenth century, which also carried advertising, would be a great aid to increasing this listing, if the time and effort could be applied to traveling to the many libraries which carry spotty collections of such journals, which journals have sunk into educational oblivion. Almost the only old journals checked by “experts” are those put out by Columbia Teachers College (Teachers College Record) and the University of Chicago (Elementary School Journal) published since about 1900. Yet those two universities are where the principal activists, Cattell, Dewey, Judd, Thorndike, Gates and Gray were located. “Experts” sometimes do cite Henry B. Barnard’s American Journal of Education from the mid-nineteenth century which is, indeed, excellent, although Barnard was heavily biased in favor of government-controlled education.
The titles published after 1900 were taken largely from the United States Catalogs which listed books actually in print and for sale in the years of 1912 and 1928. My comments on certain of those titles are the result of my examination of actual copies. However, my examination was far more infrequent for books published after 1900 than for books published before that date. It is probable that many American titles are omitted from this listing after 1900, as the bulk of my library research time has been spent on texts published between 1800 and 1900. Most of the comments I have made in this history concerning textbooks published before 1900 were the result of my evaluation of photocopies I made of pertinent portions of textbooks in the enormous (and praiseworthy!) Harvard Library collection. In the summer of 1986 at Harvard, I made over 8,000 of these photocopies on over 400 textbooks.

Harvard’s enormous textbook collection which was the source for most of my pre-1900 information was apparently well under way by 1860. The Harvard Library has an 1840 edition of The Reader’s Manual by John Hall. Written on the copyright page is the notation, “1861, Oct. l. By exchange of duplicates.” With whom the exchange was made is not indicated, but the note implies the existence of a textbook collection by 1861. Another is a written notation on the copyright page of Henry Butter’s Gradations in Reading and Spelling, published in Philadelphia in 1836. The written note reads, “1860. Aug. 11, Gift of Ticknor and Fields.” Ticknor and Fields were Boston publishers. One of the most interesting of the textbook gifts was a very worn (and obviously heavily used) 1829 copy of The National Spelling Book and Scholar’s Guide on a New Plan, Published by Charles Hoag, Concord, New Hampshire, on which no author’s name appeared. This speller was in the pattern of those pre-1826 spellers which seemed to ape Webster’s in teaching by “sound” but which actually moved heavily towards “meaning,” and this one certainly did, rating perhaps a Code 7. Very possibly the original edition was earlier than 1829. That copy was particularly interesting because of the very faint and hard-to-read written note on the “Preface” page, which seems to say: “186l. Febr.(?) 23, Gift of The Family of Rev. Sam'l Willard (or possibly Hillard) of Deerfield, D. D. (H. C. 1808).” Reverend Willard (1776-1859), who did live in Deerfield, is credited with having written the religious Franklin Primer of 1802 as well as the series of readers starting with the non-religious Franklin Primer of 1826. Reportedly, Willard went tragically blind many years before his death in 1859. A possible date for Willard’s graduation from Harvard College of 1808 is a little surprising, however, since he would have completed the religious primer in 1802 at the age of 26 but would not have graduated (presumably as a Doctor of Divinity) until 1808 at the age of 32. Conceivably he was a preacher before graduation. Deerfield is in Franklin County, 33 miles north of Springfield, on the Connecticut and Deerfield Rivers. Franklin County (and possibly Deerfield) is where the convention was held which adopted the 1826 Franklin Primer. Deerfield is the location of the Deerfield Academy established in 1797. It appears likely that Willard was associated with that academy and with the organizing of that 1826 Franklin County convention.

It appears that by 1861 an elaborate printed form had been prepared to paste into such gifts of old books, which carried Harvard’s seal. This suggests old books were being received in some numbers by 1861, though of course the seals could have been pasted in at a later date, since the copies also seem to carry a simple written note on the donor’s name. (Presumably, Harvard could provide the actual history of its remarkable textbook collection.)

An 1820 copy of B. D. Emerson’s Third Class Reader carried that pasted-in seal, with the written notation, “The Gift of Caroline L. Sawyer of Cambridge, 2 Sept., 1861.” Two texts in 1863 carried the pasted-in seal, on which had been printed, not written, “The Gift of George Livermore, Of Dana Hill, Cambridge. 1 May, 1863,” which suggests “George Livermore” gave enough books, and considerably more than two, to justify printing the seal. One of the two books was Jasper Hazen’s 1823 copy of his 1822 The Primary Instructer (sic) and Improved Spelling Book, and the other was Kay’s Infant and Primary School Reader & Speller, No. 1, of 1839, published in 1840. A very great number of the readers and spellers contributed over many years were “The Gift of Samuel A. Green, M. D. of Boston, (H. C. 1851).” The date of Dr. Green’s graduation and his great interest in acquiring old textbooks for the
Harvard library suggests the textbook collection may well have been started before 1851 while Green was still a student. What is obvious, however, is that Harvard already had by the 1860’s what was a remarkable collection of old textbooks, including old beginning reading textbooks, and it would have been available in the 1860’s for those who were concerned with methods used in elementary education, such as Agassiz of Harvard and those associated with him.

However, I chose only a small selection of texts to review from Harvard’s large collection of reading books published after 1900, and I chose those texts because I knew they had been in wide use after 1900. My review of actual textbooks I saw which were published after 1900 includes those relatively fewer textbooks published after 1900 which I saw at the Harvard Library, a few copies purchased in used book stores, and those I saw at the United States Department of Education library and at a few other places.

The titles of the texts published after 1900 also included those I obtained from the American Catalogue of Leypoldt of 1905, which Catalogue attempted to list books published between 1900 and 1905.

It is probable that many texts which were published between 1912 and 1928 were out of print at the time the United States Catalog was prepared in 1928, which showed books actually for sale in that year. One such series which was not listed in the 1912 catalog and which was out of print by 1928 was the famous Beacon series of 1912. It had apparently appeared too late for inclusion in the 1912 catalog. For most such series published between 1912 and 1928 which were out of print by 1928, I have no record. Therefore, as mentioned, in no sense can this listing be considered complete.

Even the American and United States Catalogs are themselves incomplete. For instance, the Passaic Primer of 1903, presently in the Library of Congress collection, which is a critically important book since it was the forerunner of the massively used 1907 Aldine readers and was written by the same authors, is not listed in the American Catalogue or the United States Catalogs.

Nor can this Appendix C even be considered complete from 1880 to 1900, as the Harvard collection of reading texts, from which most of the names of the texts for that period came, does not contain all the reading texts published before 1900, even though it is the largest collection of textbooks in America. Certainly the large collection of the U. S. Department of Education does not contain all reading texts, since it is smaller than Harvard’s, though it has many reading texts Harvard does not.

However, it should be manifestly obvious that, if Government education agencies were capable of doing ANYTHING competently, they would at least have authorized the preparation and maintenance of a complete, properly indexed and annotated list of American textbooks, and a very representative selection of them as well! Yet no collection of textbooks the size of Harvard’s private collection - and certainly no complete and properly annotated list of American textbooks - exists in Washington, despite the fact that we have had Federal agencies concerning education ever since the 1860’s! The Government publication, Early American Textbooks, 1775-1900, which was published by the Office of Educational Research and Improvement, Washington, D. C., in 1985, is woefully incomplete, even though its compilers obviously tried to produce a good catalog with what was apparently limited assistance. Furthermore, the large textbook collection of the U. S. Department of Education has been shockingly neglected and underfunded by the department’s management, who ordered its librarians to stop their partially completed work of cataloging and arranging the collection, which fact was reported to me some years ago by one of their librarians.

Some of the titles from 1928 to 1930 were obtained from Nila Banton Smith’s American Reading Instruction, and the titles she listed before that date have been compared to other sources. Also used was the list of beginning readers from Arthur I. Gates’ article, “Problems in Beginning Reading, Suggested by
an Analysis of Twenty-One Courses,” from Teachers College Record, March, 1925. Gates said he had selected this list of twenty-one beginning readers out of a longer list, all of which he said had been widely used in 1925. Gates’ statement about a very, very long list of beginning readers in wide use in 1925 is very arresting, when compared to Jean Chall’s comment in her 1967 book that, only shortly before, the Scott, Foresman readers and the Ginn readers had accounted for an astonishing 80 per cent of all American reading textbook sales. (It was customary at that time for elementary schools to use two different series simultaneously, which means that each of those two series had about 80 per cent, not 40 per cent, of all American reading book sales!)

The United States Catalogs of 1912 and 1928 are a remarkable source of information. The history of such catalogs in the United States is given in the preface to the 1928 edition. The first was A Catalogue of All the Books Printed in the United States with Prices and Places Where Published Annexed, Published by the Booksellers in Boston, January, 1804. Next was the Bibliotheca Americana, 1820-1861, compiled by O. A. Roorbach. Following that was the American Catalogue, 1861-1871, compiled by James Kelley, and next the American Catalogue of 1876, compiled under the direction of F. Leypoldt. The “Preface” to the 1928 United States Catalog said Leypoldt’s work contained:

“books in print July 1, 1876... This was continued by seven supplements, bringing its record down to 1910, when it was discontinued.... The next ‘books in print’ appeared... as the ‘United States Catalog, Books in Print, 1899....’ the second edition, 1902....”

It said the much enlarged third edition of 1912 was replaced by the 1928 edition. The 1899 and 1902 United States Catalogs have not been consulted in compiling this history, but only the editions of 1912 and 1928. Leypoldt’s American Catalogs were consulted up to and including the edition for 1900-1905.

As stated earlier, the listing in this Appendix of reading texts in America does not pretend to be a complete one, but only a representative one for books in probable use in American schools after 1900. What the huge size of the listing which follows establishes, particularly since it is incomplete despite its size, is that it was most unnatural for the Scott, Foresman reading series (“Dick and Jane”) to have blanketed American schools after 1930. It was unprecedented for a single series such as “Dick and Jane” to have been the dominant series in use in almost all American schools for decades, with most other series such as Macmillan’s only being used as secondary series. Concerning these secondary series published after the arrival of the deaf-mute-method readers in 1930, all modeled on Gates’ and Gray’s materials with the use of high-frequency controlled vocabularies and phony phonics, most probably did not even reach the market until after 1939, except for Mabel O’Donnell’s series which came out in 1936. In 1939, Houghton, Mifflin published the Child Development Readers by Julia L. Hahn. Nila Banton Smith’s Learning to Read Series was published by Silver, Burdett from 1940.

America’s involvement in World War II from 1941 to 1945 obviously interrupted the publication of reading textbook series. Therefore, it was not until 1948 that Arthur Gates’ student, David Russell, and others published The Ginn Basic Readers, and Emmett Betts, a major “expert,” produced Betts’ Basic Readers published by American Book Company. That these series were not dominant, even after 1940, is evident from the “Dick and Jane” jokes which have entered American culture as testimony to the vast use of that viciously damaging series. It was also exceedingly unnatural for virtually all earlier series from before 1930 totally to have disappeared after 1930, particularly since a few had been continuously in print for almost a century before 1930, and many had been in print for thirty, forty, and fifty years.

Demonstrating the longevity of some of these earlier materials, the 1928 Catalog showed that very old primers had still been available in that year. Eulalie Osgood Grover’s Sunbonnet Babies Book which dated back to 1902 was still being published in 1928 by Rand and selling for $1.00. E. M. Cyr’s Interstate Primer and First Reader dating back to 1886 was on sale by Lothrop for 50 cents. Sarah Fuller’s
Illustrated Primer dating to 1888 was sold by Heath for 64 cents. Even Sanders’ Primary School Primer of 1840 and Sanders’ Union primer of 1866 were still on sale by American Book Company!

Since book companies were apparently printing many old primers on which they still had the plates, an explanation appears in order for American Book Company’s having dropped some time before 1928 the truly phonic material by Rebecca Pollard of 1887, just as an explanation appears in order for Ginn’s apparently taking the 1912 and 1921-1922 Beacon phonic series off the American market before 1928. However, after 1900, “supplemental phonics” had been taught outside the “reading” lessons, even when the book is use was a sight-word book. The net effect for most beginners after 1900, therefore, was to begin by “sound” and not by “meaning.”

To give an idea of the huge volume of reading materials available in 1928, given immediately below are lists of just the primers shown in the 1928 United States Catalog for sale by American Book Company and Ginn, apparently the two largest textbook publishers of the period. These lists necessarily, of course, omit any of their reading series which began with a “Book One” instead of a primer, so the actual totals of beginning reading books published by just these two companies are greater. In addition, a great number of primers are listed in the 1928 edition of the United States Catalog, and a vast number of readers, all published by a large number of different publishers. The original dates of publication of these primers, if they were given, follow the titles below, though in some cases prior information indicates the dates are only of reprints. That these two companies alone were selling so very many primers in 1928, many of which were very old, gives a very different picture of the reading textbook market in the 1920’s than is generally understood to have been the case.

The point of this list is how sharply it contrasts to the 1930’s, when Gates’ and Gray’s primers had pushed almost all other primers out of the schools and the primers shown below, some of which had been for sale for almost a hundred years, went out of print.

Also notice that the extensive list of old texts argues with the McGuffey Myth. Significantly, American Book Company was apparently disinterested enough in the primer and book one of the phonic 1879-1881 McGuffey series, which they had copyrighted under their name in 1896, to release the copyrights on the phonic primer in 1909 to Henry H. Vail. Vail discussed the numerous editions of the McGuffey Readers in A History of the McGuffey Readers, Cleveland: The Burrows Company, 1911. American Book Company released the copyright on phonic book one to Vail in 1907 (which Vail copyrighted again in 1920). That Vail obtained ownership of at least part (and perhaps all) of the 1879-1881 series copyrights about the time he left American Book Company hardly suggests that American Book Company considered the phonic 1879-1881 McGuffey series to be very important at that time. Whether Vail also had the copyright on the 1879 McGuffey readers above book one after 1907 is unknown but appears likely. Vail’s interest in the readers in 1911 when he published his history (which significantly was not published by American Book Company) may not simply have been nostalgia. It may have concerned his desire to increase the sales of the 1879-1881 series, and therefore his royalties on these books which were still published by American Book Company in 1928. If that were the case, Vail’s history becomes even more of a vested-interest account, although it is apparently an honest one.

It is Vail’s phonic 1879 McGuffey series which is most known today. However, the original 1836-1838 sight-word McGuffey series presently being published by Mott Media of Milford, Michigan, is becoming more widely known (with which Mott Media sells some good supplementary phonic materials). The 1901 sight-word McGuffey revision put out by American Book Company appears to have almost totally disappeared, but a copy of that sight-word Book One is in the Department of Education Library in Washington, D. C. Yet it is unlisted in Early American Textbooks. The sight-word 1901 McGuffey series represented an about-face on beginning reading methods, returning to almost pure “meaning” and rates perhaps no more than a Code 2. This 1901 series is almost totally forgotten, and so
very possibly might the memory of the phonic 1879 McGuffey’s series have disappeared, like the memory of all the rest of the nineteenth century reading series, if it had not had Vail’s 1911 history to keep it alive. No one ever wrote such a history about the enormously used sight-word Sanders readers dating from 1840, or others like them. However, the “experts” had Vail’s convenient 1911 history in the 1920’s to distort and blow up into the McGuffey Myth to make it appear that the sales of American reading books had always been almost monopolized by only one publisher, and so the McGuffey series survived in the public memory while others passed into oblivion.

The McGuffey Myth provided a convenient tool after 1930 to explain away the near monopoly of American schools by Scott, Foresman’s “Dick and Jane” deaf-mute readers. Yet the “experts” need not have bothered to invent the myth. So little attention has ever been given to beginning reading by the public that no one noticed it when the near-monopoly take-over occurred. Nor has anyone publicly noticed it to this day. Nor to this day has anyone tried to find out exactly how it was achieved. It was, truly, an impressive achievement to blanket three thousand miles of America from coast to coast, and from the Canadian border to Mexico, with these poisonous books in only a handful of years, and to displace the hosts of reading series used in America before, and then to have no one publicly question that achievement.

The great number of books listed under the heading, “Primers,” in the 1928 United States Catalog, just for the American Book Company and Ginn Company, is shown below. They are nevertheless just a small part of the total number of primers that the catalog showed for all American publishers in 1928.

**Published by American Book Company:**

- Appleton’s Chart Primer (Appleton’s series came out in 1878 but Appleton’s Chart Primer by Mrs. Rebecca D. Rickoff in 1884.)
- Baker, T. O. Action Primer ’06
- Beebe, E. M. Picture Primer. ’18
- Brown, C. L., and Bailey, C. S. Jingle Primer. ’06
- Coe, L., and Specht, L., Easy Steps in Reading. ’23
- Hyde, A. Primer. ’08
- McElroy, M. J. Child’s First Book in Reading. ’27
- McGuffey, W. H. Revised Eclectic readers; primer, rev ed 24 cents; chart primer per doz $1.20 ’96.
  (These both were apparently the 1881 phonic primer, part of the 1879 series, and not the Baldwin sight-word revision of 1901.)
- Monroe, L. B. Chart-primer. ’05. New Primer. ’90

(These dates are wrong, and so is the author’s name on at least one of the two items. Professor Lewis B. Monroe died before 1882. His widow wrote Monroe’s New Primer, published originally by Cowperthwait in 1882. An undated copy is in the Harvard libraries which was published by the Butler company. Mrs. Monroe’s book is the second book listed above. Also in the Harvard Libraries is a copy of the 1884 The Chart Primer, part of a different series published by the Butler company called Butler’s Series, on which Samuel Mecutchen was the editor, and that may be the first book listed above. Mecutchen had also been editor of the 1872 speller for Butler’s New American Series of 1871 by Epes Sargent and Amasa May. See page 326 of The School Journal for October 2, 1897, on two sets of charts published by E. H. Butler & Co. One set of charts was based on Professor Monroe’s original series. They were called Monroe’s Primary Reading Charts and had been in print by 1875 or before, since they were advertised on an 1875 copy of Professor Monroe’s fourth reader published by Cowperthwait in 1875. They were, however, wrongly called “Munroe’s... Chart Primer” in the January, 1879, issue of Primary Teacher. From the illustration in the 1897 article, Professor Monroe’s charts were different from the “New Primer” of 1882 by his widow. It appears probable that the Chart-primer listed above
was Mecutchen’s 1884 material, because the 1897 article also reproduced a chart from the
Chart-primer series and it exactly matched a page in Harvard’s copy of The Chart Primer on
which Samuel Mecutchen had been editor. The confusion resulted apparently because E. H.
Butler & Co. had become the publisher for all these books and charts by the 1890’s: Professor
Monroe’s and Mrs. Monroe’s, originally published by Cowperthwait, and Mecutchen’s which
were originally published by Butler. Since the Butler company went out of business apparently
before 1900 and American Book Company instead of Butler had been publishing these materials
for almost thirty years by 1928, the original history of the materials had apparently been buried.

Sanders, C. W.: Primary School Primer, Union Pictorial Primer, ‘93.
(Obviously a reprint: the Primary School Primer came out in 1840 and the Union Pictorial
Primer in 1866.)
Scripture, M.: Baldwin Primer. ‘99
(Baldwin rewrote the McGuffey series in 1901, according to Vail. Baldwin had written a
series for Harper in 1888, and then his own series, Baldwin’s School Reading By Grades,
1897-1899. M. Scripture is probably the wife of the psychologist, Scripture, referred to in Huey’s
The Psychology and Pedagogy of Reading, 1908. Early American Textbooks, 1775-1900, lists a
copy of The Baldwin Primer of 1899 with the author shown as May Kirk, which was presumably
Mrs. Scripture’s maiden name, or a pseudonym).
Swinton, W.: Primer. (Originally came out in 1883.)
Werner Primer for Beginners in Reading. (It came out in 1895.)
Turpin, E. H. L.: Rose Primer ’05
White, E. G.: Pantomime Primer. ‘14

This list makes it clear that American Book Company chose to reprint many very old sight-word
materials in 1928, although they had strangely dropped Rebecca Pollard’s once widely-used synthetic
phonics material that had appeared in the 1880’s. Baldwin, who was the author of two earlier sight-word
series, Harper’s and “Baldwin’s,” had rewritten in 1901 the 1879 McGuffey series with a sight-word book
one. That 1901 series was not preceded by a primer. “May Kirk’s” 1899 primer was apparently an
addition to the earlier sight-word “Baldwin” series.

The Catalog lists the following primers on sale by Ginn in 1928:

Published by Ginn
Barnes, W., and Lane, M. A. Easy Primer
Blodgett, F. E. and A. B. Blodgett readers: primer (1904)
Field, W. T. Field Primer. ’21
Field, W. T. and Martin, K. Field-Martin Primer. ’25
Learn to Study Readers: First Lessons in Learning to Study. ’26
McCloskey, M. O.: Primer. (1909)
Noyes, M. I., and Guild, K. L.: Sunshine Primer. ’06
Talbert, L. E.: Expression Primer

The primer entries in the Catalog did not, however, include all Ginn’s beginning reading books, some
of which were shown under “Readers,” any more than the entries under primers showed all the American
Book Company beginning reading books. For instance, under “Readers” in 1928 appeared an entry for the
whole E. M. Cyr sight-word reading series which Ginn had been publishing since the early 1890’s, and
Cyr’s first book was meant as a sight-word primer. The total number of beginning books for both
companies was therefore considerably larger than those shown under the heading, “Primers” in the 1928 United States Catalog.

Despite Ginn’s continuing to publish its early 1890’s Cyr sight-word readers, Ginn had apparently stopped publishing its far newer and extremely popular 1912-1921 Beacon phonic series some time before 1928. That matched the peculiar action of American Book Company in dropping publication of the once widely used Rebecca Pollard phonic materials. However, the Beacon series apparently continued to be published by Ginn’s branch in England.

The listing follows of hundreds of reading series beginning with a primer or book one and primers which were not part of a reading series. Most are known to have been published in America at some time after 1880. It is emphasized again that this is only a partial listing.

The only readers published before 1880 which are shown below are those which were still in print when the 1912 United States Catalog was published, or those which were in some way related to readers published after 1880. However, considerably more background information is given on these early readers which survived over many years than on other readers. Many of these highly successful and very early readers were still in print when the 1928 United States Catalog was published.

To show the longevity of the readers and as a confirmation of the entry, the latest known catalog listing is sometimes shown in the headings, such as the 1900-1905 American Catalogue, or the 1912 or 1928 United States Catalog. For the many materials not listed in these catalogs, the primary source of the information on the material is shown instead. That source is usually a surviving copy or another reference work.
#Publishers First Appearing in This List Before 1830

1817(?) (Referred to by Nietz, p. 26)  
Union Speller  
American Sunday School Union

1826 (Harvard copy - Code 4)  
Union Spelling and Reading Book  
American Sunday School Union

1832 (Nietz, p. 16)  
The Union Spelling Book  
American Sunday School Union

1853 (Harvard copy - Code 1)  
Union Primer  
American Sunday School Union

Philadelphia, Pennsylvania

1876 or Before (In the 1876 American Catalogue.)  
Living Letters: Alphabet, With Short Stories on Each Letter. 25c.  
American Sunday School Union.

Philadelphia, Pennsylvania (?)

1876 (Mentioned by F. Buisson, as shown below)  
Union Sunday School - Primer  
American Sunday School Union?

1912 or Before (In 1912 and 1928 United States Catalogs)  
Union Primer (Possibly different editions from the 1853 one)  
American Sunday School Union

Philadelphia, Pennsylvania (?)

Sunday schools before 1826 in America and Great Britain had primarily been schools to teach reading to the disadvantaged, and not schools to teach religion. As mentioned, Carey’s publishing of a speller as early as about 1796 may have been in connection with the Sunday schools which he was helping to promote.

According to Lawrence A. Cremin in American Education - The National Experience - 1783 - 1876 (Harper & Row, Publishers, New York: 1980, pages 66-69), the idea of Sunday schools arose in England during the 1780’s and was then used in America in the following twenty years or so in Philadelphia, Boston and Pawtucket. In the first part of the nineteenth century, the Sunday school was numbered among other types of schools such as church schools, charity schools, private schools, and various incorporated schools. The Sunday school existed originally to teach reading and writing on Sunday to children who worked during the week, and it was also intended to keep them off the streets on Sunday. In 1815, such Sunday schools were few and meant for poor children. Yet, by 1830 they had changed into institutions that catered to all children and whose purpose was primarily to teach religion. Cremin said, however, that such Sunday schools frequently preceded the establishment of common schools in new towns. Cremin quoted the following from the Indiana Sabbath School Union in 1827:

“Let Sabbath schools be established wherever it is practicable. They will answer the double purpose of paving the way for common schools, and of serving as a substitute till they are generally formed.”
Cremin stated that in 1817 the American Sunday-School Union put out its first book, Mary Butt Sherwood’s Little Henry and His Bearer. That was a sad story about an English orphan who taught the Bible to another child in India, which story had originally been published in England. An astonishing total of over 6 million copies of similar stories had been printed for Sunday school students by 1830. Cremin said that another organization which had been founded in 1825, the American Tract Society, put out 3 million such works in the following five years, and by 1865 had published 20 million bound books, each of which had 12 or more such tracts, and it also had put out about 250 million single pamphlets.

It is clear that developments in the “Sunday schools” paralleled developments in the government schools. Starting in 1817, the once unorganized and independent Sunday schools appear to have been taken over by the same kind of highly organized activists as those working for government schools, and a review of Sunday school reading texts shows the same shift from “sound” to “meaning” that is to be found in the texts that were used in government schools. It should be noted that Dr. Keagy also worked to promote Sunday schools. As discussed in this history, Keagy was the government school activist who openly endorsed the deaf-mute reading method to teach beginning reading apparently as early as 1819 and certainly by 1826.

Nietz had commented on page 27:

“In fact, when the American Sunday School Union was formed in 1824 (sic), public schools existed only in New England and in New York State.”

Cremin commented on page 70 that some publications of both groups were also meant to be used for reading instruction, as a series of reading books, and both groups published primers. He thought that their reading materials were just as graded in difficulty as the McGuffey readers.

In mentioning McGuffey’s series, Cremin commented that it was only one of many American series of the time, and that it was used for the most part only in the Ohio Valley and in parts of the South. In the literature, I have found no one, other than Cremin, who has ever acknowledged that fact. The fact that he debunked the McGuffey Myth is greatly to Cremin’s credit. Although Cremin clearly deflated the McGuffey Myth, it still persists.

The record suggests the Sunday schools on both sides of the Atlantic were taken over by government-school activists about 1817. The fact that the above 1826 Harvard text published by the American Sunday School Union rates only a Code 4 tends to confirm that supposition.

The above 1853 Harvard text listed other locations and sects comprising the American Sunday School Union. It used a Code I “meaning” approach, and it contained remarkably little religious material. Those last two facts suggest that John-Wood Sessional-School-type activists may have comprised its Committee of Publication, which consisted of 14 members from the various denominations. This 1853 American Sunday School Union text was very different from Harvard’s copy of Reverend Martin Ruter’s 1853 The New American Primer and Juvenile Preceptor published by Carlton and Phillips, New York, for the Sunday School Union of the Methodist Episcopal Church. Reverend Ruter’s text rated a Code 7, was very like the old analytic phonics spelling books, and began with a syllabary and blends. Reverend Ruter’s text also had much gentle and truly religious content. The contrast therefore was sharp both in religious tone and in the instructional methods between Reverend Ruter’s 1853 Code 7 text and the Code I 1853 American Sunday School Union text prepared by some nameless committee.

When Ferdinand Buisson of France visited the 1876 Philadelphia Centennial Exposition, he also visited American schools and listed in his report, as described in this history, the reading texts he saw in use. He gave a passing mention to “Union Sunday School - Primer.”
From Buisson’s description, it was a sight-word text and may have been the 1853 edition of the Union Primer in the Harvard library, published by the American Sunday School Union at Philadelphia. That was a sight-word text and obviously inexpensive. All materials of the American Sunday School Union seem to have used a MEANING APPROACH.

1825 (Cremin, p. 66-70, the date the Society was founded)
American Tract Society
1830 (Early American Textbooks, under Primers)
The Tract Primer, 108 pages (and another undated copy)
Author Unknown
American Tract Society, New York
1835? to 1843? (Early Amer. Text., date not given)
The History of Jonah, 156 pages
Gallaudet, Thomas Hopkins
American Tract Society, New York
1835? to 1843? (Early Amer. Text. copy from 1896)
Scripture Biography for the Young, 200 pages
(Thwaite said, p. 233, Gallaudet wrote seven scripture biographies from 1835 to 1843)
Gallaudet, Thomas Hopkins
American Tract Society, New York
1850 (Harvard copy)
Picture Alphabet
1860(?) (Harvard copy - Code 1)
First Footsteps in the Way of Knowledge
American Tract Society
150 Nassau Street, New York.
1864 (1876 American Catalogue)
United States Primer, 15c
Bronson, Mrs. O.
1867-1868 (1876 American Catalogue)
United States Reading Books, First 20c, Second 40c.
1912 or Before (In 1912 United States Catalog)
United States Primer
United States Second Reading Book
American Tract Society
In 1988 in The New Big Book of Home Learning by Mary Pride
Pictorial Tract Primer, $6.50
(Reprint of Classic Primer.)
(Also Primer, $5)
Cumberland Missionary Society, Inc.
Rt. 2, Box 446, Evensville, Tennessee 37332

Mary F. Thwaite in From Primer to Pleasure in Reading, The Horn Book, Inc., Boston, 1963, 1972, wrote:
“The American Tract Society was formed in 1825 by an amalgamation of the two largest societies, those of New York and New England. Many of the first tracts issued were reprints of those already circulated by the New England Tract Society, which had seventy-five children’s tracts when the merger took place... an attempt was made to compete with the chapbook and other secular wares....”

Sunday schools were discussed by Lawrence A. Cremin on pages 66-69 of his book, American Education - The National Experience - 1783 - 1876 (Harper & Row, Publishers, New York: 1980). According to Lawrence A. Cremin, the idea of Sunday schools arose in England during the 1780’s and was then used in America in the following twenty years or so in Philadelphia, Boston and Pawtucket. In the first part of the nineteenth century, the Sunday school was numbered among other types of schools such as church schools, charity schools, private schools, and various incorporated schools. The Sunday school existed originally to teach reading and writing on Sunday to children who worked during the week, and it was also intended to keep them off the streets on Sunday. In 1815, such Sunday schools were few and meant for poor children. Yet, by 1830 they had changed into institutions that catered to all children and whose purpose was primarily to teach religion. Cremin said, however, that such Sunday schools frequently preceded the establishment of common schools in new towns. Cremin quoted the following from the Indiana Sabbath School Union in 1827:

“Let Sabbath schools be established wherever it is practicable. They will answer the double purpose of paving the way for common schools, and of serving as a substitute till they are generally formed.”

Cremin stated that in 1817 the American Sunday-School Union put out its first book, Mary Butt Sherwood’s Little Henry and His Bearer. That was a sad story about an English orphan who taught the Bible to another child in India, which story had originally been published in England. An astonishing total of over 6 million copies of similar stories had been printed for Sunday school students by 1830. Cremin said that another organization which had been founded in 1825, the American Tract Society, put out 3 million such works in the following five years, and by 1865 had published 20 million bound books, each of which had 12 or more such tracts, and it also had put out about 250 million single pamphlets.

Cremin commented that some publications of both groups were also meant to be used for reading instruction, as a series of reading books, and both groups published primers. He thought that their reading materials were just as graded in difficulty as the McGuffey readers.

In mentioning McGuffey’s series, Cremin commented that it was only one of many American series of the time, and that it was used for the most part only in the Ohio Valley and in parts of the South. In the literature, I have found no one, other than Cremin, who has ever acknowledged that fact. The fact that he debunked the McGuffey Myth is greatly to Cremin’s credit.

No copy is available of 1825 material which must have been published by American Tract for teaching beginning reading.

Gallaudet’s having published the materials listed above demonstrate that he worked actively with the group, as Keagy also worked actively with Sunday school groups. Was Gallaudet perhaps influential in founding the group in 1825? Did Gallaudet have anything to do with preparing their primer, of which a copy survives from 1830? I have not seen the primer so cannot give it a code number.

The 1850 Picture Alphabet is a toy book, about 2 1/2 by 4 inches. Its intent obviously was only to teach the alphabet from whole words while the book was being read to beginners, as the first pages are reading text composed of words with an emphasis on initial letters.
The 1860 (?) copy apparently totally ignored the syllable step and rates a Code 1. The table of contents showed the alphabet, followed by in sequence 1, 2, 3, 4, 5, and 6 letter words. The words were all used in meaningful contexts, and not given in lists. The book totaled 154 pages, and six-letter words were finished by page 133.

The 1864 text was listed in the 1876 American Catalogue as in print for 15 cents, but no other information is available on it. Nor is other information available on the 1867-1868 readers listed as in print in the 1876 American Catalogue for 20 cents and 40 cents. Nor is information available on the American Tract Society material listed in the 1912 United States Catalog, which may or may not have been the same as the earlier material. The nineteenth-century material of the American Tract Society possibly all used A MEANING APPROACH.

The New Big Book of Home Learning by Mary Pride (Crossway Books, Westchester, Illinois: 1988) described the Pictorial Tract Primer, a reprint of a classic primer, for sale for $6.50 by the Cumberland Missionary Society, Inc., Rt. 2, Box 446, Evensville, Tennessee 37332. The word, “tract,” in the title certainly suggests it was originally published by the American Tract Society. However, it apparently used a “sound” and not a “meaning” approach. The use of “pictorial” in its title suggests it may originally have been published after about 1828, and possibly considerably after.

Mary Pride described it as “very lovely,” and said it included “ba, be, bi, bo, bu” (obviously at least part and possibly all of the classic syllabary), and she said it used “phonics instruction,” presumably in addition to the syllabary. It also included Dr. Isaac Watt’s First Catechism, The Children’s Scripture Catechism, Easy Questions for Little Children, and Scripture texts in an alphabetic form. Its format suggests it was modeled after the “New England Primer” type of catechism.

THE PREDECESSOR TO THE THREE HILLARD SERIES WHICH WERE WIDELY USED FROM THE 1850’S INTO THE 1880’S WAS THE WORCESTER SERIES OF THE 1820’S. TO HELP SORT OUT RELATIONSHIPS, OTHER CONTEMPORARY MATERIALS ARE LISTED BELOW AS WELL.

1825 (Early American Textbooks, page 101)
The American First Class Book
Pierpont, John
Cummings, Hilliard & Co. and Richardson & Lord, Boston

1826 (Early American Textbooks, page 97)
The English Reader, Edited by Rensselaer Bentley
Holbrook & Fessenden, Brattleborough, Vermont

1826 (Harvard copy)
Worcester’s Primer
Worcester, Samuel
Hilliard, Gray, Little and Wilkins, Boston

1826 (Early American Textbooks, page 101)
The American First Class Book
Pierpont, John
Hilliard, Gray, Little and Wilkins and Richardson & Lord, Boston

1830 (From Nov. 8, 1830 copyright information on 1845 copy below)
A Second Book for Reading and Spelling, New Edition
Worcester, Samuel
Richardson, Lord and Holbrook, Boston

1831 (Early American Textbooks, page 64)
The Infant School Manual, or Teacher’s Assistant
Richardson, Lord and Holbrook, Boston
1832 (Early American Textbooks, page 84)
Peter Parley’s Book of Curiosities, Natural and Artificial
Goodrich, Samuel (Pseudonym: Peter Parley)
Richardson, Lord & Holbrook, and Waitt & Dow, Boston.
1833
The National Reader
Pierpont, John
Carter, Hendee and Co. and Hilliard, Gray, and Co., Boston
1836 (Vail, pages 42-44. Vail’s citation of Hendee was probably only as a co-publisher. In confirmation of that probable fact, see the 1843 entry below on which Hendee and the Jenks company were co-publishers on material written by the long-standing activist, William Russell)
The Worcester Readers
Worcester, Samuel
Charles J. Hendee, Boston
1837 (Early American Textbooks, page 78)
Boston Reading Lessons for Primary Schools (142 pages)
Charles J. Hendee, Boston
1838 (Vail, pages 42-44)
The Worcester Readers
Worcester, Samuel
Richardson, Lord and Holbrook, Boston
1841 and before (Names of texts, from 1845 copy below)
Worcester’s First Book, or Primer
Worcester’s Second Book for Reading and Spelling
Worcester’s Introduction to Third Book, with Rules and Instructions for avoiding common errors
Worcester’s Third Book for Reading and Spelling, with Rules and Instructions for avoiding common errors.
Worcester’s Fourth Book for Reading, with Rules and Instructions.
Publisher uncertain in 1841
National Spelling Book or Pronouncing Tutor
Emerson, Benjamin Dudley, Principal of Adams Grammar School, Boston, Jenks & Palmer, Boston
(Copy advertised their Worcester’s readers)
1843 (Early Amer. Textbooks, p. 36. See other entries on Russell.)
Lessons in Enunciation, 81 p.
Russell, William
Charles J. Hendee, and Jenks & Palmer, Boston
1845 (Writer’s copy bought at a New York City street book fair)
Second Book for Reading and Spelling, New Edition
Worcester, Samuel
Jenks & Palmer, Boston
1854 (Vail, pages 42-44)
The Worcester Readers
Worcester, Samuel
Jenks, Hickling & Swan, Boston
1855-1859 (In 1876 American Catalogue)
The Hillard Series
Hillard, George Stillman
Hickling, Swan & Brewer, Boston (By 1876 had become Brewer & Tileston)
1858 (Harvard copy)
The Third Primary Reader
Hillard, George Stillman
Hickling, Swan & Brewer, Boston; Ingham and Bragg, Cleveland
1863-1864 (In 1876 American Catalogue)
The New Hillard Series (some levels possibly earlier or later)
(Primer and Second Reader Available in Leigh Type)
Hillard, George Stillman and Loomis Joseph Campbell
Brewer & Tileston, Boston
1871-1873 (In 1876 Amer. Cat. and 1912 U. S. Cat. by Amer. Book)
The Franklin Series
(Primer and Second Reader in Leigh Type listed only in the 1876 but not 1912 catalog.)
Hillard, George Stillman and Loomis Joseph Campbell
(The Sixth Reader and Speaker by Hillard with Homer B. Sprague)
Brewer & Tileston, Boston (and other pubs. including Taintor of N. Y.)
1879 (Early Amer. Textbooks, p. 78-9; Harvard copy of one-volume Franklin Primer and Advanced First Reader)
The Franklin Advanced Readers (at least to third)
Campbell, Loomis Joseph
Taintor Bros., Merrill & Co., New York; William Ware & Co., Boston
1886 (In 1912 United States Catalog by American Book)
The New Franklin Series
Campbell, Loomis Joseph
Taintor Bros., Merrill & Co., N. Y. and William Ware & Co., Boston
(Brewer & Tileston apparently went out of business by 1877)
1892 (1890-5 Am. Cat. as new series; 1912 U. S. Cat. by Amer. Bk.)
The New Franklin Series
Campbell, Loomis Joseph
Sheldon & Co., New York and Chicago

The Hillard reading series have been discussed at length in this history. Copies are available in the Harvard libraries. However, as with so many reading series, the Library of Congress only has the second-grade book of the 1863-1864 edition (in Leigh print), but none of the primers for any Hillard editions.

The popular 1855-1859 series by George Stillman Hillard and its very popular revision in the early 1860’s with Loomis Joseph Campbell were out of print by 1912. However, the Franklin series Hillard wrote with L. J. Campbell and Homer B. Sprague in the early 1870’s was still in print in 1912, but had apparently long since ceased being available in Leigh type. Also still in print were The New Franklin Readers by L. J. Campbell alone, but not his series, The Advanced Franklin Readers written from about 1879.

By 1863 through 1878, Hillard’s and Campbell’s publisher’s name was Brewer & Tileston, located in Boston. Brewer & Tileston apparently went out of business and the Hillard rights went to the Taintor company in 1878, which company had already been publishing Hillard and Campbell’s (with Sprague) Franklin materials for some time. It was Taintor alone who published from 1879 The Franklin Advanced Readers and by 1884 The New Franklin Readers, both series written solely by L. J. Campbell. From entries on pages 69, 78 and 79 of Early American Textbooks, it can be seen that Taintor published The New Franklin Readers until 1888 but at some point passed the rights to Sheldon & Company. Sheldon apparently went out of business by 1899, after briefly merging with the Butler company. The Hillard-Campbell (with Sprague) Franklin materials and Campbell’s New Franklin Readers eventually
ended up being published by American Book by 1912, but all the Hillard and Campbell reading texts were out of print by 1928.

The actual dates of name changes on the Boston publisher, Brewer & Tileston, until its 1878 disappearance are unknown. However, the records show that the name had been Brewer & Tileston in 1863, Hickling, Swan & Brewer in 1858, Jenks, Hickling and Swan in 1854, and Jenks & Palmer in 1845. These four Boston companies were obvious successors to one another. However, Jenks & Palmer in 1845 was either a successor to a previous publisher, Richardson, Lord & Holbrook, or had bought out that company, as the above entries suggest.

Richardson, Lord & Holbrook is known from the 1830 copyright date mentioned above to have been publishing at least from 1830, and, according to Vail, they continued to publish to at least 1838. The company was publishing as Richardson & Lord as early as 1825, as shown by the above entry for Pierpont’s reader. Richardson, Lord & Holbrook published the Code 1 Worcester readers at least from 1830. As will be shown, Richardson & Lord probably were co-publishers of the Worcester Primer from its date of first publication, 1826.

The records also show that the publishers of the Hillard books from 1858 had previously been the 1840’s and 1850’s publishers of the Worcester Readers. Therefore, the Hillard books from 1858 were the publisher’s replacement for its former series, the Worcester books, which it no longer published. The Hillard publishers had been the ultimate successors of the company, Richardson & Lord, which had been the probable co-publishers of the first pure Code 1 reading book ever published in America, the Worcester Primer in 1826. (The Angell Code 1 series did not appear until 1830, in Rhode Island and probably Philadelphia, and the Bumstead Code 1 materials did not appear until 1838 in Boston.)

Although an intriguing similarity is noticeable on both the names and the time frame, the “Holbrook” of Richardson, Lord and Holbrook is not the arch-activist Josiah Holbrook (1788-1854) of that period, whose activities have been outlined so well in Samuel Blumenfeld’s book, Is Public Education Necessary? and who is discussed in Appendix B under an entry for the Bumstead readers.

The “Holbrook” of Richardson, Lord & Holbrook is discussed in A History of Book Publishing in the United States, Volume I, by John Tebbel, published by R. R. Bowker, New York, on pages 455-456. Tebbel wrote that “Holbrook”’s father, John Holbrook (1761-1838) only began publishing in 1808, in late middle age. The firm he founded, Holbrook, Fessenden & Porter, obtained the rights to Webster’s speller. At that time, Webster leased his rights to local printers. Despite the elder Holbrook’s entering the publishing business in 1808, the elder Holbrook never became very active in it, although his two of his sons and two of his sons-in-law did, keeping up the company he had started. One of his sons-in-law, Joseph Fessenden (1777-1835) became the elder Holbrooks’s partner in 1820. The Panic of 1837, and other circumstances, according to Tebbel, caused the firm to close by 1839. Tebbel reported that after the elder John Holbrook died in 1838, one of his sons, John Calvin Holbrook, became a partner in the firm of Richardson, Lord & Holbrook of Boston. However, that 1838 date reported by Tebbel for Holbrook’s joining Richardson and Lord may be in error. The 1830 copyright date shown above indicates that John Calvin Holbrook’s association with that firm dates at least from 1830, not from 1838.

Available information on the publishers of the Worcester series from the 1826 original publication date of the Worcester Primer to the 1854 date, the last available, is shown above. It is followed by information on the apparent replacement for the Worcester series, the various Hillard editions. However, included with the information on the Worcester readers is some information on other materials from early publishers which provides background information and helps to sort out the relationships.
In his 1911 history of the McGuffey readers, Vail had made the following comments on pages 42 to 44 on the Worcester readers.

“On October 1st (1838) Benjamin F. Copeland and Samuel Worcester brought suit in the court of the United States against Truman & Smith and William H. McGuffey for infringement of copyright....

“The Worcester Readers had a short and inconspicuous life. When this suit was brought, their publishers were Richardson, Lord and Holbrook of Boston. In 1836 Charles J. Hendee published them, and in 1854 they appeared with the name of Jenks, Hickling & Swan of Boston. These several publishers were probably gobbled up by some imaginary Book Trust sixty years ago.”

He was wrong. The Worcester readers had lasted from 1826 until after 1854, and it was their publishers who retired them for a newer series: the Hillard books, which must be considered as their immediate descendant. The publishers of the Worcester readers in 1854, Jenks, Hickling & Swan, under the new name of Hickling, Swan & Brewer, became the publishers of the enormously successful Hillard series in 1858 and of its revisions. Under that successful publisher’s name on the title page of the third book of Hillard’s series appeared “Cleveland: Ingham and Bragg.” So Bragg had joined the competition to McGuffey’s by 1858, and when he later became a partner in Wilson, Hinkle & Company, the publishers of McGuffey’s, Bragg was changing sides in the textbook wars of the period.

The names of the publishers of the Worcester Readers before Jenks, Hickling & Swan in 1854 can be sorted out, using the information above in combination with Vail’s comments. The entries shown above for other texts published in that period demonstrate that books sometimes had two publishers in Boston at the same time, who obviously were closely cooperating companies. As demonstrated by the listing above, the original publishers of Worcester’s 1826 primer also co-published books in Boston in 1826 with Lord and Richardson. Therefore, the fact that the surviving Worcester copy of 1826 shows the publisher as Hilliard, Gray, Little and Wilkins, Boston, cannot rule out the possibility that it was also published by the proven associate of that company in 1826, Lord and Richardson, who are known to have been its publisher only a few years later.

The fact that Hendee also was a publisher, according to Vail, also does not rule out the fact that he may have been so at the same time that Richardson, Lord and Holbrook were publishers. Note that the proven dates for Richardson, Lord and Holbrook publication of the Worcester readers come before and after the date given for Hendee, which certainly seems to argue that they remained publishers during that period.

It is extremely interesting that there is a tie between the Boston publishers of The Worcester Primer, the Code 1 1826 text, and the Boston publishers of The Child’s Picture Defining and Reading Book, Gallaudet’s 1830 text which used a Code 1 approach and which was meant for both hearing and deaf children, although it was not a beginners’ book. As shown in the entry below concerning books for the deaf, The Child’s Picture Defining and Reading Book by Reverend Thomas Hopkins Gallaudet was simultaneously published in 1830 by the two Boston publishers, Richardson, Lord & Holbrook and Carter & Hendee (as well as by both a Hartford and a New York publisher). Therefore, the Gallaudet entry proves that the two Boston publishers did act as co-publishers on at least one Code 1 book in addition to The Worcester Primer. Yet, since Boston had other publishers besides these two companies, pure chance should have dictated the use of different publishers on these two presumably unrelated books of 1826 and 1830.

The record suggests, therefore, that Richardson and Lord (and by 1830 Richardson, Lord and Holbrook) were the publishers of the Worcester Readers, possibly from their origin with the publication
of the critically important Code 1 Worcester Primer in 1826. They were certainly publishers in 1830, almost immediately after the origin of the Code 1 Worcester series. Richardson, Lord and Holbrook were replaced as publishers by Jenks and Palmer, who may have been their direct successors or their purchasers. Jenks and Palmer then evolved, through management changes, into the company which published the widely used Hillard readers.

Early American Textbooks stated on The National Reader of 1833 by John Pierpont, published by Carter, Hendee and Co. and Hilliard, Gray, and Co., Boston, “One of the many readers written by Pierpont, this one replaced Murray’s English Reader as the adopted textbook in Boston.”

As shown above, the almost uniformly used English Reader for upper grade students before 1826 was published in 1826 in an edition “edited” by Rensselaer Bentley, and such an “edited” edition had been unheard of. Murray’s English Reader had been published, like Webster’s speller, by many companies, but no where is there any indication that anyone had ever “edited” it before. It was simply as “standard” as Webster’s speller, but apparently, like Webster’s, was a target of the change-agents. Bentley went on later to write a picture primer (identifying words by pictures, not sound). It is intriguing that Bentley’s queer version of the English Reader came out in the change-agent year of 1826. Murray’s English reader about that time was “patriotically” being changed for Pierpont’s American series in many places. However, the real hostility to Murray’s reading series which was eventually replaced by Pierpont’s series may have arisen from the fact that Murray’s began with a Code 10 spelling book for beginners, like Webster’s Code 10 speller. To displace Murray’s Code 10 book, it was probably necessary to replace the whole Murray series. Pierpont’s series, when it began, did not have a book for rank beginners. When Pierpont’s beginner’s book was finally added, in the 1830’s, it was, not surprisingly, a Code 1 text! By then, both Murray and Webster’s materials for beginners had been largely removed from the schools.

It is possible to sort out other facts on the publishers of the Worcester readers from the various sources. Jenks & Palmer’s 170th edition of Emerson’s National Spelling Book or Pronouncing Tutor with an 1828 copyright date was obviously published by Jenks and Palmer many years after 1828. However, Early American Textbooks lists copies of that speller published in 1829 and 1830. In those years, Emerson’s speller was in the very act of displacing Webster’s speller, and its publisher at that time was Richardson, Lord & Holbrook of Boston. Richardson, Lord & Holbrook were the publishers of Emerson’s change-agent speller. The American Society for the Diffusion of Useful Knowledge published in 1843 a 32-page pamphlet, Report of the Committee on Spelling Books, a copy of which is presently in the American Antiquarian Society library. It confirms that Emerson’s speller was the most used in Massachusetts in the 1830’s and by then had displaced Webster’s. The activism against Webster’s Code 10 speller has been discussed in this history. It is obvious that Richardson, Lord & Holbrook had a crucial place in the displacement of Webster’s Code 10 speller.

The Harvard copy of Emerson’s speller by Jenks & Palmer of uncertain date also advertised Worcester’s 1826 and later Code 1 reading series being published by Jenks & Palmer at the time.

The 1845 copy of Worcester’s Second Book for Reading and Spelling carries this notation: “Worcester’s Reading Books, Published by Jenks & Palmer, and For Sale By the Booksellers Generally,” followed by the five book series which have been shown above as in print by 1841. Confirmation that they were all in print by that date is given by G. B. Emerson’s 1841 remarks to be quoted shortly. The remarks of G. B. Emerson (not B. D. Emerson, the spelling book author) were preceded by this statement from the publisher:

“The above form a complete series of Reading Books which are not surpassed by any other works for this purpose now before the public.... This series of Readers has been introduced into
numerous Seminaries and Schools in the United States, and wherever used, the books have given satisfaction.

“George B. Emerson, Esq., an eminent teacher of Boston, remarks in a letter to the Publishers, [Ed, whether Jenks & Palmer or Richardson, Lord & Holbrook is not clear] dated October, 1841, - ‘Ever since I first became acquainted with Mr. Worcester’s books they have seemed to me better adapted, than any other series that has come to my knowledge, to the capacities and wants both of learners and teachers of the Elementary Schools. They are not, like most others intended for this purpose, a mere compilation; to a great extent they are original....’ And in regard to the Introduction to the Third Book, just published, Mr. Emerson adds, ‘I welcome this as an addition to an invaluable series.’”

The Introduction to the Third Book was therefore published in or shortly before 1841. These comments are followed with the copyright notice from the District of Massachusetts, indicating that “A Second Book for Reading and Spelling. By Samuel Worcester. New Edition.” had been copyrighted on November 8, 1830, by Richardson, Lord and Holbrook. The Worcester materials, of course, used A MEANING APPROACH.

According to Biographical Dictionary of American Educators, edited by John F. Ohles, Greenwood Press, Westport, Connecticut, George Stillman Hillard (1808-1879) the author of the original and later Hillard series, graduated from Harvard in 1828. Hillard taught school for two years before entering Harvard Law School. He graduated from law school in 1832 and actively practiced law. Hillard edited The Christian Register, a weekly Unitarian paper, with George Ripley. Hillard was part-owner and associate editor of the Boston Courier (1856-61) and held various elected offices in Massachusetts. He wrote many books besides his schoolbooks, which presumably grew out of his having edited five volumes of the Poetical Works of Edmund Spenser in 1839. He was also on the Board of Overseers of Harvard in 1871-1875.

According to Nietz’ history, the revised Sixth Reader of Hillard’s series in 1863 had an “Introductory Treatise on Elocution” by Professor Mark Bailey of Yale. Bailey later was one of the authors on the Appleton 1878 series. (The earlier Hillard series had been labeled in reverse: the sixth was the first, etc.)

Both the Franklin Series and the New Franklin Series, either the 1886 Taintor or 1892 Sheldon versions, were on sale in 1912 by American Book Company, according to the 1912 United States Catalog. They were not listed for sale in the 1928 United States Catalog. The Franklin Series and Hillard’s earlier series have been discussed at length in the text of this history. They used A MEANING APPROACH WITH PHONY PHONICS.

READERS FOR TEACHING THE DEAF

1830 (Harvard Copy)
The Child’s Picture Defining and Reading Book
Gallaudet, Rev. Thomas Hopkins, Principal of the American Asylum for the Education of the Deaf and Dumb.
H. & F. J. Huntington, Hartford; Richardson, Lord & Holbrook, and Carter & Hendee, Boston; Jonathan Leavitt, New York

1836 (In Early American Textbooks)
The Deaf and Dumb (Apparently not a reader but may be of interest)
Mann, Edwin John
D. K. Hitchcock, Boston

1872 (In Early American Textbooks)
School Stories with Questions. 101 pages
Keep, John R.
Institution for the Deaf and Dumb, Columbus, Ohio
1876 (In Early American Textbooks, page 90)
Primary Reader for Deaf Mutes, 169 pages
Latham, William.
Wilson, Hinkle & Co., Cincinnati and New York
1886 (In Early American Textbooks)
First Lessons in English, for the Use of the Deaf. 116 pages
Sweet, Caroline C.,
The American Asylum, Hartford, Connecticut
1888 (Still in print in 1928 United States Catalog)
An Illustrated Primer
Fuller, Sarah, of Horace Mann School for the Deaf, Boston
1893 (In Early American Textbooks)
Story Reader, 122 pages
Hammond, Ida V.
The American Asylum, Hartford, Connecticut

The Child’s Picture Defining and Reading Book is discussed at length in Appendix B, under the 1830 date, and most of Gallaudet’s long Preface is quoted. The Child’s Picture Defining and Reading Book was not a beginning book but was meant for both deaf and hearing children, with Code 1 philosophy. It contained philosophy like Keagy’s 1826 primer and was the forerunner to Gallaudet’s The Mother’s Primer of 1835.

The Mother’s Primer was written to teach hearing children to read by using the deaf-mute approach of Gallaudet’s school for the deaf, with “frustration levels” for the introduction of “new” sight words, even though such “frustration levels” are not mentioned in the book. They become evident only through a word count. That word count demonstrates that, on the average, the introduction of “new” words in selections in The Mother’s Primer does not exceed ten per cent of the total number of different words in those selections. Even today in “reading experts’” theory, if reading selections for learners do not contain 90% or more of already taught sight words, such selections are considered to have fallen below the “frustration level.” The fact that The Mother’s Primer was written for hearing children by Gallaudet, and The Mother’s Primer itself, had been buried since long before 1930, until Blumenfeld dug them up and discussed them in his 1973 book, The New Illiterates. In that book, Blumenfeld identified the deaf-mute approach of The Mother’s Primer as the precursor to William Scott Gray’s 1930 deaf-mute-method Scott, Foresman readers. As has been shown in this history, Gallaudet’s general sight-word approach, in its unrefined form, unlike The Mother’s Primer which used “frustration levels,” had also been used in most American reading series from 1826 until the twentieth century, which fact was buried under the avalanche of publicity promoting the McGuffey Myth.

Sarah Fuller’s An Illustrated Primer was written for deaf-mute children but was also suggested for use with hearing children. E. B. Huey praised it, recommending its use for hearing children, in his 1908 book, The Psychology and Pedagogy of Reading. The associations of both Fuller and Huey are of interest. As discussed, Fuller was in the Boston schools, in their school for the deaf, both before and after the promoter of the Leigh phonics “sound” method, Superintendent Philbrick, was fired. During that period, as has been discussed, William James most probably was among the activists promoting the “meaning” method to teach beginning reading. The near penniless E. B. Huey, judging from a letter in the Cattell manuscript files in the Library of Congress, had apparently been recruited to psychology by James McKeen Cattell. Huey may well have been in debt to Cattell for getting financial assistance for graduate
school, for which assistance from Cattell Huey had specifically asked in that early letter, which has been quoted previously. The psychologist, Cattell, was a close friend of the psychologist, William James, from sometime before 1893, as demonstrated by another letter from the Cattell manuscript files which has been quoted previously. The Fuller primer for the deaf, which Huey recommended also for hearing children, was still in print in 1928, sixty years after it first appeared! It is obvious the book received “expert” endorsement, and probably not just from Huey, Cattell’s apparent protege.

No other information is available on the other materials for the deaf which have been cited above.
#Publishers First Appearing in This List Between 1830 and 1840

1830 (Library of Congress 1830 copy; Harvard’s 1848 reprint)
Angell’s Readers
Union No. 1, or Child’s First Book,
The First of a Series of Spelling and Reading Books in Six Numbers
Angell, Oliver (1787-1858), Teacher in Providence, R. I.
Cory, Marshall and Hammond, Providence, R. I.
(E. H. Butler & Co. of Philadelphia published the 1848 reprint)
(Publishers in 1833: Marshall, Clark & Co., School Book Publishers,
Pennsylvania School Book Depository, Phil., per Harvard 1833 brochure.)
1850 (The writer has 5th Reader; Early Am. Texts lists 1st., 2nd.)
Angell’s Readers, New Edition, No. 1 to No. 6
Angell, Oliver (1787-1858) Prin., Franklin H. S., Providence, R. I.
E. H. Butler & Co., Philadelphia

1871 (1876 Amer. Cat.; Early Amer. Text., Harvard Copy 1st Reader)
The New American Series, 6 v.: First reader, 20c - Second 30c - Third 50c - Fourth 60c - Fifth 90c -
Etymological reader, 1.50
Sargent, Epes and Amasa May
(Sargent’s earlier series was still being published by J. L. Shorey.)
1876 or Before (In 1876 American Catalogue)
Junior Ladies’ Reader. $1.50.
Ladies’ Book of Read[ing]. and Recitation. $1.88.
Ladies Reader. $1.75.
Primary Ladies’ Reader. 60c.
Hows, J. W. S. (See Appleton entries for Hows)
E. H. Butler & Co., Philadelphia
1882 (Harvard copy with date of copyright)
Monroe’s New Primer
Mrs. Louis B. Monroe
(Prof. Monroe’s earlier series was also published by Cowperthwait)
Cowperthwait & Co., Philadelphia (This Harvard undated copy was published by E. H. Butler & Co.,
Philadelphia. Apparently this new series was first published by Cowperthwait of Philadelphia, who may have been bought out about 1890 by Butler, who apparently still used the original plates with the original dates.)
1883 (In 1876-1885 Amer. Cat. In 1912 U. S. Cat. pub. by Amer. Bk.)
Butler’s Series of Readers - First through Fifth
Mecutchen, Samuel, Editor
1884 (Harvard copy)
The Chart Primer
Mecutchen, Samuel, Editor
E. H. Butler & Co., Philadelphia
1895 (Harvard copy. In 1912 United States Catalog)
Hazen’s Primer and First Reader (Second, Third, Fourth-Fifth)
Hazen, Marshman Williams
E. H. Butler & Co., Philadelphia, Boston, Chicago
1899 (In 1912 United States Catalog - Harvard Copy)
The Progressive Course in Reading
Aldrich, George I. and Alexander Forbes
Butler, Sheldon & Co., New York - Philadelphia - Chicago

Union No. 1, or Child’s First Book of the Angell series was originally copyrighted on June 9, 1830 by Cory, Marshall & Hammond of Providence, Rhode Island, and presumably they copyrighted the other books in the series. In 1833, Marshall, Clark & Co., School Book Publishers (Pennsylvania School Book Depository, No. 4, North Fifth Street, Philadelphia), produced a brochure for the Angell readers with attached letters of recommendation, a copy of which is in the Harvard library. The action and support of school activists is marked on the letters of recommendation. It is of great interest that a highly organized, massive and successful push for government schools to replace private and religious schools took place in Pennsylvania in 1830 and shortly afterwards, and that the Rhode Island publisher of this Code 1 series had moved its headquarters to Pennsylvania some time between 1830 and 1833. That is only one of the hosts of circumstances that link the push for government schools to replace private and religious schools with the push to replace “sound” with “meaning” in teaching beginning reading. Samuel Blumenfeld’s book, Is Public Education Necessary?, gives the background on the Pennsylvania drive for government schools.

The Angell reading-disability-producing series was obviously widely used (presumably in the new government schools) since it remained in print for many years. However, the Angell series was not in print when the 1876 United States Catalogue was published. Whether E. H. Butler is a successor to Marshall, Clark & Co. of Philadelphia, which was itself presumably associated with Cory, Marshall & Hammond of Providence, is unknown. Angell’s materials which have been discussed in this history and in Appendix B used a Code 1, pure MEANING APPROACH.

Sargent’s two original series were not published by Butler. Sargent’s old series, in print by 1856, was being published by John L. Shorey of Boston, as well as Sargent’s new series of unknown date, according to the 1876 United States Catalogue, at the same time that Butler was publishing the Sargent and May 1871 series. A copy of Epes Sargent’s 1856 Sargent’s Standard Primer published by John L. Shorey of Boston is in the Harvard library, with a notation that its publication date was 1871. It is straight Code 1 “meaning” material, recommending even that the alphabet itself not be taught before a long list of sight words has been learned. However, the 1871 Sargent and May series published by Butler made some use of real phonics, though it was still sight-word material. That was during the brief revival period for phonics, largely associated with Leigh pronouncing print, from 1864 to about 1873. The 1871 Sargent and May First Reader, a copy of which is in the Harvard library, rates perhaps a Code 7 as it used A MEANING APPROACH WITH SOME REAL PHONICS.

Early American Textbooks - 1775-1900 lists copies of Butler’s Series under Samuel Mecutchen’s name as editor on page 95. Harvard library has a copy of Mecutchen’s The Chart Primer of 1884. The first-through -fifth-book series was in print by American Book Company in 1912 according to the United States Catalog, but not in print in 1928.

A “Chart Primer” was listed in the 1928 United States Catalog as published by American Book Company and was attributed to L. B. Monroe as author. This may be a mistake. If the listing meant Mecutchen’s material, Mecutchen’s Chart Primer was still in print in 1928. If it meant Monroe’s material, Monroe’s was still in print in 1928.

L. B. Monroe, elocution instructor of Boston, wrote a reading series about 1871-1873, published by Cowperthwait & Company of Philadelphia. (It may have been a revision, since Early American Textbooks showed a first reader by Monroe in 1864. However, that date may be wrong, since Early American Textbooks showed some other dates that were clearly wrong. An advertisement in The American Teacher by Cowperthwait in September, 1883, refers to Monroe’s Readers as having been in
print for eight years, which would only be from 1875. Therefore, the 1871-1875 series may have had an
1875 revision.) The Primary Teacher of January, 1879, referred to “Munroe’s... Chart Primer,” but the
material was actually called Monroe’s Primary Reading Charts. In 1882, Professor Monroe’s widow
wrote Monroe’s New Primer, published by Cowperthwait of Philadelphia and (apparently later) by E. H.
Butler & Co. of Philadelphia. (The 1883 advertisement in The American Teacher referred to the New
Primer, and Monroe’s Advanced First, Second and Third Readers, also written by Mrs. Monroe, as
“Monroe’s Supplementary Readers,” meaning that they were supplementary to Professor Monroe’s series,
still on sale.) As discussed previously, all these materials qualify as sight-word readers using inadequate
phonics, although Mrs. Monroe’s material is sharply superior to the earlier material of Professor Monroe.

As mentioned, in 1883, E. H. Butler & Co. had published Butler’s Series on which Samuel
Mecutchen was editor. References to Butler’s charts appeared in later material. The probability is that
Butler’s charts were those associated with the Mecutchen series, and not Monroe’s. The 1928 United
States Catalog may be wrong in attributing the Chart Primer being published by American Book
Company in 1928 to L. B. Monroe, since it may have been Mecutchen’s.

Harvard has a copy of an 1884 Mecutchen book, Butler’s Series - The Chart Primer which carries the
notation, “A Reproduction in book form of Butler’s Series of Reading Charts,” and it was a meaning
approach with incomplete phonics. The Mecutchen primer was most probably the book still being
reprinted in 1928 by American Book Company. If it were Professor Monroe’s material, it could have been
a meaning approach with such inadequate phonics it rated as a meaning approach with phony phonics.
However, if it were Mecutchen’s material listed above, as appears likely, it was Code 4, A MEANING
APPROACH WITH INCOMPLETE PHONICS.

Hazen’s 1895 series included the Primer and First Reader, and Second, Third, and Fourth-Fifth
Readers. It was still in print in 1912, published by American Book Company. The Harvard copy of the
Primer and First Reader show it used A MEANING APPROACH WITH PHYONY PHONICS.

The 1899 Aldrich-Forbes Progressive Course five-book series was being published by American
Book at the time the 1912 United States Catalog was published. It should not be confused with the
Progressive Road to Reading by Burchill, Ettinger and Shimer, published by Silver Burdett in 1909. The
first and second Aldrich-Forbes books are listed in Early American Textbooks, and Harvard has a copy of
the First Book, published in 1899 by American Book Company. Considering that early 1899 publishing
date, it is possible the Butler company and the Sheldon publishers who had merged by 1899 were
absorbed by American Book about that time, particularly since both Sheldon and Butler seem to disappear
from the records after 1899. The beginning of the 1899 Aldrich-Forbes First Book used the standard
approach of the time: sight words in sentences with many pictures, and directions to introduce phonetic
lessons later. Too few photocopied pages are available to judge, but the probability is that the book used
the standard inadequate phonics, which in actual practice would have been phony phonics. Yet the growth
in extensive “supplementary” phonics drill at the blackboard by first-grade teachers was increasing in
1899, so first-grade teachers began to make up for the inadequacies of such primers. The complete First
Book most probably used A MEANING APPROACH WITH INADEQUATE OR PHYONY PHONICS.

1835 (Library of Congress copy)
Peter Parley’s Primer
Copyrighted in Massachusetts in 1835
Published by T. T. Ashby in Philadelphia in 1835.
1836 (Harvard has Little Reader, 2nd bk, pub. R. W. Pomeray, Phil.)
Parley’s Series of Readers
Goodrich, Samuel G. (pseudonym: Peter Parley)
Otis, Broaders & Co., Boston, and other publishers

1328
1851 (In 1928 United States Catalog)
Mother’s Primer
John P. Morton & Co., Louisville, Kentucky

1857-58 revision (In 1876 Amer. Catalogue and 1928 U. S. Catalog)
Goodrich’s First-Sixth Readers
Revised by Noble Butler
John P. Morton & Co., Louisville, Kentucky
1866 (In 1876 American Catalogue and 1912 U. S. Catalog)
Common School Primer (Possibly part of a John P. Morton & Co. series)
Morton
1868 (In 1928 United States Catalog and 1876 American Catalogue)
First Book in Spelling and Reading.
Butler, Noble
John P. Morton & Co., Louisville, Kentucky
1869-1875 (In 1928 United States Catalog)
New First-Fifth School Readers
Butler, Noble
John P. Morton & Co., Louisville, Kentucky
1874 or Earlier (In 1928 United States Catalog)
The American Primer, Pictures and Words for Teaching Little Children to Read and Write (48 p. Listed on p. 69 of Early American Textbooks)
(Possibly this was the same as Wm. J. Davis’ Word Method for Beginners, 1874 or earlier, advertised as mentioned below)
The American (Standard) School Series
Davis, William J.
John P. Morton & Co., Louisville, Kentucky
1912 or Earlier (In 1912 United States Catalog)
Child’s First Book: Reading and Spelling
Morton

In 1836, Parley’s Series of Readers contained four books: Parley’s Picture Book or First Reader, Parley’s Little Reader, Parley’s Common School Reader, and Parley’s School Library, or Universal Reader. A portion of the second book is discussed elsewhere in this history, based on Harvard’s 1836 copy. The Library of Congress has a copy of Peter Parley’s Primer, apparently not part of the series unless its name was later changed to Parley’s Picture Book or First Reader. The Library of Congress copy of the Primer was copyrighted in Massachusetts in 1835 and published by T. T. Ashby in Philadelphia in 1835. Its only use of “sound” was in the incomplete syllabaries at its beginning. The method used in the rest of the Primer was totally “meaning,” with a heavy emphasis on pictures.

Whether the Goodrich reading series above the level of the primer may have also been in print before 1836 is not known. Goodrich’s First through Sixth Readers were still in print in 1928 according to the United States Catalog, listed under “Butler, N.” and they were presumably the original series as revised by Noble Butler in 1857. If so, they had an astonishing longevity, from about 1835 to after 1928. Still in print in 1928 by Morton were Noble Butler’s New First-Fifth School Readers, dated 1869-1875 per the 1876 American Catalogue. Also in print by Morton was Noble Butler’s 1868 First Book in Spelling and Reading.

Vail said (page 61):

“The Goodrich Readers published by Morton & Griswold in Louisville, Kentucky, were perhaps the most constant competitors with the McGuffey Readers in the early years throughout
the states of the Mississippi Valley. These were prepared by S. G. Goodrich, the author of the popular ‘Peter Parley Tales.’ The readers were originally published in Boston and some copies bear the imprint of Otis, Broaders & Co. They were first copyrighted in 1839 (sic) and were frequently revised. They finally became the property of the Louisville publisher. Mr. Smith [Ed.: McGuffey’s publisher] and Mr. Morton kept up a most vigorous schoolbook war, especially in Ohio, Tennessee, and Kentucky in the years from 1845 to 1860.”

William G. Webster, Noah Webster’s son, wrote A Sequel to Webster’s Elementary Spelling Book or a Speller and Definer sometime before or in 1847, which was published by George F. Cooledge & Bro., New York, who by that time or shortly after became the publisher of Noah Webster’s speller, claiming sales of a million copies a year by 1848. William G. Webster’s Sequel was also published by Morton & Griswold, of Louisville, Kentucky, as well as by J. B. Lippincott of Philadelphia. Morton & Griswold therefore had early ties to Eastern publishers which might account for their acquiring the Goodrich series. The original Goodrich readers used a meaning approach. So, presumably, did the 1857 revised readers. A PROBABLE MEANING APPROACH.

Concerning Morton’s 1851 Mother’s Primer, it was listed as in print in 1928 in the United States Catalog. Some time ago, I saw a Mother’s Primer of about 1850 which was not Gallaudet’s Mother’s Primer and this may be it. PROBABLY A MEANING APPROACH.

An advertisement for the Davis primer on the back of Harvard’s 1874 copy of The American Spelling Book by Noble Butler read:

“Word Method for beginners, by Wm. J. Davis. Pictures and Words on CARD. PRIMER, printed in large type and appropriately illustrated. Pronounced superior to all other methods for teaching little children to read.”

The Davis primer also was listed on page 69 of Early American Textbooks, as shown above. Webb’s “word-method” books had been popular since the 1840’s, and dropped the oral spelling of sight words. As shown under McGuffey’s publisher’s name elsewhere, that publisher had also produced a “word-method” reader in 1855 in obvious competition to Webb, and, as this entry shows, so did the publisher, John P. Morton, in Louisville. The 1928 United States Catalog dated this primer which was still in print in 1928 to 1874, but the dates the Catalog gave for other materials were frequently wrong. No date appeared for the Davis primer in Early American Textbooks. The Davis primer may have originally been published considerably before 1874, which was the date of the book carrying an advertisement for it as well as the date given in the 1928 United States Catalog.

The advertisement on the 1874 book was followed with advertisements for Noble Butler’s own books, implying they were all in “The American (Standard) School Series.” At the end was advertised, “Also Butler’s Goodrich Readers - Six books.” In the 1912 United States Catalog, Davis’ book appeared as American Primer, but Noble Butler’s series was not related to it, instead appearing as New School Readers, which implied no connection to Davis’ book. The same was true in the 1928 United States Catalog. The listing for the book by Davis in the 1928 United States Catalog read, “American Primer 25 cents ’74 Morton. Pictures and words (cards) and American Primer $4.50 Morton.” Early American Textbooks - 1775-1900, shows a copy, “The American Primer. Pictures and Words for Teaching Little Children to Read and Write. Louisville: John P. Morton and Co., no date, 48 p.” The Goodrich, Noble Butler and Davis material were probably all based on A MEANING APPROACH.

____________________

ACCORDING TO VAIL, THE MCGUFFEY SERIES HAD FIVE EDITIONS. THE THREE MAJOR ONES ARE INDICATED WITH ASTERISKS.

McGuffey Readers, Original Edition
McGuffey, William Holmes, and Alexander Hamilton McGuffey
Truman and Smith, Cincinnati, Ohio
1847 (In 1876 American Catalogue)
Hemans’ Young Ladies’ Reader. $1.25
Pineo, T. S.
Wilson, Hinkle & Co., Cincinnati, Ohio
1855 (In 1876 American Catalogue)
Little Teacher, First Book in Reading on the Word Method. 10c, 16c.
W. B. Smith & Company, Cincinnati, Ohio
1857 (In Early American Textbooks, page 35)
Vocal Culture and Elocution. 480 pages.
Kidd, Robert (See his 1870 text below)
Wilson, Hinkle & Co., Cincinnati; Claxton, Remsen & Haffelfiner, Philadelphia; Clark & Maynard, New York.
1857
New High School Reader. $1.25.
McGuffey, W. H. (This is obviously only the company’s use of his name)
Wilson, Hinkle & Co., Cincinnati, Ohio.
1868 (In 1876 Amer. Cat.; in Early Amer. T.; in F. Buisson’s 1876 Philadelphia Exposition Report in France)
Knell, A. and J. H. Jones
The Phonic Reader, No. 1, 112 pages. 27c.
Wilson, Hinkle & Co., Cincinnati, Ohio; Claxton, Remsen & Haffelinger, Philadelphia; Clark & Maynard, New York.
1868 (In 1876 American Catalogue under Primers.)
McGuffey’s New Eclectic Primer; in Phonetic Type. New Edition. 35c
Leigh, Edwin
Wilson, Hinkle & Co., Cincinnati, Ohio
1870 (In 1876 American Catalogue under Readers)
Rhetorical Reader. $1.25
Kidd, R.
Wilson, Hinkle & Co., Cincinnati, Ohio
1875 (In 1876 American Catalogue)
Eclectic Educational Series, The Graded-School Readers, First-Fifth,
Harvey, T. W.
Wilson, Hinkle & Co., Cincinnati, Ohio
1876 (Listing of McGuffey’s in 1876 American Catalogue)
New Eclectic Series. New Ed. 8 v. - New Eclectic Primer, 16c, First Reader, 18c, Second Reader, 35c,
Third Reader, 50c, Fourth Reader, 60c, Fifth Reader, 95c, Sixth Reader, $1.15. Pictorial Eclectic Primer, 12c.
McGuffey, W. H.
Wilson, Hinkle & Co., Cincinnati, Ohio
1876 (In 1912 United States Catalog, by American Book)
Latham, William H.
Primary Reader for Deaf Mutes
Wilson, Hinkle & Co., Cincinnati, Ohio
1878 (In Early Amer. Textbooks, which also lists 2nd and 5th readers pub. in 1897 by Tiernan Printing Co., St. Louis, Missouri.)
A Fonetic Furst Redur

“For half a century the present writer has had personal knowledge of the readers. At first, as a teacher, using them daily in the class room; but soon, as an editor, directing the literary work of the publishers and owners.... For more than seventy years the McGuffey Readers have held high rank as text-books for use in the elementary schools, especially throughout the West and South. But during this time these books have been revised five times.... (page 5:) Each of these revisions has constituted practically a new series although the changes have never included the entire contents.”
The original McGuffey series of 1836 had been published by Truman and Smith of Cincinnati, which company became just W. B. Smith in 1841, and W. B. Smith & Company in 1852. The name became Sargent, Wilson & Hinkle in 1863, and Wilson, Hinkle & Co. in 1868. In 1877, the firm became Van Antwerp, Bragg & Co. All of these changes were partial, former members remaining in each new company. Vail was “given an interest in the profits” in 1871, after he had been “for some years” an employee, and became a full partner three years later (page 54). However, Vail said (pages 55 and 56):

“The American Book Company became, on May 15, 1890, the owners, by purchase, of all the copyrights and plates formerly owned by Van Antwerp, Bragg, & Co. The four active partners in that firm, each of whom had then been in the schoolbook business some twenty-five or thirty years, entered the employ of the American Book Company. Mr. Bragg and Mr. Hinkle remained in charge of the Cincinnati business. Mr. Vail and Mr. Ambrose went to New York: the former as editor in chief, the latter was at first treasurer but later became the president.... This sale, completed May 15, 1890, did not then include the printing office and bindery belonging to the firm. These were used by the firm of Van Antwerp, Bragg & Co. until January 1, 1892, in manufacturing books ordered by the American Book Company....

“The latest revision of the McGuffey Readers, five books, was prepared and published by the American Book Company in 1901, under the same general direction as the revision of 1878; but the actual work was done by Dr. James Baldwin, who was the author of the Harper Readers and of Baldwin’s Readers.... These books acquired at once a large sale, and the sales of the previous editions are still remunerative.”

Vail did not mention that there had been a series called McGuffey’s Alternate Series, with a first through sixth reader, published by Van Antwerp, Bragg & Co. in 1887-1888, in an obvious response to the great flurry of emphasis on “supplementary reading” which had been started by Colonel Parker in Quincy in the 1870’s. Copies of these books are listed in Early American Textbooks, 1775-1900. They were still in print and for sale by American Book Company in 1912, according to the 1912 United States Catalog, but were not listed in the 1928 United States Catalog. Nor did he mention McGuffey’s Natural History Readers, published in 1887 and 1888, which were listed in the 1885-1890 American Catalogue. That was obviously another supplementary series, in response to the Agassiz “natural history” influence.

In his book praising the McGuffey readers, Vail also did not adequately emphasize the enormous competition which existed for even its most successful edition of 1879. Yet, despite such continuing competition, the company apparently greatly increased in size after that 1879 edition.

Useful testimony about such competition on all schoolbooks, obviously including readers, came from Gilman H. Tucker of American Book Company, New York, in The School Journal of July 17, 1897, page 65. American Book Company had owned the McGuffey readers for the previous seven years by 1897. Tucker said in 1897, in his article, “Education from a Publisher’s Standpoint,”

“Competition among publishers has never been more rife than in the past ten years, and such a thing as a possible monopoly is absurd....”

Tucker said this despite the fact, referred to elsewhere, that the Indiana School Journal in 1890 estimated that the newly formed American Book Company controlled about 80 percent of the textbook market. In 1890, American Book Company had been formed by the merger of four other companies, of which Van Antwerp was one, and the buying out of Harper’s textbooks. Yet reading book titles which increased after 1890 suggest that by 1897 American Book Company’s share of the reading textbook market had greatly shrunk.
Vail said concerning the sales of the earliest editions (page 47):

“In a first reader printed in the fall of 1841, there are two pages of advertising matter, in which Truman and Smith claimed to have sold 700,000 of the Eclectic Series.”

It should be noted that by 1848 the publishers of Webster’s spellers were claiming sales of 1,000,000 copies a year, as mentioned earlier. This should be compared to the total sales for the McGuffey Readers at all levels, plus their speller, of only 700,000 copies over a period of five years from 1836 to 1841. A copy of The Sanders Series, The School Reader, First Book, printed by Sage & Brother of Rochester, carried a date on its title page of 1844 and the “Preface” was signed by Charles W. Sanders in New York and dated September, 1840. The copyright date also read 1840. An advertisement on the back cover of this copy which was printed by Sage & Brother, presumably in 1844, read,

“Such has been the demand for these Books, that, although recently published, more than 2,000,000 have already been sold.”

If the Sage & Brother cover with that claim was printed at the same time as the title page with the date, 1844, which title page carried Sage & Brother’s name as well as the publisher Mark H. Newman of New York, that indicates the Sanders Series sold 2,000,000 copies from September, 1840, to 1844, a four year period. Yet McGuffey’s only sold 700,000 from 1836 to 1841, a five-year period which overlapped the period given for Sanders’ sales.

However, whether any of these claims were credible may be questioned, since they were used as advertising tools. There was no way to check on their authenticity at that time, since America had no Bureau of Internal Revenue which might threaten to pore over a company’s profit-and-loss statements (nor did we even have a national debt)!

The School Bulletin, Syracuse, New York, June, 1878, carried chapters from the book, Roderick Hume, by the Managing Editor, C. W. Bardeen, one of which chapters was titled, “A Change of Text-Books.” (A copy is in Appendix A.) The chapter poked fun at the swarms of book agents which descended on schools in those days, and it poked fun at their inflated claims. One agent said to Hume, who was a school principal in a village:

“All the big cities use (our books) exclusively. They have just been re-adopted in Boston, and when Smintheus’s tried to displace us in Hong Kong, we not only held them in there, but drove out theirs for ours in Yang tsi Kiang.”

Note the implication that “Boston” was a kind of authority. Hume decided to write leading publishers for sample copies:

“So he got what addresses he could from the advertisements in a school journal...”

Education journals were numerous in 1878. One of the book company answers read:

“We are delighted to get your letter, intimating that at last you are prepared to adopt a uniform set of books. News of your remarkable success at Norway had already reached us, and we have been hoping that our Mr. Hook would find time to call upon you. Don’t fail to come and see us, the first time you visit the city. Our establishment turns out fifteen million books an hour.... Our publications are used in all the best schools.... Most of (our books) are in such universal use that you may feel under obligation to adopt them, because children who move into or out of your village will thus have the same books which are already in use.”
Most book companies were more than willing to send sample copies:

“Other letters flowed in, followed by express packages, till Roderick’s shelves, and table, and floor, were successively over-flowed...”

Bardeen was associated with schools in the 1870’s and knew the real state of things. So did his contemporaries. His contemporaries must have been very familiar with high-pressure salesmanship and overblown advertising from book companies or Bardeen would never have chosen to parody them. Publishers’ claims for book sales in the 1870’s and for years before and afterward, therefore, may reasonably be taken with grave reservations.

The McGuffey readers were issued in Leigh phonetic print from about the late 1860’s as were most popular reading series at that time (which, of course, was an implicit admission that they were sight-word, and not phonic, readers). McGuffey’s publishers also produced a sight-word reader whose title suggests that the reader dropped the oral spelling of sight-words, in imitation of Webb’s highly popular materials known as the “word-method” readers. The McGuffey company’s version in 1855 was entitled, Little Teacher, First Book in Reading on the Word Method.

The company also produced in 1868 The Phonic Readers by A. Knell and J. H. Jones, a phonics series, so they were obviously trying to cover all bases in order to meet the competition. Surprisingly, they also published a reader for deaf mutes in 1876, Primary Reader for Deaf Mutes, by William H. Latham, which was still in print by American Book Company in 1928. They also published A Fonetic Furst Redur, by T. R. Vickroy in 1878, an obvious entry into the “fonetic” spelling field. Presumably, the Vickroy material was not successful. Copies of higher books in the Vickroy series were later printed in 1897 in St. Louis by Woodward & Tiernan Printing Company, so the publishers dropped the series and Vickroy probably arranged to have it reprinted himself.

In 1875, the publishers’ new Eclectic Educational Series, The Graded-School Readers, by T. W. Harvey was not too successful. As a result, the 1879 revised edition of McGuffey’s was prepared by the successor company, Van Antwerp, Bragg & Co. The 1879 material was the most successful revision of all, according to Vail, and it undoubtedly did have enormous sales in the Midwest. Van Antwerp, Bragg & Co. became part of American Book Company in 1890 which put out The New McGuffey Readers, a sight-word series, written by Baldwin in 1901. Both the phonic McGuffey’s of 1879 and the sight-word McGuffey’s of 1901 were in print in 1928. McGuffey’s of 1879 probably still had a good sale in 1928 as it was listed in the United States Catalog under its own name, as well as in the general list of readers.

As discussed elsewhere, the American Book Company was founded in 1890, as a merger of Ivison; Appleton; Barnes; and Van Antwerp, Bragg. The Board of Education of Lyndhurst (then Union Township), New Jersey, listed township book adoptions on August 30, 1889, including Conklin’s Grammar, copyrighted by D. Appleton and Company in 1888. In November, 1889, the board approved a bill to Ivison, Blakeman & Company, for books and supplies of $117.46, to D. Appleton for books of $26.05, to A. S. Barnes for books of $17.15 and to N. J. News Co. for books and supplies of $57.22. The Board also approved a budget of $200 for books in the coming year (presumably the school year 1890-1891). On June 27, 1890, Principal Banks complained of the failure to purchase books, which suggests that all the books adopted the previous August which were listed in the minutes may not have been received, including Conklin’s Grammar. The following November 1, 1890, $161.40 was paid to American Book Company, followed in February, 1891, with $9.06 to Arel and Co., and another $22.96 to American Book. For the 1891-92 year, the book budget was $250, and a total of $111.24 was paid to Baker and Taylor by March, 1892.
It is apparent that in these three successive years the Board was purchasing the bulk of its materials from companies which acted as book agents and general school supply houses. In 1889, the agent obviously was primarily Ivison, Blakeman & Company, in 1890 American Book Company, which had resulted from the merger of Ivison Blakeman and three other companies and the buyout of Harper’s textbook list, and in 1891 Baker and Taylor. Ivison, Blakeman, A. S. Barnes and Appleton who had supplied books and supplies in 1889, became American Book by 1890. American Book Company then continued to be a book agent as well as publisher. Note, however, that in 1889, before the merger, and at the height of McGuffey’s sales, Lyndhurst was not buying from McGuffey’s publishers, Van Antwerp, Bragg.

The great size of the merger which produced American Book Company is shown by the resultant exceedingly long lists of grammar and spelling books which became available for sale by the new company. That list was printed inside the covers of an old Union Township Conklin’s Grammar given to the Lyndhurst Historical Society. (It was from my attic. It had the signature of my late uncle, William Rodgers, all over it, made when he was presumably about 12 years old. My grandparents must have had to buy the book, probably printed about 1891, since their son had obviously spoiled it.) The book shows “From the press of D. Appleton & Company” on the title page (obviously the original publishers of the Conklin grammars) and above it “American Book Co., New York, Cincinnati, Chicago.” Inside both covers were listed an astonishingly great number of language books and spelling books which American Book by then was marketing, which books had previously been marketed by the five former publishers: Ivison, Appleton, Barnes, Van Antwerp, and Harper.

Earlier McGuffey editions had been sight-word readers, although the 1838 McGuffey speller was phonetic and was intended for beginning readers. If that speller had been used first as Alexander McGuffey recommended (although it probably rarely was used first) the series could have been taught phonetically. The 1879 and most widely used edition, however, was: A PHONIC APPROACH.

The New McGuffey First Reader, published by American Book Company in 1901 as the first book in their revised series by Baldwin, was a sight-word Code 2 approach, perhaps rating a Code 3 at the most. Although a copy is in the Department of Education Library in Washington, no mention was made in Early American Textbooks, which was prepared from material in this library, of the existence of the 1901 sight-word McGuffey series. Parts of the “Preface” to the 1901 First Reader make it very clear that it was, at the best, a “phony phonics” approach, and very weak “phony phonics,” at that. Since I have turned up no other record or copies of this reader, portions are quoted at length below for the assistance of any interested persons.

“The New McGuffey First Reader has been prepared in conformity with the latest and most approved ideas regarding the teaching of reading, and its lessons embody and illustrate the best features of the word, the phonic, and the sentence or thought methods.

“While all the stories in this book are new, or have been rewritten especially for its pages, care has been taken to preserve the distinguishing characteristics which have given to the McGuffey Readers their unparalleled popularity and usefulness.

“The gradation both in thought and in words has been carefully maintained, and the work provided enables the pupils to advance by easy and evenly progressive stages from the beginning to the end.

“Only a few new words are introduced at each lesson, and these are repeated frequently in succeeding lessons until the pupils are able to recognize them without difficulty.
“From the first lesson script is presented in connection with the printed forms of words, the frequency of its use diminishing as the printed forms become more familiar.

“The sounds of the letters are taught, in the order of the alphabet, by appropriate exercises after the various reading lessons. The phonic elements and the common diacritical marks are learned one at a time and in a manner that is both natural and easy.”

The next page, page 4, has the alphabet, both small and large, and a full-page picture on the following page 5, headed FIRST READER. Page 6 has a picture of a boy in the middle. On the top are “a boy I see,” separated, with script versions underneath each printed word. Next to the picture of the boy, on the right side of the page, the words are repeated in print, going down: “boy I see a boy.” Finally, at the bottom comes the “important” thought built from the disjointed practice sight words: “I see a boy” (no period) in both print and script. Page 7 has, across the top in print with script under it: “girl can and the girl.” A picture of a boy and a girl are in the middle of the page, with this world-shaking sight-word prose under it: “I see a girl. I see a boy. I see a boy and a girl. The boy can see the girl. I can see the girl and the boy. I can see the girl.” The last sentence was the only one repeated in script after the print. Each sentence was on a separate line, followed by a period, except the last script sentence.

Page 8 introduced the first so-called phonics on the bottom, On the top were the words: “man has hat run” in print and script, with a picture underneath. Then came the sentences: “See the man! See the boy and the man. The man has a hat. Has the boy a hat? The boy can run. Can the man run? The man can see the boy run.” The last sentence was repeated in script, with a period. Underneath came the “phonics,” with a short sign over each a: “a man can has hat a.” The intent was to show the short sound of a, but no distinction was made concerning the use of the article “a” on the same page, which has a short u sound. The sight words on the top of page 8 were: “doll have any,” followed by sentences in print: “I have a hat. I have a doll. See my doll! Can the doll see? I can see my doll. Has the doll a hat? My doll has a hat. The girl has a doll and a hat.” The last sentence was repeated in script. At the bottom were the short a words: “a can has hat have a,” with the short sign over each a. Yet, when used as words (and “a” is a word) three of the six are irregular. “Has” contains the “z” sound for the letter “s,” instead of the “s” sound in the sight-word already taught, “see.” The article, “a,” is pronounced with a short “u” sound. The letter “a” in “have” is pronounced with a short sound despite the fact that the word ends in a silent “e” which normally gives the pronounced vowel the long sound. The silent “e” is not mentioned and remains unnoticed and untaught by the McGuffey reader at this point. The result of including three phonic exceptions in a list of only six words presented to rank beginners is sure to be phonic confusion in the minds of those rank beginners.

Sight words continued to be introduced on each page. Page 10 had “play may take ball.” Page 11 had “baby little big.” On the bottom of these pages long “a” words were shown: “may play take baby,” but in no way did that mean the long “a” sound was being taught. Note the different vowel patterns in these words, with no explanation on the fact that only a certain very few, and very specific, vowel patterns will produce the long “a” sound. Yet the children were not being taught those fundamental vowel patterns, without which it is impossible to read English by letter “sound” and without which English can only be read by word “meaning.”

There are three vowel patterns in these four words (may, play, take, baby), and each vowel pattern would be taught in a series of specific lessons in phonics programs, with days being spent on drilling on each pattern until the children learn it. The first vowel pattern in these four words is the vowel combination, “ay,” which produces the long “a” sound (may, play, day, etc.). The second vowel pattern is the fact that a syllable ending in a vowel is usually long (as in no, go, and the first syllable, ba-, of ba-by). The third vowel pattern is the fact that a silent “e” at the end of a word usually makes the first vowel long
(as in take, ride, code, etc.) Without explanation on the vowel patterns in these words, the words must necessarily be perceived only as meaning-bearing wholes, with little or no reference to sound.

Page 12 introduced “dog it he with” as sight words, and the “phonics” on the page was the sound of the letter “b” at the bottom in “big boy ball baby.” Note that only two letter sounds have been mentioned in all the words up to this point (“a” and “b”) and the rest of their phonetic construction was totally ignored.

The “sounds” were obviously being introduced as letters of the alphabet in alphabetical order: first long and short “a” on pages 8 to 11, then “b” on page 12, etc. The whole alphabet would eventually be covered, but only long, long after a massive load of sight words had been taught. Long before the “teaching” of the alphabet was completed, conditioned reflexes would have been formed to read words only as meaning-bearing wholes instead of as syllables formed from the sequential sounds of letters. At the best, the 1901 McGuffey rates a Code 3: phony phonics on whole sight words. This was an extraordinary and inexplicable change of emphasis from the enormously successful and truly phonic 1879 McGuffey edition put out eleven years before American Book Company took over, and which 1879 edition was still on the market for years after 1901. Therefore, the 1901 New McGuffey series by American Book Company, like many other materials American Book was marketing in 1901 and which were still in print in 1928, was a SIGHT WORD SERIES WITH PHONY PHONICS.

THE SEQUENCE OF THE IVISON COMPANIES IS DISCUSSED BELOW:

1838 (Harvard copy 1844)
Sanders Spelling Book
Sanders, Charles Walton
Gould, Newman and Saxton, New York, New York

1840 (1876 Amer. Cat.; Primer in 1912, possibly 1928, U. S. Cats.)
Sanders Series, 5 vols. plus 1840 Primer listed later below
(In 1876 American Catalogue for sale by Ivison with 1st 28c, 2d 50c, 3d 75c, 4th $1.20, 5th $1.25. 1840 Primer not listed in 1876, but 1858 Pictorial and 1866 Union were listed. 1840 Primer, and 1858 and 1866 Sanders’ primers were listed for sale by American Book in 1912 U. S. Catalogue. Only two Sanders primers were listed in 1928 U. S. Catalogue, “Primary School Primer” and Union Pictorial Primr... ‘93.” The date of the last is either wrong or a revision. Whether the former was based on the 1840 or 1858 primer is unknown.)
Sanders, Charles Walton
Mark H. Newman, New York, New York

1840 (Harvard copy published in November, 1846, or after)
The Sanders Series- School Reader. First Book
Sanders, Charles W.

1844
The Sanders Series, The School Reader. First Book
Sanders, Charles W. (Copyright 1840)

1840 (Harvard copy published in 1854 or after, and an earlier one)
Sanders’ The Primary School Primer
Sanders, Charles W.
Ivison & Phinney, New York, Successors to Newman and Ivison

1855 (Ad. on McElligott’s Young Analyzer, pub. by Ivison, 1855)
American Lessons in Reading and Speaking
Leavitt, Joshua (See Appendix B, for his series pub. by Jewett, N. Y.)
Ivison & Phinney, New York
1858 (In 1876 American Catalogue under Primers)
Pictorial Primer. 18c.
Sanders, Charles Walton
Ivison.

1858-1867 (1876 Amer. Cat.; Nos. 1, 3, 5, in 1912 U. S. Cat. by American Book; Writer has personal copy of Union Pictorial Primer.)
Union Series of Readers, 7 volumes: Union Pictorial Primer, 20c, In Leigh’s Orthog. 25c, Union Reader No. 1, 28c, In Leigh’s Orthog., 32c, No. 2, 50c, No. 3, 75c, No. 4, $1.25, No. 5, $1.50, No. 6 Rhetorical Reader, $1.88
Sanders, Charles Walton
Ivison, Pinney, Blakeman & Co., New York (By 1867)

1872 (In 1876 American Catalogue)
Word-book of Spelling, Oral and Written
Swinton, W.

1873 (In 1876 American Catalogue)
Word-primer: Beginner’s Book in Oral and Written Spelling
Swinton, W.

1873 (In 1876 American Catalogue, some pages reproduced by Buisson)
The American Educational Readers
New Graded Readers, (7 vols., No. 1, 25c, In Leigh’s Orthog. 30c, 2, 40c, In Leigh’s Orthog. 50c, 3, 50c, 4, 80c, 70c [sic], 5, $1.20.
Ivison, Blakeman, Taylor & Co., New York and Chicago

1874 (In 1876 American Catalogue)
Literary Reader
Cathcart, G. R.

1881 (From 1885 advt., address on Appnd., 1876 Am.Cat. Auths. etc.)
(Advertised in Appleton’s Sentence and Word Book by James Johonnot in 1885, by which time Appleton was presumably the publisher: “Designed to connect with any of the regular series of readers,” which remark proves that nothing like a near-monopoly existed on readers in 1885.)
Book of Tales, School Readings
Easy Steps for Little Feet: School Readings
Golden Book of Choice Reading
Readings in Nature’s Book
Seven Am. Classics
Seven British Classics
W. Swinton and G. R. Cathcart

1882-1886 (In 1928 United States Catalog published by American Bk.)
Swinton’s Readers (Primer and First Reader through Sixth)
Swinton, William

1889, Ivison, Blakeman & Company merged with three others, Van Antwerp, Barnes and Appleton, to form the enormous American Book Company. (The Taylor of the company had dropped out by 1889, perhaps being the Taylor in Baker and Taylor Company.) As quoted elsewhere, the Indiana School Journal in 1890 reported that the merger gave the new company, after it almost immediately acquired the Harper elementary textbook rights, control of 80 percent of the American elementary schools
textbook market. Yet, before the 1890 complex merger and the buyout of Harper’s book list, Ivison already had a very complex history. In the nineteenth century, book companies formed and reformed as partners or blood relations of partners shifted in and out. Perhaps nowhere is the family tree of a publishing company more tangled than in the Ivison background.

The final Ivison company grew from at least four root companies. These four had either merged with, took over, or contained a partner who joined the concern which ultimately became the final Ivison company. These four were the Phinney root, the Newman root, the Ivison root, and the Blakeman root. Most probably “Taylor” was also a root, but no information is available on it. Of them all, Blakeman ultimately appeared to be the most powerful.

As mentioned in Chapter 18, the use of the asterism has been exceedingly rare in the hundreds of reading instruction texts which I have reviewed. The use of the printer’s mark, the asterism (three asterisks in the shape of a triangle) is meant to direct attention to an item, just as a pointing finger or an arrow is sometimes used for that purpose by a printer. Also as mentioned in Chapter 18, I was intrigued by the use of the asterism on two texts using the “meaning” method after 1826 to teach beginning reading, because the placement of the asterism on those two texts suggested that it could have served as a “flag” to enlist the cooperation of like-minded people in the promotion of those two books. Also mentioned in Chapter 18 was the fact that one of the rare appearances of the asterism was much later on Swinton’s Second Reader, copyrighted in 1883 by Ivison, Blakeman, Taylor and Company.

Because the printer’s mark, the asterism, appeared on the Swinton “meaning”-method readers which were published by the Ivison company in which Blakeman was a partner by 1883, it is of interest to find that one of the other rare occurrences of the asterism on textbooks had been on an advertisement on a book published in 1858 by what was probably the first company in which Blakeman had been a partner. That book was the United States Spelling Book, and its publishers were Lamport, Blakeman & Law in 1858. The back cover of that 1858 book listed many books published by that company, but the asterism only appeared before a paragraph describing Webb’s series of Normal Readers, one of the most notorious of the early “meaning”-method series. Although Lamport, Blakeman & Law were the publishers of the Webb readers in 1858, those readers followed Blakeman as he went from company to company in the following years. Blakeman apparently only relinquished his connection with the Webb readers when he joined the Ivison group. There was a very good reason for his doing so at that time, since Ivison was the publisher of the massively successful, and competitive, Sanders “meaning”-method reading series.

However, it is tempting to conclude that Blakeman had arranged to have the asterism placed on that advertisement for the Webb “meaning” readers in 1858, and that he also had it placed years later on the Swinton “meaning” readers published by Ivison in 1883, in both instances to request the cooperation of fellow activists in the promotion of those series (as may have been true earlier with Russell and his associates, as discussed in Chapter 18). A group of like-minded men in those years might very well have shared some agreed-upon significance for the use of the asterism. Blakeman eventually became president of the huge, new American Book Company in 1890, which, as discussed, had been formed by the merger of four of the five largest textbook publishers in the United States, and the buying-out of the textbook line of the fifth company.

In A History of Book Publishing in the United States, Volume I, by John Tebbel, R. R. Bowker, New York, 1972, Tebbell referred to the Phinneys. Tebbell said that Henry and Elihu Phinney were publishers, printers, and booksellers in Cooperstown, New York. Their father, Judge Elihu Phinney had also had a printshop, and sold books and published a newspaper. It is interesting that Fenimore Cooper worked in Judge Phinney’s printshop, setting type. (It seems likely that Cooperstown took its name from the family of the author, Fenimore Cooper.) By 1820, Judge Elihu Phinney’s sons, Henry and the younger Elihu, had a stereotype foundry with plates of the Bible, from which plates they printed about 200,000 Bibles. They
had five presses, and from them they printed in addition some 60,000 schoolbooks and 200,000 toy books. The grandson, Henry F., who was the oldest son of the younger Elihu., became a partner in the Cooperstown firm in 1839, but then he left in 1854 for New York, where Tebbel said he became a member of the firm, Ivison, Phinney, Blakeman, Taylor & Co. However, as will be shown, that form of the company name did not arrive until later, but it seems undoubtedly true that Henry F. Phinney joined the developing Ivison company in New York in 1854.

According to Early American Textbooks, page 164, H. and E. Phinney of Cooperstown had published a textbook as early as 1816, a first edition of John Smith’s A New Compend of Geography. In 1846, H. & E. Phinney of Cooperstown published Salem Town’s 1844 First Reader, Code 4 “meaning” material, a copy of which is in the Harvard library. (The most reliable information on publishing companies comes from such surviving copies, despite the fact that stereotyped plates were sometimes used for years which carried the name of an original but defunct publisher. However, such copies often carried current advertising and testimonials or reprinted front and back covers of a current publisher which makes it possible to date them fairly accurately.) Yet Town’s principal publisher in 1848 and probably in 1846 was apparently Sanborn & Carter of Portland, Maine. According to page 110 of Early American Textbooks, some of Salem Town’s material was also published between 1859 and 1861 by Phinney & Co. of Buffalo, and Phinney, Blakeman & Mason of New York, but these companies most probably were formed from other descendants of the original Phinney family, since its descendant Henry F. Phinney had joined the developing Ivison company in New York City before those dates, in 1854.

Concerning “Blakeman” in the developing Ivison firm name, Blakeman played hop-scotch between companies before settling into the Ivison company, if the “Blakeman” in so many contemporary titles is the same man. That appears probable, since the appearances of that name are sequential. When the new American Book Company was formed in 1890, Birdseye Blakeman became president. That man may well have been the same Blakeman in the following entries, with the earliest entry in 1854. If he had been 30 years old at that time, he would have been 66 at the time of the 1890 merger.

As already mentioned, that Blakeman also appears to have carried the rights to the Webb readers with him, except on his last move. In 1854, Blakeman had apparently been a member of Lamport, Blakeman & Law, which published Josiah Miles’ United States Spelling Book, a copy of which is in the Harvard library. According to advertisements on that copy, in 1854, Lamport, Blakeman & Law were also publishing “Mr. Webb’s Readers,” the famous Code 1 “meaning” series. Early American Textbooks shows an 1856 copy of Webb’s Normal Reader No. 2, published by Sheldon, Lamport & Blakeman of New York. Therefore, Sheldon by 1856 had apparently replaced Law in that 1854 firm but presumably in a dominant position. The name had changed again by 1857, when Sheldon, Blakeman & Company of New York took out a copyright on The Word Method Primer, by W. H. Webb, an addition to the J. R. Webb series. Yet, by 1863, as shown by a Harvard copy of that book, it was being published by Sheldon & Co., New York, instead of Sheldon, Blakeman & Company. As will be shown, the record indicates that when Blakeman left that firm some time before 1861, he took the J. R. Webb readers with him, but not The Word Method Primer of W. H. Webb, which had been copyrighted in 1857 by the Sheldon company.

Blakeman had finally joined the Ivison company some time before 1867, since my 1867 copy of The Union Pictorial Primer by Charles W. Sanders shows it was published by Ivison, Phinney, Blakeman and Company, 47 and 49 Greene Street, New York. Yet that would not have been Blakeman’s second completely new company affiliation, but his third, since he presumably had been a member of “Phinney, Blakeman & Mason” of New York in 1861, as shown above. (As mentioned, that company presumably contained a different “Phinney” from the developing Ivison company.) Mason Brothers, New York, the probable successor to Phinney, Blakeman & Mason, continued to publish the Webb readers after Blakeman left, so Blakeman must have carried most of the Webb rights with him to Phinney, Blakeman & Mason, but obviously must have been obliged to leave the solitary rights to the 1857 W. H. Webb book.
with Sheldon, since it had been copyrighted in their joint company name, Sheldon, Blakeman & Company, in 1857.

Mason Brothers apparently retained the rights to the Webb readers after Blakeman left but may have shared them with a co-publisher, the Sherwood company of Chicago. Sherwood appears to have become the owners of the later Webb and Edwards/Webb books sometime after the Mason company disappeared from New York. Taintor was apparently Mason Brothers’ successor in New York, to whom they presumably sold out in the late 1860’s. Taintor was publishing Webb’s Normal readers in 1876, according to the 1876 American Catalogue, so Taintor presumably had bought the rights from Mason Brothers. Taintor and Sherwood of Chicago continued to publish Webb materials, as discussed elsewhere. The Sherwood company apparently eventually became sole owner of Webb’s materials, and was bought out in 1894 by the young firm of Scott, Foresman, according to Volume 2 of A History of Book Publishing in the United States, by John Tebbel, published by R. R. Bowker, New York, in 1975.

Yet Blakeman, who had apparently once owned the Webb sight-word readers, had by the late 1860’s become a partner in the Ivison company which instead was publishing the enormously used Sanders sight-word readers. If that Blakeman and Birdseye Blakeman were the same man, then he prospered mightily, because Birdseye Blakeman became President of the new American Book Company in 1890. After also acquiring almost immediately the Harper elementary textbook list, Blakeman’s company then controlled 80 percent of the American elementary textbook market in 1890, according to the Indiana School Journal article discussed elsewhere.

By 1873, as shown by page 75 of Early American Textbooks, the Ivison developing company name had reached an intermediate form, Ivison, Blakeman, Taylor & Co., dropping “Phinney.” Page 75 shows Ivison, Blakeman, Taylor & Co. as publishers of The American Educational Readers, on which no author is shown (or known). By 1889 or before, the company had become Ivison, Blakeman and Company. Yet American Book Company, formed in 1890 from Ivison and three other companies, was obviously still publishing those 1873 plates after 1890, as some copies listed on page 75 of Early American Textbooks show American Book Company as the publisher of the American Educational Readers under the date of 1873.

The history of the Ivison root is far easier to trace than the Blakeman or Phinney root. The name, J. C. Ivison of Auburn, New York, first appeared on a Harvard copy of an early edition of The Sanders Series - School Reader - First Book, by Charles W. Sanders. Internal testimonials show the book was published after October, 1846, but most probably almost immediately after, so it can reasonably be dated to November or December, 1846. The publishing data on that copy shows Mark H. Newman & Co. of New York as the principal publisher, and the other publishers were Wm. H. Moore & Co. of Cincinnati; J. C. Ivison & Co. of Auburn; Mills, Crandall & Mosely, Cazenovia; and Griggs, Bross & Co. of Chicago. A Harvard copy of a later but uncertain date of Sanders The Primary School Primer by Sanders carries the note that it was published by Ivison & Phinney of New York, “Successors to Newman and Ivison.” Therefore, at some time after November, 1846, someone from the Ivison company of Auburn, New York, had joined with Newman of New York, New York, to form Newman and Ivison, and then, by 1854, according to Tebbel’s statement above, Phinney, originally from Cooperstown, had replaced Newman of New York to form the new company, Ivison & Phinney of New York.

Concerning the Newman root, which disappeared by 1854 with the advent of Phinney, the Newman name first appeared on Harvard’s copy of an 1844 reprint of the 1838 speller of Sanders. It showed the publisher as Gould, Newman, and Saxon of New York. (The Gould was no apparent relation to the other Gould companies mentioned by Tebbel, and Saxon is unknown.) The speller had been copyrighted in 1838 and presumably was set in print on stereotype plates in 1838 with the name of that original 1838 publisher, although the copy was printed apparently in 1844. The copy carried the notation that two
million copies of Sanders’ readers and spellers had been published. A Harvard copy of a Sanders’ The Primary School Primer made the same claim and can be dated to 1844, but it shows the publisher as Mark H. Newman of New York. By the time that Sanders Primer was copyrighted in 1840 and was set in type on stereotype plates, the publisher’s name was changed to Mark H. Newman of New York. (On that primer printed in 1844, W. H. Moore was shown as an associated publisher in Cincinnati).

The Newman company name had changed again by about late 1846. As shown above, a Harvard copy of Sanders Series - School Reader - First Book, carrying testimonials through October, 1846, was published by the new firm, Mark H. Newman & Co. of New York. That copy showed affiliated publishers: Wm. H. Moore & Co., Cincinnati; J. C. Ivison & Co., Auburn; Crandall & Moseley, Cazenovia; and Griggs, Bross & Co., Chicago. That was the first appearance of the Ivison name: it was the affiliated Auburn publisher of the Newman company of New York some time after October, 1846.

Also as mentioned above in discussing Ivison, Harvard library has a copy of Sanders’ The Primary School Primer, and though it carries no identifiable date, it was obviously printed later than Sanders’ First Book just mentioned that appeared after October, 1846. It was that Primer of uncertain date that carried the publisher’s name, Ivison & Phinney, New York, “Successors to Newman and Ivison.” Yet it still showed among its affiliated publishers the name of J. C. Ivison & Co., Auburn. The appearance of Phinney’s name places the date of that copy probably after 1854. Therefore, sometime after October, 1846, the firm name Mark H. Newman & Co., which had first appeared as Mark H. Newman, changed again to Newman and Ivison, and, probably in 1854, to Ivison and Phinney. Ivison and Phinney were the publishers of Sanders’ enormously used readers, which by that time (presumably not long after 1854) had sold 3,000,000 books, according to that Harvard copy. The powerful Ivison company had finally arrived in earnest by 1854 when Phinney joined with Ivison, but it was no longer merely a series of roots but had become a very large tree.

According to the 1928 United States Catalog, American Book Company in 1928 were still publishing the Primary School Primer of 1840 and the Union Pictorial Primer of 1866 by Sanders but were not publishing the rest of those two series by Sanders. The 1912 United States Catalog showed that the first Sanders series was no longer in print in 1912 except for the Pictorial Primer and the Primary School Primer published by American Book Company. Of Sanders’ Union series by 1912, the Union Pictorial Primer was available from American Book Company, but only levels one, three and five of the Union readers. The Union Series had come out in 1861, but the Union Pictorial Primer only in 1866. The original Sanders series had enormous sales and was very widely used between 1840 and the 1860’s, particularly in New York State. That series was only one among many other successful series on the market at that time, but one of the best-selling, Sanders Spelling Book, published in New York in 1838 by Gould, Newman and Saxton, was “for sale by the principal booksellers in the United States,” two years before Sanders published his readers. In his 1838 speller, Sanders said, “It is hoped that the subject of elementary orthography will soon receive its appropriate attention in our primary schools,” which, of course, is a confirmation that the speller was no longer used as the beginning book by 1838, although it had been the beginning book before 1826. Sanders’ was a Code 10 speller, but obviously Sanders thought in 1838 that such spellers had not been used for beginning readers for some time. Sanders’ readers for beginners, when published in 1840, were all Code 1 sight-word materials. Sanders’ readers used A MEANING APPROACH.

The American Educational Readers of 1873, on which no author is known, reportedly had a Leigh print edition, which suggests they used A MEANING APPROACH, PROBABLY WITH PHONY PHONICS.

On Swinton’s Readers, Early American Textbooks - 1775-1900, have five levels listed, all published by Ivison between 1882 and 1886. Harvard has a copy of the Primer and First Reader published by
American Book in 1890. (An internal note said the material sometimes was published in two volumes.) Swinton’s readers have already been discussed in this history. Despite his disarming remarks about his concern for teaching phonics, his approach when carefully analyzed turns out to be pure Code 3, phony phonics.

In the preface addressed, “TO SCHOOL OFFICERS,” on an 1890 American Book Company edition of Swinton’s Primer and First Reader, this appeared:

“Method. - The word method is used alone where it serves best, the phonic method is used alone where it serves best, and at a later stage the two are combined where such combination is most helpful....

“Gradation. - Each word is registered at the head of the lesson in which it first occurs....

“Script. - Since children are now taught the first steps of reading by means of words and sentences written on the blackboard, this knowledge should be utilized as an aid in learning the printed word. Hence, in the Primer, script is introduced at once, and forms a very prominent feature of the book. The words and sentences for copying are given in a script with guide rules (representing a section of the child’s slate) to aid in the first steps of transcription. The simple and beautiful script has been engraved expressly for this book.

“Practice Sentences. These Reviews are designed to test the child’s power of rapidly recognizing words already learned, and to fix their image and import by reiterated use in new relations. The drill thus afforded must double the class-room utility of these Primer lessons.”

That was followed by the section, “AUTHOR TO TEACHER”:

“The more successful you are in teaching primary reading, the less will you be disposed to make a fetich (sic) of any so-called ‘method.’ Children have been taught to read by every method and by no method, - and it would puzzle the wisest to tell exactly how a child does learn to read our anomalous mother tongue.”

Before 1875, Leigh’s phonic “sound” materials had been incredibly successful in comparison to “meaning” materials, as Superintendent Philbrick of Boston (among others) had documented. Yet by ignoring and thereby denying Leigh’s success, this 1890 edition of Swinton’s widely used book, which had been copyrighted in 1883, simply rewrote history and promoted the lie that it did not matter whether “sound” or “meaning” was used to teach beginning reading. Swinton then made the following comments under “General Principles.”

“The three recognized systems of teaching the first steps in reading are the Alphabetic, the Phonic, and the Word systems.... As to the old “a-b-c” device, it is now generally conceded that it is a mistake to begin by teaching the complete alphabet. It does not teach to read, since the names of the letters furnish only a slight clew to the sounds of a given word.... It is a work of supererogation, however, to decry the alphabetic system, since its doom is long since spoken; and indeed the only danger is that, in the revolt from the abuses of that system, we may forget that there is such a thing as the alphabet.... Under the guidance of a wise teacher, the alphabet presents none of its traditional terrors: it is taught incidentally and insensibly.

“The re-action from the “a-b-c” plan resulted in the so-called word-method. This is the “look-and-say” principle, by which the word in its entirety (and without reference to its component elements as addressed either to eye or ear) is taught as the sign of an idea. This is
undoubtedly an admirable mode of imparting to the beginner not only his first little stock of words, but also that considerable class of familiar child-terms - as one, eye, said, who, know, etc. - that present phonic anomalies. But here its usefulness ends.

“English is not Chinese, in which each individual word is represented by a synthetic symbol, - as many symbols as words. Underneath all its anomalies and exceptions, our English alphabet is phonetic, and its characters represent with more or less fidelity the component elements of the spoken word. It would appear rational, therefore, that we should begin as soon as possible to put the child in possession of those phonic constants and fruitful analogies that come to view in our mother tongue. This will the soonest enable him to pass from the known to the unknown - the soonest enable him to help himself to the knowledge of new words.”

Swinton’s “fruitful analogies” were actually two-step, whole-word phonics, just like that promoted in the 1883 Boston reading curriculum.

In this 1890 printing of his 1883 book, Swinton used the phrase, “from the known to the unknown.” That had been taught as an important maxim at teachers’ normal schools, probably ever since the late 1880’s, and it continued to be emphasized for many years afterwards. It probably resulted from the massive influence on elementary education of the DeGarmo/ McMurry brothers group, who had returned in the late 1880’s from their study in Germany. As C. H. Judd commented in his May, 1926, article in Teachers College Record, J. M. Cattell and others had brought laboratory methods in psychology back to America, but Charles A. McMurry and his brother, Frank M. McMurry, and Charles DeGarmo, brought with them the pedagogical “psychological” ideas that had grown out of the influence of Johann Friedrich Herbart (1776-1841) and his 1831 Letters Regarding the Application of Psychology to Pedagogy. (Herbart’s first published work came out in 1816.) One of the pedagogical dogmas being promoted at this time, possibly originating with that Herbartian influence, was always to proceed from the “known to the unknown.” The dogma popped up in the prefaces meant for teachers in reading instruction books of the period, as with this 1890 preface by Swinton (which preface was possibly rewritten in this 1890 printing from the first printing in 1883. The 1883 edition would have come out before the greatly increased Herbartian influence). The dogma showed up again in the 1905-1906 series of articles in the widely-read publication, The School Bulletin, Syracuse, New York. As The School Bulletin article put it:

“Too much cannot be made of this pedagogical aphorism, attach the unknown to the nearest relative known.”

Swinton’s preface addressed to teachers continued:

“On this sound principle the phonic method proceeds. But just as we have seen that by its devotees the word system is carried to a point where it ceases to be valuable and should give place to the phonic method, so on the other hand the latter is often brought into use too early, - at a stage where words should be learned as words, without analysis of their parts. To embarrass the tyro with the intricacies of phonic markings is to sacrifice practical utility to the one-sidedness of theory.

“The fact is that learning to read a language like ours... requires great toil and trouble. The child should have all possible help - help from every device, from every “method.” And the merit of any system of teaching primary reading must be judged not by its conformity with this or that theory, but by the Baconian test of its ‘fruit.’“

Note Swinton’s indirect attack on Leigh one-step, true phonics, with Swinton’s claim that the “intricacies of phonic markings” “embarrass the tyro.” Swinton referred to the fact that a “Baconian” test
on any “theory” was its “fruit,” but he broke his pompous commandment by burying the fact that the “fruit” of Leigh’s “phonic markings” had always been enormous success. Furthermore, no where in any of the commentaries of the period that I have seen on Leigh print have I ever found it stated that children found Leigh print at all difficult to learn or to use, and children transferred to normal print at second grade with no difficulty. Therefore, Leigh-print “phonic markings” certainly did not “embarrass the tyro,” as Swinton claimed in this 1890 preface meant for teachers. Furthermore, Swinton’s use of such terms as “Baconian” and “theory” was hardly everyday, “high-frequency” vocabulary for elementary school teaching in America in 1883, any more than it is in America in 1995, but it did make him sound very “scientific” in his discussion of “education,” just like Agassiz and his followers in the 1870’s and later. Swinton’s elevated verbiage did tend to obscure the fact that the statement he was making to first-grade teachers about the utility of “phonic markings” was just a bald falsehood.

Swinton went on:

“This ‘Primer’ has been prepared under the conviction just expressed, and the attention of the teacher is invited to the following noticeable features of the book:

“Word-Method. - This plan is used in imparting the first stock of words. The word is taken as the unit; but it is vitalized by its connection with a little phrase, forming a very simple model of sentence. [Sic. Did he really mean to say, “model of sentence”? However, notice he starts with sentences.] To each such phrase the name “idiom” has been given, and special attention is called to the use made of this instrumentality. Thus in the first lesson (p. 15) cat and a cat are taught in connection with the idiom “It is.”....

“Phonic Analysis. - So far the teaching is purely by the word system. But from the start a beginning in phonics has been made....”

Swinton specifically referred to phonic “analysis.” The analysis was of whole words, when one whole meaning-bearing word, already learned as a sight-word, was to be compared to a “new” meaning-bearing words, so as to see like parts and so as to commit the new word to memory. That is two-step, phony phonics, and it is the same as the soundless “analysis” made by deaf students in memorizing the “look” of their sight words.

“Pictures and Stories. - The series of lessons from p. 29 onwards consists of little stories in connection with pictures. The stories have been so composed as to present in the vocabularies a sufficient number of words suitable for phonic teaching. Hence the vowels are set forth in the regular order of the “shorts” and “longs;”....

“While a progressive phonic drill is thus provided for, other words necessary to the telling of the story with naturalness and vivacity - simple as words, but not yet within the child’s power to analyze phonically - are taught “by sight,” on the word-method. To confine the vocabularies of primary reading-lessons, as is often done, to two or three-letter words of regular formation, inevitably leads to “It is by it,” “He is in it,” and the like inanities, in which, to an imagined simplicity and regularity, all that makes the value and virtue of a piece is sacrificed.

“In teaching these lessons constant reference should be made to the pictures. The principle of association comes powerfully into play here. The picture suggests the whole story, and the parts of the picture suggest the words used in telling the story. These words are such as children daily use, and the ideas and fancies they express are childlike. It may be added, that, in order to make sure that these little pieces come home to the child-mind, each lesson has been carefully tested on
the black board with classes in the school-room, and such lessons as could not be made to interest
the pupils have been rejected.

“Vocabulary and Gradation. - All words not already taught are registered at the head of the
lesson in which they first occur, - a desideratum hitherto unattained in any other primary Reader.
[Ed.: As this history makes clear, that is not true.] Inspection of these vocabularies will make
manifest the very great care that has been exercised in maintaining systematic gradation
throughout the series of lessons. The several vocabularies taken together constitute the entire
body of words used in the Primer, and the review of these word-lists from time to time will afford
ample drill in oral spelling.

“Practice Sentences. - The educational value of the review lessons entitled ‘Practice
Sentences’ will be readily recognized. If primary Readers are often chargeable with not being
simple enough, they are still more open to the objection of not being long enough simple. It is too
often the case, that, in the rapid succession of lessons, words learned to-day are forgotten
to-morrow. It is not enough that a child should see a word once or twice: he should see it many
times; for, as reiteration is the only way in which words are learned through the ear, so it is the
only way they are learned through the eye. In accordance with this principle, the words already
learned are reiterated in the Practice Sentences in new and varied uses and relations. Words thus
learned can hardly fail to be thoroughly mastered.

“Script. = - The very important part assigned to script in this Primer will at once strike the
eye, and it will be welcomed by all progressive teachers.”

Note the implication: If a teacher did not welcome it, she could not consider herself “progressive,”
and that was something the nineteenth-century media assured her was a very desirable thing to be. Most
of the teachers in 1890 (and 1883 when this book was first published) were ingenuous, young, small-town
girls or unmarried middle-aged women, whose maiden state at their advanced age made them already
very low in status. At that point in time, they were systematically paid about half of the salary paid to men
teachers for the same job, which seems almost unbelievable today. Swinton was a “man,” and therefore
he was automatically assumed to be a far more weighty thinker than the low-status women teachers.
Furthermore, most of those women did not have enough sophistication to deal with the kind of
propaganda that Swinton was writing, or they would have been able to tell Swinton and the whole Ivison
company that they could just go and chase themselves.

Swinton continued:

“In the classroom the child first sees words and sentences in the form not of printed
characters, but as written by the teacher on the blackboard. It is therefore desirable, that, when he
comes to the reading of printed words, he should do so in connection with the graphic forms with
which he is already somewhat familiar....

“...All the ruled script is intended to be copied on the slate, and it is earnestly recommended
that this pleasant and profitable task should be begun as early as possible. The child has full
possession of a word only when he can write it correctly.”

Swinton obviously was teaching sight-words along with two-step, whole-word phony phonics, was
endorsing the use of picture clues for guessing, and was even expecting children to copy short,
“meaning-bearing” script sentences before they knew any letters of the alphabet. No record exists of
which I know which reports that Swinton ever taught beginning reading, so he was obviously not
qualified to write a beginning reading book. This 1890 copy of Swinton’s beginning reading book, which
was first published in 1883 by Ivison , one of the largest American publishers, was an abomination. Yet it

1347
was massively sold in America, undoubtedly because it received promotion from all the “right” people in 
“education.”

Swinton’s readers were listed both in the 1912 and 1928 United States Catalog as still in print in those years. Swinton’s readers used A MEANING APPROACH WITH PHONY PHONICS

1838 (In Early American Textbooks under Spellers)  
The Symbolical Spelling Book in Two Parts, Part I (Code 1 material)  
Hazen, E. (First published in 1829 but not by Appleton, and later by many publishers)  
D. Appleton and Company, New York; Geo. S. Appleton, Philadelphia  
1842? (Library of Congress 1846 Copy)  
Primary Lessons  
“Being a speller and reader, on an Original Plan in which one letter is taught at a lesson with its power, an 
application being immediately made of each letter thus learned and those words being distinctly arranged 
into reading lessons.”  
Albert D. Wright  
1842? (In 1876 American Catalogue)  
Primary Lessons, or Child’s First Book

Rickoff, Rebecca D.
American Book Company, New York, Cincinnati, and Chicago

The Harvard 1844 copy of Very Little Tales for Very Little Children,... First American From the Sixth London Edition, was a sight-word text, and it showed the American publishers as D. Appleton Co., New York and Geo. S. Appleton, 138 Chestnut Street, Philadelphia. This 1844 copy reported that it was the fourth Appleton edition in eighteen months. The 1844 sight-word text reprinted from the London original is the second earliest Appleton children’s reading text that I have found.

The first text that I found was the 1839 reprint of Hazen’s 1829 material, listed above. Appleton had apparently only entered the reading text book field with that 1839 reprint. Yet he did so squarely on the side of “meaning” to teach beginning reading, which is suggested by his reprinting of Hazen’s sight-word book and his reprinting of the London sight-word material. Wright’s material listed above was possibly published as early as 1842 but it definitely was published by Appleton in 1846, and Wright’s material appears also to have used a “meaning” sight-word approach in reading instruction, with only phony phonics.

Yet D. Appleton would have been 54 by 1839 when he reprinted Hazen’s material, so he had almost certainly been publishing other kinds of materials for many years. The Columbia Viking Desk Encyclopedia, Vol. I, The Viking Press, New York, 1953, shows on page 56:

“Appleton, Daniel, 1785-1849, American publisher, founder of a large publishing house.”

Harvard library has a copy of Little Annie’s First Book in Words of Three Letters. It advertised other books in what was obviously a series: Very Little Tales for Very Little Children in Single Syllables of Three and Four Letters, and Little Lessons for Little Learners, in Words of One Syllable, by Miss Barwell, Author of Mamma’s Bible Stories; Little Annie’s Second Book in Words of One Syllable, and Mother Goose in Hieroglyphics. It included a list of other Appleton books, with Miss Sinclair’s A Series of Tales and its review in the Edinburgh Advertiser; Divine and Moral Songs by Isaac Watts; Maria Edgeworth’s books, and Mrs. Sherwood’s books.

The “Advertisement” on Little Annie’s First Book read:

“The Idea on which this little book is founded, although not an original, is a useful one. It was suggested by Mr. Wood, of the celebrated Edinburgh Sessional School. It is simply this: That as soon as a child learns the letters of the alphabet, and even while engaged in learning them, he
should be taught their use and sound in real words, such as he is uttering every day, and not in
unmeaning syllables, which convey to his mind no ideas, and are associated with no real
objects.... Uttering sounds without meaning and being told that b,a, spells ba, he justly esteems
rather dry work.

“But at the moment he is able to connect the sounds he is acquiring with the object he sees,
he may easily be induced to learn his letters without repugnance.”

At the end of the 1850 edition is a catalog of Appleton books, listing Appleton’s New Cheap
Juvenile Library - 12 volumes, including those mentioned. The 1848-1850 Appleton materials
were obviously somewhat outdated British (or Irish) reprints unprotected by copyright in the United States (on at least
one of which Appleton took out an American copyright). Miss Edgeworth and Mrs. Sherwood had
published books roughly in the first quarter of the nineteenth century. At that time, Isaac Watts’ material
from the eighteenth century was still popular, which it apparently no longer was by 1850 when it was
published by Appleton. The massive trans-Atlantic enthusiasm for John Wood and his “improvement” of
teaching beginning reading by “meaning” instead of “sound” dated from about 1828 into the 1830’s. John
Wood was very old news by 1850, and so were books specifically endorsing his approach.

Wright, who published about 1846 Primary Lessons, or Child’s First Book, had published in 1839 for
older students the very poor and elaborate Elements of the English Language and Analytical Orthography.
His book teaching elocution to much older students had been published for years by other companies than
Appleton but was out of print in 1876, judging from the 1876 American Catalogue. Considering the great
failings of that upper-grade work, Wright’s Primary Lessons used PROBABLY AN INADEQUATE
PHONETIC APPROACH TO TEACH ELOCUTION, NOT DECODING.

Mandeville’s reading series published by Appleton from 1849 rates a Code 4 approach in the teaching
of reading. Sometimes both its content and its pedagogy are rather appalling. A somewhat heated
contemporary essay against the series is contained in a pamphlet now in the American Antiquarian
Society library in Worcester, cited in Appendix B. The complaint was that the series was often vulgar
both in content and language, and was a bad influence on children. Although some of the complaints
seem unreasonable today, some of the content was objectionable, even by today’s lower standards.
However, a review of the material shows that its “pedagogy” was even worse than its content. It was still
in print when the 1876 American Catalogue was published but out of print when the 1912 United States
Catalog came out.

The 1876 American Catalogue listed Noah Webster’s Elementary Spelling Book, his Elementary
Reader, and his son’s Speller and Definer as available from Appleton. As mentioned in the above listing,
Webster’s excellent 1829 edition of his speller had been “edited” very much for the worse in 1848 after
Webster’s death. Appleton obtained the copyrights on this objectionable 1848 Webster spelling book
edition in 1855, apparently from Cooledge, who had them in the 1840’s. Another undoubtedly popular
spelling book besides Webster’s before 1876 had been W. H. McGuffey’s New Eclectic Spelling Book,
listed in 1876 at 18c a copy. Yet that obviously would not have been very competitive with Webster’s 10c
a copy, when sold in a package of 12.

Under Spellers, the 1876 American Catalogue listed at least 138 different titles of spellers, or more if
new editions are counted. Some of the materials, like Webster’s original materials and McGuffey’s, had
been on the market since before 1840. They were meant for levels from primary to high school. The
probability is that the sales of most of that vast number of spellers were wiped out by the Quincy
anti-speller influence some time after 1876. The 1876-1885 American Catalogue and 1885-1890
American Catalogue listed new spellers published in those intervening years, producing this pattern:
Except for what may have been three laggard spellers finally published in 1881, the pattern suggests
that, starting in 1879 and continuing into 1883, little market existed for spellers. Then there was a sharp
increase in the popularity of spellers starting in 1884. Those statistics confirm J. H. Stickney’s statement
in Word by Word: Primary Spelling Book of Ginn, copyrighted in 1889, that the speller had gone out of
favor because of “expert” influence but was returning because of massive spelling failures.

As discussed elsewhere, by 1885, Appleton’s was speaking of sales of Webster’s speller of over a
million a year. It appears likely that Webster’s sales had also sharply declined after 1875 and then picked
up again about 1883, possibly in part because many of the pre-1876 spellers had probably gone out of
print by 1883. McGuffey’s publisher obviously moved to capture part of that rapidly expanding market,
because the price of the W. H. McGuffey “Alternate Speller” published in 1888 by Van Antwerp was
only 14c, making it more competitive with Webster’s, which had probably increased in price from the 10c
in lots of 12 that had been published for 1876. Webster’s objectionable 1848 revision was still a heavily
phonetic speller for use above the beginning reading level, and so, most probably, was the new McGuffey.
As Stickney’s 1889 speller demonstrated, there must have been a market for such heavily phonetic spelling
books by that date at second grade and above or she never would have written hers which was meant to be
used at second grade and above, particularly since she was the author of a sight-word reading series.

It should be emphasized, however, that the use of a speller as a BEGINNING book had ceased almost
everywhere in America not long after 1826. Spellers, after that change-agent period, were not used until
after a child had been taught sight-word primers.

Appleton’s 1878 reading series was still in print in 1928 by American Book Company, who were also
still printing Appleton’s Chart Primer. Its principal author, Harris, was an exceedingly influential man,
and Appleton’s was historically a critically important series, as attested to in Vail’s 1911 history of the
McGuffey readers, and as previously outlined at length in this history. Early American Textbooks -
1775-1900, also shows an Appleton version published as The Minnesota Textbook Series, and lists a copy
of The First Reader published in 1887, and a second and third in 1878. Concerning that material, see later
entries on the D. D. Merrill Company. The Appleton series used A MEANING APPROACH WITH
PHONIC PHONICS.

Concerning the reading charts Mrs. Rickoff wrote for the Appleton Readers, perhaps as early as 1881,
the following excerpts are from an article she wrote in The Primary Teacher, Boston, page 151,
apparently the December, 1881, issue:

“Appletons’ Elementary Reading Charts. By Mrs. Rebecca D. Rickoff. The WORD AND
PHONIC METHOD is too often understood to mean merely the union of naming words at sight
with spelling words by sound. That the Word and Phonic Method as used in APPLETONS’
READERS means much more than this, it is the aim of these charts to illustrate. It is their design
to set forth, in a graphic way, the importance of the word as a whole; the principle which
underlies the representation of an idea by a printed word; the relations of the words, one to
another, in phrase and sentence; and the value of phrasing in making the thought clear.

“Another feature of the Appleton Method, one which is prominent in the First Reader and is
given its due importance in the Second, is here treated at much length, and “pictured out” in a
way that, it is hoped, will prove acceptable to both teacher and pupil. It is the obtaining of the
correct sound of the letter from the analysis of the spoken word...”
Rebecca Rickoff then said, correctly, that children found it hard to distinguish sounds in isolation, without a word example. Yet no competent synthetic phonic method ever tried to teach letter sounds without such spoken “word” examples, back to the days of Noah Webster! However, phonically-trained children never learned those examples as sight words, while in the Appleton method they were learning the examples and many other words besides as sight words. Of course, Mrs. Rickoff’s argument was meant to support her use of phony phonics: learning and using many meaning-bearing whole words in sentences first, to be remembered as whole sight words, and only later slowly learning letter sounds from some of those memorized whole sight words.

Johonnot’s The Sentence and Word Book was still in print in the 1912 United States Catalog for sale by American Book Company, and four books from his history series were still in print in 1928 by American Book Company. Johonnot is discussed at length in this history. The complete title of his 1885 book was The Sentence and Word Book, A Guide to Writing, Spelling and Composition by the Word and Sentence Methods. By James Johonnot. “The letter killeth; but the spirit giveth life.”

Johonnot had the following note “To Teachers” at the beginning:

“Why This Book Was Made.
In teaching reading, those who practice the word and sentence methods have met with a serious difficulty. They cannot find, in sufficient number, simple lessons with words expressing the ideas of home and of youthful experience. The ordinary reading-lessons do not contain these words, and the teacher has not time to search them out, and arrange them in proper sentences....

“The Plan.
To the end that all words may be associated with the ideas which they represent, the plan adopted is as follows:
1. The words are all used in sentences, or are so arranged that they may be put into sentences by simple substitution.
2. New words are used in illustrative sentences, which, in most cases, so fully express the meaning that formal definitions are unnecessary.....

“How the Plan is Carried Out.
1. The first twelve pages are in script, giving enough of script-work for one school term....
2. In every sentence something of interest is told, so that the language is kept subordinate to thought.

“How to Use the Book.
1. The first lessons should be introduced by means of the objects designated in each....
2. The sentence which in recitation is read from the board, after recitation should be copied from the book. Words are learned by copying them, and correct copying implies close observation....

“What will Come of It.
1. The pupils learn the form and meaning of words incidentally, while copying, and in the endeavor to express their own thoughts.
2. They find words in sentences and spell them by writing; their school-work thus conforming to subsequent practice....

“Some Other Points
.....the object of this book is to render the acquisition of language, on the part of the pupil, as nearly unconscious as possible....
“To Teachers
  First of all, and above all, in every lesson given to pupils, teach the thought.
  In the very first lessons in which graphic language is involved, teach reading and writing
together....
  Give the first lessons in writing slowly, carefully, and patiently, until the pupil acquires the
art of copying correctly.
  Teach the forms of the letters by the observation which comes from correctly copying them.
  Teach the names of the letters by speaking them as if known - one or two at a lesson.
  Make a point of teaching the names of the letters quite early in the course.
  Teach the alphabet in its order as soon as the forms and names of the letters are known.
  Change from script to print at the end of a two or three months’ course.
  Let the test of spelling be the ability of the pupil to spell words correctly in daily original
written work.
  Again teach the thought first, last, and always.”

This 1885 Johonnot textbook is the last school text to have promoted the unbreakable-sentence
(“thought”) thesis that had first surfaced in Farnham’s Binghamton in 1870. The unbreakable-sentence
thesis did not appear again until William James stated it, implying it was his own inspiration, in his 1890
psychology book.. Johonnot’s The Sentence and Word Book for teaching reading is unbelievably bad and
uses a pure MEANING APPROACH.

As discussed elsewhere, Appleton merged with three other publishing companies, Van Antwerp,
Ivison and Barnes, to form American Book Company in 1890, in which year American Book also took
over the textbook listings of the Harper company.

#Publishers First Appearing in This List Between 1840 and 1850

1841 and later (In 1876 Amer. Catalogue Published by Lee & Shepard)
Tower’s Readers, 7 volumes (emphasis on elocution)
Lee & Shepard’s 1876 prices: First, 25c, Second, 45c, Intermediate, 50c, Third Gradual, 60c, Fourth, 75c,
Fifth, 90c, Sixth. $1.
Tower, David Bates
Daniel Burgess & Co., New York; Sanborn, Bazin, and Ellsworth of Boston and their predecessors, until
published by Lee & Shepard of Boston an unknown time before 1876, per 1876 American Catalogue
1853 (In Early American Textbooks)
First Lessons in Language
Tower, David Bates and Benjamin Franklin Tweed
Crosby, Nichols & Co., Boston
(Later material by Tweed and Tower was published by Lee & Shepard, whose books are shown below.)
1857 (Harvard copy)
Tower’s Little Primer for the Youngest Class in Primary Schools
Tower, Anna E.
Brown, Taggard & Chase, Boston
1866 (Harvard copy)
Kindergarten Spelling Book (highly phonic material)
Little, Ella
Lee & Shepard, Boston
1866 (In 1876 American Catalogue)
First Lessons in Reading: A New Method....
(Based on Rev. Zachos’ highly phonic material)
Wheeler, William A. and Richard Soule
Lee & Shepard, Boston
By 1876 or Before (In 1876 American Catalogue)
Phonic Primer, and Primary Reader, 35c
Zachos, Rev. J. C.
(See Appendix B for 1859 Zachos book published by Wilstach)
Lee & Shepard, Boston
By 1876 or Before (In 1876 American Catalogue)
Gradual Speller and Complete Enunciator
Tower, D. B.
Lee & Shepard, Boston
By 1876 or Before (In 1876 American Catalogue)
Grammar School Speller
Tweed, B. F.
Lee & Shepard, Boston
By 1876 or Before (In 1876 American Catalogue)
Normal Writing Speller, per doz. $2.40
Williams, J. D. and Packard, S. S.
Lee & Shepard, Boston
1880 (In Early Amer. Textbooks; related material pub. by Harper)
First Lessons in Natural History and Language
Tweed, Benjamin Franklin and L. W. Anderson
(Anderson was co-author on the 1887 new edition of Holmes Readers published by University Publishing Company)
Harper and Bros., New York
1885 (In 1885-90 Amer. Cat.; 1912, 1928 U. S. Cat. pub. by Lothrop)
Graded Supplementary Readers
Tweed, Benjamin Franklin
Lee & Shepard, Boston; C. T. Dillingham, New York
1891 (In 1890-1895 American Catalogue, p. 212)
Picturesque Geographical Readers, Bks. 2-5 (1912 U. S. Cat.: Bks.1-6)
King, C. F.
Lee & Shepard, Boston
1891-1894 (P. 193, 1890-95 Am. Cat; in 1928 U. S. Cat. by Lothrop)
Secondary Geographical Readers, Bks. 2-5 (1912 U. S. Cat.: Bks.1-6)
King, C. F.
Lee & Shepard, Boston
1894 (In 1890-95 Am. Cat.; in 1912 U. S. Cat., p. 2020 by Lothrop)
Primary Script Reader, on Form and Elementary Science
Oliver, F. E.
Lee & Shepard
1897 (P. 233, 1895-1900 Am. Cat.; in 1928 U. S. Cat, by Lothrop)
Primary Geographical Readers, Book 6: Northern Europe
King, C. F.
Lee & Shepard
The 1866 Kindergarten Spelling Book used what appears to be a correct phonic approach, from the few photocopies I have from Harvard’s copy. It used A PHONIC APPROACH.

Wheeler and Soule, both editors on dictionaries, wrote that their 1866 material was based on Reverend Zachos’ phonic method. Zachos has been discussed in this history. The material used A PHONIC APPROACH.

Therefore, in 1866, Lee & Shepard had spearheaded part of the phonic movement by publishing phonic materials based on Reverend Zachos’ method, and by 1876 were the publishers of Tower’s earlier readers which, because of their emphasis on elocution, could be used to teach phonics. Yet the puzzling phony phonics 1857 primer by Anna E. Tower, whose relationship to David B. Tower is unknown, which was published by a different publisher, raises unanswered questions. A non-phonic pictorial primer perhaps wrongly credited to Tower, published by Bazin and Ellsworth, Boston, from 1857, raises similar questions. This is discussed elsewhere in this history.

In 1880, Harper had published Tweed’s material blending natural history with language, a clear tie to the Agassiz influences, showing that Tweed, some of whose material had been published previously by Lee & Shepard, had become au courant. Then, by 1885, a great change had also taken place in the emphasis of the formerly pro-phonics Lee & Shepard materials, when the company published Tweed’s supplementary readers. Such supplementary readers demonstrated an unmistakable influence from Colonel Parker’s Quincy. Tweed’s supplementary readers survived until 1928, at which time they were still being published by Lothrop. Lee & Shepard appear to have merged with Lothrop about the turn of the century since they seem to disappear from the records about then, after which some of their materials continued to be published by Lothrop. By contrast to Lee & Shepard, Lothrop had shown heavy influences from the movers-and-shakers by publishing “meaning” method material like Cyr’s in the 1880’s, and, although in business since about 1850, had published no pro-phonic material during the enthusiasm for phonics in Boston in the 1860’s and 1870’s. This period has been discussed elsewhere in this history. “Lothrop” still had material in print when the 1928 United States Catalog was published. A 1975 copy of the sixth edition of How to Increase Reading Ability by Albert J. Harris and Edward R. Sipay listed publishers in Appendix C, and showed Lothrop, Lee and Shepard Co., Inc., at 105 Madison Avenue, New York, New York. At what time the name change was made from Lothrop Publishing Company is unknown.

Tweed’s Graded Supplementary Readers were listed in the American Catalogue for 1885-1890, and were said to consist of 12 parts, per dozen 48 cents. Contents for the 1st Year Primary: Pts. 1, 4, 7, 10 - 20 cents; 2nd Year Primary: Pts. 2, 5, 8, 11 - 20 cents; 3rd Year, Primary: Pts. 3, 6, 9, 12 - 20 cents. The publishing of such supplementary reading materials was an obvious result of Colonel Parker’s influence, and Parker himself published supplementary reading materials for primary grades which can only be described as appalling. What Tweed’s materials were like is unknown. However, such supplementary materials were regarded with contempt by Philbrick, the fired superintendent of schools in Boston, who referred to them as rubbish in 1885, as quoted elsewhere in this history.

Tweed’s 1885 materials were listed in Early American Textbooks - 1775-1900, with the notation that The Graded Supplementary Reader, First Year consisted of 24 pages, and so did the Second Year Reader. The material was still in print in 1912 according to the United States Catalog as Graded Supplementary Readers, 12 parts, paper, 60 cents, 3 volumes, 1st, 2nd, and 3rd, and “bds. ea. 20 cents” by Lothrop of Boston. Tweed’s materials remained in print when the 1928 United States Catalog was published. Tweed’s materials almost certainly used A MEANING APPROACH.

1842 (In 1876 American Catalogue; in Early American Textbooks)
The Second Book of Reading Lessons (144 pages)
Brothers of the Christian Schools
Eugene Cummiskey, Philadelphia

This text is listed on page 78 of Early American Textbooks. The series is listed for sale by others in the 1876 American Catalogue as “Christian Brothers. Readers. 3 v., First Reader, Second, Third.” Those later editions of the material are shown in this listing under entries for the D. & J. Sadlier company and the O’Shea company. The material was also published by 1870 by a company named Strong, on whom no information is available. The series was revised in 1884 by John P. Murphy, as described later.

An advertisement on the back cover of Harvard’s 1885 copy of The Metropolitan Spelling Book, published by D. and J. Sadlier of New York and Montreal read, “The cheapest school books ever issued for use in Catholic schools.” The advertisement apparently meant the Christian Brothers first through fourth readers which were listed immediately afterwards. The 1842 book published by Eugene Cummiskey of Philadelphia, listed above, was the apparent forerunner or the same material as the Christian Brothers series Sadlier was advertising in 1885.

The 1876 American Catalogue had listed “Sadlier” (no initials) as a publisher of Christian Brothers Readers (First, Second, Third Readers) but showed they were also published by the O’Shea and Strong companies. Strong also published a Fourth Reader, and so did D. & J. Sadlier, according to an advertisement on their 1885 textbook mentioned above. By 1884, The Christian Brothers New Series - Primer, was published by De La Salle Institute, but the publisher John P. Murphy was shown as holding the copyright. The Harvard libraries have a copy of that 1884 book. The Christian Brothers readers were apparently out of print by the time the 1912 United States Catalog was published. THE APPROACH IS UNKNOWN.

COWPERTHWAIT: FROM 1847 OR BEFORE POSSIBLY TILL 1890 OR AFTER

1842 (Harvard copy published in 1847)
Introduction to the Pictorial Reader
Bentley, Rensselaer
Geo. F. Cooledge & Brother, 323 Pearl Street, New York;
Pratt, Woodford & Co., New York;
Thomas, Cowperthwait & Co., Philadelphia

1850 (Harvard copy published in 1852)
The Primary School Spelling Book, Designed for Primary and Intermediate Schools
Swan, William D., Principal of the Mayhew School, Boston,
Thomas, Cowperthwait & Co., Philadelphia.

1851 (In Early American Textbooks, page 92)
The National Speaker.
Maglathlin, Henry B
Boston: Robert S. Davis; New York: G. F. Coolidge (sic) and Bro.; Philadelphia: Thomas, Cowperthwait & Co.

1854 (Harvard copy published in 1856)
Primary School Reader, Part First, New Edition, Revised and Improved.
Swan, William D.

1856 (Harvard copy published in 1857)
Leach’s Complete Spelling Book (for upper grades)
Leach, Daniel, A. M., Supt. of the Public Schools of Providence

1864 (In Early Amer. Textbooks, page 95. This date may be wrong.)
The First Reader, 96 p.
Monroe, Lewis Baxter
Cowperthwait & Co., Philadelphia
1869 (In 1876 American Catalogue)
Primary Spelling book, 25c.
Swan, William D.
Cowperthwait & Co., Philadelphia
1871 (Early American Textbooks, p. 97)
The Fifth Reader
Monroe, Lewis Baxter
Cowperthwait & Co., Philadelphia
1872 (Harvard copy and Early American Textbooks, p. 97)
The Fourth Reader, Cowperthwait & Co.’s Educational Series, 235 p.
Monroe, Lewis Baxter, Dean of Boston University School of Oratory.
1872 (Early American Textbooks, p. 97)
The Sixth Reader, 408 p.
Monroe, Lewis Baxter
Cowperthwait & Co., Philadelphia
1872 (In 1876 American Catalogue)
Large Spelling Book, New Ed. 28c.
Swan, William D.
Cowperthwait
1873 (In Early American Textbooks, Pages 95 and 97)
The First Reader, 96 p.
The Second Reader, 160 p.
The Third Reader, 224 p.
Monroe, Lewis Baxter
Cowperthwait & Co., Philadelphia
1873 (Harvard copy. Harvard also has 1875 copy)
Monroe's First Reader - Revision
Monroe, Lewis Baxter
1873 (In Early American Textbooks, p. 95)
The First Reader. Edited in Pronouncing Orthography by Edwin Leigh.
Monroe, Lewis Baxter
1875 or Before (Ad. in Monroe’s 4th reader pub. 1875 by Cowperth.)
Monroe’s Primary Reading Charts
(Wrongly called “Monroe’s Chart Primer,” Jan., 1879, Primary Teacher)
Monroe, Lewis Baxter
By 1876 (In 1876 American Catalogue)
Monroe, L. B. Readers. 6 v. First reader, 30c, Second 50c, Third 70c, Fourth $1; 84c, Fifth $1.25, Sixth $1.50. (Monroe’s primer not listed)
Cowperthwait & Co., Philadelphia
1876 (In 1876 American Catalogue)
Complete Spelling Book. New ed. 32c.
Leach, Daniel
Cowperthwait & Co., Philadelphia
1877 (Early American Textbooks, page 95)
The 1842 Rensselaer Bentley book listed above on which Cowperthwait was one of the publishers in 1847 was not a beginning book. However, its make-up suggests its book one used a sight-word approach. See entries for Bentley elsewhere. Bentley used A MEANING APPROACH.

The 1850 Swan speller, on which Cowperthwait was one of the publishers in 1852, could be Code 4 to 6, probably Code 5, depending on how it was taught. However, it was not meant for beginners. Swan’s materials, which were published widely, have been discussed elsewhere. The 1852 copy above listed other publishers in other cities. For New York, Geo. F. Cooledge was shown, and for Boston, Phillips, Sampson & Co. Other publishers were shown in Baltimore, Charleston (S. C.), Louisville, St. Louis,
Cincinnati, Nashville, Memphis, Lexington, Macon, and Buffalo. The copy showed it had been adopted in Cincinnati and elsewhere. See other entries on Swan.

Swan’s Primary School Reader, Part First, rates a Code 6. It taught phonemes but in many, many sight words. Reeder, page 50, wrote concerning Swan. See discussion of Swan’s materials in earlier Swan entries. Swan’s materials used A MEANING APPROACH WITH INADEQUATE PHONICS.

Professor Lewis B. Monroe was in charge of elocution for the Boston schools at the time of Alexander Melville Bell’s visit in 1868, which has been discussed in this history. Also discussed were Professor Monroe’s readers, published by Cowperthwait since 1864 if an entry in Early American Textbooks is correct, but at least since 1871. However, Early American Textbooks made many errors on dates, so the 1864 date would have to be confirmed.

The Leigh pronouncing-print 1873 edition listed above was not included with Monroe’s materials in the 1876 American Catalogue so it possibly was withdrawn by that date. It is also possible that the later 1875 revision (if such a revision were made) of the Monroe series did not provide for a Leigh edition. Monroe was a Bostonian, and Boston is where the hostility to Leigh’s pronouncing print obviously originated.

Professor Monroe died some time before 1882, in which year his widow wrote Monroe’s New Primer, which was far better phonic material than her husband’s earlier edition. It was first published by Cowperthwait. It was later published by E. H. Butler & Co., and a copy of the beginning-level book is in the Harvard libraries. Butler apparently bought the rights and the plates about 1890 or so.

Also in the Harvard libraries is a copy of the 1884 The Chart Primer, part of a different series published by the Butler company called Butler’s Series, on which Samuel Mecutchen was the editor. See page 326 of The School Journal for October 2, 1897, on two sets of charts published by E. H. Butler & Co. One set of charts was based on Professor Monroe’s original series (a mixed sight and sound approach which in effect was Code 3). They were called Monroe’s Primary Reading Charts and had been in print by 1875 or before, since they were advertised on an 1875 copy of Professor Monroe’s fourth reader published by Cowperthwait in 1875. (They were, however, wrongly called “Munroe’s... Chart Primer” in the January, 1879, issue of Primary Teacher.) From the illustration in the 1897 article, Professor Monroe’s charts were different from the “New Primer” of 1882 by his widow. The 1897 article also reproduced a chart from the Chart-primer series and it exactly matched a page in Harvard’s copy of The Chart Primer on which Samuel Mecutchen had been editor. The Chart-primer listed in the 1928 United States Catalog may have been Mecutchen’s 1884 material, and not L. B. Monroe’s, as stated in that catalog. The possible confusion on the author of The Chart Primer resulted because E. H. Butler & Co. had become the publisher for all these books and charts by the 1890’s.

By the 1890’s, the Butler material included Professor Monroe’s, whose original series had been published by Cowperthwait. From the dates shown on other titles, Professor Monroe’s material dated from at least 1871 (although this may refer to a second series, if the entry for an 1864 book is correct). It is probable that the series was revised again in 1875, since The American Teacher for September, 1883, carries an advertisement by Cowperthwait & Co., which refers to Professor Monroe’s series having been in print for eight years, which would have been since 1875. It also advertised Mrs. Monroe’s materials as “Monroe’s Supplementary Readers,” including Monroe’s New Primer, Monroe’s Advanced First Reader, and Second and Third.

The Cowperthwait advertisement in the September, 1883, issue of The American Teacher included these comments:
“Cowperthwait & Co.’s Latest Publications. Something New & Practical for Teaching Young Pupils. How to Use the English Language. How to Talk, over 200 illustrations, Intro. price 42 cts. How to Write, over 150 illustrations, Intro. price. 60 cts. These two books, prepared by W. B. Powell, A. M., Supt. of Schools, Aurora, Ill., are the result of many years of successful effort in training children to talk and write correctly. Their purpose is to guide the young learner in the correct use of language at the time when he is ACQUIRING A VOCABULARY, and FORMING HABITS OF SPEECH.....

“Parker’s Arithmetical Charts Prepared by Francis W. Parker, Superv. of Public Schools, Boston; formerly Supt. Schools, Quincy, Mass. These charts present the latest and best methods of teaching beginners in Arithmetic, and wherever used will render unnecessary the ordinary text books in Primary Arithmetic, thus saving both time and expense. The Charts comprise FIFTY NUMBERS, printed on manifold parchment paper 26[?] x 30 inches in size, and bound in the same manner as Monroe’s Reading Charts. Price per Set of 50 Nos., $7.00; Back Frame or Easel, 50 cts.

“Monroe’s Primary Reading Charts. The best and most popular Reading Charts yet issued, and the only series giving a scientific and practical system for teaching reading. EXPLICIT DIRECTIONS are given on the margin of the Charts, so that the most inexperienced teacher may understand how to use them. Price per set of 50 Nos., $7.00; Back Frame or Easel, 50 cts.

“Monroe’s Supplementary Readers.

“MONROE’S READERS have been for the past eight years the leading series before the public, and it is no exaggeration to say that they are almost unanimously acknowledged by disinterested parties to be the best series published. After so long an experience with these books, we frankly say that we do not know how to improve the series as text-books from which to teach reading.

“There is, however, a growing demand for more reading-matter in the lower grades and classes, and to meet this demand, MONROE’S ADVANCED OR SUPPLEMENTARY READERS have been prepared by MRS. LEWIS B. MONROE, who wrote the lower books of the original series.

“In preparing these new books, advantage has been taken of all the recent improvements in typography and engraving: the best artists, such as Fredericks, Northam, White, Schell, Sheppard, Cary, etc., have been engaged, and it is believed that no handsomer school-books have ever been issued.

“SCRIPT LESSONS have been largely introduced, and the greatest care has been taken to secure the standard forms of writing letters, such as are given in the most carefully-prepared copy-books. The different books of the series contain many other new features, the advantages of which will be apparent on examination.

“Specimen Copies of any of the above-named books will be mailed on receipt of the Introductory price, which will be refunded if the books are either adopted or returned to us.
By 1883, the 1878 Appleton series and the 1879 McGuffey series had been engaged in a titanic textbook war, according to Vail who worked for the McGuffey publishers and knew that to be so from personal knowledge. Furthermore, as discussed elsewhere in this history, contemporary sources make it very clear that Appleton’s was the dominant publisher in America at that time, McGuffey’s being largely limited to the Middle West. Therefore, the statement in this advertisement, “MONROE’S READERS have been for the past eight years the leading series before the public” is just so much advertising fluff.

Colonel Parker’s arithmetic materials were being published by Cowperthwait in 1883, so the Cowperthwait company was obviously well acquainted with Colonel Parker. It is amusing that Cowperthwait made no mention that the supposed demand for supplementary reading which they were attempting to fill, and the supposed demand for the teaching of script to beginners which they were also attempting to answer, had both originated with Parker at Quincy! The supposed demand for these materials was undoubtedly being made by the “experts” writing for the educational journals and giving the teacher institutes, all of which glorified Parker, and from the superintendents of schools who respectfully fell in line behind the “experts.” The demand was undoubtedly not coming from in-service classroom teachers, who normally had nothing to say anyway about what textbooks were ordered by their “supervisors” for them to use.

It is possible that Butler and Cowperthwait had some business relationship in 1883, since the Butler advertisement was on the top half of page 29 in the September, 1883, copy of The American Teacher, and the Cowperthwait advertisement was on the bottom half. At the very least, it seems very likely that Butler bought out Cowperthwait after 1890 and continued to print Cowperthwait’s earlier plates, showing the original copyright dates, but with the title pages of the new editions carrying E. H. Butler’s name. American Book Company used the same practice on some of its 1890’s reprints of books originally printed under other publishers’ names. American Book reprints showed the original copyright dates but not the original publishers. If the E. H. Butler company bought out Cowperthwait and acquired its plates some time after 1890, that would explain Cowperthwait’s disappearance after 1890.

Professor Monroe’s materials originally published by Cowperthwait combined sight-words and phonics and qualify, therefore as SIGHT WORDS WITH PHONY PHONICS. Mrs. Monroe’s materials originally published by Cowperthwait were far better and qualify as a DOMINANTLY PHONIC APPROACH.

THE FOLLOWING ENTRIES CONCERN GEO. SHERWOOD & COMPANY OF CHICAGO, WHO WAS BOUGHT OUT BY SCOTT, FORESMAN IN 1894, AND THE HISTORY OF BOOKS THAT WERE IN SOME WAY ASSOCIATED WITH THE WEBB “WORD METHOD” READERS:

1846 (Per Nila B. Smith)
John’s First Book or the Child’s First Reader
Webb, John Russell

1850 (In Early American Textbooks, p. 111)
Webb’s Normal Reader No. 1
Webb, John Russell
Huntington & Savage, New York; H. W. Derby & Co., Cincinnati;
H. Crittenden, St. Louis

1854 or Before (From an advertisement on the back of Harvard’s 1854 copy of Miles’ United States Spelling Book)
Webb’s Series of Normal Readers 1-5:
Normal Primer; Primary Lessons: A Series of Large Cards to be Used in Connection with the Primer and No. 1
Webb, John Russell
Lamport, Blakeman & Law, 8 Park Place, New York.
1856 (In Early American Textbooks, p. 111)
Webb’s Normal Reader No. 2
Webb, John Russell
Sheldon, Lamport & Blakeman, New York
1857 (Harvard copy)
The Word Method Primer
Webb, W. H.
Sheldon, Blakeman & Co., New York
York, in 1857, gave no author’s name but internal notes show it was written by a woman and was meant
to accompany John Russell Webb’s series. Her initials were later given in the 1876 American Catalogue.
Controlled vocabulary listed on page 38 (105 words), page 83 (159 words), and page 108 (204 words),
totaling 468 words for the whole book.)
1866 (Harvard copy)
Analytical First Reader
Edwards, Richard and J. Russell Webb
Mason Brothers, New York; Mason & Hamlin, Boston; Geo. and C. W. Sherwood, Chicago.
1866-1871 (In 1876 American Catalogue)
Analytical Readers (9 vols., 1st and 2nd in regular and Leigh print)
(Harvard copy of 1st in Leigh print carries a copyright date of 1871)
Edwards, Richard and J. Russell Webb
Publishers: Sherwood, Taintor
1866 or later (Harvard copy)
Analytical Second Reader
Edwards, Richard and J. Russell Webb
Taintor & Co., 678 Broadway; Geo. & C. W. Sherwood, Chicago.
1867 (Harvard’s 1868 copy)
The Analytical Speller
Edwards, Richard (Illinois State Normal University), and Mortimer A. Warren, Principal of Avery Normal
Institute, Charleston, S. C.
Copyrighted by Geo. and C. W. Sherwood, Illinois
Published by Taintor & Co., 678 Broadway, New York and Geo. & C. W. Sherwood, Chicago

Boyden, Helen W. (First name shown, page 78, Early American Textbooks)
Publisher: Geo. Sherwood & Co., Chicago

1887 (In 1885-1890 Am. Cat.)
Institute, Grammar and High School Reader
Boltwood (No Initials)
Publisher: Geo. Sherwood & Co., Chicago

1888 (In 1885-1890 American Catalogue)
New Model First Reader
Webb (No initials given)
Publisher: Geo. Sherwood & Co., Chicago

1889 (In Early American Textbooks, page 98)
The New Model First Reader Sentence Method
(No author given)
Geo. Sherwood & Co., Chicago

1897 (In Early American Textbooks, page 78)
First Reader (96 p.)
Boyden, Helen W., Revised by Florence Holbrook (See 1886 Boyden entry)
Scott, Foresman & Co., Chicago

1897 (In Early American Textbooks, p. 82)
Second Reader. Third Reader.
Edwards, Richard, Rev. by Florence Holbrook (See 1867 Edwards entry)
Scott, Foresman & Co., Chicago

The entries in Early American Textbooks have sometimes been incomplete and with dates which were obviously wrong according to other sources. It lists two series for Edwards, his Analytical and his Student’s Series, yet the latter does not appear in the contemporary American Catalogues either under “Student’s Series” or Edwards’ name, while the works above by other authors published by Sherwood in the 1880’s do appear. The Student’s series of the 1880’s may have been a revision of Edward’s Analytical series, on the lower books of which J. Russell Webb worked.

What is apparent from all of these entries is that the publishers of materials associated with Webb changed frequently in earlier years. (See the amusing fiction in Appendix A which was written in 1878, “A Change of Text-Books,” by C. W. Bardeen, referred to elsewhere in this history. It mentioned a word-method series which had constantly changed its publishers. That amusing fictional detail may have been based on the facts about Webb’s widely-used word-method series.) The name of the original publisher of Webb’s series is unknown. Webb’s material and the material which resulted from it ended up being published by Taintor and Sherwood through the 1870’s, by Sherwood in the 1880’s, and finally by Scott, Foresman who bought out Sherwood in 1894. According to A History of Book Publishing in the United States, Volume 2, by John Tebbel, published by R. R. Bowker, New York, in 1978, Scott, Foresman was a relatively new firm when it bought out George Sherwood Publishing Company in 1894.

On the closely printed back cover of Miles’ United States Spelling Book, published by Lamport, Blakeman & Law of New York in 1854, which advertised their many materials, appeared an advertisement for Webb’s Normal Readers. It was followed by a paragraph which read:

“These readers are used in the principal cities and villages throughout the United States, and are rapidly coming into use in the smaller towns of the country. Their merits have been fairly tested, and they have universally been pronounced superior to any series of Readers extant; not only for the improvement in the system of teaching, which is the WORD METHOD; but also in the high moral tone and inspiring character of the pieces selected. The author, Mr. Webb, was recently from the State Normal School at Albany.” [Ed.: Farnham and Johonnot were also Albany Normal School students, as discussed elsewhere in this history. It is highly probable that they knew Webb.]

“They are the best Practical Readers that have come under my notice; they are all and everything they should be.” Hon. S. S. Randall, Deputy State Sup’t Com Schools.”

On the 1857 copy of The Word Method Primer, published by Sheldon, Blakeman & Co., appeared the same kinds of advertisements on the back cover. The section on “Webb’s Series of Normal Readers” remained very much the same, including the same paragraph quoted above. However, they had added The Word Method Primer to the list of books, and had changed the number of pages on Normal Reader No. 2 from 168 to 180 pages, and on Normal Reader No. 5 from 583 pages to 480 pages, so those levels must have been revised.

None of these materials appeared in the 1912 United States Catalog, so they were presumably all out of print shortly after the turn of the century. By 1912, Scott, Foresman, who bought out Sherwood, was publishing Elson’s series of readers, eventually revised by William Scott Gray as the “Dick and Jane” 1930 deaf-mute-method series. The Sherwood materials, including those of Webb, used A MEANING APPROACH WITH PHONY PHONICS.
Florence Holbrook did the three 1897 Scott, Foresman revisions listed above of three reading instruction texts from two earlier reading series. The probability is that the entire two series, Edwards’ and Boyden’s, were revised, and not just the three levels of those series listed above on which firm records exist. James A. Bowen is listed with Florence Holbrook in Early American Textbooks as an author on the Rand, McNally Introductory Geography in 1899. The fact that Florence Holbrook was a co-author on that text suggests that the “Holbrook” who was a co-author on a Globe company text, listed later, may also be the same woman since her work with Bowen identifies her as someone who would work as a co-author. It is also probable that those two Holbrooks, on the 1905 Globe material and on the 1899 Rand, McNally materials, are the same as the Florence Holbrook who revised the Geo. Sherwood & Co. materials for Scott, Foresman in 1897 and who wrote the Hiawatha Primer published by Houghton, Mifflin in 1898.

ENTRIES ON J. B. LIPPINCOTT CO.

By 1847 or earlier (From advertisement on the back of Harvard’s copy of Cooledge’s 1847 The Illustrated Primer)
A Sequel to Webster’s Elementary Spelling Book
William G. Webster (Noah Webster’s son)

Basic Reading (Revised by Scribner’s in 1987. See Scribner’s entries.)
McCracken, Glenn and Charles C. Walcutt
J. B. Lippincott Co., Philadelphia

Before or in 1847, George F. Cooledge & Bro., New York, became the publisher of Noah Webster’s speller, claiming sales of a million copies a year by 1848. The “Sequel” by Noah Webster’s son, William G. Webster’s Sequel, was also published by Cooledge and by Morton & Griswold, of Louisville, Kentucky, as well as by J. B. Lippincott of Philadelphia. The Cooledge company had also become the publisher of the famous Pierpont readers. Yet by 1854, Lippincott had become a publisher and possibly the principal publisher of the Pierpont series, and Appleton had become the publisher of Webster’s speller about that time. Presumably, therefore, the Cooledge company had sold its rights to these famous books and went out of business some time after 1851, for which date an entry appears on page 92 of Early American Textbooks still listing a Cooledge company book, The National Speaker, by Henry B. Maglathlin.

Burleigh’s 1851 The Childs Little Thinker, A Practical Spelling Book, was a poor book, even though it was reported that he taught for 25 years. It began with a Code I approach and added analytic phonics on vowel sounds later. Burleigh had also written what was apparently an upper-level reader, The American Manual, largely patriotic and civic material and including a copy of the Constitution, on which Lippincott had published the 15th edition by 1854. Lippincott also published other Burleigh materials shown above. Yet The Thinker Series of School Readers, with four books, by Joseph Bartlett Burleigh, LL. D., was published by Claxton, Remsen & Haffelfinger of Philadelphia. The Claxton company had also been agents for the Cincinnati publishers of the McGuffey Readers and Ray’s arithmetics, and of other materials, but the only traces I have found of Claxton are in the American Catalogues and in Early American textbooks.

Lippincott was publishing at least by 1857 Grigg & Elliot’s series that Grigg & Elliot had called their “New” series. Lippincott used the title, Grigg and Elliot Common School Readers. A Harvard copy that
had been published by Grigg & Elliot of Philadelphia stated, “This little volume is intended to be used as a First Reading Book, after the Spelling Book.” Besides that “sound” note of starting with the spelling book, the first story was syllabicated. The Grigg & Elliot material obviously was not strongly “meaning” oriented, even though some selections are really object lessons.

The 1860 Sargent book was a Code 1 book, It was possibly not set up in print until 1865. The Harvard copy was published in 1865 by John L. Shorey, Boston; J. B. Lippincott, Philadelphia; and W. I. Pooley & Co., New York, and indicated that it had been set up in print by University Press, Cambridge. Lippincott seemed to act primarily in that earlier period as the Philadelphia publisher for such books on which the primary publisher was located elsewhere, or to act as a later publisher of materials which had originally been published by other companies. One of the most notable was Cooledge, who had been the publisher in the 1840’s of the famous Pierpont readers which had come out from the 1820’s to 1830’s. The 1860 Sargent book is the only material I have found before 1877 which was set up by University Press in Cambridge, the official press for Harvard. Although University Press was a privately owned press and did print non-Harvard materials as well as Harvard materials, its use on the Sargent material could have been associated with someone at Harvard in 1860, or, more probably, in 1865. The Preface of Sargent’s book read, “As in the author’s previous work for the young, the principle here adopted, that the system of teaching children familiar words in little stories, at the outset, before drilling them in meaningless syllables, is the most effective process of instruction in reading.” A table gave “exercises” in vowel sounds, obviously for elocution.)

Willson’s materials, first published by Harper in 1860, were pure “meaning,” Code One. See the notes on Willson under the Harper entry. His last series published by Lippincott in 1881 is shown in Early American Textbooks. Willson’s 1860 Harper materials appear to have been very popular, as might have been Harper’s United States Series of 1872, listed on pages 112 and 113 of Early American Textbooks and credited to Willson. However, Willson’s 1881 Lippincott material appears not to have been popular. Yet only Willson’s 1860 School and Family Series is listed in the 1876 American Catalogue, and Willson’s 1872 and 1881 material do not appear. That may be an omission, or it may be an indication that there really was only one Willson reading series, which was retitled in later editions as “United States” and as “Popular.” Early American Textbooks shows on page 101 that The Popular Series Fifth Reader was published by American Book in 1895. If that was Willson’s text, American Book may have taken over Willson’s Popular Series by that date. The only materials of Willson’s in print in 1912 were his “Primer” and his “Readers,” first and third, by American Book, with no indication of whether they were originally the Harper 1860 or 1872 texts, or the Lippincott 1881 texts. Willson’s materials were apparently out of print by 1928. Willson’s 1881 Popular Series may be assumed to have been A MEANING APPROACH.

The material by Eben H. Davis, published by Lippincott in 1889-1890, is listed in the 1885-1890 American Catalog as Lippincott’s New Series of Readers in four volumes: Beginner’s Reading Book, Second Reading Book, 3d and 4th, with Teacher’s Edition for the Beginner’s Reading Book. It is evident from the page numbers that Part II, published later by University, was largely the Teacher’s Edition. Why University Publishing Co. published The Beginner’s Reading Book in two sections in 1891 and 1899, one obviously containing the original teacher’s edition because of its size, when the original publisher, Lippincott, was itself in business, can only be surmised. The whole Eben H. Davis 1889-1890 series was in print by American Book in 1912 according to the United States Catalog.

Eben H. Davis’s material of 1889 used the sentence method with credit to Farnham and was one of the first reading series to do so. It was also one of the first reading series officially to endorse the teaching of “literature,” which was being demanded by President Eliot of Harvard about that time. Of course, Henry Cabot Lodge had edited a collection of fairy tales for the Boston schools in 1879, and Jenny H. Stickney, who had been Principal of the Boston school’s Training School, had her Classics for Children -
A Primer published by Ginn of Boston in 1885. Stickney’s primer had announced it was to be followed by a classic series, which soon was published, and it also used the sentence method, so Davis’ material was not the first. Also, Ellen M. Cyr of Cambridge, Massachusetts, had published The Interstate Primer and First Reader which emphasized literature in 1886. All these texts were long before Nila Banton Smith claimed the “literature” approach first became the theme of reading series, and long, long before Smith claimed the Farnham “sentence” approach became popular. The 1889 Harvard copy of The Beginner’s Reading Book, published by J. B. Lippincott Co. in Philadelphia, which used the sentence method with credit to Farnham and which endorsed the teaching of literature was Code I, A MEANING APPROACH.

The 1910 and later Lippincott series by Homer Lewis and E. P. Lewis was still on sale in 1928, as was Lippincott’s silent reading material of 1925 (listed in the U. S. Catalog as 1926). The “Preface” to Lewis’s 1910 A.B.C. Primer read in part, “to teach the child, easily and rapidly, to read is the sole aim.... his interests [are] followed... to master the symbols of written speech.... For this reason most ... lessons are based upon Mother Goose rhymes and stanzas of high class poetry... to be read by the teacher and memorized by the children.... [new] words... in each lesson [are] the least that will admit of an idea being fully rounded out in one lesson... given at least three times.... The child will come into possession of the smallest working vocabulary...the commonest and simplest words... to be most easily acquired.... [The vocabulary] has been made largely phonetic... [hope all helps] child to grasp the thought.” The material was clearly A MEANING APPROACH POSSIBLY WITH SOMETHING BETTER THAN PHONY PHONICS.

Rudolf Flesch, in his famous 1955 best-seller, Why Johnny Can’t Read, Harper & Row, New York, discussed the wonderful results from the 1948 Hay and Wingo phonics program. The Hay and Wingo materials were an oasis in the American publishing desert of “meaning” reading series.

The Walcutt and McCracken phonic materials were among those used in the 1967 U.S.O.E. first-grade studies. They scored high, particularly on spelling and oral reading, which, as discussed in this history, are the only valid indicators of reading achievement. The Walcutt and McCracken materials prepared for Lippincott were listed approvingly as one of “The Phonic Five” on page 9 of Rudolf Flesch’s Why Johnny STILL Can’t Read, Harper & Row, 1981. The materials had several revisions by that date since their appearance in 1963. In 1963, Lippincott had first put out that very widely used truly phonic series. It was, however, always very weak because it stretched out the introduction of phonic material over an inordinately long period of time, and was geared far too completely to the teaching of phonemes only in whole words. Dr. Walcutt, its co-author, was adamantly opposed to sounding-and-blending synthetic phonics and only endorsed analytic phonics from whole words. By contrast, the Open Court program, despite an unusual phonic sequence, covered all phonemes by about Christmas of first grade and had fewer failures.

The Lippincott series became watered down in subsequent revisions over the years, and the very old Lippincott company eventually went out of business, being absorbed by Scribner’s before 1987, and the McCracken-Walcutt phonic series was taken over by Scribner’s. The Lippincott materials, while inadequate, had been truly phonic materials, but they were totally rewritten by Scribner in 1987 and 1989. These new Scribner materials have a massive and ludicrous emphasis on “meaning” in the first grade, although arranged to follow (in a highly inadequate and highly unsatisfactory fashion) the original Walcutt-McCracken Lippincott sequence for introducing letter sounds. In the Scribner edition, the introduction of phonemes, which had already been far too slow in the Lippincott materials, was not finished for average students until well into second grade. Yet competent phonic programs cover all the sounds in about the first half-year of first grade. The inadequacy of the Scribner revision has been discussed in this history. In my opinion, the 1987 and 1989 Scribner programs based on the former Lippincott materials do not qualify as true phonics programs and should be totally avoided.
I heard a discouraged salesman who had handled the Lippincott materials say about 1985, “The phonics battle has already been fought and lost.”

Veatch, Jeanette
G. P. Putnam’s Sons, New York

Elizabeth Peabody’s 1849 book, discussed in Appendix B, rated a Code 4 but if taught by sight as recommended in a note on the bottom of page 12, Code 2. It is a crazy, mixed-up mess attempting to be phonic and attempting to follow Latin pronunciations. Elizabeth Peabody published the Boston edition, but G. P. Putnam published the New York edition. It used A MEANING APPROACH FOR ENGLISH PRINT WITH A LUNATIC VERSION OF LATIN PHONICS.

As noted under Houghton, Mifflin’s entries, Putnam temporarily left the publishing business in 1862 until 1866, and Hurd, Houghton of Boston, presumably Houghton, Mifflin’s predecessor, temporarily
took over his New York facilities. From the entries shown above, by 1892 Putnam joined with a “Potter,” possibly J. E. Potter whose entries are also shown above. Eventually the company became G. P. Putnam’s Sons, New York.

The 1879 Putnam Reading Book of English Classics for Young Pupils was not a beginning book, but an apparent early reaction to the call for classics for children emanating from President Eliot of Harvard and his associates. Charles Frances Adams was greatly concerned with the changes in Quincy, Massachusetts. Since Adams’ unrelated books on railroads were published by Putnam, it is of interest that Putnam also put out this book of “classics” for young children in 1879, at the time that the Quincy and Boston educational changes were receiving so much publicity. Did Putnam receive the suggestion to publish such a book from Adams and his associates, who at that very time were busy promoting literature in Quincy and Boston for young pupils? (Also see the Estes entries concerning a possible tie between Adams and the publishing of children’s literature.)

The New Script Primer of 1892 has been discussed in this history. It was still in print by Silver in 1912 according to the United States Catalog. It was Code I material, A MEANING APPROACH.

The Wake-Robin Series was listed in the American Catalogue for 1895-1900 as two volumes, volume I for 30 cents and volume 2 for 36 cents. It did not appear as published by Potter & Putnam in the 1912 United States Catalog, but very probably was the same as the material shown as published by “Silver,” listed under “Readers, Biographical,” “Wake-Robin Series of Biography,” in three books, with book I for 36 cents, book 2 for 42 cents, and book 3 for 54 cents. Wake-Robin Book I was listed as one of the approved books at second grade for New York City schools in Taylor’s 1912 book on teaching reading. Taylor’s book is listed in Appendix D. The Wake-Robin Series was obviously, therefore, not a reading series since Book I was placed at the second grade level by the New York City schools.

Florence C. Fox, who wrote the 1918 Fox Readers for Putnam, had obviously prospered from the time she had written her 1906 Indian Primer for American Book. In 1916, she wrote “Elementary Education, 1916” published by the Department of the Interior, Bureau of Education. The title on the material showed she was “Specialist in Educational Systems, Bureau of Education.” The publication was a reprint of Chapter VI from the “Report of the Commissioner of Education for the year ended June 20, 1916.” It can be described as material cloned from that produced by the reigning “experts,” the names appearing in it being Dewey, Flexner, Judd, Courtis, Gray, Thorndike, Frank McMurry, the General Education Board, and so on, ad nauseum. On page 103, Fox said:

“In the teaching of beginning reading, the tendency for the last two years has seemed to be back toward the mechanical preparation on a phonic basis. While an occasional method has appeared that was based upon the technique of reading rather than on the “thought-getting” process, the general trend has been for a combination of the thought and phonic method. Recently, several of the book companies have issued systems of teaching reading which are wholly mechanical for the first few weeks of school, merging gradually into the content reading after the phonic drills have been given.”

Fox’s slightly garbled testimony was that some series which made ritual bows to meaning but taught real phonics had reached the market in the last few years before 1916. Yet only a very few omitted the bow to meaning at the very beginning of reading instruction. She obviously disapproved and her 1918 material probably made no such “error.” Fox had preceded her comment on reading with this statement:

“The problem of reading is one of the most important in primary education at the present time. Elimination of waste is undoubtedly needed in this subject. Reports received by the Bureau of Education indicate the urgent need for investigation of the many types of methods of teaching
reading. The need of experiment stations where the subject can be scientifically studied is sadly felt; to carry on a satisfactory investigation otherwise is well-nigh impossible.”

Fox was promoting in 1916 the kind of “experiment” centers we now have at government expense, which labor mightily and rarely bring forth even mice.

In September, 1922, four years later, Florence C. Fox wrote the four-page Teachers’ Leaflet No. 10, Tendencies in Primary Education, published by the Department of the Interior, Bureau of Education, Washington. It was “au courant” on trends, but made the startling statement that one out of four first graders was failing. If true, (with emphasis on the “if,”) that was a sharp increase since 1909 when Leonard Porter Ayres had published his reliable statistics showing far fewer failures. Ayres’ study, Laggards in Our Schools, published in 1909 by the Russell Sage Foundation, New York, contained a graph concerning the promotions in all grades, not just the first, of 14,762 children in 28 cities. It demonstrated that most children were in the right grades for their ages or only a year behind or ahead. Very, very few were more than two years behind. Yet, if one out of four children were failing at first grade by 1922, many more must have been two years or more behind by the time they reached the upper grades. However, by 1922, “meaning” approaches and silent reading were crowding out “sound” in many first-grade classrooms all over the country because of “expert” influence, and increased first-grade reading failures were inevitable. Nevertheless, supplementary phonics charts were in use in the primary grades all over the country until 1930, their use at least in first grade being confirmed by Arthur Irving Gates himself, in his March, 1925, Columbia Teachers College Record article, “Problems in Beginning Reading.” Therefore, many of the failures that resulted from teaching silent reading to beginners were being remediated by use of these supplementary phonics charts, until Gates’ “intrinsic phonics” method displaced the supplementary phonics charts after 1930.

Fox said on page 8 of her 1922 leaflet:

“Silent reading. - Perhaps the most notable innovation in methods of teaching is the universal emphasis which is being placed on silent reading. Every effort is being made to encourage the child to read silently and to form a habit which will serve him better than any other in his later life, the ability to interpret the printed page rapidly and intelligently and to enjoy the process.”

Yet NOTHING is more lethal for beginning readers than “silent reading”!

It can be presumed from Fox’s background that any material she wrote, such as her 1918 series for Putnam, probably used A MEANING EMPHASIS WITH PHONY PHONICS.

1857-1866 (1876 American Catalogue under Readers; Harvard copy of 1858 Primer and 1860 First Reader; Many copies listed in Early American Textbooks)
The National Series [a Code I “meaning” approach] (National School Primer 25c, National First Reader 38c, Second 63c, Third $1, Fourth $1.50, Fifth $1.88.)
Parker, Richard Green and James Madison Watson
A. S. Barnes & Burr, New York
1859 (Page 90, Early American Textbooks)
The North-Carolina Reader, No. 2
Hubbard, Frank McKinney
A. S. Barnes & Burr, New York; E. J. Hale & Son, Fayetteville, N. C.; W. L. Pomeroy, N. C.
1864 (In 1876 American Catalogue under Primers)
Easy Lessons: Key to National School Tablets, 25c.
Scofield, S. R.
Barnes.
1867 (In 1876 American Catalogue)
Common School Reading, $1.25 Barnes; $1.50 Bancroft.
Swett, John (Also Bancroft 1883 readers with J. Royce and C. H. Allen)
1872?-1875 (Harvard copy of 1875 The Independent Primary Reader; Library of Congress copy of 1872 Independent Child’s Speller; this and other Barnes series were cited in their advertisements in back of other texts. Listed in 1876 American Catalog as 7 vol. series)
The Independent Series [a partial phonics approach]
Watson, J. Madison
A. S. Barnes & Co., New York, Chicago, and New Orleans
1876 or Before (In 1876 American Catalogue under Readers)
Independent First Reader, in Phonetic Type - 25c
Leigh, Edwin
A. S. Barnes & Co., New York, Chicago, and New Orleans
1876 or Before (In 1876 American Catalogue under Primers)
National School Primer, 25c
Parker, R. G. and J. Watson
National Primer in Phonetic Type by Edwin Leigh, 25c
A. S. Barnes & Co., New York, Chicago, and New Orleans
1876 or Before (In 1876 American Catalogue under Primers)
Copy-Book Primer: Elements of Reading and Writing Combined. 30c
Love, J. D.
A. S. Barnes & Co., New York, Chicago, and New Orleans
1876 or Before (In 1876 American Catalogue under Readers)
High School Literature: Sel. of Readings. 3d ed. $1.75.
Monmonier, J. F., and J. N. McJilton
A. S. Barnes & Co., New York, Chicago, and New Orleans
1882-1884 (In 1928 United States Catalog sold by American Book Company. Also see New Barnes Readers, a different series sold by Laidlaw)
Barnes’s New National Readers, 1st-5th [Code I “meaning” approach]
Barnes, Charles J. and John Marshall Hawkes
A. S. Barnes & Co., New York, Chicago, and New Orleans
1886 (In 1885-1890 American Catalogue under Primers)
North Carolina Primer (Per doz., 45c)
Alfr. Williams
1886 (In 1885-1890 American Catalogue under Readers, p. 173)
North Carolina Readers, Nos. 1-3
Wiley and Hubbard (No initials given. Apparent revision of 1855 above)
A. S. Barnes & Co., New York, Chicago and New Orleans
1916 (Reviewed by W. S. Gray in Elementary School Journal., 1917-18, p. 38)
The New Barnes Primer and Manual, The Kearny Plan
Robbins, May - Primary Supt., Kearny, N. J; Herman Dressel, Supt. of Schools, Kearny, N. J.; Ellis U.
Graff, Supt. of Schools, Indianapolis, Indiana.
“A. S. Barnes” was the publisher in 1916, per W. S. Gray. It was presumably a division of American
Book if Gray was correct. See Laidlaw, below, as 1924 publisher.
1924 (Per A. I. Gates, Teachers College Record, Problems in Beginning Reading, March, 1925, and
Writer’s Copy of Book Six)
New Barnes Readers
Dressel, Herman; May Robbins, Ellis U. Graff
Laidlaw Brothers, Chicago - New York (See entry under Laidlaw as well)

“Barnes” is listed in the 1876 American Catalogue as having published Parker’s reading series which
dated from 1849, so possibly Barnes had been in business at least from that date. How long Barnes had
been in business, whether from that date or possibly from before that date, is unknown but an object
lesson text is available with their imprint from 1862. In 1890, Barnes merged with Appleton, Ivison,
Blakeman and Van Antwerp, Bragg to form American Book Company.

Richard Green Parker, former Principal of the Franklin Grammar School, Boston, and the author of
the 1849-1852 School Readers, had written Progressive Exercises in English Composition in 1832, a
composition book which was in wide use over a long period of time. In 1857-1866, Parker and James
Madison Watson wrote the National Series, a Code 1 “meaning” approach, which was widely used for a
long period of time, as discussed in this history. Early American Textbooks lists many volumes from the
National Series. It used A MEANING APPROACH.

James Madison Watson wrote the Independent Series which came out from 1872 (?) to 1875, and
which used some real phonics. It was A MEANING APPROACH WITH PARTIAL TRUE PHONICS.

The Leypoldt 1876 American Catalogue listed the “1855” materials, the North Carolina Readers, as
published by Barnes, with Hubbard having written books 1 and 2, and Wiley having written book 3. The
American Catalogue only listed new materials after its original 1876 edition, so its 1885-1890 edition
showing the North Carolina Primer and Readers for 1886 indicated they were revised in that year.
APPROACH IS UNKNOWN.

Early American Textbooks - 1775-1900, shows New National Readers published by American Book
and written by Charles J. Barnes and J. Marshall Hawkes as a series separate from Barnes New National
Readers of A. S. Barnes & Company. Yet, according to Nietz, page 102, both are the series written by
Barnes and Hawkes. This is supported by the fact that the New National Fourth and Fifth Readers of 1884
which Early American Textbooks listed as having been published by American Book Company in that
year (an impossibility, since American Book Company was formed in 1890) are listed in the
contemporary American Catalogue of 1885-1890 as having been published in 1884 by A. S. Barnes.
Barnes’s New National Readers have been discussed earlier in this history. Barnes’s New National
Readers were still in print when both the 1912 and 1928 American Catalogs were published and were for
sale by American Book Company. The 1882-1884 Barnes’s New National Readers sold by American
Book in 1928 should not be confused with the unrelated 1916-1924 New Barnes Readers, “The Kearny
Plan,” sold by Laidlaw at least from 1924, also in print in 1928. The 1882-1884 Barnes’s New National
Readers used a Code 1 MEANING APPROACH.
Three sources of information are available on The New Barnes Readers - The Kearny Plan, 1916-1924, by Herman Dressel, Superintendent of Schools, Kearny, N. J.; May Robbins, Primary Superintendent, Kearny, N. J.; and Ellis U. Graff, Superintendent of Schools, Indianapolis. One source is my own copy of Book Six from a used book store which shows a copyright date only of 1924. The second source is a reference in Arthur I. Gates’ March, 1925, article in Teachers College Record, “Problems in Beginning Reading Suggested by an Analysis of Twenty-One Courses.” The third is a review of the 1916 New Barnes Primer by William Scott Gray in the 1917-1918 Elementary School Journal, page 38. In a footnote, Gray cited the publisher as A. S. Barnes, but A. S. Barnes was absorbed by American Book Company in 1890. Therefore, Barnes in 1916 almost certainly would have been an American Book Company subsidiary. However, Gray’s listing of Barnes may have been in error. Gray wrote:

“The New Barnes Primer assumes that reading is a thought-getting process. The first two lessons attempt to develop a basic vocabulary by means of exercises involving a large amount of repetition. Beyond the first ten pages, the lessons are based on interesting, familiar stories such as the “Three Bears,” the “Three Little Pigs,” etc. The distinctive feature of The New Barnes Primer is that silent reading is emphasized from the beginning in order to train pupils to secure the meaning of what is read. The manual provides suggestions for training in word analysis during drill periods.”

Gray did not name the authors. However, Gates did in his 1925 summary of 21 programs:

Gates commented in the body of his article, with statistical tables to support his comment, that all the 21 series he listed gave heavy supplementary phonic drill.

My copy of Book Six of The New Barnes Readers - The Kearny Plan, shows it was copyrighted by Laidlaw Brothers, Chicago and New York, in 1924, and it lists the same three authors as shown by Gates for 1916, giving their affiliations and the fact that The New Barnes Readers were subtitled, “The Kearny Plan.”

Sorting all of this out suggests the whole series probably came out about 1916, possibly published by an American Book subsidiary, but it then was acquired by Laidlaw, some time before 1924. Presumably there would not have been an eight-year hiatus (1916-1924) from the arrival of the primer in 1916, confirmed by Gray in 1916 and Gates in 1925, to the arrival of book six in 1924, which my copyrighted copy might otherwise seem to suggest. From combining Gates’ and Gray’s comments on the 1916 manual, it can be assumed the material was A MEANING APPROACH WITH HEAVY SUPPLEMENTARY PHONIC DRILL.

#Publishers First Appearing in This List Between 1850 and 1860

1850 (Harvard copy)
Illustrated Primer
(On title page of Harvard copy; cover shows only Primer)
D. Lothrop & Co., Boston
1875 (In 1876 American Catalogue under Primers)
Illustrated Primer (40 cents)
D. Lothrop & Co., Boston
1877 (In 1876-1885 American Catalogue under Primers)
Illustrated Primer (New edition) (40c, 25c)
D. Lothrop & Co., Boston
1877 (In 1876-1885 American Catalogue under Primers)
Baby’s Own Primer
D. Lothrop & Co., Boston
1878 (In 1876-1885 American Catalogue)
Easy Reading (25c)
D. Lothrop & Co., Boston
1879 (In 1876-1885 American Catalogue under Primers)
Linen Primer (Linen primers were apparently popular. See Scribner.)
D. Lothrop & Co., Boston
1880 (In 1876-1885 American Catalogue)
Stories for Language Lessons: Reading Pastime (sic) for Little Beginners (50c)
D. Lothrop & Co., Boston
1880 or Before (Listed on p. 27, Sept., 1880, The Primary Teacher)
Periodicals: Wide Awake, $2 a year; The Nursery apparently $2 a year)
D. Lothrop & Co., Boston
1880, 1883 (In 1876-1885 American Catalogue; Advt. in Jan., 1880,
The Primary Teacher, p. 222, and article, p. 27, Sept. 1880)
Little Folks Reader (4c a month, 75c a year, $1 bound copy)
D. Lothrop & Co., Publishers, Boston
1886 (In 1928 United States Catalog)
The Interstate Primer and First Reader (Sold by Lothrop in 1928)
Cyr, Ellen M.
Copyright 1886 by the Interstate Publishing Company
Lothrop Publishing Company (publisher), Boston
1891 (In 1890-1895 American Catalogue)
Helps in Teaching Reading (75 cents)
Hussey, M. S.
Lothrop Publishing Company, Boston
1893 (In 1912 United States Catalog)
Interstate Third Reader
Lovejoy, M. L. (40 cents)
Lothrop
1904 (1900-1905 Am. Cat. by Lothrop; 1912-1928 U.S. Cat. by Little)
Wide Awake Primer
Murray, Clara - Pseudonym for Eva Austin Blaisdell (McDonald) for whom
see other entries under Little, Globe School Book and Macmillan
and N. B. Smith, p. 218 and 434)
Lothrop
(Pub. by Little, Brown & Company, Boston, by 1912 and 1928. 1928 U. S. Cat. also shows Junior Primer
pub. by Little. Wide Awake First (1906), Second (1908), Third (by 1912), Fourth (by 1928) also
Awake Primer and New Wide Awake Readers, lst-4th, 1929, by “C. Murray,” published by Little.)
1912 or Before (In 1912 United States Catalog)
Primary Script Reader
Oliver, F. E.
Lothrop
1912 or Before, Probably About 1893 (In 1912 United States Catalog)
Brown Interstate Second Reader
Brown, K. L.
Lothrop
1912 or Before, Probably About 1890 (In 1912 United States Catalog)
Tweed’s Graded Supplementary Readers
Lothrop

Note the heavy publishing of “primers” by Lothrop of Boston in the Boston/Quincy change-agent time-frame from 1877 through 1880. No other companies even approached Lothrop’s record of primer production, according to the American Catalogues for those years. Lothrop also became the first publisher for Cyr’s heavily “meaning”-approach materials, and also were the publishers of the apparent change-agent Interstate materials. Furthermore, some time before 1900, Lothrop apparently absorbed the Boston publisher, Lee & Shepard, who had promoted “sound” approach materials in the 1860’s and 1870’s. See entries for Lee & Shepard books, some of which Lothrop published after 1900. Lee & Shepard disappeared from the records I have seen after 1897, but Lothrop still had material in print when the 1928 United States Catalog was published. A 1975 copy of the sixth edition of How to Increase Reading Ability by Albert J. Harris and Edward R. Sipay listed publishers in Appendix C, and showed Lothrop, Lee and Shepard Co., Inc., at 105 Madison Avenue, New York, New York. At what time the name change was made from Lothrop Publishing Company is unknown.

Harvard’s copy of Lothrop’s 1850 Illustrated Primer contained an alphabet followed with pictures with phrases under them, then pictures with paragraphs apparently excerpted from other books. Disconnected and disorganized, its purpose is puzzling. The pictures are EXCELLENT. Presumably the later editions were more elaborate.

A great deal of information about the state of things in 1880 can be gleaned from a January, 1880, full-page advertisement for Lothrop’s The Little Folks’ Reader. The Primary Teacher carried this advertisement on page 222, and it read:

“To Teachers, Superintendents, and School Boards. The Little Folks’ Reader Is prepared to meet the rapidly-growing demand from the Public Schools of America for Fresh Reading Every Month, and of a character more fully adapted to the real wants than any at present supplied. It is believed that this Serial Reader, with its bright, suggestive, simple Stories and Poems, the Object-lessons, it large, clear type, and its beautiful pictures, will be Thoroughly Helpful to the Little Beginners, Assisting them to “Read at Sight,” Thoroughly Helpful and Suggestive to Teachers, Thoroughly Delightful to both Scholars and Teachers. The “building idea” of the Reader is that the child’s EYE readily becomes acquainted with any word, however long, with which his EAR is already familiar, the associations aroused assisting to fasten the eye UPON THE FORM OF THE WORD, in an intelligent and reflective manner; also awakening curiosity and interest in the child’s mind. Thus the exercise of reading becomes normal and spontaneous instead of mechanical.

“The New-England Journal of Education says: ‘If anything in this world will stimulate boys and girls to learn to read, and at the same time teach them to use their eyes, and think of what they behold around them, this charming LITTLE FOLKS’ READER will do it.’

“The LITTLE FOLKS’ READER has the hearty sanction of Dr. Samuel Eliot, Superintendent of Schools in Boston, where it has just been adopted in the primary departments.
The Educational Weekly says: ‘D. Lothrop & Co., Boston, the children’s publishers, have at last given us “the very thing” in the LITTLE FOLKS READER. Its type and illustrations are clear and artistic.’

The Vt. Phoenix says: ‘Messrs. D. Lothrop & Co., Boston, have begun a real missionary work in the cause of primary education.’

The Cambridge Jeffersonian says: ‘No better primary reader ever came from the press.’

The Moravian says: ‘The LITTLE FOLKS’ READER is “a new departure,” and looks very much like a “royal road to learning,” or a near approach to it.’

The Teachers’ Advocate says: ‘A move in the right direction has been made by D. Lothrop & Co., of Boston, in the way of furnishing fresh reading for the primary pupils of our schools. Our men want fresh news every day, and find it in the daily paper. Our ladies have their weekly and monthly magazines, and there is no reason why our children should not have a new reader once a month, especially when one can be had for four cents. We are not paid for advertising the LITTLE FOLKS’ READER, but we feel that the enterprise is worthy of free and full notice, and we hope the project may meet with that success which it deserves.’

The publishers know the only proof is in seeing and testing, hence they will gladly send specimen of the first number with terms of supply, to EVERY SUPERINTENDENT OF SCHOOLS IN AMERICA, and to EVERY PRIMARY SCHOOL TEACHER who will send address to D. Lothrop & Co., Publishers....

The last gushing 1880 endorsement for this obviously Code 1, sight-word, “meaning” material published in Boston for rank beginners in reading came from a publication called “The Teachers Advocate.” How could that magazine have assumed such a false title? Only two years before, virtually every primary school in the city of Boston (and that means virtually every primary school teacher in the city of Boston) had voluntarily adopted Leigh phonics for beginners, because of its great success. Yet this “advocate” was endorsing a pure sight-word approach, obviously in opposition to the wishes of the vast majority of Boston primary teachers.

The gushing advertisements recall those concerning the 1826 Franklin Primer. Concerning that enormously harmful earlier “meaning” material, meant to replace the “sound” approach Webster-type spellers, the change-agents at that time had obviously banded together to promote it, as those advertisements which have been quoted earlier establish. As has been discussed elsewhere in this history, the Franklin Primer of 1826 and the higher books in that series had even received an endorsement in a Paris journal! These 1880 probably-orchestrated endorsements were more sedate, but notice the use of the buzz-word, “new departure.” Charles Francis Adams, Jr., used that expression in the title of his article praising the change-agent work he and his brother had accomplished in Quincy, when Colonel Parker was hired. Notice the reference to Superintendent Eliot in Boston. Superintendent Philbrick, who had brought Leigh phonics to Boston, was fired in March, 1878, and replaced by Superintendent Eliot. Only a few months later, the new primary course of study implicitly outlawed Leigh phonics (“sound”) and installed the sentence “meaning” method for beginners, even though Leigh phonics had been voluntarily adopted by that time by almost every primary school in Boston.

Notice the blunt admission by one of the endorsers of this Lothrop monthly material, “The Vt. Phoenix,” that the material was change-agent stuff. That endorsement read, “Messrs. D. Lothrop & Co., Boston, have begun a real missionary work in the cause of primary education.” Leigh phonics (“sound”) had been quietly outlawed in Boston by January, 1880, but now Lothrop, with its “missionary work,” was
reaching out to the entire United States to promote the pure Code 1, sight-word, “meaning” approach, with its offer to:

“...gladly send specimen of the first number with terms of supply, to EVERY SUPERINTENDENT OF SCHOOLS IN AMERICA, and to EVERY PRIMARY SCHOOL TEACHER who will send address to D. Lothrop.”

The small but “missionary” Lothrop company must have had access to bankers who were willing to provide any necessary loans, or they would not have been able to make such an offer. Even in the smaller America of that time, that could have been a very expensive operation. It is obvious from the description in the 1880 advertisement that the widely promoted Little Folks’ Reader used for beginners a pure Code 1 MEANING APPROACH.

Lothrop was still selling the Interstate readers in 1912, according to the 1912 United States Catalog of books in print in that year. The Interstate Primer and First Reader was still in print by Lothrop in the 1928 United States Catalog, but the other books were not listed.

With their publishing Cyr’s work, who was an author of “meaning” materials, and with their Boston location, Lothrop appears to have been on the side of the “experts” in the Boston move to “meaning” in beginning reading instruction after 1878. The Interstate/Lothrop materials, on which Cyr wrote the beginning level book, may be presumed to use A MEANING APPROACH.

The books by “Clara Murray,” who also wrote under her real names, Eva Austin Blaisdell (McDonald), are discussed under Little, Brown & Company, Macmillan Company and Globe School Book Company entries. Her books used A MEANING APPROACH WITH PHONY PHONICS.

CONCERNING THE HARPER COMPANY, SEE LATER ENTRIES FOR HARPER & ROW

Circa 1850 English Edition
Reading Without Tears, Or A Pleasant Mode Of Learning To Read
Mortimer, Mrs. Favel Lee (Bevan)
Varty and Owen, London, England (Probable Publisher)
1860 (In 1928 U. S. Cat., p. 2360, by Longman; Harvard 1860 copy.)
Reading Without Tears
“By the Author of Peep of Day” (Mrs. Favel Lee [Bevan] Mortimer)
Harper & Brothers, New York
1860 (1876 Am. Cat.; Harvard has Primer, First, and prob. others)
Harper’s School and Family Readers (Primer, First-Fifth and Spellers)
Willson, Marcius
Harper & Brothers, New York
1863 (Harvard copy)
Little Pet Primer, The Hobart Hall Reading Without Tears
By The Rector
Alexander Fleming, New York
1872 (In Early American Textbooks)
Harper’s United States Series (Probably Primer, Plus First-Fifth)
Willson, Marcius
Harper & Brothers, New York
1880 (In Early American Textbooks, p. 27)
First Lessons in Natural History and Language
Tweed, Benjamin Franklin and L. W. Anderson
Reading Without Tears was a sight-word primer from England, using phony phonics. It was somewhat weaker at its beginning than Mrs. Favel Lee Bevan Mortimer’s 1830’s phony-phonics Reading Disentangled charts which were sold apparently only in England, and which were on the 1848 list of materials approved for government subsidies in England. I obtained copies of those charts from the British Library. The 1830’s charts employed the two-step phony phonics method (learning new words from comparison to a previously learned word) and heavy use of context reading of sight word selections almost from the beginning. Reading Without Tears was reprinted in America by Harper by 1860, and a copy of that edition is in the Harvard libraries. The title was also used in a book published by Alexander Fleming in New York in 1863, Little Pet Primer, Hobart Hall Reading Without Tears, “By the Rector,” a copy of which is also in the Harvard libraries. That different book was a truly phonic text, which Mrs. Mortimer’s was not, and was in no way related to either Mrs. Mortimer’s text or the Harper publishers. Mrs. Mortimer also wrote religious texts for children such as Peep of Day which were popular in England. Her book, Reading Without Tears, was still in print in America by Longman in 1912, and also in 1928 according to the United States Catalog (at the beginning of page 2360). It rated a Code 3 at its beginning, but improved to a Code 5 later. It used A MEANING APPROACH WITH TWO-STEP PHONY PHONICS.

Early American Textbooks shows on page 189 that Marcius Willson wrote History of the United States, published in 1847 by Mark H. Newman & Co., who were the important publishers of Sanders’ readers at that time. The Newman company was one of the predecessors of the Ivison company, which in turn was one of the predecessors of the very important American Book Company formed in 1890. Early American Textbooks commented about his 1847 history book, “Willson’s classic has a detailed table of contents, colored maps, and a complex time chart....” Apparently Willson made his mark as a popular historian, before writing his 1860 Harper reading series, very possibly his first reading series.

Willson’s materials used a pure “meaning,” Code One, approach. In his 1860 Primer, he recommended that teachers read whole sentences first for children to imitate, rather than isolated words, and deplored the spelling of words before reading either whole words or connected text.
Willson’s last series published by Lippincott is shown in Early American Textbooks with editions of 1881, 1882 and 1883, and an apparent reprint in 1895 of the fifth reader by American Book Company, who may have taken over the series. Willson’s Harper materials appear to have been very popular, but not his Lippincott series. Only the 1860 material appears in the 1876 American Catalogue, and the 1881 material is not listed in the 1876-1885 American Catalogue, which may or may not have been an omission. It is possible the three series credited to him, of 1860, 1872, and 1881, were actually the same material being given new names in later editions. The only materials of his in print in 1912 were his “Primer” and his “Readers,” first and third, by American Book, with no indication of which series they matched. His materials were apparently out of print by 1928. The “Harper’s” readers, first to sixth, being sold by American Book Company in 1928, almost certainly were the Bright-Baldwin 1888 Harper series which had been very popular. Willson’s materials used A MEANING APPROACH.

The 1888-1889 Harper series as a whole was edited by James Baldwin and was being published by American Book by 1890. It was still in print as “Harper’s Readers” in 1928 published by American Book. Baldwin later prepared the Baldwin Readers and the 1901 McGuffey Revision for American Book Company, which are listed later. He also prepared in 1911 for American Book an eight-book series with I. C. Bender, according to the 1912 United States Catalog. The Harper’s 1888 series was widely used. The beginning material edited by O. T. Bright used a Code 3 approach. The Harper 1888 series used A MEANING APPROACH WITH PHONY PHONICS

At some point after 1930, Row, Peterson of Chicago may have merged with Harper & Brothers to form Harper and Row. See the entries elsewhere for Row, Peterson followed by Harper and Row.

Harper and Row, presumably the successor to Harper, were the publishers of Rudolf Flesch’s 1955 best-seller, Why Johnny Can’t Read, and his 1981 sequel, Why Johnny STILL Can’t Read. These books are essential reading for anyone who wishes to understand America’s reading problem, and are still in print. Flesch’s 1955 book was, incredibly, the first to draw wide public attention in America to the terrible reading disabilities that resulted from the 1930 change in beginning reading methods. Flesch’s 1955 book resulted in hysterical denials and counter-charges appearing in the contemporary literature from America’s plague of “reading experts.” Yet his 1955 book (and its 1981 sequel) have been virtually ignored in their subsequent heavy (literally) tomes on what they call “reading instruction.” The experts have obviously learned that unthink really works.

1853 (Harvard copy - Code 7)
The New American Primer and Juvenile Preceptor
Ruter, Martin, D. D.,
Published for the Sunday School Union of the Methodist Episcopal Church by Carlton and Phillips, New York
1876 or Before (1876 American Catalogue)
First Lessons in Spelling and Reading, Per doz. $1.80.
Methodist Book Concern
Nashville, Tennessee? (Shown there by Vail in McGuffey history, p. 53)
1876 or Before (1876 Amer. Cat.-“Readers” Sect.; 1928 U. S. Cat.)
Spelling and Reading Book, Per dozen, $1.80.
Methodist Book Concern
Nashville, Tennessee? (Shown there by Vail in McGuffey history, p. 53)
1912 or Before (In 1912 and 1928 United States Catalogs)
Southern Methodist Primer
Pub. House Methodist Episcopal Church Society (In 1912 U. S. Cat.)
Cokesbury Press (In 1928 U. S. Cat.)
The Code 7 1853 primer shown above by Reverend Ruter was very like the old analytic phonics spelling books, beginning with syllabary and blends. It had much gentle, true religious content and was in sharp contrast in its higher religious tone and higher instructional code to the 1853 Code Union Primer of the American Sunday School Union which had been prepared by a nameless committee.

Whether the “Sunday School Union of the Methodist Episcopal Church” of 1853 was the same group as “Methodist Book Concern” from 1876 and “Methodist Book” from 1912 is unknown. However, because the three groups may be the same organization with a changing name, all three entries are shown here.

No information is available on the Methodist books in print by 1876, listed above, from the 1876 American Catalogue, nor on those shown above from the 1912 and 1928 United States Catalogs.

However, A History of the McGuffey Readers by Henry H. Vail, he referred to the Methodist Book Concern, possibly the same as that listed above. He wrote on pages 52 and 53:

“From the location of Cincinnati on the Ohio River, then affording the cheapest means of distributing goods to all parts of the South, Mr. Smith had obtained, before 1860, a very considerable part of the schoolbook trade in the Southern states of the Mississippi Valley. The opening of the Civil War swept this trade away and left on the books of the firm in Cincinnati many accounts not then collectible. The continuance of the war and the constant fluctuation in the price of materials, due to the use of paper money, joined to advancing age and ill health, all combined to lead Mr. Smith to withdraw from business.

“A new firm, Sargent, Wilson & Hinkle, was organized April 20, 1863.... These active partners had long been in this business....

“The Confederate States, at the opening of the War, had within their limits no publisher of schoolbooks which had extensive sales. Nearly all of the schoolbooks used in the South were printed in the North. But there were printing offices and binderies in the South. The children continued to go to school, and the demand for schoolbooks soon became urgent. To meet this demand, a few new schoolbooks were made and copyrighted under the laws of the Confederacy; but others were reprints of Northern books such as were in general use. The Methodist Book Concern of Nashville, Tenn., reprinted the McGuffey Readers and supplied the region south and west of Nashville until the Federal line swept past that city. This action on the part of the Methodist Book Concern had the effect of preserving the market for these readers, so that as soon as any part of the South was strongly occupied by the Federal forces, orders came to the Cincinnati publishers for fresh supplies of the McGuffey Readers. This unexpected preservation of trade was of great benefit to the firm of Sargent, Wilson & Hinkle.”

Presumably the Methodist Book Concern reading materials listed above had no connection with the McGuffey materials which Methodist Book Concern printed during the Civil War. However, Vail’s entry suggests that the Methodist Book Concern may have been principally located in Nashville, Tennessee.

1855-1858
Progressive Readers (From Nietz, p. 93-94, 103)
Osgood, Lucius.
1870-1873 Revision (In 1876 Amer. Cat.; In Early Amer. Textbooks)
Osgood’s American Series of Readers
A. H. English & Co., Pittsburgh
1881 or Before (From copy of Sheldon’s Modern School First Reader)
Osgood’s Modern Series (name uncertain)
Osgood, Lucius
Sheldon & Company, (8 Murray Street), N. Y. and Chicago (N. Y. Address from March, 1880, Appendix to 1876 Amer. Cat. - Authors and Titles)

John A. Nietz said the Osgood readers were first published from 1855 to 1858, and mentioned them on pages 93-94 and 103 of his book, Old Textbooks, University of Pittsburgh Press, 1961. Nietz said:

“These constituted the most popular series of textbooks ever published in Pittsburgh.”

One of Osgood’s series or a revision of his material was sold in 1881 by Sheldon, advertised on Harvard’s copy of the Sheldon 1881 first reader. The Osgood Progressive series was unrelated to the once very widely used The Progressive Series by Salem Town and Nelson M. Holbrook which was being published by 1855. The Town and Holbrook series was apparently out of print when the 1876 American Catalogue was published. The Osgood Series was revised in 1870-1872 as Osgood’s American Series of Readers, Primer to Sixth and was listed as such in the American Catalogue for 1876, and may be the material being sold by Sheldon in 1881.

Osgood’s material was not in print in 1912 according to the 1912 United States Catalog. However, because of its huge popularity and the possible confusion of the Osgood Progressive material with the widely used 1855 Town and Holbrook Progressive series (which was apparently out of print when the 1876 American Catalogue was published), Osgood’s material is included here. From Nietz’s description of the 1855 series and reproduction of a primer page, the 1855 Osgood series, and probably the 1870 series and Sheldon material, used A MEANING APPROACH.

1856 (In Early American Textbooks, page 111)

Choice Literature, New Ed., 7 Bks.
Williams, Sherman, Compiler
American Book Company

Harvard’s copy of The Word Method Primer of 1857 published in 1863 gave no author’s name but
internal notes show it was written by a woman and was meant to accompany J. R. Webb’s series. Her
initials, W. H., were later given in the 1876 American Catalogue. The 108-page primer had a controlled
vocabulary of 468 words.

See the entries elsewhere on J. R. Webb’s books. Nila Banton Smith dated John’s First Book or The
Child’s First Reader by J. R. Webb to 1846, and said J. R. Webb completed his series of Normal Readers
by 1855. See the discussion on the Webb readers in Appendix B, under the 1851 United States Spelling
Book, Fourth Edition, by Josiah Miles [from Watertown, New York], which was published in 1854 by
Lamport, Blakeman and Law, New York. That publisher also put out Webb’s Normal Primer, Primary
Lessons, “A Series of Cards to be used with Primer and No. 1, Normal Reader,” and also published
Webb’s Nos. 2, 3, 4, 5. The back cover of Miles’ speller read re Webb’s:

“These readers are used in the principal cities and villages throughout the United States and
are rapidly coming into use in the smaller towns of the country... the system of teaching... is the...
WORD METHOD....”

Hon. S. S. Randall, Deputy State Superintendent of New York Common Schools, said about the
Webb readers:

“They are the best practical readers that have come under my notice; they are all and
everything they should be.”

Josiah Miles, the author of the United States Spelling Book, was from Watertown, New York, and
Webb “invented” his word method in a country school near there. See Webb entries under Ivison in this
appendix and in the body of this history. What the relationship was of W. H. Webb to J. R. Webb is
unknown, but there obviously had to be some kind of close connection.

Like J. R. Webb’s materials, W. H. Webb’s text used A MEANING APPROACH.
According to the 1912 United States Catalog, a five-book series called E. A. Sheldon’s Modern School Readers, lst-5th, was on sale by American Book Company in 1912. Yet E. A. Sheldon’s 1876 six-book series had been published by Scribner’s, and had included a primer, which the reprint did not. The probability is that the material being reprinted by American Book by 1912 was actually the Sheldon company 1881-1885 Modern School Readers, and not E. A. Sheldon’s 1876 readers, particularly since E. A. Sheldon’s materials did not carry “modern” in their titles. Harvard library has a copy of Sheldon & Co.’s Modern School First Reader, Sheldon & Company, New York and Chicago, copyrighted in 1881 and published in 1882. It rates a Code 3, A MEANING APPROACH WITH PHONY PHONICS.

The 1898 “Choice Literature” series of Sherman Williams originally published by Sheldon was issued by American Book Company, in books 1 - 7 some time before 1912, along with A Reader for Beginners by “Williams,” as shown in the 1912 United States Catalog, with no notation that it was a new edition. Yet “Choice Literature, New Ed., 7 Bks.” by S. Williams, “Comp.,” was listed in the 1928 United States Catalog without A Reader for Beginners, and showing a publishing date of 1912 by American Book. Harvard library has a copy of Choice Literature Book One for Primary Grades, Compiled and Arranged by Sherman Williams, Superintendent of Schools, Glenn Falls, N. Y., published by Sheldon and Company who copyrighted it in 1898. At the top of the title page appears:

“A series intended to create and foster a taste for good reading.”

On page 4 in the Preface, this appears:

“This series can be used to excellent advantage in teaching children how to read, but it should be borne in mind that the primary purpose of the series is to teach what to read, to create and foster a taste for good literature....”

Under “To the Reader,” this appears:

“This book is made in the belief that many of the old rhymes and tales, such as are herein contained, ‘Children’s Classics,’ if I may so term them, are, or should be, the birthright of every child. They are all very old; many of them so old that their origin is wholly lost. This is notably true of ‘Cinderella.’ Miss Marion Cox... gives three hundred and forty-five variations of the story, and traces it to the literature of nearly every country.... No doubt many of these old stories were originally nature myths...”

E. B. Huey wrote concerning the Sherman Williams material, on pages 345 and 346 of Huey’s book, The Psychology and Pedagogy of Reading:

“The rhymes, jingles and classic child poems and stories presented in such books as Williams’ ‘Choice Literature,’ or the ‘Heart of Oak’ introductory reader, will be listened to with wonder and rapt attention when told or read aloud by the teacher, and will bear repeating many times until many of them will be known throughout by all the children. There need be no hurry to have them read for themselves, as the teacher’s story-telling and reading to them will long continue to be the more effective medium for teaching the literature, just as it was in the old Greek days. However, if the children are supplied with the books, they will delight to follow along with the teacher in the readings, especially if abundant illustrations help them to keep the place. Sometimes the teacher’s copy is a chart which all can see, following the pointer or pictures as the reading progresses, thus becoming familiar with the printed sentences, phrases, and words. Once children know a poem or a story, it is surprising how quickly they can locate its parts on the printed page, and read it. Accordingly, in the books by Miss Taylor, Miss Arnold, and other
successful primer writers, teachers are urged to make much of memorizing poems, especially, as an excellent means of learning to read...."

Nothing in the table of contents of Sherman Williams’ Book I indicates any attempt at teaching reading, so Sherman Williams’ 1898 material, like Charles Eliot Norton’s 1895 (or 1893) Heart of Oak material, obviously endorsed the so-called “natural” method by exposure to literature. A MEANING APPROACH.

The 1899 Aldrich-Forbes Progressive Course five-book series was being published by American Book at the time the 1912 United States Catalog was published. It should not be confused with the Progressive Road to Reading by Burchill, Ettinger and Shimer, published by Silver Burdett in 1909. The first and second book Aldrich-Forbes books are listed in Early American Textbooks, and Harvard has a copy of the First Book, published in 1899 by American Book Company.

Considering that early 1899 publishing date, it is possible the Butler company and the Sheldon publishers who had merged by 1899 were absorbed by American Book about that time, particularly since both Sheldon and Butler seem to disappear from the records after 1899 and American Book appears as the publishers of their earlier books.

The beginning of the 1899 Aldrich-Forbes First Book used the standard approach of the time: sight words in sentences with many pictures, and directions to introduce phonetic lessons later. Too few photocopied pages are available to judge, but the probability is that the book used the standard inadequate phonics, which in actual practice would have been phony phonics. Yet the growth in extensive “supplementary” phonics drill at the blackboard by first-grade teachers was increasing in 1899, so first-grade teachers began to make up for the inadequacies of such primers. Heavy “spelling” was taught by second grade after the late 1880’s, apparently often phonetically, so “spelling” lessons also cushioned the effect from such beginning reading books as this. The complete First Book most probably used A MEANING APPROACH WITH INADEQUATE OR PHONY PHONICS.

1857 (In Early American Textbooks, page 35)
Vocal Culture and Elocution. 480 pages.

Charles E. Merrill Publishing Co., A Division of Bell Howell Company Columbus, Ohio
(The Beginning Reading Instruction Study, published in 1993 by the U. S. Department of Education, listed the publisher of the 1986 edition by Rudolph, Wilson, Young, Waynant and Otto as SRA School Group, Chicago. Science Research Associates at the same address also published the revised Distar program, under the name of Reading Mastery, in 1993.)
1973 edition (date of first edition unknown)
Merrill Phonic Skilltexts (Books A-F, six workbooks)
Wolfe, Josephine B., et al.
Charles E. Merrill Publishing Co., Columbus, Ohio

No connection appears between Maynard, Merrill & Co. of New York in 1887 and Taintor Bros., Merrill & Co. of New York in that period. Nor is there any apparent connection to D. D. Merrill of St. Paul, Minnesota, in 1878, or to The Bobbs-Merrill Co. of Indianapolis, in business by 1909 or before. At some time apparently after 1899, Maynard, Merrill & Co. of New York became Charles E. Merrill Company of New York. At some time after 1925 but before 1965, it became Charles E. Merrill Publishing Co., A Division of Bell Howell Company, Columbus, Ohio.

The name, “Merrill,” as listed above and as in Taintor Brothers, Merrill & Co., occurs in at least five publishing company names, but most of the occurrences are probably unrelated though the possibility that they are related cannot be ruled out. Charles E. Merrill Company of New York were the clear successors to the company of Maynard, Merrill & Co., New York. Maynard, Merrill & Co. were the successors some time after 1881 but by 1887 of the company, Clark & Maynard, of New York, and were still in business under the name of Maynard, Merrill & Co. in 1898. Clark & Maynard had been the successor to Clark, Austin, Maynard & Co., which had been the successor to Clark, Austin & Smith, according to Vail’s account, given below.

Clark, Austin & Smith, and then Clark, Austin, Maynard & Co. after 1861, had been the New York publishers for the McGuffey books until 1862. Their apparent successor (by at least 1868), Clark & Maynard are on record, as shown above, as the New York publishers of at least two books put out by the Cincinnati publishers of the McGuffey series, the first in 1868 and the last in 1870. However, there is no indication that Clark & Maynard of New York published any of the McGuffey readers, though they may well have acted as the New York agents until about 1870.

As early as 1849, Clark, Austin and Smith, had put out the New York edition of McGuffey’s Newly Revised Eclectic Primer copyrighted and published by Winthrop B. Smith, of Cincinnati. Vail’s account, given below, said they and their successor continued as the New York publishers of the McGuffey readers until 1862, when he said the association terminated. However, in 1868, Clark & Maynard of New York, the apparent successor company, published The Phonic Reader, No. 1, which was also published by Wilson, Hinkle & Co., Cincinnati, and Claxton, Remsen & Haffelfinger of Philadelphia. Then, in 1870, Clark & Maynard put out a New York edition of Wilson, Hinkle & Co.’s The Institute Reader and Normal Class Book for the Use of Teachers’ Institutes. The title page on Harvard’s copy clearly shows
the 1870 publishers as Wilson, Hinkle & Co. of Cincinnati and Clark & Maynard of New York. Therefore, despite Vail’s comment, some degree of association between a successor New York firm and the Cincinnati firm continued until at least 1870. That association apparently ceased shortly after 1870 when The Institute Reader... was published.

Henry H. Vail discussed the McGuffey publishers’ New York agency to some degree in A History of the McGuffey Readers (1911) but he left unanswered the question of when the association between the Cincinnati and the New York publishers actually ceased. Vail wrote on pages 51 and 52:

“While books could be manufactured in the West even in the early years cheaper than they could be delivered in the West from the better organized establishments of the older cities of the East, it was not possible to deliver books in New York from Cincinnati so cheaply as the books could be made in the East. The cost of transportation constituted a very considerable element in the price of school books. Mr. Smith therefore made an arrangement with Clark, Austin & Smith, of New York, to become the Eastern publishers of the McGuffey Readers and other books, and a duplicate set of plates was sent to New York. From these plates, editions of the readers were manufactured, largely at Claremont, N. H., bearing on the title page the imprint of Clark, Austin & Smith, New York.

“The Smith of the firm was Cornelius Smith, a brother of Winthrop B. Smith. Cornelius Smith withdrew from this firm before 1861. In that year the war broke out, and this New York firm, which as booksellers and stationers had a large trade in the South, lost not only their custom in that section, but were unable to collect large amounts due them for goods. Clark, Austin, Maynard & Co. failed and Mr. W. B. Smith bought, in 1862, all their assets for the sum of $6,000, placed Mr. W. B. Thalheimer in charge of the business and resumed control of the duplicate plates of the McGuffey Readers.

“...The continuance of the war and the constant fluctuations in the price of materials, due to the use of paper money, joined to advancing age and ill health, all combined to lead Mr. Smith to withdraw from business.

“A new firm, Sargent, Wilson & Hinkle, [Ed.: of Cincinnati] was organized April 20, 1863.... These active partners had long been in this business...”

Sargent, Wilson & Hinkle was not a “new” firm in any real sense. Vail’s comment, “These active partners had long been in this business,” and his remarks elsewhere in his history demonstrated that it was essentially only a reorganization. Presumably, something like that must have happened with the New York firm because it apparently continued in business as Clark & Maynard.

Obviously, Vail’s account left unanswered the name of the New York office after 1862, which may or may not have been Clark, Austin, Maynard & Co., and the facts concerning when the New York affiliation of the Cincinnati publisher with Clark, Austin, Maynard & Co. of New York and its successor, Clark & Maynard of New York, actually ceased. As shown above, as late as 1870, Clark & Maynard in New York were publishing a book of the McGuffey publishers in Cincinnati.

Concerning Clark & Maynard’s later books which showed no affiliation with the Cincinnati publisher, Clark & Maynard had been the publishers at least since 1878 of what seem to have been popular grammars by Alonzo Reed and Brainard Kellogg, as well as literature and business texts. (My mother, aunt and uncle used a copy of the Reed and Kellogg grammar in a little country school outside Carthage, New York, in the 1890’s, which is why I have a very dog-eared and very scribbled-on copy today.) Two of the Clark & Maynard literature texts are shown above.
Also as shown above, Clark & Maynard advertised a speller in 1878 which taught the writing of script, obviously in response to the Quincy emphasis for written spelling, instead of oral spelling. Their advertisement in the December, 1878, Primary Teacher on page 125 said in part:

“Even the youngest pupils are taught to form the script letters and enabled to write legibly. Having thus been initiated into the art of writing, the pupils are then taught spelling by a system of various exercises requiring them to write words and sentences and read them in their script or written forms. The pupils also learn the forms of words and not simply the mere names of the letters.... It does not necessarily superecede the ordinary spelling book but rather fills a place that has never been occupied by any book....”

The 1887 reader shown above is listed in the 1885-1890 American Catalogue at a price of 20 cents. Presumably there were other texts in the 1887 Merrill series, but no further information is available.

On Collard’s 1888 readers, Harvard has a copy of Part II, published in 1890 by Maynard, Merrill & Co., New York. These readers were not in print in 1912, according to the 1912 United States Catalog. They used A MEANING APPROACH.

E. B. Huey listed on page 443 of his bibliography, but made no other reference to, the Classic Fables by “Turpin.” That book had been published at some date earlier than the date of his book, 1908, and he wrote that it had been published by Maynard, Merrill & Co.,. Possibly this “Turpin” was E. H. L. Turpin whose Rose Primer was published in 1905 according to the 1928 U. S. Catalog. In 1928, the Rose Primer was published by American Book.

The 1899, 1915 and 1925 Merrill series are discussed by Nila Banton Smith on pages 142, 143, 213, 430 and 433 of her book, American Reading Instruction. Harvard has a copy of the 1899 material. Gates listed the 1915 material in his 1925 article on widely used primers, and Nila Banton Smith described it as using the sentence method. On the authors of the 1899 material, Harry Pratt Judson was Dean of the Faculty of Art, Literature and Science at the University of Chicago, and Ida C. Bender was Supervisor of Primary Grades in the Public Schools of Buffalo, New York. The method used in the Harvard copy of the 1899 Graded Literature Reader First Book was high-frequency sight-words and Code 3 phony phonics, building new words from parts of memorized sight words. The material used A MEANING APPROACH WITH PHONY PHONICS.

On page 142 of her “history,” Nila Banton Smith made a wrong statement concerning the period in which the sentence method was in use. It actually had been in use from after 1870 until about 1918, but she moved the period of its introduction to the late 1890’s, and of its wide use up to 1909. This presumably was part of her patterned burying of the Boston anti-phonics campaign in the 1870’s, discussed previously in this history. Nila Banton Smith wrote:

“It was not, however, until the years between 1909 and 1918 that the method enjoyed the height of its popularity, as applied in such well-known series as Baker and Carpenter’s Language Readers (The Macmillan Company), Burchill-Ettinger-Shimer’s The Progressive Road to Reading (Silver, Burdett and Company), Free and Treadwell’s Reading-Literature (Row, Peterson and Company), Bryce and Spaulding’s The Aldine Readers (Newson and Company), Coe and Christie’s Story Hour Readers (American Book Company [Ed.: Christie had the married name of A. J. Dillon by the time Smith wrote.], Dyer and Brady’s The Merrill Readers (Charles E. Merrill Company), Hervey and Hix’s The Horace Mann Readers (Longmans, Green and Company), Baker and Thorndike’s Everyday Classics (The Macmillan Company), and the Elson Readers (Scott Foresman and Company).”
However, from Smith’s comments, it can be assumed that the Dyer and Brady material published by Merrill used the sentence MEANING METHOD, PROBABLY WITH PHONY PHONICS.

The Fries Linguistic Readers were among those used in the 1967 U.S.O.E. first-grade studies. On pages 353 and 354 of her book, Dr. Chall wrote:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters)- e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

Dr. Chall stated on page 332 of her book that the authors of the Fries series answered her questionnaire, concerning its major emphasis, that it was “Definitely not a decoding program.” Yet, to the degree that the material was arranged on language patterning, it could presumably have been used to teach phonics. Yet, like so many other linguistic approaches, the emphasis was on A MEANING APPROACH.

On pages 428 and 429 of the book, How to Increase Reading Ability, published by David McKay Company, Inc., in a sixth edition in New York in 1975, Albert J. Harris and Edward R. Sipay listed the Merrill Phonics Skilltexts, and said they were meant to develop phonic, structural, and contextual skills. The reference to developing structural and contextual skills in a so-called “phonics” workbook indicates that the method being taught was not synthetic, sounding-and-blending phonics, but two-step, whole word “substitution” phonics. However, all the so-called “phonics” workbooks that were in use when I was teaching primary grades in government schools, from 1963 to 1985, never used synthetic sounding-and-blending phonics, but only the two-step, whole-word approach.

#Publishers First Appearing in This List Between 1860 and 1870

1865 (Harvard copy)
Large Letters for Little Ones
(Other children’s books listed on the back cover)
Hurd, Houghton
401 Broadway, Corner Walker Street
New York, New York
By 1876 (In 1876 American Catalogue)
Riverside Juveniles (House That Jack Built, etc.)
Hurd and Houghton
Boston, Massachusetts (?)
By March, 1880
Houghton, Osgood & Co.
Boston, Massachusetts
(This changed company name appeared on the March, 1880, Appendix to the 1876 American Catalogue - Authors and Titles)
1883 (In 1876-1885 American Cat., advertised in The American Teacher in 1883)
Riverside Literature Series (ten volumes in 1883)
(Works by Longfellow, Etc.)
Houghton, Mifflin Company, Boston
1890 (In 1885-1890 American Catalogue)
Riverside Manual for Teachers; Suggestions Leading to Primary Reading
Hall, I. Freeman, Superintendent of Schools, North Adams, Mass.
Houghton, Mifflin Company, Boston
1891 (Harvard Copy)
The Riverside Primer and Reader
Houghton, Mifflin Company, Boston, New York, Chicago
1898 (In 1895-1900 American Catalogue)
Hiawatha Primer, Riverside Literature Series
Holbrook, Florence
Houghton, Mifflin Company, Boston, New York, Chicago
1912 or Before (In 1912 U. S. Catalog)
Beginner’s Primer; Beginner’s Reader

21 Authors including Wm. K. Durr but not Paul McKee or Lucile Harrison
Houghton Mifflin Company, Boston

According to a comment made to me in the summer of 1986 by a librarian at the Houghton Library of Harvard, Henry O. Houghton, a printer, began his publishing work when he took over the well-known operations of Ticknor and Fields of Boston. (Appendix B shows only two reading or spelling textbook publications by that company, Columbian Spelling Book in 1849 which was cited by Nietz as “Ticknor’s,” and what was an apparent reprint of English sight-word material in 1852, The Indestructible Lesson Book. In 1852, the company name had been Ticknor, Reed and Fields.)

The following appears on page 311 of A History of Book Publishing in the United States, Volume I, by John Tebbel, published by R. R. Bowker of New York in 1972, concerning the period from 1862 to 1866:

“...unable to carry on his publishing business in his new [government] job, Putnam made arrangements with the Boston firm of Hurd, Houghton, to print and sell his books on commission and the Putnam publishing office became the Hurd & Houghton store at 411 Broadway between 1862 and 1866. While this arrangement lasted, Putnam was out of the publishing business for practical purposes....”

Harvard has a copy of Hurd, Houghton’s Large Letters for Little Ones published in New York, New York in 1865. It contained capital letters with illustrations and sentences, and was probably intended only to teach the alphabet. The back cover listed children’s books:

“Comical Rhymes of Ancient Times, dug up into Jokes for Small Folks... Price 25 cents.
Rumrical Rhymes, with Pictures to match.... Price 25 cents.
Large Letters for the Little Ones. Elegantly printed in oil-colors on tinted paper.

“New Juvenile Books.
Sandford and Merton. By Thomas Day. Revised by Cecil Hartley... $1.50.
Swiss Family Robinson. Edited and revised by Cecil Hartley... $.50.
Evenings at Home By Mrs. Barbauld and Dr. Aikin, corrected and revised by Cecil Hartley... $1.50.
Tales from Shakspere, for the Young. By Charles and Mary Lamb... $1.50.
Yet nothing is listed in the 1876 American Catalogue as in print in 1876 for Hurd, Houghton under Primers or Readers, including this ABC book. However, elsewhere in the 1876 American Catalogue appears a listing for the Riverside Juveniles published by Hurd, Houghton, containing material such as The House That Jack Built. The use of “Riverside” in the 1876 listing suggests the firm published it in Boston, on the Charles River, since their apparent successor, Houghton, Mifflin of Boston, used “Riverside” in association with literature in the titles of many of their materials for many years. For instance, in 1883, Houghton, Mifflin published a Riverside Literature Series with works by Longfellow and others. That Hurd, Houghton were publishing literature for juveniles as early as 1876 or before 1876 suggests an early move toward “literature wholes” for children’s use, which was urged for many years by President Eliot of Harvard. “Houghton” may have had some kind of a tie to Harvard, since he apparently endowed the very attractive research library there which carries his name, the Houghton Library.

The 1891 Riverside Primer and Reader and its Manual of 1890 have been discussed in this history at length. The material used a Code I “meaning” approach. The author of the manual was I. F. Hall, who should not be confused with G. Stanley Hall. According to the September, 1882, issue of The Primary Teacher, I. F. Hall was at that time Superintendent of Schools in Dedham, Massachusetts. On page 31 of that September, 1882, issue, The Primary Teacher quoted I. F. Hall’s comments on spelling, which demonstrated his approach was “meaning,” and not “sound”:

“Hold your pupils responsible for correct spelling in every written exercise.... make and keep lists of words misspelled. Let the practice be mainly on such words.

“Pupils learn to spell by practice, not by studying columns of words.... All words in lowest primary grade should be copied; none written from memory....”

The Riverside Primer and Reader was still in print in 1912, according to the United States Catalog, but not the Manual. Neither were in print in 1928. The 1890 and 1891 Riverside materials were in the same “literature” tradition as the earlier Riverside materials and used A MEANING APPROACH.

The Hiawatha Primer published in 1898, based on Longfellow’s poem, which the 1895-1900 American Catalog listed as part of the Riverside Literature Series, was written by Florence Holbrook. She had revised at least one textbook level of Richard Edwards’ Analytical Series (and probably the whole series), which revision was published in 1897 by Scott, Foresman instead of its former publishers, Geo. Sherwood and Company of Chicago. Edwards’ series had been the apparent replacement for the famous Webb sight-word materials. The Webb materials and the Sherwood Company have been discussed at length in this history. See the Scott, Foresman entry for other data on Florence Holbrook. The Hiawatha Primer was still in print in 1912 and 1928, according to the United States Catalogs of those dates. Although I have not seen it, it was ALMOST CERTAINLY A MEANING APPROACH.

The Primer of the 1911 revision of The Riverside Readers was written by James H. Van Sickle, Superintendent of Schools, Springfield, Massachusetts, and Wilhelmina Seegmiller, Director of Art, Indianapolis Public Schools, formerly Principal of the Wealthy Avenue School, Grand Rapids, assisted by Frances Jenkins, Supervisor of Elementary Grades, Decatur, Illinois. It was Code 3 material, A MEANING APPROACH WITH PHONY PHONICS.

Mrs. Kathryn Diehl of Cincinnati, Ohio, who has done so much work for so many years for a reform in reading instruction, and who wrote her own phonic materials which are reviewed in this appendix, sent me her copy of Florence Akin’s 1913 Word Mastery, A Course in Phonics for the First Three Grades.
That copy had obviously been published some time after its second copyright date of 1941. It is straight “Code 10” phonics, and so, presumably was the 1908 material, First Book in Phonics probably written by the same “F. Akin” but published by M. and G. Atkinson, not Riverside Press. The 1913-1941 material, however, is a child’s textbook listed under “Readers” in the 1928 United States Catalog, while the 1908 material was listed under “Reading” (guides) instead of “Readers,” (children’s textbooks) in the 1912 United States Catalog. Since the original Word Mastery was published by Riverside Press in 1913, the same year that they published a new Riverside reading series, it seems possible that Word Mastery was obtained from Florence Akin for use as a supplement to Riverside’s new 1913 series. Akin by that time already had a presumably successful 1908 phonics book in print and so would have been a possible candidate for consideration.

The preface of the 1913-1941 material begins:

“This little book is intended to be put into the hands of children at the beginning of their first year in school. It may be used in conjunction with any series of readers.

“Teachers generally recognize the value of a good foundation in phonics as an important aid in learning to read. Unfortunately many teachers are not sufficiently familiar with the principles underlying phonic analysis and the building of words to feel sure that they can make their phonic drills as economical and as effective as they should be.... it must of necessity be presented to the pupils from the blackboard, or from large printed cards and charts. It has seemed to the author that it would be a great advantage to both teacher and pupil to have before the pupil in a book a carefully worked out and thoroughly tested series of exercises in phonics, which have been found to make pupils self-reliant in word mastery.

“The author has evolved this system of teaching phonics in her own schoolroom, and has found that it ensures rapid progress in learning to read....”

Akin’s “Suggestions to Teachers,” pages 112 to 117, followed by “List of Phonograms Studied” is an excellent guide to teaching Code 10 phonics. While some of her “Phonograms” are actual word parts instead of isolated phonemes, her guide suggests teaching them solely by “sound” and not by “meaning,” so the material does rate Code 10. She originated this material in the early twentieth century, when supplementary phonics became the norm in American first grades, and she apparently had it on the market by 1908. Yet she obviously still expected her material to be solely “supplementary,” as she referred to two ten-minute daily drills in phonics, to be done apart from the “reading” lesson. That Akin’s excellent supplementary phonics material was still being published by Houghton Mifflin as late as 1941, and very probably even later, is very surprising, considering the blanketing effect in America of the Dick and Jane readers. The Dick and Jane so-called “intrinsic” phonics of 1930 was intended to do away with such supplementary phonics drill as Akin’s, which had been around since shortly after 1900. However, apart from its listing in the United States Catalogs of 1912 and 1928, I never saw any reference to Florence Akin’s material in the literature until Mrs. Diehl sent the book to me from her collection of reading materials. It does not seem probable that the Akin material had any wide use after 1928, at which time it was listed in the United States Catalog as in print. Akin’s 1913 material is STRAIGHT CODE 10 PHONICS.

Harvard’s copy of the 1923 First Grade Manual by Emma Miller Bolenius demonstrates the approach Bolenius would have followed in her 1922 readers: the meaning approach with what may or may not have been phony phonics, but not enough photocopies are available to judge. The manual by Bolenius was full of praise for materials by the “experts,” Thorndike, et al. Nila Banton Smith made the following comment (page 175) on the readers by Bolenius: “Miss Bolenius’s The Boys’ and Girls’ Readers and Lewis and Rowland’s The Silent Readers were the first textbooks to employ the silent reading techniques. These
were followed by several other series, notably The Progressive Road to Silent Reading by Ettinger, Shimer and others; The Silent Reading Hour by Buswell and Wheeler; Lippincott’s Silent Reading for Beginners by Watkins; and The Learn to Study Readers by Horn and Shields.... William Dodge Lewis and Albert Lindsey Rowland were the first authors to produce a complete set of readers devoted to silent reading, under the title The Silent Readers (The John C. Winston Company).” I have lost the source, but believe I saw somewhere that Bolienius came from Lancaster, Pennsylvania, which was the location of J. McKeen Cattell’s very active Science Press. Her name, Emma Miller, certainly sounds like a Lancaster old-timer’s name. Cattell’s daughter, Psyche, eventually opened a nursery and kindergarten school in Lancaster, in the 1930’s or later. Bolienius may have received the “inspiration” for her 1922 series, which was the first to use silent reading, from some such Cattell-Thorndike connection in Lancaster. In Laura Zirbes’ 1925 account on reading in the second grade of the Lincoln School which was associated with Columbia Teachers’ College, reference was made to the use of Bolienius’ materials, possibly as early as 1921, so there may have been an earlier Bolienius series. Zirbes’ report is discussed in Appendix D. The Bolienius 1922 material was A MEANING APPROACH WITH WHAT MAY OR MAY NOT HAVE BEEN PHONY PHONICS.

The 1930 Bolienius material, on which ample photocopies are available to make a judgment, was clearly A MEANING APPROACH WITH PHONY PHONICS.

A large gap in the publication of new reading series occurred from 1932 through 1940, very probably at least in part because of the Great Depression in those years, although the 1930 Gray series and the 1930-1931 Gates series obviously suffered from no lack of sales in those years. Nila Banton Smith’s 1940 series was only the third major new series published from 1932 through 1940 on which I have been able to find a record. The second series published in the 1932-1940 time-frame, at least so far as I have been able to determine, was Houghton-Mifflin’s 1939 The Child Development Readers, Reading for Fun, by Julia Letheld Hahn, Division Supervising Principal, Washington, D. C. Nila Banton Smith did not mention the Hahn material in her “history.” The first series published after the Gates 1930-1931 series and the Gray 1930 series was apparently O’Donnell’s of 1936. Yet Mabel O’Donnell’s reading series published by Row, Peterson and Company was dated by Smith with five other series, including her own, to the 1940-1950 decade. Nevertheless, a source cited in Samuel L. Blumenfeld’s The New Illiterates (1973) gave the beginning date of the O’Donnell series as 1936:

“Hillel Black, in his book, The American Schoolbook, tells us that Alice and Jerry have earned Miss O’Donnell $2,700,000 in royalties since 1936.”

Reading for Fun, one of Julia Letheld Hahn’s 1939 The Child Development Readers published by Houghton, Mifflin, now in the U. S. Department of Education Library, carried these comments on page 152, concerning the Word List which started on that page:

“The total number of words used in the Primer is 239.... Omitting 16 proper names and 4 interjections the total vocabulary is 219 words. Of these 182 are in the first 500 of the Gates and 97% in the first 1000 of the Gates list.... 90% are in the first 1000 of the Thorndike list. 97% are in the Horn-Packer list. The 45 starred words are the complete vocabulary of ‘Who Knows,’ the little primer.”

A more rigidly-controlled-vocabulary, “meaning” approach, would be hard to imagine. It is from post-1930 materials like these, injected into our government schools by mindless and gullible government school administrators, that our great nation, the United States of America, has been turned into a sea of functional illiteracy. (Of course, it is not supposed to be “good manners” to display any irritation over the absolutely incredible stupidity of government school administrators, even though they are presently
falling all over each other in their haste to adopt the latest poison package for beginning readers, “whole language.”)

Most of the badly disabled readers resulting from such material as Hahn’s, but who are nevertheless good word-guessers from the meaning of context, have been wrongly counted among the literate. The reality and extent of our functional illiteracy (which is actually true illiteracy) has been neatly masked from the general public for the last sixty years because of the almost unknown fact that only about 3,000 high-frequency words (out of the approximately 500,000 total words in English, not counting proper names) compose about 98 per cent of most written matter (and only 1,000 words compose about 90 per cent). Guessing from the large context that is composed of these memorized high-frequency sight words makes it possible for disabled readers with a memorized sight-word bank as small as 1,000 or so words to guess many words which they are not really reading. The fact that disabled readers are only silently guessing (sometimes correctly but often incorrectly) most words above the 1,000, 2,000 or 3,000 word-frequency level has been nicely hidden because few people understand anything about word-frequencies, particularly when used in tandem with context-guessing.

The 1939 Hahn material obviously used A MEANING APPROACH PROBABLY WITH PHONY PHONICS.

The fourth edition of Reading for Meaning by Paul McKee, et al, was among those programs used in the 1967 U.S.O.E. first-grade studies. That was an earlier version of the Houghton, Mifflin series in use in 1981 (and at least as late as 1986), which was listed as one of “The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. I can confirm his conclusion that it was not a truly phonic series because of the years I was forced to use that series in the primary grades, since it was required by my school system. For instance, one of the exercises in the first-grade materials directed children to distinguish the word “everything” from “evening” by the context in which the word was used, instead of by the differences in the sounds of all the letters. The teachers’ guides gave massive drill on the use of context for word identification, and said that only as many letter sounds should be used as were necessary to confirm word identification. My written and verbal requests to the school administration for a change to a truly phonic series were quite literally never answered.

The series’ many near-worthless and time-consuming first-grade “tests” were official documents that had to be filed in the school building’s office. Also, their numerous sub-scores and total scores had to be painstakingly entered on each child’s official record filed in the school building’s office, which used up more teacher out-of-the-classroom time that would have been far better spent in preparing lesson materials. Similar but fewer tests were given at second grade and above. The probability, of course, is that no one ever really examined those test results afterwards which had used up such enormous amounts of valuable teacher and pupil time. Even if someone in the future made the effort to examine the recorded scores, which is extremely unlikely, the scores could have no real utility, but they looked very “professional,” “important,” and “official.”

Yet the existence of those official records made the use of the workbooks on which the test “exercises” were based mandatory. The primary “skill” actually being tested was the little child’s familiarity with the steps necessary to follow the elaborate directions in the many tests, all of which mental manipulations had to be practiced previously in the time-consuming workbooks or the child could never have passed the tests, even if he knew how to read. The children were not mentally mature enough really to understand the elaborate (and pointless) procedures, so they found the workbooks and the tests difficult. Yet what most of the wheel-spinning procedures were really testing was not the ability to read but the kind of mental ability that develops naturally with maturity, completely independently from reading.
Such basal reader “teaching” is exactly comparable to the kind of “teaching” in John Wood’s Edinburgh Sessional School in 1829, about which the anonymous Scottish Schoolmaster complained, saying the comprehension “skills” being taught in Wood’s school developed naturally in children with increased maturity. Like the so-called “instruction” in Wood’s 1829 Edinburgh school, most of the exercises in the 1980’s Houghton, Mifflin workbooks concerned comprehension “skills” which are really only facets of mental maturity. Those workbooks and tests used up massive amounts of teacher and pupil time in first-grade, which should instead have been spent in teaching pupils to read fluently. The Houghton, Mifflin materials before 1986 used A MEANING APPROACH WITH PHONY PHONICS.

The Interaction Literacy Kit, which was a supplemental kit to Moffett’s Interaction materials for the primary grades, is unsatisfactory and is discussed below. However, before discussing the supplemental Literacy Kit, it should be stated that Moffett’s other Interaction materials were excellent. The Interaction program consisted of an extraordinary and brilliant collection of books and tapes of books and songs (many with folk backgrounds), with card games and remarkably stimulating independent work cards, all interrelating loosely with the books and songs. All were meant to be used in an individualized classroom, the materials to be selected for use by the children themselves, based on their own preferences. The materials were not meant to be used in whole-class lessons. The program’s primary intent was to foster language abilities and literature appreciation, and to give practice in reading to develop fluency. However, the materials would have been almost useless for primary-grade children taught by the sight-word method, as such children would have been incapable of reading the work cards or the words on the game cards. (I taught my first-graders to read, and only then gave them the materials.) Similar kits were available for the upper grades, but I did not review them. The materials would be ideal for home instruction (if a few of the children’s folk songs were removed, which are historically valid but not desirable for little children because of coarseness).

It is to be greatly regretted that Moffett’s primary Interaction kit is no longer available from the publishers, as it is so remarkably effective in motivating primary grade children to read and to enjoy writing activities, once they have been taught how to read. Children also enjoy the card games such as “Silly Syntax,” which teaches parts of speech by the use of color on the cards and the making of syntactically correct but “silly” sentences. It is to be hoped that the publisher will some day publish this remarkable material in a form which can be sold to local libraries for parents to check-out for home use. The undesirable Hooked on Phonics program is currently being sold to libraries, so there is certainly no reason that excellent materials such as the general Interaction kit should not also be available in libraries.

Moffett did not dismiss the need to learn sound-symbol correspondences of letters and letter-clusters. However, Moffett thought many children can teach themselves to read from exposure to print. It is indisputably true that in some very few cases that can happen, In The Complete Handbook of Children’s Reading Disorders, Dr. Hilde L. Mosse even told of some aphasic children, incapable of understanding speech or of generating meaningful speech themselves, who nevertheless mysteriously taught themselves to read print aloud with about sixty per cent accuracy. Obviously, that class of aphasics falls into the category of idiot savants. Yet learning to read without any direct instruction is clearly not something that can be done by most normal children.

Many adults, with fuzzy memories of childhood, have confidently assured me that they learned to read spontaneously, before they began school. Their fuzzy memories form quite a contrast to the fact that I have had only one first grader who reportedly learned to read spontaneously, without any specific instruction, before beginning school. Even with that first-grader, I suspect the parents very under-estimated the amount of unconscious instruction that they may have given in sound-symbol correspondence to that very bright boy. Such a brilliant child does not need much instruction to catch on to the sound-symbol correspondences in print, but he probably needed some instruction, however unconsciously it was given. Certainly, the vast majority of children do not learn to read solely by
following a parent’s finger as he holds it under the lines of a story as it is read. It is highly doubtful, anyway, that most parents trace most of the print in stories with their fingers while they are reading, and that is about the only way a child can see the sound-symbol correspondences for himself as the story is being read.

From the discussion in the Literacy Kit Teacher’s Guide which I bought, Moffett’s Literacy Kit which uses tapes, books and games, is very faulty. (I have not seen the actual Literacy Kit, but only the Teacher’s Guide.) The part of the program that most specifically concerns phonics is the section, Sound Out Films. According to the Teacher’s Guide to Sound Out Films which was inserted in the Literacy Kit Teacher’s Guide, long before all letters of the alphabet have been covered, the digraphs th, sh, and ch are introduced. Yet those digraphs stand for missing letters in our alphabet and in no way have the sounds of the separate letters, “t,” “s”, “ch” or “h.” At the same time, consonant blends like sp and st are introduced which do have the sounds of the separate letters composing them. The result of such an approach, long before the whole alphabet has been taught, would be to confuse children on the function of letters. Furthermore, the material does not teach sounding and blending phonics. In many other ways, the sequence in the “Sound Out Films” is unsatisfactory. “Sound Out Films” are an example of seemingly excellent phonic materials whose excellence evaporates upon closer study. Yet the entire Literacy Kit is also unsatisfactory. The spelling work-cards in particular are very weak, and could not be read by almost any child who needed much help in spelling. Any child who could read the elaborate text probably would not need help, and even if he did need help, the approach is mixed-up and vague.

In his chapter, “Why and How” in the Teacher’s Guide to the Literacy Kit, Moffett agreed with the “experts” conclusion that not every child needs phonics. Yet, in his discussion of whole-word and sentence approaches, used in the so-called “language experience” and parent-reading-to-child “lap” methods, he concluded that such children work out for themselves the specific sound-symbol correspondences in print. That certainly is not “whole word” “meaning” philosophy but “sound” philosophy.

A major flaw in the Literacy Kit material is Moffett’s conclusion that a child can work his way through it independently, only by following “needs.” Properly organized, the teaching of beginning reading is a very simple and uncomplicated process and can easily be taught to first-graders in whole-class instruction. It is pointless to bury such simple material under a lot of hay as in the “language experience” method. Yet Moffett’s conclusion is that such whole-class teaching is undesirable. He said on page 25, “Any predetermined learning schedule is going to be wrong for most learners.” However, when first-graders are taught real synthetic phonics in whole-class instruction, the vast majority can read independently (and use Moffett’s activity cards and games independently) by Easter of first grade, and many of them can do so by mid-winter. (That is true anywhere that real phonics in whole-class instruction is taught. For instance, I was told by a teacher in Luxembourg in 1977 that, before they used the modified whole-word method there, children read independently by Easter!)

Yet, by following Moffett’s advice, it is certain that most first-graders would not be reading independently by Easter, and many would be incapable of reading at all, which means they could not read his activity cards or use his games at all in first grade. All of his materials went out of print most probably because teachers followed his advice on non-directive “teaching,” and because sight-word taught children in the first, second and third grades, unlike phonically taught children, would have been incapable of reading the words on his cards and games.

Moffett’s Literacy Kit appears to include some whole-word materials and some materials which use A WEAK PHONIC APPROACH.
The Literature Experience, published in 1991, was reviewed in The Beginning Reading Instruction Study of 1993, compiled by the Office of Research, U. S. Department of Education. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the first grade samples from The Literature Experience of Houghton, Mifflin, 1/6 had concerned “Sound/symbol relationships... Explicit,” and 4/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had been 5/6, but for “Decoding strategy... Explicit,” the score had been only 1/6. Furthermore, not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the series is not teaching synthetic phonics to beginning readers. Considering the original publication date and the title of the series, it is probably “whole-language” oriented.

1866 (In Early American Textbooks)
First Reading Book
Sheldon, E. A.
Charles Scribner, New York; Nicholson & Bro., Richmond, Indiana

1876 or Before (In 1876 American Catalogue under Primers)
Everlasting Victoria Primer, 50c.
Scribner, W. & A.

1876 or Before (In 1876 American Catalogue)
Mavor’s Alphabet, Spelling and Reading Book
Mavor’s Illustrated Linen Primer
Mavor’s Illustrated Primer
(Presumably based on Rev. Mavor’s early 19th cent. English materials)
Scribner, W. & A.

1876 or Before (In 1876 American Catalogue)
Warne’s Large Type Linen Alphabet, Spelling and Reading
Warne’s Large Type Linen Primer
Warne’s Large Type Primer
(Possibly based on materials by an English company or author named Warne)
Scribner, W. & A.

1876 (In 1876 Am. Cat.; Teacher’s Guide in Library of Congress)
Sheldon, E. A.
Scribner, Armstrong, and Co., New York
By March, 1880
Charles Scribner’s Sons (Also Scribner & Co.)
743 and 745 Broadway, New York
(Entries under each of the above company names, at the same address, appear separately in the March, 1880, Appendix to the 1876 American Catalogue - Authors and Titles which lists additional books published between 1876 and 1880. Scribner & Co. has about half a page of entries, but Charles Scribner’s Sons has over five pages, so the change in company name probably appeared shortly after 1876.)

1898 (In 1912 United States Catalog)
Eugene Field Book - Verses, Stories and Letters for School Reading;
Eugene Field Reader (no date)
Field, Eugene
Scribner

1901 (In 1912 U. S. Catalog)
Literary Primer
Burt M(ary). E(lizabeth). and M. Howells
Scribner

1906 (In 1912 U. S. Catalog)
E. A. Sheldon’s readers were shown as a “New ed.” in the 1876 American Catalogue. The date of the original edition is unknown. The earliest copy shown in Early American Textbooks is dated 1866 and is listed above. The 1876 “New ed.” series had six volumes, “Primer, adapted to phonic mode of Teaching, 20c, First reader, adapted To phonic mode of Teaching, 25c, Second reader, 50c,” and third through fifth. The material was Code 3 phonics, which establishes that what was labeled “phonic” in 1876 was likely not to be so.

In the 1912 United States Catalog, a five-book series without a primer is listed as in print by American Book, “Sheldon, E. A. Modern School Readers,” first through fifth. However, it is highly probable that they were only the 1881 Modern School Readers published by Sheldon & Co. in 1881 (which also did not have a primer) and not the E. A. Sheldon series published by Scribner in 1875 (which did have a primer and which did not use the title, “Modern School...”). The real E. A. Sheldon material published by Scribner was probably out of print at that time. As shown elsewhere, the Butler and Sheldon publishers appeared to merge about 1898, and then almost immediately appeared to merge again with American Book Company, as their readers came out under American Book’s name after that date. Also, the names of Butler and Sheldon disappeared from the catalogs. Therefore, the origins and details on the respective publications of the Butler and Sheldon companies probably became obscured, along with the fact that the E. A. Sheldon readers had been published by Scribner, and not the Sheldon company. E. A. Sheldon’s 1875 Scribner material used A MEANING APPROACH WITH PHONY PHONICS.
The 1901 Literary Primer listed in the 1912 United States Catalog by Mary Elizabeth Burt and M. Howells and published by Scribner was almost certainly a meaning text, and probably a Code I meaning text, to judge from the following remarks. In his 1908 book, The Psychology and Pedagogy of Reading, E. B. Huey lists in his bibliography Mary E. Burt’s Poems That Every Child Should Know, published by Doubleday, Page, & Co., New York and said on page 347 that it contained:

“...an admirable selection of these classics. The children will often like to read their favorite pieces aloud, largely from memory at first, but using more and more cues from the printed page. These readings aloud should always be from what is already quite familiar.”

Huey said further on pages 373-374:

“The child’s reading... in the main should be done independently of formal ‘Readers.’... Wider reading is needed, and the reading of literary wholes. Miss Mary E. Burt, in the Dial for March 16, 1893, tells of her experiment in teaching reading without ‘Readers,’ using ‘real books’ from the library instead. She decided that the reading-book was ‘of no earthly use,’ that it ‘made children timid toward real books,’ that ‘the child should never be compelled to buy a reading-book. He should buy only what is desirable to keep through life in a library.’ She gives the children the Odyssey, Irving’s works, Shakespeare, Hawthorne, and later even Plato’s Phaedo, Dante, Aeschylus, Sophocles, Plutarch, Tennyson, etc. She would have ‘thirty copies or enough to go round’ of each of these and similar books, for a class, and likes the original books rather than even the best of adaptations. The plan was indorsed (sic) by John Burroughs and wife, who followed the experiment; and certainly much is to be said in favor of introducing the children directly to the library.”

No comments seem necessary on Burt’s Code I “whole language” method, since, unlike Marva Collins with her extraordinarily successful Code 10 phonic method in Collins’ Chicago school for Black children, Burt did nothing whatever about teaching children HOW to read before handing them classics to learn. Burt’s students “learned” the material, obviously, only by orally memorizing stanzas and paragraphs. Yet that is the way pre-literate societies handed down oral epics to their next generation. Such ballyhooed fakery as Burt’s masquerading as “teaching reading” is a tragedy. Burt obviously used A MEANING APPROACH.

In Appendix D, a pamphlet by Laura Zirbes is discussed which was published in 1925. In it, she listed some reading series in use by 1922 in the second grade of the Lincoln School attached to Columbia Teachers College. Included in the list was “Howe 2” which presumably was one of the 1909 Howe Readers. The Howe Readers were still in print when the 1928 United States Catalog was published, and so presumably were fairly popular.

John Henry Haaren, co-author of the 1914 Natural Method Readers, was Associate Superintendent of Schools in New York City. The other author, Hannah T. McManus, was a principal in New York City public schools. The Preface of A First Reader of the 1914 material reads in part:

“This book, the second of the Natural Method Readers, is designed to proceed along the lines laid down in the primer, and gradually to enable the pupil to gain the ability to read for himself. The Mother Goose rhymes, which were so freely used in the primer, are made the connecting link with the higher work, the simple folk myths and the other stories.... The number of new words in a lesson is small. The phonic drills that have been developed from the words in the primer prepare the pupils to attack with confidence the words of the first reader.”
Florence C. Fox’s 1916 comments, quoted under her Putnam book entry, reported that from about 1914 to 1916 a pronounced increased emphasis on phonics was appearing in “meaning” or “content” series. This series was apparently one of them, and can probably be classed as using A MEANING APPROACH WITH HEAVY PHONIC EMPHASIS.

Concerning the 1930 material, Patty S. Hill was active at Columbia Teachers College over many years. The probability is that anything she wrote, particularly in 1930, would use a MEANING EMPHASIS.

The 1987-1989 Scribner Reading Series was a revision of the Walcutt/ McCracken truly phonic series published by Lippincott, which originated in 1963 and had several revisions before being taken over by Scribner. Although the 1987-1989 series has a phonic sequence, it uses in practice a very heavy “meaning” emphasis in first grade. The teacher’s guide for the pupils’ book commonly recommends that first-graders read the new material silently before reading it orally, which is a classic “meaning” and not “sound” approach. In my opinion, the material provides almost totally inadequate phonic instruction, and some material parallels the two-step phony phonic approach. Furthermore, it contains a heavy load of pure sight words. Its principal author, Jack Cassidy, is a past president and board member of the International Reading Association. Because of its content, I believe that the Scribner Reading Series should be rated a MEANING SERIES WITH PHONY PHONICS.

____________________

THE TAINTOR SEQUENCE OF COMPANIES

From 1866:

“An oddity in New York State publishing, although one not to be disdained, was the single effort of Joseph Lord Taintor. Born in Colchester, Connecticut, on September 21, 1835, he was too frail for the farm life he was born into, and could not even finish Yale with the class of 1858 because his health failed. The implication is that he had tuberculosis, which probably accounts for his retreat to the Adirondack village of Bloomingdale, where he published a New York State Map and Gazetteer in 1858. [Ed.: See note below on another publisher of such a map.] Reentering Yale in 1860, still not recovered, he managed to graduate with honors. He wanted to study law, but again his health barred him and he retreated once more to the mountains, where he published the noted Washington Map of the United States, in a partnership with his uncle and brother as S. Taintor & Co. This map sold several hundred thousand copies in 1860 and 1861, but the Civil War, with its ominous doubt raised about what the map was going to be by the time the conflict ended, cut off its future sale.

Tebbel reported that Taintor did business in his own name starting in 1863, after he had bought out his partners. In that same year, he tried again to study law but gave it up, but he also married in 1863. In 1866, he and Charles, his younger brother, went into partnership and they resumed the publishing of the Washington Map, under the name of J. L. Taintor & Co. In February, 1867, they got rid of the plates, as well as the copyright, and moved to New York, where they began to publish books. Taintor died on September 1, 1881, at the age of forty-five, a year after he had left the firm, which had been publishing guidebooks and schoolbooks. During that time, the firm had been run with the help of other brothers and relatives.

Concerning Taintor’s first map, The School Bulletin, Syracuse, N. Y., in May, 1876, on its first page, referred to “Hon. John H. French, LL. D., late State Superintendent in Vermont and well known
throughout this State [New York] as an Institute instructor, and as author of the N. Y. State Gazetteer and Map...” Immediately below the 1876 reference to French was reproduced French’s copy of an advertisement for a Teachers’ Institute in 1843, reportedly the second ever held of that type. French presumably would have retained a copy of that advertisement because of his connections with such institutes in the past as an institute instructor. Possibly there was some connection between French, whose popular New York State map and gazetteer was published before 1876, and Taintor, whose popular New York State map and gazetteer was published in 1858, particularly since it is very possible that Taintor may still have been publishing the New York State map and gazetteer as late as 1867 when his brother and he sold their early firm.

Taintor showed ties to New Haven and Yale (as did William Torrey Harris and other notables). Taintor’s health presumably barred him from finishing Yale in 1858, but not from founding a printing establishment, researching maps, and publishing a map and gazetteer that very same year.

It was J. L. Taintor’s younger brother, Charles Taintor, who made the very interesting comments on various publisher’s market shares in 1884, which are quoted elsewhere in this history.

Taintor’s reading textbooks were largely re-issues or co-issues of widely used materials published by other companies, such as the Webb, the Franklin, and the Osgood reading series. Therefore, these series appear again elsewhere in this listing under other publishers’ names. The New York office of Mason Brothers, below, was Taintor’s probable predecessor in 1866, which the Taintor company probably bought out when they moved to New York City, reportedly in 1867. The Mason and Hamlin Company of Boston presumably continued in business. The Taintor company appears to have disappeared from the records about 1890, with the advent of American Book Company, but Taintor was not listed as one of the merging companies and undoubtedly was far smaller than any of those four merging companies. Conceivably, Taintor may have been bought out about that time by some other company, which was very possibly Sheldon.

1866 (Harvard copy)
Analytical First Reader
Edwards, Richard and J. Russell Webb (See entries elsewhere on Webb)
Mason Brothers, New York; Mason & Hamlin, Boston; Geo. and C. W. Sherwood, Chicago.
1866-1871 (In 1876 American Catalogue)  
Analytical Readers (1st-6th, intermed., 1st and 2nd in Leigh print.  
(1st Leigh carried a copyright date of 1871, possibly so did 2nd.)

1867 (In Early American Textbooks, p. 82)
Analytical Series. Fourth Reader
Edwards, Richard.
Taintor & Co., New York; Geo. & C. W. Sherwood, Chicago
1871 (Harvard copy marked 1871 and another marked 1870)
Analytical First Reader, Leigh’s Pronouncing Edition
(Carried a copyright date for the Leigh version of 1871)
Edwards, Richard and J. Russell Webb
Taintor & Co., 678 Broadway, New York; Geo. & C. W. Sherwood, Chicago (on title page. Large print
was used in each case for the name given first. Carried Leigh’s 1871 copyright, so it was transcribed to
Leigh print in 1871, despite library’s 1870 notation shown on one copy listed above.)

Reprints of Brewer & Tileston’s Franklin Series By Taintor:
1863-1864 (In 1876 American Catalogue)
The New Hillard Series (And 1st Prim. Reader, Hillard’s First Series)
(Primer and Second Reader available in Leigh Type according to 1876 Amer. Catalogue)
Hillard, George Stillman and Loomis Joseph Campbell
Brewer and Tileston, Boston (and other publishers including Taintor)
1871-1873 (In 1876 Amer. Cat. and 1912 U. S. Cat. by Amer. Book)
The Franklin Series
(Primer and Second Reader in Leigh Type were listed only in 1876 American Catalogue)
Hillard, George Stillman and Loomis Joseph Campbell
Brewer and Tileston, Boston (and other publishers including Taintor)
1886 (In 1885-90 Amer. Cat.;In 1912 U. S. Cat. by Amer. Book; See also Early American Textbooks)
New Franklin Series
Campbell, Loomis Joseph
Taintor Bros., Merrill & Co., N. Y. and William Ware & Co., Boston
1892 (1890-5 Am. Cat. as new series; 1912 U. S. Cat. by Amer. Bk.)
New Franklin Series
Campbell, Loomis Joseph
Sheldon & Co., New York and Chicago

The Hunt and Gourley materials listed below may be reprints. Note the 1883 date for a spelling text.
As noted elsewhere, the American Catalogue had listed no spellers published in 1883.

1882 (In Early American Textbooks)
The Modern Grammar-School Reader
Gourley, H. I. and J. N. Hunt
Taintor Bros., New York, Boston, Pittsburgh and Omaha
1883 (Harvard copy)
The Modern Spelling-Book
Hunt, J. N. and H. I. Gourley
Taintor Brothers, Merrill & Co., New York
1883 (Harvard copy)
The Modern Spelling-Book
Hunt, J. N. and H. I. Gourley
Sheldon & Company, New York, Boston and Chicago

1883 or Before.
The reading and spelling texts shown below were advertised on the back cover of the Harvard copy of
Taintor’s edition of The Modern Spelling-Book by J. N. Hunt and H. I. Gourley. Harvard also has another
copy apparently published by Sheldon & Company in 1883, as noted above, which probably indicates that
Taintor and Sheldon were co-publishers of that text, and probably of the texts below. However, it is
possible Sheldon bought out Taintor and continued to use the plates carrying original copyright dates. It is
curious that Taintor did not list on this book cover the Franklin readers which they were still publishing in 1883. Nor did they list the Edwards-Webb materials, although the rights to them may have passed solely to the Sherwood company of Chicago by 1883. Texts Taintor published in some other subjects than reading were listed also on this book cover but are not given below.

Osgood’s American Readers
Osgood’s American Spellers
Osgood’s Progressive Readers.
Osgood’s Progressive Speller.
(By Lucius Osgood - See earlier publisher listed elsewhere)
Modern (First, Second, Third, Grammar School) Readers
(By J. N. Hunt and H. I. Gourley)
Taintor Brothers, Merrill & Co., 18 & 20 Astor Place, New York

1887 (In 1885-90 American Catalogue)
Modern Intermediate Reader
Gourley, H. J. (sic) and J. N. Hunt
Taintor Brothers, Merrill & Co., New York

1888 (In 1885-1890 American Catalogue)
The Continental Readers, 1st, 2nd, 3rd
Campbell, William A. and Elizabeth A. Allen
Thomas Kelly, New York; Taintor

Few of the materials published by Taintor (whose company name varied over the years) were published by them alone. The Continental Readers were published by “Kelly” and Taintor, according to the 1885-1890 American Catalogue. The “Kelly” was Thomas Kelly, New York, according to page 79 of Early American Textbooks, and is listed elsewhere in this appendix under the date of 1888.

The name, “Merrill,” as in Taintor Brothers, Merrill & Co., occurs in at least five publishing company names, but most of the occurrences are probably unrelated though the possibility that they are related cannot be ruled out. Charles E. Merrill Company of New York were the clear successors to the 1887 company of Maynard, Merrill & Co., New York. Maynard, Merrill & Co. were the successors some time after 1882 but by 1887 of the company, Clark & Maynard, of New York.

No connection appears, however, between Maynard, Merrill & Co. of New York in 1887 and Taintor Bros., Merrill & Co. of New York. Nor is there any apparent connection to D. D. Merrill of St. Paul, Minnesota, in 1878, or to The Bobbs-Merrill Co. of Indianapolis, in business by 1909 or before.

All of the various reading series known to be published, re-published or co-published by Taintor appear to have used the MEANING APPROACH WITH PHONY PHONICS.

1866 (Harvard copy)
The Franklin Alphabet and Primer
Davis, Porter & Co., Philadelphia

1867 (Harvard copies)
(Toy book series from page 1 on the first book to page 36 on the last book:)

4. The Easy Lesson Book (pages 20-30)
5. My Little Primer (pages 31-36).

Davis, Porter & Coates, Philadelphia
1878 (In 1876-85 American Catalogue)

Normal Readers
Raub, Albert Newton (See Christopher Sower Co. re other Raub books.)
Porter & Coates

By March, 1880
Porter & Coates, Corner of Ninth and Chestnut Streets, Philadelphia
(This name and address appeared on the March, 1880, Appendix to the 1876 American Catalogue -
Authors and Titles)
1886 Revision (In 1885-90 Amer. Cat.; Circa 1895 by The Werner Company, Chicago; In 1912 U. S.
Cat. by Amer. Book.)
New Normal Readers (five-book series)
Raub, Albert Newton (See Christopher Sower Co. re other Raub books.)
Porter & Coates

As mentioned in the body of this history, in Volume II of A History of Book Publishing in the United
States, published by R. R. Bowker of New York in 1975, John Tebbel referred to Porter & Coates as a
New York company in 1884. Yet the references shown above confirm that it was a Philadelphia company
from before and at least as late as 1880, and probably later.

It is conceivable that Porter and Coates of Philadelphia were the ultimate successors to R. Porter of
Wilmington, Delaware, who published the Philadelphia Primer or Child’s First Book in 1824, a Code 7
book of which the American Antiquarian Society has a copy. Porter and Coates possibly went out of
business sometime before the mid-1890’s, at which time The Werner Company appeared as the
publishers of the Raub readers. By 1912, American Book were the publishers of the Raub readers.

The Franklin Alphabet and Primer of 1866 was a Code 3 type of toy book. It is obvious on the later
1867 material that Davis, Porter & Coates had separated a 36-page toy book into five parts, beginning
each with a cover and title, and with the alphabet in capital and small letters. One of the five-book series
is missing, so it apparently was not in the Harvard library unless I overlooked it. The material is Code 3,
two-step whole word phonics.

See Christopher Sower Company of Philadelphia for a discussion of Raub’s textbooks. For Raub’s
Normal Readers, which presumably used “normal” words to teach the alphabet, but possibly not letter
sounds, THE APPROACH IS UNKNOWN.

1866 (Early American Textbooks)
The Southern Pictorial Primer or First Reader
Holmes, George F.
Richardson & Company, New York
1866 (Early American Textbooks)
The Southern University Series:

   Between 1900-1905, Probably 1900 (In 1900-1905 American Catalogue)
First Reader, New Edition
Holmes, George F. and L. W. Anderson
University Publishing Company, New York

*****The following entries suggest that a different “University Publishing Company” surfaced in 1910, located, at least originally, in Nebraska, because of the following 1910 reference on a text about teaching reading from the 1912 United States Catalogue. The “Univ. Pub.” entries following the 1910 entry appear to be related, because of the re-occurrence of “Searson.” Newson and Co., New York, who published the famous Aldine readers in 1907, may be the successors to the original University Publishing Company, to which the 1910 and later “Univ. Pub.,” possibly University Publishing Company or University Publishers, appears to have no connection. These assumptions could only be confirmed by checking surviving textbooks and records.******

   1910 (In 1912 United States Catalogue under Reading)

   1928 or Before (In 1928 United States Catalog)
Studies in Reading (two primers, 1st-8th, Teacher’s Manual)
Searson, J. W. and Others
Univ. Pub.

The Christy books shown above appeared in the American Catalogue for 1900-1905, and in the United States Catalogs for 1912 and 1928. The United States Catalogs showed E. R. Shaw as co-author,
and listed a teacher’s edition as well as the first and second readers. Except for Christy’s materials published by American Book, most of the above materials were apparently out of print by 1912 as the only other ones listed were G. F. Holmes’ First through Fifth Readers published by American Book Company, and Anderson’s name was not listed as a co-author. Harvard library has a copy of The Holmes First Reader by G. F. Holmes and L. W. Anderson with the notation that it was adopted by the State in Raleigh (presumably North Carolina), and, as shown below, the Holmes materials must have been popular in the South. The Harvard text was copyrighted in 1886, 1891, and 1900 by University Publishing, which also suggests it is the “New Edition” listed above. It stated, “The lessons are based on the word method, but are equally well adapted to the sentence method.” The claim was also made that the book could be used with the phonic method, but it would have to be phony phonics.

The information first given in the list of editions above came from the American Catalogues, which were contemporary sources and therefore highly reliable (though clearly incomplete). According to Early American Textbooks, 1775-1900, the Department of Education Library has a copy of The Southern Pictorial Primer, or First Reader by George F. Holmes, published by Richardson & Company in New York in 1866, a year before the University edition, and without “University” in its title. Also shown in Early American Textbooks is the Southern University Series, The Southern Pictorial Second, Third, Fourth and Fifth Readers, all 1866 except the last which was 1869, and all published by Richardson & Company, New York. Early American Textbooks also has an entry for University Series - Holmes First Reader, New York and Baltimore, University Publishing Co., 1870, as well as second to sixth readers. The second and third readers have editions of 1870 and 1871, the fourth and fifth an edition of 1870, and Holmes Sixth Reader by University Publishing has an edition of 1872. For the New Edition, Early American Textbooks lists G. F. Holmes’ and L. W. Anderson’s Holmes Third Reader, New Edition, New York: University Publishing Company, 1887.

It appears that the Holmes “University” series had a standard edition and a Southern edition, and the Southern “University” edition was published by Richardson & Co. and moved into the Southern states by 1866, only a year after the Civil War ended, before the standard edition was put out by University Publishing Company. However, the publication dates listed in Early American Textbooks, 1775-1900, are sometimes clearly wrong, and it would be necessary to see actual copies of textbooks in order to confirm that the Southern University series by Holmes preceded the standard University series by Holmes. The Holmes readers are Code 2 materials, A MEANING APPROACH WITH PHONY PHONICS.

Lady of the Lake, by Sir Walter Scott, was part of the Standard Literature Series, “For Supplementary Reading and School Libraries,” published by Newson Company. The series included 70 titles, from primary level to high school, and apparently paralleled the Riverside series of Houghton, Mifflin, and other literature series produced at the end of the nineteenth century. Houghton, Mifflin’s earliest literature series had apparently been in the 1870’s, while the company was still Hurd, Houghton. The various Riverside literary materials were, indeed, excellent and praiseworthy additions to school rooms.

The copy of Lady of the Lake published by Newson Company (no date given) had an introduction by Edward Everett Hale, Jr. It had been copyrighted in 1896 by University Publishing Company. University Publishing Company had obviously concerned itself with “literature” at the time they prepared the 1896 edition of Lady of the Lake, and Newson Company published in 1907 the Aldine series, in which they chose the name “Aldine,” obviously for its literary allusions, since it was the name of a famous Italian Renaissance press. (It had been used previously by Houghton, Mifflin’s apparent predecessor, Hurd, Houghton.) Newson probably either bought the 1896 copyright for the Lady of the Lake edition from University Publishing Company or was an affiliate of or successor to University Publishing Company. University had concerned itself with publishing literature series, and Newson continued the “literature” emphasis in its Aldine readers and its other materials.
Yet the idea of publishing school libraries which was so praiseworthy after 1870 had an unfortunate (and startling!) earlier history, some thirty years previously. In the late 1830’s, a school library series came out with gravely objectionable content, published by, of all people, the publishers of Horace Mann’s Common School Journal. In 1839, the publishers of The School Library, Juvenile Series of Reading Books, were Marsh, Capen, Lyon and Webb, and by 1843, Fowle and Capen. The uproar over the content arose some years after the “libraries” began to be published, apparently in series. (Fowle’s text books have already been discussed in this history.)

Harvard has filed under Educ 2199.01 by a pamphlet, School Library Books and Recommendations, No. 2, dated April 15, 1843. It was an answer to the defense the publishers had already given to the original objections. The defense (apparently written by Fowle) had included the comment that “lynx-eyed” Horace Mann had already removed what was defective. In answer to that defense, the pamphlet quoted pages of objectionable material that still remained, which it indicated were not even all the objectionable material. The pages of long excerpts contained highly irreverent remarks, liberal sprinklings of socially unacceptable words, graphically offensive content, and the implicit endorsement of a “life style” diametrically opposed to that of 1843 Boston. They are startling even today, and would certainly not be published in the Reader’s Digest today, or in the New York Post, except as reports on public scandals.

The literary source of part of this material was the eighteenth century journal, the Spectator, and certain articles in that famous journal undoubtedly were excellent. Yet the “reading comprehension” of the publishers of the school libraries must have been remarkably defective to have reproduced the grossly offensive selections that they did, and the offensive material from other sources besides the Spectator. Either that, or they simply printed material wholesale without even reading it! What is even more remarkable is that these defective school libraries had been endorsed, apparently unread, by people like Wm. A. Alcott, Jared Sparks, Geo. B. Emerson and others. However, the April 15, 1843, pamphlet referred to the fact that at least one of the original endorsers of the libraries had removed his endorsement.

1867
Ginn Brothers, Founded by Edwin Ginn and His Brother Fred

1891-1894 (In 1928 United States Catalog)
Cyr Readers, (The Children’s Primer, to Fifth)
Cyr, Ellen M. (Mrs. R. P. Smith. Also see Cyr’s Interstate books.)
Ginn and Company, Boston
1892 (In Early American Textbooks, P. 83. Also 1893, 1897.)
Classic Series. Fifth Reader. 356 p. (Part of Stickney’s series?)
Fulton, R. I. and T. C. Trueblood, Eds.
Ginn and Co., Boston
1896? (In 1928 United States Catalog)
Easy Primer (See entry under Boston School Supply, possibly the same.)
Barnes, W. and M. A. Lane
Ginn and Co., Boston
1897 or Before (Reviewed on p. 325, School Journal, Oct. 2, 1897)
The Child-Life Reading and Educating Chart (50 pages)
Burt, Mary E.
Ginn and Co., Boston
1897 (Harvard copy)
Study and Story Nature Readers [Ed.: Not for teaching reading]
Earth and Sky, Number I, A First Grade Nature Reader and Text-Book
(No. 2 and No. 3 listed in 1900-1905 American Catalogue)
Stickney, Jennie H. (Mrs. Lansing)
1897 (In 1912 United States Catalog)
The Finch Primer (300 words vocabulary, 90 pages)
Finch, Adelaide Victoria
1900 to 1912 (In 1912 United States Catalog)
Child’s Word-Garden (also teacher’s guide) (1907)
Classics Primer
Readers - lst - 5th
Alternate Fourth Reader (1900)
(Listed as in use in New York first grades, in Taylor’s 1912 book, Appendix D, was “Lansing’s Rhymes and Stories.” It is possibly one of these books but the title does not appear in the 1912 U. S. Catalog.)
Lansing, J. H. (Mrs. Jennie H. Stickney Lansing. See texts above. Most of these are probably the same Stickney series or revisions published under Stickney’s married name of Lansing.)
Ginn and Co., Boston
1902 (In 1928 United States Catalog under Primers)
Step by Step
Peabody, S. C.
Ginn and Co., Boston
1903 (In 1928 United States Catalog)
The Jones Readers by Grades - (lst-8th)
Jones, Lewis Henry (1844-1917, President, Michigan State Normal, Formerly Superintendent. of Schools in Indianapolis and Cleveland)
Ginn and Co., Boston
1904 (In 1928 United States Catalog)
Blodgett Readers (Primer, Books 1-7)
Blodgett, Frances Eggleston (1856- ) and A. B. Blodgett
Ginn and Co., Boston
1905-1908 (In 1928 United States Catalog)
Wade Language Readers (Primer, 1st - 5th)
(Also, Wade Graded Readers, Primer, 1st-3rd, unknown date after 1912)
Wade, J. H. and E. Sylvester
Ginn and Co., Boston
1906 (In 1928 United States Catalog)
Natural Readers
Ball, L. A. - Also wrote Natural Reading (For Teachers), 1906
Ginn and Co., Boston
1906 (In 1912 United States Catalog)
“Second Reader” (Presumably part of a series)
Richmond, C. and H. E. Richmond
Ginn and Co., Boston
1906-1910 (In 1928 United States Catalog)
Hill Readers (Books 1-5)
Hill, D. H. and others
Ginn and Co., Boston
1906 (In 1928 United States Catalog)
Sunshine Primer
Noyes, M. L. and K. L. Guild
Ginn and Co., Boston
1908 (Listed by E. B. Huey, page 442, as published by Ginn)
The Thought Reader, Book I
Summers, Maud
Ginn and Co., Boston
(Shown in 1912 U. S. Cat. as published by Beattys, and in 1928 U. S. Cat. by Noble & Noble, Per Huey, p. 324, 342, 343, a “meaning” method.)
1908 (Copy at Harvard)
The Graded School Speller, Book I
Spaulding, Frank E. and William D. Miller
(See Newson on Aldine series by Spaulding and Bryce; Bryce wrote a speller later for Newson)
Ginn and Co., Boston
1909 (In 1928 United States Catalog under Primers; Harvard copy)
The McCloskey Primer
McCloskey, Margaret Orvis
Ginn and Co., Boston
  By 1912 (In 1912 United States Catalog)
Graded Art Readers, Book 1 and 2
Cyr, Ellen M. (Mrs. R. P. Smith)
Ginn and Co., Boston
  By 1912 (In 1912 United States Catalog)
Folklore Stories and Proverbs
Wiltse, S. E., Editor
Ginn and Co., Boston
  1912 (Incredibly, Beacon was only listed in Early Amer. Textbooks on p. 69, as 1875! The 1912 or
1921-1922 edition was not listed in the 1928 U. S. Catalog.
See the 1921-1922 edition below.)
Beacon Readers
Fassett, James H.
Ginn and Co., Boston
  1916 or Before (In 1928 United States Catalog)
Literary Readers (no date)
Advanced Literary Reader (2 vols., 1916)
Young, E. and Walter Taylor Field
Ginn and Co., Boston
  1917-1918 (In 1928 United States Catalog)
Browne Readers (Books 1st-4th)
Browne, R. W.
Ginn and Co., Boston
  1921-1922 (In 1928 United States Catalog)
Field Readers (Primer, 1st-6th and manual)
Field, Walter Taylor and Nell R. Farmer
Ginn and Co., Boston
  1921-1922 (See N. B. Smith p. 134, 138-41, 430)
Beacon Readers (Revised)
Fassett, James H. and Charles H. Norton
Ginn and Co., Boston
  1924 (In 1928 United States Catalog under Readers and Primers)
The Learn to Study Readers (In N. B. Smith’s book, pages 170, 431)
Horn, Ernest (1882-?, an “expert” on spelling and shorthand at U. of Iowa.) and Grace Shields (1875-?
wrote 1915 reading man. for Cedar Rapids, Iowa)
Ginn and Co., Boston
  1925 (In 1928 U. S. Catalog)
Happy Children Readers (two books)
Pennell, Mary E. and Alice M. Cusack
Ginn and Co., Boston
  1925 (In 1928 United States Catalog under Primers)
Field-Martin Primer and Teacher’s Edition
Field, Walter Taylor and K. Martin (Also see 1916 and 1921 for Field)
Ginn and Co., Boston
  1926 (In 1928 United States Catalog under Primers)
Land of Play
Ketchum, I. A. and A. L. Rice
Ginn and Co., Boston
  1926 (In 1928 United States Catalog under Readers)
Beacon Gate to Reading
Sullivan, M. E. and P. M. Cox
(The Brownie Primer, 1906, Century, was written by P. Cox. The same?)
Ginn and Co., Boston
1928 or Before (In 1928 United States Catalog)
New American Readers (Books 1st-5th)
Baugh, L.
Ginn and Co., Boston
1928 or Before (In 1928 U. S. Catalog under Readers)
Corona Readers “See main entry”
Egan, M. F and Others
(Possibly Ginn and Co., Boston)
1928 or Before (In 1928 U. S. Catalog)
Fables and Rhymes for Beginners
Thompson, J. G. and T. E. Thompson (See Morse and Silver, Burdett)
Ginn and Co., Boston
1928 or Before (In 1928 United States Catalog under Primers)
Expression Primer
Talbert, L. E. (See Talbert’s entry under Doubleday)
Ginn and Co., Boston
1929 (See N. B. Smith p. 167, 213, 218, 228-9, 234-5, 238, 432)
The Children’s Own Readers (Preprimers, primer, 6 readers)
Pennell, Mary E. and Alice M. Cusack (See 1925 entry)
Ginn and Co., Boston
1929 (In Cumulative Book Index 1928-1932)
Our Story Readers (Books 1-3)
Kirk, W. H. and others
Ginn and Co., Boston
New Path to Reading (Primer and two or three more books)
Cordts, Anna D. (Particularly bad two-step phony phonics)
Ginn and Co., Boston
1948-1953, Revised Before and in 1963 (N. B. Smith p. 277, 284-6, 289-90, 295, 322, 326, 435; see
Chall, Learning to Read)
The Ginn Basic Readers
Russell, David H. and Others
Ginn and Co., Boston
1964, 1966 (Per Blumenfeld’s The New Illiterates, p. 291-292; see Chall, Learning to Read; Used in
USOE 1st Gr. Studies, reported in Reading Research Quarterly, Summer, 1967)
The Ginn Basic Readers, 100 Edition
Russell, David H. and Odille Ousley
Ginn and Co., A Xerox Education Company, Lexington, Massachusetts
1969 (Also later editions)
Reading 360
Clymer, Theodore; Virginia L. Brown; Billie Parr; Bernice M. Christenson; Consultants: Roger W. Shuy
(Linguistics), E. Paul Torrance (Creativity)
1972 (Reviewed by Blumenfeld on p. 312-313)
SWRL Beginning Reading Program
Southwest Regional Laboratory for Research and Development (Inglewood, California), Program
Director: Dr. Howard Sullivan, assisted by Dr. Fred Niedermeyer, Leslie Bronstein, Carol Lebeaune, Dr.
Suzanne Baker.
Edwin Ginn and his brother, Fred, founded the company of Ginn Brothers in 1867. In 1876, the company became Ginn and Heath, and in 1885, Ginn and Company. “Heath” apparently left and founded his own company, because the company, D. C. Heath, dated at least from 1887.

The 1867 co-founder of the company, Edwin Ginn, had apparent activist inclinations by 1910. Dr. Dennis L. Cuddy showed the following on pages 5 and 6 of his 1993 annotated chronology, “President Clinton Will Continue the New World Order,” published by The Southwest Radio Church of the Air, Oklahoma City, Oklahoma:

“1910. The World Peace Foundation (formerly the International School of Peace) is founded by educational publisher Edwin Ginn. One of the first books published by the foundation is The First Book of World Law (1911) with chapters on ‘The World Judiciary,’ ‘The World Executive,’ and even one on ‘The Universal Postal Union.’”

The titles suggest Edwin Ginn might logically have found it impossible to swear under oath to uphold and defend the United States Constitution, if he had ever been elected to a United States office, which positions require that oath.

The general history of Ginn and Company is given in a 1935 brochure now in the Harvard library, entitled, Textbooks Then and Now. It was based on material prepared for the 1933 Chicago World’s Fair and the illustrations are presumably from the Ginn exhibit there. The brochure stated that Edwin Ginn and his brother, Fred, founded the company of Ginn Brothers in 1867. In 1876, the company became Ginn and Heath, and in 1885, Ginn and Company. (Not stated is the fact that the “Heath” in that company name very probably founded his own company, since D. C. Heath was publishing material at least by 1887.) The brochure said:

“Thumbing through the early catalogs of Ginn and Company, one comes upon many outstanding publications in the history of textbook making....”

Listed were many Ginn textbooks on Latin, geometry, history, etc., apparently largely upper grade materials, but NOTHING on Ginn readers, of which there have been so very many. As the previous listing of Ginn texts demonstrates, from 1885 to 1930, Ginn had published at least 18 different reading series, plus individual primers.

A photograph of books that had apparently been laid out in exhibit at the 1933 World’s Fair was entitled, “Three of the famous McGuffey Eclectic Readers, in front, and some modern readers.” In the back were Ginn’s most recent readers: the 1929 “meaning”-approach Pennell and Cusack Primer, Book Two and Book Three, and the three Cordts’ phony-phonics 1930 texts. The choice of books for that picture carried two implications. (1) Those were the only sets of its reading materials that Ginn was promoting in 1933. (2) Ginn chose to ignore ALL its vast production of old readers from 1885 onwards,
listed in all of its catalogs, which were almost certainly still in existence, and chose instead to compare its modern series to another publisher’s old series: American Book’s McGuffey series.

That was a very strange thing to do, particularly since George A. Plimpton, “a member of the firm” in 1933, and its president in 1935 (and probably earlier), had an “extensive collection” of “old textbooks” which were used in the Chicago exhibit, and certainly should have known of the fallacy of the McGuffey Myth! As early as 1900, in the bibliography to his 1900 history of reading, R. R. Reeder cited on page 92 “Plimpton, George A., New York City. Collection of New England Primers, and Early School Readers.” On page 36, in a footnote, Reeder referred to “Mr. George A. Plimpton’s Collection, New York City.” That Plimpton, who was very likely the father of the president of the Ginn company, published short materials on surviving texts which he thought might possibly have been used in childhood by Chaucer and Shakespeare, one of which Plimpton titled Education of Chaucer, and the other Education of Shakespeare. In my opinion, his interpretations of those surviving materials served to obscure, not to illuminate, actual practices. The 1933 exhibit of the Ginn Company certainly also obscured the history of beginning reading in America. George Plimpton, presumably the son of the George Plimpton that Reeder mentioned, was with the Ginn company at that time.

The source of the title, “Beacon” for Fassett’s famous series may have been the location of the firm between 1902 and 1916, on Beacon Street in Boston. I was told by Mrs. Kathryn Diehl of Lima, Ohio, who is well-known for her extensive work on the reading problem over many years, that after the Beacon series was no longer sold in America about 1930, it still could be obtained in Canada and England until about World War II, and that after it was no longer available in Canada, it could for a time be obtained in England. If the report she received was true, those facts might be explained by the organization plan outlined in the brochure. In 1935, the company was a partnership of eighteen partners. The statement was made on page 15:

“The affairs of each office are in the hands of one or more of the members of the firm. This form of organization has made it possible for Ginn and Company to keep in touch with educational developments everywhere, and to meet in their books the requirements of many different localities.”

A statement was made on page 18 of the 1935 brochure that demonstrates vocabulary control was in place for textbooks in all subjects by 1935. That was startlingly rapid, indeed, since strict vocabulary control had only begun to re-surface for beginning reading books in the early 1920’s. Furthermore, vocabulary control had never existed anywhere in history before the 1920’s in other subjects than reading instruction except probably for books written for deaf-mutes. Of course, American children after 1930 were being taught to read by the deaf-mute method of strictly controlled vocabulary, comparing of whole-word parts (phony phonics), and context guessing, so they could only read textbooks in other subjects if they also had vocabulary control. The 1935 brochure read:

“A book... must fit the grade for which it is intended. Scientific checking of vocabulary is widely used. Not only do Ginn and Company employ the usual word lists for this purpose but to almost all elementary-school books they apply a special graded list of some 15,000 words to determine the degree of difficulty of the vocabulary.”

The harmful effect of this rigid and MOST unnatural vocabulary control, which stunted the mental development of American students after 1930, does not need to be pointed out again.

No information is available on materials published from 1867 to 1876 by Ginn Brothers. Concerning the materials listed first above which were published by Ginn, Heath & Co., the 1877 Classical English
Reader was a possible response to the campaign by President Eliot of Harvard for “real” literature in children’s readers.

March’s book is listed in book lists for primary teachers in two 1882 issues of Primary Teacher. Apparently March’s text concerned methods or included methods. March was a philologist involved in spelling reform, who had been a student of Noah Webster, and who had been a professor at Lafayette College where he had been J. M. Cattell’s favorite teacher, according to Sokal’s excellent book on Cattell. March’s ABC Book was not listed in the American Catalogues or the United States Catalog, and no copy has turned up. APPROACH IS UNKNOWN.

Elizabeth Turner’s book is listed in Early American Textbooks, page 74, as published in 1885 by Ginn, Heath & Co. It was later published by Ginn, as it was advertised in the back of Tarbell’s Lessons in Language, Book I, copyrighted in 1890 and published in 1897 by Ginn & Co., Boston. Tarbell’s grammar book was very poor. Tarbell’s 1897 grammar also advertised Turner’s Stories for Young Children, and Short Stories (Supplementary for Primary), all published by Ginn. The 1912 United States Catalog showed the last two were still in print, the latter for third grade and the former for second and third. Turner’s Primer and First Reader were also still in print, all published by Ginn. Short Stories is listed on page 23 of Early American Textbooks. APPROACH IS UNKNOWN.

The “Classic Series” is probably the extension of Stickney’s 1885 Classics for Children, a Primer. On page 83, Early American Textbooks lists 1892, 1893 and 1897 copies of the Classic Series Fifth Reader by R. I. Fulton and T. C. Trueblood. Presumably there were first through fourth readers in that “Classic Series” before 1892 when a fifth reader is known to have appeared. If the “Classics” title used on that 1895 Fifth Reader was also used on Stickney’s first through fourth readers which are recorded as having been published between 1888 and 1890, then Stickney’s was the first “classic” series ever printed in America, instead of the two series in the late 1890’s which Nila Banton Smith claimed were the first. (In any event, no matter who wrote the first through fourth books, that “Classic Series” published by Ginn of Boston was certainly in existence by 1892, about six or seven years before the two non-Boston “classic” series that Smith cited as the first of that kind.)

Stickney had firm ties to the Boston schools and the 1870’s change-agent period there, as discussed elsewhere. Nila Banton Smith seemed to have gone to great lengths to bury the Boston schools 1870’s story, and the Stickney materials may have been closely associated with it. Also noteworthy concerning the burying of the Boston schools 1870’s story, as discussed elsewhere, were Smith’s garbling of the Franklin reading series history and her omission of the Leigh-print history in the Boston schools.

As discussed in this history, the “classics” emphasis seems to have originated in Boston/Cambridge in the 1870’s, and Jennie H. Stickney was obviously right in the middle of things, promoting “meaning” in the teaching of beginning reading. Yet Stickney’s name had appeared as the principal signer, and presumably author, of a joint letter written about 1868 endorsing Leigh print for beginners. The letter was on the back cover of Leigh’s Pronouncing Edition of Hillard’s Primer, copyrighted in 1866, but in an edition of 1872. From the following, it appears probable that the letter being quoted on the back cover had been written about 1867. In Boston Superintendent John D. Philbrick’s report of March, 1870, he had said the following (on pages 145 and following of the Annual Report of the School Committee of the City of Boston, 1870, published in 1871):

“Several years ago, an order was passed by the Board, authorizing the district committees to introduce into the schools of their respective districts, Leigh’s phonic system of teaching the first steps of reading, making use of the phonic charts and Hillard’s first and second readers, printed in the pronouncing type..... The experiment has been, I believe, generally successful. In some cases, the results attained have been very remarkable.”
The permission to use Leigh type, if so desired, had been given to Boston primary schools about 1866, three years and a half before Philbrick’s comment. Therefore, the following letter quoted on the back cover of Hillard’s Primer, on which letter Stickney was the principal signer, may be dated to about 1867:

“THE TRIAL IN BOSTON

“The teachers, after a year’s trial by order of the school board, report: - ‘As compared with our corresponding classes in former years in common print, the classes we have taught the past year in DR. LEIGH’s print, learned the letters and sounds with as great facility as the others did the alphabet; read twice as many pages, pronounced much more correctly and distinctly; analyzed words, or spelled by sound, admirably; could study their lessons, finding out new and hard words themselves, without the aid of any one to tell them; made the transition to spelling by letter, and reading in common print, without difficulty; read fluently, calling words at sight, instead of spelling out so many words; read naturally and with expression; we could secure more interest and wide-awake attention from the whole school. (signed) Jenny H. Stickney, Principal of the Training School; A. J. Baker, Ass’t Teacher of same, J. P. Titcomb, Rutland St., M. Mitchell, East St.; E. J. Cosgrave, Charter St.’ ... MR. MASON, Master of the Eliot School, speaks of its ‘marked success’ in Miss Cosgrave’s School: - ‘The little ones have made great proficiency. Their enunciation and pronunciation is very perfect. They read with the greatest facility, and in all the elementary work seem to be much in advance of pupils who have commenced in the old way.’”

In the 1871 volume of the Annual Report of the Boston schools, printed in 1872, the Report of the School Committee, from page 7 and following, read:

“Now the method of leading pupils into a knowledge of the formation of words should be made easy, attractive and short. It is no longer a matter of doubt that a method exists that relieves teachers from perplexities and pupils from tears. A teacher who has had the advantage of observing this method at the Training School, and has learned the art of oral instruction and of using the blackboard for illustrations, who has the vital qualities that engage the attention of children, and the sweet, firm temper that retains hold upon them, will be able, with Leigh’s phonic exercises, to conduct a whole class over the irregular field without a stumble - ‘forty reading as one.’....

“We beg leave to say that six years of careful experiment in several schools in this city have shown the best results from this system... the fact leaves no room for dispute. Within six months ordinary pupils under this system get nearly through the second reader, - a point which pupils by the old method are always eighteen months, and often two years in reaching. This is a constant, unvarying result... The way is not only shortened, but the lessons are made attractive... Words are never parroted either in reading or spelling; no word is used that is not understood... There are many other points in the mode of teaching pursued at the Training School to which attention should be called....”

Stickney’s letter about 1867 on the back of Leigh’s Pronouncing Edition of Hillard’s Primer, along with the 1870 and 1871 comments from the Boston Annual School Reports, make it absolutely certain that Stickney had used Leigh print for several years at the Boston Training School of which she was the principal in 1867, and probably in 1871. Stickney knew for a fact, beyond any shadow of a doubt, that children taught by “sound” learned to read quickly and accurately, while children taught by “meaning” stumbled and fell behind.
Therefore, Jennie H. Stickney had been intimately acquainted for years with the marvelous results of teaching beginning reading by “sound” (as the Leigh print did) in her position as Principal of the Boston Training School. Yet, in 1885, she joined William Bentley Fowle, in his action some forty years before, in doing a complete about-face on the teaching of beginning reading, since by 1885 Stickney endorsed “meaning” to teach beginning reading. That put her on the side of the powerful change-agents who had fired her former superintendent, Philbrick, in 1878, and it undoubtedly also made her own career far more secure. (Sarah Fuller, head of the Boston city school for the deaf which had been founded by Philbrick, obviously made a similar switch, as referred to elsewhere in this history. Fuller’s job had remained secure after the founder of the school, Philbrick, had been fired. Only Fuller’s name as principal, not Philbrick’s name as founder of that first day-school for the deaf, is ever mentioned in connection with it.) As shown in Appendix B, Fowle had contradicted his 1824 statements by his 1842 statements, to agree with the first wave of change-agents who had surfaced in earnest about 1826. Stickney also switched her views stated before 1872 to different ones sometime before 1885. The change-agents had surfaced again in earnest before 1875. In 1875, the Adams brothers and others installed Colonel Parker at Quincy. In 1878, unknown persons with influence on the Boston School Committee dumped Superintendent Philbrick and his Leigh phonics.

Stickney had realistically faced the way the wind was blowing in Boston sometime before 1885. That was the year she personally copyrighted under her own name the appalling 1885 Classics for Children, A Primer, which was published by Ginn & Co. Harvard’s 1885 copy shows the following after its title: “Embracing the sentence and phonic methods for teaching sight reading.” It is an absolutely terrible book, with phony phonics and long lists of words by association. (Two-step phony phonics is the comparing of parts of whole sight words to each other, and it is actually a deaf-mute method used to distinguish differences visually between soundless sight-words). Nevertheless, Stickney’s book included class oral drill for “elocution.”

On page ii, Stickney cited her rationale. Except for its endorsement of “classics,” which were the special enthusiasm of President Eliot of Harvard, Stickney’s methods sounded like E. L. Thorndike (or, I suspect, like the ideas of Thorndike’s teacher, William James, because I am convinced that is where Thorndike got his own ideas about teaching reading):

“Among the considerations which have led a practical teacher to the development of a somewhat novel plan are these: -

1. After reducing a number of books to their vocabularies, it has been found that the ready recognition of about five hundred words will put a child upon his feet, as it were, in pleasant natural reading, appropriate to his age, with only such aid in new words as may be made needful by new subject-matter....

2. A second consideration is the fact that, in spite of all effort to prevent it, children learn by rote the pages of their primers long before they can distinguish all the words contained in them.... it is proved in hundreds of homes that without effort children learn to read by the use of the simple books previously learned by heart.... we have made such selections... as embody the greatest number of simple words, with the fewest of those less commonly used.... [Ed.: She obviously endorsed the rote memorization of sight words with the help of context.]

3. A third consideration is drawn from the law of analogy... word correspondence [Ed.: Here she endorsed two-step phony phonics, which is what she meant by “analogy”]...
4. One other item.. is, that children who are suffered to run wild with the time honored nursery classics until six or seven years old, will themselves.. make impromptu stories and rhymes.... [Ed.: Her purpose: language growth, which, at least, was a good point.]

“Hoping that fellow-teachers will find pleasure in its use, we commend our work to their friendly judgment.”

This fellow-primary-teacher’s judgment is not only unfriendly but appalled. From the content of Stickney’s book written by 1885, it sounds very much as if she had filled somebody’s work-order to prepare “classic” material for children to teach beginning reading by “meaning” instead of “sound,” by the memorization of sight-words in meaningful contexts. After all, young Henry Cabot Lodge appeared to have been filling a work order when he wrote his 1879 collection of old tales prepared specifically for the Boston schools. However, it would have taken far less time to prepare Lodge’s short collection of fairy tales which were copied mainly from Harvard’s chapbook collection and which could have been put together in a hurry than it would have taken Stickney to prepare her phony phonics reader.

This “classic series” material appeared in the reverse order of earlier series. On almost all earlier series, the fourth and fifth readers were published first, and the primary readers last, almost as an afterthought. This series started with the classic “primer” in 1885, and then worked up to produce Book 5 (if that is, indeed, part of a Stickney’s “Classic” series), only some seven years later, at least by 1892. The real emphasis of this “classics” material was obviously not on “classics” but on “meaning” for beginning readers, instead of “sound.”

Yet by 1889 Stickney admitted the damage the “meaning” method had done, in her book, Word by Word, An Illustrated Primary Spelling Book. It was written for the second year of primary school and taught real phonics along with a lot of sight-reading. Real phonics had come back to American schools by 1889 through such spellers at second grade and above. Nevertheless, the title page of Word by Word referred to Stickney as “Author of Stickney’s Readers, Etc..” so she was still endorsing “meaning” for beginning readers. Stickney said in the preface to her 1889 speller:

“The action of the mind in learning to read and spell has been of late years a favorite study of educators. Theories have been advanced and experiments made which, though disastrous in certain lines, have been on the whole of great value.

“Reading has undoubtedly gained both fluency and expression; loss falling, if anywhere, on the strength of impression - a fault not wholly chargeable to the school. But in many quarters a generation of bad spellers are testifying to failure somewhere, and the most zealous advocates of incidental spelling recognize the need of specializing the work at that stage in a child’s life when forms and images are most readily fixed.

“The perception of words required for reading is only such as secures against the mistaking of one word for another. Oral and written spelling call for much greater accuracy of impression. One may know a house from a barn or a shop, yet be unable to picture the details of construction in either. As reading does not require, it has no call to provide, the mental habit and training implied in word-reproduction; yet this latter need is as great as the former, and the teaching of spelling has from henceforth as sure a tenure as that of reading and arithmetic.

“Since the agitation of the subject came through educators from whom have been derived some of the best fruits of educational progress, it will be useful to look closely into the grounds upon which the work of the spelling-book was first banished and is now being restored to the schools....”
Stickney clearly recognized a sharp deterioration in spelling ability by 1889, and clearly recognized that it was the direct result of the “expert” influence with which she, herself, had cooperated.

It appears evident from the records that J. H. Stickney, Jennie H. Stickney and Mrs. J. H. Lansing are the same person. Stickney apparently used her married name of Lansing on her work in later years. Many of Stickney’s materials were in print in 1912 under the name, Lansing, according to the United States Catalog. For beginning reading, she used A MEANING APPROACH WITH PHONY PHONICS.

Cyr’s readers published by Ginn have been discussed at length in this history. They were obviously outgrowths of her work with the Interstate group with ties to Lothrop, listed elsewhere. According to Early American Textbooks (page 81) “Literary selections in all Cyr’s readers were prominent.” Cyr’s “Preface” to her Interstate Primer was dated July, 1886, Cambridge, Massachusetts. Her emphasis on literature and sight words, together with her origin at Cambridge certainly suggest that, like Stickney, she had ties to movers-and-shakers such as William James at Harvard in Cambridge. The Cyr Readers of 1891-1894 published by Ginn were apparently best-sellers all over America, and rate a Code 1 at the beginning level. A MEANING APPROACH.

The Easy Primer was not in print in 1912, but M. A. Lane’s Oriole Stories for Beginners of 1900 was in print by Ginn. However, Ginn’s Easy Primer by Barnes and Lane was in print in 1928, so it had been resurrected with the late 1920’s “push” to reduce vocabulary in primers. The 1896? date given for it above is only a guess, since Lane had material in print in 1900, and since Boston School Supply published a primer with the same title in 1896 which is possibly the same. THE APPROACH IS UNKNOWN.

See the comments on Mary Elizabeth Burt’s background, in connection with her Literary Primer written with M. Howells and published by Scribner in 1901. As those comments given in the Scribner section demonstrate, she was obviously well known after about 1893. Mary Elizabeth Burt’s The Child-Life Reading and Educating Chart of 50 pages published by Ginn was reviewed on page 325 of the School Journal on October 2, 1897. The review stated in part:

“By means of easy conversations with the teacher reinforced by blackboard work, the child is unconsciously put in possession of words. He recognizes print before he knows that print is what he is trying to master, and the use of script is acquired almost unconsciously, his mind being employed with the thoughts to be expressed, rather than in the mode of expression. The lessons are arranged phonetically to a great extent, and are so graded that the vocabulary averages about a word a day for the school year. Much attention is paid to word building and reviews in which old words are repeated in new sentences. In order to familiarize the child with the best literature, a number of classic poems and stories are supplied.... The chart contains about one hundred and fifty illustrations - thirty of which are copies of great works of art. While preparing this work, Miss Burt made three visits to Europe, visiting art galleries and the schools. She has spent five years’ work on this chart, assisted by her publishers, who have spared nothing which could forward her work.... The chart contains fifty pages....”

Burt’s material probably rated a Code 3. It had a “literature” emphasis, and used A MEANING APPROACH WITH PHONY PHONICS.

The Finch Primer, a copy of which is in the Harvard library, was in print in 1912, according to the United States Catalog, but not in 1928. It is listed in Early American Textbooks, page 69. On page 124 of Nila Banton Smith’s “history,” she said The Finch Primer was listed on Utah’s 1897 course for the second half of first grade, as well as the Werner primer. For the first half, the Utah course showed
Stepping Stones to Literature, No. I, by Arnold and Gilbert, listed here under Silver Burdett. The Finch Primer did not teach the alphabet in the beginning but began on page 1 with a picture of a maple leaf and two sentences in script, “This is a leaf. This is a maple leaf.” It preceded the sentences with these words in script: leaf, This, maple, a, is. The Finch Primer used a MEANING APPROACH.

The Jones First Reader of 1903 is a sight-word book, with sentences alternately in print and script, with a lovely use of color, and with a sight-word list at the end. Giving sentences alternately in script and in print was a lingering influence from Quincy, the original source of the clouds of chalk dust from script sentences written on the blackboard. At the very most, Jones’ text could not rate higher than Code 3 phony phonics. Its preface said it had an ethical aim, and said:

“Nature study has been given a prominent place... for use through each or all of the modern methods of teaching beginners to read. The sentence method, the word method, and the phonic method - if such simple processes of teaching may properly be dignified by the term method - may be used to advantage, separately or in happy combination. The modern teacher knows well how to use good reading matter so as to develop the power to read well and... the love for good literature.”

By thus shuffling off all responsibility for results to the shoulders of the poor teachers using his materials, Jones had absolved himself of all blame for his appallingly inept beginning text and for the appalling results it could be anticipated to deliver. The Jones material used A MEANING APPROACH WITH PHONY PHONICS.

Harvard library has a copy of The McClosky Primer of 1909, its Preface signed by McClosky at Newark, New Jersey. It is one of the “literary” primers with literary notes in the back, and appears to be straight, Code I, “meaning” material. Its 1909 Preface is a survival of the 1890’s “expert” approach. It is indistinguishable in its philosophy from that expressed by most 1994 administrators who endorse “whole language” and who unfortunately hold the controlling reins in our abysmal government schools:

“...In mechanical structure the cumulative tale is so admirably adapted to the needs of beginners in reading as to suggest that it might have been invented for the express purpose of saving children from the stultifying effects of a struggle for mere reading symbols. The simple, logical steps of the story save all strain upon the memory. The vocabulary of the shorter tales is extremely limited: the rhyme of ‘The Kid’ contains only twenty-nine (29) words.... The repetition is abundant.... The reports mentioned agree further in the statement that the exclusive use, in the earliest years, of imagination-nourishing material, presented by a method which, in practice as well as in theory, emphasizes thought and feeling rather than symbols, results in a high degree of educational economy. Not only are the pupils able to deal rapidly and effectively with the formal difficulties of reading, but they become familiar with a better type of form,- a more literary vocabulary, a natural sentence structure, and a simple literary unity.

“A knowledge of this higher type of reading symbols, combined with keen interest and mental grasp, enables the first-year pupils to pass directly and easily from this series to the best English versions of Grimm and Anderson and late in the first year or early in the second, to such material as The Adventures of Alice in Wonderland, Pinocchio, and Just So Stories. At this time no mechanical difficulties prevent the enjoyment of good poetry and narrative portions of the English Bible.

“But the literary acquisition, the economy of time and effort, and the quickened intelligence resulting from a rational use of this material are, however important, secondary to more fundamental and far-reaching advantages. These are: the child’s first conscious study of his
mother tongue is stimulated by a sense of need and inspired by a vision of future joy.... impossible to associate with artificial exercises designed merely to give a reading vocabulary...."

Paper never refuses ink. McClosky wrote the above criminal untruths (criminal because of the suffering she caused to little children) in 1909. That was just about a year before Myrtle Sholty scientifically demonstrated at the University of Chicago how very badly three little girls in its practice school were reading half-way through second grade, after those girls had been exposed there to the “meaning” method plus phony phonics. Sholty’s statistics prove that “meaning”-trained second-graders could not possibly have handled the uncontrolled vocabulary of “Alice” or the English Bible, as McClosky falsely claimed her “meaning”-trained readers would have been able to do at the end of first grade or the beginning the second. Sholty’s report is referred to elsewhere in this history. The McClosky material used A MEANING APPROACH.

The Beacon Readers of James Hiram Fassett (1869 -?), first published in 1912, have been discussed at length in this history. The 1921 version written with C. H. Norton was listed by Gates in his 1925 article. However, the Fassett 1912 or 1921 Beacon readers were not listed under “Readers,” “Reading,” or “Primers” in the 1928 U. S. Catalog. Yet Beacon could presumably still have been a best-selling series in 1928 and therefore should not have been out of print. The only listings in the 1928 U. S. Catalog for Beacon, published by Ginn, under “Readers,” “Reading,” or “Primers” was the 1926 material shown above, Beacon Gate to Reading by M. E. Sullivan and P. M. Cox. That 1926 material had been listed under “Readers,” the section for textbooks, and not under “Reading,” the section for teacher’s books, but it gave no grade level for this apparent child’s book and showed only “60c.” Under Fassett’s own name in the general alphabetical listings of the 1928 U. S. Catalog (of which the entries, Primers, Readers, and Reading had been three of the alphabetical listings) appeared an entry for Fassett’s and Norton’s manual and its price, but nothing for his readers, so far as I could see. This note also appeared there under Fassett’s name but implied a different series: “See Egan, M. F. author under Beacon, A Method of Reading - A Primer, First, Fifth Reader and New Beacon Guide to Reading by Sullivan and Cox.” Another entry appeared solely for M. F. Egan under “Readers,” for his Corona readers.

It is possible the Corona readers were the replacement for the Beacon readers (there is a “light” relationship in names: Beacon, Corona), but they may have had no connection to the Beacon readers. All that the entry under Fassett might have indicated was that, as an author of readers, Egan had worked on some kind of guide on the 1921 version. Whether the Sullivan and Cox Beacon Guide to Reading, listed under Fassett’s name, was simply a misprint for the Sullivan and Cox Beacon Gate to Reading shown under “Readers” is unknown. The entries are thoroughly confusing.

Therefore, and incredibly, the famous and successful phonic Beacon series of 1912 and 1922 by Fassett was not actually listed in the 1928 U. S. Catalog and so apparently had been taken off the American market by Ginn some time before 1928, while Ginn continued to publish in 1928 a host of old Ginn sight-word materials. Beacon continued to be published for another ten years or so in England and Canada, presumably because of the organizational set-up of the Ginn company, in which divisions were independent to some degree, but after about 1940 (perhaps about 1945 or so in Canada), the Beacon materials could not be obtained in England or Canada, either. Ginn’s rejection of the highly successful and presumably very profitable Beacon phonic materials in America before 1928, and in England and Canada by about 1940 or so, is therefore a matter of record. The discarding by Ginn of their undoubtedly very profitable Beacon phonic materials strongly suggests that very successful influence had been exerted from somewhere before 1928 to discontinue the famous Beacon phonic series, as part of a drive to remove the teaching of phonic “sound” in beginning reading. By the mid-1930’s, that drive to drop phonic “sound” in beginning reading and to replace it with the deaf-mute, context-guessing, sight-word “meaning” method was astonishingly successful in the United States.
However, although Fassett’s Beacon readers are praised as phonic materials, they appear, when examined, to be very inferior phonic materials, but they were at least dominantly phonic. They have been discussed in the body of this history, and use A MEANING APPROACH WITH SIGHT WORDS BUT ALSO WITH VERY HEAVY AND VERY REAL PHONICS MODELED ON NOAH WEBSTER’S CODE 10 SPELLING BOOK.

In 1963, the Wayne, New Jersey, school in which I taught had Cordts’ material available for supplementary use. It used “whole word” two-step phony phonics and, in my opinion, was virtually worthless: A MEANING APPROACH WITH PHONY PHONICS.

The authors of the series Ginn was apparently promoting in the early thirties were Mary E. Pennell, formerly Assistant Superintendent of Schools, Kansas City, Missouri, and Alice M. Cusack, Director of Kindergarten and Primary Grades, Kansas City, Missouri. Photocopies of portions of Book One of the 1929 Pennell and Cusack material show it to be an apparent sight-word follow-up on sight-word pre-primers and primer. From that and the quotation from the authors on pages 234-235 of Nila Banton Smith’s book, the material is shown to use A MEANING APPROACH WITH PHONY PHONICS.

The Ginn Basic Readers in various editions from 1948 to 1963 by David H. Russell and others are discussed at length by Jean Chall in Learning to Read, The Great Debate, McGraw-Hill Book Company, New York, 1967 (second and third editions 1983 and 1996, Fort Worth, Texas: Harcourt Brace). She said on page 200-201, “...the two series most widely used in the late 1950’s and early 1960’s - Scott, Foresman’s 1956 edition of The New Basic Reading Program and Ginn’s 1961 edition of the Ginn Basic Readers... probably accounted for around 80 percent of total reading-series sales during the period.” My own experience tends to confirm the dominance of those two series. When I began teaching third grade in 1963, and for about seven or eight years afterwards, the Ginn and Scott, Foresman series were to my knowledge the only two series used in my school building in Wayne, New Jersey. The Ginn Basic Readers, like the Scott, Foresman, used A MEANING APPROACH WITH PHONY PHONICS.

It seems likely that one of the most dominant arithmetic series in this general period from 1938 until the 1960’s, matching the wide use of Ginn’s reading series, was Ginn’s material on which Guy T. Buswell of the University of Chicago was the principal author. Concerning Buswell’s background, see the comments on the Ayres spelling scale in the body of this history.

The Ginn 100 series of 1964 was used in the U.S.O.E. first-grade studies in 1967, reported in the Reading Research Quarterly for the summer of 1967.

The Ginn 1969 Reading 360 series has been widely used. I used a later edition when teaching second and third grade reading in a private Catholic school from January to June in 1986 and considered it highly unsatisfactory. At the second, third and fourth grade levels, a vast amount of time was wasted on “reading workbooks,” which children are expected to do largely alone, “silently.” Except for practice in using phony phonics, children derive next to nothing from such basal reader workbooks except a pronounced dislike for reading. The Ginn basal reader series in use in 1981 was listed as one of “The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. The material used A MEANING APPROACH WITH PHONY PHONICS.

The 1972 SWRL “phonic” program which was funded by United States Government agencies is the classic two-step phony phonics approach that has been used ever since it first surfaced in eighteenth-century France. SWRL was published by Ginn but obviously was not its own material. It is another example of the government mountain’s laboring at great taxpayer expense to bring forth a very small mouse, Yet a first grade teacher, without “Dr.” before her name, Sue Dickson, wrote an extraordinarily successful entire first-grade, truly-phonic program, with practice readers, and non-boring
“workbooks” which teach real phonics, to be done WITH the teacher, and NOT silently and alone. Mrs. Dickson’s program is entitled Sing, Spell, Read and Write, and was first published at just about the same time as the SWRL program. Mrs. Dickson wrote the program without assistance of any sort, except that she asked some fellow teachers to write a small number of the 17 very short, attractive, practice readers, and asked a talented woman artist to illustrate all of them. Mrs. Dickson also hired an orchestra to play supporting background music for her delightful recorded song drills and games, which used words and music she herself composed. (Music was her college “minor.”) Her program has been ignored by all the counter-productive government research centers which have been spread across the country at great taxpayer expense. Mrs. Dickson presently markets her program herself. I had both the SWRL materials (bought with tax money by the school system) and her materials (which I bought with my own money) available for supplemental use in my classroom. The quality contrast between the two was pathetically striking. SWRL used A MEANING APPROACH WITH PHONY PHONICS.

The following book which I have not seen would undoubtedly be helpful concerning the history of the Ginn Company. It was listed in the bibliography to Early American Textbooks, 1775-1900, published in 1985 by the Office of Educational Research and Improvement, U. S. Department of Education, Washington, D. C.:

The 1991 series, World of Reading, on which Pearson, Clymer, Venezky and others were the authors, was reviewed in The Beginning Reading Instruction Study of 1993, compiled by the Office of Research, U. S. Department of Education. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the first grade samples from the World of Reading of Silver Burdett & Ginn, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had been 6/6, but for “Decoding strategy... Explicit,” the score had been zero. Not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the 1991 World of Reading series is not teaching synthetic phonics to beginning readers. Considering the publication date and the title of the series, it is probably “whole-language” oriented.

1867 (Harvard copy)
My First Alphabet
George Routledge & Sons, London and New York
1871 (From 1876 American Catalogue, under Primers)
Child’s First Lesson Book, $1.25
George Routledge & Sons, London and New York
1876 or Before (From 1876 American Catalogue)
Illustrated Primers. Four Volumes: The Alphabet, Little Words, Spelling Made Easy, Easy Lessons in Reading. 25 c each.

1876 or Before (From 1876 American Catalogue)
Little Helps for Our Little Ones; or, Reading a Pleasure, Not a Task. (One syllable). 50 c.
George Routledge & Sons, London and New York
1876 or Before (From 1876 American Catalogue)
New Colored Illustrated Primer, Comp. Alphabet and Easy Words, and Easy Spelling and Reading. 50 c.
George Routledge & Sons, London and New York
1876 or Before (In 1876 American Catalogue under Readers)
Routledge’s Illustrated Reading Book. $1.
1878 (From 1876-1885 American Catalogue)
Large Picture Primer. 75 c, 50c.
George Routledge & Sons, London and New York
By March, 1880
George Routledge & Sons
416 Broome Street, New York (and London)
(This company name and address appeared on the March, 1880, Appendix to the 1876 American Catalogue - Authors and Titles in which Routledge listed three pages of books on all topics published in 1876, 1877, 1878, and 1879. That list has not been searched for new titles on reading instruction.)

1883 (From 1876-1885 American Catalogue)
Little Birdie’s Picture Primer. 25 c.
George Routledge & Sons, London and New York

1885 (From 1876-1885 American Catalogue)
Little Pratler’s Picture Primer. 25 c.
George Routledge & Sons, London and New York

1887 (From 1885-1890 American Catalogue under Readers)
Pierson, H. W.

“The publishers who dominated the scene for most of the period under discussion were Macmillan and Routledge… Routledge had commenced business in 1834 but did not achieve success with children’s books until he became associated with Edward Lear in 1861. From the 1860’s and throughout the 19th century the firm specialized in outstanding picture books by Crane, Caldecott, and Greenaway. During the middle period, however, its success was founded on the piracy of American books…”

Yet the 1867 Harvard copy listed shows British content, not American. It was not meant for teaching reading but only for teaching the alphabet. It shows a picture and word for each large and small letter. The company advertised on this 1868 copy its “3 Penny Toy Books” - My First Alphabet, The Old Woman Who Lived in a Shoe, Little Bo Peep, Mother Goose, The Five (sic) Little Pigs, The Babes in the Woods, The House that Jack Built, Little Red Riding Hood, and one other.

No information is available on the 1887 H. W. Pierson material which was probably from England, but it is unusual by 1887 since it suggests home instruction, possibly in beginning reading. Nor is information available on the other texts listed above, taken from the American Catalogues. Routledge apparently abandoned its American publishing of primers and readers after about 1890, since no further entries for beginning reading books have been found. Nevertheless, some of those 1867-1887 books may have lingered in use in homes and schools after 1900, and may conceivably still have been for sale. The probability is that all used A MEANING APPROACH.
P. Kelly & Co.
1871 (In 1876 American Catalogue)
Illustrated Primary Spelling Book, New Edition
Creery, W. R.
P. Kelly & Co.
1883 (In Early American Textbooks)
The Fifth Reader, 372 p. (Presumably also all six volumes of 1868)
Newell, M. Alexander (no mention of Creery)
John B. Piet & Co., Baltimore
1885 (In 1885-1890 American Catalogue)
Grammar School Speller
Newell, M. A. and Creery, W. R.
Van Antwerp, Bragg & Co., Cincinnati
1885 (In 1885-1890 American Catalogue)
Primary Speller
Newell, M. A. and Creery, W. R.
Van Antwerp, Bragg & Co., Cincinnati

The entry for John B. Piet & Co.’s publication of Newell’s reader is from page 98 of Early American Textbooks - 1775-1900. All other entries are from the American Catalogues, and the speller entries from the American Catalogues are added for further information. No other references have turned up anywhere concerning readers or spellers by Newell and Creery, which is surprising since they remained in print for close to twenty years, from 1868 until 1885. They were out of print by the time the 1912 United States Catalog was published. THE APPROACH IS UNKNOWN.

This particular listing establishes that Van Antwerp, Bragg & Company were acquiring and publishing old titles in 1885. This was the practice of American Book Company, its successor, from its arrival in 1890. Vail said:

“The American Book Company became, on May 15, 1890, the owners, by purchase, of all the copyrights and plates formerly owned by Van Antwerp, Bragg, & Co.”

Vail, when he referred to the several publishers of the Worcester readers in his history, made a non-derogatory reference to book trusts which swallowed up other publishers:

“These several publishers were probably gobbled up by some imaginary Book Trust sixty years ago.”

1867 (In 1876 American Catalogue)
Common School Reading, $1.25 Barnes; $1.50 Bancroft.

The history of the older Bancroft readers and their relationship to the newer Indiana State Series and
St. Louis series has already been discussed in this history. Information on the Bancroft materials and on
the related materials appears in Early American Textbooks on pages 75, 80, 99, 107, and 108. None of
these three series (the Bancroft, the Indiana, or the St. Louis) were in print in 1912. Early American
Textbooks, 1775-1900, showed on page 99 the 1874 revised edition of the Pacific Coast Series, First to
Fifth Readers, which established that there had been an earlier Bancroft edition before 1874. It also
showed an 1875 volume, The Instructive Reader. The “New ed. 6 v. ‘75” is listed in the 1876 American
Catalogue, including that sixth volume, “Instructive Reader.”

The most important Bancroft edition of 1883, however, did not appear at all in the American
Catalogue. According to Early American Textbooks, page 75, the 1883 Bancroft series was
simultaneously printed in 1883 as the Standard Educational Series by the Standard School Book
Company of St. Louis, and as the Indiana State Series published by the Indiana School Book Company of
Indianapolis. Early American Textbooks, page 80, shows that the Indiana series had been edited in 1883
by S. H. Clark and H. S. Fiske. It was reprinted again, apparently unrevised, in 1889, according to page
75 of Early American Textbooks.

The Indiana School Journal in 1890 has an advertisement for the Indiana School Book Co. of
Indianapolis:

“To the School Officers of Indiana:

“The Several Complete Series of Readers, Geographies, and Arithmetics published by this
company were adopted on July 10, 1889, by the State Board of Education for exclusive use in the
common schools of Indiana for the next five years.”

Therefore, an apparently unrevised edition of the Indiana State Series printed in 1889, a version of the
Bancroft series of 1883 that had been “edited” by Clark and Fiske, apparently also in 1883, was being
mandated for use in all Indiana schools in 1889. The 1883 Bancroft reading series had also been
promoted, apparently unsuccessfully, in St. Louis in 1883. Early American Textbooks on page 75 shows
copies of the Standard Educational Series, a version of the 1883 Bancroft series, published by Standard
School Book Co., St. Louis, Missouri, in 1883. However, it apparently was not successful in displacing the use of Leigh phonetic print there.

The Indiana School Journal had articles on teaching beginning reading by Howard Sandison, Professor of Methods in the State Normal School, which made it clear that the “official” reading textbooks, the Indiana Series, were a “meaning” series, and possibly even Code 1. In January, 1890, Sandison outlined on page 12 the approach to be taken before using a first book, which by law apparently had to be the Indiana State Series. Sandison’s comments presumably would have been in agreement with the thinking of other users of the Bancroft material in California and Missouri:

“In primary reading, the first phase is that which results in the mastery of a group of some forty or fifty words as letters, standing for meaning. This work is oral, and occupies perhaps, two or three months in time. In it, the sole purpose is to directly associate a printed word as a whole, with its meaning. In this work, the attention of the children is not called in any way to the letters or sounds. If the children learn anything in regard to these, such knowledge is incidental. The one aim of the work, is to impress the children with the idea that words stand for meaning; and to give them a basis for determining the meaning of new words in connected sentences, through the meaning of these familiar words that are also found in such sentences.

“Words signify, however, more than meaning. They signify sounds. Therefore, printed words must be taught as standing for sound, but this work is not to be taken in connection with the preceding phase, because it unduly and unnecessarily complicates the work in that phase, and also prevents the child from acquiring the idea that the main function of words is to express meaning....”

Sandison then endorsed at that point the use of a vague kind of phonics from whole words, and said:

“These two phases of work having been well done, the child is prepared to enter upon the definite use of a First Reader, and the study of simple thought in connected sentences.

“The nature of work with connected sentences is the question now to be considered. Take for example, Lesson XV, on page 23 of the First Reader of the Indiana Series:

“‘Come, mamma, do come!’ says Dickie Rat. ‘See this little box. May I go in to play? It is a nice box to play in.’

“‘Oh no, Dickie! it is a trap. We will not use it.’“

Sandison made it clear that systematic synthetic phonics was not recommended before starting a child on the Indiana Series first book, and that by lesson 15 in that book, the children would be forced to read the irregularly spelled words just quoted as wholes by “meaning” and “context” instead of by “sound.” His quotations from the apparently unrevised first book of the Indiana State Series of 1889 make it clear it used a “meaning” approach, and, therefore, that the 1883 Bancroft and St. Louis Standard Educational Series also used a “meaning” approach. To what extent the series would have later employed “phony phonics” is unknown, but Sandison’s later comments suggest that any “phonics” taught would have been sparse, indeed, perhaps not rating even Code 3.

Sandison made his ideas on what constituted “phonics” very clear in a later 1890 article, appearing on page 143 of the 1890 volume of the Indiana School Journal. Sandison was describing a lesson given five months into the first-grade year (the end of January in today’s schedule), at which point most phonically trained first-graders can independently read aloud, very slowly but with fair success, almost anything in
print. Sandison’s “lesson” lasted ten minutes and concerned reading the simple word, “red,” for its meaning and sound. He made the incredible statement that for his first graders, after five months of so-called “reading instruction,” “The next step was to awaken the idea that the oral word consists of separate sounds.”

Sandison’s “phonics” was manifestly whole word, phony phonics. Therefore, the record suggests that the 1883 Bancroft Series, the 1883 Standard Educational Series of St. Louis, Missouri, and the 1883 and 1889 Indiana State series all used A MEANING APPROACH WITH MINIMAL PHONY PHONICS.

The 1895 Krackowizer text published by “Flanagan” was still in print in 1912, according to the United States Catalog. Whether “Flanagan” had taken over the Indiana School Book Company’s textbook publishing by that date is unknown, but, as shown above, they had apparently done so at least for the reading series by 1905. Early American Textbooks lists “Second Science Reader” by L. Mae Nelson-Virden, published by A. Flanagan of Chicago and New York in 1894, who was most probably the publisher handling the Indiana texts. Flanagan was still publishing the Nelson-Virden Science Readers when the 1912 United States Catalog was prepared. On the 1895 Krackowizer text, the APPROACH IS UNKNOWN.

The American Catalogue, 1900-1905, showed Annie Klingensmith wrote a reading manual to accompany the first four books of the Indiana State Series of readers, published by Flanagan, but by that time at least the first reader of the series had been revised by Annie Klingensmith. According to Early American Textbooks (page 75), Annie Klingensmith revised the first reader of this series in 1894. She also wrote primers for Educational and American Book, listed under their headings. Presumably any Klingensmith material would have used A MEANING APPROACH WITH PHONY PHONICS.

Flanagan was obviously a secondary publisher of books with the Brownie title, the original publisher being Century. On page 16 of Americana in Children’s Books, a Library of Congress 1974 pamphlet, the following appears:

“Cox, Palmer. The Brownies through the Union. New York. Century Co. [1895] 144 p. illus. 26 cm. PZ8.3C839 Bth JuvColl Rare Bk
“The prankish Brownies explore famous sites and historic landmarks in the series of rhyming stories (1887-1913) first published in St. Nicholas and the Ladies Home Journal.”

Those magazine stories are the apparent source for the Brownies material. See the later entries under Century Co., New York.

1876 or Before (In 1876 American Catalogue under Spellers)
Beeton’s Pictorial Speller
Pub. by American News and Nelson (Possibly the British publisher.)
1883 (In 1885-1890 American Catalogue)
World at Home Readers, 5 volumes.
1884 (In 1885-1890 American Catalogue)
Prince Readers for Boys, No. 1
Queen Readers for Girls, No. 1
Royal Star Readers for Mixed Schools, No. 1

“The commercial success of Nelson was achieved through the publication of books for children, among whose authors were R. M. Ballantyne and Charlotte Tucker (A.L.O.E.). In the 1870’s the house of Thomas Nelson was the largest publisher of juvenile literature.”

This company appeared in the March, 1880, Appendix to the 1876 American Catalogue - Authors and Titles, listing about two pages of books published between 1876 and 1880. Nelson had also been selling its schoolbooks, including readers, in America in 1876, as shown by the 1876 American Catalogue.

The Nelson books listed above were obvious attempts by the company that, at that time, was probably the leading British textbook publisher, to capture part of the American schoolbook market. That attempt appears to have been resoundingly unsuccessful. In the 1890’s, however, the British publisher, Macmillan, did appear to have some success in the American market, but Macmillan also became firmly established as an American publisher, which Nelson did not. Nelson’s Royal Readers published in two different editions in the 1870’s are described in the British section of this history and used A MEANING APPROACH WITH PHONY PHONICS. The Royal Readers, apparently vastly used in Great Britain, had other editions in later years.

Before 1870 (See 1842 entry for earlier edition. In 1876 Am. Cat.)
The Christian Brothers Readers (First through Third)
D. & J. Sadlier, New York and Montreal, and also O’Shea and Strong)

1876 or Before (In 1876 American Catalogue under Readers)
Introduction to the English Reader, 31c.
Murray, Lindley
D. & J. Sadlier, New York and Montreal
1885 (Harvard Copy)
The Metropolitan Spelling Book
Designed to Accompany the Metropolitan Readers
By a Member of the Order of the Holy Cross
D. & J. Sadlier, New York and Montreal

It is apparent that the Metropolitan series first appeared some time before 1871 because by 1871 D. & J. Sadlier & Company were publishing a revised series. Early American Textbooks, 1775-1900, showed on page 95 “The Metropolitan First Reader. Rev. ed. New York and Montreal: D. & J. Sadlier & Co., 1871. 120 p.” It also showed an 1873 edition of 120 pages and an 1874 edition of 88 pages. It showed The Metropolitan Second Reader in 1871 of 216 pages and a shortened edition of 137 pages in 1873. It listed The Metropolitan Third Reader of 336 pages in 1871 and a shortened edition of 240 pages in 1873, as well as “A Third Reader” of 240 pages in 1871. It also showed The Metropolitan Fourth Reader of 450 pages of 1871. It is possible that the shortened versions were actually the original, unrevised series.

D. & J. Sadlier published the Metropolitan speller in 1885, of which the Harvard library has a copy. The Metropolitan speller dated back to at least the 1870’s since the 1876 American Catalogue showed the Metropolitan speller in two volumes published by “Sadlier” (no initials), one a speller and the other a definer and spelling book. The Harvard 1885 title was “A New Graded Series. The Metropolitan Spelling Book. Carefully arranged. Designed to accompany the Metropolitan Readers. By a member of the Order of the Holy Cross. New York, D. and J. Sadlier and Company.” The Metropolitan speller began with a fairly complete syllabarium, followed by two letter words and then three letter words. With its emphasis on the syllabarium, it was “sound” oriented.

The Metropolitan Readers were apparently out of print by 1912 as they were not listed in the 1912 United States Catalog.

On the back cover of the 1885 copy appeared other information. It showed that D. and J. Sadlier had an office on Barclay Street in New York and at 275 Notre Dame Street, Montreal, and that The Metropolitan Series included The Metropolitan First Reader, Illustrated, and second through fifth readers, (not sixth as listed in the 1876 American Catalogue as published by “Sadlier”) as well as the spelling book and a speller and definer. The book cover also advertised the Golden Primer or Child’s First book. St. Peter’s Catholic Church on Barclay Street in New York is very old, and the region was reportedly a location for many years for Catholic bookstores, and, apparently, for publishers of Catholic books.

It then referred to, “The cheapest school books ever issued for use in Catholic schools,” by which it apparently meant the Christian Brothers first through fourth readers listed immediately afterwards. Early American Textbooks, 1775-1900 listed on page 78 “Brothers of the Christian Schools… The Second Book of Reading Lessons. Philadelphia: Eugene Cummiskey, 1842.” This was the apparent forerunner of the Christian Brothers series Sadlier was advertising.

The 1876 American Catalogue listed “Sadlier” (no initials) as a publisher of Christian Brothers Readers (First, Second, Third Readers) but showed they were also published by the O’Shea and Strong companies. Strong also published a Fourth Reader. By 1884, The Christian Brothers New Series - Primer was published by De La Salle Institute, and the publisher John P. Murphy was shown as holding the copyright. The Harvard libraries have a copy of that 1884 book. The Christian Brothers readers, both old and new series, were apparently out of print by the time the 1912 United States Catalog was published.

D. &. J. Sadlier do not appear under “Readers” in any American Catalogue after 1876, nor do they appear in the 1912 United States Catalog. However, because of the similarity in name to William H. Sadlier, whose books were published also from the 1870’s, their listing is also included here. What the emphasis of the Metropolitan readers were is unknown, but Harvard’s 1885 copy of the Metropolitan
Illustrated Speller, Designed to Accompany the Metropolitan Series of Readers, by a Member of the Order of the Holy Cross, D. and J. Sadlier, New York and Montreal is Code 6 material, A WEAK PHONIC APPROACH.

On the back of that speller, Sadlier advertised the earlier Christian Brothers Readers, “the cheapest school books ever issued for use in Catholic schools.” That series preceded Murphy’s revision, listed elsewhere. The APPROACH IS UNKNOWN.

Before 1870 (See 1842 entry for earlier edition. In 1876 Amer. Cat.)
Christian Brothers Readers
P. O’Shea, New York, as well as Sadlier and Strong
1871 (In 1876 American Catalogue and 1912 United States Catalog)
Illustrated Progressive Series
P. O’Shea, New York
1876 or Before (In 1876 American Catalogue under Readers)
Young Ladies’ Progressive Reader; for
Higher Classes in Cath. Schools, $1.25.
P. O’Shea, New York
1882 or before (In Early Amer. Textbks., p. 84, and 1912 U.S. Cat.)
Graded Catholic Education Series
P. O’Shea, New York

According to the 1876 American Catalogue, the Christian Brothers first, second and third readers were published by Sadlier, O’Shea and Strong, with Strong publishing a fourth reader. Harvard has a copy of Christian Brothers New Series, Primer, 1884, published by De La Salle Institute, New York, and copyrighted by John P. Murphy. The 1876 American Catalogue also listed Christian Brothers Speller in two volumes published by O’Shea. Early American Textbooks, 1775-1900 listed on page 80 the Christian Brothers Illustrated Series. The First Reader. New York: P. O’Shea, 1870, 98 pages. It also listed under readers “Part I” of 36 pages and “Part II” of 106 pages, both by O’Shea in New York in 1870, but these are presumably the two parts of the Christian Brothers speller which O’Shea published. The Christian Brothers readers were not listed in the 1912 United States Catalog so were presumably out of print before then. Early American Textbooks, 1775-1900 lists on page 78 “Brothers of the Christian Schools... The Second Book of Reading Lessons. Philadelphia: Eugene Cummiskey, 1842.” This was the apparent forerunner of the Christian Brothers series.

O’Shea also published the Illustrated Progressive Series. Early American Textbooks, 1775-1900, showed on page 90 the Illustrated Progressive Series. The Second Progressive Reader. New York: P. O’Shea, 1871, 144 pages, and The Third Progressive Reader, also 1871, 240 pages. Shown on page 83 of Early American Textbooks was their First Progressive Reader, 1871, 106 p., Fourth of 1871. 312 p., and another Fourth of 1872, also 312 p., and a Fifth of 1875, 452 p. Shown in the 1876 American Catalogue was the Progressive Series of Readers in 8 volumes published by O’Shea, beginning with the Primer and the the Primary Spelling and Reading Book, followed by the First through the Sixth Readers.

In the 1912 United States Catalog, O'Shea was shown as still publishing the Graded Catholic Educational Series of Readers in six books and the Progressive Readers in eight books. However, neither was listed in the 1928 United States Catalog. On the O'Shea materials, THE APPROACH IS UNKNOWN.
1874 (Also 1887) (Early American Textbooks, page 113)
Third Reader, 224 pages
Catholic School Book Co., New York

1874 (Harvard copy, copyrighted also in 1887, published in 1893)
The Young Catholic’s Series Primer
Copyrighted by Lawrence Kehoe
Catholic School Book Company, New York.

1897-1900 (or to 1905) (In 1928 United States Catalog)
Columbus Series of Readers
Vlymen, William T.
Catholic School Book Company
Schwartz, Kirwin & Fauss, New York

Not enough information appears to identify this 1874 (and 1887) text. It is unlikely that it is one published by The Catholic Publication Society Company of New York, entered later under 1876, because 1876 was the date of that company’s series.

Harvard has an 1893 edition, copyrighted in 1874 and 1887 by Lawrence Kehoe, of The Young Catholic’s Series. Primer. New York. The Catholic School Book Co. It is Code I material, A MEANING APPROACH.

According to the 1895-1900 American Catalogue, first through third books of the 1897 series were in print in 1898 and 1899 by Catholic School Book Company and Schwartz. According to the 1900-1905 American Catalogue, fourth and fifth reading books were published by Schwartz but dates were not given. In the 1912 United States Catalog, the five-reader series was listed as published by Schwartz, and in the 1928 United States Catalog as published by Schwartz, Kirwin & Fauss.

Harvard’s copy of the Columbus Series, First Reading Book, showed it was copyrighted in 1897 by Catholic School Book Co. and published by Schwartz, Kirwin & Fauss of 42 Barclay Street, New York. It was, unfortunately, written by “William T. Vlymen, Ph. D.” instead of some old nun who would have known a great deal more about teaching beginning reading to little children than Vlymen did. Sister Monica Folzer has not been the only nun who put together fine beginning reading materials, as I have been pleased to learn over the years. However, Vlymen most probably picked up his confusions while getting his Ph. D. and while keeping a sanitized distance between himself and any little beginning readers. Vlymen said on page 2:

“The first fifty-nine lessons contain but two new words each. The remaining lessons bring in but three new words each.... All the words in the First Book are intended to be learned as sight words. At the same time, if Teachers so prefer, phonics can be introduced at any stage, and the new words can be taught as phonetic words... Never allow a child to begin to read aloud until he has read the sentence silently and has grasped its meaning as a whole....”

The word selection was totally unphonetic and totally unsuitable for teaching phonics, despite Vlymen’s “permission” to do so if the teacher wished. Furthermore, there was very, very, little religion in Vlymen’s primer written for Catholic schools in 1897, which was a curious omission, indeed. Vlymen’s unfortunate material used A MEANING APPROACH.

1874 (In 1912 United States Catalog by Schwartz, Kirwin & Fauss)
The American Catalog for 1876 to 1885 showed “Spalding, J. L. Illustrated School Books: Readers. ['76]. Cath. Publ.,” and listed “Young Catholic’s illus. primer,” and first through sixth readers, plus “Young Ladies Illustrated Reader.” Harvard has a copy of the Young Catholic’s Illustrated Speller, copyrighted in 1874 by Lawrence Kehoe and published in New York in 1884 by The Catholic Publication Society Company of 9 Barclay Street, New York. Since Kehoe held the copyrights on this Catholic Publication Society Company material and on material published by the Catholic School Book Company, and since Schwartz, Kirwin & Fauss published material by both companies, the companies were presumably related. The American Catalog for 1885-1890 shows that the Young Catholic Normal Reader by “Spalding, J. L.” was published in 1885 by “Cath. Pub.” Early American Textbooks, 1775-1900 lists several copies of the series on page 113. The Young Catholic’s Illustrated Second Reader was published in New York by The Catholic Publication Society Company in 1890, the Fourth Reader in 1876, and the Fifth Reader in 1887. The 1912 United States Catalog lists “Spalding, J. L., ed. Young Catholic’s illustrated readers. 9 bks. 8c-45c. Schwartz, Kirwin & Fauss.” The series was not listed in the 1928 United States Catalog.

The Young Catholic’s Illustrated Speller, copyrighted in 1874 and published in 1884 by The Catholic Publication Society Co., Lawrence Kehoe, Manager, 9 Barclay Street, New York had no syllabary, but taught long and short vowel sounds, and was possibly Code 7. A WEAK PHONIC APPROACH.

Advertised on the back cover of the speller was The Catholic Publication Society Co.’s Series of Illustrated School Books, Edited by Right Rev. J. L. Spalding, D. D., Bishop of Peoria. Readers: The Young Catholic’s Illustrated Primer, The Young Catholic’s First Reader (and second through sixth, plus a “Normal” and Illustrated Young Ladies’ Reader).

1874 (In 1876 American Catalogue and 1912 United States Catalog)
The Catholic National Readers (lst-25c, 2nd-40c, 3rd-75c, 4th-$1)
Gilmour, Right Reverend Richard, Bishop of Cleveland
Benziger Brothers - New York, Cincinnati and St. Louis

1887-1889 (Per American Catalogue, 1885-1890)
The Catholic National Series: New Primer, 1889,
New First Reader, 1889; New Fourth Reader, 1887
In 1912 U. S. Cat., Catholic National Series went from Primer to 6th.
Benziger Brothers - New York, Cincinnati and St. Louis
1900-1905 (In 1900-1905 American Catalogue; 1912 U. S. Catalog)
New Century Readers (Same title as Rand and Morse series)
Benziger Brothers - New York, Cincinnati and St. Louis
Before 1928 (In 1928 United States Catalog)
American Cardinal Readers for Catholic Parochial Schools
Benziger Brothers - New York, Cincinnati and St. Louis
1971 (Reviewed in Blumenfeld’s The New Illiterates, p. 309-310)
The prices in the 1876 American Catalogue for Benziger’s series by Bishop Gilmour, and for their other two readers shown above, establish that Benziger had two reading series available in 1876. Probably the “Australian” materials shown above came later since they were not listed in the 1876 American Catalogue, and Bishop Gilmour’s 1874 series was probably newer than the first and second readers shown in the 1876 American Catalogue.

The Harvard library has a copy of The First Reader of The Catholic National Series, copyrighted in 1874 by Benziger Brothers. I lack sufficient photocopies to make a proper analysis of its approach. It might be sight-words with inadequate phonics, or, in practice, with heavy emphasis on real phonics. In appearance at its beginning, from the few pages I photocopied, it looks like a Code I “meaning” text. In its preface addressed “To Teachers,” it said:

“In some lessons, the new words introduced are far less numerous than in others, and repetitions are often made.... The very numerous spelling lessons in connection with the exercises on vowel sounds and word-building and the introduction of simple paronymous words are claimed as a peculiar advantage of this book: they will from the start be of great help in overcoming two main difficulties of our language - namely: orthography and the correct pronunciation of vowel sounds. The first eight lessons should be spelt before being read.... The spelling lessons should always be treated as most essential, and the children should never be allowed to read, until they are thoroughly able to spell all the words which precede the reading lesson. Too much attention can hardly be given to the word-building. It affords the teacher an excellent opportunity to use the blackboard. The children seeing how new and longer words are built up from smaller ones (see at, etc, Lesson XXII) naturally grow interested in the process; the importance of every part of a word will be apparent to them, and consequently the different elements will be more readily remembered.”

The use of the blackboard to drill on vowels and word building might or might not in practice have resulted in heavy supplementary phonics, but more of the text would have to be seen to determine which was the case.

The 1876 American Catalogue listed the “Catholic National Readers” by R. Gilmour published in four volumes by Benziger, and the 1876-1884 volume of the American Catalogue showed that the Fifth Reader of the “Catholic National Ser.” was published in 1877. R. Gilmour’s New Primer was published in 1889 by Benziger, according to the 1885-1890 American Catalogue. and a New First Reader in 1889 and a New Fourth Reader in 1887. Early American Textbooks, 1775-1900, lists copies of the Catholic National Series: a First Reader in 1874, a Second, and Third Reader in 1875, and a Fourth and a Fifth in 1876, as well as a Fifth in 1877. It also shows The New Second Reader published in 1890. However, the dates in this reference are sometimes patently wrong, as with its listing of The New Fourth Reader in 1866 and 1875.

The Catholic National Series appeared in the 1912 United States Catalog. By then, Benziger published it in two script editions, “slant” or “vertical script” and had added a sixth reader. The series was out of print by 1928. THE APPROACH IS UNKNOWN.

According to Early American Textbooks, 1775-1900, Benziger published between 1876 and 1898 a series called Australian Catholic Readers, also published by “St. Mary’s, Sydney.” Listed were The First Reader, 1898, the Second, 1898, the Third, 1891, the Fourth, 1876, the Fifth, 1876, and the Sixth, 1877.
None of these appear in the American Catalogs covering those years, and conceivably Benziger only acted as an agent for imports. THE APPROACH IS UNKNOWN.

According to the 1900-1905 American Catalogue, Benziger Brothers published the New Century First through Fourth Readers sometime in that period (no actual date being given). In the 1912 United States Catalog, the material was shown as the New Century Catholic Readers, first through fifth, published by Benziger. The material was not listed in the 1928 United States Catalog. THE APPROACH IS UNKNOWN.

However, the 1928 United States Catalog showed that Benziger was publishing a new series by that date, the American Cardinal Readers for Catholic Parochial Schools. Its Primer was listed under the “Primer” section in the 1928 United States Catalog. Under “Readers,” appeared, “American Cardinal Readers. See main entry,” which implies that the Cardinal Readers were very widely sold. THE APPROACH IS UNKNOWN.

---

Before 1876 (See 1842 entry for earlier edition. In 1876 Am. Cat.)
The Christian Brothers Readers (First through Fourth)
Strong (Also published by O’Shea and Sadlier)
   1876 or Before (In 1876 American Catalogue Under Primers)
Lessons for Young Learners, two volumes.
Cannon, C. J.
Strong
   1876 or Before (In 1876 American Catalogue Under Readers)
Universal Reader, Compiled for [Catholic] Schools, 50 cents.
Strong,
   1876 or Before (In 1876 American Catalogue Under Spellers)
T. Carpenter’s Speller, 25 cents
Strong.

Early American Textbooks, 1775-1900 listed on page 78 “Brothers of the Christian Schools... The Second Book of Reading Lessons. Philadelphia: Eugene Cummiskey, 1842.” This was the apparent forerunner of the Christian Brothers series.

The 1876 American Catalogue listed “Strong” (no initials) as a publisher of Christian Brothers Readers (First, Second, Third, Fourth Readers) but showed the first three were also published by the O’Shea and Sadlier companies. By 1884, The Christian Brothers New Series - Primer, was published by De La Salle Institute, but the publisher John P. Murphy was shown as holding the copyright. The Harvard libraries have a copy of that 1884 book. The Christian Brothers readers were apparently out of print by the time the 1912 United States Catalog was published. The APPROACH IS UNKNOWN.

Since The Christian Brothers New Series was in print after 1880, but by a different publisher, Strong is included in this Appendix C, since he was one of the publishers of the earlier series, even though no record appears on him after 1876. No further information is available on Strong. For the other materials he published, the APPROACH IS UNKNOWN.

According to Alec Ellis on page 65 of A History of Children’s Reading and Literature, Pergamon 

1442
“The publishers who dominated the scene for most of the period under discussion were Macmillan and Routledge. The former had been in financial difficulties in the 1850’s but the situation changed quickly with the success of Kingsley’s Westward Ho! and Hughes’ Tom Brown’s School Days. Writers of the calibre of Lewis Carroll, Mrs. Molesworth, Charlotte M. Yonge, and in the 1890’s, Rudyard Kipling, all helped to ensure the supremacy of the house of Macmillan.”

Macmillan published a great number of supplementary reading books, listed in the 1900-1905 American Catalogue, apparently reprints of English editions. The English schools had series of “readers” in many subjects, which were used to teach reading above the primer level. They are omitted here because they are not pertinent to beginning reading, and, in any event, do not appear to have been too successful in America because few seem to be listed in the 1912 United States Catalog. However, Early American Textbooks lists the same English origin Book VI as that in the New York Public Library catalog. It is shown in the 1876 American Catalogue as book 6 Introduction to English Literature, published in 1875. All of this suggests the use of Book VI as a supplementary reader in America during the 1880’s, the period of enthusiasm for supplementary reading and “real literature” instead of “scraps.”

The following note was at the beginning of an 1893 second reader by Laura Soames which was published in 1893 by Swan Sonnenschein & Co. of London. Macmillan was shown in the 1895 American Catalogue as publishing Soames’ books in 1894:

“To the Teacher. This little book is Holborn’s Practical Infant Reader No. 2 transcribed phonetically, and [I thank]... the Educational Supply Association for allowing me to use it.... Brighton, May, 1893, Laura Soames. Teacher’s Manual in Preparation, the Child’s Key Shortly, Albany Phonetic Readers NO. 1, 2, 3,...”

The next page showed the “English Phonetic Alphabet” with phonetic spellings. The material was very poor.

However, Laura Soames was clearly the author of the Albany Phonetic Readers and was listed as such in the contemporary American Catalogue: L. Soames’ Phonetic Method for Learning to Read, Nos. 1, 2, 3, published in 1894 by Macmillan. Macmillan was conceivably putting out American editions of Swan Sonnenschein’s London material. However, the No. 2 reader published in 1893 by Sonnenschein which is now in the Department of Education Library in Washington is definitely by Soames. Therefore, it is puzzling to find that reader not listed in Early American Textbooks which was based on the Department of Education Library, and instead to find a title listed on page 77 which must be in error: Barnes Phonetic Method, Albany Phonetic Reader No. 3, published by Swan, Sonnenschein in 1893. There apparently is no such thing as “Barnes Phonetic Method,” since the Albany Phonetic Readers were by Laura Soames. They were a very unsatisfactory attempt to introduce “sound” in beginning reading.

Macmillan’s later strictly American reading series seem to have been very successful.

Harvard’s copy of Child Life, A First Reader, published by Macmillan in New York in 1899 shows that Etta Austin Blaisdell was then Supervisor of Schools, Brockton, Massachusetts. No title was given for Mary Frances Blaisdell. The Blaisdell approach is indicated in the Preface:

“A child will learn to read well by reading well, and he will read best that which interests him most.... ‘Child Life’... represents the child, his life, and his environment. He is seen in his relation to the home, to the school, and to Nature. Each lesson is based on a child’s interests; for this reason the words used are those already familiar to him in conversation. In the first twenty
lessons the average number of new words is but four. As most primary teachers make extensive use of the blackboard, the new words in the first fifty lessons appear both in script and in print. Phonetic drills, providing practice in enunciation, occur in careful gradation. The long and short vowel sounds and the sounds of the consonants and of some of the most common diphthongs are introduced. Material for seat-work is furnished by the script sentences, by the phonetic drills, and by the outline drawings.”

Therefore, the preface clearly indicates the “phonetic drills” were for enunciation, not decoding. The text used the sentence approach and can be classified as A MEANING APPROACH WITH PHONY PHONICS.

Concerning the 1894 entry for “New Literary Readers,” “new” implies a former series as well as the new one. Macmillan’s “Literary Readers” may therefore have been published before other literary readers such as Houghton, Mifflin’s Riverside, and Interstate’s and Ginn’s. The 1906 Language Readers by Franklin T. Baker and others were probably also “literature” readers and were probably based on A MEANING APPROACH.

Franklin T. Baker was also an author on a 1922-1923 series by Macmillan. Harvard library has a copy of the 1922 Thorndike-Dunn-Baker Everyday Classics Primer, printed in 1925. It was a Texas-adopted copy, printed in the year of the textbook adoption scandal involving Suzzallo’s American Book Company speller. That affair, which was reported in a December, 1925, issue of the New York Times, has been reviewed previously in this history. Franklin T. Baker, who was an author on the 1906 series already mentioned, was in 1922 (and perhaps in 1906) Professor of English in Teachers College Columbia. Concerning the other authors, Fannie Wyche Dunn was Assistant Professor of Education in Teachers College, Columbia, and Ashley H. Thorndike was Professor of English in Columbia University and the brother of the Teachers College, Columbia, psychologist, E. L. Thorndike. This 1922 primer compared its word use to E. L. Thorndike’s recently published list of the 10,000 commonest words, listing those of its words in the hundred most common, in the second hundred, in the third hundred, in the fourth hundred, in the fifth hundred, in the next five hundred, etc.. The great bulk of its words were in the first five hundred of E. L. Thorndike’s list, and only 163 words in this primer were marked for “mastery.” The primer’s word usage was outlined in Harvard’s copy of The Teachers’ Manual to The Everyday Classics Primer, which was written in 1923 by Fannie Wyche Dunn of Columbia Teachers College. In Arthur Irving Gates’ 1925 Teachers College Record article, “Problems in Beginning Reading,” he said the vocabulary in the Everyday Classics primer had been compared to E. L. Thorndike’s word list, and the primer gave a rough correlation between the two.

The Everyday Classics series taught the reading of alphabetic print like Chinese characters, as meaning-bearing symbols. Apparently no reference to sound was to be made in the initial stages of reading, and precious little was to be made at any later stage. Fannie Wyche Dunn, Assistant Professor of Education in Teachers College, Columbia University, New York, made the following very revealing comments on page 4 of the Everyday Classics Primer Teachers’ Manual of 1923.

“...a widely read adult has a reading vocabulary of thirty thousand or more [words]. Teaching to read appears indeed an appalling task in the face of these facts. It is, however, less serious than at first appears. For though the total number of words is indeed large, only a small proportion of them are so often repeated that they need be attacked during the early years of learning to read. A child who knows only a few thousand, provided they are the commonest words, is prepared to read with considerable fluency and ease, with only occasional help from teacher or dictionary. Just as we have for several years had a list of the thousand most commonly written words as a guide to our emphasis in teaching spelling, we now have a list of the ten thousand most commonly printed words to aid in our emphasis in the teaching of reading.”
Dunn’s thousand-word list was Ayres’ 1915 list which was still famous in 1923, but which was later buried. The ten-thousand-word list of the most common words to which Dunn referred was E. L. Thorndike’s The Teacher’s Word Book, published in 1921. The list was later extended to the 20,000 most common (at an unknown date), and then in 1944 it was extended to the 30,000 most common. That 1944 edition was published under the title of The Teacher’s Word Book of 30,000 Words, and it was prepared with Irving Lorge as co-author. Dunn continued:

“This [Ed.: 1921] list moreover shows the first hundred words in reading importance, the second hundred, the first five hundred, the first thousand, and so on. The teacher is in a position to select for thorough teaching those words which are of such common use that the child is sure to need them again and again no matter what book he takes up; and also is in a position to neglect, or give only passing emphasis to, those which will not again be met perhaps for many months or even for years,”

“All authorities are now agreed that children should read matter of real interest, such matter as necessitates a considerable range of possible vocabulary. But we no longer believe that they should be required to master every word as they meet it. Some words are but passing acquaintances, to be introduced when met, greeted, and passed by with little chance of future recognition. Others are useful servants for a brief space of time, to be readily recognized and called when needed, but after a little period of such service, to be seen no more, and perhaps to pass altogether out of memory. An example of the first class is the word crown, in the familiar rhyme of ‘Jack and Jill.’ It is needed to read that rhyme, and therefore must be introduced when met, but it is not likely to be needed again by a primary pupil for a year or two, if so soon. It would be a waste of time, therefore, to try to impress it so that the child will recognize it when he meets it again. In the second class, is such a word as Goldenhair in the story of ‘The Three Bears.’ After this story it will not be needed at all. But it recurs so often in this story that it should be taught well enough when it is first met to be recognized in each succeeding occurrence in this story. It may then be dropped altogether. The third class is of course the most important. Yet often the words that belong to it are not vivid and easily remembered. They are such words as is, it, up down, me, and numerous common nouns and verbs, with a few adjectives. These are the words that need thorough teaching, so that they may become early the permanent possessions of the little readers.

“4. Phonics. - The value of phonics in primary reading has not yet been determined.”

It is to the eternal disgrace of American superintendents of schools in the 1920’s that they did not laugh out of existence such Alice-in-Wonderland statements as this. Instead, incredibly, superintendents of schools gullibly swallowed such wild propaganda when it came bearing an “expert” label from Columbia Teachers College or the University of Chicago. Dunn of Columbia Teachers College continued with her wrongheaded conclusions:

“There is evidence, however, that some means of making the child an independent reader, with the ability to attack new words for himself, is an important part of the teaching of reading. The important thing to keep in mind is that phonics is a means and not an end in itself and that it should be treated accordingly....”

The “phonics” that such “experts” as Dunn proposed to make “independent” readers was the deaf-mute-method visual comparison of new words to previously memorized words, so as to see like parts, in order to fix the visual image of the new word in memory. The meaning of the new word was to be guessed from the context of already known sight words in which the “new” word had been carefully
embedded, to assure that the “guess” of its meaning would be an accurate one. That jig-saw puzzle approach, mentally fitting together parts of previously memorized sight-words, in order to match the parts of the new word so as to fix it in memory, certainly is not one-step synthetic phonics. It is, instead, the two-step phony phonics of the basal readers.

What is particularly disturbing is Dunn’s open recognition in 1923 of the importance of the 1915 Ayres spelling scale. The Ayres scale had shown the decreasing frequency of words - from the most common to the least common - of the first thousand (which thousand commonest words Ayres had identified through statistical studies), and had stated flatly that those 1,000 words occupy over 90% of most texts. Dunn clearly established that Thorndike’s ORIGINAL word book had also clearly identified the commonest words: the first hundred, then the next hundred, then the five hundred most common, and so on, and that it was common knowledge, at that time, that only a relatively few very high frequency words composed the bulk of most selections. That is why it was common knowledge with the “experts” that, with only a few thousand of the highest frequency sight-words, a child could get by in much of elementary school!

Yet, omitted from the 1944 Thorndike revision (and probably from the one preceding it) was most of that information on word frequency. Omitted were the lists of the first hundred and the next hundred (although the first five hundred were shown). More harmfully, the actual statistics on each word up to 2,021 frequency, which could reveal such things as the commonest first hundred and next hundred, and more importantly, the fact that very few words account for most of any text (300 words for 75%, 1,000 words for over 90%, and 2,000 words for perhaps 97%). Furthermore, the existence of the 1915 Ayres scale, which did clearly report such information on the 1,000 commonest words, fell (or, more realistically, was pushed) into education history’s black hole by the early 1930’s. Therefore, it was no longer possible to learn such facts as that only 1,000 of the highest frequency words occupy over ninety percent of most texts (and some 300 occupy about 75 per cent), as Ayres had made abundently clear. Thorndike must have deliberately hidden those facts in 1944, even though it appears certain from Dunn’s remarks that at least the lists of the first and second hundred most common words, omitted in Thorndike’s 1944 work, had been in Thorndike’s 1921 work. That raises the question, why did Thorndike remove those highest-frequency word lists from his later editions? Unlike Ayres who reported individual frequencies on every one of the thousand commonest words, why did Thorndike omit any statistics on individual word-frequencies for words below the 2,021 commonest, when he did give such statistics on words above the 2,021 commonest? Was it because the high-frequency effect (the fact that only a relatively few of those highest frequency words occupy most of any printed page) was the rationale behind the writing of the deaf-mute-method readers in the first place, and to report such statistics would make that fact clear to careful readers of his book?

Students who know only a thousand or two thousand printed words out of the half million or so in English seem to be able to read fluently. That is provided that the nine percent of unknown words (if they already know one thousand sight words) or about three percent of unknown words (if they already know two thousand sight words) in a printed selection are words they can guess from the context because they already know such words as spoken words. The fact that they are really disabled readers is nicely hidden, until they meet college-level texts where they cannot guess the unknown words any more because they are not in their spoken vocabularies.

Thorndike’s ex-graduate-students, with whom he had worked closely, A. I. Gates and W. S. Gray, introduced those deaf-mute-method readers nationwide in 1930, the Scott, Foresman and the 1930 Macmillan series. Those series, with their impoverished vocabulary, took over American schools by the mid 1930’s. They resulted in veritable phalanxes of functional illiterates and in an enormous impoverishment of vocabulary in American children, therefore lowering their functioning intelligence.
Nila Banton Smith in her “history” said the Everyday Classics Primer used the sentence method. The 1922 Thorndike-Dunn-Baker Everyday Classics Primer did use a sentence/story approach with two-step phony phonics: A MEANING APPROACH WITH PHONY PHONICS.

A copy of the Primer of The Marquette Readers of 1924 is in the Department of Education library. It states, “Thanks are due... to (Macmillan publishers, A. Thorndike, Baker, Dunn) for permission to reprint the following selections from the Everyday Classics Primer, copyright, 1922...” The selections were “Three Bears, Something You Can Make, Chicken Little, Read and Do (2), Three Pigs, Little Red Hen.” Page 91 showed that “Read and Do” concerned silent reading actions. The book began with the “Three Bears.” As the very first story with many whole sight words and no phonics, it would obviously have to be read solely for meaning and not sound. The book had a strictly controlled vocabulary, with a word list showing the pages on which words were introduced. Words were marked according to E. L. Thorndike’s list: 500 most common 1a, second most common 1b, third most common 2a, etc. Words above 5,000 frequency were not marked, but there were only nine of them. Of the words in the Primer, 65% were from the 500 most common, 82% from the 1,000 most common, and 92% from the 2,000 most common. The Marquette Primer used A MEANING APPROACH.

Macmillan was also the publisher of Arthur I. Gates’ deaf-mute-method primer in 1930, published the same year as W. S. Gray’s Scott, Foresman “Dick and Jane” deaf-mute method primer. (Both Gates and Gray, of course, had been E. L. Thorndike’s graduate students about fifteen years earlier. Gray had worked very closely with Thorndike in 1913 and 1914 when taking his master’s degree on oral reading tests at Columbia Teachers College, and Gates continued to work with Thorndike through the 1920’s, long after Gates received his doctorate at Columbia Teachers College in 1917.) Nila Banton Smith wrote on page 236 of her “history”:

“Gates and Huber in their First Grade Manual say: ‘Extensive phonic drill is not recommended for the first half year. The reason for this is that several studies have shown that extensive drill in teaching particular phonograms by conventional methods at this time does relatively little good.’ There were a few educators who would postpone the work on phonics for a year or a year and a half. The phonetic elements to be taught were often selected on the basis of lists resulting from scientific investigations conducted for the purpose of determining the number and frequency of phonetic elements occurring in words the children are supposed to meet in their reading.”

Gates’ and Gray’s deaf-mute-method readers used what Gates termed “intrinsic phonics.” That meant comparing in memory whole, meaning-bearing words to see like visual parts to a presently seen but unknown printed word, and then using the meaning of the context to figure out the meaning of that unknown word. Deaf children then memorized the appearance of that new word along with its meaning, but without sound, by associating its parts with those previously memorized whole words. Yet hearing children, because they already knew the sounds of those previously memorized words, might (or might not) use them to figure out the sound of the unknown new word. The nature of that deaf-mute approach is confirmed by Arthur I. Gates’ comments in the First Grade Manual to his 1930-1932 Macmillan reading series (from pages 26 to 42):

“...to see similarities and differences among words, to identify common phonetic elements in words, to translate these letters or letter combinations into sounds, and to blend these separate sounds into a whole-word sound... (as) a matter of fact... are important abilities. What the Work-Play course provides is a new and better method of securing these abilities. It goes further than that. It develops phonetic skills so that they work when and where needed, namely, in the actual process of reading for the thought. It cultivates them furthermore, so that they will function.
simultaneously with the habits of utilizing context clues. In this system, the ‘mechanical’ and ‘thought getting’ training are not separated but combined. By a new type of organization, the mechanical skills are developed naturally during the normal activity of reading for the thought....

“It is found that a passage followed by printed comprehension exercises is an excellent means of cultivating this type of comprehension. The word-perception training is then worked into the comprehension exercises without injuring them in any way for their primary purpose. It is a case of killing two birds with one stone. The following will illustrate the principle:

“In a Work Book one page may contain a picture and printed episode about a bear....

“Draw a line under the right words.

The bear was very old.
The bear was very cold.
The bear was very bold.

“...Note that it will be utterly impossible for the pupil to solve the exercise, except by chance, unless he has in mind the content of the passage and, at the same time, is able to distinguish the words which express the thought from other word-forms that contain similar elements. He is obliged, however unconsciously, to note the differences between old, cold and bold. The similarity of the words forces him to see their parts. He learns to observe the identical portions and the different portions.

“Working in this way, the pupil gradually becomes familiar with reappearing common elements, such as initial consonants and old, at, in, ing, ed, and other group phonograms. Gradually he develops an insight into word-form structure. Since he sees the word parts as he pronounces them, the form and sound become associated and phonetic skill results.

“It is important to note that such reading activities tend gradually to develop word-perception skills and phonetic abilities during the actual process of reading for the thought. The pupil is unaware of being ‘taught’ or even of ‘studying’ phonetics or word-form analysis. His mind is given to getting and demonstrating his understanding of the thought. The word mastery skills are a natural and necessary result of normal reading.

“4. SOME ADVANTAGES OF THE INTRINSIC METHOD.

“REASONS WHY THE NEW PROCEDURE WORKS WELL. The reasons why this newer procedure works so well are fairly obvious. In the first place, there is no dependence upon the transfer of training of these skills from the non-reading situation to a reading situation.... ...the newer exercises require the child, as suggested above, to use context clues and word-form clues at one and the same time. This, of course, is what the normal reading situation demands....

“CONTEXT CLUES AND WORD FORM CLUES USED SIMULTANEOUSLY. ...These exercises introduce a relatively large number of different phonograms and require the discrimination of many words which are similar in letter arrangement, sound units, general configuration and otherwise. The following are illustrations (Ed.: using capitals here instead of original italics): 1. Words containing a familiar suffix or prefix, as - comING, eatING, wantED, plantED, BEfore, BEcause. 2. Words of one syllable containing similar phonograms, as - THese, THey, cAN, rAN, FIGHT, lIGHT. 3. Words containing similar component words, as - postMAN, policeMAN, someTHING, everyTHING. 4. Words similar in general appearance but different in
obscure details, such as - came, come - these, there - was, saw.... As stated above, little or no phonetic work beyond that provided in doing these exercises in a natural way is necessary....

“...A phonetic drill period is a poor time in which to introduce new words to children. These should be first introduced in a rich, meaningful context.... It is important not only that phonetic work be conducted with words which children have already read, but also that it be based upon those phonograms which appear with most frequency in the words which the children have met and will soon meet in their reading. Other things being equal, the more words a phonogram will help unlock, the more it deserves to be brought to the pupil’s attention.... The phonograms suggested for consideration in this course are carefully chosen to give the learner the most useful tools. The choices have been made not only to secure the most common phonograms, but to secure the desired variety of types, to give fair representation to initial, medial, and final phonograms, and otherwise to insure a well-rounded growth of ability to meet new words with ease....

“PRIMARY PURPOSE OF WORK WITH PHONETICS. The whole management of phonetics will be improved by remembering that the primary objective is not to drill a small number of phonograms into pupils’ heads, but to develop a general eye-ear sensitivity and a few general ways of reacting to printed words. Three general abilities are desirable: 1. The ability to identify or see the phonetic elements in a printed word. 2. The ability to sense the sounds that these phonetic elements commonly represent. 3. The ability to combine or blend the sounds of several phonograms into a single word sound.... Thus, pupils should learn to see bring as a definite total composed of br and ing and not merely as a vague total nor as a series of separate letters - b r i n g....

“Ear training by means of activities with Mother Goose rhymes and other rhymes leads to an awareness of recurring sounds. This work provides a natural introduction to phonetic work. This is continued during the first half-year, during which time the pupils become gradually more and more familiar with the appearance and sounds of various phonograms. The pages in the Dictionary may also be used to call attention to initial phonograms.

“During the first half year the child will have practice in the use of the following initial letter phonograms - listed here in the order of frequency of occurrence in the Primer: w b h m f s l p c r d g t n y.

“During the second half year he will have practice in the use of all the initial consonants except q x and z.

“During the first year, various Work Book exercises are calling constant attention informally, to common phonetic elements in words. In the later units of the first half year work, definite provision is made for supplementary work with the following phonograms - chosen because of their frequency of occurrence.

“The suffix phonograms . . s, ed (as in walked), ing.
“The phonograms . . an, th (as in then), ay.

“During the second half year, many phonograms are naturally introduced in the work book exercises....”

Gates’ “phonics” was all two-step Code 3 phony phonics based on memorized whole words: the comparing of parts of already memorized sight words to the parts of unknown words. Concerning Gates’
denial that children could use “phonics” in the first half year, most of my first graders had no trouble in beginning to use real phonics, not his ersatz variety, starting almost on the first day of first grade. (A small minority of children did need some preliminary auditory and visual training to distinguish between different sounds and different shapes, but that is given at the beginning of first grade anyway to all well-taught first-graders as a preliminary step, commonly in a game or play form.) The Gates 1930 material used A MEANING APPROACH WITH PHONY PHONICS. (PURE PHONY PHONICS IS THE DEAF-MUTE METHOD OF SILENTLY AND VISUALLY COMPARING MEANING-BEARING WHOLE WORDS TO EACH OTHER TO SEE THEIR RESEMBLANCES AND DIFFERENCES, IN ORDER TO FIX THE MEANING-BEARING WHOLE WORDS IN VISUAL MEMORY).

Scott, Foresman was publishing the Cathedral Readers by J. A. O’Brien in 1923, a year before Macmillan published the “meaning” approach Marquette Readers. The Cathedral Readers of Scott, Foresman for Catholic schools were rewritten later, and presumably so were the Marquette Readers for Catholic schools of Macmillan. If they were revised after 1930, the methods in the Catholic school editions of Scott, Foresman and Macmillan could therefore match the methods in their public school editions.

The public school editions were the Arthur I. Gates deaf-mute method primer and the William Scott Gray “Dick and Jane” deaf-mute method primer which plunged our great nation into functional illiteracy. Gates and Gray had been Thorndike’s students and worked closely with him, and Ashley Thorndike was E. L. Thorndike’s brother and was a co-author of a “meaning”-approach reading series. Yet the accepted history has been that the psychologist E. L. Thorndike, the close friend and former student of the psychologists William James and James McKeen Cattell, had absolutely NO interest in the teaching of beginning reading! To me, that sounds like disinformation.

Dr. Chall said the publisher’s response to her questionnaire concerning Sister Mary Caroline’s Breaking the Sound Barrier was that its major emphasis was “Phonics.” However, on pages 353 and 354, Chall said:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters)- e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

Therefore, it is obvious that Breaking the Sound Barrier does not use true synthetic phonics but only two-step, whole-word, substitution phonics, which is defined in this text as phony phonics.

Grades K to 3 of the 1988-1991 series, Connections, published by Macmillan, School Division, New York, were listed and reviewed in The Beginning Reading Instruction Study, Office of Research, U. S. Department of Education, 1993. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the Macmillan “Connections” samples at first grade, 1/6 had concerned “Sound/symbol relationships... Explicit,” and 5/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had been 6/6, but for “Decoding strategy... Explicit,” the score was zero. Furthermore, not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the Connections series is not teaching
synthetic phonics to beginning readers, but only whole-word (and probably two-step) analytic phonics. Considering the original publication date, the series is probably “whole-language” oriented.

1899 (In 1912 United States Catalog)
Standard Readers (1st-5th)
Brumbaugh, Martin Grove (Primer written with W. D. Hall)
Christopher Sower Co., Philadelphia

1912 or Before (In 1912 and 1928 United States Catalogs)
Method Readers (Books I-4 and Teacher’s Edition)
Peters, M. S. and Martin Grove Brumbaugh
Christopher Sower Co., Philadelphia

The Sower company published Raub’s spellers but not his readers, neither the original Normal Readers of 1878 nor their revision. The New Normal Readers, published by Porter & Coates of Philadelphia in 1878, were for sale by American Book Company in 1912, according to the United States
Catalog of 1912, listed under “Readers - Normal,” but were not for sale in 1928 according to the United States Catalog of 1928.

The Children’s Friend’s Reader of F. P. Wilmsen which Sower of Philadelphia had published before or by 1876 was most likely not a beginning reading text, but in some way associated with the Quakers (the Friends) of Philadelphia. The Sower company had obviously been printing spellers, but not reading series, for many years before 1899. That is the apparent reason they published the Raub spellers but not the Raub readers. Yet in 1899 appeared what was possibly the first Sower reading series, the Brumbaugh readers. The Brumbaugh readers are listed on page 78 of Early American Textbooks: The Standard First Reader, The Standard Second Reader, The Standard Fourth Reader, and The Standard Fifth Reader, all published in 1899. The six readers by Sower, first through fifth, are listed in the American Catalogue for 1900-1905, so they were apparently new in 1899. The sixth book was apparently the primer, written by W. D. Hall and M. G. Brumbaugh. It was listed along with books first through fifth in the 1912 United States Catalog. On page 82 of Principles and Methods of Teaching Reading by Joseph S. Taylor, The Macmillan Company, New York: 1912, Taylor said:

“Many, like Sarah Louise Arnold and Superintendent Brumbaugh, consider [diacritical marks] a necessary evil, to be tolerated only when their presence is indispensable. Others, like Ward, have built up very elaborate systems of marks, which constitute essential features of their methods.”

Taylor’s grouping “Superintendent Brumbaugh” with the well-known Sarah Louise Arnold and Superintendent Ward of Brooklyn indicates that Brumbaugh also must have been a well-known man and probably the superintendent of a large city school system in 1912, possibly Philadelphia since the Sower company was in Philadelphia. The Method readers, Books 1 through 4, by Peters and Brumbaugh, and the primer were all still in print by Sower when the 1928 United States Catalog was published. THE APPROACH IS UNKNOWN.

Some of Raub’s grammar, reading and arithmetic books are listed in Early American Textbooks, 1775-1900 of the U. S. Department of Education (1985), but the dates of some of the entries appear to be in error. An edition of The New Normal Fourth Reader by American Book Company is shown with “no date” which would probably have been after 1900. The Fifth Reader is shown as published by The Werner Company, Chicago and New York, in 1878, when the publisher according to the contemporary American Catalogue was Porter & Coates. That 1878 listing for The Werner Company is obviously wrong. The Fifth Reader is therefore probably part of the new, and not the old, series and should probably have been listed as the New Normal Fifth Reader published by The Werner Company in the 1890’s.

Raub’s arithmetic text is shown in Early American Textbooks as published by The Werner Co. in Chicago and New York in 1857, which appears to be an impossibility since the Werner Company was most probably not in business at that date. Raub’s arithmetic text is shown as published by Porter & Coates in Philadelphia in 1877, which is probably correct. Early American Textbooks, 1775-1900 also shows arithmetic texts published by The Werner Co. in 1894 and 1895, which listings appear to be correct, since The Werner Co. has only turned up in other literature in the 1890’s, and I have seen no earlier reference to it other than the apparently incorrect dates given in Early American Textbooks, 1775-1900.

The Werner Co. also published The Werner Primer by F. Lillian Taylor in 1895, a sight-word book mentioned by E. B. Huey, along with her First Reader, on Huey’s pages 323 and following, and pages 344 and 443. Raub’s Normal Readers probably used a selection of “normal” words to teach letters. Whether the Raub readers effectively taught letter sounds as well is unknown, and so THE APPROACH IS UNKNOWN.
It is very likely that the Christopher Sower Co. of Philadelphia, Pennsylvania, publishing the Standard Readers by Brumbaugh and the spellers by Raub, was founded by someone in Pennsylvania who was a descendant of the original Christopher Saur, who began printing in Germantown, Pennsylvania in 1738. The original Christopher Saur’s son, also named Christopher Saur, was a printer after his father’s death. However, the second Christopher Saur had his press and concern confiscated during the Revolution because of his lack of support for the war. The second Christopher Saur had sons who were also printers. That the family continued to produce printers is suggested by pages 103-104 and 203 of Early American Textbooks which lists a Sanders’ reader published in Philadelphia in 1853 by Sower & Barnes, and Edward Brick’s arithmetics published in Philadelphia in 1863 by Sower, Barnes & Potts, in 1873 by Sower, Potts & Co., and in 1888 by Christopher Sower Co. These four company names were obviously revised names for the same concern. The Sower in each of these four company names was possibly a descendent of the original Saur, which is certainly suggested by the adoption by 1888 of the name, Christopher Sower Co. It is interesting that the company was still printing the Standard Readers of 1899 in 1928 under the name, “Christopher Sower,” in Philadelphia, Pennsylvania, 190 years after the original Saur began printing in Germantown, Pennsylvania!

“One of Saur’s earliest publications was the first German A B C book printed in America.... no copy is known to have survived....”

John Clyde Oswald in his Printing in the Americas stated that in 1738 Christopher Sower (Saur) in Pennsylvania published An ABC and Spelling Book to be Used by All Religions Without Reasonable Objection. Oswald also stated that Christopher Sower (Saur) was born in Lauterburg, Germany, in 1694, came to America in 1724 and worked successively as a tailor, farmer, and maker of stoves. Sower then entered the printing business by printing material for the Dunkers (Baptists) on a printing press they had imported. The 1738 text was his first book. The “Dock” ABC mentioned by Klinefelter was in German. Yet the first book mentioned by Oswald must have been a different and earlier text in English, because Oswald stated:

“‘The first production of the press under Sower’s direction, issued in 1738, was entitled, ‘An ABC and Spelling Book to be Used by All Religions without Exception.’ That same year he published an almanac in German....’”

Oswald certainly implied the first 1738 ABC was in English, so it is unlikely that it was written by the German, Dock. As mentioned, German-American texts not included in this bibliography as the Klinefelter history covers them so very well.

However, Klinefelter presumed the German ABC written shortly after 1738 was written by the schoolmaster, Christopher Dock, who taught Saur’s son and who in 1750 wrote Schul-Ordnung at Saur’s request. In that 1750 book, Dock told of teaching children first the alphabet, then the Abs (the syllabary), and finally words. Dock had this advice for parents when a child conquered the alphabet and was ready to move to the syllabary, which advice also confirmed the teaching sequence at that time (alphabet, syllabary, words):

“When he attains this standing his father owes him a penny and his mother must fry him two eggs for his achievement, and the same reward is due him for each promotion: that is, when he enters the word class, etc.”
Sadlier’s Excelsior Series (1st 25c, 2nd 50c, 3rd 75c, 4th $1.)
By a Catholic Teacher
William H. Sadlier, New York
1877 (In Early American Textbooks)
Sadlier’s Excelsior Fifth Reader, 336 pages
William H. Sadlier, New York
1878 (In Early American Textbooks)
Sadlier’s Excelsior Sixth Reader, 474 pages
William H. Sadlier, New York
1886 (In 1885-1890 American Catalogue and 1912 United States Cat.)
Excelsior Primer
Sadlier, William H.
William H. Sadlier, New York

This company was apparently separate from the D. & J. Sadlier company listed earlier.

Harvard has Sadlier’s Excelsior First Reader which was copyrighted in 1876 and published in 1887 by William H. Sadlier of New York. In the section, “To Instructors,” was the statement that the book contained excerpts from Watson’s Independent Readers. The 1876 American Catalogue stated that Sadlier’s Excelsior Readers were written by a Catholic teacher and were published by “W. H. Sadlier” in four volumes in 1876. The American Catalogue for 1885-1890 showed that “W. H. Sadlier” also published a Primer in 1886. Early American Textbooks, 1775-1900, listed some copies of the Excelsior series in the Department of Education library in Washington: 1876 copies of the second, third, and fourth readers, an 1877 copy of the fifth reader, and an 1878 copy of the sixth reader. The 1912 United States Catalog showed that the Excelsior readers from first to sixth were on sale by “W. H. Sadlier” in that year, as was the Excelsior Primer. However, they were out of print by the time the 1928 United States Catalog was published. As might be expected from the fact that it used some of Watson’s Independent material, Sadlier’s Excelsior First Reader is possibly Code 6 material, A WEAK PHONIC APPROACH.

No further information is available on possible reading series by this publisher, who is still in business, judging from the 1992-1993 classified directory of New Jersey Bell.

Kellogg’s Readers, First Reader (Phonetic - lll pages)
T. D. Kellogg, New York
1878 (Early American Textbooks)
Kellogg’s Readers, First Reader (Phonic, Rev. ed., 123 pages)
T. D. Kellogg, New York
1887 (Early American Textbooks)
Kellogg’s Readers, First Reader (194 pages)
T. D. Kellogg, New York
1905 or Before (In 1900-1905 American Catalogue)
Child World Readers
Kellogg

All of the above information on “Kellogg’s Readers” came from entries on page 90 of Early American Textbooks - 1775-1900. No entries appear in either the American or United States Catalogs,
and no other copies have surfaced. The dates suggest the readers were a too-late entry into the field of phonic readers (1877) at almost the precise time that the change-agents started their blitz to replace the growing attention to phonics with the “meaning” method. Kellogg’s readers must have lingered, however, for about ten years, judging from the publication dates. They presumably had a reader or readers above the level of the First Reader. The T. D. Kellogg company of New York, whoever they were, should not be confused with E. L. Kellogg of New York who published the School Journal which publicized Parker’s methods, as well as publishing the famous book about Parker’s lectures, Talks on Teaching, in 1883. Concerning Kellogg’s Readers, THE APPROACH IS UNKNOWN BUT PROBABLY TRULY PHONIC.

The Child World Readers listed in the 1900-1905 American Catalogue as having been published between 1900 and 1905 by “Kellogg” presumably have no connection with the 1917 Child’s World series published by B. F. Johnson. Nor, presumably, is there any connection between the Kellogg “Child World” material and The Child’s World Readers listed in the 1912 United States Catalog as having been written by C. A. Smith and published by “Clark” in 1910. Nor, presumably, is there any connection with the 1908 Child World Primer listed in the 1912 United States Catalogue under Primers, written by A. E. Bentley and G. R. Johnston, published by “Barnes,” presumably a division of American Book Company. No information is available on the Kellogg material with the Child World title. Whether it was published by the T. D. Kellogg company or some other Kellogg is also unknown.

1877 (In 1876-1885 American Catalogue; Harvard copy)
Anglo-American Primer
E. B. Burnz (Eliza Boerdman Burnz)
1892 Revision (In 1912 United States Catalog)
Step by Step Primer

The 1892 primer was in print in the 1912 United States Catalog. A copy of the 1877 primer is available at Harvard. It has an attempted phonetic spelling and is ghastly. A PHONIC APPROACH

1878 (In Early American Textbooks, page 86)
The Minnesota Text-Book Series, The First Reader, Second, and Third
(Reprints of Appleton’s Series, According to Early American Textbooks)
D. D. Merrill, St. Paul, Minnesota
1886 (In Early American Textbooks, page 107)
(Merrill’s?) Advanced Second Reader, Third Reader, Fourth Reader
Sprague, Sarah E.; Louis H. Marvel (Also see Sprague under Educational and Rand, and Marvel on Colonel Parker’s Supplementary Readers.)
D. D. Merrill, St. Paul, Minnesota
1887 (In 1885-1890 American Catalogue)
Merrill’s Advanced First Reader
D. D. Merrill, St. Paul, Minnesota

According to Early American Textbooks, 1775-1900, published by the U. S. Department of Education in 1885 (page 86), Appleton’s series was adopted as The Minnesota Text Book Series published by D. D. Merrill in St. Paul, Minnesota. The Department of Education listing showed a second and third reader published there in 1878, and a first reader published in 1887, so the series was apparently in use in Minnesota for at least nine years. The Appleton series, and therefore the Minnesota series, used A MEANING APPROACH WITH PHONY PHONICS.
Presumably the Merrill readers were a complete new series. The Third, Fourth and Advanced Second show in Early American Textbooks on page 107, credited to Sprague and Marvel as authors, but without the name, “Merrill.” However, “Merrill’s Advanced First Reader” of 1887 appeared in the 1885-1890 American Catalogue, so the name of the Sprague and Marvel 1886-1887 series was apparently “Merrill’s Readers.” and not the Minnesota Text-Book Series, as was the case with Merrill’s 1876 material. Marvel had written with Colonel Parker the appallingly bad, controlled vocabulary, supplementary readers which were published in 1880. Sprague wrote the Sprague Classic Readers of unknown date (note the “classic,” published by Educational and listed in the 1912 United States Catalog. Sprague also wrote material in 1898 for Rand, discussed later, which endorsed the “meaning” approach, but with the use of supplementary phonics. However, considering the fact that Marvel was a co-author on Sprague’s 1886-1887 Merrill texts, that material was almost certainly A MEANING APPROACH.

1879 (Copyrighted, published 1880) (Harvard copy)
Our Baby’s Primer and Pretty Picture Book
Findlay, Phillip
Printed by University Press: John Wilson & Son, Cambridge
Estes & Lauriat (Publisher)
Boston, Massachusetts
1879 (American Catalogue, July, 1876 to June 30, 1884)
New Departure in the Common Schools of Quincy, and Other Papers on Educational Topics
Adams, Charles F., Jr.
Estes & Lauriat
Boston, Massachusetts
1879 (American Catalogue, July, 1876 to June 30, 1884)
The Public Library and the Common Schools:
Papers on Educational Topics
Adams, Charles F., Jr.
Estes & Lauriat
Boston, Massachusetts
By March, 1880
Estes & Lauriat, 301 Washington Street, Boston
(This name and address appeared on the March, 1880, Appendix to the 1876 American Catalogue - Authors and Titles, in which the company listed three-quarters of a page of titles published since 1876.)

Although Charles F. Adams’ widely circulated 1879 books on education were published by Estes, his books on American railroads were published by Putnam, not Estes. Estes & Lauriat of Boston who published Adams’ books on education may have had some tie to the activists. In 1879, Estes & Lauriat copyrighted Our Baby’s Primer and Pretty Picture Book, which might have found its way into primary grades even though it was not meant as a reader. In that year of 1879, the Boston primary grades were looking for just such “meaningful” material, like Henry Cabot Lodge’s Six Popular Tales, “Authorized for Use in the Boston Public Schools,” which was compiled largely from Harvard’s chapbook collection. (Lodge’s book showed no publisher, but only a Boston printer, but it used similar large, oddly shaped sheets to those used in Our Baby’s Primer and Pretty Picture Book, suggesting the two books had a similar source or market.)

A possible connection to the activists is suggested by the fact that Estes & Lauriat’s Our Baby’s Primer and Pretty Picture Book was printed by University Press: John Wilson & Son, Cambridge, who had printed the Franklin Primer. Estes & Lauriat were also the American publishers of the English children’s magazine, Chatterbox. Adams’ use of a Boston publisher, who also published children’s materials, for his few writings on education, instead of his other publisher, Putnam, is intriguing.
Henry Cabot Lodge’s 1879 book compiled from Harvard’s chapbook collection was moved into the Boston schools the year after Philbrick had been fired and the Leigh phonetic print had been subtly outlawed. Lodge’s “literature” book, which showed a different printer but no publisher, has been discussed in this history. It is highly likely that Our Baby’s Primer and Pretty Picture Book published by Estes was also meant to be a “meaning” supplementary reader for the Boston primary grades in 1879, the year after Philbrick had been fired. The peculiar sizes of the Findlay and Lodge books were presumably meant to interest the children. If used for reading instruction, Findlay’s book above, like Lodge’s was a pure Code 1 MEANING APPROACH.

#Publishers First Appearing in This List Between 1880 and 1890

1880 (Harvard copy marked by library as an 1884 edition)
Supplementary Reading - First Book - Primary Schools
Parker, Francis W., Supervisor of Schools, Boston, and Louis H. Marvel, Superintendent of Schools, Gloucester, Massachusetts.
(Press of Berwick & Smith, Boston)
Published by Leach, Shewell, and Sanborn, Boston and New York.

1888 (Harvard copy)
First Term’s Work in Reading
Cleveland, Helen M., State Normal, Wisconsin
Leach, Shewell and Sanborn, Boston and New York

1890 (In Early American Textbooks, p. 80)
Second Primary Reader, 92 pages
Cleveland, Helen M.
Leach, Shewell and Sanborn, Boston and New York

1894 (In 1890-1895 American Catalogue)
Beginners’ Readers, Nos. 1-4, 10c
Cleveland, Helen M.
Leach, Shewell and Sanborn, Boston and New York

1898 (In Early American Textbooks, p. 178)
Vivid Scenes in American History, Book I
Cleveland, Helen M.
Benjamin H. Sanborn & Co., Boston

1899 (In Early American Textbooks, p. 80)
Letters from Queer and Other Folk, Book I and Book II
Cleveland, Helen M.

The Harvard copy of Parker and Marvel’s Supplementary Reading, First Book, Primary Schools, was marked by the Harvard library as an 1884 edition, and it showed 1880 and 1881 copyright dates by the authors. The appalling Code I material is also listed in Appendix B and is discussed in the body of this history. Marvel was also co-author with Sarah E. Sprague of the D. D. Merrill Readers in St. Paul (also listed in this appendix), according to page 107 of Early American Textbooks. “Rev. Ed. ['82]” of Supplementary Reading for Primary Schools - First Book, and Second Book, were listed in the 1876-1884 American Catalogue as published by “R. S. Davis, (B.),” about which company no information is available, but the original edition was not listed in the 1876-1884 American Catalogue. Since the revised
edition came out in 1882, and the Harvard copy of the original edition carried the library’s note that it was printed in 1884, apparently there were two versions in print by 1882, published by different publishers.

The 1912 United States Catalog shows Cleveland’s Beginners’ Readers, “3 nos.” at ten cents each, or in one, for 25 cents, published by Sanborn. From the 1898 history book entry above, the complete company name before that date had changed to Benjamin H. Sanborn & Co. Harvard has a copy of Cleveland’s 1888 First Term’s Work in Reading. It recommended a rigidly controlled sight vocabulary and rates initially Code l. Helen M. Cleveland obviously had some importance in her day, from before 1888 until after 1899, since Macmillan also published her material in 1899. However, her name and materials have fallen into total oblivion. A MEANING APPROACH.

As can be seen from entries in Appendix B, the name “Sanborn” appeared in some of the following sequential companies who published the Town and Holbrook, and for a time the Tower, materials. However, whether the “Sanborn” who disappeared from the following company titles some time before 1860 was related to the Sanborn in Leach, Shewell and Sanborn of 1880 is unknown.

1848 - Sanborn and Carter, Portland, Maine
1856 - Sanborn, Carter, Bazin & Company, Boston.
1857 - Sanborn, Bazin & Ellsworth, Boston.
By 1860 or earlier - Bazin & Ellsworth, Boston.

Some time after 1862, Bazin & Ellsworth of Boston became simply Oliver Ellsworth of Boston. The company was apparently out of business by the time the 1876 American Catalogue was published. In any event, that company’s association with a “Sanborn” was apparently terminated before 1860.

1880 (In 1876-1885 American Catalogue under Primers
Benjamin Franklin Primer. 10c.
N. Y. News.
1880 (Library of Congress card catalog in October, 1981, under “Primers, 1870-1950”)
The Benjamin Franklin Primer, 24 pages
1886-1888 (In 1885-1890 American Catalogue)
Natural History Readers
Wood, John George
Boston School Supply Co., Boston
1891 (In 1890-1895 American Catalogue)
Boston School Series, The Information Readers, Nos. 1-4
Boston School Supply Co., Boston
1896 (In 1895-1900 American Catalogue)
Easy Primer
(See Ginn entry with the same name. If the same book, it was in print by Ginn in the 1928 United States Catalog.)
Boston School Supply Co., Boston

In October, 1981, the Library of Congress card catalog in the section, “Primers, 1870-1940,” described The Benjamin Franklin Primer as 24 pages and “A satire on the primers and first readers in common use.” Why the American Catalogue, which was a contemporary catalog, listed the original publisher in 1880 as N. Y. News, while the Library of Congress showed the 1880 publisher as Boston School Supply Co., is not known, but the Library of Congress catalog card did refer to another edition. Some time ago, I saw a copy of this book, and it was obviously not a child’s book but a parody on children’s primers. That fact suggests school supply companies like the Boston concern and New York
News, and the general public as well, had been exposed to considerable and not very welcome publicity on primers by 1880. It was the period in which Parker was active in Quincy, and the period in which Hillard and Campbell’s 1873 Franklin series was in wide use in its non-Leigh-print edition. The use of the word, “Franklin,” certainly suggests that the parody in the 1880 primer was quite pointed, particularly since the book was published by Boston and New York concerns which supplied materials to schools, which companies would have been well aware of the way the wind was blowing on school supplies.

There would have been no point to printing such a parody for adults unless the subject of primers was well known to adults at the time. The existence of this primer, therefore, tends to corroborate the strength of the public relations blitz on the “meaning” method in teaching beginning reading which was emanating principally from Quincy and Boston in Massachusetts before 1880 and which was spreading all over the United States. Note that the parody was printed in New York!

The 1876-1884 American Catalogue also lists under “Primers” the following:

That Comic Primer, F. Bellew. 50c. Carleton.

The date of 1877 and the title suggest that the Bellew primer published by Carleton may also be a parody.

The Natural History series had first through sixth readers, according to the American Catalogues. A copy of the First Natural History Reader is listed in Early American Textbooks on page 113. The readers were not listed in the 1912 American Catalog. The influence of Agassiz followers in preparing these readers appears probable. APPROACH IS UNKNOWN BUT ALMOST CERTAINLY A MEANING APPROACH.

The Information Readers had different authors for each level. H. W. Clifford was the author of the 1891 No. 2, Everyday Occupations, according to the 1890-1895 American Catalogue. Information Reader No. 3, published in 1892, was by William G. Parker, and its title was Man and Materials, according to Early American Textbooks. Early American Textbooks also showed No. 4, written by Robert Lewis. The materials were not in print in 1912. The Easy Primer is possibly that listed later by W. Barnes and M. A. Lane, published by Ginn and in print in 1928. APPROACH IS UNKNOWN BUT ALMOST CERTAINLY A MEANING APPROACH.

By March, 1880
Little, Brown & Co.
Boston, Massachusetts
(The company name and address appear in the March, 1880, Appendix to the 1876 American Catalogue, in which Little, Brown & Co. listed general books published by them between 1876 and 1880. However, no readers published by them have been found before the entries shown below, although some books on that 1880 list may have been children’s readers.).

1904 (1900-1905 Am. Cat. by Lothrop; 1912-1928 U.S. Cat. by Little)
Wide Awake Primer
Murray, Clara - Pseudonym for Eva Austin Blaisdell (McDonald) for whom see other entries under Lothrop, Globe School Book and Macmillan and N. B. Smith, p. 218 and 434)
Lothrop Publishing Company, Boston
(Pub. by Little, Brown & Company, Boston, by 1912 and 1928. 1928 U. S. Cat. also shows Junior Primer pub. by Little. Wide Awake First (1906), Second (1908), Third (by 1912), Fourth (by 1928) also published by Little. Cum. Bk. Index 1928-1932 shows New Wide Awake Junior Primer, New Wide Awake Primer and New Wide Awake Readers, 1st-4th, 1929, by C. Murray, published by Little, listed again below.)
1918 (In 1928 United States Catalog)
Rhymes and Tales for Children (Under Readers for $1, 1928 U. S. Cat.)
McDonald, Eva Austin Blaisdell
Little, Brown & Company, Boston

1926-1927 (In 1928 United States Catalog)
Atlantic Readers
Condon, R. J.
Little, Brown & Company, Boston

1927 (In 1928 United States Catalog)
Toy Town (In print for $1 under Readers in 1928 U. S. Catalog)
McDonald, Eva Austin Blaisdell
Little, Brown & Company, Boston

1927 or Before (In 1928 U. S. Catalog)
Home and Country Readers (Books 1 - 4)
Laselle, M. A.

1928 or Before (In 1928 United States Catalog)
Rhyme and Story Primer, and First Reader
McDonald E. A. Blaisdell and M. F. Blaisdell Blackburne
Little, Brown & Company, Boston

1928 (In 1928 United States Catalog)
Wide Awake Junior Primer (by 1928), Primer (1904), 1st (1906), 2nd (1908), 3rd (by 1912), 4th (by 1928)
Murray, Clara - Pseudonym for Eva Austin Blaisdell McDonald
Little, Brown & Company, Boston

New Wide Awake Readers (Junior Primer, Primer, 1st - 4th)
Murray, Clara - Pseudonym for Eva Austin Blaisdell McDonald
(See her Globe, Lothrop and Macmillan materials)
Little, Brown & Company, Boston

Kelpies Run Away ($1, School Edition 70c.)
McDonald, E. A. Blaisdell
Little, Brown & Company, Boston

According to page 27 of Americana in Children’s Books, a 1974 Library of Congress pamphlet, the name, “Wide Awake,” was the title of a child’s magazine published by D. Lothrop in Boston from 1875 to 1893. Volumes 1 through 13 were called the “Wide Awake Pleasure Book,” and the others usually called “Wide Awake; an Illustrated Magazine for Young People.” The name was obviously adopted by Lothrop Publishing Company for its reading series written by “Clara Murray,” a pseudonym for Eva Austin Blaisdell (McDonald). The series was published by Little, Brown & Company, Boston, after 1912. The New Wide Awake Junior Primer, New Wide Awake Primer and New Wide Awake Readers, 1st-4th appeared in 1929, also by C. Murray and published by Little.

“Clara Murray’s” preface to her 1929 New Wide-Awake Primer is disturbing. The material would ruin children’s reading ability but claims a syrupy concern for their welfare:

“This is a book for the little ones who are just beginning the struggle with word-forms, and who need, therefore, to have the paths to learning made as smooth and straight as possible. Their
little feet must trudge slowly but steadily on; they must find flowers by the wayside to attract their interest and keep them from fatigue; but there must be no steep hills to climb, no long hours of travel; and the hand that helps over the stones must be a guide and not a support.

“The helping hand is the teacher’s; it is she who leads and guides; but the book is the path, and it is the writer who paves the way....”

The vocabulary was limited to 346 sight words taught in meaningful sentences. Her first work was apparently the 1899 joint-authored material published under her own name, Eva Austin Blaisdell (later McDonald) and that of Mary Frances Blaisdell (later Blackburne) for Macmillan. It was followed by the 1904 Lothrop Wide-Awake Primer under her pseudonym, Clara Murray, which was published by Little by 1912, and also her material published by Globe, which see. Since both she and her probable sister had written controlled vocabulary sight-word materials in 1899-1901, she was a fine “resource” to be employed again in the 1920’s when the “experts” were busy once again reducing vocabulary and phonics in readers. A MEANING APPROACH WITH PHONY PHONICS.

The Hunt and Gourley material listed below, after being published by “The Author” was published by the Taintor company and the Sheldon company, as shown also under their listings, and finally by American Book Company some time before 1912.

1881 (In Early American Textbooks)
The Modern First Reader (See Sheldon & Co. for completely different series with similar title, Modern School Readers)
Gourley, H. I. and J. N. Hunt
Published by The Author, Pittsburgh

1882 (In Early American Textbooks)
The Modern Third Reader
Gourley, H. I. and J. N. Hunt
Published by The Author, Pittsburgh

1882 (In Early American Textbooks)
The Modern Grammar-School Reader
Gourley, H. I. and J. N. Hunt
Taintor Bros., New York, Boston, Pittsburgh and Omaha

1883 (Harvard copy)
The Modern Spelling-Book
Hunt, J. N. and H. I. Gourley
Taintor Brothers, Merrill & Co., New York

1883 (Harvard copy)
The Modern Spelling-Book
Hunt, J. N. and H. I. Gourley
Sheldon & Company, New York, Boston and Chicago

1887 (In 1885-90 American Catalogue)
Modern Intermediate Reader
Gourley, H. J. (sic) and J. N. Hunt
Taintor Brothers, Merrill & Co., New York

This reading series was published by American Book in 1912, according to the United States Catalog, but were not listed in the 1928 United States Catalog. The APPROACH IS UNKNOWN.

1883 (In Early American Textbooks, under Spellers)
Story’s Blending and Spelling Book, 307 pages
This was obviously a too-late entry in the move towards phonics that had been growing through the 1860’s and early 1870’s, until derailed about 1878 by the “experts’” highly ballyhooed Quincy and Boston “meaning” programs. No information on this material is available beyond the bare entry in Early American Textbooks.

1883 (In Early American Textbooks)
Reading Speller. A New Method of Teaching Spelling, First Book, Second Book.
Campbell, William A., Principal of High School, Hoboken, New Jersey
Text Book Company, New York
1885 (In Early American Textbooks, p. 79)
The Continental First Reader
Campbell (listed as Loomis J. but must be William A.)
Daniel Van Winkle, New York
1888 (In 1885-1890 American Cat.)
The Continental Readers, 1st, 2nd, 3rd
Campbell, William A. and Elizabeth A. Allen
Kelly, Taintor
1889 (In Early American Textbooks, p. 79)
The Continental Fourth Reader
Campbell, William A. and Elizabeth A. Allen
Thomas Kelly, New York
1890 (Harvard copy)
The Continental First Reader
Campbell, William A.
Mutual Book Co., New York

Early American Textbooks lists the Reading Speller. First Book, published by Text Book Co. in 1883 and Daniel Van Winkle in 1886, and the Second Book in 1883 by Text Book Co. As shown above, in 1888 and 1889 Campbell’s readers were published by Kelly and by Taintor, and in 1890 by Mutual Book Co. Campbell’s readers were not in print in 1912, nor, possibly, his spellers. See the entry in this appendix under the date of 1888 on the publisher, Thomas Kelly, and the entry under the date of 1866 on Taintor. Campbell’s readers are discussed in this history. They were not in print in 1912 according to the 1912 United States Catalog. A MEANING APPROACH WITH PHONY PHONICS

1884? (In 1883-1884 American Teacher)
Alphabetic Reading Charts

An article appeared in The American Teacher on page 233 of the 1883-1884 volume (April, 1884), “How to Teach Spelling,” by Z. Richards (possibly the same name as one of the men who were listed as active in the NEA at that time). The article was based on the Alphabetic Reading Charts. With an immediate phonic analysis of sight words, it sounds as if the charts were Code 10 analytic/synthetic material, which Richards said “ought to be in every primary school.” They may be the same as “Phonic Reading Charts” referred to in “Books for Primary Teachers,” on page 223 of the February, 1882, issue of that publication. AN APPARENT PHONIC APPROACH.

1884 (In 1885-1890 American Catalogue)
New English Readers, Nos. 1-3
This listing appeared in the American Catalogue for 1885-1890. No other information is available on these materials. Lindley Murray’s once highly-popular materials from the early 1800’s until the 1830’s had been called the English Readers. This series was possibly an attempted replacement. APPROACH IS UNKNOWN.

1884 (Harvard copy of Primer)
The Christian Brothers New Series
Copyright: John P. Murphy; De la Salle Institute, New York, Publisher
(See above for earlier 1842 edition and editions of O’Shea, Strong, and D. & J. Sadlier)
1885 (In 1912 United States Catalog)
The Peabody Series. Illustrated Reading Books
John P. Murphy, Baltimore, Publisher
1886 (In 1928 United States Catalog; Harvard copy of Primer and Infant Reader)
Murphy’s Illustrated Catholic Readers
John P. Murphy, Baltimore, Publisher

Early American Textbooks, 1775-1900 lists on page 78 “Brothers of the Christian Schools... The Second Book of Reading Lessons. Philadelphia: Eugene Cummiskey, 1842.” This was the apparent forerunner of the Christian Brothers series. In 1870 or before, the Christian Brothers Readers had been published by the Sadlier, O’Shea and Strong companies, as mentioned elsewhere. (I have no information on the Strong company, but only on D. and J. Sadlier and O’Shea.) None of these three companies’ names appeared on the 1884 revision. In 1884, The Christian Brothers New Series, Primer, was published by De La Salle Institute, New York, and copyrighted by John P. Murphy. Harvard has a copy which shows that it taught vowels, but in whole words. Words were not arranged by sound analogy. The 1884 text rates perhaps a Code 5, leaning more heavily towards “sound” for decoding than “meaning.” The Christian Brothers New Series Primer was A WHOLE WORD APPROACH WITH INADEQUATE PHONICS.

Yet a different primer copyrighted by John P. Murphy only two years later in 1886 went totally back to meaning, rating only a Code 1, as shown by a copy in the Harvard library. It is titled Murphy’s Series, Illustrated Catholic Readers, Primer, John Murphy & Co., Baltimore. It had the same general approach as the McGuffey Primer of 1849. Lesson 1 was the alphabet, and lesson 2 was the script alphabet. Lesson 3 dealt with two letter words with open and closed syllables mixed, which means with long and short vowels mixed, and some were phonically irregular. The words included “am up or to if go of,” etc. Next came two letter sentences, such as “I am by it.” The text progressed from two-letter words to three letter-words, and so on. The approach was pure sight-word “meaning,” totally devoid of “sound.” The Infant Reader which followed it was also Code 1. This series was shown in the American Catalog of 1885-1890 as “Murphy’s Illustrated Catholic Readers,” and included the Illustrated Catholic Primer and the Illustrated Catholic Readers, lst through 6th, all published in 1886. They also appeared in Early American Textbooks, 1775-1900, on page 97, as Murphy’s Series, Illustrated Catholic Readers, Baltimore: John Murphy & Co., 1886. Listed are the Primer, The Infant Reader, First Reader and Second through Sixth Readers, all published in 1886. In the 1912 United States Catalog, the series appeared as Murphy’s Catholic Readers, 8 books, the primer, the infant reader, and the lst reader to the 6th reader. The 1928 United States Catalog showed “Murphy J. Catholic Readers. Primer, infant reader, first, sixth. Murphy.” Whether they were ever revised is unknown, but this Code 1 series was apparently continuously in print from 1886 to 1928. Based on the 1886 material which I saw, this was, unless changed afterwards, A MEANING APPROACH.
Besides the revised Christian Brothers Readers and the Illustrated Catholic Readers, Murphy published the Peabody Series: Illustrated Reading Books. The last two series remained in print to 1912. The Illustrated Catholic Readers were still in print in 1928. The Peabody series was a year older than the Illustrated Catholic Readers, having appeared in 1885, the other having appeared in 1886. Murphy’s sudden appearance on the scene in 1884 is unusual. It suggests he may have been affiliated with an existing publisher.

The American Catalog for 1885-1890 listed the Peabody Series: Illustrated Reading Books, an eight-volume series published in 1885 by Murphy, beginning with the Primer and Infant Reader, and with a First Reader through a Sixth Reader. Copies are listed in Early American Textbooks, 1775-1900, on page 101: The Peabody Series. Illustrated Reading Books, 1885, Second Reader and Fourth Reader, John Murphy & Co., Baltimore and New York. The 1912 United States Catalog showed that the Peabody Series of Readers, “Primary” and 1st through 6th were in print in that year by J. Murphy. The Peabody series was apparently out of print by 1928, since it was not listed in the 1928 United States Catalog. THE APPROACH OF THE PEABODY SERIES IS UNKNOWN.

1885 (From E. B. Huey’s book)
The Citizen Reader
Arnold-Forster, H. O.
London

This appears in E. B. Huey’s bibliography, Primers and Readers, page 442 of his 1908 book, The Psychology and Pedagogy of Reading. Yet nothing appears in the text of his book, according to his index, on this material, nor have I found it listed elsewhere. This is one of the many curious 1880’s English references which turn up after the turn of the nineteenth century in the works of people associated in some way with James McKeen Cattell, who was in England in the 1880’s.

As indicated elsewhere, Huey appears to have been Cattell’s protege.

Something else that suggests Cattell’s input on Huey’s book is the listing of a German reference in his bibliography on page 442, Primers and Readers, although it does not appear in Huey’s index or elsewhere in Huey’s 1908 book so far as I could see: Deutsches Lesebuch fur Hohere Anstalten, Vols. I-V. Cattell spent some years with the psychologist, Wundt, in Germany during the 1880’s, and, of course, Cattell continued his famous “reading” experiments under Wundt in Germany.

1885 (In 1885-90 American Cat. In 1912 U. S. Cat. pub. by Simmons)
ABC Reader
Buckelaw, Sarah Frances and Lewis, M. W. (Frances W.?) - 20 cents
Pub.: A. Lovell
1905 and Later (In 1912 and 1928 United States Catalogs)
Buckwalter Readers (Easy Primer, 1st-4th in 1912, 1st-5th in 1928)
Buckwalter, G.
Simmons (publisher in 1912 United States Catalog)
Simmons-Peckham (publisher in 1928 United States Catalog)

The ABC Reader was listed in the 1885-1890 American Catalogue as published by A. Lovell, and in the 1912 United States Catalog as published by Simmons. No further information is available on it. However, concerning available background on its authors, Sarah Frances Buckelaw and M. W. Lewis, Early American Textbooks lists Sarah Frances Buckelaw (p. 1), as the author of Dictation Lessons in Drawing for Primary Grades, Ivison, Blakeman, Taylor and Co., 1876, reprinted in 1878 and 1879. Drawing lessons were prominent in schools from the 1870’s and New York State tests for teachers
eventually included drawing requirements. (See issues of the School Bulletin published by Charles William Bardeen in Syracuse, and Bardeen’s book listed on page 1 of Early American Textbooks, entitled The Questions and Answers in Drawing Given at the Uniform Examinations of the State of New York, 1896.) Frances W. Lewis is possibly M. W. Lewis (if the initial “M” is a misprint) shown on page 47 of Early American Textbooks as the author of 500 Choice Selections, Eastern Educational Bureau, Boston, 1889. On the ABC Reader, the APPROACH IS UNKNOWN.

No information is available on the Buckwalter readers shown in the 1912 United States Catalog, except that they were still in print in 1928, which suggests that they must have been very successful somewhere. Their APPROACH IS UNKNOWN.

---

1885 (In 1885-1890 American Catalogue)
Diacritical Speller; Exercises in Spelling and Pronunciation, 50 cents
Bales, C. R.
C. W. Bardeen, Syracuse, New York

1903 (In 1912 United States Catalog)
Bailey Book
Bailey, M.
C. W. Bardeen, Syracuse, New York

1905 or Before (In 1905 American Catalogue, page 876)
Primer
Warner (E. E.?)
C. W. Bardeen, Syracuse, New York

The Diacritical Speller appeared in the 1885-1890 American Catalogue and is listed here as a possible indication of a turning-point concerning spelling, after the miserable effects from the Quincy influence became evident. The Diacritical Speller obviously represented a move toward “sound” in spelling. C. W. Bardeen, who published the superb periodical, The School Bulletin, appeared to have no interest or any real knowledge concerning the opposition between “sound” and “meaning” in teaching beginning reading. That is surprising, since Bardeen was generally very knowledgeable. However, Bardeen did not concern himself with the beginning stages in schooling. APPARENTLY A PHONIC APPROACH.

---

1885 and later (In Amer. Cat. 1885-1890; In 1928 U. S. Cat. on page 2358, toward middle of 3rd column, apparent afterthought to “Readers”)
Concordia Primer Illustrated
1st Reader (to 4th by 1912 U.S. Cat.; “Old Series” in 1928 U. S. Cat.)
Concordia

1912 or before (In 1912 U. S. Cat.; in 1928 U. S. Cat., p. 2357)
Standard American Series (1st-4th, and 5th by date of 1928 U. S. Cat.)
Concordia

This is a Catholic school series. An article written in 1910 for The Catholic Encyclopedia, 1913, stated:

“In 1883, four sisters of St. Joseph arrived at Newton, Kansas, from Rochester, New York, and opened their first mission. After remaining there a year, they located at Concordia, Kansas, in the fall of 1884, and established the first motherhouse in the West in what was then the diocese of
Leavenworth. The congregation now numbers 240 in charge of three academies, two hospitals, and 26 schools in the Archdiocese of Chicago and the Dioceses of Marquette, Rockford, Kansas City, Omaha, Lincoln and Concordia. The sisters have about 4000 children under their care.”

Whether this is the source or not of the Concordia Catholic readers is not known but appears possible. No other information is available on the background of these readers.

No copies are available and the series is known only from the American and United States Catalogs. In the 1912 United States Catalog, Pictorial Primer, or First Reader for Parochial Schools was on sale by Concordia for 25 cents, and the Primer for 20 cents, presumably the 1885 material. Also on sale was the Primer and First Reader in One Book for 35 cents. According to the 1912 United States Catalog, by that date Concordia were also selling first to fourth “Readers,” apparently one series, and an additional one with first to fourth readers, the Standard American Series. In the 1928 United States Catalog, immediately before “Reader’s Guide” on page 2358, was shown “Readers; 1st 4th; old series... Concordia.” Also shown in 1928 on page 2290 was “Primer Concordia 30 cents” and on page 2357 “Standard American readers, first fifth, Concordia.” APPROACH IS UNKNOWN.

1886 (Harvard copy)
California State Series of School Textbooks, First Reader
Printed at State Printing Office
Sacramento, California

Harvard has the above copy. The series was not listed in the 1912 United States Catalog. Early American Textbooks lists on page 78 the Second Reader, 1886, and First Reader, 1886. On page 97, it shows Murphy, Anna C., New Fourth Reader, California State Board of Education, 1895. Also, it shows California School Books, Revised Series, New Third Reader (174 pages), 1895, George, Mary W. and Anna C. Murphy, State Printing Office, Sacramento, California. Harvard’s 1886 copy of the First Reader rates a Code 3, and uses phony phonics and sight words. A MEANING APPROACH WITH PHONY PHONICS.

1886 (In 1912 United States Catalog published by Lothrop)
The Interstate Primer and First Reader
Cyr, Ellen M. (Mrs. R. P. Smith) (See her 1891-94 Ginn books)
Copyrighted by Interstate Publishing Company
Published by Lothrop Publishing Company, Boston
1887 (In 1885-1890 American Catalogue)
Interstate Primer Words, Per Box, 50c
Interstate Publishing Company, Boston and Chicago
1887 (Harvard copy)
Primary Monthly, An Illustrated Magazine for
Supplementary Reading in Primary Schools (Sept., Number 11)
Brown, Kate L., Editor
The Interstate Publishing Company, 30 Franklin St., Boston and Chicago
1887 (In Early Amer. Txtbks., p. 74; In 1885-90 Amer. Cat. as 1888)
The Interstate Primer Supplement
Winchell, Samuel Robertson
The Interstate Publishing Co., Chicago and Boston
1887 (In 1885-1890 American Catalogue)
Primary Drawing and Reading Cards - 13 cents
The Interstate Publishing Co., Boston and Chicago
In 1885-1890 American Catalogue, page 173; listed under “Reading,” not “Readers,” in 1912 and 1928 U. S. Catalog, published by Flanagan, the probable successors to Indiana School Book Co. Early American Textbooks lists “Second Science Reader” by L. Mae Nelson-Virden, published by A. Flanagan of Chicago in 1896, so it was possibly the same publisher.

1888 (In 1885-1890 American Catalogue, page 173; listed under “Reading,” not “Readers,” in 1912 and 1928 U. S. Catalog, published by Flanagan, the probable successors to Indiana School Book Co. Early American Textbooks lists “Second Science Reader” by L. Mae Nelson-Virden, published by A. Flanagan of Chicago in 1896, so it was possibly the same publisher.)

First Steps in Reading. In 4 Pts.
Pease, M. A.
Interstate, “Winchell.” (See 1887 Winchell above possibly in Chicago.)

1889 (In 1912 United States Catalog published by Lothrop)

Interstate Second Reader
Brown, Kate L.
Interstate Publishing Company

1893 (In 1890-95 American Cat.; In 1912 United States Catalog)

Interstate Third Reader
Lovejoy, M. I.
Lothrop Publishing Company, Boston

The Primary Monthly, An Illustrated Magazine for Supplementary Reading in Primary Schools, with offices both in Boston and Chicago, most probably had some tie to Colonel Francis W. Parker, who had gone to Chicago from the Boston schools about 1883, after leaving Quincy.

Parker, of course, was famous for promoting “supplementary reading” for primary schools. Parker’s foe, former Boston Superintendent of Schools John Dudley Philbrick, labeled most such reading as “rubbish” in his report on American schools, Circulars of Information of the Bureau of Education, No. 1-1885, City School Systems in the United States, Government Printing Office, Washington. Parker’s own supplementary material written with L. H. Marvel, Supplementary Reading for Primary Schools, First Book and Second Book had revised editions in print in 1882, according to Leypoldt’s 1876-1884 American Catalogue. Harvard has an 1884 copy of the first edition of the First Book which came out in 1880, and it is a terrible thing consisting of very high frequency words and is almost senseless. It was certainly “rubbish.” Parker had been a supervisor in Boston after leaving as Superintendent in Quincy, and before moving to Chicago. The Harvard library copy of the Primary Monthly issue, No. 11, September, 1887, not only advertised Colonel Parker’s “Pictures for Language Lessons, For Kindergartens and Primary Schools, 24 cards, each 8 1/2 x 10 inches, with suggestions for use... Price 30 cents.” It also advertised:

“Lessons on Color in Primary Schools, By Lucretia Crocker, one of the Supervisors of the Boston Public Schools. This plan for Color-Lessons was prepared for the use of teachers in the Boston Primary Schools, and adopted by the Boston School Committee, and ordered used in all the Primary Schools of the city. Price, 30 cts.”

Such “experts” as Parker and Crocker were still able to make what was probably a considerable amount of money by being certified “experts.”

It is the nature of Primary Monthly which most clearly showed its tie to Parker’s movement. It was published specifically “For Supplementary Reading in Primary Schools.” It was described as at the “First and Second Reader grade... 100 or more copies, 2 cents per copy.” Yet two cents extra for each child each month was a considerable added expense in those low-inflation days to ask the Boston taxpayers to pay, particularly since ten issues came out in a year. The Interstate Monthlies also published a Monthly Reader for “Intermediate” grades and another for “Grammar School,” but the grammar school copies cost almost four times as much: $7.50 for a hundred. Yet the poor little children would have been unable to read those relatively expensive monthlies if they had been taught to “read” by Parker’s “meaning” method.
Cyr’s readers published in 1891 to 1894 by Ginn have been discussed at length in this history. They were obviously outgrowths of her 1886 work with the Interstate group which obviously had ties to Lothrop. According to Early American Textbooks (page 81) “Literary selections in all Cyr’s readers were prominent.” Cyr’s “Preface” to her Interstate Primer was dated July, 1886, Cambridge, Massachusetts. Her emphasis on literature and sight words, together with her origin at Cambridge certainly suggest that she had ties to movers-and-shakers at Harvard. Her Ginn series was apparently a best-seller, and rates a Code 1 at the beginning. Probably her Interstate material also used A MEANING APPROACH.

1887 (In Early American Textbooks)
A Primer
Knudsen, C. W.
Golden Bros., South Norwalk, Conn.

This 72-page primer is listed in Early American Textbooks on page 70. It is not listed in the 1912 American Catalog. APPROACH IS UNKNOWN.

1887 (In 1885-1890 American Catalogue under Primers)
Illustrated Picture Primer
Aunt Susie (pseud.)
Belford, C. & Co.

Listed in the American Catalogue for 1885-1890. No further information is available. APPROACH IS UNKNOWN.

Also see prior entries under Ginn, Heath & Co., Boston. D. C. Heath was probably the “Heath” in that company name.

1887 (Harvard 1893 copy. In 1928 United States Catalog)
Stepping Stones to Reading, A Primer
Badlam, Anna B. (In 1887 at Rice Training School, Boston, as Principal; by 1893 Principal at Lewiston, Maine, Practice School)
D. C. Heath, Boston
1887 (In 1912 United States Catalog under Readers - Nature)
Nature Readers
Wright, Mrs. Julia McNair
D. C. Heath
1887 (In 1885-1890 American Catalogue under Readers)
Suggestive Lessons in Language and Reading for Primary Schools
Badlam, Anna B. (The Primary Teacher, Boston, published Badlam’s articles with similar titles. This is apparently a collection.)
1888 (Still in print in 1928 United States Catalog)
An Illustrated Primer
(Written for deaf-mute children; but suggested for all children. Praised by E. B. Huey in his 1908 Psychology and Pedagogy of Reading)
Fuller, Sarah, of Horace Mann School for the Deaf, Boston
1891-1893 (In 1912 United States Catalog)
Temperance Readers, No. 1
Wright, Mrs. Julia McNair
National Temp.
1894-1895 (In 1928 United States Catalog)
Heart of Oak Books
Norton, Charles Eliot, Editor
D. C. Heath & Co., Boston

1898 (Copyright by Bass, published by Heath in 1899, Harvard copy)
Lessons for Beginners in Reading
Bass, Florence
D. C. Heath & Co., Boston
1901 (In 1912 U. S. Catalog; E. B. Huey, pages 342-343 and 442)
Primer of Work and Play
Alger, Edith G.
D. C. Heath & Co., Boston

1902-1910 (In 1928 U. S. Cat. with added bk. 5, N. B. Smith p. 134)
Gordon Readers (1st-4th and teacher’s manual)
Gordon, Emma K.
D. C. Heath & Co., Boston, New York, Chicago

1903-1904 (In 1928 U. S. Catalog)
Heath Readers by Grades (1st-8th)

1903-1904 (In 1928 United States Catalog)
Heath Readers (Primer, 1st-6th - a different arrangement from above)
D. C. Heath & Co., Boston, New York, Chicago

1904 (In 1928 U. S. Catalog with Beginners’ Reader)
First Reader
Bass, Florence
(See her 1898 Lessons for Beginners in Reading, possibly the same as Beginners’ Reader listed in 1912 U. S. Catalog)
D. C. Heath & Co., Boston, New York, Chicago

1908 (In 1928 U. S. Catalog under Primers)
Rhyme and Story Primer
McMahon, H. A. and Others
D. C. Heath & Co., Boston, New York, Chicago

1909 (In 1912 and 1928 United States Catalogs)
Finger Play Reader, 2 parts and Teacher’s Edition.
Davis, J. W. and F. Julien
D. C. Heath & Co., Boston, New York, Chicago

1912 or Before (In 1912 and 1928 U. S. Catalogs)
Haliburton Readers (See his Johnson Publishing Company materials)
Haliburton, M. W.
D. C. Heath & Co, Boston, New York, Chicago

1917 (In 1928 U. S. Cat., Copy of 1918 Manual in Libr. of Congress)
The Kendall Series of Readers
Kendall, Calvin N., LL. D., Commissioner of Education, New Jersey; Caroline L. Townsend, Ph. B.,
Department of Education, State Normal School, San Diego, California; Marion Paine Stevens, B. S.
(Teachers College), Ethical Culture School, New York City.
(Per A. I. Gates’ 1925 article on beginning readers, the primer was by Kendall and Townsend and the
manual by Stevens. The manual had phony phonics, but a great deal of it.)
D. C. Heath & Co., Boston, New York, Chicago

1917-1918 (In 1928 U. S. Catalog, N. B. Smith p. 134)
Gordon Readers, New Series (Primer, 1st-5th, teacher’s manual)
Gordon, Emma K. and M. Stockard
Anna B. Badlam wrote articles for the Primary Teacher about 1882 endorsing the teaching of what sounded like real phonics. Badlam’s 1887 book very possibly used A PHONIC APPROACH TO JUDGE FROM ANNA B. BADLAM’S ARTICLES.

Julia McNair Wright wrote Nature Readers, Nos. 1-3, for Heath, in 1887-1889. Harvard has a copy of Nature Reader No. 1, Sea Side and Way Side, copyrighted in 1887 and published in 1891. It is natural history material and meant it to be used as the primary beginning material to teach reading. The title page quoted a verse by Longfellow addressed to Agassiz, which suggests where Mrs. Wright’s inspiration was probably coming from. Whether the Temperance Readers were also meant as materials to teach beginning reading is not known. Mrs. Wright’s Nature Readers and her Temperance series, lst through 4th readers, was still in print in 1912 according to the United States Catalog. Her Nature Readers used A MEANING APPROACH.

Sarah Fuller’s An Illustrated Primer is discussed in this history. E. B. Huey discussed it approvingly in his 1908 book, The Psychology and Pedagogy of Reading, on page 319 and following, and page 442, and said it was copyrighted in 1898 and published by D. C. Heath Company, Boston. Yet, an 1888 edition is listed on page 69 of Early American Textbooks. Based on Fuller’s teaching of deaf-mutes in Boston,
the book was recommended also for hearing children. It was still in print in 1928, according to the 1928 United States Catalog. A MEANING APPROACH WITH SOMETHING LIKE PHONY PHONICS.

The Heart of Oak books by Charles Eliot Norton have been discussed at length in this history. Although omitted totally from Nila Banton Smith’s “history” written in 1932 at Columbia Teachers College, New York, they were discussed approvingly by Reeder in his 1900 history also written at Columbia Teachers College. The Heart of Oak texts were also discussed by E. B. Huey on page 254 of his 1908 book. He said:

“Most of the present-day series of readers are based on literature as the subject-matter, and the ‘Heart of Oak’ series, a six-book series edited by Charles Eliot Norton perhaps marks the extreme of this tendency to ‘read for literature’s sake,’ as contrasted with the other extreme represented in the Willson books.”

The Marcius Willson series of 1860 had been informational. Huey gave the Heart of Oak series an 1894 original publication date on page 442 of his bibliography, which may well be correct. By 1905, the series included Book One to Book Seven. They were still in print in 1928 and were a literature/natural-method series. A MEANING APPROACH.

Florence Bass signed her 1898 Introduction, adding Indianapolis, Ind. It recommended the classic sentence approach in script, including little boxes of word cards for each child, and then recommended what sounded as if it might be a true synthetic phonic approach. Not enough photocopies are available to determine whether it was or was not. The 1898 Florence Bass material used A MEANING APPROACH INITIALLY POSSIBLY FOLLOWED WITH TRUE SYNTHETIC PHONICS.

Edith G. Alger’s 1901 book, Primer of Work and Play, was listed by Edmund Burke Huey on pages 342-343 and 442 of The Psychology and Pedagogy of Reading. Huey said on pages 342 and 343:

“Miss Maud Summers, in her suggestive beginners’ book, ‘The Thought Reader,’ Book I, emphasizes the importance of children’s doing much of this early blackboard reading silently, and urges that when there is reproduction aloud, it should not necessarily be in the exact words that are upon the board. Thus the children in the very beginning of reading come to think of it as the getting or giving of thought from what is written, rather than as the naming of certain written words... Miss Summers would have the children sometimes read by acting the thought of what is written, as in reading such sentences as ‘Hop, skip and jump’.... ‘The Primer of Work and Play,’ by Edith G. Alger, also suggests much of this reading by actions.”

It is obvious that Edith G. Alger’s dominant approach was “meaning,” not “sound,” so her materials can be labeled as using A MEANING APPROACH.

The Gordon Series of 1902-1910 was a phonics series which made the obligatory bows to meaning by the use of some sight words. Presumably the 1917-18 material was similar. A PHONIC APPROACH

The Library of Congress has a copy of Teaching How to Read, A Manual for Teachers, 1918, by Marion Paine Stevens, B. S. (Teachers College), Ethical Culture School, New York City, “To Accompany The Kendall Primer, The Kendall First Reader, The Kendall Second Reader.” Those were written by Calvin N. Kendall and Caroline I. Townsend. The manual used phony phonics approaches, but a great emphasis and time were spent on them. The Kendall series, therefore, was A MEANING SERIES WITH A VERY HEAVY USE OF PHONY PHONICS.
The 1942 and 1955 materials by Paul A. Witty almost certainly used a “meaning” approach with two-step, whole-word “phonics.”

The 1991 program, Heath Reading, was reviewed in The Beginning Reading Instruction Study of 1993. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the Heath Reading samples at first grade, none had concerned “Sound/symbol relationships... Explicit,” but 4/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had also been 4/6, but for “Decoding strategy... Explicit,” the score was zero. Not a single sample concerned “Decoding strategy... Blending taught explicitly.” The “implicit” phonics approach must obviously be based on the analysis of whole, meaning-bearing words. The program obviously does not have a true phonic “sound” emphasis.

1887 (In 1912 U. S. Cat. pub. by Amer. Bk.; but only speller, also by Amer. Bk., in 1928 U. S. Catalog)
Pollard’s Synthetic Method of Reading and Spelling, A Complete Manual
Pollard’s Synthetic 1st, 2nd, 3rd Readers
Pollard’s Intermediate Reader (1899),
Pollard’s Advanced Reader
Pollard’s Advanced Spellers
Busy Work for Little Fingers (1887)
Pollard, Rebecca Smith (1831-1917)
Western Publishing House, Chicago (First privately published)

Pollard’s letters of recommendation from pleased parents concerning the success of her method with first graders (based on true synthetic phonics, or “sound”), which are cited in the body of this history, date from 1885, so her method was invented by the school year of 1884-1885 or before. However, it was apparently not published publicly until 1887.

This series included A Complete Manual, Pollard’s Synthetic First Reader, Second Reader, Third Reader, Intermediate Reader, and Advanced Reader, and “Pollard’s Advanced Spellers,” the last published as one volume at least by 1897. If the dates in Early American Textbooks are correct (and they sometimes are not), Western Publishing House was still publishing Pollard’s material in 1897. It was possibly still the publisher in 1899 when the Intermediate Reader came out. That date of publication was given in the 1912 United States Catalog. The Pollard materials were in print in 1912 according to the United States Catalog, but by then were being published by American Book Company. All of Pollard’s materials were out of print by the time the 1928 United States Catalog was published, except her “Synthetic Spellers,” presumably “Pollard’s Advanced Spellers,” a 232-page one-volume book listed on page 120 of Early American Textbooks, published by Western Publishing House, Chicago, in 1897.

Pollard’s remarkable success with true synthetic phonics (“sound”) and the appalling reaction towards it of the “experts” has been discussed at length in this history. As a sample of the reaction by “experts,” as mentioned elsewhere, Colonel Parker referred to Pollard’s “Synthetic” method as the method “full of sin.” Pollard’s 1887 series could have protected America from the plague of functional illiteracy from which it suffers. The fate of the Pollard series is a classic example of the harm that results from following “experts” instead of relying on the ordinary common sense of ordinary people. Only too often, the remark the late Bishop Fulton J. Sheen made about “intellectuals” applies to “experts,” as well. Bishop Sheen, a prolific author and philosopher himself, defined “intellectuals” as those people who have been educated beyond their intelligence. Pollard’s materials used A SYNTHETIC PHONICS APPROACH.
Brann, Rev. Henry A., Rector, St. Elizabeth’s Church
Thomas Kelly, New York, Publisher
1888 (In 1885-1890 American Catalogue, Harvard copy of primer.)
Kelly’s Universal Readers, New ed., 1st-5th, Primer
Brann, Rev. Henry A., Rector, St. Elizabeth’s Church
Thomas Kelly, New York, Publisher
1888 (In 1885-1890 American Cat.)
The Continental Readers, 1st, 2nd, 3rd
Campbell, William A. and Elizabeth A. Allen
Kelly, Taintor
1889 (In Early American Textbooks, p. 79)
The Continental Fourth Reader
Campbell, William A. and Elizabeth A. Allen
Thomas Kelly, New York
1890 (Harvard copy)
The Continental First Reader
Campbell, William A.
Mutual Book Co., New York

Harvard library has an 1888 copy of the Universal Primer. Kelly’s series by Rev. Brann does not appear in Early American Textbooks, 1775-1900. The 1885-1890 American Catalogue listed “Kelly’s Universal Primer [‘88]” and “Kelly’s Universal Reader. 1st-5th. New ed. [‘88].” Since a new edition appeared in 1888, the original series must have been published before that date. The 1888 edition probably was out of print in 1912 since it was not listed in the 1912 United States Catalog. A MEANING APPROACH WITH PHONY PHONICS.

Early American Textbooks lists the Reading Speller. First Book, by Wm. A. Campbell, published by Text Book Co. in 1883 and Daniel Van Winkle in 1886, and the Second Book in 1883 by Text Book Co. As shown above, in 1888 and 1889 Campbell’s readers were published by Kelly and Taintor, and in 1890 by Mutual Book Co. See the earlier entry on the Wm. A. Campbell readers, on which Thomas Kelly was one of the publishers by 1888. It is possible the Mutual Book Company which published a Campbell text in 1890 was the successor to Thomas Kelly who published a Campbell text in 1889. Campbell’s readers are discussed in this history. They were not in print in 1912 according to the 1912 United States Catalog, and used A MEANING APPROACH WITH PHONY PHONICS.

1888 or Before (Harvard copy of speller)
Practical Educational Series
F. F. Hansell & Bro., New Orleans, Louisiana

Harvard library has an 1888 copy of Practical Educational Series - First Lessons in Spelling, published by F. F. Hansell & Bro., New Orleans. Its title suggests the probability that the Hansell series also included reading books, but I have found no other trace of Hansell materials. The Preface to the Hansell speller refers to a “change of sentiment” on spelling, confirming the return of spelling to importance in American schools by 1888, after the Parker/Quincy influence from about 1875-1883 had died down.

1888 (In 1885-1890 American Catalogue)
Illustrated Scripture Primer, per doz., 75c.
Richmond, Mrs. E. J.
Phillips & H.
Listed in the American Catalogue for 1885-1890. No further information is available. APPROACH IS UNKNOWN.

1889-1891 (In 1912 U. S. Catalog under Normal Readers)
The Normal Course in Reading
Todd, Emma J. and William Bramwell Powell
Silver, Burdett & Co., New York, Boston, and Chicago
1893 (In 1890-95 Amer. Cat.; In 1912 U. S. Catalog by Silver)
The New Script Primer
Faber, Caroline A.
Potter & Putnam, New York (Original publishers)
1894 (In 1928 U. S. Catalog, N. B. Smith p. 134 to 138, and 430)
Rational Method in Reading, The (Primer, lst-6th and Manual)
Ward, Edward Gendar
Silver, Burdett & Co., New York, Boston, and Chicago
1897 (In 1895-1900 American Catalogue)
Wake-Robin Series
Potter & Putnam, New York (Original publishers. See note below, since Silver may have been the later publisher.)
1897 (In 1928 U. S. Catalog, N. B. Smith p. 142, 143, 430)
Stepping Stones to Literature (11 volumes, first to eighth grades)
Arnold, Sarah Louise; Charles B. Gilbert
Silver, Burdett & Co., New York, Boston, and Chicago
1901 (In 1928 United States Catalog)
Arnold Primer (See Arnold’s material under Iroquois in 1913)
Arnold, Sarah Louise
Silver, Burdett & Co., New York, Boston, and Chicago
1905 or Before (In 1905 American Catalogue and 1912 U. S. Catalog)
Our First School Book
Ferris, C. S.
Silver, Burdett & Co., New York, Boston and Chicago
1906 (In 1928 United States Catalog)
Silver, Burdett Readers (5 vols.)
Powers, Ella Marie and Thomas Minard Balliet (Wrote Morse 1902 series)
Silver, Burdett & Co., New York, Boston and Chicago
1907 (In 1928 U. S. Catalog under Primers)
Little Helper (Books 1 and 2)
Baum, M.

Harvey, M. L.
Silver, Burdett & Co., New York, Boston and Chicago
1909 (In 1928 U. S. Catalog. See N. B. Smith p. 142 and 175))
Progressive Road to Reading (Bks. I-4; Reviewed Harvard copy of Bk. I)
Burchill, Georgine - N.Y. City Teacher; William L. Ettinger, Assoc. Supt., N.Y. City.; Edgar Dubs
Shimer, District Supt., N. Y. City
Silver, Burdett and Co., New York, Boston and Chicago
1912 or Before (In 1912 U. S. Catalog)
Nature, Myth and Story
Thompson, J. G. and T. E. Thompson (See Ginn and Morse entries)
Silver, Burdett and Co., New York, Boston and Chicago

1912 and Later (lst-1912 U.S. Cat.; Prim., lst, 2nd in 1928 Cat.) Rational Method in Reading - Additional Readers (Primer, lst, 2nd)
Ward, M. A. and Barnum, M. D. (NOT E. G. Ward of 1894 series, above)
Silver, Burdett and Co., New York, Boston, and Chicago

1913 (In 1928 United States Catalog)
See and Say Phonetic Series (Books 1-3, Manuals 1-3)
Arnold, Sarah Louise, Elizabeth C. Bonney and E. F. Southworth
Iroquois Publishing Co., Syracuse, New York

1917 (In 1928 United States Catalog)
Thompson Readers (1st-4th, Teacher’s Manual 68c, Word Building 68c)
Thompson, J. G. and I. Bigwood (See Morse and Ginn on Thompson)
Silver, Burdett & Co., New York, Boston and Chicago

1917 (In 1928 United States Catalog)
Progressive Road to Reading, Enlarged. Ed. (to Bk. 6, Manual 1919) Kleiser, C. and Others
(Kleiser-Ettinger-Shimer on Primer, per Gates)
Silver, Burdett & Co., New York, Boston and Chicago

1922-1923 (In 1928 United States Catalog)
Progressive Road to Silent Reading; Fourth-Six Years (3 books)
Ettinger, W. L. and Others
Silver, Burdett & Co., N. Y., Newark, Boston, Chicago, San Francisco

1925-1927 (In 1928 United States Catalog - See N. B. Smith p. 212)
The Pathway to Reading (Through 6th)
Hosic, James Fleming (Ph. D., Teachers College, Columbia, 1920); Bessie Blackstone Coleman, Willis L. Uhl
Silver, Burdett & Co., N. Y., Newark, Boston, Chicago, San Francisco

1927 (In 1928 United States Catalog under Primers)
My First Book
Coleman, Bessie B.
Silver, Burdett & Co., N. Y., Newark, Boston, Chicago, San Francisco

1940-1945 (N. B. Smith, p. 277, 282, 289)
Learning to Read Program (From pre-primer through 4th grade)
(As an example of the low “literary” quality of such sight-word basal readers, this series had a 4th grade book actually entitled, Distant Doorways. Smith also wrote The First Productive Spelling Book, publisher unknown)
Smith, Nila Banton
Silver, Burdett Company, New York

1991 (Reviewed in The Beginning Reading Instruction Study, 1993)
World of Reading
Silver Burdett & Ginn
(As of November 30, 1994, Silver Burdett & Ginn, apparently one company by 1994, were reported to be a subsidiary of Simon and Schuster, which had reportedly been a subsidiary of Paramount but was reportedly a subsidiary of Viacom by 1994.)

The 1889-1891 Normal Course was apparently a very important series, with eight volumes: primer and lst through 4th readers, and alternate 2nd, 3d and 4th readers, which obviously were published in response to the “supplementary reading” enthusiasm of the period. Harvard has The New First Reader, The Normal Course In Reading, 1895. The material was listed in the 1912 United States Catalog under “Readers - Normal” and “Primers” but was not listed in the 1928 United States Catalog. Silver Burdett
became the publishers of Ward’s very popular phonic materials in the 1890’s, which must have overshadowed this series. THE NORMAL MATERIAL WAS A MEANING APPROACH WITH PHONY PHONICS

Dr. Adolf Douai wrote The Rational Phonetic Readers, First to Third, between 1872 and 1874, which were published by a New York publisher, E. Steiger. The E. Steiger company advertised their German-American primers and texts on the cover of Douai’s 1872 The Rational Phonetic Primer, so Douai’s move to phonics may have been inspired by German materials. It was probably also prompted by the American move to phonics in reading in the 1860’s and early 1870’s, which was so abruptly terminated after 1875, as has been discussed in this history. Both the duplication in names, “Rational,” and the fact that both Douai’s and Ward’s series taught heavy phonics, suggests that Ward of Brooklyn modeled his 1894 series on Douai’s 1872-1874 series, copies of which probably still lingered in the New York City area. Ward’s highly successful phonic method has been discussed in this history. In March, 1925, the article, “Problems in Beginning Reading,” by Arthur Irving Gates, was published in the Teachers College Record, Teachers College, Columbia University. It listed 21 widely-used beginning reading series, which Gates had selected randomly out of a longer list of widely used American series. In that 1925 article, Gates said that Ward’s primer had been revised in 1919 and Ward’s manual in 1920. Only the original Ward materials and not those revisions have been examined in writing this history. It is possible that the Ward phonic materials were watered down in those revisions, just as Fassett’s 1912 phonic Beacon material was watered down in its 1921-1922 revision, as has been discussed in this history. Ward’s series was still in print by Silver, Burdett in 1928. WARD’S MATERIAL AFTER A BRIEF SIGHT-WORD BEGINNING USED A PHONIC APPROACH.

The Wake-Robin Series was listed in the American Catalogue for 1895-1900 as two volumes, volume 1 for 30 cents and volume 2 for 36 cents. It did not appear as published by Potter & Putnam in the 1912 United States Catalog, but very probably was the same as the material shown as published by “Silver,” listed under “Readers, Biographical,” “Wake-Robin Series of Biography,” in three books, with book 1 for 36 cents, book 2 for 42 cents, and book 3 for 54 cents. Wake-Robin Book I was listed as one of the approved books at second grade for New York City schools in Taylor’s 1912 book on teaching reading. Taylor’s book is listed in Appendix D. The Wake-Robin Series was obviously, therefore, not a reading series since Book I was placed at the second grade level by the New York City schools.

The 1897 Stepping Stones to Literature was apparently one of the most widely used series. Nila Banton Smith mentioned (page 124) that it was prescribed for the first half of first grade (Class A) in the 1897 Utah course of study for the public schools, along with Werner’s and Finch’s primers. Smith said Arnold had been supervisor of schools in Boston in 1897, and Gilbert was superintendent of schools in Rochester, New York. Smith said Arnold also wrote Reading: How to Teach It, emphasizing literature appreciation, in 1899. Nila Banton Smith wrongly stated concerning the Stepping Stones to Literature series:

“There can be no doubt that the pioneers in literary readers were... Stepping Stones... and Bender’s Graded Literature Readers (...1899)....”

Yet the real pioneers in literary readers were Boston materials from the 1870’s onwards, discussed previously. On page 142, Smith also made a wrong statement concerning the period in which the sentence method was in use. It actually had been in use from after 1870 until about 1918, but she moved the period of its use up to 1909, presumably as part of her patterned burying of the Boston anti-phonics campaign in the 1870’s, discussed previously in this history. Smith said that Stepping Stones:

“...made moderate use of the method. It was not, however, until the years between 1909 and 1918 that the method enjoyed the height of its popularity, as applied in such well-known series as
Baker and Carpenter’s Language Readers (The Macmillan Company), Burchill-Ettinger-Shimer’s The Progressive Road to Reading (Silver, Burdett and Company), Free and Treadwell’s Reading-Literature (Row, Peterson and Company), Bryce and Spaulding’s The Aldine Readers (Newson and Company), Coe and Christie’s Story Hour Readers (American Book Company [Ed.: Christie had the married name of A. J. Dillon by the time Smith wrote.], Dyer and Brady’s The Merrill Readers (Charles E. Merrill Company), Hervey and Hix’s The Horace Mann Readers (Longmans, Green and Company, Baker and Thorndike’s Everyday Classics (The Macmillan Company), and the Elson Readers (Scott Foresman and Company).”

Smith’s listing is possibly correct concerning those non-phonic series popular in the period 1909-1918. She very possibly got that list from Gates, also at Columbia Teachers College at that time, since, in his 1925 article mentioned above, Gates had listed the Coe and Dillon material as Coe and Christie material.

The most popular phonic series in that period were apparently Ward’s, the Beacon Series, and Gordon’s, all of which made ritual bows to teaching by “meaning.” Pollard’s truly phonic materials were dying out in the 1909-1918 period. They were then being published by American Book, which was publishing great numbers of other old reading series, including the best-known 1879 McGuffey phonics series and the 1901 McGuffey sight-word series. However, Pollard’s reading material was out of print by 1928, although her spelling book remained in print. The Stepping Stones to Literature series was in print in 1912 and in 1928 according to the United States Catalogs. Harvard’s copy of Stepping Stones to Literature - A First Reader, shows it used the sentence method and A MEANING APPROACH.

The Arnold Primer was listed in the American Catalogue as having been published between 1900 and 1905 and was still in print in 1928, according to the United States Catalog. THE APPROACH IS UNKNOWN.

Sarah Louise Arnold was also an author on the See and Say Series of 1913, not published by Silver, Burdett. The series was in print in 1928 according to the United States Catalog, which described it as the “See and say phonetic series. 6 bks.” Arthur I. Gates included the See and Say Series on his list of widely used series in his 1925 article. Yet Silver, Burdett which had published both Ward’s very early and widely used phonics series as well as Arnold’s original sight word series, did not publish Arnold’s later widely used See and Say Series which was apparently A PHONIC SERIES.

The 1909 Burchill-Ettinger-Shimer Progressive Road to Reading and its 1917 revision by Kleiser, Ettinger and Shimer straddled two periods. Nila Banton Smith listed the first under the literature/sentence approach (p. 142) and the second under the silent reading approach (p. 175), only listing the authors as Ettinger-Shimer. That obscured the fact that two different series were being discussed. According to Gates, the manual for the second series was published in 1919, which placed it in the silent reading period. Upper grade readers were published in 1922-1923 by “W. L. Ettinger and Others” as shown in the 1928 U. S. Catalog. The Introduction of Book I of the 1909 Harvard copy of The Progressive Road to Reading contained the same philosophy as others of the period. It started with “meaning” but gave heavy drill on supplemental phonics. Whether later editions did is unknown. In Principles and Methods of Teaching Reading by Joseph S. Taylor, The Macmillan Company, New York: 1912, Taylor quoted from personal letters to him from Shimer concerning Shimer’s viewpoints on reading. The letters seemed to describe the “meaning” approach with two-step phony phonics, but in practice the 1909 Progressive reader on which Shiner collaborated was more heavily phonic. THE APPROACH IN 1909 WAS HEAVY MEANING AT THE BEGINNING FOLLOWED BY HEAVY PHONICS.

James Fleming Hosic, an author on the 1925-1927 series, Pathway to Reading, was obviously a reading “expert.” He took his Ph. D. at Columbia Teachers College in 1920. According to the 1928
United States Catalog under readers, his 1921 book published by Teachers College for $1.50, Empirical Studies in School Reading, was still in print in 1928. Willis L. Uhl, with James Fleming and Bessie Blackstone Coleman a co-author on the 1925-1927 Pathway to Reading, is quoted as an “expert” by Nila Banton Smith on pages 167, 191, 195, 201, 212, 432 and 433. Harvard’s copy of the primer shows Blackstone’s name first, but only identifies her as a “Specialist in Reading.” The copy shows Uhl as Associate Professor of Education, University of Wisconsin, and Hosic as Associate Professor of Education, Teachers College, Columbia University, Formerly Head of Department of English, Chicago Normal College. Uhl wrote “The Use of the Results of Reading Tests as Bases for Planning Remedial Work.” Elementary School Journal, XVII (Dec. 1916), p. 273-280; Scientific Determination of the Content of the Elementary School Course in Reading, University of Wisconsin: 1921, (in the 1928 United States Catalog), and The Materials of Reading, Newark: Silver, Burdett Co., 1924. The Newark location, presumably in Delaware, suggests the International Reading Association of Newark, Delaware, founded in 1956, may have located in Newark because of some such Silver, Burdett connection. It was Silver, Burdett which published Nila Banton Smith’s 1932 (?) doctoral dissertation in 1934, American Reading Instruction, and they also published her 1940-1945 reading series. Possibly they published The First Productive Spelling Book by her, listed in the Library of Congress catalog under PE 1144.S66 Office, which I was not able to obtain from general circulation but possibly could have found on further inquiry. (Concerning the founding and history of the IRA, see Blumenfeld’s 1973 The New Illiterates, pages 119-122). Nila Banton Smith stated elsewhere that none of the reading series published from 1925 to 1930 used a phonics approach. Neither did The Pathway to Reading Primer which had a small sight vocabulary and silent-reading exercises. It can be presumed to have used a straight Code 1 MEANING APPROACH.

The 1991 series, World of Reading, on which Pearson, Clymer, Venezky and others were the authors, was reviewed in The Beginning Reading Instruction Study of 1993, compiled by the Office of Research, U. S. Department of Education. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the first grade samples from the World of Reading of Silver Burdett & Ginn, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had been 6/6, but for “Decoding strategy... Explicit,” the score had been zero. Not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the 1991 World of Reading series is not teaching synthetic phonics to beginning readers. Considering the publication date and the title of the series, it is probably “whole-language” oriented.

#Publishers First Appearing in This List Between 1890 and 1900

1890 (In 1885-1890 American Catalogue)
Reformed Primer and First Reader
Heilprin, L.
Babyhood Publishing Company

Listed in the American Catalogue for 1885-1890. No further information is available. APPROACH IS UNKNOWN.

AMERICAN BOOK COMPANY WAS FORMED IN 1890 FROM THE FOUR FIRMS OF IVISON, BARNES, APPLETION AND VAN ANTWERP, AS DISCUSSED ELSEWHERE. LATER IN
1890, THE NEW AMERICAN BOOK COMPANY BOUGHT OUT THE SCHOOL BOOK LIST OF
HARPER.

1890 (In 1890-1895 American Catalogue)
Harper’s Sixth Reader
Baldwin, James (See Harper for the rest of his 1889 Harper series published by American Book Company after 1890, possibly still under Harper’s name)
Harper (American Book Company, New York, Cincinnati, Chicago)
1892 (In 1890-1895 American Catalogue)
Supplementary First Reader
Rebecca. D. Rickoff (Worked on Appleton Series Primer of 1878)
American Book Company, New York, Cincinnati, Chicago
1892 (In 1890-1895 American Catalogue. First published in 1874 by Ivison per 1876 American Catalogue. Also see Swinton - Ivison entry in 1876-1884 American Catalogue on supplementary series written with W. Swinton.)
Cathcart’s Literary Reader, 2d Ed., Rev., Enl., Rewritten
Cathcart, G. R.
American Book Company, New York, Cincinnati, Chicago
1894 (In Early American Textbooks, page 83)
First Lessons in Reading Based on the Phonic-Word Method (80 pages)
Teacher’s Edition (143 pages)
Fundenberg, Elizabeth H.
American Book Company, New York, Cincinnati, Chicago
1896 (Listed in 1912 and 1928 United States Catalogs)
McGuffey’s Chart Primer (Per doz. $1.20 in 1928, when dated to 1896)
(No other information is available.)
American Book Company, New York, Cincinnati, Chicago
1897 (In 1928 United States Catalog, Harvard copy of “First Year”)
School Reading by Grades
(An 8 book series and a 5 book series, plus apparently the Baldwin 1899 primer below)
Baldwin, James
American Book Company, New York, Cincinnati, Chicago
1899 (In 1928 United States Catalog)
The Baldwin Primer
Scripture, M. (May Kirk)
American Book Company, New York, Cincinnati, Chicago
1899 (Harvard copy. In Early American Textbooks, p. 73)
First Days in School, A Primer
Coe, Ida and Seth T. Stewart
American Book Co., New York, Cincinnati, and Chicago
1900 (Bibliography, Early American Textbooks)
American Public Schools: History and Pedagogics [possibly of interest]
Swett, John (Author on Barnes/Bancroft reader of 1867 and co-author on Bancroft 1883 series, listed elsewhere in this appendix)
American Book Company, New York
1900 (In 1928 U. S. Catalog)
New Education Readers (1st-4th) “A Synthetic and Phonic Word Method”
Demarest, A. J. and William M. Van Sickle
American Book Co., New York, Cincinnati and Chicago
1901 (In 1928 U. S. Catalog) (See earlier entries on McGuffey’s)
New McGuffey Readers (First-Fifth)
Baldwin, James
American Book Co., New York, Cincinnati and Chicago
Before 1905 (In 1900-1905 Amer. Cat.; in 1912 and 1928 U. S. Cat.)
Pathways in Nature and Literature (1st, 2nd readers, teacher’s ed.)
Christie, S. R. and E. R. Shaw (1905 Am. Cat. lists only Christie)
University (the publisher between 1900 and 1905)
American Book Co. (publisher by 1912 to after 1928)
1905 or Earlier (In 1900-1905 American Catalogue)
Harmonic Second Reader (Presumably part of a series)
Ripley and Tapper
American Book Co., New York, Cincinnati, and Chicago
1905 or Earlier (In 1900-1905 American Catalogue and 1928 U.S.Cat.)
Lee Readers (1st-5th)
Lee, E. H.
American Book Co., New York, Cincinnati, and Chicago
1905 or Earlier (In 1900-1905 American Catalogue)
Culture Readers, Books 1 and 2, and Manual of Natural Method
“Miss Merrill” (Author? or Publisher? per J. S. Taylor who showed that after the title of the series, in his 1912 book, in Appendix D.)
Warner, E. E. (Shown as author in 1900-1905 Am. Cat.)
“Appleton” Publisher (Presumably division of American Book in 1900)
(By 1912 United States Catalog, E. E. Warner’s 1910 version of Culture Readers was being published in 2 vols. by C. E. Merrill. Was that “Miss Merrill”? See also Hinds as Warner’s publisher and also Noble and Bardeen.)
1905 (In 1928 U. S. Catalog under Primers)
Rose Primer
Turpin, E. H. L.
American Book Co., New York, Cincinnati, and Chicago
1906 (In 1928 U. S. Catalog)
Classics Old and New - First-Fifth Readers
Alderman, E. A.
American Book Co., New York, Cincinnati, and Chicago
1906 (In 1928 U. S. Catalog)
Action Primer
Baker, Thomas O.
American Book Co., New York, Cincinnati, and Chicago
1906 (In 1928 U. S. Catalog as well as 1912)
Brooks Readers
Brooks, S. D.
American Book Co., New York, Cincinnati, and Chicago
1906 (In 1928 U. S. Catalog)
Carroll & Brooks Readers (Only primer listed in 1912 U. S. Catalog)
Carroll, C. F. and Brooks, S. C. (NOT S. D. Brooks as above)
“Appleton” in 1906 and 1928 (Presumably a division of American Book)
1906 (In 1928 U. S. Catalog under Primers)
Jingle Primer
Brown, C. L. and C. S. Bailey
American Book Co., New York, Cincinnati, and Chicago
1906 (In 1928 U. S. Catalog under Primers)
Indian Primer
Fox, Florence C. (See her G. P. Putnam’s Sons entry)
American Book Co., New York, Cincinnati, and Chicago
1908 or Before (Per E. B. Huey, p. 341, 442. See entry under 1928)
Old Time Stories Retold for Children
Smythe, E. Louise

American Book Co., New York, Cincinnati and Chicago
1908 or Before (Per E. B. Huey, p. 278, 339-41, 442.)
Four True Stories of Life and Adventure;
The Story of Washington
Smith, Jessie R.

E. H. Harison (sic), Publisher, New York (Included here with American Book because Smith’s books are related to E. Louise Smythe’s book, above. See discussion below.)
1908 (In 1912 United States Catalogue under Primers)
Child World Primer
Bentley, A. E. and G. R. Johnston
“Barnes” (Presumably a Division of American Book)
1908 (In 1912 U. S. Catalog)
Primer
Hyde, A.
American Book Co., New York, Cincinnati, and Chicago
1909 (In 1928 U. S. Catalog)
Standard Catholic Readers First to Fifth.
Doyle, M. E.
American Book Co., New York, Cincinnati, and Chicago
1911 (In 1928 U. S. Catalog)
Expression Readers (lst-8th)
Baldwin, James and Ida C. Bender (See her 1899 Merrill material and his other Harper and American Book materials)
American Book Co., New York, Cincinnati, and Chicago
In 1912 U. S. Catalog and 1928
Choice Literature - New Edition (Books 1-7) (First ed. Sheldon & Co., 1898)
Williams, Sherman
American Book Co., New York, Cincinnati, and Chicago
1912 or Before (In 1912 United States Catalog)
School readers. 2 bks. 1st... 2nd
( Possibly the 1897 texts published by Eaton)
Taylor, Frances Lillian
American Book Company
1912 or Before (In 1912 U. S. Catalog)
Crane Readers (lst-5th) (See the 1893 entry on Crane)
American Book Co., New York, Cincinnati, and Chicago
1912 or Before (In 1912 U. S. Catalog; Originally published in 1886 by Porter and Coates, Philadelphia, and then The Werner Co., Chicago.)
New Normal Readers (five-book series)
Raub, Albert Newton (See Sower of Philadelphia concerning Raub)
American Book Co., New York, Cincinnati, and Chicago
1912 or Before (In 1912 U. S. Catalog)
Universal Primer
Klingensmith, Annie (See entries on Bancroft/Indiana, Flanagan, Educ.)
American Book Co., New York, Cincinnati, and Chicago
1912 or Before (In 1912 U. S. Catalog 1st-3rd, in 1928 Primer-5th)
Golden Treasury Readers lst-5th (Also another “First Reader” in 1928)
Stebbins, C. M. and M. H. Coolidge
American Book Co., New York, Cincinnati, and Chicago
1912 or Before (In 1912 U. S. Catalog)
New Graded American Educational Readers (Nos. 1-5)
(Possible revision of The Graded School Readers, Eclectic Educational Series, by Thomas Wadleigh Harvey, 1875, Wilson, Hinkle & Co.)
American Book Co., New York, Cincinnati, and Chicago
1913? (In 1928 U. S. Catalog)
Story Hour Readers
Coe, Ida and A. J. Dillon (Gates said Ida Coe and A. J. Christie, Mrs. Dillon’s maiden name)
American Book Co., New York, Cincinnati, and Chicago
1914 (In 1928 U. S. Catalog)
Pantomime Primer
White, E. G.
American Book Co., New York, Cincinnati, and Chicago
New Barnes Primer (By 1924, Laidlaw was pub. See also under Laidlaw.)
Dressel, Herman; May Robbins; Ellis U. Graff
A. S. Barnes Co. (Apparently division of American Book Company)
1918 (In 1928 U. S. Catalog)
Picture Primer
Beebe, E. M.
American Book Co., New York, Cincinnati, and Chicago
1920 (In 1928 U. S. Catalog)
The Insular First Reader - New Edition
Gibbs, David - Formerly Div. Supt. Schools, Philippine Islands (With Anna H. Carter and Mary E.
Polley, Teachers, Phil. Normal School)
American Book Co., New York, Cincinnati, Chicago, Atlanta
1923 (In 1928 U. S. Catalog under Primers)
Easy Steps in Reading (Primer)
Coe, Ida and L. Specht (See 1913? entry above)
American Book Co., New York, Cincinnati, and Chicago
1927 (In 1928 U. S. Catalog under Primers)
Child’s First Book in Reading
McElroy, M. J.
American Book Co., New York, Cincinnati, and Chicago
1927 (In 1928 U. S. Catalog)
Everyday Reading (Books 1-3)
Pearson, H. C. and C. W. Hunt
American Book Co., New York, Cincinnati, and Chicago
1928 or Before (In 1928 U. S. Catalog)
Primary Reader
Smythe, E. L. (Probably E. Louise Smythe. See 1908 entry.)
American Book Co., New York, Cincinnati, and Chicago
1930 (See Nila Banton Smith, p. 213 and 433)
Fact and Story Readers
Suzzallo, Henry (1875-1933), George Earl Freeland (1886-?),
Katherine Louise McLaughlin (1880-?), Ada Maria Skinner (1878-?)
American Book Company, New York, Cincinnati, and Chicago
1930 (On pages 1719 and 1720 of Cumulative Book Index 1928-1932)
Do and Learn Readers (1st-3rd years and manual)
White, Margaret L. and Alice Hanthorn
American Book Company, New York
reviewed by Blumenfeld in The New
Illiterates on pages 300-301)
Betts Basic Readers
Betts, Emmett A. and Carolyn M. Welch
American Book Company, New York
1963 (One of the 27 programs used in the 1967 U.S.O.E. Studies)
We Learn English Series
Bumpass, Fay L.
American Book Company, New York
1971 (See Blumenfeld’s review, The New Illiterates, p. 310-311-312)
The READ Series (Reading Experience and Development)
Johnson, Marjorie Seddon; Roy A. Kress; John D. McNeil
American Book Company, New York

American Book Company was formed in 1890, as discussed previously, from Ivison; Barnes; Appleton; and Van Antwerp, Bragg. Later in 1890, it bought the schoolbook listings of Harper. Also, as is obvious from this bibliography, American Book Company later bought many reading materials that had originally been published by many other companies.

With the formation of American Book Company in 1890, the early 1880’s textbook war, taking place in the Midwest, between the 1878 Appleton phony-phonics sight-word series and the revised truly phonetic 1879 McGuffey series came to a permanent end. What is surprising is that Vail in his history of the McGuffey readers made no mention of the fact that the two formerly competing companies had merged, along with two others, in 1890, only saying that Van Antwerp, Bragg had joined American Book.

That is one of many indications that Vail did not tell the whole story, apparently obscuring aspects which for some reason he considered negative. Perhaps, to mention that Van Antwerp, Bragg was only one-quarter of the new firm would have seemed to downgrade Van Antwerp, Bragg’s importance. Perhaps Vail retained his hostility to his former arch-competitors, the Appleton group, and to their reading series which had carried on a publishing “war” with the 1879 McGuffey edition in the Midwest in the 1880’s. Therefore, Vail may have preferred to ignore Appleton’s presence in the new company. After all, Vail had been the editor of the famous 1879 McGuffey series, and apparently the author of its phonetic book one. Vail obviously felt towards the 1879 McGuffey series as a father feels to his child. It is very possible that Vail left American Book Company because of some conflict, since his 1911 McGuffey history was published by another company, and that is very surprising.

Fundenberg wrote her material in Pittsburgh in 1894, and it is interesting that her philosophy was like Agassiz’. This material was in print in 1912, according to the United States Catalog but was not in print in 1928. Harvard’s copy shows that the material used A MEANING APPROACH WITH PHONY PHONICS.

Harvard library has a copy of James Baldwin’s School Reading By Grades, First Year, published in 1897. The text used the sight-word, sentence method and later added scanty, inadequate phonics. It used A MEANING APPROACH WITH INADEQUATE PHONICS.

Early American Textbooks wrongly shows Seth T. Stewart as the sole author of First Days in School, A Primer, the 1899 book listed above published by American Book Company. He took out the 1899 copyright, as shown by Harvard’s copy, but Ida Coe’s name appears under Stewart’s on the title page of
James Baldwin wrote School Reading by Grades, the 1897-1899 series discussed above, the 1901 McGuffey edition listed below, the Harper series, and supplementary reading materials not listed here. However, the 1899 Baldwin primer was not written by him, since it was signed, “May Kirk, New Haven, Connecticut.” The U. S. Catalogs show her name as M. Scripture. She is probably the Mrs. Scripture whose Code 1 beginning reading method was described by E. B. Huey in his book, and the probable wife of the psychologist, Scripture. As stated above, Baldwin’s first book in his 1897-1899 series for American Book, meant originally as the beginning text, used the sentence method. Yet the very first pages of the few photocopied pages available from the beginning of Harvard’s copy of The Baldwin Primer published later use only phrases: “An apple and an arm. A bat and a ball. A cat and a cow.” These appear on the page opposite a page showing the words, “apple, arm, ball, bat, cat, cow” with pictures and upper and lower case printed and script A, B, C. Mrs. Scripture was obviously teaching A, B, and C from pictured sight-words. The “Preface” claims, “In teaching words the synthetical and analytical methods are followed simultaneously.” In practice, this was probably phony phonics. The material used A MEANING APPROACH PROBABLY WITH PHONY PHONICS.

The 1900 Demarest-Van Sickle materials plagiarized Pollard’s story approach on phonics and then used the phonetic material to teach two-step phony phonics on a heavy base of sight words. Harvard’s copy of A Synthetic and Phonic Word Method, Book One, shows that it wrongly claimed to be a phonic method when it was in fact A MEANING METHOD WITH PHONY PHONICS.

The 1901 New McGuffey Readers (First-Fifth) by James Baldwin published by American Book Co. have been discussed at length under the earlier entries for the McGuffey series. That phony phonics, “meaning” series, meant to replace the truly phonic 1879 McGuffey series but which is virtually unknown today, was credited by Vail with a wide sale in 1911. Baldwin wrote fine children’s literature which was the probable cause for the popularity of his materials, but he possibly had little to do with deciding the nature of his beginning readers which taught children to read. Baldwin’s 1901 material, like all his materials, taught beginning reading with a blatant PHONY PHONICS MEANING APPROACH.

The Action Primer of 1906 by Thomas O. Baker is mentioned in Principles and Methods of Teaching Reading by Joseph S. Taylor, The Macmillan Company, New York: 1912. Taylor wrote the following on pages 70 and 71:

“The number of verbs used by a child is relatively much larger than in the case of an adult. The child imitates movements before sounds and expresses many actions by gesture. These considerations exhort us to put the emphasis, in early reading matter, upon doing, action,
movement; hence the popularity of fairy tales, myths, and fables, all of which have the narrative form.”

After this Taylor put a footnote, “See The Action Primer by Thomas O. Baker, American Book Co.” It is probable that Baker wrote a sight-word primer, in which children acted out the words they silently read, an approach recommended for years by “experts.” If so, Baker’s primer used a pure MEANING APPROACH.

The 1908 (or before) materials listed above for Jessie R. Smith and E. Louis Smythe are discussed at length by E. B. Huey in his 1908 book. Huey said on pages 276-278:

“It is a matter of gratification that we now have books that are so attractive and that set before the child high standards of beauty. It is an open question, however, whether the idealization of many of the pictures is not an adult one that is somewhat foreign to the child, and whether the use of the child kind of sketches, motivated as his own illustrative drawings are motivated, would not reach his real needs and interests better than these exquisite adult expressions. It is a question, anyway, how much reading owes to his aesthetic development, when pictures are needed rather to assist with natural child interpretations of what is read. The reading-books compiled by Jessie L. Smith, in which children’s stories are illustrated by children’s own illustrative drawings, suggest a very different ideal which is at least worth considering. A specimen illustration is shown below.”

Huey then reproduced in Fig. 53 the drawing, “George Goes Surveying” by Philip Redmond, age 12, from Smith’s “The Story of Washington,” copyrighted by E. H. Harison, publisher, New York. Huey wrote on pages 339-342:

“Miss Jessie R. Smith, of the Santa Rosa, California, Schools, has published two little volumes of such children’s Readers, ‘practically written by children.’ I quote from Professor Burk’s preface to one of these Readers, ‘The Story of Washington,’ and reproduce part of the first story. An illustration of this story, by one of the older children, has been shown on an earlier page.

“The method of the book’s production has been as follows: she first related to her pupils who were from seven to nine years of age, the story of the hero in the best form her instincts could dictate. Some days later, after the story, its form of presentation, and language have somewhat settled in the children’s minds, she has called for reproductions, both oral and in written form, allowing the pupils also to illustrate their written work in any way they pleased. She has then made these reproductions the material for most careful study as to essential elements of plot, salient points of interest, and especially the words and forms of expression used by the children. By this means the story has been reconstructed. Portions over which the children love to linger are brought out to the fullest extent. Their words and forms of language, within the limit of grammatical usage, are followed scrupulously. Much care has been used to keep the stories within a limited vocabulary. Less than 750 different words are used in the entire series, and these, excepting the necessary geographical names are all of the commonest use among children.”

The method kept real literature with its rich vocabulary away from the children, and limited the children to the use of their already acquired vocabulary. That was a fine recipe for stunting children’s language growth.

Huey followed this with an insipid excerpt from the Washington book. He also included an excerpt from another story, and it was repulsive, particularly for little children. It was entitled The Apples of Idun,
from Old Time Stories Retold by Children, published by American Book, “a Reader compiled somewhat similarly by E. Louise Smith, of the Santa Rosa Schools.” The excerpt read in part:

“Once upon a time three of the gods went on a journey. One was Thorn and one was Loki. Loki was ugly and mean... At last they got very hungry. Then they came to a field with cattle. Thor killed a big ox and put the pieces into a pot. They made a big fire but the meat would not cook. They made the fire bigger and bigger, but the meat would not cook. Then the gods were very cross...”

After quoting this culturally elevating excerpt on casual slaughtering and butchering, Huey said:

“The children’s reproductions of the stories were at first typewritten or mimeographed, and were read in this form. They are, of course, all the more pleased to read their stories when printed. It is, of course, just as natural to discuss with the children an interesting drawing upon the blackboard, and to write and read with them the statements that they make about the objects drawn. This blackboard sentence method is always enjoyed by the children, and fast increases their vocabulary and their familiarity with phrases and sentences that are in common use. Miss Margaret Wheaton describes and illustrates this method in a very intelligible fashion in the New York Teachers’ Monographs for November, 1898. Miss Maud Summers, in her suggestive beginners’ book, ‘The Thought Reader,’ Book I, emphasizes the importance of children’s doing much of this early blackboard -reading silently, and urges that when there is reproduction aloud it should not necessarily be in the exact words that are upon the board. Thus the children in the very beginning of reading come to think of it as the getting or giving of thought from what is written, rather than as the naming of certain written words.”

The Smith and Smyth materials obviously used A MEANING APPROACH.

Concerning the 1912 entry for Sherman Williams’ readers, the original publisher was Sheldon, not American Book. Harvard library has a copy of Choice Literature Book One for Primary Grades, Compiled and Arranged by Sherman Williams, Superintendent of Schools, Glenn Falls, N. Y., published by Sheldon and Company who copyrighted it in 1898. See the entry under Sheldon for further information, which entry quotes from the Harvard copy of Book 1 of Williams’ 1898 series. Yet the “Choice Literature” series of Sherman Williams was published by American Book Company, in books 1 - 7 some time before 1912, along with A Reader for Beginners by “Williams,” as shown in the 1912 United States Catalog, but with no notation that it was a new edition. Nevertheless, “Choice Literature, New Ed., 7 Bks.” by S. Williams, “Comp.,” was listed in the 1928 United States Catalog without A Reader for Beginners, and showing a publishing date of 1912 by American Book. Apparently, therefore, there was a second edition sometime after 1898 but before 1912, which was published by American Book by 1912. Williams’ materials with their “literature” emphasis apparently used A MEANING APPROACH.

The 1928 United States Catalog shows that Story Hour Readers were written by “E.” Coe and A. J. Dillon, “See main entry.” Yet, in Arthur I. Gates’ long list of popular primers in a 1925 issue of the Teachers College Record, Gates reported that the Story Hour Readers were written by Coe and Christie (Dillon’s maiden name). Nila Banton Smith repeated that name, and apparently got it directly from Gates and not from his article, because she listed the names when describing the series as one of the popular sentence method/literature readers published between 1909 and 1918. (Gates had not included that information in his article.) If Smith had researched the original materials by herself to determine their nature, instead of depending on hearsay, she might not have repeated Gates’ use of the author’s maiden name. Nila Banton Smith did not give first names in her paragraph reporting on the nature of these readers, but did so in the index, showing Ida Coe and Alice J. Christie. However, Alice J. Christie Dillon should not be confused with S. R. Christy. S. R. Christy and E. R. Shaw wrote Pathways in Nature and
Literature, first and second readers and a teacher’s edition, published in 1912 and 1928 by American Book. The Christy/Shaw readers were listed in the 1900-1905 American Catalogue as being published initially by University. The Ida Coe and Alice J. Christie Dillon materials published by American Book Company, discussed by Nila Banton Smith, PROBABLY USED A MEANING APPROACH.

The 1914 publication of a “Pantomime Primer” suggests an earlier re-emphasis on the silent reading of the late 1870’s through 1890’s than is normally considered, which re-emphasis came after about 1920. PROBABLY A MEANING APPROACH.

The 1916 Barnes material (and the 1883 Barnes material) are discussed under Laidlaw and Barnes, which see.

The Insular First Reader - New Edition of 1920 by David Gibbs, obviously meant for use in the Philippines, used a controlled- vocabulary, sight-word approach. The probability is that heavy supplemental phonics was also used, but I cannot tell that from my few Department of Education photocopies. This was the third book in the series, following the Chart Primer and First Year Book. The “Preface” said, “The Insular First Reader has a vocabulary of about five hundred and seventy new words. In addition to these, all important words in the Chart Primer and First Year Book are repeated in this one.”

In comparison to the series that came out in the later 1920’s, that was a very heavy vocabulary load for first grade by the “experts”’ standards, probably at least 800 words. That fact may account for the materials’ not being listed in the 1928 United States Catalog. With its controlled vocabulary, it appears to have used a sight-word approach. PROBABLY A MEANING APPROACH WITH SUPPLEMENTARY PHONICS.

Henry Suzzallo and his Columbia Teachers College background, his association with the American Book Company, and his association with the Carnegie foundation have been discussed elsewhere in this history. Like so many of the “experts,” Suzzallo wrote grammar school textbooks (spellers and readers, and perhaps others) from about 1911 until shortly before his death in 1933. The profits from the elementary school textbooks that such “experts” wrote for the government schools over which they had such great influence must have been very comfortably remunerative. Henry Suzzallo’s Fact and Story Readers of 1930 were listed in the New York Public Library catalog. Before 1981, I requested the Primer - Book 1, under call number RNP6. Despite repeated requests, I could not get it. A note finally came back, “not on shelves, only Book 4.” Suzzallo’s primer was only one of many first year books that I could not find in libraries. The 1930 Suzzallo material and the 1930 White material probably used MEANING APPROACHES.

Emmett Betts, the co-author of the Betts Basic Readers of 1948 and later, was a major “expert” of the post-World-War-II period, writing a very large, pro-meaning teacher-training book, Foundations of Reading Instruction, American Book Company, 1946. Many years ago, when I was doing student teaching and was required by my college supervisor to use Betts’ terrible book as a “guide,” I marveled at the fact that his very thick and heavy “guide” gave almost no attention to the subject of phonics.

Whether Emmett Betts was related to George Herbert Betts who had been a student of Dewey about 1904 is unknown. George Herbert Betts had been active in Iowa from about 1915 into the 1920’s and had been a co-author of the 1924 Bobbs-Merrill series with Clara Belle Baker and Edna D. Baker. It appears possible that Emmett Betts and George Herbert Betts were related since both came from Iowa. I requested the 1924 primer by George Herbert Betts at the New York Public Library but, like some others, could not get it.
The Betts Basal Readers of 1948 were one of the 27 programs in the 1967 U.S.O.E. studies, listed in Appendix E. Emmett Betts’ material used A MEANING APPROACH WITH PHONY PHONICS.

The Cooperative Research Program in First-Grade Reading Instruction. Reading Research Quarterly, Summer, 1967, International Reading Association, Newark, Delaware, listed in its appendix the We Learn English Series by Fay L. Bumpass as one of the instructional materials which were used.

1891 (In 1890-95 American Catalogue under Phonetic System)
Sound-English Primer - 25 cents
Knoflach, A.
Stechert

No further information is available on this entry.

1892
Preparing to Read
Spears and Augsburg
New-England Publishing Co., Boston

The New-England Publishing Co., of which Thos. W. Bicknell was the publisher, also published what was apparently a very successful education magazine for many years, The New-England Journal of Education. From 1877 to 1883, the company published The Primary Teacher, A Monthly Magazine, copies of which are at Harvard. After merging with two other publications, The Primary Teacher became The American Teacher in 1883. How long that magazine was published is unknown.

The book by Spears and Augsburg was listed by E. B. Huey in his 1908 book on page 442, and he recommended it on page 319, after the following comments on the Illustrated Primer by Sarah Fuller. Her primer had been written for the Horace Mann School for the Deaf in Boston, but was also meant for hearing children. Huey said Fuller’s primer had:

“...a large number of pictures of familiar objects, with the names just below each. These familiarize with words, and other pictures show the meaning of sentences placed below each. The pictures, being easy outline sketches, will suggest drawings that a mother may make to call forth children’s own sentences about the drawings, these sentences being then written and read. Spears and Augsburg’s ‘Preparing to Read’ is a primer which is especially rich in very easy outline sketches.”

The Spears and Augsburg material undoubtedly used A MEANING APPROACH.

1893-1897 (In Early American Textbooks - 1775-1900)
Excelsior Series (1st-5th, probably unrelated to Sadlier’s Excelsior)
George W. Crane & Co.
Topeka, Kansas
1903 (In 1912 United States Catalog)
Crane Institute Reader
Crane & Co.
Topeka, Kansas
The Crane Excelsior series was presumably unrelated to the Catholic series, Sadlier’s Excelsior readers, since “Excelsior” readers and primer were still in print in the 1912 United States Catalog, for sale by William H. Sadlier. APPROACH IS UNKNOWN.

“Crane Readers,” first through fifth, are not shown above as they were listed in the 1912 United States Catalog as for sale by American Book Company. Yet they possibly had first been published by Crane & Co. That company must still have been in business in 1912 since it is listed in the 1912 United States Catalog as still selling the Crane Institute Reader shown above.

See the later entry for Wooster’s Primer, originally published by Crane & Co. in 1899.

Little information is available on Moses’ Readers. The Williams’ Reader for Beginners of 1893, written by Moses with M. C. S. Noble, is listed on page 99 of Early American textbooks, and is listed in the 1912 United States Catalog as published by American Book for 15 cents. The 1895 First Reader written by Moses alone is listed on page 97 of Early American Textbooks. The 1912 United States Catalog lists Moses’ Primer as in print by B. F. Johnson in 1912 but does not list Moses’ readers. Possibly the 1890’s series written by Moses alone was taken over by B. F. Johnson from the first publisher after 1900 but most of the Moses series did not remain in print, while American Book took over the book written jointly by Noble and Moses. Neither the book written jointly by Noble and Moses, or the material written by Moses alone, was in print in 1928, according to the 1928 United States Catalog. APPROACH IS UNKNOWN.

The obscure Shearer material was listed by Nila Banton Smith on pages 128-129 and 429 of her book, American Reading Instruction. On page 129 she reproduced a page from Shearer’s Speller which demonstrated his phonetic markings and which had this comment at the bottom:

“By the phonetic alphabet a child may be taught the art of reading, not fluently, but well, both in phonetic and in ordinary books, in three months.... a task which is rarely accomplished in three years of toil by the old alphabet....”

That statement was undoubtedly true for most children, since Shearer’s 1894 St. Louis material was only a variation of Leigh’s highly successful 1864 St. Louis material. Therefore, it is extraordinary that Shearer’s comment reproduced in Nila Banton Smith’s “history” has never been commented on by reading “experts,” all of whom presumably should have seen Smith’s famous reading “history.”

Although Nila Banton Smith listed this obscure 1894 material, she gave almost no mention to Leigh’s important phonic print which had appeared thirty years before the Shearer System, in 1864. She only mentioned the use of Leigh print in St. Louis in her 1965 edition apparently because of reference made to it by John Downing of England in connection with his famous and widely used Initial Teaching Alphabet materials. Some distortions in Nila Banton Smith’s “history” appear to have been attempts to bury the anti-phonics campaign in Boston in the 1870’s, presumably at the urging of others (Cattell? Thorndike?).
That successful 1870’s campaign had removed the Leigh phonetic approach from the Boston schools, and therefore effectively from American schools, since Boston set the style for America at that time. (See the humorous chapter on textbook sales in Appendix A, taken from a Bardeen book, which implicitly admits in one of its comments that Boston was a style-setter.) Smith apparently chose to remove any mention of Leigh’s name from her original 1934 edition. She omitted any clear discussion on the use of Leigh print even from her 1965 revision, which revision is the “standard” history of reading for our “educators.”

Smith’s failure to discuss Leigh’s phonetic print is made even more unexplainable because both the Leigh print and the Shearer material are discussed at length in E. B. Huey’s famous 1908 book, The Psychology and Pedagogy of Reading. Huey described the Shearer system on pages 270-271 and pages 357-358. However, although Huey’s book is famous, it is highly doubtful that many “educators” have ever taken the time really to read it instead of merely to scan it. Smith may well have thought that such useful information on Leigh print in Huey’s lengthy book was likely to remain safely buried. Huey showed in his 1908 bibliography on page 442 that J. W. Shearer’s The Combination Speller was published by “F. B.” Johnson, Richmond, Virginia. The 1890-1895 American Catalogue correctly shows B. F. Johnson. The Shearer material was not in print under “readers” in the 1912 United States Catalog, but may have been listed under spellers. It was not in print, even under spellers, in the 1928 United States Catalog. 

A PHONIC APPROACH

Johnson’s Readers, primer and first to fifth, were listed as in print in the 1912 United States Catalog. They were listed in the American Catalogue for 1895-1900 as Johnson’s Readers, 1st - 5th, revised in 1899, published by B. F. Johnson. They were also listed in the American Catalogue for 1900-1905 as Johnson’s Readers, 1-5, published by B. F. Johnson. Entries in Early American Textbooks are on pages 78, 90, 92 and 278 but cover only Johnson’s readers from the second to the fifth, with no entries on the primer or the first. On page 78, Johnson’s Second, Third and Fourth Readers are listed as written by E. C. Branson in 1899, and on page 92 Johnson’s Fourth Reader is shown as written by Louise Manley in 1897. On page 90, Johnson’s Fifth Reader is shown as written by Blanche Wynne Johnson in 1897. Harvard has an 1897 copy of Johnson’s Primer by Mrs. H. H. Richardson, and according to the 1912 United States Catalog she also wrote the 1899 Johnson’s First Reader. The frequent probable revisions indicated by the above entries (1893, 1895, 1897, 1899) suggest these readers were prepared for state adoptions, possibly in North Carolina and Virginia. Such frequent textbook revisions are prompted by “official” adoptions. Today, the appalling practice of state textbook adoptions continues to exist in such states as California and Texas, despite the enormous abuses which can result. Such abuses can concern not solely the distortion and control of our children’s curriculum by wrong-headed “movers and shakers,” but can also concern the wrongful use of taxpayers’ money. Concerning the latter abuse, see the text of this history for a textbook scandal in Texas in 1925.

Concerning the approach in the 1897 Johnson Primer, a copy of which is held by Harvard, the philosophy in the preface is pure Code I, “meaning,” but the abbreviated word lists before the lessons are marked with elaborate phonetic markings, which match a phonetic “key” in the back. An enterprising teacher might therefore teach decoding (with difficulty), though the obvious intent of the markings is to teach correct enunciation. Other than this possible adaptation of the materials to teach phonics, the material is Code I, A MEANING APPROACH.

The Child World Readers listed in the 1900-1905 American Catalogue as having been published between 1900 and 1905 by Kellogg presumably have no connection with the 1917 series published by B. F. Johnson. Nor, presumably, is there any connection between the 1917 series and The Child’s World Readers listed in the 1912 United States Catalog as having been written by C. A. Smith and published by “Clark” in 1910. Nor, presumably, is there any connection with the 1908 Child World Primer listed in the 1912 United States Catalogue under Primers, written by A. E. Bentley and G. R. Johnston, published by “Barnes,” presumably a division of American Book Company.
The 1917 Primer of The Child’s World series, a copy of which is in the Harvard library, was written by Sarah Withers, Principal, Elementary Grades, and Critic Teacher, Winthrop Normal and Industrial College, Rocky Hill, S. C.; Hetty S. Browne, Extension Worker in Rural School Practice, Winthrop Normal and Industrial College, and W. K. Tate, Professor of Rural Education, George Peabody College for Teachers, Nashville, Tennessee. These three “experts” produced a pleasant little collection of children’s stories and poems, which contained NO instruction whatsoever in learning how to read, except for stating on some poems that they were to be memorized, and except for the presence of the alphabet at the very end of the book - obviously as an afterthought. This book by these three “experts” must have turned out veritable legions of functional illiterates in the South.

The back cover of the book carried the words, “State Edition, Contract Price 28 Cents, Exchange Price - None. The price marked hereon is fixed by the State and any deviation therefrom should be reported to the State Superintendent of Public Instruction.” What “state” was meant was not specified. Presumably it was Georgia, Virginia or Texas, where the publishers were located, or South Carolina or Tennessee where the authors were located. The material was Code I, A MEANING APPROACH.
Binders,” in Akron, Ohio, which may be the same company. According to the American Catalogues, by 1897, the date of the McBride copyright, The Werner Company had published a number of books meant for literary “recitations,” which were very popular at that time.

The Werner School Book Company, presumably the same company, published The Werner Primer for Beginners in Reading by Frances Lillian Taylor in 1895, which was a successful sight-word book praised by E. B. Huey (pages 323 and following, page 344, page 443.) Huey said in 1908 Taylor’s Primer and her First Reader were published by American Book Company, giving a 1900 date for her First Reader. A copy of her Primer is in the Harvard library. According to Nila Banton Smith (page 124) the Werner Primer was part of the Utah curriculum in 1897. The Werner School Book Company also published School Readers by Taylor consisting of a First Reader and a Second Reader, according to the American Catalogue published in 1905 for the years 1900 to 1905. The 1895-1900 American Catalogue showed that Taylor had already published a First Reader in 1897 as part of the Home and School Series for Eaton and Company, and it gave a date for the Werner Primer of 1896. Early American Textbooks, 1775-1900, listed two copies of Taylor’s First Reader published in Chicago by Eaton & Co. in 1897 and 1898, and her “Second Reader” published by Eaton in 1898. Whether the Eaton texts by Taylor are the same as the Werner First and Second Readers by Taylor, and the same as the “School readers. 2 bks. lst... 2nd” by Taylor listed in the 1912 United States Catalog as published by American Book is unknown.

I have lost the source, but believe C. W. Bardeen in one of his early 1890’s issues of The School Bulletin of Syracuse, New York, referred to Taylor in a very uncomplimentary (and uncharacteristic) fashion, although it would not have been on the phonics issue, as surprisingly Bardeen apparently had no understanding of it. However, I may be confusing F. Lillian Taylor’s name with one of the other highly publicized women “experts” of the 90’s who also wrote a primer. F. Lillian Taylor’s material used A MEANING APPROACH.

The 1896 text above by E. Louise Smythe is listed in Early American Textbooks. E. B. Huey discussed reading material by Smythe, and his comments are quoted elsewhere in this history. Smythe used A MEANING APPROACH.

______
1894-1896 (In Early American Textbooks, page 91)
The First (Second, Third, Fourth, Fifth, Sixth, Seventh) Reader
(Probably originated in England)
Longmans, Green & Co., London, New York and Bombay
1898 (In 1928 U. S. Catalog and Early American Textbooks, page 91)
Longmans’ “Ship” Literary Readers, Book I, II, III
Longmans, Green & Company, New York
(Design on front cover shows Longman & Co. founded 1726)
1908 (In 1928 United States Catalog. See N. B. Smith p. 142.)
The Horace Mann Readers (Primer, First-Fourth in 1912)
Hervey, Walter L. and Melvin Hix
Longmans, Green & Company, New York - Chicago
1912 and 1928 U. S. Catalogs (First published in England about 1850, Republished in America by Harper in 1860)
Reading Without Tears, or a Pleasant Mode of Learning to Read
“By the Author of “Peep of Day,” &c., &c. (Mrs. Favel Lee Bevan Mortimer)
Longmans, Green & Company, New York - Chicago

The very old Longmans company was referred to in the section on Great Britain. It had published the widely used Mavor speller in Great Britain in the early nineteenth century, and was the agent for the government-approved list of textbooks in 1848, which were eligible for textbook grants. According to

“Longman enjoyed an intermittent success with children’ books from the publication in 1839 of Catherine Sinclair’s Holiday House. Farrar’s Eric; or, Little by Little was also popular, and in the 1870’s the acquisition of Andrew Lang maintained the status of the firm as a major publisher of books for children.”

Andrew Lang’s fairy-tale books were enormously popular in America also, until the Gates and Gray deaf-mute-method sight-word readers arrived in 1930. Most children who received the misinstruction from the Gates and Gray 1930 and later texts were unable to “decode” Lang’s tales, since Lang had most naturally used the uncontrolled vocabulary of normal speech.

The probability is that the 1894-1896 Longman entries shown above were for a series originating in England.

Longmans’ “Ship” readers, obviously meant for the American market, date only from 1898. Harvard has a copy of Longmans’ “Ship” Literary Readers, Book I, and its title page shows only New York - Longmans, Green, and Co., 1898, Copyright, 1898, by Longmans, Green, and Co. However, it obviously was not meant as a first book and must have been preceded by a primer. APPROACH IS UNKNOWN.

The Horace Mann Readers were very widely used. One of its authors, Walter L. Hervey, had once been a president of Columbia Teachers College in New York. Yet, when I called Columbia Teachers College library on February 13, 1981, to see if they had the beginning reader which I wished to see, I was told, “We only have the second volume.” That was the case, according to the Teachers College Library card catalog on that day. That continued to be the pattern I have often turned up at libraries. The beginning volume in reading series is often missing, even though the upper level books are available. Beginning volumes in this series in various editions were available in the Harvard library, although portions of the back cover of one copy are missing, as discussed elsewhere. According to Nila Banton Smith in American Reading Instruction, page 142, the Horace Mann Readers used Farnham’s sentence method. On tests run by Superintendent of Schools Harris in Dubuque, Iowa, in 1916, reported in the Elementary School Journal, (Volume 17, page 18), the Horace Mann and Aldine readers were significantly outsored by the phonic Beacon method on oral reading, rate and comprehension. The Elementary School Journal of the University of Chicago where C. H. Judd and W. S. Gray were located stated, “The conclusions cannot be accepted as final, however.” That study supporting phonics has fallen into education history’s black hole. Yet Currier and Duguid’s New Hampshire study, reported in the Elementary School Journal in 1916 without any numerical data whatever, and which purported to show that the sight word approach was better, has been referred to ever since in the literature. The Horace Mann Readers, also discussed elsewhere in this history, used A MEANING APPROACH WITH CODE 3 PHONY PHONICS.

Reading Without Tears, or a Pleasant Mode of Learning to Read, By the Author of “Peep of Day,” &c., &c. (Mrs. Favel Lee Bevan Mortimer), was published by Harper & Brothers, Publishers, Franklin Square, New York, in 1860. At that time, copyright laws were not in place between America and Great Britain. Whether Longman’s were the original publishers, presumably about 1850, of Reading Without Tears is not known, but appears probable since they were publishing it in 1912. The material used a Code 3 approach at the beginning, with rhyming-word lists, which were then used in context. A Code 5 approach was used later. It introduced the syllabary and silent letters on pages 32-33 of the 136-page book, which was too late. Mrs. Mortimer previously wrote Reading Disentangled, widely used in England, discussed in the text of this history and in Appendix B, which used two-step phony phonics. Reading Without Tears was in print by Longwood according to the 1912 and 1928 United States Catalog,
appearing in 1928 after the entry, Reading - Psychology. An 1865 edition by Harper is listed in Early American Textbooks on page 102. See Little Pet Primer under 1863 which used a variation of this title in its own title. Reading Without Tears is discussed in Appendix B and in this history in the section on Great Britain. It used A MEANING APPROACH WITH CODE 3 PHONY PHONICS, WITH A CODE 5 APPROACH AT THE END.

1895 (In Early American Textbooks)
English Visible Speech in Twelve Lessons
Bell, Alexander Melville
The Volta Bureau, Washington, D. C.

Alexander Melville Bell’s pure phonic material has been discussed in this history. This book is listed on page 77 of Early American Textbooks as 80 pages long. It was not listed under primers or readers in the 1912 United States Catalog and so may have been out of print by 1912. A PHONIC APPROACH

1896 (Harvard copy; In 1912 United States Cat. by Silver, Burdett)
Phonetic Reader, The
Deane, Charles W., Supt. of Schools, Bridgeport, Conn.
The Morse Co., New York, Boston, Chicago

1897 (Advertised in The Quincy Word List but not in 1912 U.S. Cat.)
New Century Readers (Same title as Rand’s by Perdue, etc. and New Century Catholic Readers by Benziger)
First book: For Childhood Days (About 100 words)
Second: Fairy Tale & Fable (300 new words. In Early Am. Text. p. 73)
“Third, fourth and fifth in Preparation” per advertisement above Third Book (Shown in print by date of 1900-1905 American Catalogue)
Thompson, John Gilbert and Thomas E. Thompson (Also see Ginn and Silver, Burdett)
The Morse Co., New York, Boston, Chicago

1901 (Harvard copy)
The Quincy Word List (for spelling)
Parlin, Frank E.
The Morse Co., New York, Boston, Chicago

1902 (In 1900-1905 Am. Cat.; Copy of first book in U. S. Dept. of Ed. library in 1981 but not listed in its Early American Textbooks)
The Morse Readers (1st-4th) (Not in 1912 U. S. Catalog)
Powers, Ella Marie and Thomas Minard Balliet
(Wrote 1906 Silver-Burd. readers in 1912 and 1928 U. S. Catalogs. Possibly identical to Morse Readers if bought out by Silver-Burdett) The Morse Co., New York, Boston, Chicago

The Phonetic Reader was in print in 1912 by Silver, but not in 1928. It was praised by Orville T. Bright, Supt. of Schools, Cook County, Chicago, in an advertisement in the back of the Quincy Word List by Frank E. Parlin:

“You have done what nobody else has - placed the subject of phonics in its proper relation to the literature that should enter into a first reader.... The best part of it all is... that (phonics) is subordinate....”

Bright’s approval is not surprising since he, himself, had edited Harper’s 1888 primer for the Baldwin series which used a “meaning” approach. In his 1894 biennial report as Cook County Superintendent, extracts of which were quoted in an 1894 report on Colonel F. W. Parker’s Cook County Normal School
and Practice School, Bright exclaimed about the “achievements” there, and “meaning” was the emphasis in beginning reading in the Practice School.

Another of the advertised comments made it clear that Deane did not use much of a “sound” approach in his so-called Phonetic Reader:

“The Phonetic Reader is the best thing of its kind yet published... used the best there is in all other systems, and in the word and sentence method.”

The table of contents did show a garbled phonic sequence, and the first three pages did concern blending a few short “a” words. From the few pages available to me at the moment from further on in Deane’s book, and from his table of contents, it appears that Deane probably used A MEANING METHOD WITH VERY INADEQUATE BUT TRUE PHONICS.

Thomas Minard Balliet, who with Ella Marie Powers wrote the 1902 Morse Readers, was Superintendent of Schools in Springfield, Massachusetts. The 1902 Morse Readers used a sight-word/sentence approach. The Preface to the First Book said only a few new words were used in each lesson. It said further:

“The classical literature of fairy tale and fable has been introduced in simple form in this book... but not to the exclusion of choice material in prose and poetry.... It is believed that this book may be used with equal success with any method of teaching reading generally approved by the best teachers in primary schools.”

The “best” teachers in 1902 obviously did not use real phonics, because the material used A MEANING APPROACH.

1896-1899 (In 1895-1900 American Catalogue)
Western Series of Readers, Nos. 1-6
Wagner, H., Ed.
Whitaker & R.

Not in print in 1912 United States Catalog. APPROACH IS UNKNOWN.

1897-1898 (In 1895-1900 American Catalogue and Early Am. Textbooks)
Home and School Series (First Reader, Second Reader)
Taylor, Frances Lillian (First, 1897; Second, 1898 in Early Am. T.)
(Taylor’s 2-bk. “School Readers,” listed in 1912 U. S. Catalog published by American Book are presumably the same as above.)
Eaton & Co., Chicago, Ill.

1897-1898 (In 1895-1900 Amer. Cat. and 1912 United States Catalog)
New Era Series (Second Reader, 160 p., listed in Early American Text.)
Jones, Lottie E. and Samuel Wylie Black
Eaton & Co., Chicago

1910 (In 1912 United States Catalog)
Eaton Readers (1st - 5th)
Moore, I.
Eaton & Co., Chicago

1913 (From a copy in the U. S. Dept. of Education Library)
Primer
Smedley, Eva A., Martha C. Olsen and Homer Hitchcock Kingsley
Eaton & Co., Chicago

*******Eaton & Co. of Chicago dropped from the records I have after the last 1913 entry, but Hall & McCreary of Chicago emerged. Hall & McCreary had an earlier 1911 entry under Readers by C. G. Adams, Easy Lessons About Common Things, but were nevertheless possibly Eaton’s successor, publishing in 1922 and later more material by Smedley and Hall, whose 1913 book had been published by Eaton.

1922 (In 1928 United States Catalog under Primers)
Complete Primer
Smedley, Eva A. and Martha C. Olsen
Hall and McCreary Company, Chicago
1925-1929 (See N. B. Smith, p. 213, 218, 433; 1925 first reader in 1928 U.S. Cat.)
The Smedley and Olsen Series
Smedley, Eva A. and Martha C. Olsen
Hall and McCreary Company, Chicago
1928 or Before (In 1928 United States Catalog)
Economy Primer (in two books)
Smedley, Eva A. and Martha C. Olsen
Hall and McCreary Company, Chicago
1928 or Before (In 1928 United States Catalog)
New Primer
Smedley, Eva A. and Martha C. Olsen
Hall and McCreary Company, Chicago
1928 (Writer’s own copy)
The Smedley & Olsen New Second Reader
The Smedley & Olsen Series
Hall & McCreary Company, Chicago

The 1897 New Era Series by Jones and Black published by Eaton & Co. was listed in the American Catalogue for 1895-1900 with first through fourth readers, 1897-1898. First through sixth readers were in print by Eaton & Co. in 1912 according to the United States Catalog. Early American Textbooks lists a copy of the Second Reader. APPROACH IS UNKNOWN.

No information is available on the Eaton Readers of 1910 by I. Moore.
APPROACH IS UNKNOWN.

Frances Lillian Taylor’s Werner Primer, listed under the Werner company, was presumably like material she wrote for Eaton. The Werner Primer was reviewed by E. B. Huey in his 1908 book. That text used silent reading, thought-getting, and no phonics. Taylor’s Eaton material also undoubtedly used A MEANING APPROACH.

A copy of Smedley and Olsen’s 1913 Primer published by Eaton & Company is in the U. S. Department of Education library. It showed that Smedley was Principal of Noyes Street School, Evanston, and Olsen was a primary teacher there. Kingsley was Superintendent of Schools in Evanston. The writer’s copy of the New Second Reader published in 1928 showed that by then Smedley was Teacher of Literature and Dramatics, Evanston, Illinois, and Olsen was Primary Supervisor, Evanston, Illinois. Both had obviously prospered by pushing the “meaning” approach for beginning readers. The Preface to the 1913 Primer read in part:
“...Stories and rhymes make a strong appeal.... That which is intended for silent reading should be so used, the child showing his mastery of the thought by what he does. This includes all of the ‘Seat Work,’ and is suggestive of much more silent reading that should be given from the blackboard. The phonic work leads to independence. The vocabulary is small, and gradually introduced.... not one sentence appears merely for the purpose of drill without a worthy, connected thought content.”

Note the 1913 emphasis on silent reading for beginners.

Both the 1913 and the 1925-1929 Smedley and Olsen material (which presumably included the “New Primer” and “The New Second Reader” listed above) obviously used A MEANING METHOD PROBABLY WITH PHONY PHONICS.

---

1897 (In Early American Textbooks, page 78)
First Reader (96 p.)
Boyden, Helen W., Revised by Florence Holbrook
Scott, Foresman & Co., Chicago

1897 (In Early American Textbooks, p. 82)
Second Reader. Third Reader.
Edwards, Richard, Revised by Florence Holbrook
Scott, Foresman & Co., Chicago

1909-1911 (By Elson and Keck per 1912 United States Catalog)
(A surviving book 4 shows a 1909 date, but U. S. Catalog shows 1910-1911. The surviving book also shows Elson and Keck’s names)
Grammar School Readers, Books 1-4
Elson, William H.; Christine Keck
Scott, Foresman & Co., Chicago and New York

1915 (Date from Manuals at Harvard - N. B. Smith 142, 224, 225 and elsewhere)
Elson Runkel Readers

Success in Reading and Writing
(Kindergarten, Grades 1, 2, 3, Teacher Editions Only, No Pupil Books)
Adams, Anne H., Mary S. Johnson, Judith M. Connors, Helen G. Cappleman
Goodyear Publishing (Scott Foresman)
Glenville, Illinois

The first two entries above were also listed previously under Webb’s and Edward’s readers. In 1894, Scott, Foresman & Co. bought out Webb’s and Edward’s last publisher, Sherwood of Chicago. The young firm of Scott, Foresman was already successfully in business when it acquired the George Sherwood Publishing Company in 1894, according to Volume 2 of A History of Book Publishing in the United States, by John Tebbel, published by R. R. Bowker, New York, in 1975.

Nila Banton Smith’s references on the history of the Elson programs and Gray’s additions to them are particularly murky. Surviving records suggest that Gray made a revision of the Elson-Runkel 1915 materials some time before 1928 (1927?) and then finally made the major “deaf-mute-method” version of 1930. The 1930 materials apparently later adopted the “Curriculum Foundation” title. It would be necessary to locate surviving copies of all of these editions to straighten out the relationships. Certainly Nila Banton Smith’s account is not only confusing but wrong. The Library of Congress showed in its card catalog that it had the Pre-Primers and Primer of the Elson Basic Readers of 1930, but the copies were missing when I checked in 1987. The library did have a 1936 primer.

On page 9 of the Introduction to the 1909 Book Four, reference is made to “Professor Clark, in his book on ‘How to Teach Reading.’” S. H. Clark’s book, How to Teach Reading in the Public Schools, had been published by Scott, Foresman in 1908, and so may well have been the model for the Elson readers of 1909 and later. The Introduction on the 1915 Manual for the Elson-Runkel Primer refers to Huey, Dewey, Hall, et al. From their inception, therefore, the Elson materials used a meaning approach, and the manual shows it was A MEANING APPROACH WITH CODE 3 PHONY PHONICS.
According to the 1928 United States Catalog, the 1923 Cathedral series meant for parochial schools consisted of a primer and books one to four, each with a teacher’s edition. It was probably a Catholic school version of the 1915 Elson-Runkel material. The Cumulative Book Index, 1928-1932, showed that a fifth and sixth reader and teacher’s edition were published in 1928. Also shown in The Cumulative Book Index was “O’Brien, J. A. and others. Cathedral Basic Readers. See main entry.” Although no date was given, this was apparently Scott, Foresman’s Catholic schools edition of W. S. Gray’s 1930 “Dick and Jane” readers, listed in The Cumulative Book Index under Elson Basic Readers. On page 867, the Cumulative Book Index, 1928-1932 showed J. A. O’Brien as joint author with W. S. Gray of Training of College Teachers, University of Chicago Press, 1930. If this were the same J. A. O’Brien, which appears highly probable, then he was obviously a close associate of William Scott Gray. The Catholic schools were not to be “deprived” of the new deaf-mute-reading method, which was very thoughtful indeed of W. S. Gray and his associates. Before the 1920’s, Catholic school readers had been independently written series. After 1920, they were largely adapted clones of “expert” materials. All Gray’s materials used A MEANING APPROACH WITH PHONY PHONICS.

The Scott, Foresman material from the 1960’s and 1971 has been very effectively reviewed in Samuel L. Blumenfeld’s The New Illiterates (1973). It used A MEANING APPROACH WITH PHONY PHONICS.

The 1989 copyrighted program, Scott Foresman Reading, was reviewed in The Beginning Reading Instruction Study, Office of Research, U. S. Department of Education. In the six samples of first-grade text analyzed for the study, “Sound/symbol relationships... Implicit” and “Decoding strategy... Implicit” were present in all six. However, none of the six had “Sound/symbol relationships... Explicit” or “Decoding Strategy... Explicit” or “Decoding strategy... Blending taught explicitly.” Therefore, apparently the material rates a low code, using whole-word, two-step, substitution phonics. That is a “meaning” and not a synthetic-phonics “sound” emphasis.

The Beginning Reading Instruction Study of 1993 reviewed Success in Reading and Writing, published by Goodyear Publishing (Scott Foresman). During the “open classroom” promotion period of the 1970’s, my memory is that at that time a company called Goodyear Publishing produced materials for teachers. It is very possible that earlier company was later bought out by Scott Foresman. Their 1992 program, Success in Reading and Writing, which consisted only of materials for teachers, was reviewed in The Beginning Reading Instruction Study in the section, “Other Instructional Programs.” The programs covered in that section did not receive the in-depth analysis given to the programs in the basal reader section. According to the 1993 study, the Goodyear material for teachers’ use does not deal at all with explicit phonics or sounding-and-blending, but does cover implicit sound/symbol relationships and implicit decoding strategy. That is, of course, the standard approach of most basal reader programs.

1897 (In 1912 United States Catalog)
Literature Readers - First Reader: Aesop and Mother Goose
Nash, Louis P.
Thompson, Brown & Co., Boston, Chicago
“This primer is planned to lead the pupil toward a knowledge of literature, along lines indicated by Mr. Scudder, Mr. Hall, and others.... There are, on the average, about two new words for each page throughout the book. The words and sentences should be developed on the blackboard.... In preparing for any story, the first step is for the teacher to TELL THE STORY.... If the children have the story in mind, the preparatory sentences, otherwise disconnected, will have a bond of unity... The teacher should have... little games of word-making and sentence building. Words may be grouped by vowel sounds, by initial or final letters, and various devices may be used to study words.... ‘All our best learning is unconscious learning’ is a maxim that comes from the wisdom of ages past, and has been recently enunciated with new emphasis by Colonel F. W. Parker and many a teacher besides....”

The “maxim” not only did not come from “the wisdom of ages past” but was pure nonsense. Dr. Hilde Mosse’s text pointed out, as discussed elsewhere, that we can learn (condition) nothing unless we focus conscious attention on the material to be learned during the act of learning (conditioning). From the photocopies available, the Nash material appears to have used A MEANING APPROACH WITH PHONY PHONICS.

1897 (In Early Amer. Textbooks; Harvard copy of First School Year)
The McBride Series.
Akron, Chicago, and New York.

Early American Textbooks, 1775-1900 lists copies of this series: The McBride First School Year, 1897; The McBride First Reader, 1898; The McBride Second Reader published in Chicago by John B. Oink in 1898; and copies of the Second, Third, Fourth and Fifth Readers published by McBride dated 1898.

The Harvard library copy of The McBride First School Year for Catholic Schools, with a copyright of 1897, shows at the bottom of the page carrying the copyright a seal design with the words, “The Werner Company, Printers and Binders, Akron, Ohio.” By 1897, the date of the copyright, The Werner Company of Chicago and New York, possibly the same company, had published a number of books meant for literary “recitations,” which were very popular at that time. The Werner School Book Company of Chicago and New York, presumably the same company as The Werner Company of Chicago and New York, had also published The Werner Primer for Beginners in Reading by Frances Lillian Taylor in 1895, which was a successful sight-word book praised by E. B. Huey, as well School Readers by Taylor consisting of a First Reader and a Second Reader.

The McBride books may have been The Werner Company’s entry into the Catholic school book publishing field. No other information has turned up on the McBride series, and it was not in print in 1912, so apparently it was not too successful. The preface to The McBride First School Year for Catholic Schools, which was the primer, read:

“The average child on entering school has a vocabulary of several hundred words. These words he is able to use as his ideas call for expression. Reading for him, therefore, should at the beginning have for its object little more than giving him the ability to translate the symbol, viz., the printed or written word, into the word which he knows by sound, and which conveys a tolerably clear idea to him. With few exceptions, the reasons for which will be obvious, no attempt is made in this Primer to do much more than to familiarize the child with the symbol for that of which he already knows the sound. The words used are such as may clearly be looked for in the vocabulary of the average child of five or six. As much blackboard work is preliminary to the reading even of the primer, the attempt has been made to render the transition from script to
print as easy as possible. Hence, every new word is introduced in script form. On the recurrence of the word, the print form alone is used....

“...The method employed is the word method; or, more properly, a combination of the word and sentence methods. Phonics are not introduced, as the author believes that their study should be taken up only after a fair stock of words has been cognized as wholes, and the child has enjoyed some practice in translating symbol into sound. He will thus have had a taste of the pleasure of reading.”

The primer itself, as might have been anticipated from its preface, was an instructional disaster, but it was also a perfect specimen of the “correct” approach for the teaching of beginning reading in 1897. Happily, the series appears to have been a marketing as well as instructional disaster and it faded into oblivion. Unhappily, however, The Werner Primer by F. Lillian Taylor was still in print by American Book Company when the 1928 United States Catalog was published, although the rest of her series was out of print. Both Taylor’s Werner Primer and her first and second “School readers” had been in print when the 1912 United States Catalog was published. By 1912, Taylor’s books were being published by American Book Company, so possibly The Werner School Book Company had gone out of business by that date. The McBride materials, possibly associated with The Werner Company materials, used A MEANING APPROACH.

1898 (In 1912 United States Catalog)
Color Primer
Bradley, M.
M. Bradley (Presumably Milton Bradley & Co.)

No other information is available other than that given in the 1912 United States Catalog: pupils 5 cents, teachers 10 cents. The material was obviously in print for at least fourteen years, so it must have been popular. The APPROACH IS UNKNOWN.

This was obviously a very short little “primer” or it would not have sold for only five cents in 1912. The probability is that this was published by Milton Bradley & Co., and related only to the use of colors and Milton Bradley crayons. However, it may also have taught the names of the colors as sight-words, something which is unfortunately common even today in kindergartens and first grades.

The Primary Teacher, Boston, Massachusetts, carried an advertisement for a catalog of the materials of Milton Bradley & Co., Springfield, Massachusetts, as early as 1879 (and possibly earlier). In 1883, the successor to The Primary Teacher, The American Teacher, also published by the New-England Publishing Co. of Boston (Thomas W. Bicknell, Publisher) also carried an advertisement offering the catalog of Milton Bradley & Co. Milton Bradley & Co. described themselves as “manufacturers of Kindergarten material, primary school aids, and elementary apparatus.” The Milton Bradley company is still very much in business today and is an important supplier. It seems very likely that this company might have published the 1898 “Color Primer” over a period of at least fourteen years until at least 1912 because the title has an obvious tie to the use of crayons by primary grade school children.

1898
Reformed Reading Primer, Book 1
Reading at Sight Series (15 cents)
Pitman

I have lost my source for this card, so have no further information. It was not in the 1912 United States Catalog, but it may have been entered under some section such as spelling reform in the 1895-1900
American Catalogue. It may have had some connection with Pitman phonetic print of the 1840’s and later. Possibly it was a later version of Pitman phonetic print, and it may have been English in origin. 

THE APPROACH IS UNKNOWN BUT IT MAY HAVE USED PITMAN PHONETIC PRINT.

1898 (In 1912 U. S. Catalog)
Lights to Literature Series (The Holton Primer and Books 1-8)
Holton, M. Adelaide, Supervisor of Primary Schools, Minneapolis
Rand, McNally & Company, Chicago and New York

1898 (In 1900-1905 American Catalogue; Harvard copy)
Rand-McNally Primer and First Reader, and Second Reader
Sprague, Sarah E. (See D. D. Merrill and Educational entries)
Rand, McNally and Co., Chicago and New York

1899 (In 1912 U. S. Catalog)
The New Century Readers (Same title as Morse and Benziger series)
Rand-McNally Educational Series.
One series of books 1-5, and a second series, by grades 1-8
LaVictoire, Florence E.; H. S. Tibbits, Hannah Avis Perdue
Rand, McNally & Company, Chicago and New York

1899 (Early American Textbooks)
The New Century Third Reader, 138 pages (See above entry)
Tibbits, H. S.
Rand, McNally & Co., Chicago and New York

1902 (In 1928 U. S. Catalog; I saw a copy held by a woman’s family for many years.)
The Sunbonnet Babies Primer
Grover, Eulalie Osgood (See her Atkinson-Mentzer listings)
Rand, McNally & Company, Chicago, New York, London

1903 (In 1912 U. S. Catalog)
Tree-dwellers (Supplementary Reader)
Dopp, Katherine Elizabeth
Rand, McNally & Company, Chicago, New York, London

1904 (In 1912 U. S. Catalog)
Early Cave-men (Supplementary Reader)
Dopp, Katherine Elizabeth
Rand, McNally & Company, Chicago, New York, London

1904 (Not in 1928 U. S. Cat, but in Cum. Bk. 1928-1932)
The Outdoor Primer
Grover, Eulalie Osgood

1905 (In 1928 U. S. Catalog)
Overall Boys
Grover, Eulalie Osgood
Rand, McNally Company - Chicago, New York, London

1906 (In 1912 U. S. Catalog)
Later Cave-men (Supplementary Reader)
Dopp, Katherine Elizabeth
Rand, McNally & Company, Chicago, New York, London

1916 (In Cumulative Book Index, 1928-1932 and Reviewed by
W. S. Gray in Elementary School Journal, 1917-1918, page 382)
Bobby and Betty at Home, A Primer
Dopp, Katherine Elizabeth
Rand, McNally Company - Chicago, New York, London
Sarah E. Sprague is listed in the 1900-1905 American Catalogue as having written “Rand McNally primer and first reader,” and her Rand-McNally Second Reader is listed on page 107 of Early American Textbooks, just before her listings with Louis H. Marvel for readers for D. D. Merrill in St. Paul, Minnesota, in 1886 and 1887. Louis H. Marvel wrote, with Colonel Parker, the appallingly bad controlled-vocabulary supplementary readers discussed in this history.

Sarah E. Sprague is listed in the 1912 United States Catalog as the author of a series by Educational, shown below, the Sprague Classic Readers.

Harvard library has a copy of the Rand-McNally Primer and First Reader by Sarah E. Sprague, Ph. D., copyrighted by Rand, McNally & Co. in 1898. Although it begins with a “meaning” approach, the author said on page 3:

“It is assumed that each lesson in the book will be preceded by a blackboard exercise for the development of new sounds, words and phrases.... In addition, the teacher should in each instance, give the necessary drill upon the sounds of letters, and also lead the pupil to combine the phrases into sentences.... As a further aid to fluency and natural expression, have the child read each sentence and paragraph silently before attempting to read it orally. Do not read the stories of his book for him. That destroys all the novelty and he has nothing to anticipate. Remove the difficulties by preparatory work and let him have the pleasure that a new story always gives....”
Therefore, it would appear that by 1898 Sprague possibly endorsed the growing trend to real supplementary phonics to be used in tandem with “meaningful” texts. From the few photocopies available of the Harvard copy of the 1898 material, Sprague’s Rand-McNally Primer and First Reader appears to be A MEANING APPROACH WHICH RECOMMENDS SUPPLEMENTARY BUT POSSIBLY REAL PHONICS.

The New Century readers and the Lights to Literature series were still in print when the 1912 United States Catalog was published. They were out of print in 1928. Although the Lights to Literature series almost certainly used a “literature” emphasis, the basic APPROACH OF THESE TWO SERIES IS UNKNOWN.

Eulalie Osgood Grover copyrighted The Sunbonnet Babies Primer in 1902. It was illustrated by Bertha L. Corbett, “The Mother of the Sunbonnet Babies” (pastel-colored illustrations). See notes in this history concerning its content. It was in print in 1912 and 1928, according to the United States Catalogs, and was listed as a reprint by Rand along with Grover’s Outdoor Primer under Primers in the Cumulative Book Index, 1928-1932. According to her preface, Eulalie Osgood Grover wrote her Sunbonnet Babies Primer in Chicago in 1901, and it was published in 1902 by Rand. It had a rigidly controlled vocabulary, and very pleasant illustrations, and was apparently very widely used, at least in the East. I have turned up references to its use before 1910 in a private school in Lancaster, Pennsylvania, and in the public schools in Passaic, New Jersey. Grover’s later books such as the two series published by 1904 by another publisher, Atkinson, Mentzer and Grover (a relative?), appear to have been promoted as the result of her having established a good reputation with her famous 1902 Sunbonnet book. The Sunbonnet Babies Primer used A MEANING APPROACH.

See notes in the body of this history concerning the sight-word, controlled-vocabulary approach in The Outdoor Primer. The Outdoor Primer was in print in 1912 but not in 1928 according to the United States Catalogs so it was out of print before being revived between 1928 and 1932. Although the Overall Boys was in print in 1912 and 1928, it was not reprinted by 1932. Under Readers, the 1928-1932 Cumulative Book Index listed reprints by Rand of other of Grover’s books which had been out of print when the 1928 United States Catalog was published: Overall Boys in Switzerland (1916), Sunbonnet Babies in Holland (1915) and Sunbonnet Babies in Italy (1922). Both the Sunbonnet and Outdoor primers, and presumably all the others, used a strictly controlled sight-word vocabulary. That fact is the obvious reason for their being reprinted by 1932, even though the books had been written up to thirty years earlier. Yet the old-fashioned clothes worn by the Sunbonnet babies, who were really toddlers, drawn by Corbett in 1902 in her charming illustrations bore no resemblance to clothes worn by toddlers in the Depression era of 1932. Presumably the illustrations were redrawn for the 1932 editions, which would have destroyed much of the appeal of the original book. Grover’s primers used A MEANING APPROACH.

See the Atkinson-Mentzer entries concerning some of Grover’s books.

Katherine Elizabeth Dopp who wrote the texts listed above very probably had a tie to John Dewey before he left the University of Chicago in 1904. In a July 17, 1902, letter to Cattell before Dewey left Chicago, quoted earlier in this history, Dewey referred to possible work being done by a “Miss Dopp” of whom he obviously thought well and with whom he had apparently been planning future work.

In his July 17, 1902, letter, Dewey asked Cattell about Dewey’s chances for getting a grant from the Carnegie Institute Funds for work on anthropology for someone he would recommend, and that work on anthropology was meant to be applied to the education of children. Dewey enclosed a letter from a Miss Dopp, who had just received her doctorate at the University of Chicago, and who was the one he had in
mind to do the work. Her letter outlined its nature. Dewey said he was also interested in applying for a
grant himself to work with several people on a child psychology topic.

“Miss Dopp” with her brand-new doctorate from the University of Chicago was almost certainly
trying to find a paying job, and that was the obvious purpose of her 1902 letter which Dewey was
enclosing, and which had the apparent nature of a grant application. Her letter very probably grew out of
her earlier conversations with Dewey. In it, she obviously had outlined the nature of her proposed work in
anthropology for use in children’s education.

A book was published the following year, in 1903, and both its title and its author’s name are
intriguing. Both the title and the author’s name suggest it included the material for children on
anthropology that Dewey in 1902 had wanted Carnegie Institute funds to finance. From the title of that
1903 book, and the titles of two others in 1904 and 1906, it is apparent that their author, Katherine E.
Dopp, was riding the same thought-waves as Dewey. She almost certainly was Dewey’s “Miss Dopp”
from the University of Chicago, which is supported by the additional fact that a Chicago company, Rand,
was the publisher.

Note the indoctrination aspect of the titles of these books for little children: 1903, Tree-dwellers;
1904, Early Cave-men; 1906, Later Cave-men. The “main idea” for the little children reading them
obviously was, “Your great-grandfather was an ape.” Dewey certainly was interested in children’s
education, but the books he apparently sponsored to be put into the hands of children posed quite a
contrast to the ancient horn book with its Lord’s Prayer and to the Book of Psalms or Psalter! Dopp’s
grand finale, published between 1928 and 1932, also had a remarkable title: Bobby and Betty with the
Workers. Kroupskaia, Lenin’s widow, who was so concerned with education and who also idolized John
Dewey, would have loved that title. Kroupskaia wanted little children to learn about “workers,” too.
Dopp’s 1916 primer, however, apparently had nothing to do with either apes or “workers.” Because it
combined “content” with “drill,” W. S. Gray found fault with it in his book review in the 1917-1918
Elementary School Journal (page 383). Gray said:

“Ability to organize words at sight is developed through (word missing), memorization, word
and sentence games, and dramatization.... interesting content has been sacrificed to provide
vocabulary opportunities. In endeavoring to combine the [different] characteristics of a reader and
a drill book in one volume essential features of each have been necessarily omitted.”

Therefore, Gray was not finding fault with Dopp’s “drill,” which was obviously Code 3 phony
phonics from sight words and context-guessing. Gray merely wanted it handled separately from the
“content” book in a “drill” book. To do so was apparently common in 1917, to judge from Gray’s
remarks. Dopp’s material appears to have been A MEANING APPROACH WITH PHONY PHONICS.

Washburne who co-authored the 1926 works was a major “expert” in the early 1920’s. Despite the
use of the word, “sound,” on one of the 1926 books, it is reasonably certain that any 1916 primer
Washburne co-authored would be A MEANING APPROACH WITH PHONY PHONICS.

The Rand, McNally & Company “Riverside Publishing Company” series in 1981 was listed as one of
“The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row,
New York, 1981. It is not known why Rand used the name, “Riverside,” that had been used for so many
years by Houghton, Mifflin Company. Possibly Rand bought out some such division from Houghton,
Mifflin.

1899 (From E. B. Huey, p. 442)
Songs of the Treetop and Meadow
Classic Stories for the Little Ones
McMurry, Lida B.
Bloomington, Illinois

Listed in E. B. Huey’s bibliography on page 442, with no further information given.

1899 (In 1928 United States Catalog)
Wooster Readers (Primer, 1st-5th)
Wooster, Lizzie E.
Wooster & Co., Chicago, Ill.
1909 (In 1928 United States Catalog)
Industrial Primer and Readers (six books)
Wooster, Lizzie E.
Wooster & Co., Chicago, Illinois

Harvard has a copy of the 1899 Wooster Primer published at that time by Crane & Company, Publishers, Topeka, Kansas, 1899. (See the 1893 entry on other materials from Crane.) The Wooster Primer can be described as a Code 3 sight-word approach with a peculiar kind of phony phonics, not the customary building of new words from parts of memorized sight words. Instead, the children were taught sight words, unrelated in any phonetic manner, and copied the teacher in “marking” them with phonetic signs. Yet no indication is given that the children are taught how to read new words by themselves, the “phonics” apparently meant only to result in clear pronunciation. The text has an emphasis on kindergarten methods and on nature study. The 1912 United States Catalog reported the Industrial Primer and Readers as published in 1909, but the 1928 United States Catalog listed “Wooster Readers; primer, first-fifth readers.” The 1928 material still in print may therefore have been the 1899 material. The 1909 Wooster material most probably also was A MEANING APPROACH WITH PHONY PHONICS.

#Publishers First Appearing in This List Between 1900 and 1910

1900 (In 1928 United States Catalog; Harvard copy of Primer)
Wheeler’s Graded Readers
Wheeler, William H. and Gail Calmerton
Wheeler Publishing Company, Chicago
1923 (In 1928 United States Catalog)
The Silent Reading Hour - (It also had a Catholic edition.)
Buswell, Guy T. and Wm. H. Wheeler
Wheeler Publishing Company, Chicago
1926-1927 (In 1928 U. S. Cat.; N. B. Smith 213, 218, 225, 236)
The Child’s Own Way Series (Primer and grade 1-3)
Hardy, Marjorie
Wheeler Publishing Company, Chicago

Wheeler wrote Wheeler’s Graded Readers with Gail Calmerton in 1900, and they included a primer and first and second readers. They were still in print in 1928 since they were listed under Calmerton’s
name followed by Wheeler’s in the 1928 United States Catalog, but a third reader had been added. The 1900 Wheeler material used controlled vocabulary and A MEANING APPROACH.

The 1928 United States Catalog showed that the Buswell-Wheeler series had a “Primary Book” (1926) and first to third readers that had teacher’s editions (1923). The Buswell-Wheeler series is discussed by Nila Banton Smith on pages 170, 172, 180 and 431 of her “history.” The 1923 Buswell-Wheeler series also had a Catholic edition.

Buswell of the University of Chicago was an associate of Charles Hubbard Judd, and Buswell’s work justifying the “meaning” approach has been discussed elsewhere in this history.

On page 172 of her “history,” Nila Banton Smith quoted Buswell:

“Practically all the primary readers which are in common use at the present time (1923) are made up of fairy tales, folklore, myths, Mother Goose rhymes and similar fanciful material.”

Buswell said factual material was needed:

“...in order that the child’s thinking may be more directly related to the actual experiences which he daily encounters.”

Buswell said his series was largely factual. What he did NOT mention was that far fewer low frequency words would be needed for his “factual” material than for “fanciful” material, so it would be far easier to reduce the vocabulary. Smith quoted Buswell again on page 180:

“Silent reading is more than noiseless reading. Silent reading is not mere non-vocal reading. It is the complex process of getting thought from the printed page and involves an entirely new pedagogy. Silent reading objectives will never be attained by oral reading methods.”

It certainly was a different pedagogy, but not a “new” pedagogy. It was only the Abbe de l’Eppe’s deaf-mute method from the eighteenth century that Buswell, Judd, Thorndike, et al were promoting. From the teacher’s manual for the Buswell-Wheeler third reader, Smith added:

“The development of comprehension was one of the major concerns of the new silent reading methods”

De l’Eppee, himself, had endorsed “comprehension” as one of the reasons for supporting his sight-word method! Smith then referred to Courtis’s experiments at Detroit but made no mention of her own work in Detroit or of jointly writing the 1920 picture reading lessons with Courtis. The Buswell-Wheeler material used the MEANING APPROACH.

Nila Banton Smith listed The Child’s Own Way Series as one of the post-1925 series, and mentioned it on pages 213, 218, 225 and 236. On page 236, she gave this quotation:

“If phonics is taught, it should not be begun before the tenth week and preferably later.”

The primer was titled, “Wag and Puff,” and it is the apparent source of the very-high-frequency word “Wag and Puff” “comprehension” paragraphs which have been duplicated so frequently and so widely ever since for primary grades. A MEANING APPROACH

1902-1904 (In 1912 United States Catalog - N. B. Smith p. 127, 429)
E. B. Huey discussed this material at length on pages 268 and following, and pages 288-289, 355, and 442. Huey also reproduced a sample page in his 1908 book, The Psychology and Pedagogy of Reading. The background on the Funk & Wagnall’s material is discussed elsewhere in this history. The material used a PHONIC APPROACH.

The Howell material which has been discussed at length in this history used A PHONIC APPROACH.

No information is available on the other materials published by “Hinds.”
Bryce, Catherine T. and Frank. E. Spaulding
1907-1909 (In 1928 U. S. Catalog, N. B. Smith p. 142, 147-9, 430)
The Aldine Readers (Primer and 7 books - revised 1916-1918, 1911 Manual)
Bryce, Catherine T. and Frank E. Spaulding (See Ginn speller.)
Newson and Company, New York
1908 (Copy at Harvard)
The Graded School Speller, Book I
Spaulding, Frank E. and William D. Miller
Ginn & Co., Boston (Bryce wrote a speller later for Newson)
1910 (In 1928 United States Catalog)
Fables from Afar
Short Stories for Little Folks
That’s Why Stories
Bryce, Catherine T. (See Laurel and Scribner entries)
Newson and Company, New York
1912 or Before (In 1928 United States Catalog)
New Friends in Storyland
Bryce, Catherine T. and Frank E. Spaulding
Newson and Company, New York
1913 (In 1928 United States Catalog)
Folk Lore from Foreign Lands
Bryce, Catherine T.
Newson and Company, New York
1913 (In 1928 United States Catalog)
Busy Brownies at Work
Davidson, Isobel and Catherine T. Bryce (See also Laurel pubs.)
Newson and Company, New York
1915 (In 1928 United States Catalog)
Playtime Primer
Bryce, Catherine T.
Newson and Company, New York
1916 (In 1928 United States Catalog)
Busy Brownies at Play
Davidson, Isobel, and Catherine T. Bryce (See also Laurel pubs.)
Newson and Company, New York
1917 (In 1928 United States Catalog)
Beginner’s Reader
Hammond, M.
Newson and Company, New York
1927 (In 1928 United States Catalog)
Storyland
Bryce, Catherine T. and Others
Newson and Company, New York
1927 (In 1928 United States Catalog)
Newson Readers, (See N. B. Smith, pages 212 and 433)
(Playtime-Primer, Good Times-Bk. 1, Open Door-Bk. 2, possibly more)
Bryce, Catherine T. and Rose L. Hardy
Newson and Company, New York
The Harvard library has a copy of the Aldine Readers - Learning to Read - A Manual for Teachers by Frank E. Spaulding, Superintendent of Schools, Newton, Massachusetts, and Catherine T. Bryce, Supervisor of Primary Schools, Newton, Massachusetts, published by Newson & Company, New York, in 1911. That copy carries the remark on page iv:

“The working out of this system of reading has been possible only through the cooperation, always sympathetic, intelligent, and enthusiastic, of many teachers and principals in the public schools of Passaic, N. J., where the system originated, and of Newton, Mass., where the system has been developed and perfected.”

Spaulding’s and Bryce’s earlier Passaic Primer of 1903, a copy of which is in the library of Congress, used the sentence method. Passaic is probably only about fifteen miles from Columbia Teachers College in New York City. In 1903, Passaic was within easy commuting distance of New York City by the former Lackawanna or Erie railroads to Hoboken, Jersey City, N. J., and from the railroad terminals by each railroad’s very large and rapid Hudson River ferries to various terminals in New York City. The fact that Passaic was so comfortably close to New York City suggests very possible input from Columbia Teachers College in New York in the “sentence” method used in The Passaic Primer of 1903, particularly because of Spaulding’s later association with people from Columbia Teachers College. (I powerfully suspect that Bryce was only one of the customary female hacks in those years who did all of the real work on such reading series, while the series usually showed as its principal author the name of some male education “expert.” One such series was the Elson series of Scott, Foresman.)

Only four years after The Passaic Primer was published, the Aldine readers were published, and the first book of the Aldine readers must be considered the direct successor to The Passaic Primer. It used the same “sentence” method and was written by the same authors, Spaulding and Bryce. Then Spaulding’s and Bryce’s Aldine reader series succeeded in blanketing the United States until 1930 (although until 1930 there were always many, many other reading series in print and in use). Since the Aldine readers achieved a huge success, it appears almost certain that Spaulding’s and Bryce’s materials must have received powerful promotion from influential sources, and very likely some of them were associated with Columbia Teachers College.

Clear records exist on some of those powerful influences which most probably account for the widespread promotion of the Aldine readers, which were the vastly used and immediate predecessors to the 1930 Dick and Jane deaf-mute-method readers. The late Lance J. Klass’s critically important book, The Leipzig Connection, which he wrote with Paolo Lionni and which was published by Heron Books, Portland, Oregon, in 1981, documented the enormous influence of Wundtian materialistic psychology on American education. The influence was achieved by Wundt’s American students and their proteges who used almost bottomless foundation moneys from the Carnegie and Rockefeller foundations. Klass quoted from the Congressional Record concerning the Senate inquiry on the activities of these foundations in 1917.

Page 2843 of the 1917 Congressional Record, not included in Klass’s book, showed a long list of dollar-a-year-men who were paid a dollar a year for their supposed services to the government, but whose real salaries were paid from other sources. These dollar-a-year men were the kind of outside agents about whose educational activities the Congressional inquiry was taking place, because such activity was considered to be an illicit use of Government power by private interests. Appointed as one of these dollar-a-year men on March 25, 1914, was Frank E. Spaulding, then Superintendent of Schools in Minneapolis and co-author with Catherine T. Bryce of the massively used 1907-1909 Aldine “sentence-method” readers.
A senator introduced a bill in 1917 to CRIMINALIZE some of the activities of such dollar-a-year men. However, America went into World War I in the spring of 1917 and the Congressional inquiry into what can best be described as the subversion of American education by those using foundation monies was stalled.

According to the Blumenfeld Education Letter (February 1994), Spaulding was a Wundtian (Leipzig) Ph. D. “who organized Yale’s department of education and wrote numerous textbooks, was a member of the Rockefeller funded Education Board from 1917 to 1920.”

The Library of Congress has a copy of The Passaic Primer of 1903 by Frank E. Spaulding, Passaic, New Jersey, and Catherine T. Bryce, copyrighted in 1903 and printed by A. F. Freeman Printing Company, Passaic. Whether Frank Freeman of the University of Chicago was related to the Passaic printer is unknown. A beginning page read as follows:

“To memorize: Fly, little birds, to the tall tree
Fly to the nest there, little birds three

“Birds - little - to the - fly, the - to - and - tree - tall - nest - three

“Fly little birds
“Fly to your nest
“Fly to the tall tree, little birds
“Fly to your little birds
“Fly to your three little birds
“Your little birds fly
“Your little birds fly to your tall tree
“Your little birds fly to the nest”

Page 3 showed the introduction to whole word “phonics”:

“t all, nest - n.”

Page 23 showed the rigid limitations of rhyming “phonics”:

“fall - called; last fast past.”

As is obvious from the above, The Passaic Primer, like the Aldine material, used A MEANING APPROACH WITH PHONY PHONICS.

The Aldine reading series was used massively, nation-wide, for very many years. On statistical tests run by Superintendent of Schools Harris in Dubuque, Iowa, in 1916, reported in the Elementary School Journal, (Volume 17, page 18), the Aldine readers and the Horace Mann readers were significantly outscored by the phonic Beacon method on oral reading, rate and comprehension. Yet the Elementary School Journal of the University of Chicago where C. H. Judd and W. S. Gray were located stated,

“The conclusions cannot be accepted as final, however.”

Those test statistics supporting phonics have fallen into education history’s black hole. Yet Currier and Duguid’s New Hampshire “study,” reported in the Elementary School Journal in 1916 without any numerical data whatever, and which purported to show that the sight word approach was better, has been referred to ever since in the literature. The massively used Aldine readers have been discussed previously
in this history. Obviously, Catherine T. Bryce was expert at writing controlled vocabulary “stories,” which is the probable reason for her many entries in this bibliography. Undoubtedly, any material by Bryce, Spaulding and Hardy used A MEANING APPROACH WITH PHONY PHONICS.

A 1927 copy of the Newson Readers, Book 2, The Open Door, showed the total vocabulary in the back.

“This book contains 436 of the words used in Playtime and Good Times. Excluding variants and compound words, there are 643 new words in this book, an average of 3.3 per page.....”

The total vocabulary, therefore, was 1,079 words. The note continued:

“Excluding proper names and nonsense words, 71% of the vocabulary is in Gates’ 1500 words; 63% is in Thorndike’s first 1000, 94% in his 5000.... 551 words of Newson Readers primary vocabulary is in either Thorndike’s or Gates’ first 500.....”

The figures are misleading and therefore effectively incorrect, the result of being computed from the text’s tiny total vocabulary of only 1,079 words. Using a large amount of adult materials, Ayres’ 1915 work had shown that 1,000 words composed about 90 per cent of simple material, not 63% as stated in the above. Yet it is obvious that a second grade book such as the Newson Reader could not be more complex than Ayres’ adult materials, even that portion of Ayres’ material that was composed of routine correspondence.

 Nevertheless, this second grade book was nowhere nearly so controlled as sight-word books became later. The book was correspondingly less dull to read. It even included some delightful poems by Robert Louis Stevenson, but the word list at the back of the book showed an inordinate number of new words in italics for those “Stevenson” pages. This meant some of the words Stevenson used had such a low frequency that they did not have to be “fixed as a part of the child’s permanent vocabulary.” Yet, by 1930, Stevenson’s poems were largely passe, and so was the enrichment of children’s vocabulary. The 1927 Newson readers used A MEANING APPROACH PROBABLY WITH SUPPLEMENTARY PHONICS.

1904 (From date on illustrated page in Huey’s book, page 327)
Bible Symbols, or The Bible in Pictures
Beard, Frank and Van Marter
Hertel, Jenkins & Co., Chicago

E. B. Huey lists this book on page 442 of his own 1908 book, The Psychology and Pedagogy of Reading, describes it on page 326, and illustrates one of its pages on his page 327. Huey said:

“It is made up of Bible texts and stories with some of the words printed and very many of them replaced by pictures, large and small, that suggest the omitted words. The pictures usually suggest enough of meaning to help the child guess the meaning of the printed words, and his knowledge of words grows apace, while the fact that he must always attend to the meanings to get the words develops reading for thought.”

Of course, that is a classic deaf-mute, or Code l, method. A MEANING APPROACH.

---

1904 (In 1928 U. S. Catalog by Mentzer)
Folk Lore Readers, The
(Primer, First, Second and later a Third Reader)
(Primer had 285 words)
Grover, Eulalie Osgood, (See her Rand entries)
Atkinson, Mentzer and Grover, Chicago and Boston (See 1908 Atkinson entry)

By 1904 (In 1928 U. S. Catalog by Mentzer)
Art-Literature Readers
(Primer to Bk. 4 by 1912. Primer had 258-word vocabulary)
Grover, Eulalie Osgood and Frances Elizabeth Chutter
Atkinson, Mentzer and Grover, Chicago and Boston (See 1908 Atkinson entry)

1928 or Before (In 1928 United States Catalog)
Columbia Readers
Bonser, F. G. and L. B. Beckington (8 books)
Mentzer (Atkinson had dropped out, possibly by 1908. See 1908 entry.)

By 1912, Grover's Folk Lore Readers and her Art-Literature Readers were being published by Mentzer, presumably still in Chicago and Boston and presumably the successor to the original publishing company which had included Atkinson. By 1908, M. and G. Atkinson were publishers, as shown below. One was possibly the “Atkinson” who had been associated with Mentzer in 1904. According to the 1928 United States Catalog, Mentzer was publishing in 1928 only the Primer and Book I of the Art-Literature Readers. In 1928, Mentzer was publishing the Primer and First through Third books of the Folk Lore Readers. The rigidly controlled vocabulary indicates that both of these primers by Eulalie Osgood Grover used A MEANING APPROACH.

No information whatsoever is available on the 8-book reading series, Columbia Readers, by Bonser and Beckington. Since the series was written some time after 1912 and was still being sold in 1928, that certainly should not have been the case.
THE FIRST FIVE BOOKS BELOW ARE OBVIOUSLY GLOBE’S SERIES OF ABOUT 1905. THE 1902 DATE ON ONE IS EITHER WRONG OR SUGGESTS GLOBE WAS IN EXISTENCE IN 1902 INSTEAD OF BEGINNING IN 1905, AS DISCUSSED BELOW, AND THEN POSSIBLY BECOMING WORLD BOOK IN 1912. NEVERTHELESS, APPENDIX C OF THE 1975 EDITION OF HOW TO INCREASE READING ABILITY BY HARRIS AND SIPAY LISTS, AS 1975 PUBLISHERS, GLOBE BOOK CO. (NOT GLOBE SCHOOL BOOK) OF 175 FIFTH AVENUE, NEW YORK, AND WORLD PUBLISHING CO. OF 280 PARK AVENUE, NEW YORK, SO THE ORIGINAL GLOBE COMPANY AND THE ORIGINAL WORLD COMPANY MAY HAVE REMAINED SEPARATE COMPANIES.

By 1905 (Per 1900-1905 American Catalogue and in print in 1912)
Story Friends

Story Readers - Primer
White, M. L.
World Book Co., Yonkers-Hudson (Presumably Globe in 1909)
   Before 1912 (Per 1912 United States Catalog)
Hawthorne Readers, 1st-5th
Hale, E. E., Jr., and Sterling, A. W.
Globe School Book

*****(The assumption is made that Globe became World Book in 1912 even though the 1925 book below carries the notation that World Book Company was established by Caspar Hodgson in 1905. The evidence suggests his company was originally called Globe, or, what is more unlikely considering that the names are almost synonymous, that a Globe in existence before 1905 was absorbed by a World Book of 1905 in 1912. Nevertheless, as already mentioned, the 1975 edition of How to Increase Reading Ability, by Harris and Sipay, lists in Appendix C both Globe Book Co. of 175 Fifth Avenue, New York and World Publishing Co. of 280 Park Avenue, New York, so the companies may have always remained separate.)

   1914 (In 1928 U. S. Catalog)
Philippine Chart Primer
Coleman, M. E. and Others

World Book Company, Yonkers-on-Hudson, New York and Chicago
   1929 (From Harvard Copy and Cumulative Book Index, 1928-1934 - Spellers)
Growth in Spelling, Book One, for Grades Two to Four
Both J. McKeen Cattell and Edward L. Thorndike, famous psychologists from Columbia University, lived not far from Yonkers and commuted to New York City. The choice of the neighboring Yonkers company, World Book Company, to publish Thorndike’s “first” speller for second graders may have been far more convenient for Thorndike than a company in New York City. Cattell, in his comments at the Columbia Teachers College program honoring his close personal friend, Thorndike, in 1926, as reported in the Teachers College Record in February, 1926, referred to a colony or social circle of educators in their neighborhood. Both Smith and Courtis came from Detroit, so their choice of World Book in Yonkers in 1924 instead of some Manhattan or Detroit publisher suggests some personal contact about 1924 with that Thorndike-Cattell colony not far from Yonkers.

The record shows that Courtis must have had a long-standing and close contact with persons in that colony. In 1911, Courtis had been a member of the Hanus Committee on School Inquiry of New York City, and in charge of testing for the public schools of Boston in 1912. Courtis also participated in school surveys in Gary and Indianapolis. Cattell and Thorndike were very active in the American Association for the Advancement of Science. Courtis was a fellow and secretary of the American Association for the Advancement of Science from 1913 to 1917, and President 1918-1919 and 1932-1933. In his youth, Courtis had attended Central High School in Detroit and MIT for two years. Although Courtis had been highly visible and active in testing for years, Courtis surprisingly did not get his B. A. degree until 1919 at Columbia at the age of 45, and his M. A. at Columbia in 1921. Courtis had prepared material on arithmetic with Thorndike in 1919, which is listed in the 1926 Teachers College Record honorary issue on Thorndike. Since Courtis prepared that paper with Thorndike in 1919, it is certain he knew Thorndike well in 1919. Courtis received his Ph. D. in 1925 from the University of Michigan. Courtis had been head of the Department of Science and Mathematics at Liggett School in Detroit from 1898 to 1914, and Director of Educational Research for the Detroit Public Schools from 1914 to 1919. He was Director of Instruction and Dean of the Detroit Teachers College from 1920 to 1924, and Professor of Education in the School of Education at the University of Michigan from 1921 to 1944.

Although I do not have the publishers and dates, I seem to recall seeing Courtis’s name as an author on a so-called “picture dictionary” in use in primary grades as late as the 1970’s. Preparing a so-called picture dictionary, in which whole printed words and phrases are defined by pictures, instead of other words as in a true dictionary, certainly would have been a logical follow up to Courtis’s and Smith’s 1920 Picture Story Reading Lessons, discussed below. Such a “dictionary” is an obvious application of de l’Epee’s method for deaf-mutes. Reverend Thomas Hopkins Gallaudet, Principal of the American Asylum for the Education of the Deaf and Dumb in Hartford, used the same method in his 1830 book, The Child’s Picture Defining and Reading Book, meant for both deaf and hearing children. It is very possible that some time after 1920 Courtis and Smith prepared the first American “picture dictionary” that was meant solely for hearing children.

Nila Banton Smith received a Ph. B. degree from the University of Chicago in 1928 and M. A. in 1929, showing that, as with Courtis, her “academic” credentials came long, long after her entry into the reading instruction field. Presumably those academic certificates were supposed to make the influence of Courtis and Smith on reading instruction more “respectable.” Smith received her doctorate from Columbia Teachers College in 1932 (or 1934), based on her reading instruction “history.” She was Director of Reading Instruction at New York University from 1949 to 1963. The kind of “reading instruction” that must have been given at that university from 1949 to 1963 under Smith’s direction is another topic that is open to study.
However, Smith and Courtis were both resident in Detroit in 1924, far from New York City when their 1920 book, Picture Story Reading Lessons, which had been used in a Detroit pilot program in 1920, was ready for more formal publication. Their 1920 work, officially published in 1924, had apparently been the VERY FIRST ONE to use Thorndike’s list of the commonest words to teach beginning reading. Smith’s and Courtis’s Picture Story Reading Lessons (1920, 1924, 1926) based on Thorndike’s high-frequency word studies were very widely used, as demonstrated by the fact the 1928 United States Catalog did not list all the data for the material under the heading, “Readers,” as was done for the vast majority of other readers. Instead, it was only mentioned by the series and author names, with the note, “See main entry.” That treatment was reserved for very few, which were obviously the best sellers. Yet only six years later, Smith totally omitted any mention of her obviously well-known 1920 (and 1924-1926) work in her 1932 “history,” despite the fact that she mentioned many, many other “silent reading instruction” materials. Why? What is cut out does leave an intriguing silhouetted hole.

A comment from the publishers on the back of the title page of the 1926 edition of the Teacher’s Manual, Picture Story Reading Lessons, Series I, Revised, read in part:

“If means of a unique procedure... pupils teach themselves to read....”

The Preface to Teacher’s Manual, Picture Story Reading Lessons, Series I, 1926, Revised, read in part:

“It was in 1920 that the first edition of Picture Story Lessons was put into experimental use in four schools in Detroit. Since that time, the method has been adopted for citywide use with Detroit semi-annual classes of approximately 25,000 first-grade children and (its use has) been widely extended to... important cities and towns throughout the United States.”

Someone certainly had a remarkable net of influence and a great deal of power to achieve such a thing from 1920 to 1926. Certainly Nila Banton Smith had no such power before 1926, and it is highly unlikely that Courtis did either, since he was always a peripheral figure in the history. The net of influence and the power must have emanated from that Cattell-Thorndike “colony” near the book’s publishers, World Book Company, in Yonkers.

At the end of the Preface appeared this remark:

“Teachers in the third and fourth grades... frequently express their opinion that these pupils... have such good habits of reading for thought.”

Yet, most emphatically, what had been produced was not “good.” Pupils taught by the pure deaf-mute “meaning” method of Picture Story Reading Lessons had developed crippled conditioned reflexes in reading. The children taught by the deaf-mute “meaning” method were incapable of reading automatically. Therefore, their forced but divided attention when reading silently (part to the content, part to figuring out the words) was probably very noticeable to third and fourth grade teachers who previously had taught children who had healthy automatic conditioned reflexes in silent reading and so had free attention which might wander. Children with healthy, normal, automatic reflexes in reading had the capacity to read with total attention to the content and resultant maximum reading comprehension, which the crippled readers could not do. However, if the mood struck them, children with healthy, normal, automatic reflexes might read with a total inattention to content and near zero reading comprehension, which the crippled readers ALSO could not do! The crippled readers had to pay attention to “meaning” or they could not read at all! Despite its lowered silent reading comprehension, their forced but divided attention was wrongly interpreted by some upper grade teachers as a strength. This was during the massive emphasis on “silent reading,” so the third and fourth grade teachers probably rarely if ever heard
the children read aloud and so did not know the degree to which the children were stumbling and groping in their other school books which, at that time, did not use controlled vocabulary.

Since the early 1930's, however, school books in other subjects have used increasingly stringently controlled vocabulary, so crippled reading has been more completely masked, even when done orally, which would not have been the case in the 1920’s when vocabulary control was not in place except in some reading books. Furthermore, after 1930, upper-grade teachers have increasingly accepted the fiction that it is “normal” for some twenty percent or so of readers to stumble when reading orally, even on the stringently controlled vocabulary textbooks used in other school subjects than reading instruction. Most upper-grade teachers before 1930 would not have accepted that fiction. Yet with the near total suppression of oral reading tests since 1930, the massive reading disabilities since 1930 have remained largely hidden.

On the page opposite the “Preface,” this appeared:

“The lessons cover a vocabulary of 265 words. This vocabulary is composed of words having the highest frequencies in the Thorndike word list together with... ten common primers. At the end of the lessons... the child has mastered the basic elements of the mechanics of reading. He is now ready to read primers and first readers and to begin work on Series II of Picture Story Reading Lessons, in which he gains power to attack new words by a variety of methods.... (He) must be able to match words, to match letters - to find letters (which) look exactly like the first letter in any given word.”

The material mentioned alphabetical order in Lesson 3, and a blackboard dictionary with initial letters. Finding “letters (which) look exactly like the first letter in any given word” is, of course, necessary for two-step whole-word phony phonics. Two-step whole-word phony phonics is essentially the same as Gallaudet’s deaf-mute-method “visual” phonics, in which soundless but meaning-bearing words are compared to each other to see like parts, so as to commit the words to memory.

This also appeared on the “Preface” page:

“It is now well recognized by psychologists and educationists that the only learning that is really efficient is purposeful learning.... the result... when once started... the pupils teach themselves to read.”

The 1926 revised edition showed Nila Banton Smith as First Assistant Supervisor of Research, Detroit Public Schools, and reported she prepared the manual:

“...under the direction of Stuart A. Courtis, Professor of Education, School of Education, University of Michigan, and Educational Consultant, Detroit Public Schools.”

Courtis and Smith’s Picture Story Reading Lessons primarily used the eighteenth-century Abbe de l’Epee’s deaf-mute MEANING APPROACH.

Concerning the earlier books listed above, see entries for Eva Austin Blaisdell McDonald’s other books under Macmillan, Lothrop, and Little. Her Globe book was still in print in 1912, according to the United States Catalog. Eva Austin Blaisdell McDonald was apparently a highly successful author of “meaning” primers for about thirty years, until about 1930. She used a MEANING APPROACH WITH PHONY PHONICS.
James A. Bowen who wrote the 1907 Story Reader for the Second Year at School shown above, published by Globe School Book Company, also wrote a reading series in print in 1928 according to the 1928 United States Catalog. In the listings under “Readers” appears, “Bowen, James A. and others. Oldtime Stories. See main entry.” Such separate listings not included under the “Readers,” or “Primers” sections in the 1928 United States Catalog, almost the only portions of which I have photocopies, only appeared for important series. Therefore, presumably Bowen’s series was important in 1928, and yet Nila Banton Smith totally omitted any mention of it. Bowen’s series published sometime between the dates of the publication of the 1912 and 1928 United States Catalogs (and probably about 1928) has fallen into reading history’s black hole, along with so much else. The publisher’s name, presumed to be World Book, can be confirmed by checking the 1928 United States Catalog under the isolated entry for Bowen.

Bowen was also concerned with word lists, to the extent of World Book’s publishing Bowen’s spellers by 1928 or before. This suggests a possible tie with Thorndike, who had his spellers published by World Book in 1929. Thorndike’s 1929 spellers and Bowen’s probably pre-1928 spellers followed the same somewhat unusual grading pattern for the 1920’s: one book for primary grades and one for upper grades. The possibility is that Globe School Book Company who published Bowen’s 1907 material became World Book Company by 1912, and later also published Bowen’s reading series, just as the record shows it published Bowen’s spelling series.

Presumably many of these books are in Harvard’s collection, but I only looked for specific titles in their collection after 1900 so would not have seen these. However, James A. Bowen is listed with Florence Holbook in Early American Textbooks as an author on the Rand, McNally Introductory Geography in 1899. That suggests that the Holbrook who wrote the Globe material may also be the Florence Holbrook who revised the Geo. Sherwood & Co. materials for Scott, Foresman in 1897 and who wrote the Hiawatha Primer published by Houghton, Mifflin in 1898.

No reading books were listed in the 1928 United States Catalog for the Globe School Book company (address unknown), but since World Book published Globe School Book’s E. V. Brown material by 1913, that suggests that in 1912 World Book may have become the successor to Globe School Book. The similarity in the names (Globe, World) certainly suggests that. Nevertheless, Appendix C to How to Increase Reading Ability, by Harris and Sipay in its 1975 edition, lists both Globe Book Co. of 175 Fifth Avenue, New York, and World Publishing Co. of 280 Park Avenue, New York. Therefore, Globe School Book may have remained in business as a separate company.

1905 or Before (In 1905 American Catalogue and 1912 United States Catalog)
Practical Primer for Home and School
Rogers, Mrs. F. R., Ed.,

1910 (In 1912 United States Catalog)
Practical Primer
White, J. E.
Southern Missionary Society, Nashville

No information is available on these materials, which may possibly be related. It is possible that the 1910 material was a revision of the material written before 1905. However, whether the Southern Pub. Assn. and the Southern Missionary Society are related or not is unknown.

1905 or Earlier (In 1905 Am. Cat.; 1928 U. S. Cat. with 1910 date)
Character Building Readers - Ist-8th, Teacher’s Ed. Ist, 2nd.
Warner, E. E. (See Appleton, Hinds, C. E. Merrill and Bardeen)
Noble and Noble, New York (Published by “Hinds” in 1912 and before)
1905 (In 1928 United States Catalog but not 1912)
Spanish-American Readers (Primer, first, Second)
Mowry, G. E. and Others
Noble and Noble, New York (In 1928)
1908 (In 1928 United States Catalog)
Thought and Action Readers
(Primer, Thought Reader, lst-3rd Readers, Teacher’s Manual
Summers, M. (Published by Beattys in 1908 per 1912 U. S. Catalog but E. B. Huey showed on page 442 of his 1908 book that The Thought Reader, Book I, was published by Ginn & Co., Boston)
Noble and Noble, New York (In 1928)
1910 (In 1912 U. S. Catalog under Primers)
The Howell Primer (Other books in preparation)
Logan Douglass Howell
Howell and Company, New York.
Hinds, Noble & Eldrudge
1917 (In 1928 U. S. Catalog published by Noble)
“How to Teach Reading” (Primer, 1st, 2nd Reader, Manual)
Howell, Logan Douglass, Former Supt. of Schools, Raleigh, N. C. and Frances S. Williams, Primary Teacher, Lynchburg, Va., Schools
Howell & Company, New York. (Apparently privately published in 1917)
1925 (In 1928 U. S. Catalog)
New Howell Primer, for Foreign Children
Howell, L. D. and Frances S. Williams
Noble and Noble, New York
1926 (In 1928 United States Catalog)
Story-Time Readers (1st-4th)
Reynolds, J. J. and E. J. Neville
Noble and Noble, New York
1928 or Before (In 1928 United States Catalog)
Graded Stories for Reading,
Reynolds, J. J. and Others
Noble and Noble, New York

Also see earlier entries on “Hinds.” The Noble company did not appear in the 1912 U. S. Catalog so far as I could see. By 1917, a company, Hinds, Hayden & Eldrudge, Inc., of New York, Philadelphia, and Chicago was publishing B. Norman Strong’s Correct Spelling, a copy of which is at Harvard. It would appear that the Noble of the 1910 company, Hinds, Noble & Eldrudge, left to form his own company, which was publishing Howell’s 1917 materials in 1928, according to the 1928 United States Catalog.

See the discussion on the Summers material in the 1908 entry below for Beattys.

The 1910 Howell materials and their revision have been discussed at length in this history. They are PHONIC MATERIALS.

1905 (In 1928 United States Catalog)
Little People’s Sound Primer
Chadwick, M. L. Pratt
Educational Pub.
1905 (In 1928 United States Catalog - 4 primers)
Little Red Hen
The Three Bears
Three Little Kittens, Chicken Little
Three Pigs (no date)
Chadwick, M. L. Pratt
Educational Pub.
   1906 (In 1912 United States Catalog)
First Reader: Puss in Boots, Reynard the Fox.
Chadwick, M. L. Pratt
Educational Pub.
   1906 (In 1912 United States Catalog)
Jack the Giant Killer (Possibly 2nd, following above first reader?)
World History in Myth and Legend (3rd and 4th grades)
Chadwick, M. L. Pratt
Educational Pub.
   1908 (In 1912 United States Catalog)
Nixie Well (no grade given)
Chadwick, M. L. Pratt
Educational Pub.
   1907 (In 1912 United States Catalog)
Graded Readers (Primer and 5 volumes)
Black, B. N. (Wrote primer and 3 vols. in 1905 or before for Bardeen)
Educational Pub.
   1911 (Both in 1928 United States Catalog)
Eureka Primer
Eureka First Reader (no publishing date and not in 1912 U. S. Catalog)
Klingensmith, Annie (See also Bancroft/Indiana, Amer. Bk., Flanagan)
Educational Pub.
   Before 1912 (In 1912 United States Catalog)
Action, Imitation and Fun Series
Chadwick, M. L. Pratt
Educational Pub.
   Before 1912 (In 1912 United States Catalog)
Our Little Folk’s Primer
Newton, M. B.
Educational Pub.
   Before 1912 (In 1912 United States Catalog)
Sprague Classic Readers (Book 1 through Book 5)
Sprague, Sarah E. (See D. D. Merrill entries.)
Educational Pub.
   Before 1912 (In 1912 United States Catalog)
Foundation Readers (1st-4th)
Burke, B. E.
Educational Pub.
   Before 1912 (In 1912 United States Catalog)
Good Time Primer and First Reader
Seymour, F. G.
Educational Pub.

Sprague’s other materials are listed under Rand and under D. D. Merrill. Her materials all apparently used A MEANING APPROACH, although she recommended supplementary phonics in the 1898 Rand material. The fact that “Educational Pub.” published a book by Klingensmith suggests a possible
connection with Indiana, where Klingensmith worked on that state’s reading series. Possibly, therefore, the company was located in Indianapolis, Indiana.

It should be noted that D. D. Merrill was possibly a publisher of state-adopted texts, and Educational Pub. may have worked on state-adopted materials. If these companies did publish state-adopted materials, then Sprague was associated with two “official” publishers.

1906 (In 1912 Catalog)
First Reader o. p. (Presumably, “out of print.”)
McIntyre, W. A.
Morang

No further information is available on this material.

1906 (In 1928 United States Catalog)
Brownie Primer (See also Flanagan publishers of book with that title)
Cox, Palmer
(M. E. Sullivan and P. M. Cox, possibly the same as Palmer Cox, who wrote Beacon Gate to Reading published by Ginn in 1926)
Century Co., New York

1917 (In 1928 United States Catalog)
Story and Play Readers
Lutkenhaus, A. M. and M. Knox, Editors
Century Co., New York

1919 (In 1928 United States Catalog)
Young America’s First Book
Baylor, A. S. and E. Colbert
Century Co., New York

On page 16 of Americana in Children’s Books, a Library of Congress 1974 pamphlet, the following appears:

[1895] 144 p. illus. 26 cm. PZ8.3C839 Bth JuvColl Rare Bk
The prankish Brownies explore famous sites and historic landmarks in the series of rhyming stories (1887-1913) first published in St. Nicholas and the Ladies Home Journal.”

Those magazine stories are the apparent source for the Brownies material.

1908 (In 1912 United States Catalog)
Summers’ Readers - Primer, 1st Reader, 2nd Reader, Teacher’s Manual
Summers, Maud (See also Noble & Noble who were the 1928 publishers. Ginn was mentioned as her publisher by E. B. Huey in his 1908 book)
Beattys

Summers’ “meaning” materials were discussed at length by E. B. Huey in his 1908 book, The Psychology and Pedagogy of Reading, on pages 324, 342, 343 and 442. On page 442, he showed the publisher of The Thought Reader, Book I, by Maud Summers as Ginn & Co. of Boston, not Beattys. The 1928 publisher according to the United States Catalog was Noble & Noble.

1908 (In 1912 United States Catalog under Reading, not Readers)
Mrs. Kathryn Diehl sent me her copy of the 1913 material, which had been published some time after 1941. It is straight “Code 10” phonics, and so, presumably was the 1908 material, probably written by the same “F. Akin” but published by M. and G. Atkinson, not Riverside Press. The 1913-1941 material, however, is a child’s textbook listed under “Readers” in the 1928 United States Catalog, while the 1908 material was listed under “Reading” (guides) instead of “Readers,” (children’s textbooks) in the 1912 United States Catalog. The preface of the 1913-1941 material begins:

“This little book is intended to be put into the hands of children at the beginning of their first year in school. It may be used in conjunction with any series of readers.

“Teachers generally recognize the value of a good foundation in phonics as an important aid in learning to read. Unfortunately many teachers are not sufficiently familiar with the principles underlying phonic analysis and the building of words to feel sure that they can make their phonic drills as economical and as effective as they should be.... it must of necessity be presented to the pupils from the blackboard, or from large printed cards and charts. It has seemed to the author that it would be a great advantage to both teacher and pupil to have before the pupil in a book a carefully worked out and thoroughly tested series of exercises in phonics, which have been found to make pupils self-reliant in word mastery.

“The author has evolved this system of teaching phonics in her own schoolroom, and has found that it ensures rapid progress in learning to read....”

Akin’s “Suggestions to Teachers,” pages 112 to 117, followed by “List of Phonograms Studied” is an excellent guide to teaching Code 10 phonics. While some of her “Phonograms” are actual word parts instead of isolated phonemes, her guide suggests teaching them solely by “sound” and not by “meaning,” so the material does rate Code 10. She originated this material in the early twentieth century, when supplementary phonics became the norm in American first grades, and she apparently had it on the market by 1908. Yet she obviously still expected her material to be solely “supplementary,” as she referred to two ten-minute daily drills in phonics, to be done apart from the “reading” lesson. That Akin’s excellent supplementary phonics material was still being published by Houghton Mifflin as late as 1941, and very probably even later, is very surprising, considering the blanketing effect in America of the Dick and Jane readers. The Dick and Jane so-called “intrinsic” phonics of 1930 was intended to do away with such supplementary phonics drill as Akin’s, which had been around since shortly after 1900.

However, apart from its listing in the United States Catalogs of 1912 and 1928, I never saw any reference to Florence Akin’s material in the literature until Mrs. Diehl sent the book to me from her collection of reading materials. It does not seem probable that the Akin material had any wide use after 1928, at which time it was listed in the United States Catalog as in print.
1909 (In 1928 United States Catalog; Harvard copy of The Primer)
The Child Classics (primer to 6th reader)
Alexander, Georgia
The Bobbs-Merrill Co., Indianapolis

1924 (In 1928 United States Catalog)
Bobbs-Merrill Readers (Harvard copy, 1st Gr. Man’l, shows all authors)
Betts, George Herbert; Clara Belle Baker; Edna D. Baker
Bobbs-Merrill Co., Indianapolis
1928 or Before (In 1928 United States Catalog)
Reading for Children (Primer, Bks. 1-3)
Baker, Clara Belle and Edna D. Baker
1928 (In 1928 United States Catalog)
True Stories Series (See N. B. Smith p. 212, 218, 433)
Baker, Clara Belle and Edna D. Baker
Bobbs-Merrill Company, Indianapolis
1959 (Reviewed in Blumenfeld’s The New Illiterates on p. 305)
Reading for Living Series
Burton, William H.; Clara Belle Baker; Grace E. Kemp.
Bobbs-Merrill Company, Indianapolis

Harvard’s copy of the 1909 Child Classics - The Primer by Georgia Alexander shows that it used A MEANING APPROACH WITH PHONY PHONICS.

Clara B. Baker, Professor, Curriculum and Method, National Elementary College, Chicago, and Edna D. Baker, President, National Elementary College, Chicago, wrote The First Reader Manual in 1924 for the Bobbs-Merrill Readers. George Herbert Betts was Editor. George Herbert Betts was an early endorser of “meaning,” having studied with John Dewey, possibly at the University of Chicago before Dewey left in 1904, or at Columbia Teachers College in New York after Dewey arrived in 1904. George Herbert Betts wrote The Mind and Its Education, published by D. Appleton and Company, New York, in 1906, in which he mentioned having been a student in Dewey’s class. According to its title page, in 1906 Betts was Head of Department of Psychology and Education in Cornell College. Later, after about 1915, Betts was very active in promoting the “meaning” method in Iowa, which resulted in the heavy reading disabilities reported in the 1920’s by Dr. Samuel Orton. The Iowa catastrophe was the reason for Orton’s involvement in reading instruction.

Betts’ involvement seems to have been scrubbed from “official” records, possibly because of the connection with Orton. His name appears nowhere in Nila Banton Smith’s “history,” so far as I could find. Any material associated with Betts can be assumed to have used a meaning approach, and that is the case in the Manual for the Bobbs-Merrill First Reader. It used two-step phony phonics, continuing the approach from the primer. The vocabulary for the Primer, First Reader, and Second Reader totalled only 1,200 words. A MEANING APPROACH WITH PHONY PHONICS.

#Publishers First Appearing in This List Between 1910 and 1920

1910 (In 1912 United States Catalog)
Child’s World Readers
Smith, C. A.
Clark

The Child World Readers listed in the 1900-1905 American Catalogue as having been published between 1900 and 1905 by Kellogg presumably have no connection with the above material. Nor, probably, is there any connection between the above material and the 1917 series published by B. F. Johnson. Nor, presumably, is there any connection with the 1908 Child World Primer listed in the 1912 United States Catalogue under Primers, written by A. E. Bentley and G. R. Johnston, published by “Barnes,” presumably a division of American Book Company.

No information is available on the material on the Child’s World Readers published by “Clark.”

At some point after 1930, Row, Peterson of Chicago may have merged with Harper & Brothers to form Harper and Row. See also the earlier entries for Harper & Brothers. By 1997, the company name had become Harper, Collins, a unit of Rupert Murdoch’s News Corporation.

1910 and later (In 1928 United States Catalog. Multiple references by N. B. Smith discussed below.
Harvard copy of 1911 First Reader)
Reading-Literature Series
Treadwell, Harriette Taylor and Margaret Free
Row, Peterson & Co., Chicago
  1930-1931 (In Cumulative Index 1928-1932)
Storyland - Books 4-6
Treadwell, Harriette Taylor and Others
Row, Peterson & Co., Chicago
  1936 (Date per Hillel Black’s The Amer. Schoolbook. A copy of Round
About, the third book after Basic Preprimer and Basic Primer, shows copyright dates of 1936, 1941, 1948,
1957, and states vocabulary is 195 words plus those in two primers; N. B. Smith p. 277 dated to after
1940.)
The Alice and Jerry Basic Readers
O’Donnell, Mabel
Row, Peterson & Co., Chicago
  1955
Why Johnny Can’t Read, and What You Can Do About It
Flesch, Rudolf
Harper & Row, New York
  1963 (See Chall, Learning to Read)
The Linguistic Science Readers
Stratemeyer, Clara G. and Henry L. Smith, Jr.
  1966 (Reviewed in Blumenfeld’s The New Illiterates, p. 298-299)
The Harper and Row Basic Reading Program
O’Donnell, Mabel; Byron H. Van Roekel, Educational Consultant
Harper & Row, Evanston, Illinois
  1981
Why Johnny Can’t Read, The Scandal of Our Schools
Flesch, Rudolf
Harper & Row, New York

On the 1910 Reading-Literature Series by Treadwell and Free, Gates stated in 1925 the 1910 Primer
had been written by both, but the 1922 manual was written by Grace E. Storm, Mae F. Mardorf and
Jeannette G. Baughman. Nila Banton Smith discussed the series on pages 142 and 143, and 149 to 152, dating it 1910 to 1916. She made the doubtful statement on page 149:

“Margaret Free and Harriette Taylor Treadwell were the first authors to prepare beginning readers with a content consisting wholly of adaptations from the old folk tales.”

Smith added:

“Miss Treadwell was principal of the West Pullman School, Chicago and Miss Free was a primary teacher in the Forestville School, Chicago.”

Their Chicago locations raise the possibility that, like so many other school personnel at the time, they were taking graduate courses at the University of Chicago which was full of “correct” ideas on the teaching of reading. Smith said on page 150:

“The word range is small. Four words (the, little, red, hen) appear on the first page of the primer, and on the second page we find six new words - the largest number introduced on any of the first ten pages. The cumulative features of the folk tales provide abundant repetition.”

The text was obviously the pure “meaning” sight-word approach, with the same endless repetitions of phrases so familiar today in the omnipresent “whole language” materials. However, on page 134 of the Harvard library copy of the First Reader of 1911, supplemental phonics drill of fifteen or twenty minutes a day was recommended. Smith’s comments suggest that the 1922 manual written by others did not include such a recommendation.

Smith described the approach of this and similar “literature” materials on pages 142-143:

“The essential steps of method advocated in these series were: first, the teacher would tell a story or rhyme to the children until they had memorized it or had become very familiar with it; the selection was then read and analyzed into separate words and phrases; and eventually phonetics was applied in sounding the words. The emphasis upon phonetics, however, was not marked. The authors of the Reading-Literature series of readers say in regard to this phase of reading:

“‘It is not the purpose here to set forth a “scientific system” of phonetics. It is not believed desirable that children in these early grades have even “a complete system” of phonics. It is the aim to give, in this manual, only such work as experience has shown necessary to train children into independent power over words in their reading vocabulary. There have been complete and scientific systems used for drill in the past. There are such systems yet in use in some sections of the country. But these systems have proved generally unsatisfactory. Their failure may be clearly traced to the fact that they are too complex and elaborate.”“

Paper never refuses ink, and so it soaked up the unfounded and fake statement, “these systems have proved generally unsatisfactory.” With that statement, the Chicago “authors,” with their possible “graduate school” ties to the University of Chicago and its “experts” like Judd and Gray, rewrote history. They had buried anew Dr. Leigh and Rebecca Pollard and so many others, including the old Scottish

But that was not all that was buried with that quotation. Smith mentioned “phonetics” and then added, “The authors of the Reading-Literature series of readers say in regard to this phase of reading” after indicating here and elsewhere (pages 142, 149, and 430) that the authors were Free and Treadwell in the period 1910 to 1916. She even gave the reference for the quotation. It was from the Primary Manual. Yet Gates in his 1925 Teachers College Record article, “Problems in Beginning Reading,” indicated that the Primer had indeed, been written by Treadwell and Free in 1910, but the Manual was written by three other women, in 1922, at which time the post-war anti-phonics crusade of Gates of Columbia Teachers College and Gray of the University of Chicago was well under way.

It was hardly news that “experts” like Gray and Gates, and those under their influence, disapproved so publicly of phonics by 1922. After all, Nelson Rockefeller and his brother were being turned into dyslexics at that very time at great expense at the Lincoln School associated with Columbia Teachers College. It was also about that time that Gates told of the poor little fellow who tried to hide behind the piano when his teacher gave the sight-word lessons. Once again, Smith had distorted history by juggling dates and burying names. She wrote her original book as her thesis apparently in 1932, and it was first published in 1934, when the differences between the intellectual climates of pre-war 1910 and post-war 1922, which dates she was juggling, would have been very obvious to her readers. The Free-Treadwell material obviously used A MEANING APPROACH WITH PHONY PHONICS.

N. B. Smith dated Mabel O’Donnell’s Alice and Jerry Basic Readers to the 1940-1950 period (on page 277). However, the following from page 300 of Samuel L. Blumenfeld’s The New Illiterates, 1973, 1988: The Paradigm Co., Boise, Idaho, places its origin at 1936:

“Hillel Black, in his book, The American Schoolbook, tells us that Alice and Jerry have earned Miss O’Donnell $2,700,000 in royalties since 1936.”

A 1957 copy of the first reader in the series, entitled Round About, also shows the first copyright date as 1936. O’Donnell’s material was a controlled-vocabulary MEANING SERIES ALMOST CERTAINLY WITH PHONY PHONICS.

A widely used series is England, Janet and John, is called the “O’Donnell” series, dating from 1949, written by “O’Donnell and Munro.” It is remotely possible it is related to Mabel O’Donnell’s American series.

Dr. Rudolf Flesch’s 1955 best-seller, Why Johnny Can’t Read, has been discussed in this history. As mentioned elsewhere, his 1981 book, Why Johnny STILL Can’t Read was unavailable in many bookstores in 1981. I personally found it to be unavailable in a bookstore in the Port Authority Bus Terminal in New York where a clerk said it had been on order from the publishers for a considerable time. I also found it unavailable in 1981 in the 30th Street Philadelphia Station book store, in a book store in Dallas, Texas, and elsewhere. I then ordered it directly from the publishers. However, Flesch’s 1981 book is now easily available from Barnes & Noble bookstores and from the current publishers, and so is his 1955 book.

See the 1997 entry in Appendix E in which Mona McNee of Reading Reform Foundation in England stated that Dr. Flesch had written her, saying:

Dr. Flesch’s earlier, famous and best-selling, 1955 book included a manual at the back for teaching children to read, the same method that he had used to teach his own little children and the famous older “Johnny,” the son of a neighbor. The book is still in print, and carries on its title page the additional words: “Use this book to teach your child to read in six weeks.” That is overstated, except for an adult total illiterate. For the average six-year-old, it should take several months, and longer for younger children (who would be better off to wait until six years of age). It would take MUCH longer for most older children who have been crippled by the “meaning” sight-word method. In the book, Flesch himself tells of constantly telling Johnny not to guess. Such whole-word guessing is deeply ingrained, highly resistant to change, and interferes with learning true phonics. Flesch’s 1955 book, still available in many libraries and still sold by its publisher, provides one of the easiest-to-locate and simplest methods for a parent to use to teach a child to read.

The Linguistic Science Readers by Clara G. Stratemeyer and Henry L. Smith, Jr., published in 1963, were among the programs used in the 1967 U.S.O.E. first grade studies, which were reported in The Reading Research Quarterly, Summer, 1967.

1912 or Before (In 1912 and 1928 United States Catalogs)
True Education Reader Series (Primer, 1st-7th)
Hale, K. B. and Others
Pacific
   1924 (In 1928 United States Catalog under Primers)
Out-of-Doors
Hale, K. B.
Pacific
   1924 (In 1928 United States Catalog under Primers)
Joan and Peter
Howell, F.
Pacific

No further information is available on these materials.

1912 or Before (In 1912 United States Catalog)
Woodward’s Readers for Grade Schools (5 books)
Woodward and T.

No further information is available on this material.

1912 or Before (In 1912 United States Catalog)
First Book for Children
Valentine, L.
Warne

The relatively uncommon name, “Valentine,” and the date, “1912, are an intriguing combination. Who the publisher, “Warne,” was is unknown but the company may have been English. The 1876 American Catalogue listed Scribner’s reprints of “primer” materials with Mavor’s name, which were almost certainly of English origin and based on materials Mavor wrote in England in the early nineteenth century. Scribner also published in 1876 varieties of “Warne’s” primers, and they were very possibly also reprints of material by an English author or English company named Warne. Valentine might well have been associated with such a company, if “Valentine” was the well-known English reading researcher who defended phonics in beginning reading.

The author of First Book for Children, Valentine, may be that English reading researcher, C. W. Valentine, with his initials wrongly recorded as “L,” or it may have been someone related to C. W. Valentine, such as possibly his wife. In 1912, an American branch of an English company named “Warne” may have been selling Valentine’s or his relative’s work. The question of phonics in reading was a concern in Great Britain by 1912, as shown by C. W. Valentine’s 1913 research, reported on pages 105-106 of Jean Chall’s 1967 Learning to Read, the Great Debate. Valentine’s research was also reported by W. H. Winch as cited elsewhere in this history. Winch said Valentine had disproved Dumville’s pro-sight-word research. Dumville’s research was cited by W. S. Gray in his UNESCO book. Note that, if this was a phonics text, it was out of print by 1928. In “beginning reading instruction,” nothing fails like success. This was POSSIBLY A PHONICS APPROACH.

1912 or Earlier (In 1912 United States Catalog)
Laurel Primer
Hailmann, W. N.
(Promoter of kindergartens, in 1891 Supt. Schools, La Porte, Indiana)
Birchard
1922-1926 (In 1928 United States Catalog. Also from 1924 Advertising Brochure Now at Harvard
Prepared for 1924 NEA Annual Meeting)
(See N. B. Smith, p. 179, 180, 191, 206, 211 and 432)
Laurel Readers (Primer, 1st, 2nd)
Hyer, F. S.
Lincoln Readers (Grades 3-8)
Davidson, Isobel and Charles J. Anderson (On Davidson, see Newson Co.)
(N. B. Smith, p. 211, referred to Davidson and Anderson’s Lincoln Readers Primer, in a list of “Study
Type Readers for Silent Reading”) Also: The Economy Method of Writing
Laurel Book Company, Chicago - New York - Philadelphia

Nila Banton Smith said on pages 179-180 that the Lincoln Readers published by Laurel Book
Company, appearing between 1922 and 1926, were widely used. She said the authors stated:

‘The selections are predominantly informational and testable and are designed as directly
preparatory to the reading of such informational materials as that met in history, geography, and
other informational courses of the elementary school.’

Smith said the readers used checks on silent reading such as yes and no exercises, directions for
making things, answering questions, and so on.

The company’s advertising brochure prepared for the 1924 NEA meeting clearly listed two distinct
names on different levels of the readers, Laurel and Lincoln, and a different author for the lower level
books. Whether there was a Lincoln primer to book 2 section published in addition to the Laurel primer to
book 2 after the advertising brochure for the NEA meeting was printed in 1924, or whether there is
simply a confusion of names on the same primer to book two materials, is unknown.

However, might the “Lincoln” readers, because of the choice of the name, Lincoln, in the 1920’s,
have had some connection with the avant-garde Lincoln School of the 1920’s with its associations at
Columbia Teachers’ College?

Isobel Davidson had also worked with Catherine T. Bryce, the co-author of the Aldine readers, on
1913 and 1916 Newson books, which see. Nila Banton Smith on pages 191 and 432 said Charles J.
Anderson and E. Merton wrote an “expert” article, “Remedial Work in Reading,” published in the
Elementary School Journal in January, 1921 (giving the date as 1920 on page 191). Also, on page 206,
she said C. J. Anderson and Isobel Davidson wrote a book, “Reading Objectives,” on which she did not
give the date.

The Laurel/Lincoln materials apparently were put together by contemporary reading “experts,” and
appear to have used A MEANING APPROACH.

1912 or Before (In 1912 United States Catalog)
Nature and Life Readers (Primer, First) (see 1928 entry below)
Pardee, L. P.
J. A. Lyons (Apparent predecessor to Lyons and Carnahan)
1914 (Library of Congress Copy)
Teachers’ Manual to Accompany Easy Road to Reading
Smith, Carrie J., Ft. Atkinson, Wis.; and Ella D. Howe, Primary Teacher, Columbus, Ohio.
Lyons and Carnahan, Chicago - New York
1919 (In 1928 U. S. Catalog and per Gates 1925 primer article)
Easy Road to Reading (10 books, Primer-8th and Higher and Manual)
(Gates referred to the “revision” of the primer and manual without giving dates. Earlier manual was dated 1914, so revision was presumably 1919.)
(Same title as different World Book series from before 1905)
Smith, Carrie J., and Ella D. Howe, Manual Revised by Frank E. Sanford
Lyons and Carnahan, Chicago
1927-1928 (In 1928 United States Catalog -
Child Story Readers (Primer, lst-6th, Primer Work Book)
Freeman, Frank N.; Grace E. Storm; Eleanor Murdock Johnson; and W. D. French
Lyons and Carnahan, Chicago
1928 or Before (In 1928 United States Catalog)
Nature and Life Readers (Primer, lst-4th) (See 1912 entry above)
Smith, Carrie J.
Lyons and Carnahan, Chicago
1950-58 (Revised 1962) (N. B. Smith p. 326, 337-8-9, 437; reviewed by Blumenfeld in The New Illiterates on p. 302)
The Developmental Reading Series
Bond, Guy L. and Others (Bond worked on USOE reading study of 1967)
Lyons and Carnahan, Chicago
1954
Child Experience Readers
(Copy of lst reader shows controlled, small vocabulary - Happy Children, First reader, after Paul and Betty; and At Home and School)

The 1914 Teachers’ Manual To Accompany Easy Road to Reading said in the Preface:

“The Easy Road to Reading Primer and First Reader are for the child. Every word on every page is for the child to read. Suggestions for seat work, phonic drill, and other material intended for the teacher are entirely eliminated from the child’s book and placed in this Manual, which is the teacher’s book.... It cannot be too strongly emphasized that recognition of the words at sight is the sine qua non of successful work in learning to read.... The teaching of the recognition of written forms usually precedes that of printed forms.... Nothing can equal the teaching effectiveness of the live teacher and the blackboard. The crayon that talks and the teacher who makes the crayon talk are two factors unequaled in potency in aiding the child in acquiring a vocabulary of written forms. Most teachers give from twenty to thirty lessons in reading from the blackboard before placing the Primer in the hands of the child. In these blackboard lessons, the order of procedure is as follows:

“1. Awaken the idea or thought in the mind of the child.
“2. Get the spoken word or sentence.
“3. Present the written form.
“4. Require the oral (or dramatized) expression of the word or sentence....”

On page 45, the manual referred to having already taught “in written and printed form” a vocabulary of ninety-one words, and methods of sight-word drill had been suggested. These 1914 authors would have felt right at home in Colonel Parker’s Quincy schools in 1875. Chapter VI, “Phonics,” recommended daily drill in “sounds” and “families” to form new words: i. e., two-step phony phonics. The Easy Road to Reading was obviously A MEANING APPROACH WITH PHONY PHONICS.
The 1927-1928 Series obviously received heavy reporting by Nila Banton Smith in her “history,” as the pages listed above show. Not surprisingly, the series’ main author, Frank N. Freeman, was at that time with the University of Chicago, where Judd and Gray were located, as was Grace E. Storm. Eleanor Murdock Johnson was a Supervisor at York, Pennsylvania, and W. D. French was Superintendent of Schools, Drumright, Oklahoma. Nila Banton Smith stated on page 232, concerning the approaches in reading books published between 1925 and 1935:

“There is no case in which such small units as letters or words are used in introducing the child to reading. A complete story, a small thought unit, and a combination of sentences, phrases, and words are the three types of introductory units most frequently employed.”

She had clearly testified that phonics was dead in “readers” by 1925. Yet, according to Gates, most teachers still used heavy supplemental phonics until the arrival of his and Gray’s 1930 deaf-mute-method materials. The deaf-mute-method readers did away with such supplemental phonics because of their so-called “intrinsic” phonics (context guessing from a sight-word stew and parts of previously memorized whole sight-words).

Although “reading groups” had been recommended in the 1914 manual above and sometimes elsewhere, “reading groups” only became common after the “meaning”-method readers finally took over and supplementary phonics was finally dropped. That is because “grouping” became mandatory once only the “meaning” method was used. The “meaning” method guarantees failures, but the failures are always spread over a huge range, from what falsely seems to be success to almost total failure. Whole-class instruction, therefore, is no longer possible when the “meaning” method is used to “teach” reading, because of that great spread in “achievement,” which spread does not exist in classes which are taught to read by “sound.” As a result, the “meaning” method to “teach” beginning reading brought along with it the installation of reading groups in classrooms all over America, from what might have been called the “bluebird” top group, through what was perhaps called the “sparrow” middle group, down to what could have been called the poor little “crows.” Time-wasting grouping, where children receive only one-third of the teacher’s instructional time, posed quite a contrast to the previous whole-class reading instruction, when each child received one hundred per cent of the teacher’s instructional time.

Smith stated on page 239:

“...[before 1925] a beginning had been made in the recommendation of ability grouping in reading, the use of diagnostic tests and remedial work - all as a means of meeting individual differences. The number of teachers’ manuals and courses of study, however, which made such recommendations prior to 1925 was exceedingly limited. Since that date practically every publication of either of these types has devoted considerable space to a discussion of these topics....”

It was the mushrooming failures from the post-1925 readers which made “reading groups” and “remediation,” mandatory but that brand-new failure was being publicized by the change-agents who were causing it, like Smith herself, as “progress.” The Freeman 1927-1928 series fitted Nila Banton Smith’s description of post-1925 series, recommending three reading groups in third grade (N. B. Smith, page 240). Harvard library has a copy of My Work Book for Terry and Billy, the Child-Story Primer, published in 1930. The few photocopies available to me now show it concerned, at least in part, the sorting and matching of short, whole, meaning-bearing sentences. That is a pure “meaning” approach. Therefore, the series used A MEANING APPROACH.

Dr. Guy L. Bond of the University of Minnesota, the principal author on The Developmental Reading Series of 1950-58 (revised in 1962), was also a co-author with Miles A. Tinker, also of the University of
Minnesota, of a textbook on the teaching of reading. It was entitled Reading Difficulties, Their Diagnosis and Correction, and was published in 1973 by Prentice-Hall, Inc., Englewood Cliffs, New Jersey. Bond also was head of the 1967 USOE studies on beginning reading, discussed in Appendix E. His reading series was reviewed by Blumenfeld in The New Illiterates on p. 302.

On the 1954 Child Experience Readers, note that the authors were New York City and New York State administrators. That fact recalls the following remarks of Dr. Hilde Mosse, associated with the New York City Schools, quoted elsewhere in this history. She wrote on page 273, under the heading, “Suppression of Critical Studies” (though her remarks do not specifically concern New York):

“The mere mention of the fact that the teaching of phonics had helped one of my patients, for instance, was cut out of an article on “Creativity and Mental Health,” a curriculum journal had asked me to write in 1959....

“Another example is the experience of a guidance counselor and an assistant principal with special expertise in reading disorders. They were charged with investigating the reading difficulties of all the children who attended special remedial reading classes during the summer. They found that all of them had one reading defect in common: they did not know phonics. Their report was never published. They were called to their supervisors and asked how they dared go against the theory of the Associate Superintendent.”

Although the two primers of the 1954 series are not available, a first reader is available. It used a small, strictly controlled vocabulary, which fact indicates that the 1954 Child Experience Readers used A MEANING APPROACH AND PROBABLY PHONY PHONICS.

1912 or Before (In 1912 United States Catalog)
Metcalf-Call Readers (Primer, 1st-3rd)
Metcalf, R. C. and A. D. Call
Johnson, Blagden and McTurnan
1912 or Before (In 1928 United States Catalogs)
Metcalf-Call Readers (Primer, 1st-5th)
Metcalf, R. C. and A. D. Call
Laidlaw Brothers, Chicago and New York
1916 (Reviewed by W. S. Gray in Elementary School Journal., 1917-18, p. 38)
The New Barnes Primer and Manual, The Kearny Plan
Robbins, May - Primary Supt., Kearny, N. J; Herman Dressel, Supt. of Schools, Kearny, N. J.; Ellis U. Graff, Supt. of Schools, Indianapolis.
“A. S. Barnes” was the publisher in 1916, per W. S. Gray. It was presumably a division of American Book if Gray was correct. See American Book, and Laidlaw, below, as the 1924 publisher.
1924 (In 1928 United States Catalog)
New Barnes Readers
Dressel, Herman; May Robbins, Ellis U. Graff
Laidlaw Brothers, Chicago - N. Y. (Also see 1916 entry under Am. Bk.)
1928 or Before (In 1928 United States Catalog)
Sunny Book Readers, Primary Grades (3 Books)
Laidlaw Brothers, Chicago and New York
1928 (In Cumulative Book Index 1928-1932)
Laidlaw Readers
(Listed under Primers as pub. in 1928 but Readers entry gave no date)
Dressel, H. and Others
Laidlaw Brothers, Chicago and New York
1981 or Before (Mentioned by Dr. R. Flesch in 1981 “Why Johnny STILL Can’t Read as one of the Dismal Dozen)
A Laidlaw Reading Series (exact title unknown)

The original Barnes’ New National Readers were published in 1883, and the Barnes Company merged with others to form American book in 1890. The New Barnes Readers and New Barnes Primer of 1916 were also put out under the name of A. S. Barnes Company, but obviously as a subsidiary of American Book Company. Laidlaw apparently bought the Barnes’ series of 1916 (not the 1883 series) from American Book sometime after 1917 or 1918 since the 1924 book six is copyrighted under Laidlaw’s name. According to the 1928 United States Catalog, American Book was still selling the 1883 Barnes series, at the same time that Laidlaw was selling the 1924 revision of the 1916 Barnes series. Neither Barnes series appears in Nila Banton Smith’s 1932 reading “history,” so far as I could see.

Three sources of information are available on The New Barnes Readers - The Kearny Plan, 1916-1924, by Herman Dressel, Superintendent of Schools, Kearny, N. J.; May Robbins, Primary Superintendent, Kearny, N. J.; and Ellis U. Graff, Superintendent of Schools, Indianapolis. One source is my own copy of Book Six, which shows a copyright date only of 1924. The second source is a reference in Arthur I. Gates’ March, 1925, article in Teachers College Record, “Problems in Beginning Reading Suggested by an Analysis of Twenty-One Courses.” The third is a review of the 1916 New Barnes Primer by William Scott Gray in the 1917-1918 Elementary School Journal, page 38. In a footnote, Gray cited the publisher as A. S. Barnes, but A. S. Barnes was absorbed by American Book Company in 1890, so in 1916 it must have been an American Book subsidiary, if Gray’s listing that name was not in error. Gray wrote:

“The New Barnes Primer assumes that reading is a thought-getting process. The first two lessons attempt to develop a basic vocabulary by means of exercises involving a large amount of repetition. Beyond the first ten pages, the lessons are based on interesting, familiar stories such as the ‘Three Bears,’ the ‘Three Little Pigs,’ etc. The distinctive feature of The New Barnes Primer is that silent reading is emphasized from the beginning in order to train pupils to secure the meaning of what is read. The manual provides suggestions for training in word analysis during drill periods.”

Gray did not name the authors. However, Gates did in his 1925 summary of 21 programs:

Gates commented in the body of his article, with statistical tables to support his comment, that all the 21 series he listed gave heavy supplementary phonic drill.

My used-book-store copy of Book Six of The New Barnes Readers - The Kearny Plan, shows it was copyrighted by Laidlaw Brothers, Chicago and New York, in 1924, and it lists the same three authors as shown by Gates for 1916, giving their affiliations and the fact that The New Barnes Readers were subtitled, “The Kearny Plan.”

Sorting all of this out suggests the whole series probably came out about 1916, probably published by an American Book subsidiary, but it then was acquired by Laidlaw, some time before 1924. Presumably there would not have been an eight-year hiatus (1916-1924) from the arrival of the primer in 1916, confirmed by Gray in 1916 and Gates in 1925, to the arrival of book six in 1924, which my copyrighted copy might otherwise seem to suggest. Florence C. Fox’s 1916 comments, quoted under her Putnam book entry, stated that from about 1914 to 1916 a pronounced increased emphasis on phonics was appearing in
“meaning” or “content” series. Gray’s comments establish that the 1916 “Barnes” material used a meaning approach with some kind of phonics in the manual. From combining Gates’ and Gray’s comments on the 1916 manual, it can probably be safely assumed that the material used A MEANING APPROACH WITH HEAVY SUPPLEMENTARY PHONICS DRILL.

Two of the authors of The New Barnes Readers - The Kearny Plan were from Kearny, New Jersey, about twelve miles from Columbia Teachers College. The third was from Indianapolis, which is not so very far from the University of Chicago for any administrators who might wish to enroll for summer courses. On the back of the title page of the 1924 sixth reader appeared:

“Grateful acknowledgment is given Elda L. Merton, Assistant Superintendent of Schools, Waukesha, Wisconsin, for helpful suggestions in the preparation of Test Paragraphs appearing throughout the book.”

Waukesha was also not so very far from Chicago for any administrator wishing to enroll for summer courses. It is noteworthy that so many of the most widely used reading series from about 1907 (the Aldine) to 1930 were written by school personnel who had been located not too far from New York or Chicago, where they were so likely to have taken graduate courses under prime movers in “education” at Columbia Teachers College in New York and the University of Chicago in Chicago.

The series Laidlaw was publishing in 1981, on which I have no other information, was listed as one of “The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. That suggests it used A MEANING APPROACH WITH PHONY PHONICS.

---

1913 (In 1928 United States Catalog under Primers)
See and Say Phonetic Series (1st-3rd, each with manuals)
Arnold, Sarah Louise; Elizabeth C. Bonney; E. F. Southworth
Iroquois Publishing Co., Syracuse, New York

Sarah Louise Arnold had written much widely used material before this series, such as Silver-Burdett’s Stepping Stones to Literature, with the “meaning” approach. Yet, with the “sound” approach, she apparently had to resort to an apparently unknown publisher. The 1913 material is presumed to use A PHONIC APPROACH.

---

Kewpie Primer
O’Neil, Rose
Frederick A. Stokes Co., New York

From Gray’s description, the 1916 material was almost pure sight words and meaning, lacking even sight-word repetition, though it used some “word building.” It was so bad, however, that even W. S. Gray recommended that it be “supplemented by drill exercises to develop power in word analysis,” i.e., Code 3 phony phonics. The material can be classified as A MEANING APPROACH.

---

1918 (In 1928 U. S. Catalog - Harvard copy of Primer Manual)
Winston Readers (Pre-Primer, Primer, 1st-5th, Manual)
Firman, Sidney G. and Ethel H. Maltby (Gehres)
The Winston Readers of 1918 were written by Sidney G. Firman, Superintendent of Schools, Glen Ridge, New Jersey, and Ethel M. Maltby (Gehres), of Corning, New York. Their 1918 Primer Manual, which reproduced the pages of the actual primer, is particularly odious. The method used was the sentence approach from the very beginning of the primer, and then it very soon began to use absolutely classic two-step phony phonics, which is, of course, the French Code 3 “echo” method devised in the eighteenth century. The material is A MEANING APPROACH WITH TWO-STEP PHONY PHONICS.

Nila Banton Smith wrote on pages 175-176:

“William Dodge Lewis and Albert Lindsay Rowland were the first authors to produce a complete set of readers devoted to silent reading, under the title The Silent Readers (The John C. Winston Company). The authors were well prepared for their work; both had practical school experience and both held doctor’s degrees. At the time the books appeared, Lewis was Deputy Superintendent of Public Instruction in Pennsylvania, and Rowland was Director of the State Bureau of Teacher Training of Pennsylvania.”
Note that Rowland with his wrongheaded ideas on teaching reading was in charge of “teacher training” for the whole of Pennsylvania about 1924, which certainly boded ill for “teacher training” in the teaching of reading in Pennsylvania. Of course, no government official in a truly free society should ever have anything whatsoever to say about teacher training. In our society, such attempts to control teacher training are manifestly violations of the Bill of Rights which guarantees freedom of speech.

Concerning the 1960-1962 Winston Basic Readers, Nila Banton Smith quoted this remarkable statement of Dr. Stauffer’s, on page 331 of Smith’s book:

“At the heart of this program is the authors’ firm belief that children can and do think and that reading is importantly concerned with the thinking process. Deliberately selected stories in each of the readers focus on problem-solving situations. From first through sixth grades, the directed Reading-Thinking Activity invites children to value and to improve their skill in critical thinking.”

The 1990’s emphasis on the so-called “skill” of critical thinking, the ultimate oxymoron, was therefore promoted by Stauffer by the 1960’s. Those who promote such programs are themselves lacking in “critical thinking” or they would not state that such self-evident and demonstrable facts as “...children can and do think” rank only as “beliefs.”

A copy of the Winston series primer, Come with Me, (1960), states it includes 83 new words, plus the 56 at the pre-primer level. It also states:

“Each of the 139 words is maintained by being used a minimum of ten times after it is introduced.”

The primer is presumably followed by the customary First Reader, which is the regular basal-reader first grade sequence.

Therefore, the total printed words taught in grade one (but only for those who succeeded!) would be 139 plus the first reader words. The whole first-grade-year reading program provides remarkably few words for the “successful” children to “think” with. By contrast, Walcutt’s and McCracken’s 1963 first grade phonic series contained about 2,000 words, and in addition taught children to sound out any word they met in print. The Russian Soviet programs at about that time contained about the same number of words and also provided the same independence in reading by the end of first grade. The 1960-1962 Winston series used A MEANING APPROACH AND MOST PROBABLY WITH PHONY PHONICS.

The Holt, Rinehart & Winston series in 1981 was listed as one of “The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. The material therefore presumably used A MEANING APPROACH WITH PHONY PHONICS.

#Publishers First Appearing in This List Between 1920 and 1930

1924 (In 1928 United States Catalog under Primers)
Clinton Primer
Clinton, M. B. and E. E. Lewis
W. S. Benson and Co., Austin, Texas
No further information is available on this material.

1924 (In 1928 United States Catalog under Primers)
Here and Now Primer
Mitchell
Dutton

No further information is available on this material.

1924-1926 (In 1928 United States Catalog)
Modern School Readers (Primer - 5th)
Thompson, R. and H. B. Wilson
Wagner, Harr

1925 (In 1928 United States Catalog under Primers)
Jingles, A Reader for Beginners
Power, A. R.
Wagner, Harr

1928 or Before (In 1928 U. S. Catalog under Primers)
Alaska Primer
Porter, Z.
Wagner, Harr

No further information is available on these materials.

1927 (In 1928 United States Catalog)
Tiddly Winks Primer, Rev. Ed
Six Tiddly Winks and the A-to-Zees (reader with no date)
Smith, L. R. (See also Smith’s Flanagan publishers)
Whiteman, Albert (publisher)

The titles make it evident this was a sight-word series with phony phonics. Its first book obviously must have begun with the word “Tiddly,” a complex phonic form which would have to be taught as a whole to rank beginners. Apparently, it was only in the second book that the alphabet was covered (the “A-to-Zees”).

1928 or Before (In 1928 United States Catalog under Primers)
Easy Primer
Burnett, E. M.
Ryerson Press

No further information is available on this material.

1928 or Before (In 1928 United States Catalog)
Corona Readers
Egan, M. F. (Catalog shows, “See main entry,” so it was apparently popular or it would not have had an individual entry besides being listed in the “readers” section. It was possibly a Ginn series since Egan wrote Ginn materials.)

1928 or Before (In 1928 United States Catalog)
Imperial Readers (Books 1, 2, 3)
Renouf Pub.

No further information is available on this material.

1928 or Before (In 1928 United States Catalog)
Natural Readers (Primer, 1st-5th)
Robbins, F. W.
F. M. Ambrose

1928 or Before (In 1928 United States Catalog under Primers)
Rhyme and Story Primer
F. M. Ambrose

No further information is available on these materials.

1928 or Before (In 1928 United States Catalog)
Strang Readers (1st-6th)
Strang, Mrs. H.
Oxford

No further information is available on this material.

1928 or Before (In 1928 United States Catalog)
Life and Literature Readers (Primer, 1st-3rd)
Talbert, L. E. (See Talbert primer under Ginn)
Doubleday

No further information is available on this material.

1928 or Before (In 1928 United States Catalog)
Parmly Readers
Parmly, M. (Has note, “See author entry,” so apparently popular.)

No further information is available on this material.

1928 or Before (In the 1928 United States Catalog)
Mary Domitilla, Sister
Ideal Catholic Readers. “See author entry.”

No further information is available on this material.

1928 or Before (In the 1928 United States Catalog)
Catholic Education Series.
First to fourth “books” and third to fifth “readers.”
Shields, T. E.
Catholic Education Press.

No further information is available on this material.

1928 or Before (In the 1928 United States Catalog under Primers)
Ready to Read. “See main entry.”
McLaughlin, E. M. and Sister Mary Ambrose, eds.
No further information is available on this material.

#Publisher First Appearing in This List Between 1930 and 1940

1930’s, With Revisions to 1990 (See Chall, Learning to Read)
The Carden Method (In most subjects, kindergarten to grade 12)
Carden, Mae
Carden Educational Foundation
Brookfield, Connecticut (Previously in Glen Rock, New Jersey)

The Carden materials have been frequently revised, and contain children’s books and very elaborate teacher’s guides (the latter a little forbidding in appearance). Miss Carden reportedly was tireless in training teachers and in giving demonstrations of her method. Her reading instruction materials are indisputably excellent and have an astonishing track record of success, mostly in private schools.

Nila Banton Smith received her doctorate from Columbia Teachers College about 1932. However, Mae Carden dropped out of Columbia Teachers College in the early 1930’s, where she had been enrolled in a program for a doctorate because she was so appalled by the reading methods which were endorsed there. Carden then wrote her own programs, financing them reportedly with her own funds, since she was a rich woman. The results of Mae Carden’s programs were praised in a Saturday Evening Post article of September 9, 1961, “These Children Love to Read,” by Frances Rummel. Despite Carden’s astonishing success and the nationwide attention given to her success by that Saturday Evening Post article, Mae Carden is not even mentioned in Nila Banton Smith’s 1965 revision of her so-called reading “history,” American Reading Instruction, the original version of which Nila Banton Smith had written about 1932 at Columbia Teachers College as her doctoral dissertation. The contrast between the worth of “Dr.” Nila Banton Smith’s work and non-“Dr.” Mae Carden’s work is just one more indication that the value of academic degrees such as the Ph. D. is, at the very least, to be questioned. The Smith/Carden history suggests that such academic degrees are sometimes the result of a willingness to conform rather than the result of a pursuit of truth.

Miss Carden died not long ago, but her company continues in existence, as a foundation. One point on which she was in error was her refusal to use pictures in beginning reading materials. However, her materials were otherwise indisputably excellent and used a true PHONIC APPROACH.

#Publishers First Appearing in This List Between 1940 and 1950

1940 (See Chall, Learning to Read)
Remedial Training for Children with Specific Difficulty in Reading, Spelling and Penmanship
Gillingham, Anna and Bessie Stillman (Based on Dr. Orton’s work)
Sacket and Williams Lithographing Corp., New York

These materials are heavily and truly phonic.
Chall said on page 16:

“Even before Why Johnny Can’t Read appeared, some school systems were using concentrated supplemental phonics programs - Reading with Phonics (Julie Hay and Charles E. Wingo), Phonetic Keys to Reading (Theodore L. Harris et al.), Phonovisual Method (Lucille D. Schoolfield and Josephine B. Timberlake). Since 1955, however, many more phonics programs have been published, only a few of which are mentioned here....”

Chall said on page 348 concerning her evaluation of reading programs:

“...I distinguished between programs teaching sounding and blending [Ed.: true synthetic phonics], those teaching analysis and substitution [Ed.: what I label two-step phony phonics], and those teaching the child to spell (say the letters) [Ed.: the old ABC-word approach of the nineteenth century]. An example of the first is the Phonovisual Method, which teaches blending of sounds through a simple technique that uses the concept of a moving train....”

The moving train technique recalls an approach I saw in use in Sweden in 1977. The teacher asked the children to think of blending in terms of a sailboat reaching a dock. However, sounding and blending of letters sounds to determine unknown words is rare in America, even in most phonic methods. Its use is certainly a strong point in favor of the Phonovisual Method. Nevertheless, Chall recorded that the Phonovisual Method was not a straight phonic method. She said the following on page 333, concerning the major emphasis in this program, according to the publisher’s answer to her questionnaire sent to such publishers in the late spring of 1966:

“Major emphasis (according to publisher): Phonic (‘phonics’ is ‘another tool’ - a ‘supplement’ not a ‘substitute’ for sight reading or the various other means of word recognition)”

A SIGHT-WORD SERIES FROM ENGLAND

1949
The Janet and John Books
O’Donnell and Munro

This series was apparently very popular in England. It is remotely possible that the O’Donnell of The Janet and John Books was the Mabel O’Donnell who wrote The Alice and Jerry Basic Readers which were published by Row, Peterson & Co., Chicago, from 1936 until some time after 1957.

#Publishers First Appearing in This List Between 1950 and 1960

1952, 1953, 1958 (See Chall, Learning to Read)
Phonetic Keys to Reading, and
Keys to Independence in Reading
Sloop, Cornelia B., et al
The Economy Company, Oklahoma City, Okla.
1964 (Reviewed in Blumenfeld’s The New Illiterates, p. 306; see Chall, Learning to Read)
Phonetic Keys to Reading, A Basic Reading Series
Harris, Theodore L.; Mildred Creekmore; Margaret Greenman
The Economy Company, Oklahoma City, Oklahoma (Related to Laurel Co.?)

Chall said on page 16

“Even before Why Johnny Can’t Read appeared, some school systems were using concentrated supplemental phonics programs - Reading with Phonics (Julie Hay and Charles E. Wingo), Phonetic Keys to Reading (Theodore L. Harris et al.), Phonovisual Method (Lucille D. Schoolfield and Josephine B. Timberlake). Since 1955, however, many more phonics programs have been published, only a few of which are mentioned here....”

The original Economy material was apparently heavily phonic but was only a supplemental program. However, the later material was a complete basal reader series, and not supplemental material. It was listed as one of “The Phonic Five,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. I disagree with Flesch’s rating of this material as a truly phonic program, as the materials which I saw were heavily geared to “meaning” and had insufficient phonic emphasis.

A PHONIC SERIES FROM ENGLAND:

1954, 1959, 1960 (See Chall, Learning to Read)
The Royal Road Readers
Daniels, J. C. and Hunter Diack
Chatto & Windus, Ltd., London

Jean Chall said on page 4:

“England saw the beginnings of a similar controversy [Ed.: on reading methods] in 1956 with the publication of the first experimental report of J. C. Daniels and Hunter Diack. These authors concluded that their newly devised approach, which they called the “phonic-word method,” produced better results than the prevailing mixed methods (sight, then phonics) then in use in England.”

Chall said further on page 24 concerning the Daniels and Diack materials:

“The Royal Road Readers use a ‘phonic-word’ method created by the authors as a way around the shortcomings of both the sight and the phonic approaches. The child who follows this program does not isolate and blend sounds, as he would do in synthetic phonics programs. Instead, he is expected to learn sound-letter relations from a beginning reading vocabulary that is controlled for spelling regularity, and he is taught what the letters “mean” through a process of visual analysis and substitution resembling quite closely the phonics instruction in conventional American basal series. Theoretically, controlling words for spelling regularity helps the child discover for himself the relationship between sounds and letters. Although Daniels and Diack do not call their approach “linguistic,” in many ways it does resemble the linguistic innovations of Leonard Bloomfield, whose beginning reading program also controls vocabulary for spelling regularity.”
However, Chall said the following on page 170 concerning the teaching of letter sounds without teaching the blending of letter sounds, which was the approach of the Royal Road materials. These comments suggest that The Royal Road Readers which did not teach such synthetic phonics must have been inadequate:

“But [Dr. Samuel T.] Orton [a neurologist] also stated that a phonic method in the initial stage does not guarantee success. He cites reading-disability cases who had learned to give the sounds for the letters and phonograms, etc., but still could not read:

“'In these cases, examination has revealed the fact that while the teaching of the phonetic [i.e. phonic] equivalents may have been fairly complete, the next and most cardinal step, that of teaching the blending of the letter sounds in the exact sequence in which they occur in the word, had not been attempted or had been poorly carried out. It is this process of synthesizing the word as a spoken unit from its component sounds that often makes much more difficulty for the strephosymbolic child than do the static reversals and letter confusions.'"

Chall added in a footnote on this page:

“In a series of studies going back as far as Gates et al (1939), auditory blending has been found positively related to reading achievement....”

Chall said on page 334 that, in answer to her questionnaire, the publishers stated that the major emphasis in this program was on “a phonic word method.” The program was listed as among those used in the 1967 U.S.O.E. first-grade studies (in Project 2735, Nita M. Wyatt, University of Kansas, one of many).

The Royal Road Readers created a great stir in England but then went out of print, just as so many phonic series have done in this country.

1956, 1964 (See Chall, Learning to Read, p. 34, 35, 329, 334)
Sounds and Letters
Hall, Frances Adkins
Linguistica, Ithaca, New York, Distributed by Chronicle Guidance Publications, Moravia, N. Y.

Jean Chall recorded the following, concerning the major emphasis in this program, according to the publisher’s answer to her questionnaire sent to publishers in the late spring of 1966:

“Major emphasis (according to publisher): Phonemically based
('I definitely do not consider it a phonic approach')”

Yet Chall’s conclusion, on page 38, was that this program and “linguistic” programs like it:

“...may be classified as either phonic or linguistic.”

Concerning the “linguistic” programs which were so popular in the 1960’s, Dr. Chall wrote on page 118:

“In fact, the best results [Ed. in linguistic programs] probably come from using some control of spelling patterns and directly teaching their sound values. Indeed, this is what several of the
new “linguistic” reading programs do - the Allen Reading Materials, Sounds and Letters, The Programmed Reading Series, and The Structural Reading Series.”

---

1957 (Revised 1963) (N. B. Smith p. 326, 329-331, 437; reviewed in Blumenfeld’s The New Illiterates on page 300)
Sheldon Basic Reading Series (1st to 8th grade texts)
Sheldon, Wm. D.; Mary C. Austin; Queenie B. Mills; Robert A. McCracken; Merle B. Karnes; Bess M. Saddoris
Allyn & Bacon, Inc., Boston

The 1957 Sheldon material was one of the programs used in the 1967 U.S.O.E. first-grade studies. As described by Nila Banton Smith on page 332 of her book, the primer used the standard basal reader MEANING APPROACH.

The Allyn & Bacon series in 1981, presumably a different series from the 1963 revision show above, was listed as one of “The Dismal Dozen,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981.

---

The Writing Road to Reading
Spalding, Romalda Bishop with Walter T. Spalding
1989-1990 (In The Beginning Reading Instruction Study, 1993)
Spelling & Reading With Riggs
(To be used in conjunction with The Writing Road to Reading)
McCulloch, Myrna T.
K & M Publishing, Beaverton, Oregon

The late Mrs. Spalding’s phonic program, in the form of a teacher’s guide, has been widely used and was praised by Dr. Hilde L. Mosse in her work, The Complete Handbook of Children’s Reading Disorders, 1982: Human Sciences Press, Inc., New York.

In the Spalding program, children are taught to write 70 basic “phonograms,” which had been given to Mrs. Spalding by Dr. Samuel T. Orton, the neurologist. These phonograms are then used in spelling high-frequency words. Mrs. Spalding used the Extended Ayres List of the 1700 commonest words (Buckingham’s list) for this purpose. However, whether it is desirable to work with the commonest words in teaching beginning reading, which risks placing the emphasis on meaning-bearing words instead of sound-bearing syllables, is open to question. Her program reportedly gives heavy drill on symbol-sound correspondence before concentrating on the high frequency words, which may remove that objection. Nevertheless, as Dr. Chall pointed out on page 345:

“...the Spalding system is difficult because the words are not selected on a spelling-regularity principle to ease the transfer of the various elements learned.”

Because of the drill on the 70 basic phonograms, Spalding’s reportedly very successful program uses A PHONIC APPROACH.

The above two programs were included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Instructional Approaches.” As such, these programs did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the
basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Instructional Approaches” section, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On The Writing Road to Reading program in its copyright version of 1990, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

On the Spelling & Reading with Riggs program in its copyright version of 1989-1990, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit,” and “Decoding strategy... Blending taught explicitly.” It is, of course, a Code 10 phonic program which this vague method of rating does not make sufficiently clear. Mrs. McCulloch’s materials are a great improvement to the basic Spalding program, which was very difficult to use without such materials.

On page 34, Jean Chall wrote:

“Another beginning reading program that may be classified as representing a linguistic approach is the Language through Picture Series, or First Steps in Reading English Series, coauthored by Christine M. Gibson and Ivor A. Richards. This program controls both letters and sentence patterns. The letter control is primarily visual. Unlike the Bloomfield program, there is no attempt to control the first words either on spelling regularity or on a one-sound-to-one-letter principle - e.g., this and his are among the first words taught. Like Bloomfield and Fries, Gibson and Richards do not teach the sound-letter relationships directly. Their major concern is with control of syntax or sentence patterns.

“We can see from these brief descriptions that there is no one ‘linguistic method.’”

Chall said the following on page 332, concerning the publisher’s answer to her questionnaire sent to such publishers in the late spring of 1966:

“Major emphasis (according to publisher): Reading for meaning with attention to alphabetic identification and word intake.”

1957, 1961 (All SRA below except DISTAR listed in Jeanne Chall’s Learning to Read)
Reading Laboratory 1a
Reading Laboratory 1: Word Games
Parker, Don
Science Research Associates, Inc.,
Chicago, Illinois (Became IBM Subsidiary 1964; became McGraw Hill subsidiary some time before 1994, and may or may not still be.)
1963
The SRA Reading Laboratories were in exceedingly wide use in American classrooms until the 1980’s, and may still be in wide use. Kits are provided for all levels from about late first grade to upper grades. Children use individual cards and proceed at their own rates.

The SRA materials are particularly subject to children’s “cheating,” since children are supposed to mark their own cards. Frequently, unless a teacher is very careful, children simply copy answers to the questions on the SRA story cards from the answer-key cards in the kit, as I know from my own classroom experience with the materials over many years.

The SRA story cards consist of a “phonie” section (whole word phony phonics) and a “reading comprehension” section, with an illustration. The reading content is frequently very interesting, but since the cards jump from one subject to another, and there is no sequence of subject matter from one card to
another that the children can use as a framework with which to organize the content in their own minds, very little long-term learning is likely to result.

Yet the purpose of the cards is not to teach subject matter, but only to “teach” “reading comprehension,” which is, as an oxymoron, quite unteachable. The original material attempting to do the same kind of thing was the McCall-Thorndike practice-paragraph material in the 1920’s. Such self-corrected silent reading exercises do show children whether they are or are not paying attention to what they read. They therefore encourage voluntary attention on subsequent selections which the children know will have to be marked, and on which they most naturally want to avoid an embarrassing low mark. Beyond encouraging voluntary attention (but only on such cards, with probably no carry-over on other material), such cards serve little purpose. The time would be better spent studying properly organized subject matter, and then testing on that content, thus producing real learning. The virtually useless phonics portion on the SRA reading comprehension cards is PHONY PHONICS.

However, the rarely used SRA kit of word games, which games are probably too difficult for most children to use independently, do have wonderfully organized analytic phonic materials. While they use whole-word, two-step phonics, the cards could be used very effectively by a careful teacher for many purposes, most commonly for remediation. However, I have not seen the Word Games Kit for some fifteen years so am unfortunately depending only on my memory for these comments. The Word Games are EXTREMELY THOROUGH TWO-STEP PHONICS MATERIALS.

On pages 353 and 354 of her book, Dr. Chall wrote:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters)- e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

From Dr. Chall’s comments, the SRA Basic Reading Series does not use the phonics approach, but the “linguistic” method.

The BRS program was included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Other Instructional Programs.” Since BRS is a true basal program, it is not clear why it was not included in the basal reader section. Programs in the “Other Instructional Programs” section of The Beginning Reading Instruction Study did not receive the degree of sampling and study which was given to the basal reader programs. In the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” analysis, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On the BRS edition of 1985, The Beginning Reading Instruction Study of 1993 showed it included no activities on “Sound/symbol relationships,” either “Explicit” or “Implicit.” It did include “Decoding strategy... Implicit,” but did not include “Decoding strategy... Blending taught explicitly.”

Distar was listed approvingly as one of “The Phonic Five,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. While the phonic content is certainly good, the teaching materials are, in my opinion, far too rigidly programmed, particularly for use with little
children. To quote from the article, “Goodbye to Bad Grades” in Think Magazine of IBM, 1979, at which time IBM was temporarily the publisher:

“The system relies heavily on repetition, demonstrations, immediate feedback, positive reinforcement and drill exercises. The pace in the half-hour lesson is steady and swift. The Distar method has been called ‘verbal bombardment’ because the teacher functions with written instructions (a script) from which there is almost no deviation throughout all 160 lessons.”

The Distar material is meant to be taught to small groups of five or ten students, but, even so, “no deviation” is an extraordinarily undesirable standard. The article also said:

“In Chicago, the Distar method is introduced to three-year-olds in five of the inner city’s 2 child/parent centers. At age four, the children are ready for Distar Reading I.”

Yet, as shown by the norms established by Dr. Elizabeth Koppitz in 1963 on the Bender Gestalt test of visual-motor integration, average children of four years of age cannot adequately draw many simple geometric patterns, even when they are looking straight at them and have no time limit. Therefore, average children of that age are NOT ready to distinguish one letter from another and to read them in combinations in words. To try to teach many four-year-olds to read is only to torment them unnecessarily and to court pathetically large failure rates. Soviet curriculum was arranged for about fifty years by its psychologists. It is no accident that Soviet children had to reach seven years of age before they could begin first grade.

For the reasons stated above, its rigidity and its promotion of teaching beginning reading to three- and four-year-old children, this reviewer believes that the Distar program is grossly defective. Nevertheless, the Distar program does use A TRUE PHONIC APPROACH.

The Ready-to-Read computer program has received considerable publicity and is still being marketed by IBM, although Distar no longer is. While the attempted phonic instruction by computer in the Ready-to-Read program progresses, kindergarten children use the computers to help them write their freely-spelled stories. The program has been widely criticized because the wild and apparently uncorrected spellings which children make while using this program may retard progress. It uses, nevertheless, A PHONIC APPROACH APPARENTLY WITH SOME SIGHT WORDS.

The Merrill Linguistic Reading Program copyrighted in 1986, a revision of the original program published in 1965 by the Charles E. Merrill company, was reviewed in The Beginning Reading Instruction Study of 1993. It is not an explicit phonics program. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the Merrill Linguistic samples at first grade, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit,” which is the usual “linguistic” approach. For “Decoding strategy... Implicit,” the score had also been 6/6, also the usual linguistic approach, but for “Decoding strategy... Explicit,” the score was zero. Furthermore, not a single sample concerned “Decoding strategy... Blending taught explicitly.” Yet, since the material probably is organized to show language patterns, it also must demonstrate phonic regularities. To the extent that it does, it can be used to teach explicit synthetic phonics, although that is clearly not the intent of its authors.

Reading Mastery, which was copyrighted in 1988, is presumably a revision of Siegfried Engelmann’s original DISTAR program. It was reviewed in The Beginning Reading Instruction Study of 1993. It is an explicit phonics program. Six samples had been taken from all the different basal reading series being reviewed, and the samples had then been analyzed for content. For the Reading Mastery samples at first grade, all had concerned “Sound/symbol relationships... Explicit.” For “Decoding strategy... Explicit,” the
score was also 6/6. For “Decoding strategy... Blending taught explicitly,” the score was also 6/6. In the 1993 government study of full basal reader programs (not supplemental programs), only Reading Mastery (DISTAR) and Open Court received such properly high scores for the teaching of true synthetic phonics in first grade. Since basal reading programs are presumably still the widest used in American first grades, that means the great majority of American first graders are not being given proper instructional materials today, even without considering the fact that the poison of the “whole language” approach has also been massively propagandized for American first grades. For some reason, however, the Scribner (ex-Lippincott) program, which still has some diluted true phonic emphasis at first grade, was not included in the 1993 study. Of course, it is possible that it was no longer being marketed in 1992-1993 when the study was being prepared.

The Beginning Reading Instruction Study of 1993 reviewed Pathways to Literacy by Billie E. Lieberman in its “Other Instructional Programs” section. It showed that Pathways to Literacy had no activities on “Sound/symbol relationships.... Explicit” but did have “Implicit” activities. It did not teach “Decoding strategy... “Explicit” but did teach “Decoding strategy... Implicit.” The program did not include “Decoding strategy... Blending taught explicitly.” The SRA School Group (Barnell Loft), Chicago, Illinois, is apparently a successor to the original Barnell Loft concern which published (presumably among other materials) supplementary reading instruction materials for elementary schools.
Let's Read (One book originally, later 9 small books and workbooks)

Bloomfield, Leonard and Clarence L. Barnhart
Wayne State University Press, Detroit, Michigan
(The Beginning Reading Instruction Study, 1993, lists Educators Publishing Service of Cambridge, Massachusetts, as the 1992 publisher. See that 1971 entry.)

On pages 353 and 354 of her book, Dr. Chall wrote:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters) e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

Bloomfield was adamantly opposed to real, sounding-and-blending synthetic phonics. His method was “linguistic,” teaching children to read from whole words and their sounds. Yet, when his materials, organized by the sound patterns in whole words, fall into the hands of most teachers, most probably instinctively would teach real phonics, just as many 1916-1930 teachers must have done with supplementary materials like those on Winston’s 1918 Code 3 phony phonics texts. It is interesting that even Rudolf Flesch, in his 1955 Why Johnny Can’t Read, misunderstood Bloomfield’s intent and thought he backed real phonics.

As a rather interesting footnote, a young Austrian college student in Innsbruck, Austria, in 1977, who had acted as my interpreter during my meeting with a school official in the city schools’ central office, told me that Bloomfield was considered in Austria to have been given credit for certain work in linguistics when the credit should actually have been given to an Austrian.

The Bloomfield/Barnhart Let’s Read program was one of the 27 programs used in the 1967 U.S.O.E. studies, listed in Appendix E.

Bloomfield’s material was organized and published after his death by Clarence L. Barnhart, who surprisingly had worked on the Thorndike-Barnhart school dictionaries. The Bloomfield-Barnhart material received heavy opposition from “reading experts.” It is MEANT AS A LINGUISTIC PROGRAM BUT CAN BE USED AS A PHONIC PROGRAM.

City Schools Reading Program
Writers’ Committee of the Great Cities School Improvement Program of the Detroit Public Schools
Follett Publishing Company, Chicago

Dr. Jean Chall wrote on pages 44-48:

“The first three preprimers of the City Schools series contain about half the number of different words in the usual three preprimers of conventional basal series. In general, the authors seem to accept all other aspects of the prevailing view: a slow, easy start; emphasis on meaning and appreciation from the beginning; introduction of sight words first; control of vocabulary for
meaning frequency. Also, phonics and other word-analysis skills are introduced later and taught primarily through an analysis of known sight words.”

Dr. Chall reproduced on page 47 of Laugh with Larry, presumably one of the three preprimers, which used a standard sight-word approach:

“Look, look, Mother. See Wiggles. Wiggles can get the ball. See Wiggles get the ball. See Wiggles play ball.”

Yet the publisher considered this to be phonic material. Dr. Chall recorded the following concerning the answer she received on the questionnaire she sent to publishers:

“Major emphasis (according to publisher): Phonics (‘although, as you say, you understand that no single approach is used in any series’)”

On pages 353 and 354 of her book, Dr. Chall wrote:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters)- e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

Therefore, Moore’s program obviously does not use phonics. His material did not consist of a set of readers. Moore attempted to teach reading to two and three years olds in what can be described as a laboratory setting using automated typewriters and equipment. His approaches were discussed more fully by Dr. Chall.

Dr. Chall wrote on pages 31-34:

“Another linguistic program that selects words on a spelling-regularity principle and teaches the sound values of the letters is Sounds and Letters by Frances Adkins Hall. The Structural Reading Series by Catherine Stern also incorporates the above features, but in addition uses color as a cue and teaches writing and spelling at the same time.”

This program was among those used in the 1967 U.S.O.E. first grade studies, reported in the Summer, 1967, issue of The Reading Research Quarterly.

In her book, Dr. Chall wrote concerning the answer received to her questionnaire to publishers:
“Major emphasis (according to publisher): Synthetic approach to phonics also called ‘modified linguistic approach’

Open Court Basic Readers
McQueen, Priscilla L., and others
Open Court Publishing Company
La Salle, Illinois

1989 (Reviewed in The Beginning Reading Instruction Study, 1993)
Open Court Reading & Writing
Hirshberg, Jan, Carl Bereiter, Ann Hughes, S. A. Bernier, Nellie Thomas, Valerie Anderson, Jerome D. Lebo, Marlene Scardamalia, Ann Brown, Joseph Campione, Walter Kintsch
Open Court Publishing Company
Chicago, Illinois

This series, which has been frequently revised, apparently far more so than in the revisions noted above, was listed approvingly as one of “The Phonic Five,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. It has always been, and presumably still is, a very effective phonic series. However, the content of some of the upper-grade books has been reported by some teachers to be too far above the mental age of the children, although I have been told revisions have been made to correct this. Mrs. McQueen, an author on the first edition, later published her own series, listed below. Open Court has apparently always used a true PHONIC APPROACH.

Open Court Reading & Writing series of 1989 was reviewed in The Beginning Reading Instruction Study of 1993. Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For the Open Court Reading & Writing samples at first grade, 6/6 had concerned “Sound/symbol relationships… Explicit” and none had concerned “Sound/symbol relationships… Implicit.” For “Decoding strategy… Implicit,” the score had also been 0, but for “Decoding strategy… Explicit,” the score was 6/6. Furthermore, every sample scored for “Decoding strategy… Blending taught explicitly.” Obviously, the Open Court program is a true, Code 10, synthetic phonics program.

Something which is wryly amusing should be mentioned concerning the current near hysteria on “whole language” with its supposed emphasis on “real literature.” The Open Court series has always made an intense effort to teach “real literature” and undoubtedly still does. Yet it cannot be considered a “whole language” series.

1963 (Grade l-1 on McQueen’s Open Court material) 1967-1968 (Grades 1 to 3 on McQueen’s own material, reviewed in The Beginning Reading Instruction Study, 1993)
McQueen Basic Readers (Grades 1 to 3)
McQueen, Priscilla
McQueen Publishing Company
Tiskilwa, Illinois

Mrs. McQueen was an author, the main author, apparently, at the beginning level of the 1963 Open Court series which has been so highly successful because of its Code 10 phonic approach at that beginning level. The copyright dates suggest that in 1967 she began marketing her own basal reading program with books through grade three. Mrs. McQueen’s reading series, which I have seen exhibited at Reading Reform Foundation meetings in the early 1980’s, is physically very attractive and apparently uses a straight Code 10 PHONIC APPROACH.
The McQueen program was inexplicably included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Other Instructional Programs,” rather than in the section entitled “Basal Reading Programs.” Yet it is a basal reading program! Programs in the section entitled, “Other Instructional Programs” did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” section, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On the McQueen Integrated Phonics and Language Arts material, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.” That vague rating, which told nothing about the degree of emphasis, certainly did not make it clear that the McQueen program undoubtedly rates a straight Code 10 on the teaching of synthetic phonics.

Programmed Reading Books
Buchanan, Cynthia Dee, Program Director, and Sullivan Associates
Webster Division

These self-correcting “linguistic” books are apparently meant to be handled by the children individually and silently, which would be very undesirable for rank beginners. I have used them, however, orally with non-English speaking Korean children and found them to be very effective, since the pictures and content supplied the meaning of the words to these children who knew no English, while simultaneously teaching them to read alphabetic print. If used orally with a teacher’s careful phonic direction, these workbooks could be very effective for phonics teaching and/or for language teaching, at least at the lowest levels while the student is learning the mechanics of reading and/or of pronouncing English. However, at that beginning level, if used silently, they would be akin to the deaf-mute sight-word method. However, ONLY IF USED ORALLY UNDER A TEACHER’S PERSONAL DIRECTION AT THE BEGINNING LEVELS, THESE WORKBOOKS CAN BE USED AS A PHONIC APPROACH AND/OR FOR TEACHING THE ENGLISH LANGUAGE.

Programmed Reading was one of the 27 programs used in the 1967 U.S.O.E. studies, listed in Appendix E.

Read Along with Me
(Stories, manual, rhyming words, alphabet cards and films)
Allen, Robert A. and Virginia F. Allen
Teachers College Press, Columbia University, New York

Dr. Chall wrote on page 31:

“Robert and Virginia Allen have developed a linguistic approach for teaching reading to preschool and primary-grade children (Read Along with Me) that, unlike the Bloomfield and Fries programs, teaches phonics and encourages sounding and blending. In fact, the publisher’s announcement states that it may be used ‘...as a means of relating phonics more closely to
reading, and as a remedial tool for those children who have been unable - or reluctant - to respond to more conventional methods of teaching reading.’”

Concerning the “linguistic” programs which were popular at the time, Dr. Chall wrote on page 118:

“In fact, the best results [Ed. in linguistic programs] probably come from using some control of spelling patterns and directly teaching their sound values. Indeed, this is what several of the new “linguistic” reading programs do - the Allen Reading Materials, Sounds and Letters, The Programmed Reading Series, and The Structural Reading Series.”

On page 330, Dr. Chall wrote the following concerning the publisher’s answer to her questionnaire on the Allen materials:

“Major emphasis (according to publisher): Spelling patterns.”

---

1964
Phonics and Word Power, Program I.
Johnson, Eleanor M.; C. Singleton and Elaine Wonsavage
American Education Publications

This program was listed as among those used in the 1967 U.S.O.E. first-grade studies. No further information is available on it.

However, the use of the word, “phonics,” in its title does not necessarily mean Code 10 true phonics. It may relate to two-step, Code 3, whole word phonics, which is the comparing of whole, meaning-bearing words to each other to see like parts.

---

1964 (N. B. Smith p. 392-3-4-5, 438)
The Downing Readers
(Pitman Augmented Roman Alphabet)(i/t/a)
Downing, John and Faith Graham
Initial Teaching Publishing Co., Ltd., London
1963-1964 (N. B. Smith, p. 395-6-7, 438; see Chall, Learning to Read)
Early-to-Read i/t/a Program
Mazurkiewicz, Albert J; Harold J. Tanyzer
i/t/a Publications, Inc., New York

Besides writing The Downing Readers, Downing was also was the editor of the 1973 book, Comparative Reading, The Macmillan Company, New York, referred to in this history and in Appendix E. Chapters were written by people from various countries.

John Downing prepared his material in England using i/t/a print, based on the nineteenth century Pitman materials. Downing’s materials were widely used in England, and the Mazurkiewicz materials were widely used in America, but both have virtually disappeared in recent years. As of the year 2000, Pitman Publishing Company has reportedly gone out of business, and so, presumably, has Initial Teaching Publishing Co., Ltd., which may, or may not, have been a separate company from Pitman Publishing Company, Ltd. The only reported source for ITA children’s texts in the year 2000 is the ITA Foundation, Roslyn Heights, New York. Therefore, presumably the Early-to-Read i/t/a/ American program is also out of business. On March 2, 2000, I was told that both Downing and Mazurkiewicz are no longer living.
On pages 353 and 354 of her book, Dr. Chall wrote:

“More than half [the code emphasis programs] teach sounding and blending. The others are divided into those which use spelling (saying the letters)- e.g., the Bloomfield System, the Fries Linguistic Readers, BRS [SRA Basic Reading Series], and the Moore program - and those which use visual analysis and substitution: The Royal Road Readers, the American ITA program, and Breaking the Sound Barrier.”

Obviously the American ITA program was not a synthetic phonics program, and yet its phonics approach was greater than that in use in England, which reportedly was often taught like a sight-word program.

Both the Downing and the Mazurkiewicz programs were among those used in the 1967 U.S.O.E. first-grade studies.

---

1964, 1965, 1966 (See Chall, Learning to Read, p. 50, 195n, 331)
The Chandler Reading Programs (books, films, etc.)
Chandler Language-Experience Readers (pupils’ readers)
Carillo, Lawrence W., Editor
Chandler Publishing Company, San Francisco

In a footnote on page 195 of her book, Dr. Chall wrote:

“Two new series based generally on conventional basal-reader methods have been designed specifically for the urban and ethnically different child - the Bank Street Readers and the City Schools Readers. The Chandler Readers, which use an urban setting, incorporate a slight change of methodology, but this too is basically a meaning-emphasis reading program.”

On page 331, Dr. Chall recorded the following answer to her questionnaire to the publishers:

“Major emphasis (according to publisher): Eclectic (‘every established method of teaching reading’)”

---

1964 (See Chall, Learning to Read, p. 16, 328)
Words in Color
Gattegno, Caleb
Encyclopaedia Britannica, Inc., Chicago

1975 (Reviewed in The Beginning Reading Instruction Study, 1993)
Words In Color
Gattegno, Caleb
Educational Solutions, New York

Caleb Gattegno has perhaps been best known for his work some years ago in promoting the colored, wooden Cuisinaire rods in America, which are used in teaching arithmetic.

Dr. Chall wrote on page 16:

“Since 1955, however, many more phonics programs have been published, only a few of which are mentioned here: Sister Mary Caroline’s Breaking the Sound Barrier, Romalda B. Spalding and Walter T. Spalding’s The Writing Road to Reading, and Caleb Gattegno’s Words in Color.”
Gattegno’s program is therefore a phonic program. Nevertheless, the use of color in teaching sound-symbol correspondence is, in my opinion, adding unnecessary complexities to the learning process. The only rational use would be to show vowels in a different color than consonants, a method used in Europe for many years. The use of colored letters was also recommended in France in Py-Poulain Delaunay’s 1719 book. Delaunay used italic print or red to mark silent letters in initial lessons and when beginning with connected reading. It is possible that he was the first to make use of color in teaching beginning reading.

Gattegno’s program was included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Instructional Approaches.” As such, it did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” section, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On Words in Color of 1975, The Beginning Reading Instruction Study of 1993 showed it recommended activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

1964 (See Chall, Learning to Read, p. 44)
Teaching Machine Course TM-002: First Steps in Reading for Meaning
Grolier Educational Corp.
845 Third Avenue
New York, New York

In her 1967 book, Dr. Chall wrote on page 44:

“Theoretically, any approach to beginning reading - sight, sentence, meaning, phonic, or linguistic - can be programmed. It is interesting to note, therefore, that the programmed beginning reading courses currently available - The Basal Progressive Choice Reading Program by Myron Woolman et al., Programmed Reading by Cynthia Dee Buchanan and Sullivan Associates, and Grolier’s First Steps in Reading for Meaning - rely heavily on a phonic-linguistic approach. All three start the child on the letters and their sound values and control vocabulary on a spelling-regularity principle.”

---

1965
Reading in a Nutshell
Brennan, Martin D. and George J. Ameer
Colfax Press, Inc., Wayne, New Jersey

Originally conceived as a remedial phonics drill program for high school students, this was highly successful when used as remedial phonics for primary grade students who had begun with “meaning” sight-word programs which only taught phony phonics. For years, I used this very simple and very effective paper- back 9x12 inch workbook at the third grade level to teach children who had begun with such sight-word programs with phony phonics as Ginn’s and Scott, Foresman’s. However, I seemed to observe the irreversible effect of the “meaning” reflex at that time for children who had begun with the “meaning” method. Their reading behaviour seemed to indicate that they could only consciously, not
automatically, use the phonic skills which they did successfully learn from this program. Nevertheless, the program was extremely successful because the children’s ability to read and to spell did enormously increase after they had been intensively drilled in this program.

Principal Brennan later used the phonic approach in this remedial program to compose a complete first-grade phonic program which I believe was used in his Wayne, New Jersey, Kennedy School, although I do not have the date of its publication nor the name of its publisher. Mr. Brennan’s present address can presumably be obtained from the Wayne, New Jersey, public schools.

Harcourt Brace Jovanovich, Orlando, Florida

The Murphy and Durrell material was listed as among those programs used in the 1967 U.S.O.E. first-grade studies. In her book, Learning to Read, Dr. Chall discussed at length research by Dr. Durrell and his associates concerning beginning reading, the results of which favored a more phonic approach.

Concerning the 1984 series, Impressions, Dr. Patrick Groff of San Diego University wrote “A Critique of Impressions.” It appeared in January, 1991, in a Special Issue of The Sounds of Reading, a publication of the Reading Reform Foundation, Tacoma, Washington, of which Mrs. Paul B. Hinds is president. Dr. Groff’s comments were based on the teachers’ manual for the 1984 edition of the Impressions reading series published by Holt, Rinehart and Winston in Toronto, Canada, and the manual listed W. Cochran as senior editor. Holt, Rinehart and Winston were apparently later absorbed by Harcourt Brace Jovanovich. Some of Dr. Groff’s comments are quoted below (not all in their original order):

“Impressions must be judged as an inferior method for teaching reading skills to young children. For the reasons detailed in this critique it is recommended that Impressions not be adopted for this purpose in primary-grade reading programs....

“The senior editor of Impressions is eager to claim that the reading instruction practices it recommends in its teachers’ manuals are based on the so-called “Whole Language” (WL) theory of reading development. It is clear that WL teaching is different from the conventional kind in several remarkable ways.

“The WL theory holds that instruction in written word recognition should be unsystematic, indirect, and incidental or nonintensive. The WL approach therefore contends that there is no preferred sequence or hierarchy of reading skills that should or can be taught. All reading skills must be learned coinstantaneously, WL avers. Instead of pupils being shown directly what reading skills they need, they merely are stimulated to infer what these are. Extended practice or exercise on reading skills is to be avoided, especially on isolated reading skills.

“The WL theory maintains, moreover, that beginning readers learn to recognize written words best in context. Teachers are advised to urge children learning to read to read to guess at (“predict”) the identity of the separate words they see in sentences. Whether or not this speculation is sufficient for its purposes is left to the subjective opinion of individual teachers.

“Since the precise recognition of written words is de-emphasized in WL, it follows that this program allows real latitude for pupils to decide what it was an author intended to convey. Leaders of the WL movement castigate the traditional practice of expecting children to give the “right” answer to the teacher’s question, “What did this author actually write?” To the contrary, they exhort teachers to prompt children to “construct” eccentric, idiosyncratic versions of what an author intended to say (Groff, 1989).

“It is fair to conclude that Impressions conforms to the above principles of WL in a deliberate and methodical manner. It admits freely to its plan for having pupils “encounter new words” in context “before dealing with them in isolation” (Cochran, 1984, p 2). In this respect, Impressions is reminiscent, as is WL, of the earlier “look-say” method of word recognition instruction.

“As did its antecedent, the look-say method, Impressions claims to teach phonics information and how to apply it to the recognition of written words. This “phonographemic cueing system,” as Impressions grandly dubs it, is conducted in this series of books by having pupils look at and say “whole words.” In fact, because Impressions follows the tenets of WL so closely, it is more severe in its rejection of the teaching of isolated letters and their corresponding speech sounds (i.e., traditional phonics information) than was its predecessor, the look-say scheme.

“In this regard, Impressions insists that ‘word identification does not mean word naming’ (Cochran, 1984, p. 13). Word identification can best be developed through the use of contextual
material,’ it goes on. ‘Strategies for word attack should not be isolated’ (p. 16). The initial, final and middle speech sounds of words may be ‘discovered’ by children, Impressions concedes, but should never be perceived as isolated items.

“The steps in a typical lesson in word recognition in Impressions proceed as follows:

1. Pupils listen to a story read aloud by the teacher or from an audiotape;

2. Pupils read the selection by themselves; and

3. Pupils engage in activities that involve specific words and letters.

“As noted so far, Impressions distinctly reflects the influence of the WL theory. In this respect, it suffers from the illogical assumptions, and from the lack of experimental verification that plagues the WL hypothesis.

“It doubtless taxes reasonable-minded persons’ credulity to ask them to believe that unsystematical, indirect, and incidental instruction in reading can be as effective as that which is ordered, straightforward, and involves much practice. The intelligent layperson probably would also find having children first read written stories on their own, and only after this to receive instruction on how to read the words in this material, as logically topsy-turvy. How is it possible for illiterate children to read stories by themselves before they have learned to identify the words these stories contain? laypeople might ask. And, if stories can be read successfully without prior preparation in word recognition, why is this latter teaching then needed?

“Then, the idea that there is no hierarchy of difficulty in reading skills, and therefore that children learning to read should not be taught first the ones they find the easiest to learn, also would appear implausible to fair-minded persons. They likely would find equally incongruous, if not inconceivable the notion that everything that one needs to learn in order to read must be learned simultaneously. In addition, people who have jobs that require a precise understanding of office memos, plans or proposals, of manuals for operating technical equipment, or of documents that can affect the very lives of people, would find preposterous the WL proposition that comprehension of written texts can be successful if readers guess at the identity of words in these materials.

“From a common sense standpoint, therefore, the Impressions’ version of the reading process and how best to teach it, fails badly. From the perspective of pertinent experimental research on reading, it fares even worse.

“Recent comprehensive surveys of the experimental research on reading, and especially that on word recognition instruction (for example, Adams, 1990; Anderson, et al., 1985; Chall, 1983; Feitelson, 1988; Groff & Seymour, 1987; Henderson, 1982; Pearson, 1984; Perfetti, 1985; Resnick & Weaver, 1979), do not support the WL theory of reading, nor Impressions adoption of it as the basis of its teaching methodology....

“To the contrary, this empirical evidence suggests that unless beginning readers are weaned away from the use of context cues (guessing at words) when reading, their progress in learning to read will be handicapped significantly. The research on reading has reported that reading programs that set up a hierarchy of reading skills, including isolated speech sound-letter relationships, and teach them in a systematic, direct, and intensive manner, produce greater reading achievement than the version of the WL scheme that Impressions uses....
“In a bold yet reckless attempt to countermand the formidable opposition set against the WL scheme, the leaders of the WL movement have expediently announced that all experimental research in reading is fraudulent, and therefore any evidence of this nature that detracts from the WL theory is illegitimate.

“In addition to its decidedly substandard qualities as a means to teach reading skills to young children, Impressions has been accused of another grievous fault. It must be noted that the content of the stories in Impressions has been found by parents of certain religious beliefs to violate their ethical, moral, and spiritual beliefs. I do not offer myself as an authority as to the degree to which these parents’ civil rights have been abridged and abused by school officials’ insistence that their children must read the stories in Impressions.

“As a longtime, ardent civil libertarian I am repulsed, however, by the possibility that the forced reading of Impressions by certain children transgresses their Constitutional rights to the free expression of their religious beliefs....”

The Beginning Reading Instruction Study, Office of Research, U. S. Department of Education, 1993, included a review of several of Harcourt’s programs, one of which was “Impressions.” Six samples had been taken from all the different basal series being reviewed, and the samples had then been analyzed for content. For Harcourt’s “Impressions” samples at first grade, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy... Implicit,” the score had been 1/6, but for “Decoding strategy... Explicit,” the score was zero. Furthermore, not a single sample concerned “Decoding strategy... Blending taught explicitly.” While it is obvious from these samples that the “Impressions” series is not teaching synthetic phonics to beginning readers, in no way does The Beginning Reading Instruction Study even hint at the degree of the grave “decoding” deficiencies in the Impressions series which Dr. Groff discussed in the above excerpt. It is obvious, therefore, that The Beginning Reading Instruction Study provides a very inadequate guide to beginning reading programs, which fact should be considered when reviewing its ratings quoted elsewhere in this appendix concerning other programs.

The Beginning Reading Instruction study reported that the series, HBJ Imagination of 1989, was even weaker on phonics than it had reported for Impressions. For HBJ Imagination samples at first grade, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy, both “Implicit” and “Explicit,” the score was zero. Not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the HBJ Imagination series is not a phonic series. The series sub-title, “An Odyssey Through Language,” and the titles of some of its materials suggest it is strongly oriented to the “whole language” approach.

The 1989 HBJ Reading Program was included in The Beginning Reading Instruction Study. For HBJ Reading Program samples at first grade, none had concerned “Sound/symbol relationships... Explicit,” but 6/6 had concerned “Sound/symbol relationships... Implicit.” For “Decoding strategy...Explicit,” the score was zero, but for “Decoding strategy... Implicit,” the score was 6/6. However, not a single sample concerned “Decoding strategy... Blending taught explicitly.” Obviously, the HBJ Reading Program is not a synthetic phonics series.

The program entitled HRW Reading: Reading Today and Tomorrow, was presumably originally prepared for Holt, Rinehart and Winston, now apparently affiliated with Harcourt Brace Jovanovich. While its phonic ratings were far weaker on The Beginning Reading Instruction Study than the truly phonic Open Court materials or the Science Research Associates’ “Reading Mastery” (presumably an update of the former DISTAR program), it was nevertheless considerably more “sound” oriented than the
other three Harcourt programs just discussed. On “Sound/symbol relationships... Explicit,” the score was 1/6, and on “Sound/symbol Relationships... Implicit,” it was 2/6. For “Decoding strategy... Explicit,” the score was 5/6, and for “Decoding strategy... Implicit,” the score was 1/6. For Decoding strategy... Blending taught explicitly,” the score was 1/6. That was a very weak score on blending, compared to Open Court’s 6/6, and the score for Science Research Associates’ “Reading Mastery” of 6/6. However, of the 13 full basal reader programs covered in The Beginning Reading Instruction Study, all with reading books at least through third grade, only HRW Reading, Open Court and “Reading Mastery” taught any blending at all. (Many of the supplemental reading programs covered in the study did, however, teach blending.) In summary, the ratings on the U. S. Department of Education first-grade study suggest that HRW Reading makes some use of a weak but probably true synthetic phonics approach.

Before 1966
Play’n’Talk
LeDoux, Marie
Carlsbad California

This self-instructional program for beginning readers uses records, books, etc., and is based on a program used by the Isabelle Buckley School in Southern California. Mary Pride stated in her 1988 The New Big Book of Home Learning, page 181, concerning that private school’s program:

“In over fifty years of operation, they have never had a reading failure for any child who enrolled before third-grade level.”

Mrs. Pride considered this program one of her favorites, and it undoubtedly has many excellent qualities. However, I question the value of three points mentioned:

1. The program is supposed to be self-instructional. Yet beginning readers of any age should read orally to a competent judge at every stage of development, or mistakes are not going to be observed. To assume that a child (or even an adult) can make self-corrections by listening to a taped lesson is an error. If it were not an error, we could develop flawless French accents simply by listening to instructional records on French.

2. The program drills extensively on “word families,” (at, bat, cat, fat). That runs the risk of developing readers who use two-step, whole-word substitution phonics, instead of one-step synthetic phonics. Instead, beginning phonic drills should emphasize mixed endings, and not drill on building new words from parts of other words. Speech (and reading) can be seen as having three levels: Syllables, syntax-generating-words, and meaning. After, and only after, children learning to decode print have a firm grasp of material on the syllable level should much drill be given at the second level, syntax-generating-words. Only at that stage is it appropriate to give much drill on word structure: baby-babies; run-running; make-making; rough, tough, through, though; etc.

3. The program teaches touch typing to beginners, which is extraordinary and wonderful. Therefore, it is to be regretted that it does so by “whole words” instead of by the classic keyboard letter-drill, fgf, frf, fvf, etc. That is tantamount to teaching a child how to play the piano by teaching him to play from finished sheet music, instead of first giving him simple keyboard drills so that he can develop the proper conditioned reflex between each printed note and its equivalent on the piano keyboard. Obviously, to give a child sheet music first would at the very least slow down his forming such conditioned reflexes.

A SIGHT-WORD SERIES FROM ENGLAND

1969 or earlier (Plus later editions)
Key Words to Literacy by J. McNally and W. Murray, published by the Schoolmaster Publishing Co., Ltd., London, in 1962, gave a list of the 300 most frequent words, on the basis of their individual frequency, apparently independently of Ayres’ 1915 work which did the same thing for the 1,000 commonest words. Thorndike’s published work (with Lorge) in his 1944 The Teacher’s Word Book of 30,000 Words (and presumably in his two earlier editions of the 10,000 and 20,000 commonest) had not broken down the frequency of the words he listed as the 500 commonest. That was surely very curious since Thorndike’s enormous original data on the 10,000 commonest words, which he, himself, had compiled over a period of ten years from 1911 to 1921, had not only made it possible to show the relative frequency of those 500 commonest words to each other but must have made those highest-frequency words extremely evident to him as he was doing his work. W. Murray became the author of the Ladybird Key Words Reading Scheme, published by Wills & Hepworth, Ltd., Loughborough and Leicestershire, England. His reading books were based on the 300 commonest words which compose about 75 per cent of children’s books.

This series using the 300 highest frequency words introduces them gradually and then systematically repeats them in 36 small story books. The material is arranged in 12 levels, each with an A, B, and C book. The “C” book in each level covers the “phonic” strand, but it is Code 3, two-step, phony phonics. The system was apparently in massive use in England for many years and is still in print. Because of its rigid vocabulary control and repetition, it can produce the illusion that children are learning to read, when, in reality, all that the children are learning are the few high-frequency sight words. The series has also been sold in the United States for some years, but it most probably has been used only minimally in America.

#Publishers First Appearing in This List Between 1970 and 1980

1970’s
Alphatime Letter People Program
(Publishers changed over the years, but The Beginning Reading Instruction Study, 1993, of the Dept. of Education lists its being sold again in 1992 in a 1988 edition by a former publisher, shown below:)
1988 (Reviewed in The Beginning Reading Instruction Study, 1993)
Alphatime Kit (Kindergarten)
Alpha-One Kit (First Grade)
Niemann, Elayne R. and Rita Friedman
New Dimensions in Education, 61 Mattatuck Hts. Road, Waterbury, Conn.

This was fine material in its original form, with a very good sequence for introduction of phonic elements and rules. Children loved the Letter People and the stories built around them, whose purpose was to teach the phonic material. The program was written by the two women shown above who apparently had first-grade experience and knew how to interest little children. Its phonic content was also placed on a set of story film-strips which were excellent.

The first grade workbook, Chatterbook, originally was very useful for phonic reinforcement, and the two first grade readers were superior. However, the Chatterbook was altered from a “sound” emphasis to
a far heavier “meaning” emphasis in a revised edition, with much of the drill material removed. Other materials were put out which were more appropriate to a “meaning” basal reader program than to a phonic program. This material ORIGINALLY USED A SYNTHETIC PHONICS APPROACH WHICH EVENTUALLY BECAME UNACCEPTABLY DILUTED WITH A HEAVY MEANING EMPHASIS.

I do not know if the superb filmstrips are still available from the current publisher. However, it is to be hoped that the 1992 publisher who had once published the material in its original excellent form before it was passed to another publisher has replaced the revised material with the original material. It would have been particularly important to drop the revised Chatterbook workbook being sold in 1985, by the publisher who was then handling the program, and to replace it with the original excellent Chatterbook. IF THE 1992 PUBLISHER HAS REVISED THE MATERIAL BACK TO ITS ORIGINAL FORM, IT IS A CODE 10 SYNTHETIC PHONICS PROGRAM.

The 1988 revision was in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Other Instructional Programs.” As such, this program did not receive the degree of sampling and study which was given to the basal reader programs. In the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in this analysis, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On Alpha Time in its 1988 revision, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit” and “Implicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

1970’s?
Addison-Wesley Publishing Co.’s reading series
Menlo Park, California
Addison-Wesley Reading Program
Rowland, Pleasant T.
Addison Wesley, Reading, Massachusetts

This series was listed approvingly as one of “The Phonic Five,” by Rudolf Flesch on page 9 of Why Johnny STILL Can’t Read, Harper & Row, New York, 1981. I have never personally seen these materials. However, for years at third grade, and then at first and second grade, I used this company’s arithmetic materials, and they were excellent, although weaker in later editions. The material may be presumed to use A PHONIC APPROACH.

The program which Dr. Flesch reviewed in 1981 may have been by a different author than the program currently being sold, which was copyrighted in 1982. The Beginning Reading Instruction Study in 1993 listed the results on six samples of text taken from each program it studied, and the 1982 Addison-Wesley program was among those studied. “Sound/symbol relationships... Explicit” was present in all six samples taken from the 1982 Addison-Wesley program. However, “Decoding strategy” was “Implicit,” not “Explicit” in those six samples, and in none of the six was “Blending taught explicitly.” Therefore, the 1982 program appears to use only a weak phonic approach. The titles of the books for kindergarten and the first-half of first-grade even suggest a heavy use of sight-words, unless the children are not supposed to read the titles: Meet the SuperKids, SuperKids Club, and Adventures of the SuperKids.
1971-1985 (Listed in The Beginning Reading Instruction Study, 1993)
A Multisensory Approach to Language Arts (Slingerland)
Slingerland, Beth H.
Educators Publishing Service, Cambridge, Massachusetts

1977-1979 (Listed in The Beginning Reading Instruction Study, 1993)
Let’s Read (and Let’s Look At...) (Original 1961 Bloomfield materials and additions mainly of 1977-9)
Barnhart, Clarence L.; Robert K. Barnhart; Cynthia A. Barnhart; Leonard Bloomfield (See 1961 entry on earlier materials)
Educators Publishing Service, Cambridge, Massachusetts

1988-1993 (Listed in The Beginning Reading Instruction Study, 1993)
Multisensory Teaching Approach
Smith, Margaret Taylor
Educators Publishing Service, Cambridge, Massachusetts

1990 (Reviewed in The Beginning Reading Instruction Study, 1993)
Recipe for Reading
Traub, Nina and Frances Bloom
Educators Publishing Service, Cambridge Massachusetts

1990 (Reviewed in The Beginning Reading Instruction Study, 1993)
Explode the Code
Hall, Nancy and Rena Price
Educators Publishing Service, Cambridge, Massachusetts

The above programs were included in the sections of The Beginning Reading Instruction Study of 1993 entitled, “Other Instructional Programs” and “Instructional Approaches.” As such, these programs did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” and “Instructional Approaches” sections, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On Slingerland’s Multisensory Approach, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

On the Bloomfield/Barnhart material, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships” “Explicit” and “Implicit,” and Decoding strategy... Implicit,” but nothing on “Decoding strategy... Blending taught explicitly.”

On the Multisensory Teaching Approach of Margaret Taylor Smith, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

On the Recipe for Reading of Nina Traub and Frances Bloom, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”
For the program, Explode the Code, by Nancy Hall and Rena Price, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” and “Decoding strategy... Explicit” but it did not include “Decoding strategy... Blending taught explicitly.”

Sing, Spell, Read & Write - Total Language Arts, K-3
(“Winning” - program adapted for illiterate teen-agers and adults)
Dickson, Sue
International Learning Systems
1000 112th Circle North, Suite 100, St. Petersburg, Florida 33716

This superb and child-motivating program uses songs and games to great effect, which is hardly surprising since its author wrote the first-grade portion of the years she was actually teaching first grade, tailoring the material to the children’s “needs,” as the “experts” would say. However, some of the storybooks were written by her associates. She re-invented, apparently unknown to herself, a version of the ancient syllabarium, setting it to the music of an imaginary carnival’s merry-go-round, and uses that for one of her skill song/games. Apart from its purpose, her “merry-go-round” song/drill is actually good music. The program includes a series of 17 phonically-sequenced little story books on which to practice the phonic skills that are taught. I used the program with great satisfaction as a supplementary program in my primary grades ever since 1973, until 1985 when I retired. (I had to buy almost all the supplementary materials myself over a period of a dozen years before I retired, as my school system usually refused to do so.) The program is best used for whole-class instruction on the skills, and games and on the skill workbooks, but the reading of the story books can be handled in smaller groups. (To buy enough 17-book-sets for the whole class to read simultaneously would be rather expensive). The program is also packaged for beginning readers in a Home Kit, which includes the 17 storybooks, two workbooks, and the games, as well as tapes of the songs. Parents can therefore use it to teach children at home. The story books should not be used until the specific skills needed for each one are thoroughly taught from the work book and games. However, Book 7 unfortunately introduces a list of sight words and a sight word story at its beginning. The list and story should be skipped. So should book 6. The few sight words from that list which appear later can be handled as they come up, focusing on their phonic parts.

The program should not be confused with the California-based program for teaching reading which claims to use music in teaching reading, but which only uses quiet, monotonous background music on some tapes, unrelated to the teaching of any skills. That program, Hooked on Phonics, advertises widely. In my opinion, unless it has been almost totally changed in its recent revisions, it is very unsatisfactory and is very “meaning” oriented because of its heavy use of sight words and its exceedingly badly organized phonics instruction. Despite its phonic label, in actual practice I believe it rates only a Code 3 on a scale from Code 1 for a pure “meaning” approach for the teaching of beginning reading to Code 10 for a pure “sound” approach. However, Sing, Spell, Read & Write obviously uses a true Code 10 SYNTHETIC PHONICS APPROACH.

Sing, Spell, Read & Write was included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Other Instructional Programs,” rather than in the section entitled “Basal Reading Programs.” Yet, since it is a complete first-grade program, with 17 little storybooks, it might logically have been included in the “Basal Reading Programs” section. Materials in the section entitled, “Other Instructional Programs” did not receive the degree of sampling and study which were given to those in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” section, the report was either “included”
or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score. Yet Sing, Spell, Read and Write would have deserved a 6/6 score.

On Sing, Spell, Read & Write, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.” That vague rating, which told nothing about the degree of emphasis, certainly did not make it clear that the program rates a straight Code 10 on the teaching of synthetic phonics, if both Book 6 and the story and word list at the beginning of Book 7 are omitted.

1973 (Information from their brochures)
The Sound Way to Easy Reading
Bremner, A. J. and Josephine Davis
Bremner-Davis Educational Systems, Chicago, Illinois

This company advertised in newspapers for many years. Their brochures included an article from the Journal of Educational Psychology, Vol. 49, No. 1, attesting to the program’s fine results. It used records to teach the sounds of the letters, and provided workbooks. Like all good programs, which it apparently is, it has virtually been ignored by our government schools and reading gurus. Yet “whole language,” one of the greatest fakeries of modern times, has taken the government schools in the entire nation by storm! The Bremner-Davis program appears to use a true PHONICS APPROACH.

1974 or Earlier (Reviewed in Mary Pride’s 1988 The New Big Book of Home Learning)
Professor Phonics Gives Sound Advice (for younger students)
A Sound Track to Reading (for older students)
Folzer, Sister Monica
S. U. A. Phonics Dept. (St. Ursula Academy)
Cincinnati, Ohio

This is an excellent, inexpensive, and highly successful phonic program. It has been endorsed by many teachers who have used it with great success, including the justly famous Marva Collins of Chicago. The program uses a Code 10 TRUE PHONIC APPROACH.

PHONICS- ORIENTED MATERIALS FROM ENGLAND

1974-1983
Language in Action
Morris, Dr. Joyce, et al.
1990
The Morris Montessori Word List
Morris, Dr. Joyce

I have not seen these materials which are mentioned in passing in Dr. Morris’s excellent 1993 paper, portions of which are quoted extensively in Part 6 of this history. However, since Dr. Morris is the author of these materials, the probability is that they are, indeed, excellent and very useful.

A PHONICS RESOURCE FROM ENGLAND

1974
Alpha to Omega: The A-Z of Teaching Reading, Writing and Spelling
Hornsby and Shear
This is described as a phonics resource “with a linguistic-sound base,” by Dr. Joyce Morris in her 1993 paper, which is quoted extensively elsewhere in this book.

1975 (Reviewed in The Beginning Reading Instruction Study, 1993)
Auditory Discrimination in Depth
Lindamood, Charles and Patricia Lindamood
Development Learning Materials
Allen, Texas

1984 (Reviewed in The Beginning Reading Instruction Study, 1993)
Swain Beginning Reading
Swain, Emma Halstead
Development Learning Materials
Allen, Texas

The above two programs were included in the section of The Beginning Reading Instruction Study of 1993 which was entitled, “Other Instructional Programs.” As such, these programs did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” section, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On DLM’s Auditory Discrimination in Depth of 1975, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

On DLM’s Swain Beginning Reading of 1984, The Beginning Reading Instruction Study of 1993 also showed it included activities on “Sound/symbol relationships... Explicit,” “Decoding strategy... Explicit” and “Decoding strategy... Blending taught explicitly.”

1975 (Sixth edition, first in 1940 by Harris alone)
How to Increase Reading Ability,
A Guide to Developmental and Remedial Methods
Harris, Albert J. and Edward R. Sipay
David McKay Company, Inc., New York

This book is included in this appendix because it lists many reading instruction materials on the market in 1975.

This book was used in graduate reading instruction programs, and it favored the “meaning,” and not the “sound” approach (sounding-and-blending phonics) in teaching beginning reading. In its chapter, “Deficiencies in Word-Identification Skills,” from pages 426 to 434, it listed “Workbooks,” “Programs and Kits,” and “Multimedia Materials” then on the market for teaching those skills. It is obvious that many used two-step, whole-word substitution “phonics” and not true synthetic sounding-and-blending phonics.

However, its listing of available reading-workbook-type materials on the market in 1975 is an excellent guide to the materials that were most widely in use in 1975, for those who wish that
information. The listing is too long to include in this appendix. Yet, only concerning their section on workbooks and boxed sets of phonics practice, and not their sections on “Programs and Kits” or “Multimedia Materials,” the authors stated that it was very far from comprehensive, since in recent years so many materials had been produced that a complete list would “run on for pages.”

1976, 1979
Johnny STILL Can’t Read - But You Can Teach Him at Home
Diehl, Kathryn (Mrs.) and G. K. Hodenfield (75-page booklet)
(No publisher listed. Formerly available from Reading Reform Foundation for $4.50 but out of print in 1995)

Includes background information on the sight-word/phonics controversy and instructions on how to teach a child to read by true phonics. Sister Monica Foltzer’s Spelling and Reading Word List is on pages 69 through 75. Mary Pride, in The Big Book of Home Learning, Crossway Books, Westchester, Illinois, 1986, page 107, said:

“Armed only with this book, I taught our oldest son to read before he turned four. Kathryn Diehl explains why you need to teach phonics and how to do it....”

Mrs. Diehl is widely recognized as an unofficial source of general information on the reading problem. In the preface to his 1981 Why Johnny STILL Can’t Read, The Scandal of Our Schools, Dr. Rudolf Flesch thanked Mrs. Diehl for the helpful background information she had given him. The Diehl/Hodenfield material which is now out of print, used A TRUE PHONIC APPROACH.

1978 (Information from their brochures)
The Literacy Primer
The Homestead Readers
Coleman, Eunice; Mary Coleman; Eugene Coleman, Jr.; Mary C. McLaughlin
The Literacy Press, Inc., Madison, Georgia
As of 1988, per Mary Pride’s The New Big Book of Home Learning:
The Literacy Press, Inc., 24 Lake Drive, DeBary, Florida 32713 (Eunice S. Coleman); Branch Office: Eugene E. Coleman, Jr., 677 Follett Run, Warren, Pa., 16365 (tel.: 407-668-1232)

The brochure for this program stated:

“In 1978 Eunice and Mary, now a primary teacher, and Eugene Jr., now principal of a Christian Academy worked together to produce THE LITERACY PRIMER, How to Teach Any Child to Read Write and Spell. Their book was rejected by 40 ‘Name Publishers’ who had new expensive detours to learning which they wanted to promote.

“The Coleman found a printer and published the book themselves and sold it to mail order customers in 47 states.”

Obviously, there was a market in those 47 states for the Coleman materials which the 40 “Name Publishers” chose to ignore. Their Literacy Press program is listed in Mary Pride’s 1988 The New Big Book of Home Learning on page 180.

The material uses A TRUE PHONIC APPROACH.

1979 or Before
Discover Intensive Phonics for Yourself
Mrs. Lockhart’s program provides one of the best phonic sequences of any materials presently on the market. Mrs. Lockhart calls her program a “bare-bones” program. Because of its simplicity, it can be used at first grade or for remediation with any age group. Mrs. Lockhart has had many letters of testimony telling of success with her excellent materials. The material uses A TRUE PHONIC APPROACH.

Many more phonic materials could be listed here if space and time permitted. The Reading Reform Foundation, in Scottsdale, Arizona, in the 1970’s and into the 1980’s, when Mrs. Bettina Rubicam was president, used to have a folder listing some one hundred or so phonic programs on the market. Most of them never found their way into our benighted, counter-productive government schools. However, it is beyond the scope of this bibliography, unfortunately, to include all such programs, many of which were undoubtedly excellent.

### Publishers First Appearing in This List Between 1980 and 1990

1980’s

Alpha Phonics: A Primer for Beginning Readers
Blumenfeld, Samuel
The Paradigm Company, Boise, Idaho

Blumenfeld’s program is highly effective, as confirmed by the great number of appreciative letters Blumenfeld has received from parents who used his program. It is not only excellent for teaching beginning readers, but for teaching retarded readers or illiterates of any age. The material is very simple, very direct, and very successful, and obviously uses a true PHONIC APPROACH,

1981

The Basal Reader Approach to Reading
Aukerman, R. C.
John Wiley, New York

On page 167 of Preventing Reading Failure, An Examination of the Myths of Reading Instruction, National Book Company, Portland, Oregon, 1987, Dr. Patrick Groff said,

“Aukerman’s extensive analysis of the content of the basal readers up to 1981 confirms that most of these textbooks still commence their instruction with the whole-word, look-say method. Some phonics elements are taught in these volumes, it is true, but generally in a delayed manner. This procedure, called the ‘eclectic’ approach, is one that Austin and Morrison found reading professors firmly committed to, twenty years earlier. That many of the research findings on phonics are not reflected in most of the basal readers currently in use thus can be said without fear of contradiction.”
I have not seen Aukerman’s 1981 book, but it is obviously an excellent guide to relatively recent series of reading books.

1984, 1988
Hooked on Phonics
No Authors Shown
Gateway Educational Products, Ltd.
1100 West Katella, Suite 8 - Sean Shanahan, President
Orange, California 92667 - Telephone: 1-800-ABCDEFG

On July 18, 1992, I wrote Mr. Shanahan and enclosed my nineteen-page critique on the program, Hooked on Phonics, which program was and is being massively promoted nation-wide. My critique was based on a lengthy examination of the books and recorded tapes in the Hooked on Phonics kit. I said:

“Your nation-wide coverage is a superb means to promote the proper teaching of beginning reading and you are to be commended for your extraordinary ability to market your program. However and unfortunately, as the enclosed comments show, it is not really possible to upgrade Hooked on Phonics into a program which it is desirable to promote nationwide. The program must be totally rewritten, and I urge that you do NOT this time ask for help from any ‘university’ sources or ‘accredited’ reading experts. Such people have created America’s reading problem.”

I suggested to Mr. Shanahan that he compare the rational phonic exercises in the back of Rudolf Flesch’s 1955 book, Why Johnny Can’t Read, to those in Hooked on Phonics to see how different the two approaches are. I further suggested that he seek help in rewriting the program from phonics authors such as Sister Monica Folzer, Samuel Blumenfeld, Charlotte Lockhart, Sue Dickson or some other phonics authors who could be suggested by the Reading Reform Foundation. Mr. Shanahan never replied to this letter.

In my opinion, despite the program’s surface use of phonics, its heavy use of sight words at the beginning and the nature of its various exercises earns for this program the charge that it is really teaching two-step phony phonics. Two-step phony phonics is bringing up whole meaning-bearing sight words in a reader’s memory to find like parts to an unknown new printed word. After finding such like parts in memory, the reader then pieces together the like parts from those previously learned words to figure out the unknown new printed word.

Furthermore, most of the printed phonic exercises in Hooked on Phonics have to be done by the learner alone without any way to correct his errors since almost all of the printed phonic exercises are not spoken on the tapes. Since the program seems to expect a learner to use it alone, without constant monitoring by another person, the omission of almost all these phonics exercises from the spoken tapes is a critical fault.

My rating for this program is therefore a Code 3. I believe it would be indistinguishable in its effects on children from any standard Code 3 basal reader approach. However, it has, in my opinion, a further serious fault, which is that I believe children would find the exercises to be boring and tiresome. While doing my study of the tapes, in which a contralto female voice is the only sound beside the occasional background music, I found that background music - such as it is - to be actually irritating because it seemed to me to be extraordinarily monotonous and remarkably dull.

Reportedly, a newer edition of Hooked on Phonics is now on sale. Whether the new edition is sufficiently phonic is not known to this writer.
1987 (Scholastic kits of reading books have been produced for many years, probably since the 1950’s, but the dates and names of the earlier editions are not available. This 1987 revision was reviewed in The Beginning Reading Instruction Study, 1993)
Bookshelf
Complete Bookshelf Stage 1 (kit - kindergarten)
Complete Bookshelf Stage 2 (kit - grade 1)
Complete Bookshelf Stage 3 (kit - grade 2.
(Undoubtedly higher grade kits as well)
Authors: “Multiple contributors”
Scholastic, Jefferson City, Missouri
1988 (Reviewed in The Beginning Reading Instruction Study, 1993)
Bridges
Authors: “Multiple contributors”
Scholastic, Jefferson City, Missouri

The Scholastic materials have been available for many years, in excellent kits of reading books matched to children’s age levels. To the extent that they included instructional approaches, the intent was that the teacher use an “individualized” approach, teaching each child at his own level. That is, of course, a physical impossibility in a classroom of twenty or so first-graders, since each child only can get a few minutes of instructional time, no matter how organized a teacher is in keeping schedules and instructional chart records. Nevertheless, the Scholastic kits of relatively inexpensive paper-bound books are a wonderful addition to any classroom, provided the children have already been taught how to read. Even at the kindergarten or beginning first-grade level, the teacher can read the books to the children, which certainly motivates the children to learn to read themselves.

The only drawback to the Scholastic materials is that most apparently use vocabulary control, which reduces children’s exposure to normal language. That can stunt vocabulary growth, if only such materials are used and no others.

Also included in the kits of reading books, at least in the lower grades, and at least as late as the early 1980’s, were very entertaining reading games for children to use in small groups. However, my familiarity with the earlier materials published by Scholastic makes me question whether they properly qualify for inclusion in a beginning reading instruction study, except to note that they can be used with the individualized reading approach. The two Scholastic programs had zero scores in The Beginning Reading Instruction Study of 1993 on the teaching of decoding. (Teachers’ guides in earlier kits did, however, include instructions on decoding, as I know from my own experience, so I find this score somewhat surprising.)

However, the real strength and worth of the Scholastic materials might be lost by judging them solely by the criteria of The Beginning Reading Instruction Study, since they should not properly be used to teach beginning reading. Yet, in my opinion, Scholastic kits (or their equivalents) should be in every elementary school classroom from grade K up, and ample opportunity should be given to children, once they have been taught how to read, to use the book kits themselves for reading pleasure (which means for real reading practice, despite the fact that the lower books may have controlled vocabulary). Even in kindergarten and beginning first grade, the teacher can read the books aloud to the children, which is something little children really enjoy.
A PHONICS PROGRAM FROM ENGLAND

Step by Step
McNee, Mona
Published by Mona McNee
2 Keats Avenue, Whiston
Prescot, Merseyside, Lancashire, England
(Printed by Studioprint, Rash’s Green, Dereham, Norfolk, England)

2000
C-A-T=Cat: Teach Your Child to Read with Phonics
McNee, Mona
Published by Elliot Right Way Books
Lower Kingswood, Tadworth, Surrey, England KT20 6TD UK

The cover of Step by Step also carries the comments, “Anybody can teach reading,” and “A day-by-day programme of intensive, systematic phonics for all ages.” It is, indeed, systematic, but it is also concise. For those two reasons alone, “anybody” certainly should find it easy to use. Besides being simple and easy to use, Mrs. McNee’s very attractive material rates a Code 10, as it is truly phonic.

The persistence of reading problems in England, as in America, is what inspired Mrs. McNee to write this material. The back cover of Step by Step reads:

“Mona McNee’s concern about reading started in 1970 when, having seen her son fail with professional teaching, she found that with no training, but relying on a phonic scheme, Royal Road Readers, old-fashioned sounding out and common sense she was able to teach him.

“In May 1975 she became the remedial teacher at a Middle School, and soon concluded that nearly all her pupils could have got it right first time around if they had been spared look-say, the whole-word start.

“She retired in 1981 and by now has taught well over 300 dyslexics, plus other young children. She believes we would be better off starting with letters/sounds, and has now set up a British Chapter of the Reading Reform Foundation.

“This book provides the vital phonics base which the National Curriculum lacks. Teachers who want to TEACH reading can use it. Otherwise, parents can use it to schoolproof their own child.”

Mrs. McNee mentioned having made some use of Daniels and Diack’s Royal Road phonic reading series of 1954, now out of print, which received so much criticism from British “experts” at that time. That phonic series is listed earlier in this bibliography and is mentioned by

Dr. Morris in her 1993 paper, a large portion of which is quoted elsewhere in this history.
In April, 2000, Mrs. McNee’s earlier work, Step-by-Step, was replaced with her new material, C-A-T=Cat: Teach Your Child to Read with Phonics, published by Elliot Right Way Books of Surrey, England. Press releases put out by Elliot Right Way Books on the publication of the new material stated that it was 192 pages in length, and sold for 3.99 pounds. With Mrs. McNee’s great expertise, it is safe to conclude that the new material lives up to the high praises that it received in those press releases from Elliot Right Way Books.

1991 (Reviewed in The Beginning Reading Instruction Study, 1993)
MCP Phonics
Elwell-Murray-Kucia
Modern Curriculum Press
Cleveland, Ohio
1992 (Reviewed in The Beginning Reading Instruction Study, 1993)
Discovery Phonics
Authors: “Multiple Contributors”
Modern Curriculum Press
Cleveland, Ohio

The above programs were included in the sections of The Beginning Reading Instruction Study of 1993 entitled, “Other Instructional Programs” and “Instructional Approaches.” As such, these programs did not receive the degree of sampling and study which were given to programs in the section, “Basal Reading Programs.” For the basal reader programs, six samples were taken and a fraction shown for the number including certain qualities, such as “Decoding strategy... Blending taught explicitly.” That might have been reported as 6/6 (in all six samples), 1/6 (in one of six samples) or zero (none of six). Instead, in the “Other Instructional Programs” and “Instructional Approaches” sections, the report was either “included” or “excluded.” That obviously could make no distinction between programs which might have deserved a 6/6 score compared to programs which might have deserved a 1/6 score.

On MCP Phonics of Elwell-Murray-Kucia, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Explicit,” and “Decoding strategy... Explicit” but did not include “Decoding strategy... Blending taught explicitly.”

On Discovery Phonics, The Beginning Reading Instruction Study of 1993 showed it included activities on “Sound/symbol relationships... Implicit,” but did not include “Decoding strategy,” either “Explicit” or “Implicit, or “Decoding strategy... Blending taught explicitly.”

1991 (Listed in The Beginning Reading Instruction Study, 1993)
EL-HI Textbooks and Serials in Print, 119th edition, 1991
Publisher not named

This reference work was listed on page 3 of The Beginning Reading Instruction Study, Office of Research, U. S. Department of Education, Washington, D. C., although its publisher was not named. Presumably earlier and later editions of this reference work might be of great help in identifying reading programs. If it is a quarterly publication, it might date from 1961. If it is a semi-annual edition, it might date from 1931. However, it is highly unlikely that it goes back further than about 1931.

A PHONICS RESOURCE FROM ENGLAND

1992
The Phonics Handbook
Lloyd, Mrs. Sue

I have not seen this material, but it is mentioned approvingly in Dr. Joyce Morris’s 1993 paper, quoted elsewhere in this history.

The following comments to be given shortly are taken from Mrs. Sue Lloyd’s paper, “Phonics Prevents Failure,” which was given at the Reading Reform Foundation’s Conference in London on September 26, 1993. That paper was included in Teaching Reading: What Works, The Reading Reform Foundation, Published by Mona McNee now at 2 Keats Avenue, Whiston, Prescot, Merseyside, Lancashire, L352XR, England. Mrs McNee has been the head of The Reading Reform Foundation’s English branch. The booklet is a compilation of four papers given at that conference.

It is interesting that Sue Lloyd’s auditory training method for rank beginners is essentially the same as the method used by Soviet psychologists, as described in the chapter by D. B. Elkonin in Educational Psychology in the U. S. S. R., Edited and With an Introduction by Brian and Joan Simon, Stanford University Press, Stanford, California: 1963. Concerning the necessity to teach auditory discrimination of sounds in words, and to teach the skill of blending separate sounds into words, Elkonin said (page 169):

“Ability to hear the separate sounds in words, to distinguish one from another, and to generalize sounds, is vitally important for succeeding stages in mastering reading and writing.”

Sue Lloyd’s program also resembles the Letterstad program of Dr. H. J. Kooreman, Pedagogisch Centrum, Enschede, Holland, which excellent program I saw in use in Holland in 1977. Dr. Kooreman consciously modeled his program on Russian programs. However, the English schools begin with four-year-olds, but the Russians wisely wait almost until age seven. The Bender Gestalt norms indicate that by the age of seven most children’s brains have matured sufficiently to deal with geometric shapes like letters, but perhaps half cannot do so at age four. Obviously, auditory discrimination, like visual discrimination, is less developed in the average four-year-old than the average seven-year-old. Success must therefore come far more slowly for the immature English beginners than for the older Russian beginners.

Sue Dickson’s excellent American program uses music drill exercise on the syllabary and is essentially the same as the method used by the ancient Greeks. Therefore, “What Works” keeps getting re-invented independently by dedicated teachers all over the world, like Mrs. Dickson, Mrs. Lloyd, and Dr. Kooreman, but it also keeps on being rejected by “expert”-plagued government schools all over the Free World.

 Portions of Mrs. Sue Lloyd’s paper follow:

“...children should be trained to hear all the sounds in words as a pre-reading requisite....

“...The children are told that the letters have sounds and when they know their sounds and put them together, they can read words for themselves.... For teaching the sounds, a multisensory method is used.... They LOOK and LISTEN to the letter-sound, they FEEL the formation and do an action. For each letter-sound there is a short story, e.g. for ‘h’ some children run a race and get puffed out and say ‘h h h h’.... Forty-two of the sounds of English are covered this way....
Regularly the letters are revised [Ed.: reviewed] and as each letter is held up, the children do the action and say the sound.

“After a week of learning the first six letter-sounds and doing the auditory training, I show the children how to blend the sounds and read words...

“Once most of the letters have been taught, [they] are given their first word box. Each box has regular words that can be worked out by blending. By going through these, the children get the valuable blending practice. By the time they have gone through all the boxes, the last of the letters have been taught. Now they are ready to start reading books for themselves. They need to know that not all words can be worked out and some are ‘silly’. It helps to go over the irregular keywords such as WAS. They enjoy looking for the ‘silly’ bit....

“...In their first term, all the children are taught the sounds of English and the main letters that are used for those sounds. They are taught to blend the sounds for reading, and to identify the sounds in words for writing....”

Mrs. Schlafly is famous for her work in defending the American Constitution in state legislatures all over the country against the ever-recurring threat of a call by two-thirds of the states for a new constitutional convention. Such a convention, which would almost certainly be under the control of the same change-agents who have been working for it for decades for various propagandistically expressed “good” reasons, would suspend our Constitution that has safeguarded our freedoms for over two hundred years. It would be replaced with a substitute constitution tailored to the liking of the change-agents, and our freedoms would almost certainly expire along with our Constitution.

Mrs. Schlafly is famous also for so many other worthwhile activities. Yet she took the time to write a very effective beginning reading program. Her interest in phonics began when, as a young mother, she became aware of the problems in beginning reading (presumably as a result of Dr. Flesch’s 1955 best-seller, Why Johnny Can’t Read). Mrs. Schlafly taught all her own children to read before they began to go to school.

Formerly, The Eagle Forum Education Fund founded by Mrs. Schlafly had for sale to parents the Hay-Wingo-Hletko Lippincott Phonics Workbooks, and the McGuffey First and Second Readers (edition date unknown). However, when the Lippincott materials were no longer available (presumably when the Lippincott company was absorbed by another company), Mrs. Schlafly wrote her own phonic reading program.

Mrs. Schlafly’s reading program consists of the 192-page, 4 color, hardbound First Reader, a 128-page workbook, two instructional audio cassettes, and two “fat” pencils suitable for beginners’ fingers. In 1993, it was available for $79.95, plus $7.00 shipping and handling charges. I have seen only the advertisement and not the material itself. However, considering the author’s expertise and background, it is safe to say that it is undoubtedly an excellent (and probably enjoyable) phonic program for children.
The Beginning Reading Instruction Study
Stein, Marcy, University of Washington-Tacoma, with Carmen Hadreas, Molly Riley Olson, Gerilyn Parker, Susan Wayne
Office of Research

All 13 full basal reader programs reviewed in The Beginning Reading Instruction Study have been discussed elsewhere in Appendix C, under the publisher’s names. However, the study also listed 30 “Other Instructional Programs,” which had readers or workbooks only to grade 3 or lower, or only supplemental instructional materials. (Why Mrs. McQueen’s program was included among those 30 instead of among the full basal programs is not known. Possibly the others had readers above the third grade level, which Mrs. McQueen’s does not, but that should not have mattered in this beginning reading study.) Also listed were 12 “Other Instructional Approaches,” a mixture of various programs. Some of these last two groups of (30 and 12 programs) are reviewed elsewhere in Appendix C, but it is not feasible to discuss them all. Those not included elsewhere in Appendix C are listed below, and interested readers can refer to The Beginning Instruction Study for further information:

Zoo-Phonics, Zoo-phonics (Publisher), Groveland, California; Georgene Bradshaw and Charlene Wrighton, 1985-1988.
It is to be regretted that some very widely used, successful, and widely known phonic programs were not reviewed in The Beginning Reading Instruction Study. Such programs include Samuel Blumenfeld’s, Sister Monica Folzer’s, and Char Lockhart’s, all of which are discussed elsewhere in this Appendix C.

Furthermore, even the vastly publicized Hooked on Phonics, which does such a poor job teaching real phonics, was omitted from this study. Yet anyone in America who listened to the radio or who watched television was almost certain to have heard its advertisements over and over again. It is used in many schools and certainly is influential in the teaching of beginning reading in America. Presumably it was excluded because it “depended heavily on audiotapes,” one of the reasons the report stated for exclusion of programs. Yet the bulk of the Hooked on Phonics program is contained in its printed workbooks.

Presumably, because of its dependence on computers, the study excluded the Ready to Read Program. That program was written by John Henry Martin in the 1980’s and is very widely sold to schools by International Business Machines. Yet the exclusion of such programs as Ready to Read or Hooked on Phonics from an American beginning reading instruction study simply because they are not dependent solely on printed material is arbitrary and misleading, since these programs have become very influential in the teaching of beginning reading in America.

Also excluded from The Beginning Reading Instruction Study was the fine reading series published by the Colemans (also included in this appendix). Also excluded was the very long-lived and very comprehensive reading program of Mae Carden, which is so justly famous (also included in this appendix). Most surprisingly, the Scribner (former Lippincott) series which was so widely used in America, and which was in use at least as late as 1991, was not included in The Beginning Reading Instruction Study. However, it may have been out of print in 1992, when this study was being prepared. The Scribner-Lippincott material is discussed elsewhere in Appendix C.
APPENDIX D
A Partial Annotated List of American Texts, Largely Before 1932, on the Teaching of Beginning Reading

Texts on the teaching of reading before 1932 are difficult to obtain, particularly concerning the teaching of reading in America. Some materials summarizing such texts are in print, but they are insufficient, and sometimes wrong.

G. Stanley Hall occasionally discussed certain German programs in his writings from probably 1874 until after 1900. A commonly cited German text on the history of teaching reading, primarily in Germany, is Karl Kehr’s Geschichte der Methodik des deutschen Volksschulunterrichts, Volume 1, Second Edition, 1889. A Swedish history is ABC Bucher in Schweden by Ingeborg Willke, 1965, Svenska Bokforlaget Bonniers, Stockholm. Unfortunately, I could make little use of either of these two works. I cannot read German in which both of these books were written, but can only read English and French. Various articles, particularly “Lecture,” in the Dictionnaire de Pedagogie et d’Instruction Primaire, Paris, 1887, edited by F. Buisson, discussed French texts and teaching methods at length as far back as the seventeenth century, and to a slight degree texts in other countries. The Dictionnaire is a magnificent source for reading methods which have been used in France, but is of little use concerning practices in America.

The Soviet white-leatherette-covered coffee-table-like book in Russian, V. P. Bogdanov’s 1974 Ot Azbukilvana Fedorovado Sovremennaug Bukvaria, is a history of Russian primers from 1574 to 1974. It would be a fine source for methods used in Russia, for anyone able to read Russian. However, our disinterested “reading instruction community” not only has never troubles itself to translate it, but probably does not even know of its existence. A copy is presently in the Library of Congress and I had some very few pages translated commercially at my own expense.

Texts on the teaching of reading in Great Britain have been discussed in this history to some extent in Part 6, for the most part by the use of source material that I saw which is presently in the British Library in London. Teaching Reading in Early England by W. J. Frank Davies, Pitman Publishing, London: 1973, is a fine source for information on the early teaching of reading in England before about 1500. A History of Children’s Reading and Literature, by Alec Ellis, Pergamon Press, Oxford, 1968, is an invaluable source for general information on primary education in Great Britain. The Victorian Country Child, by Pamela Horn, The Roundwood Press, Kineton, England, 1974, is also a fine source for factual material about education and children in nineteenth-century Great Britain.

Yet reliable texts concerning the history of methods in the teaching of reading in America are lacking. Nila Banton Smith’s “history,” reportedly written for her doctorate about 1932 at Teachers College, Columbia University, New York, which was first printed commercially in 1934 and then revised in 1965, cannot seriously be considered an historical source, except in part after about 1920. The defects in her “history” have been discussed at length previously. Rudolph R. Reeder of Teachers College, Columbia University, wrote The Historical Development of School Readers and of Method in Teaching Reading, Columbia University Contributions to Philosophy, Psychology and Education, Volume 8, No. 2, The Macmillan Company, New York, May, 1900, but his book is also unsatisfactory. Another book of very limited value concerning the history of reading instruction is Old-Time Schools and School-Books, by Clifton Johnson, The Macmillan Company, New York: 1904; Peter Smith, New York: 1935. Also gravely limited is the famous text, The Psychology and Pedagogy of Reading, With a Review of the History of Reading and Writing and of Methods, Texts, and Hygiene in Reading, by Edmund Burke Huey, The

A need therefore exists for a bibliography on actual American guidebooks for reading instruction which have been published over the years, as such contemporary guidebooks provide much of the necessary historical information on the teaching methods for beginning reading that were used. The following is such an attempted bibliography but it is necessarily also very incomplete.

While the most of the references are American in origin, some are British, because there was a great overlapping of materials on education between Great Britain and America until about 1835.

Various sources have been consulted to prepare this partial listing. The listing is broken down into sections, according to these sources. However, the first heavily annotated section given below concerns titles which turned up not just from one but from many scattered locations. It consists of titles of American texts and some foreign texts which were influential in America such as the Edgeworths’ material. The list omits uninfluential material such as First Book of English for Children, by Charles Kraitsir, M. D. His book was published in Boston in 1846 by Elizabeth P. Peabody, Horace Mann’s and Nathaniel Hawthorne’s sister-in-law. She is referred to elsewhere in this history. Kraitsir had a phonic system for reading English based on Latin vowel pronunciations, which system is obviously unworkable in English. Peabody wrote the First Nursery Reading Book in 1849 partially based on Kraitsir’s work but including sight words, and her book was ludicrous.

Some of the titles in this first list were taken from Early American Textbooks, 1775-1900, published by the Office of Educational Research and Improvement, Washington, D. C., 1985. These texts (all of which are shown below with library call numbers beginning with “P”) may be presumed to have been of some influence or copies probably would not have managed to survive and to end up in the Department of Education library, the source for Early American Textbooks, 1775-1900. Samuel R. Hall’s very influential 1829 text, Lectures on School-Keeping, is also in the Department of Education library in Washington but is not listed in Early American Textbooks. I made photocopies of this text while visiting the Department of Education library. Hall’s 1828 book is referred to in Samuel Blumenfeld’s Is Public Education Necessary? and was also referred to in material printed in the 1830’s in this country and England. However, many other titles in this first list came from sources other than Early American Textbooks and the Department of Education library.

At the beginning of the first list of titles, which is given chronologically, are some very early English materials which obviously eventually influenced the teaching of beginning reading in America. Although R. C. Alston’s Spelling Books, Volume IV, 1962, of A Bibliography of the English Language from the Invention of Printing to the Year 1800, published in Great Britain, lists many hundreds of early English spellers, most are omitted here and in Appendix B unless there is evidence that they were used in America. Information on some of the early titles shown in the first list below came from some of the volumes of Alston’s bibliographies, and from Foster Watson’s The English Grammar Schools to 1660,

Following the first list of titles given chronologically are the other lists, which are arranged in alphabetical, not chronological, order. These titles came from various other catalogs and sources which are, nevertheless, also inadequate. For instance, Leyboldt’s American Catalogues did not adequately report on contemporary reading instruction texts as proven by their omission of March’s ABC Book by Francis A. March (1825-1911), published by Ginn, Heath & Co., Boston, which was referred to twice in 1882 issues of the Primary Teacher.

Yet March’s book, which must at least have concerned the initial teaching of the alphabet, would be of interest, and not just because March had been a college student of Noah Webster whose famous spelling book dominated the teaching of beginning reading in America from 1783 until about 1826. Anything from March concerning beginning reading would be of interest because Mitford Mathews’ wrote that in March’s book, Spelling Reform, Washington: 1893, March had not only discussed the use of Pitman phonetic print used to teach reading in Waltham, Massachusetts, but wrote on pages 37 and 38 concerning St. Louis. March’s comments on St. Louis must concern, of course, the use of Leigh print there.

In the Cattell manuscript files in the Library of Congress is Cattell’s eulogy for the philologist, Francis A. March. As discussed by Dr. Michael M. Sokal in An Education in Psychology, James McKeen Cattell’s Journal and Letters from Germany and England, 1880-1888, The MIT Press, Cambridge, Massachusetts, 1981, March was Cattell’s favorite college teacher when Cattell was an undergraduate at Lafayette College until 1880. Therefore, through his association with March, Cattell most probably would have been informed about the Pitman and Leigh print “sound” attempts to displace the sight-word “meaning” method in American beginning reading in the approximately twenty-year period from the early 1850’s to the early 1870’s. Cattell most probably would also have been informed about what may or may not have been March’s endorsement of those attempts.

Cattell’s probable exposure to March’s knowledge about beginning reading may have led to Cattell’s adapting some of Wilhelm Wundt’s earlier reaction experiments so that they concerned the reading of print instead of listening to speech. The latter type had been among the reaction experiments that G. Stanley Hall had seen done in Wundt’s laboratory in Germany. Cattell devised his obvious adaptation of Wundt’s earlier experiments (and Cattell also devised rather clever laboratory equipment to carry out his reading experiments) while Cattell was a graduate student at Johns Hopkins University in Baltimore, under G. Stanley Hall. Hall had himself been a subject in Wundt’s German experiments and undoubtedly had described those experiments to his students at Johns Hopkins, one of whom was Cattell.

Therefore, it is very easy to see where Cattell probably got the basic idea for his reaction experiments in reading and why Hall wished to claim partial credit for Cattell’s work, as discussed in Sokal’s book. Cattell’s results have, of course, falsely been used for a hundred years to support the teaching of reading by “meaning” instead of by “sound.” Yet March has largely faded from the records and it has never before been suggested that there is a very probable connection between March’s work on spelling and reading and Cattell’s devising his misinterpreted reading experiments.

The first list follows, in chronological order.

Concerning the earliest items, it should be noted that with the sixteenth-century switch in much of Europe to teaching beginning reading in the vernacular instead of in Latin, England was the only country which found it necessary to invent “spelling books.” Such English “spelling books” were originally invented after the mid-sixteenth century SOLELY to help in teaching beginning reading! No such a thing
as an English dictionary had ever existed, either, and “spelling books” predate English dictionaries by a considerable number of years, as shown by Alston’s bibliographies on both categories.

Before the early sixteenth century, when Latin was the common written language for educated Englishmen, there never had been any such thing as the “correct” spelling of English words nor any need for “spelling books,” even when people wrote in the English vernacular. Nor apparently had the thought of “correct” English spelling (or “correct” spelling of most of the words in ANY language) ever occurred to anyone. People simply wrote down sequential syllable sounds, and they most naturally produced word sounds.

However, of all the European languages, only the English language had come from so many different roots and as a result had so many conflicting spelling patterns for syllables. It was this confused background on syllable spellings which made training in English “spelling” necessary for little beginners trying to learn to read in English as the first step. They no longer were learning to read regularly spelled Latin syllables as the easy first step, which firm “sound” foundation had made the later tackling of irregular English syllables fairly easy. After the switch to teaching beginning reading in the vernacular, other European countries in contrast to England managed quite well simply by having children study their languages’ complete and generally consistent syllabaries. This was true much later in France, even though France had a similar but less daunting problem, when France finally made the switch to teaching beginning reading in the vernacular instead of in Latin after 1700.

Yet the English “spelling” problem surfaced immediately after the switch to teaching beginning reading in English instead of in Latin, as shown by the 1551 remarks by John Hart, below. If Hart had been a young teacher of about 21 when he made these remarks, he would have learned to read at about six years of age in 1536, which was two years after the English Reformation. It is also highly probable that some English non-conformists, who had been objecting to having the Scriptures in Latin, had been teaching beginning reading to their children in English for some ten years or so before 1534, the date for the English Reformation, and Hart may have been one of those children.

The first list follows, in chronological order. Although some of the titles listed are of books which I have not seen, their titles suggest they may be of interest.

*******************

Hart, John -The Opening of the Unreasonable Writing of Our Inglish Toung, 1551. Mentioned in Charles C. Fries’ article, “Linguistics and Teaching of Reading,” page 594 and following of The Reading Teacher May, 1964. Hart, a school teacher, said: “For even so I have opened the vices and faultes of our writing: which cause it to be tedious, and long in learnying: and I learned hard, and evill to read.... And then have I sought the meanes (herin writen) by the which we may use a certaine, good and easi writing, onli following our pronunciation; and keping the letters in their auncient, Simple and Singular powers.” Fries said, “Hart’s Orthographie of 1569 developed much more completely the principles set forth in his manuscript of 1551 and proposed the use of an ‘augmented’ Roman alphabet as a consistent spelling of the ‘sounds.’“ Reproductions of Hart’s later material are available in libraries.

Mansell, Andrewe An alphabet and plaine pathewaye to the facultie of readinge, 1576. R. C. Alston lists this book in his Spelling Books. A 160l copy survives of a work by Mansell with a slightly different title which was clearly a spelling book: A new booke of spelling with syllables: or an alphabet and plaine pathwaye to the facultie of reading the English, Romane, Italica, and secretarie hands,.... Alston also lists a record of a publication by Thomas Johnson in 1590, The pathwaye to readinge; or, the neweste spelling A,B,C; conteyninge a most shorte, easie, and profitable way of teaching to spell and reade. Alston said, however, that Johnson’s 1590 book might only have been a reprint of Mansell’s 1576 work.
Clement, F., 1576, 1587 The Petie Schole, With an English Orthographie, wherein by rules lately prescribed is taught a method to enable both a childe to reade perfectly within one moneth (sic), & also the unperfect to write English aright. Clement’s book contained lists of rules illustrated by certain words, and was not a “dictionary” word-list approach. It has been reproduced in Four Tudor Books on Education, Facsimile Reproductions, with an Introduction by Robert D. Pepper, Scholars’ Facsimiles & Reprints, Gainesville, Florida, 1966.

Johnson, Thomas - The Pathway to Reading, or the Newest Spelling A B C, 1590. Foster Watson on page 179 of The English Grammar Schools to 1660, Their Curriculum and Practice, said Johnson’s book had been published in 1590 and so preceded Coote’s 1596 book. He thought Johnson’s might have been the Spelling A B C in the list of school books owned by the Stationer’s Company in 1620.

Coote, Edmund - The First Book of the English Schoole-maister, and The Second Book of the English School-maister, 1596. This is followed by a catechism, all three bound together as one book. Coote’s was the model for the spelling books which were to follow, and was enormously popular, being produced in a vast number of editions for over a century. It contained not just systematic rules, but systematic spellings, and inserted short paragraphs for reading practice, and it had many imitators. The three which were bound together as one book have been reproduced on microfilm from a copy in the British Museum, London, by University Microfilms Inc. (Gt. Britain) Ltd., which microfilm copy I saw at the Library of Congress in 1988.

Brinsley, John (1585-1665) - Ludus Literarius, or, The Grammar Schoole; Shewing How to Proceede from the First Entrance into Learning, to the Highest Perfection Required in the Grammar Schooles, With Ease, Certainty and Delight Both to Masters and Schollars....., London, 1612. Coote’s 1596 speller was praised by John Brinsley, who was a grammar school teacher. Brinsley discussed methods to teach reading. His book has been reproduced in full as No. 62 in that astonishing series, English Linguistics 1500-1800 (A Collection of Facsimile Reprints) Selected and Edited by R. C. Alston, The Scolar Press Limited, Menston, England, 1968. Alston of the British Library who produced a vast literature on the English language is an unsung hero!

Hornbye, William - Hornbye’s Horn-Book. “Printed by Aug. Math. for Thomas Bayly, and are to be sold at his shop in the middle Row, neere Staple Inn, 1622.” Andrew W. Tuer reproduced a long section of this poem in History of the Horn-Book, first published in 1897 and republished by Arno Press, A New York Times Co., New York, 1979. On page 213, Tuer said, “Concerning (Hornbye’s) birth and death we are ignorant, but Hornbye says of himself that he was educated at Peterborough Free School.” The poem from which Tuer quoted lengthy excerpts, on pages 214 to 220, casually mentions much about teaching methods.

Lloyd, Richard - The Schoole-masters Auxiliaries...., 1654, London. Watson referred to this on pages 183-184. Lloyd taught letters by comparing them to objects. Watson said he showed the powers of the
letters, and that Lloyd wrote: “Thus a just account is given of every letter in the right sound thereof; and when the same is silent, or doth vary from the proper sound....”

Ellis, Tobias - The English School, 1680. Listed by Foster Watson in The English Grammar Schools to 1660, Their Curriculum and Practice, 1908, 1968.

Anonymous - The Irish Spelling Book, 1740. A Scolar Press Facsimile, English Linguistics 1500-1800 (Collection of Facsimile Reprints) Selected and edited by R. C. Alston. No. 199. The Scolar Press, Limited, Menston, England, 1969. This extremely important but exceedingly rare and largely unknown book has been discussed in the text of this history. It marked the entrance of Pascal synthetic phonics into the teaching of reading in English and was the probable source for Sheridan’s interest and famous work on phonics. It was Sheridan’s influence through his lectures and books which eventually produced phonic spellers like those of Noah Webster, Perry, etc., as well as pronouncing dictionaries.

Edgeworth, Richard and Maria Edgeworth, Practical Education, Published in 1798 in Ireland, and very influential. A section of their book concerned the teaching of reading, endorsing phonics on whole words but decrying the use of the ancient syllabary. Edgeworth claimed his use of phonic markings had predated the publication of Sheridan’s material. Possibly Edgeworth also had a copy of The Irish Spelling Book!

Bell, Rev. Andrew, The Madras School, or Elements of Tuition, London: 1808 (New York Public Library). This book has been discussed in this history. It promoted monitorial schools.

Neef, J. The Method of Instructing Children Rationally in the Arts of Writing and Reading. Philadelphia. 1813. Cited in Mitford Mathews’ Bibliography to Teaching to Read, Historically Considered, University of Chicago Press, 1966, page 213. Neef, an Alsatian, had come to America in 1806 at the request of an American philanthropist (unnamed), after having opened a Pestalozzian school in Paris in 1803. Neef’s book was an attempt to teach regularly spelled English words first. Mathews described Neef’s material, which was probably Code 10 “sound,” on page 153. Dr. Keagy cited Neef as a source for his own 1826 book. That was very curious, since Keagy endorsed (but did not use) a Code 1 “meaning” approach for beginning reading. Keagy claimed the time had not yet arrived for the use of “meaning” to teach beginning reading. Keagy’s work is discussed at length elsewhere in this history.

Kelly, James. An Improved Method of Education Instituted by Dr. Bell... Also Joseph Lancaster's Method of Teaching. Philadelphia, 1817. (New York Public Library). This book, discussing Lancaster’s method and Bell’s original method of teaching beginning reading has been discussed in this history.

Journal Articles from Various Sources, from 1826 to 1900 Various articles in the American Journal of Education (later American Annals of Education) from Russell’s beginning it in 1826; articles in Horace Mann’s Common School Journal from 1839; and reports from the American Institute of Instruction are a fine source for comments on teaching reading. Dunn stated on page 4 of his book, Popular Education (1836), “One source, however, from which I have drawn unsparingly must be specially mentioned. I refer to the ‘American Annals of Education and Instruction,’ edited by the Rev. W. C. Woodbridge, of Boston, U.S., a journal of which it is impossible for me to speak too highly; I scarcely know the extent of my obligations to this educational treasury.” At a later date, Barnard’s American Journal of Education, unconnected with the first journal with that name, is an excellent source. The large numbers of educational journals published in America in different states after the 1830’s and all through the nineteenth century, which are virtually forgotten today, are further sources. I have seen many of them lining shelves in the stacks of the Library of Congress.

Infant Schools (on cover), Infant Education (on title page), by A Friend to the Poor, Published by Shirley and Hyde, Portland [Maine]: 1827-1828 (Harvard library). This book has been discussed in this history.

The work of John Wood, a pivotal figure, is discussed in this history.

Pillans’ Letters to Kennedy, commented on by the Scottish Schoolmaster listed below, and on page 68 of Dunn’s Popular Education, also listed below. 1828.

Wilderspin, Samuel. Infant Education; or Practical Remarks on the Importance of Educating the Infant Poor, from the Age of Eighteen Months to Seven Years, Fourth Edition, Carefully Revised, with Considerable Additions, London: Published by W. Simpkin and R. Marshall, Sold Also by Oliver and Boyd, Edinburgh; Collins and Ogle, Glasgow; William Currie, Jun. and Co.; and Westley and Tyrrrel, Dublin, 1829. Internal testimonials are dated 1823, so presumably that was the date of the first edition, while 1829 was the date of the fourth revised edition. Wilderspin began in the infant school at Quaker Street, Spitalfields, on August 7, 1820, which had been established by Joseph Wilson on July 24, 1820. Wilson with Brougham and others had established the first English infant school at Brewer’s Green, Westminster, London, in 1818, for which they hired Buchanan from Robert Owen’s prototype for infant schools which was attached to his factory at New Lanark, Scotland. Wilderspin claimed the earlier infant schools had merely been “asylums” and not schools, and that he originated the practice of teaching “infants.”

Wilderspin told of the formation of the London Infant School Society at Freemason’s Hall, London, on June 1, 1824, with Brougham and others in attendance. Wilderspin’s long-winded account of the speeches showed that it was a public relations, fund-raising event, to which Brougham, Robert Owen and others gave “subscriptions,” or money. The purpose of the meeting was to establish a training school for infant school teachers. Therefore, only six years after having introduced the brand-new idea of infant schools to England, the activists were already getting public support for a normal school to train teachers for future infant schools. That was an extraordinary public relations accomplishment and certainly
suggests that the activists were well organized! Brougham gave 25 pounds and some others gave more. However, Robert Owen, like a typical good socialist, gave only ten pounds. After all, that was his OWN money and not other people’s tax money that he was subscribing!

Wilderspin’s description of “reading” instruction in his school is ludicrous and vague. Apparently the school emphasized “meaning” far beyond the mental level of two- to six-year-old children, and the drill work consisted of memorizing the letters of the alphabet and lists of spelling words on cards. Whether there was any phonic arrangement to the word lists on the cards is unknown. Since the one word that Wilderspin listed as being spelled by a class was the phonically irregular word, “post,” (it should have the vowel-sound in “pot”), that suggests that the lists may not have been sound-oriented.

Anonymous Scottish Schoolmaster. His book was entitled Letters Addressed to the Parochial Schoolmasters of Scotland, Concerning the New Method of Tuition. Containing Strictures on Professor Pillans’ “Principles of Elementary Teaching”.... By a Schoolmaster, Edinburgh: 1829. The book was a collection of letters published between November 30, 1827, and August 15, 1828, with additional material after that written by the Schoolmaster. The Schoolmaster was responding to Pillans’ remarks in his lectures and book vilifying parish schools and promoting monitorial schools such as John Wood’s famous Sessional School. Henry Dunn had approvingly quoted Pillans’ 1828 and 1836 work in Popular Education. Reverend T. H. Gallaudet edited a book of Dunn’s (probably Popular Education) for American readers. Yet Dunn made NO mention of the powerful 1829 rebuttal to Pillans made by the Scottish Schoolmaster. That rebuttal was presumably well known, since a copy survives in the New York Public Library today. The Schoolmaster’s material has been discussed at length in this history.

Hall, Samuel R. Lectures on School Keeping, 1829. This was a very influential book in its day. See comments elsewhere in this history. Samuel R. Hall also wrote at least two children’s texts, The Child’s Instructor, or Lessons on Common Things, Flagg and Gould, Andover, Mass: 1832 (PEllI9.A1H.H3) and The Grammatical Assistant, G. and C. Merriam, Springfield, Mass., 1836 (PE II09 .H3). Hall’s important 1829 book is also in the Department of Education library but is not listed in Early American Textbooks.

Parkhurst, J. L. Moral Philosophy, (by 1830) listed on page 17 of Lectures on School Keeping by Samuel Reed Hall, Second Edition, Boston, 1830. Hall quoted Parkhurst as having said:

“...to send an uneducated child into the world is like turning a mad dog into the street.”

Hall concluded, “...all are under obligations to regard with high interest, those institutions which furnish the means of mental culture to the great mass of people.” Such remarks were part of the ongoing propaganda for centralized government schools in the literate America of the 1820’s which had no need for them, since literacy was almost universal except for those held in slavery. (It was not lack of private, non-governmental schools which accounted for the illiteracy of slaves. On the contrary, some governments of slave-holding states specifically forbid the teaching of reading to slaves, and penalized private individuals who tried to teach them. That fact is a particularly ugly facet of our history, and demonstrates that the slaveholders clearly recognized that literacy equals power.) In centralized, government schools, the change-agents obviously could set up the curriculum. With control over the curriculum, they almost immediately after 1826 gave functional illiteracy instead of real literacy “to the great mass of people” by promoting the use of “meaning” instead of “sound” in the teaching of beginning reading. That obviously resulted in less “power to the people,” pulling them down closer to the cultural level of those still held in slavery. Propaganda for such government schools was also widespread in Great Britain, where literacy had not been so high but was fairly general, as shown by the massive sales of cheap chapbooks which had a high readability level during the eighteenth century.
Seton, S. W. The Abecedarian, Printed by J. R. Requa, 1830. See Blumenfeld’s Is Public Education Necessary? for Seton’s connection with the activists. Seton’s incredibly bad text is described elsewhere in this history. (Harvard library)

Key to the First Step in Teaching Children to Read, According to the Lesson System of Education, First American from Third Edinburgh Edition. Publisher: Jonathan Leavitt, New York: 1830. This appalling book has been described in this history. (Harvard library)

Howland, Mrs. The Infant School Manual, or Teacher’s Assistant. Boston: Richardson, Lord, Holbrook. 1831. 274 p. PS 681 .H6 This was the publisher of Samuel Worcester’s Code 1 reading series. “Holbrook” was not Josiah Holbrook.

Philosophy of Instruction or Nurturing Young Minds. Greenfield, Massachusetts, 1832. Since this book was published in Greenfield, Massachusetts, in 1832, it is very possible it was published by Phelps, the original publisher of the Franklin Primer. Its content might be of interest.

Davis - Manual for Teachers of Common Schools. Mentioned in G. & C. Merriam’s The Easy Primer (1833, 1836), below. The identity of “Davis” is unknown.

Abbott, J(acob) (1803-1879), The Little Philosopher, or Infant School at Home, published in or before 1833. The preface of G. and C. Merriam’s The Easy Primer (1833, 1836) said that “to excite a love for school” teachers should suggest to every parent that he or she read The Little Philosopher, or Infant School at Home, by J. Abbott, Hall’s Lectures on School Keeping and Davis’ Manual for Teachers of Common Schools. Jacob Abbott also wrote the famous Rollo series of children’s books as well as school histories. See references in Early American Textbooks for such books, but no reference is made there to Abbott’s book which was cited as a teaching guide by G. and C. Merriam in 1833 in America. Nor is any reference made to Abbott’s book, The Teacher, which was cited as an authority by Dunn in England in 1836. Yet these teacher’s guides were apparently critically important in the history of education. On page 233 of Mary F. Thwaite’s From Primer to Pleasure in Reading, she said Jacob Abbott eventually wrote 180 books. After teaching college and being head of a girls’ school in Boston, she said Abbott devoted himself to the ministry and to his books for children. She said his earliest book was The Little Philosopher, The Infant School at Home, published in 1830. He later also wrote three books for the Tract Society, two of which he wrote jointly with his brother, John S. C. Abbott.

Taylor, J. Orville. The District School, New York, circa 1835. Taylor also briefly published a journal, Common School Assistant, from January, 1836, until at least February, 1839, which is of interest concerning that period in education.

Dwight, Theodore, Jr. The School-Master’s Friend, with the Committee-Man’s Guide, New York: Roe Lockwood, 1835. Endorses Code 1 reading. On page 51, the following appears:

“Learning to read without spelling. The University of France and the Deaf and Dumb Institution of Paris have adopted a system for teaching to read without spelling. This has been approved by some very good judges in that country....”
Dwight gave a garbled explanation of the “French” method, which apparently had some Pascal phonics, and then recommended teaching pure Code 1 sight words in English. Recommended American Annals of Education by W. C. Woodbridge, Boston, The District School by J. O. Taylor, New York, Hall’s Lectures to Schoolmasters, and The House I Live In by Dr. W. A. Alcott, Boston. These authors were all change-agents, and the change-agents often recommended each other’s works. Yet, as this list makes clear, almost the only works on elementary education being published at that time were such change-agent works, since the general public had an enormous disinterest in the topic. Dwight actually confirmed the public’s disinterest in this book. See the note in the text of this history concerning the “meaning” primer written by Dwight.

Pillans’ Three Lectures, 1836. Mentioned on page 50 of Dunn’s Popular Education, 1836. See comments of the Scottish Schoolmaster in this history concerning Professor Pillans’ 1827 remarks, and Pillans’ Letters to Kennedy, which were also mentioned on page 68 of Dunn’s Popular Education.

Peabody, Elizabeth P, Record of a School, Boston: 1836, Second Edition. Reporting on A. Bronson Alcott’s school in the basement of Boston’s Masonic temple in which Peabody also taught. See elsewhere in this history concerning the fact that Alcott’s school eventually scandalized Boston and lost support because of Alcott’s teachings, although undoubtedly very tame by today’s standards, on the topic of sex.

The Schoolmaster, 2 vols., Knight, Ludgate Hill (England), before 1836. Mentioned on pages 70 and 71 of Popular Education by Henry Dunn, 1836. Contains American lectures, one by Thayer at the formation of the American Institute of Instruction in 1830. Dunn said Thayer, like Parkhurst in his book, The Teacher’s Guide, had said words:

“to be spelled should first be embodied in reading lessons, and afterwards arranged in columns; and both insist that the evidence of their being possessed by the pupil should in all cases be rendered in writing.”

Such silent written spelling which by its nature concentrated on word “meanings” was meant to replace the former very extensive oral drill which instead had concentrated on syllable “sounds” and their construction. Dunn quoted Thayer:

“It may be said, the eye remembers. It is more attentive than the ear. Its objects are not confused. It takes in a single and perfect image of what is placed before it, and transfers the picture to the mind.”

Such written spelling did not replace oral spelling until much later, but the effect was the same after about 1830. That was because the sound-bearing syllabary was no longer learned as a first step, and words were no longer spelled syllable by syllable.

In America, William Bentley Fowle, publisher and school book author, referred on the back cover of The Common School Speller (1842) to The School and Schoolmaster of Geo. B. Emerson and Dr. Potter, both Americans. That material presumably was unrelated to the British publication, The Schoolmaster.

Emerson, Geo. B. and Dr. Alonzo Potter - The School and Schoolmaster, 1849 or before - mentioned on back cover of Wm. B. Fowle’s Common School Speller, in which they recommended Fowle’s book. All were government-school activists.

Dunn, Henry, Secretary to the British and Foreign School Society. Popular Education; or, The Normal School Manual, 1836. Second Edition, London: Published by The Sunday School Union, 1837. Dunn signed the preface to the second edition, “Borough Road, December, 1837,” so he was apparently located at the Borough Road School, which he said on page 2 had trained four hundred and sixty instructors, presumably for the British and Foreign School Society schools. Borough Road apparently had a model school for children as well, to judge from the article from the Educational Magazine, mentioned below. Reading was taught by “meaning,” not “sound.”

Educational Magazine, mentioned in Popular Education, or The Normal School Manual, by Henry Dunn, Secretary to the British and Foreign School Society, London: 1836. See entry for Dunn’s text. On page 84 of Dunn’s text, he referred to a reprint in his Appendix of an article from that magazine, “A Day at the Borough Road School.” On page 87, he referred to the Educational Magazine article (no date given), “Method of Teaching Mental Arithmetic.”

“(Gallaudet) edited an American edition of Dunn’s Principles of Teaching, a British work, which had done much good in that country, under the name of the Schoolmaster’s Manual.”

The quotation is from W. A. Alcott’s Tall Oaks from Little Acorns, 1856, and it gave no date for Gallaudet’s edition of the British text, which was most probably Dunn’s 1836 Popular Education, or The Normal School Manual, and not a book called Principles of Teaching, on which I have found no record. As Alcott’s book establishes, W. A. Alcott was a close friend of Gallaudet, so presumably Gallaudet was his source for the comment that Dunn’s book “had done much good in that country.” How could Gallaudet have known that Dunn's book “had done much good in that country” unless there were a trans-Atlantic clique of improvers who were able to communicate effectively through publications, personal letters, or visits? Alcott’s cousin, Amos Bronson Alcott, made a kind of triumphal visit to England about 1840, even though he had shortly before fallen into disfavor with the Boston public, as mentioned in the entry above for Elizabeth Peabody. The trans-Atlantic lines of communication between educational reformers had obviously been in good working order for some time before Amos Bronson Alcott’s visit about 1840.

American Common School Union, New York City. from March, 1837 and later. According to C. W. Bardeen in his 1893 paper given at the Chicago World Fair, mentioned elsewhere, the following books were listed in The Common School Assistant as being sold by the American Common School Union, New York City. That group had been founded by J. Orville Taylor, editor of The Common School Assistant (1836-1840):

Sigourney’s Girl’s Reading Book and Boy’s Reading Book.
Taylor’s District School, on which Taylor had won a prize,
Burton’s District School As It Was,
Wittich’s Essay on the Method of Teaching in Prussian Schools
Lord Brougham On Education
Prussian and New York School Systems Compared
Satirical Hits on the People’s Education

Dunn, Henry. An Apology for the Bible in Schools for the Nation, with Remarks on Centralization, the Voluntary Societies, &c, &c, &c. Advertised as “shortly will be published” (1837?) in the back of the 1837 Second Edition of Dunn’s Popular Education, published by The Sunday School Union, London. Note appeal to religion, which would have been widely acceptable in 1837, with only “afterthoughts” on “centralization.” Yet centralization was a primary aim of the activists. Centralization was well under way by 1837, the independent Sunday schools having formed a “union” in both America and England. It should be noted that the biography of Keagy, a very important activist on both government schools and Code 1 reading, said Keagy had also worked with American Sunday schools. An American Sunday school text, referred to elsewhere in this history, had moved sharply toward meaning by 1826, at a time when such a move was almost unheard of. T. H. Gallaudet also wrote material for the Sunday school societies. Early American Textbooks shows on page 247 Gallaudet’s The History of Jonah, New York: American Tract Society, no date, 156 pages, and Scripture Biography for the Young. New York, American Tract Society, 200 pages, published in 1896. Therefore Gallaudet, like Keagy, had a firm tie with the Sunday school groups, even though there is no record of his having published beginning reading materials for them specifically.

Bilby, T. and R. B. Ridgway. The Infant Teacher’s Assistant, for the Use of Schools and Private Families, Ninth Edition, 1843, Published by R. B. Ridgway, Infant School Depot, 22, Chichester Place, Gray’s Inn Road (England). Much flowery “piety,” followed by total endorsement of pure Code 1 reading and the removal of little toddlers of two through five years old from their parents. One of the authors said he had been working in infant schools almost from their inception, which would be some time after 1818 in London. The Code 1 suggestions were contained in the chapter, “Elementary Reading,” beginning on page 77, and subheaded, “As adopted at Hart Street Infant School, by R. B. Ridgway.” According to their recommendations on organization, in a “school” containing 40 to over 200 little children, the toddlers were to be placed in strictly regimented small groups taught by “monitors” no older than themselves. If more than 80 children were enrolled, both a master and mistress were presumed to be needed. The authors opposed combining “the Infant and National Systems, thus spoiling both.” This suggests that these organizations were firmly entrenched well before 1843, when the ninth edition of this book was published. The division between infant school and elementary school persists even today in the organization of English government schools, except that “infants” are not received until about four years old. Except for its highly successful public relations, the monitorial system was a monstrous failure even when used with older children, as the Scottish Schoolmaster made plain in his 1829 text. I photocopied portions of this text when I saw it in the Department of Education library in Washington, D. C., but, like some other important books there, it is not listed in Early American Textbooks. This ninth edition was dated 1843, but the date of the original edition is unknown.

Ellis, Alexander John - A Plea for Phonotypy and Phonography. Published in England, 1845. According to Mitford Mathews’ discussion of Pitman print in Teaching to Read, Historically Considered, University of Chicago Press, 1966, pages 166-170, Ellis had met Isaac (later Sir Isaac) Pitman (1813-97) in 1843. Ellis was a wealthy and well-educated young man about Pitman’s age. Ellis helped Pitman in his invention of a phonetic alphabet with a separate sign for each sound, and Pitman print was used in some
places in America and Great Britain to teach beginning reading for some years. The Initial Teaching Alphabet (ITA), based on that system, was widely used in America and Great Britain over a hundred years later, largely during the 1960’s. Longley published American materials based on Pitman print in the mid-nineteenth century. See the Longley entries in Appendix B, and the body of this history concerning the use of Pitman print in America.

Goldsbury, John. Exercises and Illustrations on the Blackboard, 1847. Goldsbury referred to William Russell on page 133 and had joined with William Russell in writing the American Common School Reader and Speaker. Goldbury’s preface to this 1847 book quoted Horace Mann on the use of blackboards in Prussia and referred also to teachers’ institutes, which were obviously firmly established by 1847. The use of blackboards in America spread after 1847.

Emerson, Rt. Rev. Geo. B. and Dr. Alonzo R. Potter - The School and Schoolmaster. Published in Boston in 1843 per Ontario listing later. This material was mentioned on the back cover of Wm. B. Fowle’s Common School Speller, stating they had recommended Fowle’s book.

Jacobs, J. A., Principal of the Kentucky Institution for the Education of Deaf-Mutes., Learning to Spell, to Read, to Write, and to Compose, - All at the Same Time, Part I., D. Appleton & Company, New York: 1861. (Copyrighted in 1859 by Jacobs.) To a large degree, this book used portions of the systematic syllable and spelling book “sound” methods to teach deaf-mutes to learn to read and write (even though Jacob’s pupils were mute and had not been taught to speak). Jacobs did not seem to realize he was using some “sound” methods to teach reading and writing but claimed correctly that his methods were also more desirable for teaching hearing children to read and write than the current ones. His book was among those advertised in the back of Appleton’s copy of James Johonnot’s The Sentence and Word Book, directly under their advertisement for the heavily revised edition of Webster’s speller, so Jacobs’ book had remained in print for at least twenty-four years. It should be remembered, however, that in 1885 Appleton’s phony phonics series was probably the best-selling series in America.

Wilbur, H. B., M. D. Suggestions on the Principles and Methods of Elementary Instruction, Published by J. Munsell, Albany: 1862. The copy in the Harvard library is inscribed, “1863, April 6, Gift of Thomas Hill, Pres. Harv. Coll. (1843).” President Hill had graduated from Harvard in 1843. The author was the principal of The New York State Asylum for Idiots. With excellent supporting reasons, he condemned “object teaching” as practiced in England and America. He also condemned the object-teaching enthusiasts’ version of phonics, which was indeed defective, but unfortunately he effectively endorsed what is Code 3 sight-word reading.

Leigh, Edwin, Dr. (1815-1890) Pronouncing Orthography, St. Louis, 1864. According to Mitford Mathews in Teaching to Read, Historically Considered, University of Chicago Press, 1966, page 170, this was an eight-page pamphlet describing Leigh’s method of marking letters and silent letters to show word pronunciations. Most primary reading series had editions in Leigh pronouncing print by 1873, and it was an enormous success until suddenly being extinguished through the influence of the Boston/Quincy change-agents and “philosophers” who endorsed “meaning,” not “sound,” in beginning reading. The most obvious anti-Leigh-print vehicles were the 1873 NEA report mentioned below, and the enormously used, non-Leigh-print 1878 Appleton series. The widely used Appleton series on which William Torrey Harris was the principal author, published in 1878, apparently was almost the first new series in years to omit an edition in Leigh print. (Sheldon’s 1875 series which used highly inadequate phonics, published by Scribner, had apparently omitted a Leigh edition, but it was never remotely so influential as the Appleton series.) It is not surprising that the “philosopher” Harris established a “philosophical” center not far from Boston and Quincy in 1880, after he resigned (?) as Superintendent in St. Louis, which, unlike other cities, went right on using Leigh print, not only after 1873, but for years after 1880.
Harris’s 1878 Appleton series had an enormous and widespread use all over the United States. Vail said in his history of the McGuffey readers that Harris’s Appleton series and Vail’s 1879 McGuffey’s series, which used Leigh-like markings to show pronunciations, fought to a draw in a textbook war, which war was apparently only in the Midwest. It was Appleton’s 1878 series almost blanketing America for a few years after 1878 which was probably most effective in killing off the use of Leigh print, after the publication of Farnham’s anti-phonics 1873 article, mentioned below. That it was the Appleton series which largely succeeded in replacing Leigh materials hardly seems accidental, since the Appleton’s series omission of a Leigh-print edition was obviously quite deliberate.

An article by the well-known Leigh, entitled “Pronouncing Orthography,” appeared on pages 207-219 of the NEA Report, 1873, immediately after an article by the little known Farnham on his new “sentence” method of teaching reading, discussed at length in this history. As also discussed elsewhere, the placement of the anti-phonics Farnham article, with its specious reasoning, directly before the Leigh article, was most probably quite deliberate. It was almost immediately after the publication of that NEA Report that Leigh print went out of general use.

However, in Leigh’s plea for the widespread use of Leigh print in first grades, because with it children could become independent readers before the end of one year in school, Leigh said:

“...we have our children in school but very few years, few of them more than four or five years, half of them only three years, one third of them only two years; and in this time, with our old books and methods, they have been able only to read through two or three primary readers in children’s language; and this third or half of our children leave school unable to read understandably an article in the morning newspaper. At the news-boys’ lodging-houses in New York, twenty children in every hundred report themselves unable to read; though most of them have attended school two years or more; and many - perhaps another twenty, - who say they can read, are found, on trial, to be unable to read easily or well enough to make use of this art, and confess that they do not and can not read the daily papers. The facts are substantially the same, though in varying degrees, with the 20,000 children who annually go out of the New-York public schools to various employment, to earn a few dollars a week by making plows, or boxes, or as errand or cash boys, or to help mother at home, etc., etc. They have not yet learned to read well enough to be actual readers. Try it with any class in the second or third reader, in the second or third primary years.... One-half or one-third of our children remain at school only three years or less, and in that time do not learn to read well enough to become actual readers of the daily papers....”

This comment appeared after Leigh’s speech: “The subject was further discussed by Dr. Adolf Douai, of New Jersey; W. N. Barringer of Newark, N. J.; Mrs. A. J. Rickoff, of Ohio; Charles O. Hurlbut, of N. J.; E. A. Sheldon, N. Y.; Mr. Ross, N. Y.; C. Goodwin Clark, Mass.; and Messrs. Freeborn and Abbott, N. Y.” Mrs. A. J. Rickoff of Ohio was presumably Mrs. Rebecca Rickoff who shortly after wrote the phony phonics Appleton “meaning” charts, demonstrating that she was a highly active opponent of Leigh print. Two of the three authors of the 1878 Appleton series were Superintendent A. J. Rickoff of Cleveland and Superintendent Harris of St. Louis. (The third was Mark Bailey of Yale.) St. Louis had used Leigh print since 1866, and continued to do so after Harris resigned (was fired?) in 1880. Leigh’s 1873 remarks concerning illiteracy in the United States were later paraphrased by Ferdinand Buisson of France in his report on the 1876 Philadelphia Exposition.

In Leigh’s 1873 NEA speech, he made a further very interesting comment:

“The Latin scholar finds that the very meaning of the words depend upon the spelling, even down to the minutest details.... he can not study or read his Latin without noticing every letter in
very word. He acquires this habit. He carries it with him in all his English reading, and it has been noticed that, as a general rule, Latin and Greek scholars become the best spellers in English. Dr. Geo. B. Emerson had some remarkable facts of this class come under his notice when he began to teach in Boston, many years ago. All his best spellers (save one who was superior in every thing), were from the Latin school, where they had had no lessons in English spelling; and all his poorest spellers were from the English high school, where they had had daily lessons from the English spelling-book. He first pointed out to me this relation between the study of Latin and good English spelling, and he predicted in 1865 that this very same result would come from the use of the pronouncing orthography. The reports of the actual results have verified his prediction.”

Of course, Emerson’s remarks further confirmed that poor spelling had been the result in Boston when the “meaning” method had been adopted.

Wickersham, James Pyle, A. M., Principal of the Pennsylvania State Normal School, Millersville, Pennsylvania - Methods of Instruction, That Part of the Philosophy of Education which Treats of the Nature of the Several Branches of Knowledge and the Methods of Teaching Them According to that Nature. Philadelphia: J. B. Lippincott & Co., 1865. (Copy in the Library of Congress). Extensively describes 1865 methods of teaching reading. Wickersham was a highly respected authority, apparently with good reason, to judge from the quality of this book. The “word” method or the ABC-“word” method was in almost total use in 1865, and the use of phonic methods extremely rare.

From the 1870’s to about 1920 Excellent late nineteenth century references are educational journals such as the School Bulletin of Syracuse, New York, the New York School Journal published in New York City, and the Primary Teacher published in Boston.

Martin, Mrs. A. C. What Shall We Attempt in Elementary Schools?. Harvard copy of an 1874 speech which demonstrated many contemporary attitudes concerning “improvements.”

Kiddle, Henry, City Superintendent of Public Instruction, New York City; N. A. Calkins, First Assistant Superintendent of Primary Schools in New York City; and a New York City superintendent named Harrison: How to Teach, “A manual of methods for a graded course of instruction.” 269 pages, J. W. Schermerhorn & Co., New York. Listed in The School Bulletin, September, 1874, page 5. “This volume contains essentially the course of study pursued in the schools of New York city, given in minute detail.... We know of no single work corresponding with it in practical value.”

Calkins, N. A. How to Teach Phonics. Chicago: Beckley-Cardy Co., n. d., 80 p. PE ll20 .C3 (From other sources, this can be dated to about 1870 or 1880 and may originally have been a portion of the book mentioned above. Calkins of the New York City primary schools did not endorse real phonics.)

Hall, G. Stanley. How to Teach Reading and What to Read in School, Monographs of Education No. 4, Heath, 1886. Hall’s book, without the “Monographs” title, was shown by E. B. Huey as 1874 in Huey’s 1908 book, The Psychology and Pedagogy of Reading. Heath’s 1886 edition may have been a reprinting of an 1874 original. Note Hall’s use of the term, “How to,” as in the New York City material by Kiddle, Calkins and Harrison, above, which was mentioned in 1874 in The School Bulletin. The New York schools’ material may well have come out before 1874. Hall may have been emulating the New York group, since the use of “how to” occurs no where else before 1874 in the titles in this Appendix D except for John Brinsley in 1612. However, the “how-to” usage in titles concerning reading is common after 1874, the probable date for Hall’s book, as the use of the search key on this software can demonstrate.

Sheldon, E. A. Ph. D., Principal of Oswego State Normal and Training School, Author of “Sheldon’s Readers,” “Elementary Instruction,” and “Lessons on Objects,” and E. Hubbard Barlow, A. M., Professor

1593
of Rhetoric and Elocution in Lafayette College, Easton, Pa. Teachers’ Manual of Instruction in Reading; Designed to Accompany Sheldon’s Readers. New York: Scribner, Armstrong, and Company, 1875. Sheldon, whose own “phonics” was perhaps a Code 3, described 1875 methods of teaching reading in this manual. His comments provide an unimpeachable source confirming that sight-words were and had been the norm in teaching in America. Sheldon was famous as a promoter of “object lessons.” Apparently, his 1875 edition did not include a Leigh-print version, and it was the first major reading series in years to omit such a version. That was the probable result of Farnham’s 1873 NEA paper promoting the sentence method and implicitly rejecting real phonics. Sheldon certainly knew of the sentence method that Farnham introduced in 1873 when Sheldon wrote this 1875 series, as he specifically referred to its use. Appleton’s, which was far more influential than Sheldon’s, omitted a Leigh-print version when it was published three years later, in 1878. That probably dealt a death-blow to the use of Leigh pronouncing print which had been so astonishingly successful in teaching beginners to read before Farnham’s 1873 NEA paper was published. (Copy of Sheldon’s Manual at the Library of Congress.)

Boston Schools, (June?) 1878: Outline Course of Study - Primary Schools; Suggestions Accompanying the Course of Study for Grammar and Primary Schools; Both Prepared by Board of Supervisors. Apparently attached to School Document No. 16, Superintendent’s Report, September, 1878. Endorsed the “meaning” method for beginners. This implicitly outlawed the use of Leigh phonetic pronouncing print in Boston first grades. Leigh print had been voluntarily adopted by almost all Boston schools by March, 1878, and had been extraordinarily successful before this curriculum guide was published, probably only about three months after Boston Superintendent Philbrick, who had moved Leigh print into the Boston schools, was fired in March, 1878. As noted elsewhere in this history, the complaint was made by the heads of individual schools in Boston a few years later that many of their record books and other materials had disappeared over the summer vacation of 1878. The materials that disappeared over the summer of 1878 presumably included the records on the successful use of Leigh print before March, 1878, and very probably the Leigh-print versions of reading books for the first grades which had been used until 1878. Without Leigh-print books available in September, 1878, first-grade teachers would no longer have been able to teach children to read by Leigh phonics. As discussed elsewhere, non-Leigh print Franklin primers had been, very strangely, published by the private press used by Harvard the previous year, 1877, and not by the normal publisher of the Franklin primers. Leigh print had been almost uniformly used in Boston in 1877, and there had been in 1877 no apparent need in the Boston area for the non-Leigh print primers being published by the privately owned press used by Harvard. It seems only reasonable to assume that unnamed persons had arranged to have the non-Leigh print Franklin copies surreptitiously printed and stockpiled in 1877. They would then have been available to move into the schools in September, 1878, when Leigh print had been effective outlawed and when the previous Leigh-print copies had been quietly removed over the summer of 1878.

Johonnot, James. Principles and Practice of Teaching, D. Appleton and Company, 1878. See the text of this history concerning Johonnot’s comments on Agassiz. In 1885, Johonnot wrote The Sentence and Word Book, reported later, a total endorsement of pure “meaning” in beginning reading.

Greene, S. S., L.L.D., and F. B. Greene, A. M. First Steps in Written Language, Numbers 1 - 6, Woolworth & Company, Publishers, 76 Duane Street, New York: 1879. This is not the F. W. Woolworth Company of the chain stores. Nor can this S. S. Greene be the same S. S. Greene who wrote the pro-“sound” article, “Methods of Teaching to Read” published in the American Institute of Instruction volume for 1844, which material is reproduced in Samuel Blumenfeld’s book, The New Illiterates. In 1844, that Greene was principal of the Phillips Grammar School in Boston. The Samuel S. Greene who was co-author of this material is apparently the same man who was an author of grammar books published by Thomas, Cowperthwait of Philadelphia. He is also apparently the Samuel S. Greene who was listed as Late Superintendent of Public Schools of Providence and Professor of the Normal Department of Brown University, in connection with a letter he wrote on December 21, 1857, endorsing
the Hillard readers. That letter was included in the publisher’s brochure, Truth Vindicated, available at the Harvard library. He was also the S. S. Greene who gave a lukewarm endorsement of Leigh print on an 1866 edition of Hillard’s Primer. His endorsement appeared with others from notables, and he was listed as President of the National Teachers Association (now NEA). On page 452 of Teaching Reading, by Walcutt-Lamport-McCracken, Macmillan Publishing Co., 1974, the Greene who wrote the 1844 article is identified as the principal of Phillips Grammar School, and “later a professor at Brown University.” The authors of that 1974 book obviously mixed up their “Greenes.” It is totally inconceivable, from the content of the 1844 article, in comparison to the content of S. S. Greene’s writings on reading in The Primary Teacher and in the materials described below, that the 1844 pro-“sound” S. S. Greene and the 1879 pro-“meaning” S. S. Greene could be one and the same man. After all, Samuel Greene, with or without the “e” on Green, was a very common New England name. At the very least, if the author of the 1857 letter who was with Brown University at the time was the same Greene who wrote the 1844 article, as the Walcutt-Lamport-McCracken material claims, then he could not have been the Greene who was the author of the material described below.

Copies are in the Harvard library of the pamphlets, First Steps in Written Language, Numbers 1 - 6, which were the “Language” part of Woolworth’s Popular Educational Series, which also included Penmanship, “Spelling” and “Drawing” sections. The back cover of Number 5 of First Steps in Written Language said of the Popular Educational Series, “The Series of School Books just issued under this title comprises a full course of study in the branches enumerated.... The books are based upon the latest and most improved methods of instruction. The best available talent has been employed in... the work....” The paper-bound booklets of workbook pages on written language included a teacher’s guide for teaching beginning reading and beginning writing by the sentence method, pure “meaning,” avoiding at first the teaching even of the alphabet.

S. S. Greene also wrote articles for The Primary Teacher, Boston, in 1878. It had started publication in 1877. His articles were flowery endorsements of teaching beginning reading with the sentence method and what he called “written language.” Beginning students copied words and sentences in connected script form without even being able to name their letters. These were the “latest and most improved methods of instruction” in 1879, and had obviously originated in 1875 in Parker’s Quincy. Some comments from booklets 5 and 2 of First Steps in Written Language are:

“Design of the Series. Language is the medium through which we express our thoughts.... To teach a child ‘to talk on paper’ is the design of this series; and these books, by easy and natural steps, furnish the means for accomplishing this result. The work in the lower numbers (1 and 2) is to be largely imitation. Simple idiomatic forms in carefully engraved script, are found at the top of each page. These the pupil is to copy....”

“The child should attend to nothing but ideas and signs of ideas. To make a word does, in fact, spell it, for the letters are actually put together in the right order; but he should do all this now unwittingly, just as he takes hundreds of steps in a brisk play without knowing it, so intent is his mind upon the game... He next spells or constructs idioms, and thereby produces customary forms. Two or three words together - See the cat, for example - are written and read as the formula for the thought.... To attend to the parts either of the word or idiom at present would be most unwise, since it would draw off attention from the significance of language to its mere mechanism. To begin with language as a system of orthography or phonetics, except as these are implicitly involved in its significant forms, would be to turn away from its simple and natural use, to an abstract and difficult philosophy for which the mere child has not aptitude. This procedure is wholly uncalled for, since the avowed end of teaching spelling, reading, and construction, is better secured by the indirect and unconscious method which nature pursues than by any scientific process....”
The “meaning” approach in the teaching of beginning reading, recommended by the Greenes, above, in 1879 and ever since the early nineteenth century, is constantly being recycled as “the latest and most improved means of instruction.” For instance, in The New York Times on page 18 of Section 4A, “Education Life,” an article appeared which was entitled “The Flowering of Innovation.” The article describing work by Gay Su Pinnell, education professor, Ohio State University, and others, appeared on November 3, 1991, 112 years after the Greenes wrote the above nonsense. The “innovation” in the so-called Reading Recovery Program from New Zealand was supposed to be revolutionary. Yet there is hardly anything revolutionary in its recommendation, as stated in The New York Times, that “reading should be taught in whole ideas rather than simply in words.” The Greenes in 1879 would have felt right at home with the “innovation” of the Reading Recovery Program. What the Times article failed to mention but appears in other reports, however, is that the Reading Recovery Program does add a convoluted variety of “phonics” to its doses of “meaning.” Yet the Greenes would eventually have gotten around to doing that also, with two-step, whole-word phony phonics.

The article stated that, in recent years, 13 American universities have set up teacher training centers for the Reading Recovery Program in which children are tutored individually. The program is meant for the bottom twenty per cent of first-grade classes, the ones who are the most likely to fail. Yet no “training centers for teachers interested in the approach” were ever established at universities across the United States after Rudolf Flesch wrote his blistering books in 1955 and 1981 recommending phonic “sound” in beginning reading. This is not surprising since our anti-intellectual “universities” only have room for “approved” thinking such as that of the so-called Reading Recovery Program (if, indeed, such lock-step parroting of approved themes can even be called thinking).

Rhode Island Institute of Instruction. Three papers on reading and Eng. lit. in schools. 1880. 25 cents. Inst. Instr. (Mentioned in Leypoldt’s American Catalogue for 1876 to 1885.)

Farnham, G. L. Sentence Method of Teaching Reading. (1881) 50 cents. Bardeen. See the text for history on Farnham. The 1895-1900 American Catalogue listed the “New 3d ed. ‘95.” It had obviously sold well from 1881 to 1894 or it would not have had a third edition by 1895. The “sentence method” was entrenched in American schools long before 1895, despite Nila Banton Smith’s dating the widespread use of the sentence method far later.

March, Professor Francis A. - March’s A-B-C Book, Ginn, Heath & Co., Boston - Listed in Primary Teacher, page 262 (February?) 1882, in a list of “Method Manuals.” No other information is available on it. After a reported fifty years at Lafayette College in Pennsylvania, Professor Francis A. March took over the direction of the work on both sides of the Atlantic on the Oxford English Dictionary. March had reportedly originally come from New England, had studied under Noah Webster, and returned to Massachusetts to work on the Oxford English Dictionary.

Documents of the School Committee of the City of Boston for the Year 1883; School Document No. 1 - 1883. Method of Teaching Reading in the Primary Schools. Prepared by the Board of Supervisors for the Public Schools of Boston. This important material is discussed in this history. It endorses Code 3 phony phonics while outlawing true phonics.

Le Row, C. B. How To Teach Reading. 1884. 12 cents. Clark & Maynard. Mentioned in Leypoldt’s American Catalogue for 1876 to 1885. In 1912 United States Catalog, still being published by C. E. Merrill and sold for 12 cents. 1912 catalog shows author also wrote Well Planned Course in Reading,
1901, still being published by Hinds for $1. The 1890-1895 American Catalog listed under “Speakers” that C. B. Le Row had written Werner’s Readings and Recitations, No. 10, America’s Recitation Book, in 1893, sold by the Werner company for 60 cents and 35 cents, as one of their series. Presumably the same company published the sight word The Werner Primer by F. Lillian Taylor in 1895, discussed in Appendix C.

Johonnot, James. The Sentence and Word Book, A Guide to Writing, Spelling and Composition by the Word and Sentence Methods. On Title Page: “The letter killeth; but the spirit giveth life.” New York: D. Appleton and Company, 1885. On page 3: “To the end that all words may be associated with the ideas which they represent, the plan adopted is as follows: I. The words are all used in sentences, or are so arranged that they may be put into sentences by simple substitution....” On page 6: “...the object of this book is to render the acquisition of language, on the part of the pupil as nearly unconscious as possible....” See my previous text for Johonnot’s ties to movers-and-shakers.

Johonnot’s book is the purest Code 1 material. Therefore, his pious quoting from the Bible is jarring, because so many of the people pushing government schools, and such Code 1 “meaning” in teaching beginning reading, have been opposed to traditional religions. It is a curious fact that so many of these nineteenth-century government-school activists and “meaning-method” reading instruction activists appear to have been agnostics, atheists or pantheists at the same time that the vast majority of American and British people, whom they were trying to influence, were believing Christians or Jews.

Bailey, Mark - The Essentials of Reading. New York: Taintor Bros., 1887. 61 p. PE 1121 .B3. Bailey, a professor of elocution at Yale, was one of the authors on the Appleton 1878 readers and also worked earlier on the Hillard readers, and possibly on the Franklin Hillard. Until about 1887 or shortly before, Taintor (and Sherwood of Chicago) had been publishing the Franklin Hillard and the earlier Hillard readers. The above book by Bailey possibly only concerns elocution.

Hall, I. Freeman. Riverside Manual for Teachers, Suggestions leading to Primary Reading. 1890. Houghton, Mifflin, Boston. Listed on page 172 of 1885-1890 American Catalogue. Harvard has an 1898 copy giving an original date of 1891. This has been discussed in this history.

Hussey, M. S. - Helps in Teaching Reading, Lothrop, 1891, 75c. Listed in the 1890-1895 American Catalogue.

Coleman, Florence Cromer. Stanford University, California. Pages from My Note Book. A Treatise on Primary Education for Parents and Teachers. Press of the Pomona Times, Pomona, California, 1900. Harvard copy. Razor-work had removed adjacent parts of pages 5, 6, 7 and 8, apparently aimed at that section running from pages 6 to 7. Such careful censoring, leaving blank margins after removing printed centers, most naturally arouses any reader’s curiosity! Also in the Harvard library, I saw razor-work on most of a back cover, leaving the margin, of a September, 1914, reprint of the Primer of The Horace Mann Readers. Presumably it would have concerned state adoption information, as that sometimes appeared on back covers. The copy of that Horace Mann Reader with Harvard’s call number EducT 759
14 453, had puzzling gift dates. On the inside cover was a Ginn and Company book plate sticker, indicating that it had been in the Ginn library, and under it in words which had been type-set. was printed, “Harvard College Library - The Gift of Ginn and Company, December 26, 1923.” Yet the actual ink-pad stamp which Harvard customarily put in, on the copyright page, read “Harvard College Library, Gift of Ginn & Co. Dec 11 1930.” Apparently the type-set notation on the inside cover had been made by Ginn in 1923, but either Ginn curiously did not send the book to Harvard for another seven years, or the book remained unfilled by Harvard for another seven years. I also saw razor-work on the centers of some pages, leaving the margins, of an 1870’s Quincy school committee report in the Harvard library. I have also seen razor-work removing pages on some New York Library materials, and have always felt the same curiosity. What was on those pages that someone had carried a razor in with them to remove? A pen knife does not cut like a razor, so the visitor had to have had such a razor with him (or her) when they came into the library, and isn’t THAT curious?

In the eight-line Preface on page 4, Coleman said she had taught in the primary grades ten years. Only a four-page chapter in the 48-page book was given to “Language - Reading and Spelling,” but eight pages to “Language - Nature Work.” She recommended Farnham’s book on the sentence method, but then the later use of heavy, real supplemental phonics, confirming the move to real but supplementary phonics in classrooms about 1900.

Clark, Professor S. H. How to Teach Reading in the Public Schools, 1908, Scott, Foresman and Company, referred to in “Introduction,” page 9, of Scott, Foresman and Company’s 1909 Book Four, Elson Grammar School Readers, by William H. Elson (1856-1935), Superintendent of Schools, Cleveland, Ohio and Christine Keck, Principal of Sigsbee School, Grand Rapids, Michigan. The 1909 Elson Primary School Readers and Elson Grammar School Readers were followed by a 1915 edition with Lura K. Runkel, and were the forerunners of Scott, Foresman’s William Scott Gray deaf-mute-method readers of 1930. Clark’s 1908 book was listed as in print in both the 1912 and 1928 United States Catalogs, and is shown again below under those headings. Clark’s 1909 book was still published by Scott, Foresman in 1928, according to the United States Catalog, and Row was publishing in 1928 Professor S. H. Clark’s 1915 book, Interpretation of the Printed Page.

Taylor, Joseph S. District Superintendent of Schools, New York, New York. Principles and Methods of Teaching Reading, The Macmillan Company, New York, 1912. This is invaluable concerning “expert” thinking of that period. On page 170, Taylor reported on a study of the number of words taught in first grade. The New York City syllabus required 300 in the first term and at least 300 more in the second term, but Taylor said:

“This study [for the first grade by 1912] shows the following results: the average number of words taught during the first half-year in 23 schools is 520; the average number during the second half is 1100. These schools therefore are doing much more than is demanded of them. The range of words is from 300 to 1575 for the first term, and from 350 to 2368 for the second term. For the entire year the average is 1620; the range is from 650 to 3556. The schools are therefore teaching nearly three times as many words as the syllabus requires....”

Vocabulary control had largely ceased after the arrival of supplementary phonics in the early 1900’s, as the above figures for the first grade make very clear. However, as N. B. Smith also made very clear, vocabulary was drastically reduced again in the late 1920’s, with the return of heavy sight-word teaching. Instead of the 1912 first half-year range for New York City of 300 to 1575, averaging 520, Smith reported that the range in 1922 for nine of twelve primers or first readers (the books usually used in the first half year) was 377 to 630. In 1931, the highest of seven was 333, and the lowest 274. The first half-year average for New York City of 520 in 1912 can be compared to a beginning book average of 274 to 333 in 1931, presumably averaging about 300. The first-half-year vocabulary had therefore been almost cut in
half by “experts,” but that unbelievable reduction had been successfully sold to incompetent school administrators as an “improvement.”

On page 172 of his 1912 book, Taylor said New York City had a list of approved books and supplies from which principals could choose. Rebecca Pollard’s phonic materials almost certainly did not make that approved list, but at least Ward’s phonic materials did. Taylor called this list of “approved” reading books for each grade an “open list.” However, that it must have been very “closed” is suggested by comparing the few books Taylor listed below as a partial list of those in actual use in the New York City schools to the 1912 United States Catalog’s four long pages of different regular and supplementary readers plus almost a full page of primers. Yet Taylor said on page 173, “With an open book list, one would naturally expect to find great variety in the choice of books. The following partial list of readers used in the several grades by the schools of [New York City] shows that such expectation is fully realized. No class is limited to a single reader. The number of books read in each half-year grade during the first three years averages about three per class, and ranges from two to six.” In his 1912 book, Taylor showed the following books in actual use in New York City for the First Year and Second Year, although he did say it was only a partial list:

“First Year - Ward’s Primer and First; Jones’s First; Aldine Primer and First; Cyr’s Primer and First; Baldwin’s First; Culture Readers, I (Miss Merrill); Finger Play Reader, I (Davis and Julien); New Education, First; Graded Literature, I; The McCluskey Primer; Stepping Stones, I; Child Life, I (Blaisdell); Lansing’s Rhymes and Stories; Folk Lore Stories and Proverbs (Wiltse); Eugene Field Reader; Pathways in Nature and Literature; Summer’s Primer; Progressive Road, I (Ettinger); Horace Mann, First; Art and Life Primer (Jacobs).

“Second Year - Ward’s Second and Third; Heath’s Second; Fables and Rhymes for Beginners; Pets and Companions; Brumbaugh’s Second; Blaisdell’s Child Life, II; Wilson’s Nature Study in Elementary Schools; Wade and Sylvester, II; Wake Robin, I; Baker and Carpenter’s Second; Cyr’s Graded Art Reader; Baldwin’s Second; New Education, Second; Culture, Second; Graded Literature, Second; Cyr’s Second; Grimm’s Fairy Tales; Book of Plays for Little Actors; In Mythland; Reynard the Fox, Aldine, Second”.

The materials shown above are all listed in Appendix C, except for Grimm’s Fairy Tales; Book of Play for Little Actors; and In Mythland. They were obviously supplementary readers, but no publishing data is available on those editions. Reynard the Fox listed above for second grade may or may not be part of the 1906 First Reader: Puss in Boots, Reynard the Fox, by M. L. Pratt Chadwick and published by “Educational Pub.”, listed in the 1912 United States Catalog. Of course, Reynard, the Fox, is a centuries-old folk tale, which was probably already centuries-old when it was first printed in English by Caxton in 1481 as The Histoyre of Reynart the Foye.

Zirbes, Laura, Investigator in Reading, and Katherine Keelor and Pauline Miner, Cooperating Teachers, Practice Exercises and Checks on Silent Reading in the Primary Grades, Report of Experimentation, The Lincoln School of Teachers College, New York City: 1925. The Lincoln School is where Nelson Rockefeller and his brother acquired their “dyslexia.” Zirbes opened this booklet with the sentence:

“Due to an unusual combination of adverse circumstances the second grade of the school year 1920-1921 contained a large number of pupils who did not seem to be progressing satisfactorily in reading.”

On page 7 she said:
All pupils were tested by means of the Gray Oral Test. Those who read less than one word per minute or failed to score on the third paragraph of the Gray Test were separated from those who did better.

Did better?!! Normal speech is about 140 words a minute, which puts her “one word per minute” into the proper focus. It hardly qualifies as doing “better.” It is, instead, appalling failure. One of Gray’s earlier third test paragraphs is quoted elsewhere in this history, in Part 7. To fail to score at all on such a paragraph would be quite remarkable, and the probability is that Gray’s final third paragraph in 1921 was far easier than the third paragraph quoted in Part 7.

In her article, Zirbes listed some of the readers being used in the Lincoln School at second grade by 1922, as well as some first grade readers in use there. That list is historically of interest. However, she mentioned elsewhere in her 1925 article that the Lincoln School also used the Bolenius (Houghton, Mifflin) readers by 1922, but they are not included on this list. All of those given below are included in Appendix C of this history. Zirbes herself wrote a reader in 1925, listed in the 1928 United States Catalog, which was apparently not a beginning book. It was entitled Farm Book with Teacher’s Edition; and it also had a separate Teacher’s Edition, published by Teachers College Press.

For “Group work with less able readers,” obviously the first-grade level, Zirbes listed:

“Winston Primer, Free and Treadwell Primer, Winston First Reader, Free and Treadwell First Reader.”

Zirbes, Laura - Comparative Studies of Current Practice in Reading, With Techniques for the Improvement of Teaching, Bureau of Publications, Teachers College, Columbia University, New York City: 1928. This was Zirbes’ Ph. D. dissertation, a copy of which is in the University of Chicago Library and is undoubtedly in many other libraries. It described some specific classroom lessons given at that time. Many were very bad lessons because they focused on teaching decoding by “meaning” instead of by “sound.” It is Zirbes’ report on an actual “experience chart” lesson (pages 124-127) and its follow-up that is historically of use. Her 1928 description can be matched to the 1897 experience chart story from Colonel Parker’s Chicago school, covered by E. B. Huey on pages 297-300 of The Psychology and Pedagogy of Reading (1908). Huey got the information from Miss Flora Cooke’s articles in the Elementary School Teacher of October, 1900, and April, 1904. Both the 1897 and 1928 materials can be compared to Decroly’s and Freinet’s European approaches. Decroly’s use of experience charts after 1900 was very probably inspired by probable reports from European visitors to Parker’s Chicago school during the Chicago World’s Fair in 1893.

This was a card in the catalog at the Library of Congress in October, 1981. I later tried to obtain these materials there but was not successful. They might be of real interest if they could be located, considering the dates (1931 for Marion Horton and 1933 for Gladys English) and the nature of the materials, and the fact that the American Library Association was on J. McKeen Cattell’s proposed organization, discussed at the end of this bibliography. What was apparently the same material or an earlier version was listed with a 1929 date in The Cumulative Book Index, 1928-1932, and it is also shown at the end of this bibliography.

***************

1886 Ontario, Canada, Library Catalog

A very interesting and reliable source for the names of actual texts on education in the nineteenth century is a catalog from a Canadian library in 1886, a copy of which is presently in the New York Public Library under call number SSD p.1.57. Although, presumably, many of the books listed may now be scattered, the catalog itself remains as a fascinating list of the kind of reading being done by “educators” before 1886. Although the catalog is very long because the collection was very large, a few titles of particular interest are given below, many of which probably touch on the teaching of reading:

Catalog of the Books Relating to Education and Educational Subjects in the Library of the Educational Department for Ontario, Toronto, 1886

p. 7 Bell, Alex. Melville. On Teaching Reading in Public Schools, Brantford, 1879. Henderson

p. 34 Gall, James Practical Inquiry into the Philos. of Ed., Edinburgh, 1840, Gall

Iowa School Laws of 1873

Lotze, Herman - Outlines of Psychology. Under the entry, “Psych.and Ed.,” it also listed works by Spencer of England, and Hailman in the United States who worked to found kindergartens. Lotze was the German psychologist with whom Cattell originally meant to study but Lotze died and Cattell went on to study under Wundt.

p. 58 Oberlin’s Infant Schools. “See Gill, John, London 1875, Art of Teaching to Observe and Think”

p. 60 Packer, Thomas - Teaching Reading (National Method of), Kingston, 1883, Smith. [This would concern the British government-supported church schools.]

p. 64 Potter, Alonzo R., Rt. Rev. Dr. and Emerson, Geo. B. School and the Schoolmaster, Boston, 1843 (See earlier listing on this material.)

Read, Methods of Teaching to, by Greene, S. S. “See Amer. Inst.1844.” [Refer to Blumenfeld’s The New Illiterates for text. From the pro-“sound” content of this material, the “S. S. Greene” of 1844 cannot be the same S. S. Greene who wrote pro-“meaning” materials for The Primary Teacher in 1878, referred to previously. Samuel Greene appears to have been a common New England name.]

Reading, by Pierce, C. “See Am. Inst. 1843” Refer to Blumenfeld’s The New Illiterates.

Educ. as a Science, Bain, Dr. A.

p. 67 Manual of School Method, 3rd, London, 1858, National Society, Richards, W. F. [The “National” schools were some of the government-subsidized church schools. They used Bell’s inferior method of teaching beginning reading, which has been described in this history. See the similar entry above from p. 60. See the earlier entry for material from a similar group, the British and Foreign Schools Society manual.]

p. 67 Royal Institution of Great Britain, Lectures at the. “See Muller, Max, p. 57, Lectures on the Science of Language, 1861 and 1863, Eng., 2nd. N. Y. 1871-2, Scribner’s”

p. 76 Spelling and Meaning of Words, Method of Teaching, G. F. Thayer, “See Am. Inst. 1830” [See also the reference in Part 4 of this history to the two-volume English publication, The Schoolmaster, 1836, which quoted Thayer’s 1830 lecture.]

p. 77 Methods of Teaching, Swett, Jno. N. Y. 1830, Harper’s

p. 78 Taylor, J. O. The District School, N. Y., 1834, Harper’s

p. 80 Teaching, Catechism, on Methods of, Diesterweig, A. “See American Pedagogue Papers for Teachers, Barnard, H. W.”

p. 82 Tod, James - Ed. Act for Scotland, 1872, Edinburgh

p. 82 U. S. Bureau of Ed. and Reports for, 1871-1884

p. 86 Young, Thomas U., Teachers’ Manual for Infant Schools, Dublin

***************

Leypoldt’s American Catalog, July, 1876 to June 30, 1884, showed the following entries for C. F. Adams, Jr. Adams’ opinions were obviously reaching a wide audience:

New Departure in the Common Schools of Quincy, and Other Papers on Educational Topics, 79, Estes.

1602
Adams’ books on American railroads were published by Putnam, not Estes. Estes and Lauriat of Boston who published Adams’ books on education may have had some tie to the activists. In 1879, Estes and Lauriat copyrighted Our Baby’s Primer and Pretty Picture Book, which might have found its way into primary grades even though it was not meant as a reader. In that year of 1879, the Boston primary grades were looking for just such “meaningful” material, like Henry Cabot Lodge’s Six Popular Tales, “Authorized for Use in the Boston Public Schools,” which was compiled largely from Harvard’s chapbook collection. (Lodge’s book showed no publisher, but only a Boston printer, but it used similar large, oddly shaped sheets to those used in Our Baby’s Primer and Pretty Picture Book, suggesting they had a similar source or market.) A possible connection to the activists is suggested by the fact that Estes and Lauriat’s Our Baby’s Primer and Pretty Picture Book was printed by University Press: John Wilson & Son, Cambridge, who had printed the Franklin Primer of 1877. Estes & Lauriat were also the American publishers of the English children’s magazine, Chatterbox. Adams’ use of a Boston publisher, who also published children’s materials, for his few writings on education is intriguing.

***************

The American Catalogue, 1900-1905, “Founded by F. Leypoldt,” “Compiled under the Editorial Direction of R. R. Bowker,” reprinted by Peter Smith, New York: 1941, lists among others the following texts on reading which were published between 1900 and 1905. The earlier American Catalogues did not list texts on reading instruction, but only readers. (The dates given below, however, are from the 1912 United States Catalog.)

Arnold (Sarah) - Suggestions to Teachers. 36 cents. Silver.

Burns - How to Teach Reading and Composition. 50 cents. American Book.
(1901)

(1903)

McMurry, C. A. Special Method in Primary Reading and Oral Work. 60 cents. Macmillan, 1903

***************

Edmund Burke Huey’s 1908 Book, The Psychology and Pedagogy of Reading, published originally by Macmillan but republished in 1968 by The M.I.T. Press, Cambridge, Massachusetts, has an extensive bibliography, which should be consulted by anyone concerned with researching the history of reading instruction. A great many of the titles are not included in this bibliography but they may be of interest, despite Huey’s pronounced bias for the “meaning” method in the teaching of beginning reading.

***************

The United States Catalog - 1912 lists among others the following texts on reading which were in print and for sale in 1912. Naturally, their list was far longer than that in The American Catalogue, which reported only on new books published over a five-year period. On the copies from the 1912 list shown below, where the original publication date was not listed but is known, it has been added in parentheses.
First, under the alphabetical headings, “Primary” and “Primer,” the following books of probable interest appeared:

Primary Methods. Sprague, S. E. 2v. $7.50. Interstate School of Correspondence.
Primary Reading. Kellogg, E. D., Ed. $1. Educational. (1901)
Primer of Teaching Practice. Green, J. A. and Birchenough, C. 90 cents. (2s 6d) Longmans.

Under “Readers - History” in the 1912 United States Catalog, the following is listed:

**************

Yet I could not find Vail’s book on the McGuffey readers listed in the 1928 United States Catalog. Presumably Vail’s realistic history, even though a vested-interest and therefore somewhat inflated history, was strangely out of print in 1928 at the very height of the promotion of the monumental McGuffey Myth!

The following are among those listed under “Reading,” (not “Readers”) from a longer list in the 1912 United States Catalog. A few have already been shown from the 1900-1905 American Catalogue, or are on an earlier list.

Akin, F. First Book in Phonics. 25 cents. 1908, M. & G. Atkinson
Arnold, S. L. Learning to Read. 36 cents. Silver.
Arnold, Sarah Louise, Reading: How to Teach It. $1. 1899. Silver
Badlam, A. B. Suggestive Lessons in Language and Reading, $1.50 Heath Pub. in 1887 per 1885-1890 American Catalogue
Bailey, M. Essentials of Reading. 50 cents. American Book.
Ball, L. A. Natural Reading (For Teachers) 30 cents. 1906. Ginn.
Bell, G. F., Regents Syllabus in Reading, 60 cents. Bardeen
Briggs, Thomas H. and Coffman, L. D. Reading in Public Schools. $1.25. 1911. Row, Peterson & Co.
(Brought by N. B. Smith)
Burns, J. J. How to Teach Reading and Composition. 50 cents. 1901. American Book.
Burrell, A. Clear Reading and Good Speaking. 90 cents. 1898. Longmans. Calmerton, G. Reading:
Carmefix, F. D., Practical Sight-word Reading Chart and Phonic Exercise. $7.50, $12.50. B. F. Johnson.
Clark, S. H. How to Teach Reading in the Public Schools. $1. 1908. Scott.
Gordon, Emma K. Comprehensive Method of Teaching Reading, 2 books, each 30c; teacher’s ed. each
35c. 1902. Heath. (Gordon also wrote a very important phonic reading series.)
Haliburton, M. W. Phonics in Reading. 40 cents. Drill Book, Separate. 18 cents. B. F. Johnson.
Hall, G. Stanley How to Teach Reading and What to Read in School, Monographs of Education No. 4. pa. 25 cents. Heath. (Shown by E. B. Huey as 1874. It was published by Heath in 1886, and that may have been a reprinting.)

Hamilton, F. M. Perceptual Factors in Reading. 50 cents. 1907. Science Press. (The Science Press was in Lancaster, Pa., and was later, and possibly in 1907, associated with J. M. Cattell, who was teaching psychology at Columbia in 1907 and who did the first reading perception experiments starting in 1883.)

Hinsdale, B. A. Teaching the Language-Arts. $1. Appleton.

Huey, Edmund Burke, The Psychology and Pedagogy of Reading. $1.40. 1908 Macmillan. (Listed by N. B. Smith. She called it, “impartial”! A June 8, 1897 letter from Huey to Cattell in the Manuscript files of the Library of Congress asked Cattell’s help in Huey’s enrolling for the study of psychology. Huey was apparently Cattell’s protege in psychology. Huey studied psychology at Clark University where G. Stanley Hall was president. Huey’s book which contained a brief reference to Messmer’s two kinds of readers, objective and subjective, was not in print in the 1928 United States Catalog.)

Hughes, J. L. Teaching to Read. 50 cents. 1909. Barnes.

Johnson, W. D. Methods in Reading. 50 cents. Crist.

Kellogg, A. M. How to Teach Reading. 25 cents. Barnes.

Kenyon, E. E. Reading Without a Primer. pa. 20 cents. March.

Klingensmith, A. Blackboard Reading Lessons. bds. 25 cents. 1903. Flanagan.

Le Row, C. B. How to Teach Reading. pa. 12 cents. C. E. Merrill.

Le Row, C. B. - Well Planned Course in Reading. $1. 1901. Hinds.

Libby, K. J. - Key Method of Teaching Primary Reading. 25 cents. Northwestern School Supply Co.

Libby, R. M. Reading for Training Classes. 50 cents. 1906. Bardeen.

McMurry, C. A. Special Method in Primary Reading and Oral Work. 60 cents. 1903. Macmillan.

McMurry, C. A. Special Method in Reading in the Grades. $1.25. 1908. Macmillan.

Monroe, L. B. How to Teach Reading. (Pre-1882 because his widow revised his series at that date, so Monroe had died before then.) 12 cents. American Book.

Moore, M. Blackboard Reading. 50 cents. 1909. Educational.

Mortimer, F. L. Reading Without Tears. (English, 1850’s) $1.75. Longmans.

Pease, M. A. First Steps in Reading. pa. 8 cents. Flanagan.

Quaintz, J. O. Problems in the Psychology of Reading. 75 cents. 1900. Psychological Review (From Univ. of Wisconsin. One of Cattell’s subjects in his reading experiments at Johns Hopkins in 1883, Joseph Jastrow, had been there for many years.)

Quigley, E. M. How to Teach Beginners to Read. 25 cents 1906. Quigley.

Soulsby, L. H. M. Record of a Year’s Reading. 30 cents (9 d.) 1910. Longmans.

Southwick, A. P. Dime Question Book of Reading and Punctuation. 10 cents. Bardeen.

Spaulding, F. E. and Bryce, C. T. Learning to Read. 60 cents. 1911. Newson. (Authors of the extremely widely used Aldine reading series of 1907 which was apparently based on their sentence-method Passaic Primer of 1903.)

Teaching Reading in 10 Cities. $1. Educational.

Todd, E. J. and Powell, W. B. How to Teach Reading. 40 cents. Silver. (Authors of The Normal Course in Reading series by 1889.)

Van Sickle, W. M. and Demarest, A. J. Teaching Primary Reading. 10 cents. 1907. American Book. (Authors of New Education Readers, 1900)

Ward, E. G. and Warner, E. E. Rational Method in Reading (Ward’s widely used phonic series, Rational Method in Reading, appeared by 1894.)

Listed separately in the 1912 Catalog is the following, which might be a useful book:
Norton, A. O., Readings in the History of Education. 85 cents. pa. 70 cents. Harvard Univ.

Under “Readers, Indexes” in the 1912 United States Catalog, the following appears:

Classified Index of the Materials Contained in the Different School Readers. 50 cents Alex Dulfer Printing Co., San Francisco, Calif. 1910. (This would be an interesting historical document for the period around 1910, if it could be located.)

***************

The following material came out after the 1912 American Catalog was published:

This was William Scott Gray’s doctoral thesis at the University of Chicago in 1917, and its bibliography should be consulted by anyone concerned with the history of the teaching of reading. Gray’s thesis can be found as one of the entries in the 1918 report published by the University of Chicago, Reading: Its Nature and Development, on which Charles H. Judd was senior author. I found the bibliography to Gray’s 1917 thesis to be invaluable for following the activities of the psychologist change-agents in the early twentieth century. Note the prestigious number of Gray’s 1917 University of Chicago Supplementary Educational Monograph: IT IS NUMBER ONE!

W. S. Gray’s Summary of Investigations Relating to Reading, University of Chicago Supplementary Monograph, No. 28, Chicago, 1925, should also be consulted.

Jean Chall’s The Great Debate, McGraw Hill, New York: 1967, second and third editions 1983 and 1996, Forth Worth, Texas: Harcourt Brace, also has an extensive bibliography which should be checked for materials before 1930, as well as later.

Also of interest to a serious researcher working on the history of the teaching of reading are the yearly publications of the National Society for the Study of Education, mentioned again below, which group has been under the auspices of leading educational “experts” ever since the turn of the twentieth century. Many of these publications touched on the teaching of beginning reading.

***************

A selection is given below from the listing of texts relating to reading instruction in the 1928 United States Catalog. Texts which were obviously manuals for reading series have been omitted, because the manuals can usually be obtained if the name of the series is known. Other materials are omitted which do not seem too pertinent. The actual 1928 listing from the “Reading” section is far longer than below.

Anderson, Charles J. and Davidson, Isobel, Reading Objectives. $1.80. 1925. (Also listed by N. B. Smith)
Laurel Book. (Anderson and Davidson wrote the Laurel and Lincoln readers, 1922-1926, emphasizing silent reading.)
Ball, L. A. Natural Reading “See author entry.” (1906, Ginn)
Briggs, T. H. and Coffman, L. D. Reading in Public Schools, Rev. Enl. Ed. $1.60. 1911. Row (Briggs received his doctorate in 1913 and was a professor of education at Columbia Teachers College in 1926. NBS listed this text.)
Brooks, F. D. Applied Psychology of Reading. $1.80. 1926. Appleton -(Listed by N. B. Smith)
Burgess, M. A. Measurement of Silent Reading. pa $1. 1921. Russell Sage Foundation (Note the appearance of this 1921 “scale” probably in deliberate contrast to Russell Sage Foundation’s 1915 Measurement of Spelling Ability by Ayres.)

Buswell, Guy T. Experimental Study of the Eye-voice Span in Reading. $1. 1920. Univ. of Chicago. Dept. of Educ.

Buswell, Guy T. Fundamental Reading Habits. A Study of Their Development. $l.50. 1922,. Univ. of Chicago. Dept. of Educ. (Listed by N. B. Smith)

Carroll, R. P. Experimental Study of Comprehension in Reading. $1.50. 1926. Teachers College.

Kramer, G. A. ed. Improvement in the Teaching of Reading. pa 50 cents. 1926. Thomas & Evans ptg. co., Baltimore

Laing, M. E. Reading $1.36. 1908 (Original date, but revised). Heath.

Libby, R. M. Reading for Training Classes. 50 cents. 1906. Bardeen.

Lloyd, S. M. and Gray, C. T. Reading in a Texas City. 50 cents. 1920. Univ. of Texas.

(C. T. Gray worked with W. S. Gray, C. H. Judd and others at the University of Chicago from 1915 to 1918 on a grant from the General Education Board, which resulted in the 1918 report published by the University of Chicago, Reading: Its Nature and Development, on which Charles H. Judd was senior author, mentioned by N. B. Smith. See Lance Klass’ The Leipzig Connection, 1981, (with Paolo Lionni) concerning the General Education Board. It can therefore safely be assumed that “Reading in a Texas City” reflected “expert” opinions not only at the University of Chicago but at Columbia Teachers College in New York and was not the result of “grass roots” efforts in Texas.)

(This was silent reading material, based on McCall’s original work with Thorndike. The method used eventually resulted in the SRA reading comprehension kits, written by other authors, which were massively used in American classrooms in the 1960’s and 1970’s. The reading cards, which were self-scored, encouraged voluntary attention on the part of students, who liked to get a high score. They did not “teach” comprehension, because it is unteachable, as has been discussed at length in this history.)

Morin, J. C. Phonetic Method in Reading. 72 cents. Heath.

National Society for the Study of Education. Twentieth Yearbook, 1921; pt. 2. Society’s Committee on Silent Reading. Factors Affecting Results in Silent Reading, and Exercises for Making Reading Function. $1.10. Public School. (Listed by N. B. Smith)

(ToListed by N. B. Smith who said it had “wide acceptance of its recommendations.” W. S. Gray worked on this report, which was shortly after praised in an Elementary School Journal article by A. I. Gates who then proposed the use of his invention, “intrinsic” phonics. Note the baleful effects on America that came from accepting the dictates of a “national committee” of “experts” instead of accepting the dictates of private common sense. Thorndike had written an article in 1920 that in general we should let “experts” do our thinking for us, and America’s functional illiteracy came from taking his pernicious advice.)

Newark, New Jersey. Board of Education. Reading Survey in the Public Schools of Newark, N. J. pa 1923. The Board, Newark, N. J.

O’Brien, J. A. Silent Reading, with Special Reference to Speed. $1.40. 1921. Macmillan (Listed by N. B. Smith)

Ohio, Education, Department of, Columbus. Reading. 1923.

Pease, M. A. First Steps in Reading. 10 cents. Flanagan.

Pennell, Mary E. and Cusack, Alice M. How to Teach Reading. $1.80. Houghton. (Listed by N. B. Smith. They wrote a reading series, The Children’s Own Readers, published by Ginn in 1929.)
I have attempted to note on the above titles from the United States Catalogs whether they were mentioned in some way in Nila Banton Smith’s “history,” though I may have missed some. Her index is very incomplete, as is her bibliography. Many items that she mentioned are not listed in either so it is necessary to leaf through her book to pick up all references. However, since some titles on reading instruction which she mentioned were not listed as in print by the United States Catalogs of 1912 and 1928, they are shown below.

Dolch, Edward W., Reading and Word Meanings
Gates, Arthur L, New Methods in Primary Reading
Gray, William S. and Ruth Munroe, The Reading Interests and Habits of Adults
Judd, Charles H. and Guy T. Buswell - Silent Reading: A Study of the Various Types, University of Chicago
Mirick, George A., Teaching to Read. N. J. State course, 1914

Smith commented of Mirick’s 1914 book, “The entire treatment was a superior piece of work and in advance of its time in many respects.” Note Smith’s implicit belief in the progress fallacy, “in advance of its time.” “Later” is presumed automatically to be “better.” Of course, if Smith thought it was “in advance,” it was undoubtedly poor.

McMurry, Charles A., Special Method in the Reading of Complete English Classics, 1899
Mead, A. S., Journal of Educational Psychology, 6, 1915, 345-348, Silent Reading Versus Oral Reading with One Hundred Sixth Grade Pupils.
O’Brien, J. A. - Reading, Its Psychology and Pedagogy
Olcott, Frances J., Children’s Reading
Patterson, Samuel W., - Teaching the Child to Read
Scudder, Horace E., Literature in the Schools, 1888
Smith, Nila B. and Grace E. Storm - Reading Activities in the Primary Grades
Smith Wm. A., The Reading Process, 1922 (history and methods)
Gerald A. Yoakam, Reading and Study

(This was mentioned on Smith’s page 162. Note the “authoritative” promotion of silent reading by W. S. Gray as early as 1917, following the re-introduction of silent reading into the literature by R. Pintner in the Journal of Educational Psychology, 4, 1913, pages 333-337, “Oral and Silent Reading for Fourth Grade Pupils,” as noted above. Pinter’s reintroduction of the emphasis on silent reading in 1913 was after the quiescent period following the promotion of silent reading in the late 1870’s, 1880’s, and early 1890’s. Note also silent reading was introduced under the topic of psychology, interestingly suggesting a possible tie to Cattell. James had died in 1910. There were very, very few psychologists in America in 1913, and they were closely affiliated through the American Psychological Association, founded on July 8, 1892, in G. Stanley Hall’s study at Clark University, with James, Dewey and Cattell in attendance. This founding meeting is recorded in “The Founding of the APA,” American Psychologist, 7, 1952, 95-97, according to the reprint entitled “Edward Wheeler Scripture, 1864-1945,” from the section, “Notes and Discussions” of The American Journal of Psychology, June, 1965, Volume 78, No. 2, p. 314-317.)

(The report rejected basal reading books (beginning reading instruction), very much in the manner of today’s “whole language” movement. Reading instruction in the activity movement was essentially a combination of experience charts and what is called today the “whole language” approach. Of course, both the 1934 Activity Movement and the 1990’s “whole language” abomination are simply variations on the 1890’s Colonel Parker/John Dewey themes.)
The Twentieth Yearbook concerned experience charts, a la Colonel Parker’s 1890’s Chicago school, yet Smith claimed experience charts were a “radical departure” in 1921 “... not widely accepted till later.” “Experts” keep recycling the same “meaning” rubbish in beginning reading, such as experience charts and “whole language.” Yet these “roses” by any other names all smell as bad. Experience charts were being pushed as radically new when I visited schools in Sweden in 1977, and children diligently kept card files of their “sight words” from these charts. (I was told that the government mandated the use of the reader, Nu Laser, in first grade. Since this was heavy synthetic phonics or “sound”, it served to reduce sharply the harmful effect from the experience chart “meaning” approach.) I was told that, during the time I was in Sweden, the Swedish “expert” who had promoted the method was at that very moment promoting the method in lucky Austria. Yet the “new” method was very much the same as the Belgian Ovide Decroly’s experience-chart approach used since the early twentieth century in Europe, which idea was probably picked up by European visitors to Colonel Parker’s school during the 1893 Chicago World’s Fair (Columbian Exposition). That fair had many foreign visitors. In 1977, I saw the experience chart method in frequent use in France, but it was used to teach heavy analytic/synthetic phonics. That was a happily successful adaptation, since the conditioned reflex being established was ultimately based on “sound” and not on “meaning.” However, a “meaning” version had been used in France since the 1920’s by a particularly odious “expert,” Celestin Freinet, for the teaching of sight-words. With Freinet’s version, the children used printing presses to “write” their “productions.”

Concerning additional texts to be added to this listing, in W. H. Winch’s Teaching Beginners to Read in England, Public School Publishing Company, Bloomington, Illinois: 1925, he mentioned on page 18 Sonnenschein’s “little book for teachers on the Teaching of Reading.” He said elsewhere that the Sonnenschein method was the teaching of syllables, without any phonic analysis. Winch also mentioned the Dale phonic method, which was popular, apparently, for many years in England, but did not teach syllabication. Therefore, these two English teachers’ texts should be included in this listing:

Sonnenschein, Teaching of Reading, published in England before 1905

Dale (A phonic manual, title unknown, pub. in England before 1905

The Cumulative Book Index, 1928-1932, added many additional titles under “Reading” which will not be listed here, both general texts and manuals for reading series, as well as many books for children under “Readers.” However, it is of interest that among those texts published between 1928 and 1932 were three from England which promoted the old sentence method. Concerning such texts, Mitford Mathews wrote on pages 119-121 of Teaching to Read, Historically Considered, The University of Chicago Press, 1966:

“Bradley’s article [Ed.: “Spoken and Written English,” 1913] made a great impression upon J. H. Jagger, an English student who later became well known in connection with his advocacy of the sentence method. In 1929 he published a book with the same title as Farnham’s much earlier work, The Sentence Method of Teaching Reading. About this identity of subjects he wrote: ‘In 1887 [sic] a pamphlet bearing the same title as this book was published by A. B. (sic) Farnham at Syracuse, New York State. As far as the author is aware, no copy of this pamphlet reached the shores of England and it does not appear to have exercised any influence on English education.’ Jagger explained that ‘The Sentence Method has arisen spontaneously in some London schools, as a reaction against the mechanical tyranny that phonetic teaching has imposed... The written form of each word is associated directly with its meaning, and indirectly with its sound... To teach reading ideographically, without the interposition of sounds between written sign and meaning, is
therefore in accord with the present character of English spelling as well as in accord with the historical development of writing. Ordinarily, the mind proceeds from the whole to the part. Reading is getting the meaning of printed and written symbols.

However, if the sentence method arose “spontaneously” in England in 1929 as Jagger claimed, then water must run up hill there, too, without being pumped, just as “spontaneously.” Three publications by these “spontaneous” authors which are listed in The Cumulative Book Index, 1928-1932, are shown below.

“Clark, A. G. Sentence-method of teaching reading. pa. 1s ’29 Arnold, E. J.”

“Jagger, J: H. Sentence method of teaching reading, 3s 6d ‘29 Grant educ co.

“Luke, E. Teaching of reading by the sentence method. 3s 6d ’31 Methuen.”

It is also of interest that The Cumulative Book Index, 1928-1932 indicated that the American Library Association was publishing material concerning primers and readers. At the end of the “Primer” section, under “Bibliography,” appeared:

“American library association. Section for library work with children. Committee on readers and primers. Readers and primers. pa per 10 45c ’29 A.L.A.”

This general material, with dates of 1931 and 1933, was listed in the card catalog of the Library of Congress, and has been listed at the beginning of this bibliography, but was not available when I requested it at the Library of Congress.

The Cattell manuscript files at the Library of Congress have two interesting typed sheets, on which the name of the American Library Association appeared. Cattell was a superb organizer (which William James acknowledged in one of his letters to Cattell, now in the Library of Congress manuscript files). These two typed pages are reproduced on the following two pages, and might be seen as kinds of organization charts. The many American associations, like the American Library Association, which were listed on each sheet reached into almost every area of American cultural life. Each had a suggested representative named for the two proposed new master organizations to be concerned with “education.” At the bottom of each list appeared the American Association for the Advancement of Science, to be represented by Cattell who at that time was the Chairman of its Executive Committee, a post which he held for many years.

If the two proposed organizations on the two copies reproduced on the following pages, or any organizations like them, ever materialized, with their named representatives chosen by the arch-activist Cattell, they operated safely outside the public sphere and could exert massive influence from the top to reach all of America, insulated from voters at the polls.

The Constitution authorized the United States Congress and the office of the Presidency to set public policy and to steer the course of this nation. Therefore, for such unauthorized privately organized groups quietly to take over the functions of the elected Congress and the elected Presidency can best be described as sedition. Such activity in 1917 by men with apparent ties to Cattell and his associates had raised a furor.
in Congress, which unfortunately died down because of the advent of World War I. (See Lance J. Klass’s book, The Leipzig Connection, with Paolo Lionni.)

The United States of America has needed laws for a very long time which can serve at least to publicize such sub-rosa quasi-legal seditious activities. After all, no one and no group has any “right” to control other people and the environment of other people without publicly announcing their intentions to do so. After all, that is the purpose for the legal listings in newspapers of tax sales on properties with back taxes, and for public notices on similar things. Whether Cattell’s proposed organizations ever existed as suggested on his typed sheets is not known. At the very least, such activities should have been announced ahead of time publicly, and any meetings of such a group should always have been open to the public. However, that such was the intent is very doubtful. Yet those two typed sheets do demonstrate how effectively illicit influence can, potentially, be exercised on the life of this entire nation, and how it is probably being exercised, without the properly informed consent of the voting public, at this very time.

(Reproduced from the Cattell Manuscript Files, Library of Congress, Washington, DC)
It seems very possible that the above ALA “Committee on readers and primers” was influenced by Cattell and his clique of “experts” through some such net of influence as outlined on the reproductions just shown. Certainly uncontrolled vocabulary library books for children posed a real stumbling block to the anticipated arrival of the deaf-mute-method readers, with their appallingly impoverished vocabulary.
Library books for children would have had to change in tandem with school books, and they did change, it should be remarked. Controlled vocabulary took over most of children’s literature some time after 1929. Presumably many of the great number of isolated titles appearing under “Readers” in The Cumulative Book Index, 1928-1932 were such controlled vocabulary “story” books. They probably found their way into American libraries as alternatives for unadapted copies of such uncontrolled vocabulary works as Tom Sawyer, Pinnochio, Winnie the Pooh and Alice in Wonderland. When the controlled-vocabulary library books finally arrived some time after 1929 to function as replacements for real children’s literature, the attack on American literacy had begun in earnest.

***************

Two additional articles not mentioned in the above listing should be included:

Gates said in the above article:

“The reading books, teacher’s manuals and supplementary materials suggested for use during the first year by each of twenty-one reading systems were analyzed. All of the systems were said to be widely used. The twenty-one courses, selected at random from a longer list, presumably provide a representative variety of primary reading methods now in use in this country.”

Gates said that all of the materials, to a greater or lesser extent, used supplementary phonics.

***************

The Volta Review was published by Alexander Graham Bell’s Volta society, so it is not surprising that it published a pro-phonic article like Burbank’s. Burbank’s article (no date given, but presumably as Volta’s 22nd volume, about 1915) was mentioned in Gates’ March, 1925, article in the Teachers College Record, listed above. Gates said that Burbank’s article was used to justify the supplementary phonics in almost universal use in 1925, since Burbank had reported that 85% of English words are phonetic.

***************

Two publications after 1928 are of enough importance to add to this list concerned primarily with materials before that date. One is:

Gray wrote this for UNESCO, and it has a number of useful international references. One such reference is to the following text:

Gray reported the following:
“Schonell, too, considers that (the phonic method) interferes with the idea of grasping words, phrases and sentences as meaningful language units.”

The “expert,” Schonell has had a very harmful influence on the teaching of literacy in Great Britain for a great many years.

***************

Many “expert” guides to the teaching of reading appeared after 1930. Two of the best known by the 1970’s are shown below. However, Frank Smith’s and Kenneth Goodman’s “expert” writings which date from about the 1970’s, and which are the primary sources of the “whole language” misinstruction of the 1990’s, are not included below. There is a difference in kind between the thick books shown below, which adopt a “scientific,” data-reporting format, and the far thinner Smith and Goodman books which adopt an inspirational tone, instead of a “scientific” one.

Foundations of Reading Instruction, American Book Company, Emmett Betts, 1946 and later revisions.

This is a very large, pro-“meaning,” teacher-training book. Betts was also the co-author of the Betts Basic Readers of 1948 and later, and was a major “expert” of the post-World-War-II period.

Harris was the principal author of the Macmillan readers in the version which apparently followed Gates’ 1930 version. The series by Harris used a “meaning” approach and was in use for many years. This book, used in teacher training classes, has a strong bias toward the “meaning” approach.

The two books listed above will provide any interested researcher with a guide to “official” thinking on the teaching of reading from the 1930’s until the late 1970’s.

However, a teacher’s guide taking the “sound” approach to beginning reading in 1974 was the following:

Charles Child Walcutt and Glenn McCracken had been the authors of the phonic reading series first published by Lippincott in 1963, and the series was published in revised editions in later years. Dr. Dykstra had been involved in the USOE beginning reading studies reported in 1967 and was in charge of the second-grade follow up reported in 1968. Dr. Dykstra is on record as having concluded that phonics (“sound”) is more successful to teach beginning reading than the sight-word (“meaning”) approach, and stated that conviction in his comments in the above book. Despite the inclusion of worthwhile and concrete research data by Dr. Dykstra that favors the teaching of phonics, this pro-sound teacher’s guide which these authors published in 1974 apparently made no dent in the “official” teachers’ colleges endorsement of the use of “meaning” to teach beginning reading.

About 1980 or so, I asked Dr. Dykstra by phone about the oral reading accuracy test scores for phonics-trained classes and sight-word trained classes on the 1968 second-grade USOE studies. Dr.
Dykstra said that the second-grade oral testing data had been accidentally erased from the computer which was processing all the rest of the second-grade test data. Since that “accidentally” erased data would have provided the first scores in perhaps sixty years or so comparing the oral reading accuracy of “sound” trained children to “meaning” trained children, I personally suspect that Dr. Dykstra may have been mistaken when he charitably termed that erasure accidental.

***************

Dating from about the 1980’s, “whole language,” a fanatically pro-“meaning” approach, became the institutionalized method all over the English-speaking world to teach beginning reading, from Australia to Great Britain, and it did so in an extraordinarily short period of time. Its seemingly near-immediate spread was an exceedingly curious development.

The Beginning Reading Instruction Study, Office of Research, U. S. Department of Education, Washington, D. C.: June, 1993, on which Marcy Stein, Ph. D., University of Washington-Tacoma was the principal author, had the following on page 5:

“Those who support intensive, systematic phonics instruction assert that, to understand the alphabetic principle, children must understand the specific connection between letters and sounds. They also believe that children who use those strategies to read words quickly and effortlessly, without having to guess at individual letters or words, will be able to comprehend with ease what they read.

“In contrast, those who advocate a meaning-centered approach believe that reading will develop naturally as children interact with words, sentences, and ideas that appear in meaningful contexts and as part of genuine literary experiences. These experiences include handling and sharing books, talking about print and stories, and reading and writing meaningful stories. Numerous books and articles have been written about the whole language approach to reading instruction. Readers interested in exploring these ideas further should consult some of the books listed below:

“In recent years, the whole language movement has emphasized the use of literature as the basis for learning to read, rather than the instructional routines, graded texts, and worksheets typical of basal reading programs. Whole language advocates strive to make reading instruction more spontaneous, integrated, and authentic. They call for students to be given more control over their own learning by allowing them to decide which books they will read and what topics they will write about.”
See the chapter in this history on the Quincy movement from 1875, which will establish that whole language is just a repackaging of a very old and very failed movement. Colonel Parker disapproved of reading textbooks, too, and instead he had a horse-drawn wagon filled with different books and made the rounds of the schools in Quincy, Massachusetts, to deliver those books. That was the “whole language” approach in earnest. With “whole language” (that stupid, half-witted phrase), students are supposed “to be given more control over their own learning....” In 1875, Parker also wanted to throw the responsibility for learning onto the children, which sounds very dramatic but is just empty talk, and an excuse for shifting the blame for educational failure to the poor little children’s shoulders. Yet Parker’s basic theme, “interest,” used as a magic wand to teach beginning reading instead of real content, was itself only being repackaged in 1875. “Interest” and “meaning” had previously been the theme of the beginning reading revolution in 1826, as this history has discussed. That revolution immediately (and predictably) produced functional illiteracy.

So is “whole language” producing functional illiteracy. Yet it is was promoted in the 1990’s, in a veritable symphonic orchestration, all over the English-speaking world, from Australia and New Zealand to North America, to Great Britain, and probably to South Africa.
APPENDIX E

An Annotated Partial Bibliography of Reference Works Used in the Preparation of this History

Most of the material in this history and its appendices is based on examination of reading instruction texts or original literature of the various periods. This examination has been aided by the approximately ten thousand photocopies I made during the summer of 1986 of pertinent portions of reading texts and other pertinent materials in the Harvard collections, as well as some penciled notes taken at their Houghton Library. Also available for consideration were some ten thousand or so photocopies I obtained since 1979 of pertinent portions of other old works at other libraries, and written notes taken at those libraries on materials on which photocopies could not be made.

The principal libraries used were the following:

Harvard Library, Cambridge, Massachusetts
New York Public Library, New York, New York
Library of Congress, Washington, D. C.
U. S. Department of Education Library, Washington, D. C.
University of Chicago Library, Chicago, Illinois
American Antiquarian Society Library, Worcester, Massachusetts
Syracuse Public Library, Syracuse, New York
Syracuse University Library, Syracuse, New York

The principal catalogs consulted were the following:

American Catalogues, 1876 and Later
United States Catalogs, 1912 and 1928

However, some general works have been of particular use and are listed below in chronological order, with notes where necessary. Some very early English texts of great interest in the history of reading instruction which are not listed below are discussed in this history in Part 2, Chapter 3, and some works in French not listed below are given in Part 3, Chapter 10.

Since I probably looked at thousands of books and periodicals over the last twenty-three years while doing my research, and in addition made photocopied excerpts and written notes on perhaps two thousand or so reading instruction textbooks and other books and periodicals, it is impossible to list them all here. Nevertheless, an attempt has been made to show here those particular non-textbook sources which seemed to be of most importance, since such a list may be of help to future researchers. In addition, some reference materials which I have not seen but which may be of use to researchers are also included below.

The listing follows, in chronological order.

***************

“When we are taught to read, first we learn off the names of the letters, then their forms and their values, then in due course syllables and their modifications, and finally words and their properties, viz. lengthenings and shortenings, accents, and the like. After acquiring the knowledge of these things, we begin to write and read, syllable by syllable and slowly at first. And when the lapse of a considerable time has implanted the forms of words firmly in our minds, then we deal with them without the least difficulty, and whenever any book is placed in our hands we go through it without stumbling and with incredible facility and speed.”

Dionysius described automaticity in reading. However, something else is notable. He also described automaticity in reading print which was run together, with no separation between words, and even without any punctuation on sentence structure (capitals, periods, commas, etc.). Those refinements did not arrive in general use until after Alcuin’s influence in the ninth century, about the time that the use of capital and small letters also began. Before that time, print had been either all in capital letters or all in what we call “small” letters. (The evolution of letter types is covered very well in many reference works.) The automaticity in reading therefore concerned both the ability to syllabicate run-together print into words, and an apparent automatic ability to perceive syntactical structure at a high speed, without any markers in print (capitals, periods, commas, etc.,) to assist the reader.

As indicated elsewhere in this history, as late as the fourth century A. D., St. Augustine of Hippo expressed surprise at St. Ambrose when he found him reading silently to himself, instead of orally. On page 78 of Teaching Reading in Early England, Pitman Publishing, London, 1973, W. J. Frank Davies referred to St. Augustine’s surprised comment. Since reading until after St. Augustine’s time was oral, inaccuracies and even meaningful “psycholinguistic guessing” would have been glaringly obvious to listeners. Therefore, there can be little doubt about the high accuracy and speed which Dionysius claimed was the norm in the ancient past. Yet even the most proficient readers today are incapable of reading unfamiliar run-together print, without even any punctuation, at high speed, which Dionysius described as the norm in the ancient past. Those ancient readers had acquired an “automaticity” in dealing with run-together print which we do not have today. Readers today do not achieve that kind of automaticity in syllabrating, because today we read “words,” and are never faced with run-together print to divide into syllables and then into the words that result from those syllables. (Furthermore, readers today do not have to deal with run-together sentences!) It is obvious that a great but almost totally unacknowledged shift occurred in our writing system from “sound” toward “meaning,” when word separations in print became the norm, because of the influence of the monk, Alcuin, in Charlemagne’s court circa 800 A. D.

Circa 50 Anno Domini - The Institutio Oratoria of Marcus Fabius Quintilianus, Rome. A 1951 English translation, The Institutio Oratoria of Marcus Fabius Quintilianus, With An English Summary and Concordance, was made by Charles Edgar Little, Ph. D., Professor of Latin in George Peabody College for Teachers, Nashville, Tennessee, in “Two Volumes, Printed for George Peabody College for Teachers, Nashville, Tennessee”.

Some excerpts from Quintilian’s work were also reproduced in Henry B. Barnard’s nineteenth-century American Journal of Education and frequently elsewhere as well. The English translation that Barnard printed (1863-1864?, page 113) of the pertinent and very valuable Quintilian section concerning reading is the best that I have seen. (From Mitford Mathews’ quote of a portion of that excerpt with almost the same wording, for which translation Mathews cited the 1875-76 work of John Selby Watson, London, it seems probable that Barnard about 1863 was quoting from an earlier Watson translation.)

Although the Little publication of the Quintilian material is of great value because it reproduces the original Latin, its translation of the following very important excerpt is shockingly inadequate. However,
since Little’s work was not published until after his death, I suspect that some “expert” mouse must have nibbled at that particular piece of valuable cheese.

The translation given by Barnard follows:

“For learning syllables there is no short way; they must all be learned throughout; nor are the most difficult of them, as is the general practice, to be postponed, that children may be at a loss, forsooth, in writing words. Moreover we must not even trust to the first learning by heart; it will be better to have syllables repeated, and to impress them long upon the memory; and in reading too, not to hurry on, in order to make it continuous or quick, until the clear and certain connection of the letters become familiar, without at least any necessity to stop for recollection. Let the pupil then begin to form words from syllables, and to join phrases together from words. It is incredible how much retardation is caused to reading by haste; for hence arise hesitation, interruption, and repetition, as children attempt more than they can manage; and then, after making mistakes, they become distrustful even of what they know. Let reading, therefore, be at first sure, then continuous, and for a long time slow, until, by exercise, a correct quickness is gained. For to look to the right, as everybody teaches, and to look forward, depends not merely on rule, but on habit, since, while the child is looking to what follows, he has to pronounce what goes before, and, what is very difficult, the direction of his thought must be divided, so that one duty may be discharged with his voice, and another with his eyes.”

It is interesting to see that Quintilian referred to what C. T. Gray called the “Anticipation of Meaning as a Factor in Reading,” in an April, 1923, article in the Elementary School Journal of the University of Chicago. To some degree that is part of what Kenneth Goodman far more recently labeled “psycholinguistic guessing.” Yet syntactical thought is a unit, so what is really at issue is the psychological urge to complete a syntactical unit once it has begun.

Brain research today suggests that the perception of printed syntax, like the perception of printed words, is automatic, and that the two activities (on syntax and on words) are carried out in specialized areas devoted to them in the brain. See the illustrations in Inside the Brain, listed later under 1980, concerning word areas and separate syntax areas in brains. These areas were identified in experimental work with actual patients prior to neurosurgery, although the precise location of the areas differed from patient to patient. In addition, it has been shown that some partial aphasics, incapable of speaking consciously but capable of parroting what others speak, can correct grammar when repeating what they hear. Because they are incapable of speaking consciously or of understanding speech, their correction of grammar has to be an automatic operation, confirming the automaticity of syntax. Sid J. Segalowitz wrote the following concerning such rare cases, on page 22 of Two Sides of The Brain, listed later under 1983.

“One last specific syndrome is very rare: isolation of the speech area. Patients in this situation cannot converse with someone nor understand them, yet are capable of repeating, completing sentences, producing automatic sequences, and of correcting faulty grammar in a phrase that is repeated! Meaningful comprehension and production are impossible.”

“Closure” is the psychological urge to complete any action already begun. The patients Segalowitz described could even automatically complete sentences (“syntax”) without understanding them! Therefore, “anticipation of meaning” in reading, when seen simply as an aspect of automatic syntax, might be described as the automatic application of “closure” to automatic syntax. Consciousness is not necessarily involved in such syntactical “anticipation of meaning,” which is very much the same as what Quintilian described as looking to the right and looking forward while pronouncing what goes before. Nevertheless, Quintilian correctly assumed that the two simultaneous actions (looking forward while pronouncing what goes before) could occur efficiently only if the ability to read syllables and words were
perfected. Otherwise, that act could not be done “by habit,” automatically. That most famous educator, Quintilian, about 50 A. D., almost two thousand years ago in Rome, therefore deplored “psycholinguistically guessing” at printed words, instead of learning how to pronounce them rapidly with absolute certainty.

Circa 300 A. D. - The Ars Minor and Major of Donatus. See the entry under 1926 for the English translation of the Ars Minor by Wayland Johnson Chase.

Written in 731 A. D., this provides considerable background material on education at that time and for some hundred years before, besides being remarkably interesting in general. In Chapter 27, page 195, Bede wrote the following concerning the period about 664 A. D., only 67 years before he wrote:

“At this period there were many English nobles and lesser folk in Ireland who had left their own land... either to pursue religious studies or to lead a life of stricter discipline. Some of these soon devoted themselves to the monastic life, while others preferred to travel, studying under various teachers in turn. [Ed.: Concerning the following, before about 1,000 A. D. or so, “Scot” meant anyone from Ireland, while “Pict” meant anyone from what is now Scotland.] The Scots welcomed them all kindly, and, without asking for any payment, provided them with daily food, books, and instruction.”

The above translation differs slightly from the translation given by John Morris in The Age of Arthur, which was quoted previously in this history. An anonymous Irish work composed in the early 600’s, which partly confirms Bede’s last remark about the populace’s open-handed reception of scholars, is Hisperica Famina, referred to later in this bibliography. It had an excellent recent translation and commentary by Michael Herren of Toronto. However, it referred to Irish lay, not clerical, scholars, who were being schooled in what was a continuation of the Druid educational tradition. Further confirmation on general educational practices of the period can be had from the surviving written saints’ “lives.” In addition, The Age of Arthur, by John Morris, listed under 1973 in this bibliography, is a goldmine of information on the period, including the facilities for education for both boys and girls in ancient Ireland, and going back as far as Illtud’s British school for boys in the fifth century in what is now Wales. Several other relatively recent works concerning this period are also listed later in this bibliography.

On page 316 of the long article concerning the education of the deaf in Volume V of The Catholic Encyclopedia (1913), the following appears:

“According to Venerable Bede, St. John of Beverley (721) caused a deaf and dumb youth to speak by making the sign of the cross over him; and Bede himself, in his ‘De Loquela per gestum digitorum’ describes a manual alphabet.”

The Ogham alphabet was still in some use in Ireland about 700, and the Irish-English connections were still manifold at the time. As discussed elsewhere in this history, it is very likely that the circa 700 finger alphabet described by Bede was based on the finger alphabet that stood for the Ogham letter.
characters. The Ogham letter characters are presumed to have been invented in the third century A. D. by pagan Druid scholars, inspired by the Germanic runes invented about 250 B. C. The Ogham finger alphabet certainly could easily have been adapted for teaching language to the deaf, which was apparently Bede’s aim.

1100-1300 Charters and Documents Illustrating the History of the Cathedral City of Sarum, 1100-1300, [Salisbury, England], ed. W. D. Macray (R.S., 1891)

This is given in the Appendix to Parry’s history, Education in England in the Middle Ages, listed here under 1920. Also included in Parry’s Appendix are compilations and guides on many other materials from about 700 to 1500, including those concerning such historically important people as Aelfric, Alcuin, Aldhelm, Alfred the Great, Roger Bacon, Thomas a Becket, Bede, Chaucer, Giraldus Cambrensis, Robert Grosseteste, John of Salisbury, Lanfranc, Alexander Neckham, and the Pastons, Much information on education practices is contained in these works, and Parry quotes much of it.

Circa 1150 Metalogicon, by John of Salisbury (c. 1115-1180).

In his 1986 book listed later, Dr. O’Mathuna commented (page 127) concerning John of Salisbury’s use of Quintilian’s texts:

“Quintilian had for long enjoyed a richly deserved reputation. His Institutio Oratoria, particularly its opening books, contained more practical common sense capable of ready translation to the classroom than almost any other treatise from antiquity. By the late Middle Ages, however, only fragmentary copies of his famous work were known to have survived: the ideas developed in his opening books were known only through secondary sources, such as John of Salisbury (c. 1115-1180) in Metalogicon, or through tradition. In 1415, however, Poggio Bracciolini, who was attending as secretary at the Council of Constance, rediscovered a complete copy of all twelve books of ‘The Training of an Orator’ in the library of the Benedictine Monastery of St. Gall. This happy find had considerable influence on educational theory for many years to come and nowhere more than in the Jesuit order.”

This establishes quite clearly that the early Middle Ages were very superior, culturally speaking, in comparison to the late Middle Ages. Before the early date of 1180, John of Salisbury in England had enough access to Quintilian’s work so that he could write a secondary work based on it. Probably long before John of Salisbury in England in the 1100’s (from before 900, to judge from reports dating the surviving complete books) the St. Gall Monastery in Switzerland had all twelve of Quintilian’s books. Yet the use of Quintilian’s works had declined so much in all of Europe after 1200 that copies of most of Quintilian’s works had disappeared by 1415. How, then, can the 1200’s and 1300’s be considered culturally advanced over the 800’s, 900’s, 1000’s and 1100’s, as is almost uniformly considered to be true? See the comments of Roger Bacon in the 1200’s, quoted at length elsewhere, which establish that Bacon, himself, one of the greatest scholars of all time, believed that the academic world of his own time was very degenerate.

In his 1920 history listed later, Albert Parry quoted from early medieval source materials which establish that excellent educational facilities were available for ordinary people in John of Salisbury’s day in the 1100’s. Parry specifically mentions the educational opportunities given to John of Salisbury.

1364 and earlier, Polychronicon, by Ranulf Higden, who became a monk in England in 1299 and died in 1364. In the article, “Annals,” in The Catholic Encyclopedia, Volume I, page 535, Higden is described as a chronicler who “… is known only by his great work, the ‘Polychronicon,’ a universal history down to his own times.” It was in this work that Higden referred to the comment concerning testing a man for
literacy that had been made by Lanfranc (circa 1005-1089), Archbishop of Canterbury. That comment has been discussed earlier in this history, since it implies that the syllabary was used in Lanfranc’s and Higden’s time.

In the Appendix to Parry’s 1920 book, Education in England in the Middle Ages, listed later, he described the following edition of the Polychronicon:

1405 The Treasure of the City of Ladies, by Christine de Pisan, translated by Sarah Lawson, Penguin Classics: 1985, Harmondsworth, Middlesex, England. The existence of this book addressed to women of all classes by a very prolific and highly successful woman writer of the time establishes the fact of considerable non-clerical literacy in the late middle ages. This book appeared well before the arrival of the printing press. The book could only be “published” by being copied in handwriting by professional scribes.

The book is also a window on the world of that time. It is surprisingly illuminating in many respects, particularly concerning the moral degeneracy of the period. That period is wrongly represented in some works as a deeply religious time. Recently published material stated that there was a widespread and unwholesome fear of Hell in the fifteenth century. Yet the widespread ugly behavior in the fifteenth century is an ample explanation for the fact that some people had such a fear, which was in many cases apparently well earned! The author was herself a devout woman, but wrote matter-of-factly and bluntly of widespread ugly and vicious behavior in many fields, cautioning her readers to be on guard against it. For instance, prostitution was apparently so commonplace that she addressed a chapter in her book to prostitutes (urging them to reform). Yet she also cautioned young wives against even the appearance of infidelity because, almost unbelievably, at that time some allegedly unfaithful wives had been burned at the stake or even buried alive! Such husbands were certainly not concerned with the Gospel about the woman taken in adultery, whom men were going to stone but who was spared by Jesus! To call such degenerate people “Christian” is to defame the word. Christine de Pisan made matter-of-fact 1405 A. D. comments on contemptible everyday behavior in other fields, concerning routine cheating, lying, and stealing. Those comments should be contrasted to those of the monk, Bede, about 731 A. D., which establish that, unlike Christine de Pisan, he wrote in what was truly a deeply religious period for the Christian population as a whole.

What is most notable in the contrast between Bede’s 731 work and Christine de Pisan’s 1405 work is the relative status of women. It was extraordinarily high in Bede’s period, but debased in Christine de Pisan’s period. By itself, that alone confirms that the latter period was more pagan than Christian, since the status of women in pagan countries has almost uniformly been low. In Bede’s time and before, women had sometimes been the heads of monasteries, and not infrequently women from those monasteries were famous for their learning. Yet learned women were extremely rare in Christine de Pisan’s time. Nevertheless, Bede considered even his own period to be a degenerate period!

Circa 1414 A. D. - ABC de Simple Gens (The A B C of Simple Folk), by Father John Gerson (1363-1429), who had been the chancellor of the University of Paris. This is not a beginning reading text, but is an elemental catechism. However, its title confirms that ABC books were so ubiquitous in France by 1414 that the term, an “ABC,” could be used allegorically to mean a fundamental text in other areas than reading instruction. It also confirms that such an allegorical use would be very commonly understood about 1414, since the catechism was specifically written for teaching “Simple Gens,” or simple people, including children.
The intimate and chatty tone of Gerson’s material differs from the formal tone of the earlier English catechisms of Peckham and Thoresby. John Peckham, Archbishop of Canterbury, England, had written his catechism in 1281, and John De Thoresby, Archbishop of York, England, had written his in 1357, as outlined in The Lay Folks’ Catechism, published for the Early English Text Society, London, 1901. However, because of the chatty tone of Gerson’s catechism, in contrast to those of Peckham and Thoresby, it is probable that Gerson meant his material to be read personally by many of the “Simple Gens,” instead of being merely read to them by a catechetical teacher. That seems to be a confirmation of more widespread literacy about 1414 than has generally been acknowledged.

It should be emphasized that teaching beginning reading in Latin by the syllable method is extraordinarily easy, and it was the standard approach at that time. Therefore, learning to read could easily be accomplished at home, if the home already had at least one literate member. The later transfer to reading the vernacular tongue was also easy, as the vernacular tongue, like Latin, was read by resurrecting a small and limited number of memorized printed syllable “sounds,” instead of by resurrecting an almost unlimited number of printed word spellings. The fact that written French at that period, like written English, had variant word spellings proves that what people were reading (and writing) at that time was syllables, not words. Since printed syllable spellings are so limited in number and are therefore far easier to learn than vast numbers of word spellings, literacy was easily obtainable for simple people with the expenditure of little money or effort.

About 1414, Gerson also wrote for religious instruction Opusculum Tripartitum de Praeceptis Decalogi, de Confessione et de Arte Moriendi. According to M. Reu on page 574 of his article, “Religious Instruction of the Young in the Sixteenth Century,” from the Lutheran Church Review, Volume 34, No. 5, of October, 1915:

“Gerson wished to have his book written wholly or at least partially on boards affixed to the walls in churches, schools and hospitals in order to keep its contents always before the eyes of people who were able to read.”

The fact that some French churches of Gerson’s period, about 1414, displayed tablets containing catechetical material to be learned is further confirmation of widespread literacy about 1414.

It is also confirmation of moral degeneracy, since the very simple contents of the basic catechism of the time (the Our Father, the Hail Mary, the Apostle’s Creed, the Ten Commandments, the seven sacraments, etc.) would routinely have been learned in childhood if the period had been even a moderately religious one. It must have been those basic portions of Gerson’s work which he wanted displayed on tablets. (Note the Latin words for the English words, Ten Commandments, in the title: “Praeceptis Decalogi””) Yet Gerson’s request to display those tablets establishes that many people who had learned to read about 1414 did not know such basic religious material as the Ten Commandments! That fact is enlightening concerning the cultural degeneracy of that period.

1571 Historie of Ireland, by Edmund Campion. Campion was an Englishman and a Catholic martyr who was executed during Queen Elizabeth’s reign and who was later canonized. Campion wrote this very hostile and brief “historie” of Ireland during his brief stay there. Since Gaelic was overwhelmingly still the dominant language in Ireland at that time, it is possible that Campion had trouble communicating, and that might have contributed to his very obvious hostility. The fact that there had already been some four hundred years of hostilities between the Irish and the English by the sixteenth century was probably the most important influence on Campion’s outlook.

The quotation from Julius Caesar given earlier in this history concerning the Druidic Celts in France in the first century B. C. reported that they were forbidden to write their learning, being required instead
to memorize it, even though they had the use of Greek letters when needed. Caesar approved of the
memorization, because he said in effect that over-dependence on writing tends to weaken the memory.
Almost certainly, the memorization by the Druidic Celts involved oral recitation. Some of Campion’s
eye-witness comments, quoted below, are of great interest concerning what was effectively the
existence of that ancient Druidic education system, which had originated long before Julius Caesar’s
day and which Campion still saw in operation in the sixteenth century, although the Druids themselves
had disappeared over a thousand years before. That Druidic education system reportedly was not
extinguished for another hundred years, until the sixteenth century. Yet, as late as the sixteenth
century, Campion heard the students in the ancient schools (which he called schools of “leachcraft” or
medicine, and “law”) demonstrate a remarkable proficiency in spoken Latin. They had learned Latin by
the same “memorizing” method of the Celtic Druids that had been reported by Caesar, himself, in the first
century before Christ.

Although the Druidic kind of education system died in the seventeenth century, the hidden “hedge
schools” then sprang up in Ireland after the finally-victorious English had outlawed education for Irish
Catholic children by the enactment of the infamous Penal Laws starting in the late seventeenth century.
The Penal code concerned a lot more than forbidding education to Catholic children. It took away virtually every civil right of Roman Catholics, including the right to own almost anything, and it called
for executing Catholic clergy if discovered. Montesquieu, the French jurist (who was not a practicing Catholic) said of the anti-Catholic Penal code that it was “conceived by demons, written in blood, and
registered in Hell,” as cited on page 455 of The Story of the Irish Race, Seumas MacManus, 1921, 1966,
summarizes the unbelievable content of the Penal Laws that were not repealed until about 1829, although
their once violent enforcement apparently began to fade by the end of the eighteenth century.

The probability is that the hedge schools that arose after the enactment of the Penal Laws did have a
cultural link to the Druidic schools, since the persistence of cultural memories can be so astonishingly
long. It is interesting that those hidden hedge schools into the nineteenth century were so successful in
teaching poor boys Latin that many emigrant Irishmen became Latin schoolmasters in America. Those
boys almost certainly would have learned Latin by the same memorizing method that was cited by
Caesar, and by the same memorizing method that Campion observed in Ireland in the sixteenth century.

The hedge schools have already been discussed in Part 4, when mention was made of W. B. Yeats’ Representative Irish Tales, as quoted in the article, “William Carleton,” (1798-1869), in Irish Literature,
Bigelow, Smith & Company, New York: 1904, Justin McCarthy, Editor. Yeats wrote of Carleton:

“He’s education, such as it was, was beaten into him by hedge schoolmasters. Like other
peasants of his time, he learned to read out of the Chap-books - ‘Freney, the Robber,’ ‘Rogues
and Rapparees’ or else, maybe, from the undesirable pages of ‘Laugh and Be Fat’.... He sat under
three schoolmasters in succession.... They were a queer race, bred by Government in its endeavor
to put down Catholic education. The thing being forbidden, the peasantry had sent their children
to learn reading and writing, and a little Latin even, under the ‘hips and haws’ of the hedges. The
sons of plowmen were hard at work construing Virgil and Horace, so great a joy is there in
illegality....

“When a boy showed great attention to his books, he would be singled out to be a priest, and
a subscription raised to start him on his way to Maynooth. Every peasant’s house, as he trudged
upon his road, would open its door to him, such honor had learning and piety among the poor...”

Note the enshrinement of “learning” among the poor in early nineteenth-century Ireland, even though
that high regard for learning is certainly not characteristic of “the poor” in most areas. That high regard
was also a cultural relic from as long ago as the seventh century. See the later entry under 1974 for The Hisperica Faminia: I. The A-Text, translated by Michael W. Herren of York University, Toronto. The material which Herren so interestingly translated and annotated is presumed by Herren to have been used as a student text in Latin in Irish lay schools about 650 A. D., the same kind of schools of medicine and law that Campion saw a thousand years later. The seventh century book demonstrates the same high regard of the general Irish population in the seventh century for learning, since the selections matter-of-factly report on lay scholars in the ancient Druidic tradition being routinely welcomed and fed by local people where ever they went.

A less mocking account of the “hedge schools” than Yeat’s is given by Henry Giles (page 1280, Volume IV of Irish Literature,) in the article “The Irish Intellect,” from a collection of Giles’ published in 1845:

“The Catholic Irish in those hard times when education was thus forbidden them, carried their literary studies into the silent fields, and amidst bushes and brambles conned Homer, Virgil, Euclid or the spelling book; and this was the origin of what has been called ‘the hedge-school.’ The old Irish hedge-school should be held in immortal honor, as the last refuge of a people’s mind and as the last sanctuary of persecuted intellect. The Irish who dared all penalties for their faith, dared no less for their understanding. They were as zealous martyrs for scholarship as for conscience. Even while the penal laws were still in force, peasants who spoke Latin could be found among the hills of southern Ireland, and at all times classical studies have been popular among the Irish.”

John O’Keeffe (1747-1833) (Vol. VII, Irish Literature, p. 2770 and following), wrote this in From the Recollections of John O’Keeffe, 2 vols., 1826. O’Keeffe had been a writer of successful plays who tragically had gone blind in mid-life. Born in 1747, his “early times” would have been well before 1770:

“In my early times, all the great outlets from Dublin had, inside the hedges, parallel footpaths with the road, and the stile, where the hedges divided the fields, were models for stiles all over the civilized world... in my time, the word village was not known, but every group of cabins had a piper and a schoolmaster, and before every cabin door, in fine weather, there was the Norah, or Kathleen, at her spinning wheel (no woman ever worked out of doors, or in the fields).”

Presumably, in the “hedge schools,” Latin was learned by an emphasis on oral, not silent practice of memorized selections, just as had been reported in anecdotes from the early Irish saints’ “lives” from the sixth to the eighth centuries, which are quoted elsewhere. The Irish students that Campion observed in the sixteenth century (“lustie fellows of twenty-five yeares and upwards”) were also required to memorize excerpts, just as Caesar had noted that the Celtic Druids did in Gaul long before. Campion noted that the Irish students had to recite those excerpts orally, although Campion belittled that practice.

Two probable reasons account for the accomplished Latin (bilingualism) of the Irish students that Campion noticed in the sixteenth century. Those same reasons probably account for the bilingualism of the early Irish monks from the sixth to the tenth centuries, which was discussed earlier in the material by Morris. They also probably account for the accomplishments in Latin of the boys taught in the forbidden Irish hedge schools, which accomplishments were so great that many of the obviously very poor boys emigrated to America to become Latin schoolmasters.

The first of those two probable reasons for the high proficiency of all three groups in spoken Latin is that the students in all three groups did not just memorize selections, as Caesar had noted the Celtic Druids did, but they also had to recite the selections aloud at the precise time that they were memorizing them. The second probable reason is that, by memorizing selections by reciting them aloud, students were
automatically dealing with syntactic wholes instead of with isolated words. Dealing with syntactic wholes, as discussed in Part 3, greatly aids in the learning of a language. (However, although it is not recorded in history, it is probable that Caesar’s Druids also memorized their material by reciting it aloud.)

It is reasonable to assume, nevertheless, that when Campion saw the professional schools of medicine and Brehon law still operating in the Druidic tradition of professional schools in the sixteenth century, which was not long before they disappeared, the schools must already have degenerated because of the hundreds of years of conflict with the English and the resultant occupation of large parts of Ireland by the English. Campion wrote:

“...Without either precepts or observation of congruity, they speake Latin like a vulgar language learned in their common schooles of leach-craft and law whereat they begin children and hold on sixteen or twenty yeares, conning by roate the aphorismes of Hypocrates and the Civill Institutions and a few other parings of those two faculties. I have seen them where they kept school, ten in some one chamber... Books at their noses, themselves lying flatte prostrate and so they chant out their lesson by piecemeale being the most part lustie fellows of twenty-five years and upwards....”

In summary, the memorization and recitation of texts that Campion witnessed in the sixteenth century in Ireland, and of which Campion so obviously disapproved, was actually a highly successful Celtic Druidic practice about two thousand years old, and the same practice that had been cited by Julius Caesar sixteen hundred years earlier.

1587 (First version in 1576) The Petie Schole with an English Orthographie..., by Francis Clement. It is reproduced with a commentary in Four Tudor Books on Education, by Robert D. Pepper, Scholars’ Facsimiles & Reprints, Gainesville, Florida, 1966. Pepper’s reproduction includes Sir Thomas Elyot’s The Education or Bringing Up of Children (1533), Dudley Fenner’s The Artes of Logike and Rethorike (1584), and William Kempe’s The Education of Children in Learning (1588).

Clement’s book has been discussed in this history. It is of real importance as possibly the first English “spelling book,” although no where nearly so complete as the far more successful spelling book by Coote in 1596, listed below. Spelling books arrived in England not long after the switch to teaching beginning reading in difficult English instead of easy Latin, which switch had obviously caused a problem. Clement discussed spelling by rules instead of by giving word lists, which is what Coote did. Clement also cautioned against beginner’s common errors: “Beware he missound not... gla, gle, gli, glo, glu, as if it were dla, dle, dly, dlo, dlu, which if they doe, must be corrected. For ing, ending a word, let him not pronounce in, leaving out the g, as speakin, for speaking.” It is self-evident that Clement was using a “sound” approach to teach beginning reading, and not a “meaning” one.

1588 The Education of Children in Learning, by William Kempe. It is reproduced with a commentary in Four Tudor Books on Education, by Robert D. Pepper, Scholars’ Facsimiles & Reprints, Gainesville, Florida, 1966. Pepper’s reproduction includes Sir Thomas Elyot’s The Education or Bringing Up of Children (1533), Francis Clement’s The Petie Schole with an English Orthographie (1587), and Dudley Fenner’s The Artes of Logike and Rethorike (1584). Kempe’s book is a source of much material on the Elizabethan period. It is discussed by T. W. Baldwin in his book, William Shakspeare’s Petty School, entered here later under 1943. See the comments under that 1943 heading on the initial steps of reading by the syllable method that were given in Kempe’s book.

This book is available on film in some major libraries, such as the Library of Congress. Coote’s was the model for the spelling books which were to follow, and was enormously popular, being produced in a vast number of editions for over a century, as Volume 4, Spelling Books, in R. C. Alston’s twelve-volume bibliography establishes. It contained not just systematic rules, but systematic spellings, and inserted short paragraphs for reading practice. (Alston’s material is cited later under 1969: the twelve-volume series, A Bibliography of the English Language from the Invention of Printing to the Year 1800, Bradford, England.)

On page 16, Brinsley described the teaching of reading by the syllable method, plus analytic phonics (“hand, band, land, sand &c.”), and wrote in the margin, “M. Coots English Schoolemaster might bee profitable to this purpose, in which booke are syllables & words of all sorts.” See the 1596 entry above on Coote.

Despite Alston’s extraordinary work in reproducing helpful materials such as this and in compiling his massive twelve-volume bibliography of the English language, (A Bibliography of the English Language from the Invention of Printing to the Year 1800, Bradford, England, 1969), his concern in doing so was with the history of linguistics, and not with the history of the teaching of beginning reading. Alston either had no knowledge of or no interest in the controversy concerning methods for teaching beginning reading, and most naturally therefore had no interest in the history of beginning reading.

Furthermore, Alston had the characteristic blind-spot of intellectuals concerning pre-Reformation educational facilities. Education in England in the Middle Ages by Albert W. Parry, listed later under 1920, quoted materials written before the Reformation which establish conclusively that widespread educational facilities were available in pre-Reformation England without charge for the unprivileged classes. Yet Alston repeated the common error that a concern for education of the “common man” dated only from long after the Reformation, when he said about Brinsley in the “Note” at the beginning of the Brinsley reproduction:

“It was, indeed, his zeal for promoting the education of the common man (in which respect he was in advance of Comenius, Hartlib and Milton) which led to his being suspended from teaching at Ashby-de-la-Zouch in 1620.”

Alston’s comment also seems to contradict the usual explanation for Brinsley’s suspension, which is that he was a Puritan sympathizer in a Royalist environment.

1657 Orbis Sensualium Pictus,... by Johann Amos Comenius (1592-1670), Written by the author in Latin and High Dutch... Tr. into English by Charles Hoole M. A. for the use of Young Latin Scholars. New York, 1810.

Comenius was the famous Moravian educator, and this book was a successful and enormously widely used textbook for teaching Latin to beginners in the seventeenth century. The preceding description was given by Mitford Mathews in Teaching to Read, Historically Considered, 1966, University of Chicago, listed later. Mathews wrote:
“This work by Comenius appeared in 1657 and was at once translated by Hoole who signed his ‘Translator’s Preface, From my School in Lothbury, London, Jan. 25, 1658.’ The New York printing was a reproduction of the 12th London Edition.”

Another American edition was by the publisher of the School Bulletin, C. W. Bardeen, Syracuse, New York, in 1887.

The fable which originated at Columbia Teachers College about 1900 that Comenius endorsed sight-words in the seventeenth century in his Orbis Pictus has been very widely promoted. Mitford Mathews provided the refutation of that fable in his book Teaching to Read, Historically Considered, as has been discussed at length in this history.

This book was listed in the article, “Bibliographie,” in the Dictionnaire de Pedagogie et d’Instruction Primaire, which is discussed later in this listing. The entry stated that it had been “Prescribed or recommended by a great number of bishops,” which indicates that it was very influential. The article, “Lecture,” in the Dictionnaire contained excerpts from this work, and they were precise instructions for the teaching of beginning reading in Latin by the syllable method. A relatively small portion of those quoted instructions follows:

“...not to undertake to make them fly in reading before they know how to spell the letters because, wishing to advance them teaching them so many things at one time, one makes their reading so confused that further they are a long time learning; [and] they never know to read well, neither in Latin or in French.

“To proceed, therefore, by order, it is necessary (l) to teach the little children to know the letters, (2) to assemble them to make syllables, (3) to spell the syllables to make some words, and afterwards to read....

“The letters should be shown to the children on an alphabet: that is, a little book of four or five sheets, which contain: (a) the lower-case letters, the capitals, abbreviations, italic letters, large and small, (2) two columns of syllables, of all the letters that can be assembled, as with the simple vowels, like ba, pa, [and] with a liquid and a vowel, like bra, bla. There must be in this same book [Ed.: all in Latin] the Our Father, Hail Mary, Apostles Creed, Misereatur, Confiteor, Benedicite, Agimus, Et beata, and Angele Dei, printed in large, lower case letters, and well distinguished, the syllables separated one from the other.... When the children know their letters and begin to spell, one must put in their hands a second book....”

The meaning at that stage really was, not to “spell” in the sense that we use the word today, but to “read” words instead of just syllables, by separating the words into syllables, and then naming the letters in each syllable (which is what was meant by “spelling), the sound of which “spelled” syllables had already been memorized in the first book.

The excerpt listed the contents for the second book: various prayers, seven Psalms, a list of numbers to 1,000, and the responses at Mass, which would obviously be in Latin, and then the excerpt listed the
material for the third book. The entire excerpt in the “Lecture” article was considerably longer than is given here.

It was only later, in the Christian Brothers’ schools for poor boys about the beginning of the eighteenth century founded by La Salle, that beginning reading was taught in French. That switch from Latin to French was intended to make learning to read easier and faster, because it skipped the initial Latin step, but it certainly did not make it easier.

The article, “Bibliographie,” in the Dictionnaire also listed some other seventeenth and eighteenth century works which included instructions for teaching beginning reading. One was:

R. P. Fourier’s Constitutions - Lettres Choisies, written in Paris in 1649. He had founded an order for the teaching of poor girls, and this was a teacher’s guide which included instructions for using the syllable method to teach beginning reading. (That an order was founded in mid-seventeenth-century France specifically to teach poor girls indicates a sharp cultural improvement in comparison to Christine de Pisan’s period in early-fifteenth-century France.) Other works from the seventeenth through nineteenth centuries were discussed in the article, “Lecture” in the Dictionnaire. Some of these works are listed in the section of this history concerning France.

One seventeenth century priest engaged in teaching beginners was recently beatified by Pope John Paul II. The Catholic Advocate (Newark, New Jersey, page 2) of March 10, 1999, reported that Pope John Paul II had beatified ten people on March 7 (beatification being the first step toward canonization, which means being declared a saint). The article stated:

“Also beatified was Father Nicolas Barre, who set up small instructional programs for children in low-income areas of 17th-century France. He promoted the principle of the right to education for all, based on human dignity, and respect for the profession of teaching. He also convinced authorities to create flexible school schedules, so working-class children could continue to help out at home.”

Possibly, despite the difference in first-name initials, Father Nicolas Barre was the “Pere I. D. B.” mentioned above.

1660 A New Discovery of the Old Art of Teaching Schoole, by Charles Hoole, reproduced as No. 133 by R. C. Alston in English Linguistics 1500-1800 (A Collection of Facsimile Reprints), The Scholar Press Limited, Menston, England, 1969. This includes Hoole’s 1659 book, “The Petty Schoole, Shewing A way to teach little Children to read English with delight and profit (especially) according to the New Primar”. Hoole wrote the New Primar, and this material was apparently meant as a teacher’s guide for the use of that book. Hoole’s directions in this work for teaching beginning reading by the syllable method were very specific, and he also referred back to Brinsley’s earlier work. For Hoole’s comments in his New Primar, see the entry under 1908 on Foster Watson, who quoted from that book.

1664 Grammaire Generale of Port Royal, France, by Antoine Arnauld.

Chapter VI in Arnauld’s book briefly described Blaise Pascal’s 1655 synthetic phonics method without naming the mathematician/scientist Pascal as its author. Before that date, the analytic “sound” method had been used for teaching beginning reading. However, it had been in the form of the syllable method (ba, be, bi, bo, bu, etc.), plus analytic phonics in irregularly-spelled English and very possibly in irregularly-spelled French, (make, take, cake; might, fight, right; etc.). Synthetic, sounding-and-blending phonics (cuh-ah-tuh, cat, etc.) had apparently never been used prior to 1655. Although the synthetic phonics method appears ludicrously simple to us now, apparently no one before Pascal had ever suggested treating consonant sounds as if they could exist apart from vowels. The fact is that consonants
cannot exist apart from vowels. Yet making that improbable intellectual leap was necessary to invent the synthetic phonics method. (Pascal had suggested pronouncing each of the consonants followed by what amounted to the schwa, or muted vowel sound, which is what is actually heard when reciting such sequences of letter “sounds” as cuh-ah-tuh instead of the letter names, c-a-t, in the attempt to produce synthetically such words as cat.) It is not surprising that it took an acknowledged genius like Blaise Pascal to make that apparently unprecedented intellectual leap and to invent synthetic sounding-and-blending phonics for the teaching of beginning reading.

The synthetic phonics method made learning to read much quicker and easier than the ancient, more time-consuming, analytic “sound” methods. However, that Antoine Arnauld knew Pascal was the source of the synthetic phonics method, and that it was unknown before that time, is indicated by a letter Arnauld wrote on January 31, 1656, discussed in the Blaise Pascal article on page 2215 of the Dictionnaire de Pedagogie et d’Instruction Primaire (listed below). In the letter, Arnauld asked his niece at Port Royal about how to use Pascal phonics as Arnauld wished to teach an illiterate. The Grammaire is discussed in the article, “Lecture,” in the Dictionnaire.

Nevertheless, the Encyclopedie article, “Syllabaire,” which appeared a century later, possibly by Denis Diderot, and which recommended Pascal phonics, said that all syllables had to be thoroughly learned, as Quintilian had stated.

The reasonable comments in this book of the famous philosopher, John Locke, are the probable basis for what is generally called, “progressive education,” though the probability is that “private” education in good homes, as opposed to “public” education in groups, has almost always been “progressive.” (As late as the end of the eighteenth century, “private” education meant home education, and “public” education meant group education outside the home.) St. Jerome’s fourth-century letter concerning the teaching of beginning reading at home certainly concerned “progressive” methods. “Progressive education,” which is simply stimulating and enjoyable teaching and learning, combined with an instructor’s concern for the feelings, abilities, and interests of the child, certainly is enormously important. It is self-evident that a child who is led can be taught considerably more than a child who is driven, and without harming the child by producing unwholesome fear and resentment. “Progressive education” is fundamentally the same as the playful teaching methods most loving mothers frequently use when teaching their own little children almost anything at all. Nevertheless much harm has been done under the wrongful use of its name in “public” or group education, when next-to-nothing is taught to children, and little or no guidance is given to children because of a false concern for their supposed native “interests” and “abilities.”

1726 (1734?) On the Manner of Teaching, (De la maniere d’enseigner et d’etudier les belles-lettres) or Treatise on Studies (Supplement to Traite des etudes.) Paris, by Charles Rollin, (1661-1741). Rollin elaborated on Dumas’ method which used Pascal’s synthetic phonic, without naming Pascal or Port Royal where the approach was first used. A 1738 English translation of Part 1 is in the Department of Education library in Washington, D. C.

1733 La Bibliotheque des Enfans, by Dumas, France, 1733. Three volumes, the first explaining the Bureau Typographique, the second l’abecedaire Latin, and the third l’abecedaire Francais. Listed in the article “Lecture” in the Dictionnaire de Pedagogie et d’Instuction Primaire and in the section of this
history on France. Dumas’ letter-card method, the Bureau Typographique, used Pascal’s synthetic
phonics, without naming Pascal. Dumas had actually carried on his work for some time before 1733. It is
interesting that, as late as 1733, Dumas expected teachers in France to teach beginning reading in Latin
first, before teaching reading in French.

(Collection of Facsimile Reprints) Selected and edited by R. C. Alston. No. 199. The Scolar Press,

This extremely important but exceedingly rare and largely unknown book using Pascal synthetic
phonics for the first time in the English language (without mention of Pascal) has been discussed in this
history, and was probably inspired by the English translation printed in Dublin in 1738 of Rollin’s 1726
French book casually describing (without naming) Pascal phonics as used by Dumas. Thomas Sheridan,
Jr., was a young man in Ireland when this was published in Ireland, and it is the probable source for
Sheridan’s later highly important work on synthetic phonics. Using synthetic phonics, Sheridan became
the first to conceive of an English “pronouncing” dictionary. However, others, acting on Sheridan’s
widely attended lectures on phonics and elocution in England, Scotland and Ireland, produced
“pronouncing” dictionaries shortly before Sheridan’s finally appeared in print in 1780.

Considering the involvement of Thomas Sheridan, Jr., in “pronouncing” print, it is very conceivable
that his schoolmaster father, a man well known in his own right and a close friend of Jonathan Swift, was
the anonymous admittedly-schoolmaster author of the 1740 Irish Spelling Book, which book is the
probable source for the later work of Thomas Sheridan Jr. If the elder Sheridan had been that 1740 author,
it would account for the intense interest that Thomas Sheridan, Jr., later showed in “pronouncing” print.
The senior Sheridan is considered to have been brilliant, like his son, Thomas Jr., and his grandson,
playwright/Parliament-member Richard, and would certainly have had the intellect to write The Irish
Spelling Book.

1744 Quadrille des enfants, by Abbe Bertaud. France. The article, “Lecture,” page 1540, Volume I,
Part II of the Dictionnaire de Pedagogie et d’Instruction Primaire, Librairie Hachette et Cie., Paris: 1887,
summarized the long history of what was called the “echo” method on page 1540, and the article on the
Abbe Bertaud in the Dictionnaire, Volume I, Part I, outlined its approach. Abbe Bertaud’s program taught
basic sounds by whole words. It was an elaboration of the idea first developed by Vallange in 1719, New
System or New Plans, etc. (Nouveau systeme ou nouveau plans etc.) Both Vallange and Bertaud inspired
the methods of Anonymous in 1751, Alexandre in 1777, Michel in 1779, possibly Madame de Genlis in
1801, and Daubanton in 1810, and they are the apparent source of Code 3, two-step, “echo,” whole-word
phony phonics. In his book, Emile, Rousseau had testified that a vast interest existed in the teaching of
reading in France by 1762, and these programs are some of the confirmations of that interest.

That was the period, of course, of the malignant “philosophes,” the philosophers like Voltaire and
Diderot, who did so much harm to Western Civilization. It is not surprising that the record reveals that the
enormously harmful Code 3, two-step, “echo” whole-word phony phonics arrived in Voltaire’s and
Diderot’s time and that it was enormously praised by the period’s “intellectuals,” as discussed below. Yet
the charlatan Rousseau denied the necessity to teach reading at all! The infamous Rousseau was probably
the first proponent of the so-called purely “natural” method.

The article, “Bertaud, Abbe” in Volume I-I of the Dictionnaire explains his program. It is obvious
that, not just a picture, but a picture with a whole word and a letter or letters from that whole word were
printed on each card in the program.
“Reading without spelling. 88 square cards from which comes the name of quadrille. [Ed.: quadrillage is a French noun for squaring, and quadrille is a French noun meaning a troop.] These cards each carry a picture representing an object known to the child and are meant to make him remember mnemonically one of the 86 syllables in which the Abbe Bertaud summarizes all the teaching of French reading; for example, to remember the sound, ‘u,’ the picture shows a bossu [Ed.: a hunchback.]. One shows the engraving to the pupil and at the same time the word bossu, then only the letter u. The pupil remembers that letter, at first by the aid of the picture, and insensibly by the same form of the letter that is written thus in his memory. (One recognizes there in principal the system of ‘normal’ words of Vogel.) When the pupil knows a series of 12 cards, he applies his acquired knowledge, in a series of syllables, of words and of sentences that one finds in the teacher’s book. By this means, the child quickly learns the 88 cards; he knows how to read at the end of some weeks of exercises.

“This method had a great vogue in the last century. The king of Prussia, who had been struck by the results, had the prince royal, Frederick William, taught to read by this procedure. Like all reading methods without spelling, it succeeds only with those pupils who have, as has been said, the memory of the eyes.”

This Dictionnaire article was signed, A. Demkes. The French “Quadrille” system of 1744, later called the “echo” approach, is clearly the origin of Code 3 two-step, whole-word phonics. Bertaud’s was also apparently the first program which taught children to read whole, meaning-bearing words long before they knew the whole alphabet, or the sound-bearing syllabary. Demkes said the reading of connected, meaning-bearing sentences using these whole words, and apparently words built from them, began when only 20 of the 86 cards had been learned! (Possibly the remaining two cards, to bring the total to the recorded 88, were the alphabet, one in upper and one in lower case letters.)

Just as is true today, two-step, whole-word phonics, with its initial conditioned reflexes based on whole-word “meaning” instead of on syllable “sound,” brought failure in its wake, as Demkes specifically noted. Yet, although the history of its origin has fallen into oblivion, it was a very famous method in its day, and was in wide use by the “intellectuals” in both Germany and France in the mid- and late-eighteenth century. Although the French Revolution in 1789 and the following wars until 1815 probably delayed its spread, it is the probable source for the harmful “meaning” method introduced in America in 1826, and in Great Britain about the same time.

However, by that time, the sight-word method had been further refined by the Abbe de l’Epee’s work with deaf-mutes, dating from about 1760.

Two-step whole-word phonics had a gradually developing history in eighteenth-century France. As briefly mentioned above, in 1719, M. de Vallange apparently originated it, and it was revised by the Abbot Bertaud in 1744 under the title, Quadrille des Enfants. “Anonymous” had also made a revision in 1751.

The article, “Lecture,” stated:

“The system due to Vallange and to Bertaud enjoyed a vogue that lasted rather a long time. It is related that Crebillon and Marivaux had it put to the test in their presence on two chimney-sweeps who, at the end of a month, by means of two lessons a day, were in the state of fluent reading. The Abbe Desfontaines called the process the philosopher’s stone for the teaching of reading.”
That the two-step phonic method, the precursor to the Code 3 phony phonics of today’s basal readers, was called the philosopher’s stone for the teaching of reading, showed that poor approaches in teaching reading have often received warm approval! In 1777, the material was revised again by Alexandre, a professor emeritus from the Ecole Militaire and was used by Madame de Genlis. It was revised again in 1779 by Michel. Finally, it was revised by a professor of grammar, Daubanton, who also applied it to the teaching of writing, in his books, Reading by Echo, 1810, and Application of Reading by Echo to Writing, 1811.

All these authors used the idea of teaching reading by the so-called “echo,” which meant comparing the sounds in new, meaning-bearing words, to the memorized sounds from memorized whole sample meaning-bearing words. That obviously omitted syllable “sound,” and used only whole-word “meaning.” That is, of course, two-step whole-word phony phonics since it requires resurrecting the visual memories of whole, meaning-bearing words to compare to parts of the unknown word before it is possible to sound out the sequential parts of that unknown meaning-bearing word, by analogy. Even deaf-mute pupils can use the process to memorize new sight words, without the any use of sound whatsoever, by simply putting together memorized parts of sight words, like jig-saw puzzle pieces.

Becoming a Nation of Readers, The National Institute of Education, U. S. Department of Education, Washington, D. C., 1985, page 12, lines 3 through 20, confirms that the time-consuming and distracting two-step “echo” approach is what is used by most American readers today, instead of one-step synthetic phonics. This is hardly surprising, since most adult Americans today were taught to read with Dick and Jane or its clones which drilled on the use of two-step, phony phonics.

Shortly after 1826 and until about the 1870’s, most American reading books had used only Code 1 pure sight words, Gallaudet’s initial approach, based on the beginning approach that the Abbe de l’Epee had used in teaching deaf-mutes to read. At an advanced stage, the Abbe had apparently used the Code 3 approach, because his follower, Gallaudet, had eventually used the Code 3 approach, comparing whole meaning-bearing sight-words to each other to tell them apart. Yet many of the post-1826 American materials used only the pure Code 1 method, in which each word was learned without reference to any others, but only by memorizing its letter sequence (“see-aye-tee, cat” which obviously is not phonics). In the United States in the 1860’s, there was a partial but aborted return to true Code 10 phonics. This resulted in activists promoting instead the American use of Code 3 “echo” whole-word phony phonics for beginners in the 1870’s and later.

The “echo” Code 3 method was also in almost universal use in England in the 1870’s as shown by beginning reading books of that period. It had apparently been in such dominant use there since about 1830, although the Code 1 approach appeared in some texts. The source of both harmful methods, Gallaudet’s 1830 (and before) initial Code 1 approach, and Daubanton’s 1810 (as well as the deaf-mute method) Code 3 approach, obviously lies in eighteenth century France.

1751 to 1772 Encyclopedie ou Dictionnaire Raisonne des Sciences, des Arts et des Metiers, by Denis Diderot et al. 28 volumes published in France, in particular the article entitled “Syllabaire,” in Volume 15 published in 1765, page 713. The last time that I consulted the volumes (with the paper in astonishingly good condition), they were on the open reference shelves in the New York Public Library on Fifth Avenue at 42nd Street, although those enormously valuable volumes may no longer be so readily available. (Those volumes may, of course, have been reprints, and not originals, but they did not appear to have been reprints.) The “Syllabaire” article is discussed elsewhere in this history. It defined “syllabaire” as “the common name for the little book containing the first elements of reading...” The author, very possibly Diderot, apparently expected children to learn to read in French, not Latin. However, he said it was essential that all syllables be taught at the beginning stage, citing Quintilian as an authority for that statement, but he endorsed (Pascal’s) synthetic phonics for doing so.
In Volume 7 published in 1757, on page 845, the following appears (obviously, in French, but translated here) in the article, “Grammaire,” reflecting the classical idea that the subject of “grammar” includes the alphabet. It also demonstrates that it was common knowledge until after the eighteenth century that only vowels can have a sound, true consonants being merely “articulations” of those basic vowel sounds. Actually, the very word, “consonant,” carries the meaning that something does not exist in isolation.

“The elementary characters are those that usage destined originally to represent some elements of speech, the sounds and the articulations. Those that were established to represent the sounds are called vowels; those that were introduced to express the articulations are called consonants: both take the common name of letters....”

On page 846 of Volume 7 (1757) appears a table on the parts of grammar, which is also highly illuminating concerning the frame of reference at the time. The building blocks of words were vowels, consonants, and syllables. The starting point in beginning reading clearly was not whole words.

Circa 1757 to 1773 Correspondence Litteraire, by Baron Friedrich Melchior Grimm. Published every other week in France from 1753 to 1773, to which Denis Diderot contributed. Sixteen volumes were bound and published in 1882. This is mentioned in the Encyclopedia Britannica (1963) and obviously is a major historical source, which I have unfortunately not seen.

1756 British Education, Or The Source of the Disorders in GREAT BRITAIN... With An Attempt to shew, that a Revival of the ART of SPEAKING, and the STUDY OF OUR OWN LANGUAGE, might contribute in a great measure, to the Cure of those Evils.

By Thomas Sheridan, A. M. Printed by George Faulkner in Essex-Street, Dublin.

1759 A DISCOURSE DELIVERED IN THE THEATRE AT OXFORD, IN THE SENATE-HOUSE AT CAMBRIDGE, AND AT SPRING-GARDEN IN LONDON. By THOMAS SHERIDAN, M. A. Being Introductory to His COURSE of Lectures on Elocution and the English Language. London: Printed for A. Millar, in The Strand; J. Rivington and J. Fletcher, in Pater-noster-Row; J. Dodsley in Pall-Mall; and sold by J. Wilkie, in St. Paul’s Church yard.

This material was reproduced in 1969 by The Augustan Reprint Society, with an Introduction by G. P. Mohrmann, as Publication Number 136, William Andrews Clark Memorial Library, University of California, Los Angeles. Alston showed it in his bibliography on Elocution. See the 1761 entry taken from Alston, below. (New York Public Library)

1761 A Dissertation on the Causes of the Difficulties, Which Occur, in learning the English Tongue. With a Scheme for Publishing an English Grammar and Dictionary, Upon a Plan Entirely New.... Thomas Sheridan, Jr. London, R. & J. Dodsley, 1761. From Alston’s section, “Pronunciation,” in which Alston said that it had been reprinted in facsimile by Menston in 1967. He stated that it had been mentioned in Monthly Review, XXVII, 1762, pages 69-70; Scots Magazine XXIV, 1762, pages 372-73; Dublin Magazine, August, 1762, pages 499-500; and Critical Review, XIII, 1762, pages160-61. He also said that Sheridan’s dictionary had appeared in 1780 and was reviewed in Alston’s Volume V, item no. 312.

The reviews of the period which Alston listed, and the lectures Sheridan gave at that time, firmly placed Pascal synthetic phonics into the English language. Although Alston listed previous works on pronunciation, they were not concerned with synthesis of isolated letter sounds, but were concerned with analysis, by analogy to the sounds of known word parts: cake, make, bake; or ba, be, bi, bo, bu; da, de, di,
do. du. They also were concerned with indicating which syllables received emphasis in pronunciation. Synthetic phonics, the learning of isolated letter sounds, and then the blending of such isolated letter sounds, which idea had been conceived by Blaise Pascal in France in 1655 and which Sheridan proposed for his pronouncing dictionary, was indeed, as he wrote, “a Plan Entirely New.”

The idea of a pronouncing dictionary was also acknowledged as new by Sheridan’s contemporaries, however obvious it seems to us. If it had not been a new idea, Lord Bute would hardly have given Sheridan a pension to work on his “pronouncing” dictionary, and Samuel Johnson would not have taken time to ridicule it. Johnson said (quoted elsewhere in this history) that it was undesirable to attempt to fix standards of pronunciation, as Sheridan was proposing. Johnson’s dictionary certainly was not such a pronouncing dictionary! Synthetic phonics, instead of analytic phonics, was obviously also a new idea for teaching beginning reading in English, and it showed up in Perry’s 1776 Scottish speller and in Noah Webster’s 1783 American speller.

1762 A Course of Lectures on Elocution, Together with Two Dissertations on Language... Thomas Sheridan, Jr. London, W. Strahan, for A. Millar, R. & J. Dodsley, T. Davies (et al). Alston stated that printed separately in 1761 and 1762 was “A dissertation on the causes of the difficulties which occur in learning the English tongue. With a scheme for publishing an English grammar and dictionary.” Alston showed that separate printing in his section on works in English concerned with “Pronunciation.”

1762 Emile, by Jean Jacque Rousseau, Paris, France. The charlatan, Rousseau, has had a most malignant influence on education. In his vastly influential novel, Emile, Rousseau wrote that Emile should not be taught to read until about adolescence when Emile demonstrated an interest in it. Richard Edgeworth of Ireland, referred to later, educated his oldest son according to Rousseau’s ideas, and he reportedly later acknowledged the results were bad. As shown under 1899, below, the early psychologists, John Dewey and G. T. W. Patrick, came close to agreeing with Rousseau on the teaching of reading.

1768 On the Manner of Teaching Languages [De la maniere d’apprendre les langues], by the Abbe de Radonvilliers, Academie Francaise, Paris.

The Abbe de Radonvilliers in France recommended a pure Code 1 sight-word method for teaching beginning reading to children, most probably inspired by de l’Epee’s work with the deaf, which had begun about 1760. Presumably his brief comments inspired the more lengthy ones making the same recommendation which appeared in the 1787 book by Nicolas Adam [1716-1792], , The True Manner of Teaching Any Language Whatever, Living or Dead, by the Means of the French Language. The article, “Lecture,” page 1541 of the Dictionnaire de Pedagogie et d’Instruction Primaire, quoted both de Radonvilliers and Adams’ comments. The probable relationships between these works on language, and Jacotot’s later work, have been discussed in this history. However, it is astonishing that Adam’s basic 1787 work recommending a pure sight-word approach is no where to be found in our reading experts’ literature, nor is any reference ever made to the Abbe de Radonvillier’s brief 1768 comments which did the same thing.

1780 A General Dictionary of the English Language. One main object of which, is, to establish a plain and permanent standard of pronunciation. To which is prefixed a rhetorical grammar, by Thomas Sheridan, Jr.. London, J. Dodsley, C. Dilly, and J. Wilkie. Listed by Alston.

This is a remarkable and extremely interesting work, particularly its discourses. Sheridan’s command of phonetics and his understanding of its relation to English spelling was extraordinary. It is curious that Sheridan’s enormous contribution to the English language is virtually unknown, and that reference to it is virtually never made today, although Alston, that ultimate authority from the British Library, certainly recognized the value of Sheridan’s work.
Thomas Sheridan, Jr.’s, clever and witty son, Richard Brinsley Sheridan, the playwright and member of Parliament, has been treated far better by our “intellectuals.” Yet, objectively, the son’s achievements are minor compared to those of the father. Thomas Sheridan, Jr., was concerned with elocution as early as 1756. He had apparently completed the foundation of his highly original work on the phonetic principles of English spelling and pronunciation (true synthetic phonics) by the time he started to give his highly popular lectures on elocution in 1758-59 at Oxford and Cambridge, and in 1761 and later in Edinburgh and Dublin.

Sheridan published his idea for the first phonetic pronouncing dictionary in the world in 1761 (see Alston, Volume VI, page 72), received a pension from Lord Bute to proceed with it and published the finished work in 1780. Meanwhile, an Edinburgh, Scotland, resident, William Perry, who was obviously exposed to Sheridan’s lectures in Scotland on phonics, published a dictionary with a phonetic key in 1775. From a title in Alston’s Volume V, The English Dictionary, it appears that William Kenrick also did more than show the customary accented syllables in A New Dictionary of the English Language; Containing Not Only the Explanation of Words ... but Likewise their Orthoepia or Pronunciation, London: 1773. After Sheridan’s dictionary was published, a fellow actor, Walker, also published a “pronouncing” dictionary which was widely used. It is very peculiar that this clear and uncomplicated history of the development of our “pronouncing” dictionaries is to be found nowhere in general reference works.

Alston’s chronological listing of dictionaries, along with information from other sources on Sheridan’s life, confirms that Sheridan was the first who conceived the idea of a pronouncing dictionary using Pascal synthetic phonics. The prefaces to Sheridan’s 1780 dictionary are impressive documents of the most astounding scholarship and originality but were obviously the culmination of years of study. Yet, as has been mentioned, since Sheridan had been lecturing on phonics since 1758, some of Sheridan’s imitators preceded him in the publication of pronouncing dictionaries.

1781 A Rhetorical Grammar of the English Language. Calculated Solely for the Purposes of Teaching Propriety of Pronunciation.... Thomas Sheridan, Jr.; Dublin: Messrs. Price, W. & H. Whitestone, (et al). Listed by Alston in his section on “Pronunciation.” Alston wrote that it concerned pronunciation and elocution. and was reprinted in A General Dictionary (1780), reviewed in Alston’s volume V, no. 312.

1786 Elements of English: Being a New Method of Teaching the Whole Art of Reading, Both with Regard to Pronunciation and Spelling. Part the First. Thomas Sheridan. London, C. Dilly, 1786. It was reprinted in facsimile by Menston, Alston’s press, in 1968. Listed by Alston in his section on works on pronunciation. Alston wrote that it concerned pronunciation and spelling and was cited in Critical Review, LXI, 1786, 156-57. Alston stated that the second part was apparently never published. That was probably because Sheridan died in 1788.

1787 Neues... zum Lesenlehren...., by Johann Bernhard Basedow, Leipzig, Germany.

A copy of this primer for teaching beginning reading in German is held by the U. S. Department of Education library in Washington. Its heavy, old-fashioned German lettering makes it almost undecipherable to someone unfamiliar with such lettering, so I am incapable of reproducing its whole title. Its contents are presumably of great interest, although his book was never successful. Yet his disciples (Campe, Gedike, etc.) who wrote books on the teaching of reading were obviously inspired by Basedow’s original work.

Basedow was the first openly to move the teaching of beginning reading up from the syllable to the word, although the French 1744 Quadrille method obviously did so implicitly. However, the method he
used to teach words was Pascal phonics. His famous school, the Philanthropinum which he founded in 1774, and his use of his phonics method on whole words (not syllables) with his own three-year-old daughter in 1770, is described in an article on Basedow in Barnard’s nineteenth-century American Journal of Education. The description concerning the way Basedow had his daughter taught in 1770 was given by Campe who was involved in the lessons. Campe later took over the Philanthropinum school after the erratic Basedow left.

In Basedow’s use of whole words instead of syllables at the beginning of reading instruction, he was very possibly inspired by the German use of the French Quadrille method of 1744, which has been described earlier.

1791 Friedrich Gedike, Johann Bernhard Basedow’s disciple, published a primer in German using whole words to teach letter sounds. Gedike’s 1791 work was based on an earlier book he wrote. Gedike’s work is mentioned by Mitford Mathews in his 1966 book, Teaching to Read, Historically Considered, and in Rudolf Flesch’s 1981 Why Johnny STILL Can’t Read.

1798 Essays on Practical Education, Richard Lovell Edgeworth and Maria Edgeworth. This was written at the Edgeworth estate in Ireland and was a very influential work in its day. Portions concerning the teaching of reading were quoted in the article, “A-B-C Books and Primers,” in an 1863-1864 edition of Henry B. Barnard’s American Journal of Education, Volume XI, p. 593-604. Maria Edgeworth, whose father, Richard, had once been a Rousseau enthusiast, was a prolific and widely read author of children’s books. In the portion reprinted by Barnard, Richard Edgeworth denigrated the use of the syllabary in teaching beginning reading and endorsed phonics. Yet Edgeworth specifically denied that his phonetic method was based on Sheridan’s. Edgeworth stated he had developed his phonic method before he saw Sheridan’s. It appears probable that Edgeworth in Ireland in the 1700’s, like Sheridan in Ireland in the 1700’s, was acquainted with the Irish Spelling Book of 1740 which used Pascal phonics.

As discussed in Appendix B, the title page of Josiah Bumstead’s My First School-Book quotes Edgeworth, and establishes that it was he who made the astonishing remark that learning to read is “the most difficult of human attainments.” Edgeworth’s remark probably appeared in his 1798 book, at a time when children were learning to read easily and quickly by the syllable method that he was denigrating and proposing to replace with his phonic method. Since Edgeworth also promoted government schools, as reported elsewhere in this history, and also down-graded the “sound” syllable method, his remark sounds like change-agent propaganda meant to smooth the way for the “meaning” method that was soon to be promoted so successfully in the English-speaking world.

1801 The Method of Educating the Deaf and Dumb, Confirmed By Long Experience.... Translated from the French...., of Charles Michel de l’Epee (1712-1789), Printed by George Cooke, Dunstan’s Hill, London. This London edition has an anonymous “Preface of the Translator,” dated July 13, 1801, which is discussed in the French portion of this history. The book was based on the 1776 edition by the Abbe de l’Epee, entitled Institution of the Deaf and Dumb by the Way of Methodical Signs. It includes the exchange of letters between the Abbe de l’Epee, endorsing the teaching of sign language as the beginning step in deaf education, and Samuel Heinecke of Germany, who promoted the teaching of normal speech to the deaf as the beginning step. This English translation of 1801 certainly should have been available in the United States for some thirteen years or so before Gallaudet became involved in the teaching of the deaf.

1814 Elements of the Philosophy of the Human Mind, by Dugald Stewart of Scotland, the philosopher/psychologist whose work has been discussed in this history. Brougham and Birkbeck had been his students in the University of Edinburgh at the end of the eighteenth century. Stewart’s popular book was published first in Great Britain in 1814.
1816 A Textbook of Psychology, by Johann Friedrich Herbart (1776-1841)

In the May, 1926, issue of Teachers College Record of Columbia Teachers College, New York, Charles H. Judd wrote the following concerning Herbart’s 1831 Letters Regarding the Application of Psychology to Pedagogy:

“It is almost a century since Herbart wrote his volume entitled, Letters Regarding the Application of Psychology to Pedagogy. This treatise appeared in 1831.... The culture epoch’s theory, the five formal steps, the teachings of Jena came to America in the 80’s in the persons of De Garmo and the McMurrys. [Ed. Charles E. and Frank M. McMurry]. Through these men the practical pedagogical precepts of Herbart, refined by a half century of unpsychological but highly energetic cultivation, were imported into a new world. The laboratory methods in psychology came to America at about the same time in the persons of Hall and Cattell. Both of these Herbartian movements profited greatly by their immigration.... The 80’s saw psychology and educational methodology vigorously at work on American soil.”

1821 Intellectual Arithmetic, Upon the Inductive Method of Instruction, by Warren Colburn Early American Textbooks wrote on page 204 concerning Colburn’s text:

“Published first in 1821, Colburn’s initial arithmetic textbooks, based on the ‘Plan of Pestalozzi,’ were used in American schools for over 75 years. The texts followed the inductive approach wherein pupils memorized tables and rules and then applied them to actual numerical problems.”

The foregoing is an inadequate explanation, but it would probably be necessary to study the book itself fully to understand its approach. The method was obviously very successful when Colburn’s original 1821 version was used. However, the record powerfully suggests that with each revision over the years the Colburn material became less effective.

The Primary Teacher, Vol. IV, 1880-1881, page 143, published in Boston, showed a list of books for the use of primary teachers. Included in this list was Child’s Book of Arithmetic, by “Colburn,” sold for 18 cents by Cowperthwait & Co. of Philadelphia. This is the only reference I have found to any Colburn material published by Cowperthwait, but its title makes it clear it was not the original 1821 basic text, nor a revision of that text. The probability is that this circa 1880 text was a completely new book which incorporated approaches used in Colburn’s original 1821 material. Its title makes it clear that it was unconnected with the texts published by the principal publishers of Colburn’s various editions, all of which used the Colburn title in its original form. To judge from the copies listed in Early American Textbooks, the first publisher of Colburn’s basic work with the original 1821 title was Hilliard of Boston, the second was Reynolds of Boston and its successor, Brown, and the third and last publisher was the Houghton company of Boston.

Early American Textbooks - 1775-1900, published by the U. S. Department of Education, Washington, D. C., in 1985, listed on pages 204 and 205 seventeen copies of works in the U. S. Department of Education Library which carried Colburn’s name. Eleven had the title Intellectual
Arithmetic, Upon the Inductive Method of Instruction (with presumed publishing dates of 1836, 1846, 1847, 1848, 1849, 1850, 1863, 1884 and 1891). Three had the same title with the addition, “Being a Sequel to Intellectual Arithmetic” (with publishing dates of 1827, 1836 and 1849). Three carried the title, “A Key, Containing Answers to the Examples in the Sequel to Intellectual Arithmetic” (with publishing dates of 1826, 1830 and 1845). The sequel and key are not discussed except in passing in the following comments on the Colburn basic text of 1821.

The publishing dates given in Early American Textbooks have not infrequently been wrong, as is evident from other sources. Therefore, all of the above dates have to be taken with reservations. What they do clearly indicate, however, is that the publishers of Colburn’s materials changed over the years. The earliest text listed above (1826) was published by Hilliard, Gray, Little & Wilkins of Boston, and they were the probable publishers of Colburn’s original work, which Early American Textbooks said had appeared in 1821 (but for which date they showed no existing copy). The Hilliard company (under a revised name, Hilliard, Gray & Co.) published two Colburn texts in 1836. By 1846, William J. Reynolds of Boston appeared as the next publisher of Colburn’s basic work (but not the sequel or the key) and Early American Textbooks listed further editions by Reynolds in 1847, 1848 and 1849. Harvard’s 1857 copy of Rensselaer Bentley’s The Pictorial Primer advertised Colburn’s basic text, sold by Brown, Taggard & Chase of Boston, who were shown as the “Successor to W. J. Reynolds and Co.” Therefore, as late as 1857, the Colburn material was still being handled by the Reynolds/Brown sequence of companies. (Concerning the Sequel, Benjamin B. Mosey and Co. of Boston published a copy in 1849, and concerning the Key, Edward J. Peet of Boston published a copy in 1845. Very probably the rights to these two supplemental works passed to other companies than Hilliard, at the same time that Reynolds acquired the rights to the basic Colburn work from Hilliard, which rights then passed to Reynolds’ successor, Brown, some time before 1857.) However, it appears probable that the original publisher was Hilliard, probably from 1821 until some time after 1836, under the names Hilliard, Gray, Little & Wilkins in 1826 and 1827, and Hilliard, Gray & Co. in 1836. The next publisher of the basic Colburn text, from 1846 or before until at least 1857, was William J. Reynolds and its successor company, Brown, Taggard & Chase. The final publisher of the basic Colburn text, from about 1862 or 1866 and later (not from 1849 as shown in Early American Textbooks) was the Houghton company.

Starting in 1849, four of the Colburn basic textbook entries in Early American Textbooks are wrong. Early American Textbooks showed an 1849 copy and an 1850 copy published as follows: New York: Hurd & Houghton; Boston, H. O. Houghton & Co.; Cambridge [Mass.] The Riverside Press (1849). According to a reference librarian at the Houghton Library at Harvard, Henry O. Houghton (a printer) had not yet acquired the assets of Ticknor & Fields as early as 1849 and would not therefore have begun publishing under his own name as early as 1849. Furthermore, the New York branch, Hurd & Houghton, as indicated elsewhere, was only in operation from 1862 to 1866, during which period it took over Putnam’s New York publishing operations at Putnam’s request while he was in Government service during the Civil War. Therefore, the inclusion of a New York office in the Colburn title demonstrates that those two copies had to have been published between 1862 and 1866, not in 1849 and 1850.

However, Early American Textbooks then showed an 1863 copy published by Houghton, Osgood & Co. of Boston, and The Riverside Press, Cambridge. That also is apparently impossible, because the company name of Hurd, Houghton still appeared in the 1876 American Catalogue, while the name of Houghton, Osgood & Co. did not turn up until the March, 1880, Appendix to the American Catalogue. The name change from Hurd, Houghton to Houghton, Osgood & Co. must have occurred after 1876, not by 1863.

Early American Textbooks then showed a “Rev. ed.” by Houghton, Mifflin & Co, Cambridge, Mass, and The Riverside Press in 1863. Clearly, that also is impossible, since Houghton, Osgood & Co. was the...
name in 1880, and the first occurrence I have seen of the final and long-lasting name, Houghton, Mifflin was in their 1883 advertisement in The American Teacher (which is in Harvard’s collections). Early American Textbooks then showed two more copies of the “Rev. ed.” by Houghton, Mifflin, in 1884 and 1891, and those most probably are correct.

Early American Textbooks listed the total pages on all of these copies. It is that information which makes it possible to separate out the various revised editions they listed. The original Colburn material was probably the same as the 1836 Hilliard copy which covered 172 pages. Reynolds’ 1846 and 1847 copies covered 140 pages (which clearly indicated they were copies of a new edition). Reynolds’ 1848 and 1849 copies covered 160 and 158 pages. They probably were actually the same new edition, which would make it the third version of the Colburn materials (1821, 1846, 1848). Houghton’s wrongly-dated 1849, 1850, and 1863 copies all covered 176 pages, which obviously means they were the same edition, and the fourth version of the Colburn materials, A second “1863” Houghton version, marked “Rev. ed.” had 216 pages, and the remaining two copies (1884 and 1891) also had 216 pages. That was the final edition, and the fifth version of the basic Colburn materials (1821, 1846, 1848, circa 1862-1866, and circa 1883). The Colburn material published under a different title by Cowperthwait of Philadelphia in 1880, which was referred to above, was probably unrelated to these main Colburn editions.

All this data shows that the original edition probably had 172 pages and was probably published by the Hilliard company from 1821 until after 1836, and possibly to about 1846. A revised edition by the Reynolds company of 140 pages was published from 1846 or before and in 1847. Another revised edition of 160 pages (or 158) was published by Reynolds from 1848, probably until after 1862. (It may have remained unrevised by Brown, Reynolds’ successor, who was advertising the Colburn text in 1857 in the back of a copy of Rensselaer Bentley’s The Pictorial Primer as Colburn’s First Lessons, Intellectual Arithmetic, Upon the Inductive Method of Instruction). Reynolds/Brown probably continued to publish the material until 1862 or later. That is because two copies of another revised edition by “New York: Hurd & Houghton; Boston: H. O. Houghton & Co.; Cambridge (Mass), The Riverside Press” appeared with 176 pages and they obviously had to be dated to between 1862 and 1866. Then a third printing of that 176-page text appeared under the name Houghton, Osgood & Co. which had to have appeared between the years 1876 and 1883. Finally, the “Rev. ed.” by Houghton, Mifflin appeared had to have come out some time after 1880 and continued to be published until at least 1891.

Revised editions of textbooks are commonly promoted as having been “improved,” which is rarely the case. The unparalleled Webster speller was “improved” by its publishers in the same time frame that the above edition dates indicate the Colburn arithmetic text was being “improved.” The probability is that the worth of the original Colburn text degenerated with each one of the four “improved” new editions. Surviving comments on the Colburn text, given below, certainly suggest that was the case.

The probable reason that upper-grade 1845 children outscored their 1919 counterparts on arithmetic texts, as discussed in Chapter 50 of this history, is that the 1845 upper-grade children had most likely been taught their arithmetic as outlined in Colburn’s original text. (As shown above, the first probable revised “improvement” of that Colburn text had not appeared until about 1846, and no earlier than 1836).

There is a wealth of confirmation in materials from the nineteenth century concerning the value of Colburn’s “mental arithmetic,” whatever that was. This writer has no information on his method, but only a collection of the most extraordinary testimonies concerning its utility, which are very hard to discount. Some will be quoted. For instance, on pages 84 and 85 of the 1883-1884 volume of The American Teacher, appear the following comments from an October, 1883, letter from Iola Rounds of Wellesley, Massachusetts, who was a teacher:

“Dear Editor:
“Moses, Jr., speaks feelingly of Warren Colburn’s mental arithmetic. As I read his earnest appeal in behalf of that good old book, memories come to me of days long gone by, when through suffering and tears I was drilled through it. In later years the sorrow has changed to a feeling of joy and exultation, for I am constantly reminded of my superior education as I see my friends laboriously “reckoning” small bills with pencil and paper. It is painful, but amusing to me when, in one of our large stores, having reached the end of a long shopping-list, I proceed to pay my bill. “I owe you this amount,” I say, handing out a bill to be changed. The clerk takes his pencil from behind his ear, looks at me as if I meant to cheat him, and after a prolonged “ciphering” which takes the time I had allowed to catch a train, comes to the conclusion that I am right. My ability in that direction is not in the least due to quality of brain. Colburn’s Arithmetic deserves the whole credit, detestable as the book seemed when I studied it.”

“‘Well,’ many a teacher will say, ‘we have daily exercises in that very book, but the children dislike it; they are not at all quick in mental arithmetic, and for all of us it is the most irksome exercise of the day.’ Yes, I know it. I well remember a school of bright girls whom I taught for a few months....”

This teacher went on to say that the problem with those “bright girls” and with the classes about which “many a teacher” complained was poor initial teaching. She apparently never considered that the revised Colburn textbooks might be at fault, nor did she reflect on the fact that Colburn’s original textbook could never have achieved the fame it did after its introduction in 1821, unless it had been, to a large extent, immune from the effects of less-than-perfect teaching.

Some months later in the 1883-1884 volume of The American Teacher, on page 278, the following appeared:

“Mental Arithmetic - We believe that no book has ever been printed, a careful study of which will add half so much to the mental power and grasp of the pupil as Colburn’s First Lessons. The earlier part of the book has been made as elementary as possible (1) for the use of young pupils, and (2) to show the proper development of the subject from the beginning.

“The correct use of Warren Colburn’s book always developed the faculty of ready and sharp logic that is required in the applications of arithmetical processes to the business of common life. A mental habit of readiness and accuracy in the processes of exact reasoning is of the highest value. We need this kind of mental drill, and greatly lament its absence in the daily work of the common schools of today.

“We earnestly urge upon teachers and school officers the necessity of restoring the thorough drill in mental arithmetic not only for beginners, but we advise its continuance to some extent throughout the entire course of a public school education....

“In the new edition the editors have made the Colburn Method so evident and attractive, that no teacher can fail to be pleased with it from the start.

“We take great pleasure in calling the attention of our readers to the advertisement on page 285, which announces a new edition of Warren Colburn’s Intellectual Arithmetic upon the Inductive Method of Instruction.”
Unfortunately, I do not have a photocopy of page 285 from The American Teacher. However, considering the information from Early American Textbooks on their copies of Colburn texts, it seems probable that it was published by Houghton, Mifflin in Boston in 1883.

On a copy of The Pictorial Primer by Rensselaer Bentley, published in Boston in 1857 by Brown, Taggard & Chase, successors to W. J. Reynolds and Co., appeared a full page of endorsements on Colburn’s First Lessons, Intellectual Arithmetic, Upon the Inductive Method of Instruction, which they were then publishing. One was the following:

“Dr. Azell P. Ladd, the Superintendent of Public Instruction in Wisconsin, in his Annual Report for 1852, to the Legislature of that State, said: ‘Colburn’s Intellectual Arithmetic is a work that has been long and extensively used in nearly every State in the Union. There are many works of more recent issue, upon this subject intended to supply the place which this little volume has so successfully occupied; but none, I think, equal to its merit.’”

The following 1835 comment was made:

“‘No man among us has contributed as much to a correct method of studying mathematics as the lamented Colburn. I have no hesitation in saying, that this book is not only the best in this country but, so far as my information extends, the best in the world. The First Lessons are above all praise.’ Extract from an Address delivered before the American Institute, 1835, by Thomas Sherwin, Esq. of the Boston High School.”

This 1835 quotation’s use of the term, “the lamented Colburn,” indicates that Colburn had died by 1835.

It is obvious that the Colburn material, in its original version or versions, was extraordinarily effective. However, in education, nothing fails like success. The evidence suggests that the material was “revised” into near uselessness, and is now totally forgotten by the American educational “establishment.”

A corresponding failure of superb beginning mathematics materials occurred in Europe in the 1970’s. Extraordinarily effective Belgian texts for teaching mathematics with the use of the Cuisinaire rods did not meet with the acceptance in European schools which they so clearly deserved. (Cuisinaire rods are one-centimeter-wide and one-centimeter-high wooden sticks, going from one to ten centimeters in length. Each centimeter length is in a different color and stands for a different number: white = 1 centimeter long, red = 2 centimeters long, green = 3, purple = 4, yellow = 5, dark green = 6, black = 7, brown = 8, blue = 9, and orange = 10. White is therefore also 1 cubic centimeter, red is 2 cubic centimeters, and so on to 10 which is 10 cubic centimeters. ). In Brussels in October, 1977, I was astonished by the achievements in basic arithmetic from the use of the Cuisinaire rods that I personally observed one morning in a first-grade class of girls and a second-grade class of girls in a public school. My visit had been arranged only the previous afternoon, so the oral performances had hardly been staged. I saw a beginning second grade class easily answer, orally, such problems as the following without at that time either the use of the Cuisinaire rods to help them or even pencil and paper. I still have copies of two duplicated worksheets handed out to the class later to do as individual written work, but with the use of the rods. One of those worksheets had these two sets and two similar sets on it.

\[
\begin{align*}
13 = (_ \times 2) + & _ \\
13 = (_ \times 3) + & _ \\
13 = (_ \times 4) + & _ \\
13 = (_ \times 5) + & _ \\
19 = (_ \times 2) + & _ \\
19 = (_ \times 3) + & _ \\
19 = (_ \times 4) + & _ \\
19 = (_ \times 5) + & _ \\
\end{align*}
\]
\[
\begin{align*}
13 &= (\_ \times 6) + _ \\
19 &= (\_ \times 7) + _ \\
19 &= (\_ \times 8) + _ \\
19 &= (\_ \times 9) + _ \\
19 &= (\_ \times 6) + _ \\
\end{align*}
\]

The second worksheet handed out had ten examples to be answered true or false, with M standing for a missing multiplication factor, and with an equal sign or a crossed-out equal sign where words are shown instead below. (My keyboard lacks the does-not-equal sign). After marking each example true or false, the child was then supposed to fill in the “Because” space following it, just as I have shown for the expected answers. The child was expected to use the rods in doing this work, for which work the Cuisinaire rods are perfectly suited.

\[
\begin{align*}
21 &= M3 \quad \underline{\text{Because}} \quad 21 = (\text{Answers: } \text{true, } 7 \times 3) \\
19 &= M3 \quad \underline{\text{Because}} \quad 19 = (\text{Answers: } \text{false, } 3 \times 6 + 1) \\
19 &\neq M2 \quad \underline{\text{Because}} \quad 19 = (\text{Answers: } \text{true, } 9 \times 2 + 1) \\
\end{align*}
\]

While in Brussels, I purchased copies of the teacher’s guides for the programs I had observed in a first grade and a second grade. The titles were A La Decouverte de la Mathematique et Les Reglettes Cuisinaire, Book I (1970) and A La Decouverte de la Mathematique et Les Reglettes Cuisinaire, Book II (1973), by Louis Jeronnez and Isabelle Lejeune, who were teachers in Waterloo, Belgium. The books were published by Editions Calozet, 40, Rue des Chartreux, Brussels. The notes I took in the first grade class on October 19, 1977, suggested it had reached pages 70 and 71 of Book I. The notes I took in the second grade class suggested it had reached pages 106, 107 and 108 of Book II. Despite the complex material, the classes were obviously moving very quickly since they had covered so many pages in only about six weeks of school since the beginning of the school year.

Those Belgian texts were far superior to, and very different from, the texts published by the Cuisinaire Company of America (which was unconnected to the Calozet company). Yet, so far as I know, the fantastic success of those Belgian texts are as unknown to most teachers today, either in Europe or America, as the fantastic results of the original Colburn text (which, however, may or may not have been very different in its approach from the Belgian materials). When I returned from my 1977-1978 half-year sabbatical leave, I offered to translate the Belgian materials for trial use in the Wayne, New Jersey, school system in which I taught. The assistant superintendent of schools, to whom I made this offer, showed no interest in it whatsoever, and nothing was ever done about it. (These books are also entered in this appendix under date of 1970.)

1822 Jean Joseph Jacotot: His works carried the common title, Enseignement Universel. The first was Langue Maternelle published in Louvain in 1822. The Catholic Encyclopedia, 1913 (Volume VIII, pages 265-266) gave a brief biography of Jacotot (1770 - 1840):

“A member of the House of Representatives during the Hundred Days, he expressed his preference for the empire, and, at the time of the Second Restoration, his hostility to the Bourbons made it necessary for him to leave France.”

The article said that Jacotot had taught in the college of his native city since 1789, and, after leaving France for Belgium, “taught privately at Mons and Brussels, and in 1818 was appointed professor of the French language and literature in the University of Louvain. The Revolution of 1830 allowed him to return to France.” Jacotot believed that knowledge in any area was a key to other subjects, and said “All is in all.” His philosophy emphasized “wholes” and affected his ideas on teaching reading.
Jacotot was the first true “whole language” advocate, with his recommendation that children learn to read by dealing with the “whole” of Fenelon’s Adventures of Telemaque. Jacotot had taught his Dutch-speaking students at the University of Louvain in 1818 to speak French by having them simultaneously memorize a French book while reading its Dutch translation. (As discussed in this history, in doing this, Jacotot was only adapting an approach that had been in use in France when he taught there.) According to Mitford Mathews, Jacotot and his method became famous with the publication of Jacotot’s Universal Instruction and The Mother Tongue. Jacotot explained that he believed children should also begin with a “whole” just as his Dutch students at the university had done. Mathews had stated that Jacotot expected children to go through the whole of Les Aventures de Telemaque and then probably to repeat it in order to learn to read, but an 1887 article in the Dictionnaire de Pedagogie reported otherwise, saying that Jacotot wrote that a child need cover only six lessons and fifty lines of text to learn to read, analyzing them phonetically as he progressed.

Obviously, Jacotot was a charlatan, but he was a highly successful and very famous one. Jacotot certainly was one of the principal subjects of Russell’s 1826 remarks concerning teaching by meaning, in the newly published journal of which Russell was editor, listed under 1826 below. Another probably was Gedike, Basedow’s disciple. Jacotot’s work concerning teaching beginning reading is described at length in the Dictionnaire de Pedagogie et d’Instruction Primaire, Librairie Hachette et Cie., Paris: 1887, in the article “Lecture”, by J. Guillaume, page 1545. The third person that Russell meant was almost certainly John Wood of the Edinburgh Sessional School. Concerning Wood, see the 1829, 1836 and 1838 entries referring to his work.

1826 American Journal of Education, William Russell, Editor. Became American Annals of Education with William Channing Woodbridge and William Andrus Alcott, as the second and third editors, as discussed in this history, and ceased publication about 1840, under a fourth editor. Apparently it had no connection with the journal later founded by Henry B. Barnard using the same name, American Journal of Education. However, Barnard’s biographical article on Russell included the following comments concerning the original journal which make it obvious that Russell in 1826 was at first only someone’s hireling as an editor, as Barnard’s article recorded, concerning Russell’s move to Boston from New Haven:

“Soon after this change of occupation, he was invited to take the editorial charge of the American Journal of Education published in Boston, first by Mr. Thomas B. Wait(sp?), in 1826, and next by Mr. S. G. Goodrich, and subsequently by Messrs. Carter and Hendee. Mr. Russell continued to conduct this periodical for nearly three years from the date of its publication.”

Russell’s editorial comments in 1826, quoted elsewhere in this history, clearly promoted “meaning” and demoted “sound” in the teaching of beginning reading. In 1826, Russell praised at least two of the three pivotal 1826 beginning reading texts which moved from “sound” to “meaning”: the Franklin Primer and the Worcester Primer.

This journal founded in 1826 was vehemently pro-government schools and pro-meaning in the teaching of beginning reading to hearing children, both ends for which Thomas Hopkins Gallaudet worked for years. It is therefore interesting that there are close ties between Gallaudet and three of the men mentioned above in connection with this journal, Goodrich, Woodbridge, and William Andrus Alcott. Some of the details of those connections are given below.

About 1800, a play was written about the Abbe de l’Epee’s work in France with a foundling deaf-mute. De l’Epee had unsuccessfully claimed that the deaf-mute foundling was the heir of a rich family. The play, called The Abbe de l’Epee by Jean Nicolas Bouilly (1763-1842), was apparently performed on stages all over Europe from about 1801 until the 1820’s and later, since it had editions not
only in French but in English, German and Italian, as can be seen from the New York Public Library card catalog, and perhaps in other languages. This certainly suggests continued promotion of de l’Epee’s inferior work by his enthusiasts over a vast area and over a long period of time. Yet de l’Epee’s work, despite his claims to the contrary, left his students forever mute and unable to take part in general society, while de l’Epee’s opponents taught their students to speak and made it possible for those deaf students to join general society. However, the superior work of de l’Epee’s opponents received no such vast puffing-up of importance as this play gave to de l’Epee. An English adaptation of the play was Deaf and Dumb, or the Orphan Protected, by Thomas Holcroft (1745-1809), and another English adaptation was by Benjamin Thompson from a German edition, both of which have 1801 dates listed in the New York Public Library catalog, along with the surprisingly numerous foreign editions mentioned above.

The Thompson version about the education of deaf-mutes by the de l’Epee method also had an 1818 edition, and that 1818 edition was published by young S. G. Goodrich of Hartford, who was just starting out as a publisher, with a preface by Laurent Clerc, the deaf-mute assistant Gallaudet had brought with him from France just two years before. The fact that Goodrich published Clerc’s preface certainly associates Goodrich with Gallaudet at the very early date of 1818. The approximately twenty-year-old play in 1818 probably had other connections with movers-and-shakers, besides Gallaudet, who could promote careers, because young Samuel G. Goodrich soon became a famous and rich publisher and was also for a time publisher of the change-agent Journal of Education in America. Publication of the play also identified Goodrich, like Gallaudet, as one of the widespread promoters of de l’Epee’s “meaning” work, and in Goodrich’s own reading books for beginners published in the 1830’s, Goodrich used “meaning,” not “sound.”

William Channing Woodbridge, the Journal’s second editor about 1830, was working in Gallaudet’s school for the deaf by 1818 when Goodrich published the play with the preface by Clerc, Gallaudet’s assistant. Gallaudet had founded the school in 1817 after returning from France with the deaf-mute Clerc who had been trained by Sicard, de l’Epee’s successor, and Gallaudet then taught sign language and sight words, not speech, to his deaf-mute students, leaving them forever mute. After assuming the editorship of the journal in 1830, taking over from William Russell, Woodbridge almost immediately published a pro-meaning article by Gallaudet concerning teaching beginning reading to hearing children.

William Andrus Alcott, the third editor, recounted in a brief biography of Gallaudet (referred to in this history) that Gallaudet and he had been close friends ever since about 1825 or 1826. (William Andrus Alcott was also a close friend of his own cousin, Amos Bronson Alcott.)

The anonymous Scottish Schoolmaster’s marvelous 1829 book is a collection of letters published between November 30, 1827, and August 15, 1828, with additional material after that written by the Schoolmaster. The Schoolmaster was responding to Pillans’ remarks in his lectures and book vilifying the Church of Scotland’s parish schools and promoting monitorial schools such as John Wood’s famous Edinburgh Sessional School. The Schoolmaster’s convincingly debunking material has been discussed at length in this history. (The Schoolmaster’s 1829 work is also listed in Appendix D, as well as John Wood’s 1828 Account of the Edinburgh Sessional School and some other books on education which refer to that hugely publicized school.) The school’s claims of success were enormous, as shown by the remarks in the 1838 pamphlet concerning Wood, quoted below under that 1838 entry. Yet the Schoolmaster’s account establishes that those claims were fraudulent.
In Letter VIII (pages 35 and following), the Schoolmaster discussed “Wood’s Method of Exercising his Advanced Classes....”

“...it affords the very best specimen of the attainments of the pupils of Mr Wood in grammar and verbal criticism. Now, what is there in all this that deserves the epithet new? Is it not the mode of questioning practised by every teacher of English in exercising his farthest advanced classes....? O, but, says Mr Pillans, all this instruction is imparted merely by viva voce communication, without having recourse to grammars and dictionaries. So much the less does it tend to the improvement of the learner, as it precludes the necessity of any application on his part.... If this observation be just, as I verily believe it is, it follows that the new method is the least useful in training boys to habits of diligence and activity that has ever been devised. Instead, therefore, of its deserving the epithet intellectual, its application should be the parrotical method of teaching; for certainly, no plan of communicating instruction to the young can be more mechanical or superficial; and, I am firmly persuaded, that had a poor dominie, instead of John Wood, Esq., Advocate, and Sheriff of Peebles-shire, attempted to bring such a scheme into general practice, both he and his plan would have been treated with contempt by the learned and influential classes, and would have been laughed to scorn by the very vulgar....”

As can be seen from the comments above, the move was away from establishing conditioned reflexes (learning), by real teaching and real study of objective subject matter from books, and towards replacing it with endless wheel-spinning conversational activities concerning “meaning” which were called “intellectual.”

From the Schoolmaster’s identifying description, John Wood was obviously a man of some social standing in Edinburgh, and presumably a lawyer (being referred to as an “advocate”) as the famous Scot, Lord Brougham, was. Since Wood had worked at the Sessional School since at least 1819, as indicated elsewhere, he was possibly in the same age-group as Brougham and Birkbeck, two famous Scottish activists in education in England after 1818 who have been discussed at length in this history. Had Wood also gone to the University of Edinburgh, studied under the famous philosopher, Dugald Stewart, and possibly met Brougham and Birkbeck there when both were students of Stewart? Was Wood a participating member in an organized education “reform” that had started its work about 1818 and which included Brougham and Birkbeck? As quoted elsewhere in this history from Brougham’s 1825 book published in London, Brougham had specifically referred to the existence of such a group of activists in education in the “north.”

At the very least, both Stewart and Brougham are quoted by a contemporary as having given “approbation and patronage” to Wood’s Edinburgh school. One of the letters the Schoolmaster included was by someone who had defended John Wood’s Sessional School, written apparently shortly after November 30, 1827:

“...(the school’s) practical results have commanded for it the approbation and patronage of such men as Professor Stewart, Brougham, Malthus, and Hume.”

Very possibly Malthus was Thomas Robert Malthus (1766-1834), the English economist who invented the theory that population is supposed to outstrip resources. Professor Dugald Stewart was a famous philosopher from the University of Edinburgh and the Scot Brougham, a member of the British Parliament, had been Stewart’s student, and a close friend of Birkbeck.

Professor Dugald Stewart of Edinburgh University had written in the 1790’s that he was concerned with reading for understanding, as discussed in this history. Stewart was one of those who gave the Edinburgh Sessional School his approval and patronage. However, that Brougham was more closely
associated with the Edinburgh change-agents than the other “greats” quoted is suggested by the mocking
answer to the Schoolmaster by his opponent in Letter IV, when this time the Schoolmaster’s opponent
brought up only Wood’s and Brougham’s names:

“Yes, Sir, Wood is a quack, and Brougham is easily gulled, their names are a shadow - their
philanthropy is a dream - “

The Scottish parochial Schoolmaster had made the following statement in his first letter of November
30, 1827, “On the Announcement of Professor Pillan’s Lectures to Teachers” and the remark certainly
suggests the lectures were connected with organized activity for educational “reform”:

“...first, it may be necessary, for the information of those of you who do not visit Edinburgh
annually, to remark, that there has sprung up, in that city, a new species of illuminati, who
entertain notions concerning the instruction of children that, I fear, can never be realized, till the
order of nature be reversed, and the ‘infant of days’ exceed, in mental capacity, the bearded man
in short, till old heads grow upon young shoulders.... I believe, their intentions are in the highest
degree laudable.... The fact is, that this band of worthies includes in it several of the most
respectable public men in the city, almost all that portion of the clergy who style themselves par
excellence Evangelists, and many of their followers. One of the chief agitators in this respectable
body is Professor Pillans....”

See the 1836 and 1838 entries on Wood concerning his books for beginning students, the religious
content of which aroused heated opposition from clergymen, and the history of Wood’s work at the
Sessional School. See also the 1883-1887 entry, The Works of Orestes A. Brownson, concerning
Brownson’s testimony on a secret society in New York State in 1829 and 1830 to which Brownson had
belonged. Its purpose was to organize government schools with mandatory attendance laws, in which
religion could be removed from education, but without making a direct attack upon religion.

1830 Lessons in Enunciation, by William Russell. Richardson, Lord & Holbrook, Boston. This is
listed in The New York Public Library catalog under call number RNR, although I have not seen it, but
have seen some of Russell’s later works listed in Appendix B. An 1843 copy is listed on page 36 of Early
American Textbooks, which copy was published by two companies, Charles J. Hendee, and Jenks &
Palmer, Boston, who were then also the publishers of the Code 1 Worcester readers. The Scot, William
Russell, was a teacher of elocution.

Russell’s activist undertakings in America have been discussed at length in this history. As stated
elsewhere, Russell was the first editor of the American Journal of Education in 1826, apparently as
someone else’s hireling since Barnard said Russell had been “invited” to become its editor. Along with
the founding of that education journal, the drives to establish government schools in America, and to
replace “sound” with “meaning” in beginning reading, began in earnest in 1826, as has also been
discussed elsewhere.

Concerning Russell’s 1830 Boston publisher, Richardson, Lord & Holbrook (and there were many
other publishing companies in Boston at the time), it is of interest that the same company was one of the
and Dumb. That book, although not a beginning book, was specifically written for both deaf and hearing
children. The principal publisher of that book was H. & F. J. Huntington of Hartford. The other Boston
publisher was Carter & Hendee, and the New York publisher was Jonathan Leavitt. As can be seen from
Appendix B, all those companies published important pro-“meaning” beginning reading texts. As
indicated in the 1826 entry for the American Journal of Education, Carter & Hendee became the publishers of that activist work after Goodrich no longer was the publisher.

As shown in the listings in Appendix C for the Worcester and Hillard readers, both Richardson, Lord & Holbrook and the Hendee company were long-standing publishers of the Code 1 Worcester readers, and the record strongly suggests that the Richardson company was one of the two original 1826 publishers of the watershed 1826 Worcester Primer. Furthermore, the Richardson company were publishers of the low-code 1828 Boston Reading Lessons for Primary Schools, widely used at the time, and the Hendee company was a later publisher. That book specifically endorsed the “meaning” method for beginning reading used in John Wood’s Edinburgh Sessional School. In addition, it had that curious element found in many activist works for little children: horrid, upsetting stories, presumably recited for their “morals.”

The Richardson company, later succeeded by the Jenks & Palmer company, was also the publisher of other activist and low-code materials. Listed in Early American Textbooks on page 64 is the Infant School Manual, or Teacher’s Assistant, which the Richardson company published in 1831. Infant schools, for children from two or three to about seven years old, had been the late eighteenth-century invention of the famous Scottish socialist, Robert Owen. With Owen’s cooperation, infant schools had been promoted by Brougham and others in London since 1818. Infant schools had become a major enthusiasm of activists in America by the late 1820’s. In 1832, the Richardson company published Peter Parley’s Book of Curiosities, Natural and Artificial, by Samuel Goodrich, whose pseudonym was Peter Parley. That book is listed in Early American Textbooks on page 84. Goodrich was the second publisher of the American Journal of Education. Russell had been the first editor and Gallaudet’s one-time employee in his school for the deaf, Woodbridge, had been the second editor. William Andrus Alcott was the third editor. As discussed in this history, Goodrich went out of his way in one of his children’s books to belittle Noah Webster’s Code 10 speller, while Goodrich himself wrote very low-code beginning reading books, which were astonishingly long-lived, still being published in a revised edition by the Morton company of Kentucky in 1928.

Therefore, the record clearly demonstrates that a small group of closely associated people (and publishers) formed the nucleus of the 1826 American movement both for government schools and for displacing “sound” in beginning reading with “meaning.” The movement had ties to the very same movement in that same period of time which was taking place in Scotland and England. Gallaudet was one of the most influential American activists in the promotion of government schools and “meaning” in the teaching of beginning reading. Though possibly of no importance concerning any connection to eighteenth-century practices in France, Gallaudet’s father was a French Huguenot who had emigrated to America, apparently after the mid-eighteenth century. However, through Gallaudet, the movement did have a clear tie to the Abbe de l’Epee’s enormously ballyhooed late-eighteenth-century school for the deaf in France, because Gallaudet had studied there from 1814 to 1816, by which time the Abbe Sicard had become its director. Teaching the deaf by “sound” approaches had been highly successful in France in the mid-eighteenth century and had been carried out by two renowned teachers, as discussed in the section of this history on France. Yet de l’Epee’s late eighteenth century school had rejected the “sound” approach and instead used “meaning,” and then received massive publicity and influential visitors from all over Europe.

1830 and later - American Institute of Instruction reports, discussed in Samuel Blumenfeld’s Is Public Education Necessary? and Mitford Mathews’ Teaching to Read, Historically Considered, both listed here later. The record demonstrates that this organization was a national vehicle for promoting government schools and “meaning” in place of “sound” in the teaching of beginning reading. As Blumenfeld pointed out, it was founded by Josiah Holbrook and his associates. When Holbrook began his organized work forming local institutes, which spread through America like wildfire in only about three years and from
which groups the national organization developed in 1830, he had first announced his ideas in 1826 in Russell’s American Journal of Education.

This pamphlet in the 42nd Street New York Public Library was printed in Edinburgh, Scotland, and contains Wood’s letter of May 23, 1836, and a portion of Reverend Trimmer’s protest to which Wood was responding. Wood began his denials of wrong-doing by quoting in part from Reverend Trimmer’s “Protest.” However, Reverend Trimmer’s objections to the religious teaching in Wood’s schoolbooks were obviously very well-founded, since Wood had obviously not included a real Christian catechism in those books which Wood specifically wrote for church schools, and which Wood claimed taught religion. Some of Trimmer’s objections were:

“Because the said books do not contain the doctrine of the Trinity, neither acknowledging the essence of the Holy Ghost, nor the Godhead of the Son....

“Because no allusion is made in them to either (Ed.: in his church) of the Christian Sacraments, no mention of the Resurrection, Christ, or of his coming to judge the world.

“Because though mention is soon made of the ‘Evil One’ assuring Eve she shall not die, it is nowhere hinted that the temptations of Satan are continued to the descendants of Eve....

“Because in these portions of Scripture History, which are extended to many pages, a Scriptural style is adopted, and the words of Scripture often borrowed, but the one not distinguished from the other, so that the children will be able to know (which they ought to do) when they are and when they are not reading the words of Scripture.

“Because most of the leading doctrines of Scripture are withheld; that such a system of religious instruction is highly objectionable, and the assurance that the children will be taught the absent doctrines not at all satisfactory.

“Lastly, Because it is absurd to teach pauper children in an agricultural district, and whose occupations are for the most part those of crow keeping, pig minding, and turnip pulling, that minerals are, as the case may be, ‘brilliant,’ ‘opaque,’ ‘malleable,’ ‘ductile,’ or ‘fusible;’ and because such a system of education is not suited to that situation in which it has pleased Providence to place the agricultural poor.”

Note the teaching of what passed for “science” in Wood’s material on geology. Geology was the great enthusiasm of the irreligious change-agents of the period, undoubtedly because they (wrongly) considered geology to be a subject that was in conflict with the Bible and therefore highly suited to their change-agent purposes. The existence of the change-agent war in America against religion is confirmed beyond any doubt by the testimony quoted elsewhere of Orestes Brownson in his autobiography concerning 1829-1830, at which time Brownson was a secret member of just such an American group, with ties to the Scot, Robert Owen. Brownson said the group wanted to abolish Christianity but aimed to do so by an
indirect approach. Of course, Voltaire and the “philosophes” had exactly the same aim in the previous century, at which time the “philosophes” called Christianity, the “Infame.”.

“...I observe it stated by my opponent, much to my surprise, that he has actually succeeded in inducing other clergymen of the district to subscribe his Protest.”

Wood then attempted to show that he, himself, was in very good standing with the Church of Scotland. Yet all that is certain from his remarks is that he was in good standing with a small Committee of that church. Change-agents, then as now, could insinuate themselves into such positions of influence. Wood continued:

(Page 9) “Among the other measures resorted to by the Committee of the General Assembly of the Church of Scotland for the diffusion of religious Education, they have very lately availed themselves of an advantageous opportunity of acquiring from its former directors the Edinburgh Sessional School with a view of converting it into a seminary for the training of teachers. Among the inducements to this arrangement, they have paid me the compliment to include a desire to obtain my services in the superintendence of that establishment.... They (refer to) what appears to them ‘the unspeakable importance of having such an establishment in connection with the religious institutes of the country, and of its operations being commenced under the inspection of an individual of Mr. Wood’s ...qualifications.’

This quotation gives background information on what was happening to the Edinburgh Sessional School in 1836, only about eight years after it had become famous on both sides of the Atlantic, which fame certainly suggests massive advertising by its promoters. John Wood referred to a Committee of the General Assembly of the Church of Scotland. Activists always operate through grabbing control of organizations at the top through committees, and activists know how to get themselves appointed to run the committees. Note that this “Committee” was interested in “the diffusion of religious Education,” and “diffusion” was an activist buzzword at that time. Wood mentioned “an advantageous opportunity of acquiring” the Edinburgh Sessional School “from its former directors,” so that teachers could be trained, obviously in Wood’s methods, as he said the committee “desire to obtain my services in the superintendence of that establishment.” Furthermore, it would influence all Scotland, as “an establishment in connection with the religious institutes of the country....” However, Trimmer’s comments establish the worthlessness of the kind of religious teaching that Wood was doing in the schoolbooks he wrote. It was so worthless that it resulted in clergymen signing a formal protest to Wood’s books.

See also the 1829 and 1838 entries concerning Wood’s school. See also the 1883-1887 entry, The Works of Orestes A. Brownson, concerning Brownson’s testimony on a secret society in New York State in 1829 and 1830 to which Brownson had belonged. Its purpose was to organize government schools with mandatory attendance laws, in which religion could be removed from education, but without making a direct attack upon religion.

1836-1839 The Common School Assistant, J. Orville Taylor.

C. W. Bardeen, the publisher of The School Bulletin, Syracuse, New York, reported on this periodical in his 1893 paper at the world’s fair in Chicago, discussed later. Taylor formed the American Common School Union, New York City, to show and to sell school goods, in March, 1837. Included were Town’s Spelling Book & Analysis; Sigourney’s Girl’s Reading Book and Boy’s Reading Book; Taylor’s District School (on which Taylor had won a prize); Burton’s District School As It Was; Wittich’s Essay on the Method of Teaching in Prussian Schools; Lord Brougham On Education; and several anonymous books:
Prussian and New York School Systems Compared; Satirical Hits on the People's Education; “etc.” It is of interest that Taylor was selling “Lord Brougham on Education,” whatever that volume was, in New York in the 1836-1839 period.

Bardeen made fun of Taylor’s journal, copies of which I have seen, I believe in the New York Public Library. Bardeen was discussing Taylor on page 8, and then all pages of Bardeen’s 1893 paper, reported below under 1893, were missing until page 17. On page 17, Bardeen mentioned a Mr. McKeen born in Antrim, Vermont, in 1792, who became principal in 1848 of #5 Mott Street School in New York, after having arrived in New York in 1818. McKeen was reportedly superintendent of schools in New York in 1854.

1838 “Account of the Proceedings Connected with the Testimonial Presented to John Wood, Esquire, on 23rd December, 1837; With the Speech of Mr. Wood,... and A Preface Containing An Account of the Edinburgh Sessional School, and of Mr. Wood’s Connection with that Institution,” published by William Whyte and Company, Edinburgh, Scotland.

This 1838 pamphlet has a short Preface with remarkably little biographical information on John Wood, even though it concerned a testimonial in his honor. Wood had been referred to in the Schoolmaster’s 1829 work as John Wood, Esq., Advocate, and Sheriff of Peebles-shire, but nothing else has been available on his background. However, this 1838 Preface does give a kind of chronology on Wood’s activities in the Edinburgh Sessional School, and quotes from Wood’s 1828 paper. Those remarks establish that Wood originally did voluntary work at the Sessional School dating from at least 1819. Whether it was full-time work is not clear, but it seems unlikely that it was full-time.

Parochial Sabbath schools for the poor had been established in Edinburgh in 1812, and soon after day schools to teach reading and writing. The Preface to the 1838 pamphlet said:

“An institution of this description, accordingly, was opened in Leith Wynd, under the name of the Sessional School, from its connection with the different kirk-sessions. This was on the 29th April 1813. In this school, the system known by the name of Lancastrian was chiefly followed.... At a subsequent period, many valuable suggestions were received from Dr. Bell, which were carried into effect by Dr. Brunton and the late Dr. Andrew Thomson, both of whom, for some time, gave daily attendance in the school-room.”

A footnote said, “Dr. Brunton has all along acted as secretary to the parochial institutions, and his zealous services have been eminently useful.” The material continued:

“It was about this period that Mr. Wood’s connection with the Sessional School commenced. The account of this we think it right to give at full length, in Mr. Wood’s own words, as forming an era in the history of education: -

“The author’s first acquaintance with the Sessional School arose from his connection with the Society for Suppression of Begging, who had placed at that seminary the children that were under their care. It was at that time in its first stage, and was taught by a Mr. Brown. The writer’s visits at this period, though few, impressed him with a very high opinion of the utility of the monitorial system, if rightly conducted, in furthering the important object of general education. He also paid several visits to the school, after it had received the improvements suggested by Dr. Brunton, on his return from London, when it was under the tuition of Mr. Bathgate, now one of the burgh teachers in Peebles, and was satisfied that it had indeed, in the meantime, undergone very great improvements, which amply compensated the meritorious exertions of its directors. A circumstance soon after this occurred, which rendered his visits to the school daily. In the course
of the winter of 1819-20, he had a particular charge allotted to him of the fund subscribed for
behalf of the operative weavers, thrown out of employment by the pressure of the times. By a
wise resolution of the managers of that fund, it was determined that the drawboys under their
charge should be sent to school; and the very favourable opinion that he entertained of the high
stage of order and discipline into which the Sessional School had been brought by the exertions
of its directors, induced him immediately to suggest that seminary. Lads of this description, of
course, required incessant superintendence. In consequence of the regular visits which he thus
found necessary, he had a good opportunity afforded him of becoming acquainted both with the
conduct and progress of the pupils under his own immediate charge, and also with the general
condition of the whole school.... Mr. Bathgate, whose zeal never allowed him to omit any thing
which promised advantage to his school, respectfully requested that he would not confine his
attention to these classes only, but would take an interest also in the other classes of the seminary,
a wish which was afterwards also communicated in a most liberal and gratifying manner, in a
letter from the secretary in name of the directors. In consequence of this request, he did not think
himself at liberty to close his labours....

"While he was thus employed, very serious doubts used frequently to come across his mind,
whether he was doing all the good, which others were, perhaps, too easily inclined to imagine.
The children were taught, indeed, to read, but the doubt was, whether they had been made such
masters of their own language, as, in future life, to give them any pleasure in reading, or to enable
them to derive much profit from it. They had learned their catechism, but were they much wiser,
with regard to the truths which it contained? The Bible was read as a task, but was it not, also like
a task, forgotten? The more he inquired into the actual condition of the lower orders, the more he
was convinced that reading, together with spelling out the meaning of what they read, was too
formidable an attempt to be frequently resorted to by them, and that even of those who did read,
few had recourse to the books calculated to give them the most useful instruction, because they
were unable to understand their language, while most resorted to works of a lighter and
unfortunately less unexceptionable kind, which they found it not so difficult to comprehend. This
evil called loudly for a remedy, which the meagre explanation, introduced along with the other
practices of the Madras System (however useful to a certain limited extent) did not supply. He
therefore felt an extremely strong anxiety to give the school more of an intellectual tone, not only
to enable the pupils better to understand what they read there, but also to give them a taste for
profitable reading, and make them understand whatever they should afterwards have occasion to
read.... Were he to content himself with proposing the scheme to others, it might, and in all
probability would be treated as visionary. He therefore resolved silently to do his best. And so
silently indeed, and with so little stir did the thing proceed, that neither the directors, nor even the
master knew what was going on, till they heard the children of the highest class, to whom he first
confined his attempt, answering questions of an unusual nature. In the commencement of the
attempt, he received even far stronger proofs than he had at all previously anticipated, of its
extreme necessity. He found that he had by no means formed an adequate conception of the gross
misapprehensions into which even the ablest children fall, regarding the meaning of what they
read. He saw, of course, still more strongly, the necessity of perseverance, and in order the better
to accomplish his object, he, with the cordial approbation of the directors, compiled a new
schoolbook, better adapted to his purpose than the highest one at that time in use. As soon as it
was sufficiently proved that the plan was both practicable and beneficial, a series of works was
prepared for the same purpose, and with the like approbation. The result is well known to all who
are acquainted with the school. He shall only now remark, that those who imagine that it was
from the first anticipated by him in its full extent, pay a compliment to his discernment, to which
he feels that he can have no just claim. A far more moderate degree of success was all he then
ventured to expect, and an insurance to that extent would have amply satisfied him." - Account of
the Edinburgh Sessional School, &c., pp. 25, 29.
“Along with the improvements in the reading department new life was given to that of arithmetic. Grammar, geography, and other branches were afterwards introduced, among which was the most important of all, viz., religious knowledge, instruction in which forms a regular part of the daily work of the Sessional School.

“In the particulars mentioned by Mr. Wood, in the very interesting extract which we have quoted, we find a satisfactory explanation of the wonderful success that has crowned his efforts. He came into a school conducted upon the best principles of education then known, and these principles were carried into effect by an energetic teacher, under the personal direction and superintendence of such men as Dr. Thomson and Dr. Brunton. In the Madras system there is much that is truly admirable, particularly in the great principle of mutual tuition, and in the scope which the classification of the children affords for the exercise of the principle of emulation. Along with many fooleries, it must be allowed that Joseph Lancaster had ingrafted various important improvements upon the system which he borrowed from Dr. Bell. And in a school where the combined excellencies of the Madras and Lancastrian method were exhibited, many advantages were enjoyed. Mr. Wood duly appreciated these advantages, and soon carried them to the utmost extent that their authors could have anticipated.

“...The essential defects of the Madras and Lancastrian systems consisted in their attaching too much importance to mere forms, and in their addressing themselves to a limited class of faculties. Their machinery, however, afforded scope for calling forth all the mental power, and of this Mr. Wood fully availed himself.

“...It must be taken into account also, when inquiring into the cause of his success, that he was a man of liberal education, and had enjoyed the benefit of the instructions of Dr. Adam, rector of the High School, one of the most distinguished teachers under the old system. Mr. Wood also engaged in the work, not as a professional schoolmaster, but as a philanthropist. His object was not to establish a high character as a teacher, but to do good to the young persons whom he found in the school. In this way, he was freed from any temptation to aim at singularity or novelty, merely for its own sake. He silently made his experiments one by one, ever following nature as his guide; and it was not till an extraordinary improvement was witnessed in his pupils, that even he himself was led to suppose that there was anything remarkable in the method he was following. To this hour it is not the least honourable trait in Mr. Wood’s character nor the least distinctive feature in his system, that he makes no pretensions to having introduced a method either essentially new in all its principles, or complete in all its parts. The interesting experiments that are continually going on are ever suggesting new views; and, holding by the same great principles, improvements in detail are introduced, we believe, up to the present hour.

“The most remarkable circumstances connected with the Sessional School, are the extent and accuracy of the information of the pupils, the intelligence and wonderful readiness displayed in their answers to the questions put to them upon general subjects - and the life and spirit with which their various tasks are performed. We have been particularly struck with the amount of their scriptural knowledge, and the clearness of their statements upon doctrinal topics; and few visitors, we believe, are present at an examination of any of the classes upon the Scriptures, without being delighted with the views of divine truth that are brought forward, or even without having something new suggested to their minds.”

The author then again quoted Wood concerning the youngest students. Before Wood, Andrew Bell had sharply moved from “sound” to “meaning” in his revised work on his Madras monitorial method. Bell had dropped most of the teaching based on “sound.” In addition, he reduced the amount of text to be
read by beginners to a tiny portion, in order to concentrate on its “meaning,” with an enormous amount of nitpicking questioning on every sentence. (Bell’s work has been discussed in this history.) However, as the author said, even Bell’s work was not sufficient for Wood in his move towards “meaning.”

Wood was the first to throw out the syllabary and all “sound” in the teaching of beginning reading in English, replacing it instead totally with Code 1 whole word “meaning.” All of the elaborate vocabulary in the following quotation from Wood is supposed to explain his lofty motives in doing so. This recalls J. P. Morgan’s remark about people having two reasons for doing anything: the good reason and the real reason. Wood’s verbiage below is his good reason. However, his real reason appears to have been to move totally from “sound” to “meaning” in the teaching of beginning reading.

In reading Wood’s work, it should be remarked that the “questioning” approach, mentioned by the Scottish Schoolmaster and seen in many change-agent works of the period, was exceedingly boring and tiresome in the form used for little children. (The “questioning” approach was NOT the ancient catechetical system, in which the memorizing verbatim of specific questions and answers is used in teaching specific subject matter.) One such change-agent work of the period has already been described in this history, and it had enormously elaborate questioning which was probably not only exquisitely boring to little children but actually harmful.

Wood certainly seems to have reached the “overkill” level in the elaborate verbiage below, which was meant to establish the lofty and disinterested motives for his work at the Edinburgh Sessional School. This material, taken from Wood’s 1828 book, is then followed by further remarks of the editor of the 1838 material.

“‘In all their arrangements, they have regarded their youngest pupil, not as a machine, nor an irrational animal that must be driven, but as an intellectual being who may be led, endowed not merely with sensation and memory, but with perception, judgment, conscience, affections, and passions; capable, to a certain degree, of receiving favourable or unfavourable impressions, of imbibing right or wrong sentiments, of acquiring good or bad habits; strongly averse to application, where its object is unperceived or remote, but, on the other hand, ardently curious, and infinitely delighting in the display of every new attainment which he makes. It has accordingly been their anxious aim to interest, no less than to task - to make the pupil understand (as much as possible) what he is doing, not less than to exact from him its performance - familiarly to illustrate, and copiously to exemplify, the principle, no less than to hear him repeat the words of a rule - to speak to him, and by all means to encourage him to speak, in a natural language, which he understands, rather than in irksome technicalities, which the pedant might approve - to keep him, while in school, not only constantly, but actively, energetically employed, to inspire him with a zeal for excelling in whatever is his present occupation (whether it be study or amusement,) and even where he is incapable of excelling others, still, by noticing, with approbation, every step, however little, which he makes towards improvement, to delight him with the consciousness of excelling his former self.’ Ibid. pages 2 and 3.

“Mr. Wood has now for upwards of twenty years devoted himself to the labour of gratuitously instructing the children of the lower classes. In the Sessional School his success has been complete. But the fruits of his labours have by no means been confined to that seminary. He has given a powerful and general impulse to the cause of education throughout Scotland, and indeed in many other parts of the world. Many of his pupils are now conducting extensive seminaries of education upon his principles. All the teachers employed by the Committee of the General Assembly in their schools in the Highlands and Islands, undergo a course of preparatory training under the care of Mr. Wood; and teachers from all quarters visit the Sessional School, and carry many of its plans along with them. In consequence of them, more enlarged views are
generally entertained on the subject of education, higher qualifications are required in teachers, and views of incalculable benefit open on the intellectual and moral condition of future generations.

“The Sessional School has long been considered as one of the institutions of which the citizens of Edinburgh have most reason to be proud; and... it was generally known, that Mr. Wood sought no other recompense for his generous sacrifices and devoted labours than the unexampled success that crowned his efforts....”

All of the above verbiage established the following facts: A church charity school was formed in Edinburgh in 1813 under directors, and with a permanent teacher. In 1819 Wood began what was almost certainly part-time teaching there, but immediately concerned himself with “meaning” in the reading of the top students (who could apparently already read fluently). That almost immediate work concerning “meaning” in reading was carried on without telling the full-time teacher, or, if you can believe Wood, the directors who had apparently appointed him. Great publicity then followed at some unspecified time on that work with the oldest students on “meaning”, which work by Wood the Schoolmaster personally observed. The Schoolmaster said that, in its good aspects such as in the meaning of vocabulary, Wood was merely imitating the standard practices already followed by teachers such as himself. Yet Wood was also introducing very harmful practices, by omitting any effort on the part of the students in the use of dictionaries and the personal study of books such as grammars.

Wood then composed a book, either at the behest of the directors, or at least with their warm approval, to teach such students who could already read, so that they would be sure to read for “meaning.” Because of his great concern for meaning, he then composed a series of books, including one for beginners. However, the beginning book taught beginners to read, not FOR meaning, but BY “meaning,” since it totally dropped “sound” for beginners, concentrating instead on whole-word “meaning.” Wood’s verbose explanation, given above, is that he wrote that material for beginners because of his loving and great concern for the welfare of little children.

Despite the reference in 1838 to Wood’s 20 years of teaching (which would have begun in 1818), the fact is that it really began in the winter of 1819-1820. Wood had said of himself, “This was at first done only at intervals, but as his interest in their improvement increased, became more and more frequent, and at length daily.... Mr. Bathgate... requested that he... should take an interest also in the other classes... also communicated in a letter from the secretary in name of the directors....” He then claimed he silently intended to promote “meaning” in reading, without telling anybody, not even “the master” or the directors. His success was so wonderful that, “with the cordial approbation of the directors” he wrote a book for the higher classes, and then for the lower ones, with “the like approbation.”

Wood wrote that account in 1828, and the Scottish Schoolmaster first wrote his criticism of Wood’s work in late 1827. Therefore, Wood’s books, including his Code 1 primer, were written between 1819 and 1828, most likely in the period from 1821 to 1825, particularly since the 1826 American Journal of Education under its Scottish editor, William Russell, referred to “improvements” in reading moving toward “meaning” that had already occurred elsewhere. As indicated in Part 4 of this history, the period from 1819 to 1825 in America showed a similar move from “sound” to “meaning” in several spelling texts, and also work promoting “meaning” in beginning reading by activists such as Keagy from 1819 onwards. However, it was only in 1826 that the major American drive to “meaning” occurred, and “meaning” rapidly became the American norm, with whole-word “meaning” primers replacing “sound” spellers for beginners.

See also the 1829 and 1836 entries concerning Wood’s school, and the 1883-1887 entry, The Works of Orestes A. Brownson, concerning Brownson’s testimony on a secret society in New York State in 1829
and 1830 to which Brownson had belonged. Its purpose was to organize government schools with mandatory attendance laws, in which religion could be removed from education, but without making a direct attack upon religion.

1839 Common School Journal, Horace Mann, Editor. Discussed in this history. Horace Mann was a major proponent of “meaning” in beginning reading, and a major figure in the history of government schools.

1843 The School Bulletin, Syracuse, New York, C. W. Bardeen, Editor, in May, 1876, reproduced a circular which had advertised in 1843 what was probably the first teachers’ “institute,” which was held on October 18, 1843, at Wethersfield Springs, New York.

See also Proceedings of the Royal Irish Academy, Second Series, Volume II, pages 280 and 281, Dublin: 1879-1888, for the May 12, 1884, letter from the Right Reverend Charles Graves, Lord Bishop of Limerick. This letter concerns Egyptian contacts mentioned in the ancient Litany of Aengus and concerns other evidence of Egyptian-Irish contacts about the seventh century.

See also the article, “On the Geography of Ros Ailithir,” by Rev. Thomas Olden, on pages 219 and following of Proceedings of the Royal Irish Academy, Second Series, Volume II, 1879-1888, concerning the content of geography lessons in the 900’s.

See also the entry under 1892.

1844 Seventh Annual Report of the Board of Education Together with the Seventh Annual Report of the Secretary of the Board, by Horace A. Mann, Boston, 1844. This brought on a violent answer, the “Remarks” of 31 schoolmasters. It was followed by Reply to the “Remarks” of Thirty-one Schoolmasters, by Horace A. Mann, Boston, 1844. Mann’s answer then brought on the “Rejoinder” from the 31 schoolmasters, resulting in Horace Mann’s Reply to the Rejoinder to the “Reply” of the Hon. Horace Mann, in 1844. Finally, following this, the Boston schoolmasters published Penitential Tears, or a Cry from the Dust by the Thirty-One Prostrated and Pulverized by the Hand of Horace Mann, 1845. Horace Mann, who is so highly praised in histories, was anything but a hero to the local schoolmasters of the period. Samuel Blumenfeld published much of this material in his book, The New Illiterates. It is also discussed in an appendix to Walcutt-Lamport-McCracken’s text, Teaching Reading, a Phonic/Linguistic Approach to Developmental Reading, listed in Appendix D. The Boston schoolmasters objected to many of Mann’s programs, one of which was the promotion of Code I “meaning” in the teaching of beginning reading.

1854 Biographie Universelle, edited by J. F. Michaud. Republished by Adademisch Druckuverlagsanstalt, Graz, Austria.

1856-1866 American Journal of Education, Henry B. Barnard, Editor. This periodical, apparently with no connection to the earlier journal with the same name, appeared both before 1856 and after 1866. The following pertinent articles appeared between those years. (Many others published during the life of the journal, of course, are also of interest.) - Thomas Hopkins Gallaudet, May, 1856; Cyrus Peirce, 1857; Johann Bernhard Basedow and the Philanthropinum, translated from the original of Karl von Raumer, 1859; Pestalozzi, 1859; Quintilian, 1863-1864?; A-B-C Books and Primers, 1865, p. 593-604, Vol XII; “Catechism on Methods of Teaching,” translated from Diesterweg’s Almanac for 1855 and 1856, printed in the 1865-1866 American Journal of Education; and Primary Instruction by Object Lessons of the City
of Oswego, New York, 1865 (which establishes that was called “phonics” there was only partial, supplemental phonic analysis of sight words). On page 277 of the September, 1860, issue appeared Pilan’s [sic] First Letter on the Principles of Elementary Education. Also covered in 1860 was Subjects and Methods of Early Education, Scotland Training College, Edinburgh, by James Carr. The Scotland Training College was presumably the successor to John Wood’s famous Edinburgh Sessional School.

1857 A Volume of Vocabularies... from the Tenth Century to the Fifteenth, by Thomas Wright (1810-1877). In Chapter XIV, Wright listed Latin words for fifteenth century English words, including those for beginning reading books, part of which material is quoted in this history. Wright also published in 1862 A History of Domestic Manners and Sentiments in England in the Middle Ages, which is an excellent reference work.

1860 Concerning an Excerpt from a Springfield, Massachusetts Editorial on Walt Whitman. The following notes on a New York Public Library display about 1982, quoting from a nineteenth-century newspaper, were taken hurriedly in shorthand on scraps of paper. The notes were not transcribed for twelve years, so undoubtedly there is some inaccuracy.

Whether Walt Whitman did or did not have talent has nothing to do with the issue discussed below. Garbage in a crystalline vase is still garbage. Furthermore, culturally speaking, it has not been primarily the talent (the package) with such writers as Whitman that has been marketed over the years, but the messages inside their packages of “talent.”

Manifestly, it is a silly argument to say that a package matters more than its contents. Yet the 1860 Springfield editor quoted below did not succumb to that argument. His article was reproduced in the New York Public Library’s exhibit, but it was obviously meant to amuse the 1980’s public because of its “outmoded” point of view and its attempt to impede the march of cultural “progress.” The article sounded anything but ignorant to me. In contrast, I considered the New York Public Library’s exhibit on children’s literature some time later to include some remarkably ignorant and downright silly comments.

However, that is anything but surprising, since the reigning literati are an astonishingly ignorant group, as they are continually demonstrating in their widely publicized books and articles. They apparently practice self-censorship, limiting their reading to the output of their canonized “experts.” For instance, it would be interesting to learn how many of the virulently anti-religious have ever read any appreciable part of the Bible. It is almost a “given” that they have never read any appreciable part of the Lives of the Saints, which the wounded and worldly soldier, Ignatius Loyola, found so moving in the 1500’s that he abandoned the military when he recovered from his wounds and founded the Jesuit order.

The following appeared in the January 16, 1860 Springfield (Mass.) Republican concerning Walt Whitman’s Leaves of Grass:

“Some weeks or months ago, we remarked upon a poem in the Atlantic Monthly from the pen of Walt Whitman... about as much like poetry... as paring one’s corns. Recently the author has appeared in a large volume... and a more scandalous volume we never saw. We had not intended to notice it, but... men and women indiscriminately have conceived that it is a pure book....

“Nothing is more notorious than the fact that when an individual claims to have some light superior to that revealed in the Bible, whether that light be the ‘light of nature,’ simply, or the light of new and direct revelation or inspiration, than that individual almost invariably develops himself toward libertinism... as in the various accounts that spring up from time to time. William Dorrel who, seventy-five years ago, proclaimed himself the Messiah up in Franklin County,
counseled promiscuous intercourse of the sexes and taught as vile stuff as our very nature-prone Walt Whitman does now....

“Spiritualism, whenever it has cut loose from the Bible as the only authoritative revelation from heaven, has gone just as naturally into free-love as water runs down hill. The very first social institution that falls into [trouble] after Christianity as a revelation is discarded, is Christian Marriage, and of all the ‘teachings’ in the world, we know of none that so inevitably lead to impurity as those attributed to ‘nature’.... Now Walt Whitman is par excellence the ‘poet of nature.’ In his pure taste, there is nothing unclean because nothing seems unclean. Nature has free course in him, and runs and is clarified in all its issues. Those passions which degrade men and lead to nine-tenths of the crime of the world, he exalts. Those appetites which only a pure, true and life-long love can hallow, are with him appetites to be cherished and fed... no matter about the love. It ought to be enough for Walt Whitman, if he honestly thinks his book a pure one, to know that the pure in society will shun it.”

The post-Christian pantheist and friend of the James family, “Reverend” Ralph Waldo Emerson, said in a letter to Walt Whitman quoted at the library exhibit, “I greet you at the beginning of a great career.” The Springfield editor despised Whitman, but Emerson applauded him. A letter in the James McKeen Cattell manuscript files in Washington tells of Cattell’s walking out, as a young man some thirty years later, along the railroad tracks to Whitman’s home to meet with him. Cattell also obviously endorsed Whitman. The people in cultural control of our American society for many years have been people like Emerson, Cattell, and Walt Whitman, but they promoted a world view that America, as a whole, has always rejected.

Culturally speaking, America is still a captive nation of the Vocal Minority. The exaltation of Whitman is another case of cultural water running uphill, without its being visibly pumped, just as has been happening in Western culture ever since before the French Revolution, with the advent of Voltaire’s “philosophes.” The Vocal Minority has been in control of American culture for a very long time. The fact that they have succeeded, against enormous numerical odds, in capturing and maintaining that control is, at the least, a seeming cultural mystery to which attention is almost never directed.

1861-1879 The Monks of the West, 7 vols., by Count de Montalembert. London translation from the French. This is an exceedingly important historical work, although it is virtually never cited by so-called “experts” on education.

1865 Methods of Instruction, by James Pyle Wickersham of Millersville, Pennsylvania, teachers college, published by J. B. Lippincott, Philadelphia. This is an unparalleled, unself-conscious reporting of the standard, as well as the most-approved, teaching methods in use in 1865. Wickersham seems to have been a very balanced and reasonable educator, as well as a highly respected one, along with his contemporary, Philbrick of Boston. Philbrick and Wickersham met and apparently became very friendly with Ferdinand Buisson of France during the 1876 Philadelphia Exposition, as reported, I believe, in Philbrick’s biography. See the 1886 entry on Wickersham’s excellent history of education in Pennsylvania.

1866 Les Ecoles Episcopales et Monastique de l’Occident, 769-1180, [The Episcopal and Monastic Schools of the West, 769-1180] by Leon Maitre. Paris. Like Montalembert’s 1861-1879 work listed above, this is an important historical source.

1867 Christian Schools & Scholars, 2 Vols., by Augusta Theodosia Drane, London. This unparalleled history by an English nun filled a great void. Yet it has been almost totally ignored, apparently never
being cited in today’s bibliographies, although it was cited by Albert Parry in his 1920 book, listed later. Crumbling copies of Drane’s two volumes are available in the New York Public Library.

1868 English Visible Speech for the Million; For Communicating the Exact Pronunciation of the Language to Native or Foreign Learners and For Teaching Children and Illiterate Adults to Read in Few Days, by Alexander Melville Bell, Lecturer on Elocution in University College, London. [He was the father of Alexander Graham Bell, the inventor of the telephone]. Simpkin, Marshall & Co, London; London and New York: N. Trubner & Co.

On the first page of this work, Bell wrote:

“... in the Inaugural Edition of Visible Speech, it was stated that by means of the self-interpreting Universal Alphabet which constitutes the system, a person of ordinary capacity would LEARN TO READ in a few days. It might have been added, that an ILLITERATE person may even be HIS OWN INSTRUCTOR! This little work affords the means of experimentally establishing both of these facts. Any person who can merely pronounce the NUMBERS 1 to 8 in the ordinary way and name the objects represented in the Alphabet Table (page 9) may be immediately taught to READ or may easily TEACH HIMSELF..... The object of visible speech is not - as some have supposed - to supercede ordinary letters. No revision in ... orthography is aimed at. The system simply furnishes a key to all letters....”

The elder Bell and his work on speech were famous in his day. In the movie, My Fair Lady, a musical version of George Bernard Shaw’s play, Pygmalion, based about 1900 in England, Eliza is told to improve her speech using “Bell’s charts.” That detail probably appeared in Shaw’s original work. Shaw must have learned of those charts in the late nineteenth century.

Another of Alexander Melville Bell’s papers is his Address to the National Association of Elocutionists, published by the Volta Bureau, Washington, D. C., in 1895. In this, he referred to his visit to the Boston schools in 1868. The association of his son, Alexander Graham Bell, with the Boston city school for the deaf as an instructor of its teachers has been discussed in this history. The Boston city school at that time taught the deaf by lip-reading “sound” and not by signs and sight-word “meaning,”

1868-1880, and before and afterwards - Annual Reports of the Quincy School Committee. John Quincy Adams served on the Committee starting in 1870, and Charles Francis Adams in 1872. Colonel Francis Wayland Parker commenced as Superintendent of Quincy in April, 1875, and left in 1880.

1868-1880, and before and afterwards - Annual Reports of the Boston School Committee. These are very large and impressive printed volumes, far more impressive than the Quincy, Massachusetts, annual reports and those like them. I did not see the 1873 Boston report, although it may have been in the Harvard library with the other reports which I did see. However, a note in a later volume referred to the report of Dr. George F. Bigelow, “former Chairman of the Committee on the Schools,” which had been printed in that Annual Report for 1873. The following comment was made concerning Dr. Bigelow’s report:

That article by Dr. Bigelow in the 1873 Annual Report of the Boston School Committee should be of real historical interest.
1873 Rapport sur l’Instruction Primaire a l’Exposition Universelle de Vienne en 1873, by Ferdinand Buisson, Paris. This reports briefly on current American reading materials exhibited at the 1873 Exposition in Vienna, Austria, and also reports on the European reading materials.

1873 Journal of the Proceedings of the National Educational Association. Contains articles by Dr. Edwin Leigh on Leigh phonetic print, and by Farnham on his sentence method. It was in 1873 that Leigh print was at the height of its success. Yet the “psychological” article by Farnham promoting his sentence method implicitly condemned Leigh’s phonic print, and Leigh’s article immediately followed Farnham’s. The placement of those two articles in the widely read NEA Journal appears to have been deliberate by Leigh’s opponents, because it was immediately after their publication that Leigh print almost went out of use. Farnham’s faulty “science” enshrining “meaning” must have sounded very convincing to many school superintendents.

According to Dr. C. C. Fries in his May, 1964 article, “Linguistics and the Teaching of Reading,” in the May, 1964, The Reading Teacher, the 1873 Journal also contained an article on Pitman phonetic print on pages 207-219, but that is in error. When I contacted the NEA Archives, they could find no entry in that publication for Pitman print. They did send me copies of Leigh’s and Farnham’s articles from the 1873 Journal. Apparently, Dr. Fries had learned that the 1873 Journal had an article on pronouncing print, and assumed that it was Pitman print, most probably because he had never heard of Leigh print. That would hardly have been surprising, because the fact that Leigh print had ever existed largely disappeared from the literature after about 1880.

1874 Agassiz and Spiritualism, Involving the Investigation of Harvard College Professors in 1857. Allen Putnam (1802-1887). 70 p. Colby & Rich, Boston. This is listed in The New York Public Library catalog under call number *Cpv 3260. A passing reference to the existence of this material has been made in this history, although I have not seen it. Since this 1874 material by the 72-year-old Putnam, published a year after the famous Agassiz died in 1873, concerned a very old 1857 investigation, it conceivably was intended as a debunking response to the highly favorable publicity that Agassiz received after his death.

1874-1920 The School Bulletin and New York State Educational Journal, Syracuse, New York (from September 17, 1874 to 1920) Published monthly by C. W. Bardeen, Syracuse, New York. It is shocking that no copies at all of this historically enormously important periodical are at present in the Syracuse library (Onandago County Library), even though it had been published for 46 years in the city of Syracuse and had been sent for 46 years not just to New York State but all over the United States. It is also shocking that no copies were at the Syracuse University Library, until a large number of incomplete volumes turned up about 1960 in the basement of the building that had been occupied by its publisher, Bardeen, until 1920, which copies were then donated to the university. Spotty, incomplete collections are at various libraries in the country. Yet no complete collection is apparently in existence, even though Bardeen had advertised that complete collections were available for libraries who wished to order them as historical documents. Nevertheless, the Syracuse public library has the 1932 “nostalgic” McGuffey editions donated by Henry Ford, which serve to support the outrageous McGuffey Myth!

1878 Rapport sur l’Instruction Primaire a l’Exposition Universelle de Philadelphie en 1876, by Ferdinand Buisson. Imprimerie Nationale, Paris. This is a gold mine of information on American reading methods at that period. The English translation of part of Buisson’s report, available in some libraries, is of little use, however, omitting most of the information concerning reading instruction.
1876 The American Catalogue Under the Direction of F. Leypoldt, Subject Entries of Books in Print and for Sale (Including Reprints and Importations), July 1, 1876. Compiled by Lynds E. Jones. (Also supplements in later years, as indicated, reprinted by Peter Smith, New York: 1941.)

1876 The Invention of Printing by Theo. L. De Vinne, New York: Francis Hart & Co., 1876. This is a remarkable history.

1870’s to 1900’s New York School Journal, published weekly by E. L. Kellogg & Co., New York, New York. Although this publication dating from perhaps the 1870’s until after 1900 was heavily biased towards the activists, it is nevertheless a useful source of information. It is difficult to locate copies, however.

1877-1883 The Primary Teacher, A Monthly Magazine. The New-England Publishing Co., No. 16 Hawley Street, Boston, Massachusetts, Thos. W. Bicknell, Publisher; also, from 1880, William E. Sheldon, Editor. Volume No. 1 of The Primary Teacher was dated October, 1877. Magazine later claimed it had 10,000 subscribers, nationwide. The company also published the more important New-England Journal of Education. The Primary Teacher largely reflected “expert” opinions (Mrs. Rickoff, S. S. Greene, etc.) In September, 1883, merging with two other publications, it became The American Teacher, with editors Thos. W. Bicknell, Wm. E. Sheldon, and W. N. Hailmann (the promoter of kindergartens), with its publishing offices still at No. 16 Hawley Street, Boston, Massachusetts. How long The American Teacher continued to be published is not known. Copies of The Primary Teacher and The American Teacher are in the Harvard libraries.

Nineteenth-century journals such as this are of particular interest for the advertisements they carry, reflecting current practices and materials. For instance, one of the advertisers from 1879 to 1883 was Milton Bradley & Co., Springfield, Massachusetts, who offered its catalogue, saying they were manufacturers of kindergarten materials, primary school aids, and elementary apparatus. Such a catalogue would be illuminating concerning actual practices being promoted in the late 1870’s. Milton Bradley is still, today, an important producer of school supplies, and might have copies of its old catalogues available for reference.

About 1877, possibly until well after 1900 - The New-England Journal of Education, Thos. W. Bicknell, Publisher, Boston, Massachusetts. This should be comparable to the School Bulletin published by C. W. Bardeen in Syracuse, New York, and presumably also has real historical value.

1878 Paris Universal Exposition, 1878, John Dudley Philbrick. (New York Public Library has this material on film, under the catalog number *368. Although I have not seen it, some of its comments may be of interest, because of the date of 1878 and the fact that its author, Boston Superintendent of Schools Philbrick was fired in 1878 in a power play which particularly concerned methods to teach beginning reading).

1880 The Spelling Reform, Francis A. March, U. S. Bureau of Education, Circulars of Information. This is listed in the Library of Congress catalog under L111.A5, 1880, No. 7. My request for it in 1988 or 1989 was returned with the note, “Not on Shelf.” I was given permission to check the shelves myself, and it and many other volumes of U. S. Bureau of Education materials were missing: 1871, 1872, 1875, 1876, 1878, 1880, part of 1884, 1895, 1896, 1897 and 1901, (However, I did find, either before or after that time, 1878, No. 2, Elementary Education in London.) Considering the facts that the renowned philologist March had been a student of Noah Webster, and had been James McKeen Cattell’s favorite professor at
Lafayette College before Cattell’s graduation in 1880, anything March wrote on the topic of spelling should be of great interest. Naturally, many of the other missing volumes would have been of interest, such as L111.A5 1884 No. 3, Illiteracy in the United States 1870-1880, by Charles Warren; and U. S. Office of Education, American Education in the Exposition to Be Held in Vienna in 1873. I specifically checked for this one myself. It is conceivable that the missing volumes are elsewhere than on the proper shelves with the existing volumes, because of a “glitch” in the filing system, since I did receive one for 1878 on another occasion. See the two Circulars of Information listed below under 1885.

1882 Tracts for Teachers - No. 1, Spelling. Colonel Francis Wayland Parker, Boston. Colonel Parker was the enormously influential first superintendent of schools in Quincy, Massachusetts, hired when the Adams brothers were on the school committee. He then went on to the Board of Supervisors of the Boston schools from 1880 to 1883, after which he became in January, 1883, head of the experimental Practice School at the Cook County Normal School, Chicago, and of the Normal School itself, both of which he made famous. Parker wrote very little himself, which makes this pamphlet and a few others of particular importance. Although this pamphlet concerns spelling, it also contains Parker’s ideas on beginning reading, and he emphatically endorsed teaching beginning reading by “meaning.”

See also the Quincy, Massachusetts, annual school reports from 1875 to 1880, while Parker was superintendent there, which include the reports Parker actually wrote himself. See also the 1895 entry, Course of Study at the Cook County Normal School, Chicago, Illinois, which was available at the University of Chicago Library in the summer of 1996, and which included a report written by Parker. (By 1896, Cook County Normal School was publishing and selling a considerable list of materials written by other staff members.) The University of Chicago library had, in the summer of 1986, a copy of a master’s degree thesis written in 1914 by Mary Agnes Riley, A History of the Chicago Normal School (1856-1906) which includes a considerable amount of background material on Parker and the Normal School. It includes a biography of Parker, part of it actually autobiographical, taken from “an appendix to a book entitled ‘School Days of the Fifties’ by William M. Giffin, Dept. of Mathematics, Cook Co. Normal.”
The Course of Study mentioned above was, I believe, filed with that thesis at the time I saw it, as it is listed in its table of contents as part of its Appendix. See also the 1883 and 1894? materials concerning Parker.

1882 Vier Seltene Schriften des Sechzehnten Jahrhunderts, by Heinrich Fechner (1845-?). “Mit einer bisher ungedruckten Abhandlung uber Valentinus Ickelsamer, von Friedrich Ludwig Karl Weigand.” (F. L. K. Weigand: 1804-1878) Reprinted by Hildesheim, New York 6 Olms. 1972. Reprint of the edition published in Berlin by Weigandt und Grieben in 1882. Library of Congress call number PF 3109.C45 1972. This was not available when I requested it from general circulation, but I received a message “Check CCF,” although I did not do so. For those who read German, this should be helpful on reading history. G. Stanley Hall stated that H. Fechner’s Die Methoden des ersten Leseunterricht, pp. 304 (or 314), Berlin, 1882, was “very valuable historically, based on careful extensive study of original [authors].” Possibly Hall was referring to a chapter of the 1882 material listed above.

1882 Les Ecoles et Colleges en Province, by Mateau. Dijon, France.

1882 Boston School Committee, Supervisors’ Board, Report on the Subject of a Spelling Book - 1882. (School Document No. 13). (This is listed in the New York Public Library catalog under the call number RNE. Although I have not seen it, it should be of interest in connection with the Boston schools material already quoted.)
1882 *Monumenta Ecclesiae Anglicanae, Vol. III*, by Edward Maskell. This is concerned almost totally with the history of the primer before the printing press was invented. The primer, of course, originally was the layman’s prayerbook, and not a child’s beginning reading text.

1883-1887 *The Works of Orestes A. Brownson, 1883-1887*, Detroit, and AMS Press, Inc., New York, 1966, a collection of the writings of Orestes Augustus Brownson (1803-1876). Samuel L. Blumenfeld’s book, *Is Public Education Necessary?,* 1981, 1985 (pages 95, 96, and 113) quoted from *The Works of Orestes A. Brownson, Volume V,* p. 62, and Volume XI, p. 442-443. Those quotations establish that Brownson had been involved in 1829 and 1830 with Robert Owen’s son and other activists who were attempting to establish government schools with mandatory attendance laws, from which all religious teaching was to be excluded. That 1829-1830 American group of Owenites had been associated with Robert Owen’s short-lived socialist colony at New Harmony, Indiana, that had been founded in 1826. Some of Brownson’s comments which Blumenfeld quoted are given below. However, to understand the extent of the organization to which Brownson referred, it is necessary to read all of Blumenfeld’s book, which contains many other quotations from original sources. The following remarks by Brownson are from Blumenfeld’s book, although the order of Brownson’s remarks has been rearranged in the following:

“The great object was to get rid of Christianity, and to convert our churches into halls of science. The plan was not to make open attacks on religion... but to establish a system of state, - we said national - schools, from which all religion was to be excluded, in which nothing was to be taught but such knowledge as is verifiable by the senses, and to which all parents were to be compelled by law to send their children.... The first thing to be done was to get this system of schools established. For this purpose, a secret society was formed, and the whole country was to be organized somewhat on the plan of the carbonari of Italy, or as were the revolutionists throughout Europe by Bazard preparatory to the revolutions of 1820 and 1830. This organization was commenced in 1829, in the city of New York, and to my own knowledge was effected throughout a considerable part of New York State. How far it was extended in other states, or whether it is still kept up I know not, for I abandoned it in the latter part of the year 1830.... It would be worth inquiring, if there were any means of ascertaining how large a share of this secret infidel society, with its members all through the country unsuspected by the public, and unknown to each other, yet all known to a central committee, and moved by it, have had in giving the extraordinary impulse to godless education which all must have remarked since 1830....

“How far the secret organization extended, I do not know: but I do know that a considerable portion of the State of New York was organized, for I was myself one of the agents organizing it.”

Brownson went on to become a well-known lecturer and editor, and was an associate of people like Ralph Waldo Emerson, Nathaniel Hawthorne, Elizabeth Peabody, and the Transcendentalists, before Brownson himself became a Catholic convert. The point is that, although Brownson was a colorful man, he does not appear to have been an unreliable man, so his testimony may be taken at face value: He testified that “movers and shakers” in 1829 and 1830 were consciously trying to shape American education secretly, and to establish government schools and mandatory attendance laws in order to remove religion from American society. There were obviously many members of this secret society, but his is the only known testimony to its existence. It would therefore appear that such activist groups leave little trace in the records. His personal knowledge of such a secret group, which clearly emanated from the Scottish and English Owenites, dated from 1829. That group may well have had an older parent group in the Owenite circle in England or Scotland. The record suggests that the sudden switch in America from the “syllable” (“sound”) method in 1825 to the “word” (“meaning”) method by about 1830 was very
likely one of the achievements of such a group, as was the eventual establishment of government schools in America and in Great Britain. The “word” method for English has been the siamese twin to the movement for government schools in English-speaking countries: Wherever government schools arrived in those countries, the “meaning” method for learning to read in English has always arrived attached to them.

See also the 1829, 1836 and 1838 entries concerning Wood’s school in Edinburgh, Scotland, possibly supported by the same kind of activists as those Brownson described.

1883 Method of Teaching Reading in the Primary Schools, Board of Supervisors for the Public Schools of Boston. This critically important document, available in the files of the Boston city schools, has been discussed in this history. Mitford Mathews discussed it in his 1966 book, Teaching to Read, Historically Considered, listed later. This 1883 publication endorsed the “meaning” method, thereby implicitly outlawing the use of Leigh print phonics (the “sound” method). For ten years before Superintendent Philbrick was fired in 1878, Leigh print phonics had been increasingly adopted in the Boston schools because of its great success. Yet the use of Leigh print phonics was implicitly outlawed only a few months later in 1878 by the new published curriculum. However, the 1883 material is far more elaborate concerning the teaching of beginning reading than the 1878 material. The 1883 material describes in essence the “meaning” methods that have been used in American schools ever since. Yet it is certainly not widely known nor in constant use as a fundamental reference in “reading instruction” texts promoting “meaning,” though it certainly should be. The fact that it is not is a good index of the hopeless inadequacy of “reading instruction” history.

1883 Notes of Talks on Teaching, Given by Francis W. Parker, at the Martha’s Vineyard Summer Institute, July 17 to August 19, 1882, Reported by Lelia A. Patridge, Fourth Edition. New York: E. L. Kellogg & Co. This was quite famous in its time. Parker had already left as a Boston Supervisor (where he had been from 1880 after having been in Quincy as Superintendent from 1875 to 1880). Parker took over in Chicago in January, 1883, as head of the Cook County Normal School and Practice School. See also the 1882, 1894?, 1895 and 1914 entries concerning Parker.

1884 The BAC (sic) bothe in latyn and in Englysshe... Col.: Thus endeth the ABC translated out of Laten to to (sic) Englysshe with other devote Prayers. Impringted at London in Paules Chyrche yarde at the sygne of the maydens heed by Thomas Petyt. (c. 1538), 8 leaves. Reproduced in facsimile by Shuckburgh in 1884 from a copy in the library of Emmanuel College, Cambridge. Andrew Tuer reproduced the first page of the Shuckburgh c. 1538 “BAC” ABC book on page 378 of The Horn Book, and a copy is in Appendix A of this book.

H. Anders described it in his article “The Elizabethan ABC with the Catechism,” published in the publication of the Bibliographical Society, The Library, A Quarterly Review of Bibliography, Fourth Series, Volume XVI, Oxford University Press, London, 1936. Anders said this circa 1538 sixteen-page book was the first surviving printed ABC book in English or at least partly in English. He said its contents include the ABC and syllables, Pater noster, Ave Maria, Credo (the preceding both in Latin and English), and the Confiteor. This is followed by graces (prayers), all in English, the book concluding with the Ten Commandments in an abbreviated and rhymed form in English, and a few more short English prayers.

The “BAC” that the printer, Thomas Petyt, accidentally set up in the title about 1538, instead of the proper “ABC,” is rather amusing, because it constitutes possibly the longest-living and best publicized misprint in history.

Comparative Reading (listed later), Grashey “maintained on his authority as a psychiatrist concerned with aphasia that the letters successively pass the macula lutea, or yellow spot of the eye, and successively provoke relevant sounds.”

In contrast to American sources ignoring both Grashey’s 1885 work and Messmer’s 1903 work, Biglmaier also mentioned Messmer’s conclusions briefly, besides quoting from Grashey’s.

Cattell’s sight-word experiments were begun at Johns Hopkins in Baltimore in the evening of March 17, 1883, (St. Patrick’s Day, and the same day that the Brooklyn Bridge was finished), at which time G. Stanley Hall and John Dewey were among his subjects. Cattell’s sight-word experiments have been wrongly cited ever since as “proof” for the desirability of teaching sight-words. Yet Cattell is supposed to have lost his interest in his reading experiments after the 1880’s. This seems highly unlikely, since most of the major reading “authorities” and promoters of the “meaning” method from 1900 to 1960 were his intellectual “descendants,” having been associated either directly with him, or with someone who was very closely associated with him, such as Thorndike or Gates.

Although Sokal did not emphasize the importance of Cattell’s reading research, he nevertheless reported chronologically on its development, which is very helpful. G. Stanley Hall arrived as an instructor in the January, 1883 term at Johns Hopkins, and set up a psychological laboratory. On March 17, 1883, Cattell reported on his reading experiments with Cattell’s newly devised equipment, recording in his journal:

“I have discovered some work in the psychological laboratory that may be of interest.”

Sokal reported that Cattell’s subjects for his reading experiments included Hall, Dewey, and Joseph Jastrow.

On December 30, 1883, Cattell wrote his parents from Leipzig, where he was studying with Wundt:

“I am getting a piece of apparatus made, which I have invented in order to carry on the work I began at Baltimore. I have written to Dr. Hall, hinting that I would like to have my notes and papers. I am not anxious that he should publish a paper, which would give him credit, which he does not deserve. If magazine editors do not see fit to print my work under my name, it need not be published at all.”

In a letter to his parents on June 14, 1884, from Massachusetts, Cattell wrote:

“When we came to talk of that paper, we had some trouble. Dr. Hall wanted to print it in a way not satisfactory to me, and so I asked him to give me back my papers & notes. I do not know what the end of the affair will be....”

Cattell wrote his parents from Germany on August 13, 1884:
“Dr. Hall even when provoked at me, told me my work is the best that has been done in England or America...”

Hall may, of course, have also been referring to Cattell’s later work in Germany. Cattell wrote his parents from Leipzig on October 27, 1884:

“I received my papers from Dr. Hall today without a word of comment or explanation.... Dr. Hall knew that the fellowship [Ed.: at Johns Hopkins, Baltimore, for 1883-1884] would not be given to me (he had already recommended that it should not) when he got my papers from me. He therefore got them under false pretenses. He said my work ought to be printed immediately, less some one else should anticipate it, and promised to print it in Mind for Sept. ‘83. But he really wanted to get possession of the papers, knowing that I could not finish the work at Baltimore. He wanted half the credit for work to which he had contributed nothing, and in the end was not satisfied with this, but tried to get it all... His suggestions to me when I was working at Baltimore were most silly.... if he improperly uses my notes, I will bring suit against him.”

In a letter to his parents from Leipzig on March 15, 1885, Cattell wrote:

“I am going to have a paper in the next number of Wundt’s ‘Philosophische Studien’.... This paper contains about the work they did not give me my fellowship on, and which Dr. Hall wanted to appropriate....”

Cattell was referring to the 1885 paper listed above. Cattell wrote his parents from Cambridge on February 18, 1887:

“I read tonight at the meeting of the Moral Sciences Club a paper on The Time it Takes to Think.”

Cattell later wrote:

“The same paper metamorphosed to ‘Recent Psychophysical Researches’ I read at the Aristotelian Society next Monday.”

On February 21, 1887, Cattell wrote his parents from London:

“I... read my paper at the Aristotelian Society. They seemed to like it better than I had expected, and the discussion was kept up until nearly eleven.”

Cattell wrote his parents again from Cambridge on May 24, 1887, about “a paper I have just finished....”

Sokal’s footnote said the paper was “The Way We Read,” a revision of Cattell’s February 21, 1887, paper before the Aristotelian Society. Cattell wrote his parents on May 28, 1887, stating:

“You will be glad to hear that the ‘Nineteenth Century’ will print a paper of mine. Mr. Knowles, the editor writes ‘the M.S. on ‘The Way We Read,” which you very kindly offer me for my review, I gladly accept it.’ He also makes the unusual request, ‘I should feel most grateful to you if you could and would kindly expand it a little’!”

Cattell wrote his parents again on November 15, 1887, from Cambridge, saying:
“I am pleased to get tonight a letter from the editor of the Nineteenth Century. I sent him a
second MS long ago asking him if he preferred it to the first. He replied to Tyrol and I did not get
his letter. Now he writes inter al, `I shall lose no time in sending you proofs of both your
everally interesting papers, which I shall hope to publish at the earliest possible date.’”

Sokal’s footnote identified the second MS as “The Time It Takes to Think,” an abstract of Cattell’s
experiments on reaction time. Sokal said “The Time It Takes to Think” was published in 1887 on pages
817-830, volume 22, of The Nineteenth Century, but “The Way We Read” was not published.

Cattell’s paper, “The Way We Read,” which is critically important historically, is now lost, since it
was never published and only the first page of his typed four-page paper is in the Cattell manuscript files
at the Library of Congress. What ever happened to those last three pages?

However, the sequence of events listed above suggests that Cattell certainly considered his reading
experiments to be of real importance, and that he may well have carried out his interest in them through
his students and associates. After all, Cattell’s research results have been cited for years as “proof” of the
“necessity” to teach whole words to beginning readers.

As discussed in this history, Cattell concluded that people read words as wholes faster than by
considering their individual letters. (Cattell obviously had not heard originally anything about reading by
syllables, or anything about the ancient belief that reading is done by syllables, not by whole words or by
isolated letters.) Apparently, Cattell based his conclusion on the fact that his subjects pronounced aloud
the letters they were reading at about the same speed as the whole words they were reading. Unless there
was more to his experiment than the report of it, his conclusion was an extraordinarily stupid one, because
letter names are themselves words. After all, there should be no appreciable difference in pronouncing
“dee” (“d”) and “cat,” or the digit “8” and the printed word, “eight.”

1885 Circulars of Information of the Bureau of Education, No. 1 - 1885, City School Systems in the
Superintendent of Schools.

1885 Circulars of Information of the Bureau of Education, No. 2, 1885, Teachers’ Institutes,

1886 A History of Education in Pennsylvania... from the Time the Swedish Settled on the Delaware
to the Present Day. James Pyle Wickersham. Published for the Author. Lancaster County. Inquirer
Publishing Company, 1886. Copyrighted James Pyle Wickersham, 1885. This very important history is
also very ignored.

This should provide an overview of what the “expert,” G. Stanley Hall, considered important in 1886.

1886 Poison Drops in the Federal Senate, by Zach Montgomery. I have not seen this reprinted book
which was out of print when I attempted to order it, but it may be of historical interest. It was reviewed
some time ago by The Barbara M. Morris Report, Upland, California, as follows:

“First published in 1886! This study of the legal and moral implications of universal
compulsory schooling is an education for those who still believe ‘public education’ can be
improved. It could have been written today.”
1886? John Dudley Philbrick, 1818-1886, by Larkin Dunton, a biography of the former Boston Superintendent of Schools, fired as a result of activist influence in 1878, as discussed in this history. Library of Congress call number LA 2317.PP5508. That Philbrick was fired as a result of activist influence is clearly confirmed by the following excerpt of January 8, 1881, from The Standard, a morning paper in Syracuse, New York:

“Superintendent Philbrick has written an ugly letter in criticism of the public schools of Quincy, Massachusetts. These schools owe their present fame to the successful efforts of Superintendent Parker, who was... supported by John Quincy Adams, Jr., and by other intelligent and influential gentlemen. The marked success at Quincy did much to throw a shadow over the Boston schools which were then under the supervision of Mr. Philbrick. In the subsequent efforts made to advance the schools of Boston, a number of changes were made, in the midst of which Mr. Philbrick lost his place....”

The fakeries of the so-called “marked success at Quincy” and the “efforts made to advance the schools of Boston” have been discussed in this history.

Circa 1887 and later - Public School Journal, Bloomington. Rudolph R. Reeder, who wrote the 1900 history of reading listed elsewhere, had been one of its editors before he joined Columbia Teachers College. This publication reflected “expert” opinion.

Also, Thesaurus Paleohibernicus, A Collection of Old Irish Glosses.... Date not known. Edited by Whitley Stokes and John Strachan.

Reference has been made in this history to such glosses. These glosses are the marginal notes in Gaelic written by scribes on works they were transcribing, usually Latin works. They are a curious window on that period, over a thousand years ago.

1887 Schools, School Books and Schoolmasters, by W. C. Hazlitt, London.

1887 Dictionnaire de Pedagogie et d’Instruction Primaire, Ferdinand Buisson, Editor. Librairie Hachette et Cie., Paris. This is a gold-mine of information, particularly the article, “Lecture.”

1887 The Time It Takes to Think, James McKeen Cattell. Published in Nineteenth Century [England], 22 (1887). Also see notes under 1885.

1887 The Way We Read, James McKeen Cattell, May 28, 1887, described in Sokal’s book as a revision of Cattell’s talk at the Aristotelian Society, London, on February 21, 1887, which Cattell said had aroused considerable interest at that meeting. The revision was never published in the Nineteenth Century periodical as Cattell had expected. Only the first page of Cattell’s four-page paper remains in the Library of Congress Cattell manuscript files, so what Cattell’s original thesis was can only be surmised. Also see notes under 1885.
1888 Blessed J. B. de la Salle, by Armand Ravelet. Paris. This is a biography of the founder of the Christian Brothers. J. B. de la Salle founded the order, meant to teach poor boys, in late-seventeenth-century France. Ravelet also wrote L’Instruction Primaire Dans les Campagnes Avant 1789, Troyes: 1875, on primary instruction before 1789, according to Brother Azarius, whose book, Essays Educational, is listed later under 1896. Azarius cited Ravelet’s latter work along with others in his chapter, “Primary School.” One of the others Azarius mentioned, which has not been obtainable, was Babeau’s L’Instruction Primaire, published in 1875.

1889 La Reforme de l’Education en Allemagne au Dix-Huitieme Siecle, Basedow et le Philanthropinisme, by Auguste Pinloche, Armand Colin et Cie., Editeurs, Paris. This very long volume in French on the work of Johann Bernhard Basedow and on his school was probably Pinloche’s doctoral dissertation, and it is a source of detailed historical data. The erratic Basedow is of critical importance for an understanding both of reading instruction and of general education. Basedow’s once-famous school, founded in Germany in 1774, and supported financially by many of the “great” in Europe, was built on both John Locke’s and Rousseau’s ideas on education. Basedow’s school was a forerunner of Pestalozzi’s, and many later important German educators had some early association with the school. An excellent brief source in English on Basedow is the 1859 article in Barnard’s American Journal of Education, Johann Bernhard Basedow and the Philanthropinum, translated from the original German of Karl von Raumer.

1890 Lives of the Saints from the Book of Lismore, edited with a translation, notes and index by Whitley Stokes, Oxford, at the Clarendon Press. A portion of this material has been quoted in this history.

1890 Ireland’s Ancient Schools and Scholars, by Archbishop J. Healy, London. This is helpful concerning education in ancient Ireland.

1890 Banbury Chap Books and Nursery Toy Literature of the 18th and Early 19th Century, With Impressions from Several Hundred Original Woodcut Blocks, by Edward Pearson. Pearson’s book had first been published in 1890 and was republished in Burt Franklin Research and Source Works Series, No. 98, Burt Franklin, New York, a copy of which is now in the Williamsburg foundation library in Virginia. Jonathan Swift’s name was associated with a 1770 Dublin edition of a Royal Primer, presumably a variant of Newbery’s, to judge from an entry in this book.

On pages 172 through 174, James quoted at length the memories of Mr. Ballard, a deaf-mute instructor at the National College in Washington, concerning Ballard’s very deep thoughts before he began to learn language at the age of eleven.

Ballard’s remarks had originally appeared in an article by Samuel Porter, “Is Thought Possible Without Language?” in the Princeton Review, 57th year, pp. 108-12 (Jan. 1881?). Ballard’s memories supported James’ ideas on the “stream of consciousness,” which James thought consisted of a stream of units, each of which were equivalent to a meaningful “sentence.” (Yet James also quoted M. G. Tarde on page 171, to show that words could be used totally divorced from meaning: “... on the whole, nothing is commoner than trains of words not understood.”) “The pack of cards is on the table,” was the example James gave of a sentence that could be a meaningful unit of the stream of consciousness (page 181).

The subject of teaching language to those born deaf or who were deaf from infancy had, of course, been prominent in Cambridge and Boston ever since 1864, when James attended Harvard, as discussed in
this history. Superintendent Philbrick had started America’s first city day school for the deaf in 1869 (perhaps the first such city day school in the world), which apparently used the “sound” not “sign” method from its inception. As outlined elsewhere in this history, through his years of residence in Cambridge, James had excellent reasons to be well informed on arguments about methods of teaching for the deaf.

On page 380 of The Horn Book, Tuer reproduced the first page of the Allnutt ABC which was all in Latin, a copy of which is in Appendix A. Tuer discussed on page 383 Allnutt’s paper. Only 25 copies of Allnutt’s June, 1891, paper were printed which included “many valuable notes on the ABC and its history by Mr. W. H. Allnutt of the Bodleian Library, Oxford...” Tuer said the ABC reproduced by Allnutt “is printed on four leaves of vellum, with rubricated capitals, and was found imprisoned as binder’s waste in the covers of an old book, where it had remained undisturbed for something like three and a half centuries...” If Tuer is correct in his description, Allnutt’s ABC reproduction of what is probably a pre-1534 Latin edition is only eight pages long, not sixteen like Shuckburgh’s c. 1538 reproduction of the first surviving English ABC.

1892 Christian Education in the Dark Ages, by Rev. Eugene Magevney, S. J., New York. Cited in a bibliography in The Catholic Encyclopedia, 1913. It also appeared as one of the pamphlets in a series of pamphlets by Rev. Magevney entitled the Pedagogical Truth Library, The Cathedral Library Association, New York, 1903. However, it is possible that his whole series dated to 1892 and that the 1903 material was a reprint.

Another pamphlet in Rev. Magevney’s series was entitled The Reformation and Education - 1520-1648. On page 17 of that work, Rev. Magevney wrote, “In every parish, in well nigh every village, parochial schools were flourishing. There were 30 such schools for girls alone in Paris as early as the 14th century, and, be it remarked that these schools had been established... by a series of synodical ordinances stretching from the sixth to the sixteenth centuries...”

Those latter comments support the supposition that basic literacy was far more general before 1500 than has been generally reported.

1892 “The Knowledge of Greek in Ireland Between A. D. 500 and 900,” by Rev. Dr. Geo. Stokes, in Proceedings of the Royal Irish Academy for 1892, Dublin, Ireland. (Some of the articles in these R.I.A. volumes, which date from before 1840, are a remarkable source of information on ancient Ireland. See other entries listed under 1844.)

1893 Enseignement Primaire a l’Exposition Colombienne de Chicago, Benjamin Buisson. Librairie Hachette et Cie, Paris. This was of little importance concerning reading, and was in no way comparable to Benjamin Buisson’s earlier materials, but the long report may be of interest for specialized purposes.

1893 Educational Journals in the State of New York, by C. W. Bardeen, C. W. Bardeen, Publisher, Syracuse, New York. Missing pages 9-16 in the volume presently in Onandago County Library, Syracuse, New York. The binding showed no sign that pages had been ripped out. This was a paper read July 28, 1893, before the Department of Educational Publications of the International Congress of Education at the World’s Columbian Exposition, Syracuse, New York. See comments from this paper reported under the 1836 entry for Orville Taylor.

1893 (?) “Spelling.” - An article by Miss A. E. Wyckoff, in Pedagogical Seminary, Vol. II, p. 450, Clark University, Worcester, Massachusetts. Cited in E. L. Thorndike’s article, “Spelling,” entered later under 1901, its probable date. The probable 1893 date was given in Jean Chall’s bibliography in Learning to Read. Pedagogical Seminary was published at Clark University where G. Stanley Hall was President. Thorndike quoted Miss Wyckoff and then commented on her remarks concerning spelling failure, which remarks have been reproduced in this history.

1895 Course of Study at the Cook County Normal School, Chicago, Illinois, by Colonel Francis Wayland Parker. I saw a copy of this in the summer of 1996 at the University of Chicago Library, and it included a report by Parker. This publication was attached, I believe, to the 1914 master’s thesis listed later, entitled A History of the Chicago Normal School (1856-1906) by Mary Agnes Riley. See also the 1882 entry for Parker’s Tracts for Teachers - No. 1, Spelling, Boston, and the 1883, 1894? and 1914 entries concerning Parker.

1895 The Heart of Oak Books, Edited by Charles Eliot Norton, Second Book, D.C. Heath & Co., Boston: 1895 (1902). According to “Notes” on pages 165-166 of this book, the authorship of the anonymous The History of Little Goody Two Shoes of 1765 was attributed to Oliver Goldsmith by Washington Irving, William Godwin and the engraver Bewick. Goody Two Shoes is very specific in its references to teaching reading by the syllable method in a dame school. A portion of the Goody Two Shoes story is reproduced in The Heart of Oak Second Book, and a part of that has been quoted in this history.

1896 English Schools at the Reformation, A. F. Leach, Westminster. Leach was an academic Jekyl and Hyde, because he was an excellent researcher but a very bigoted author. However, because he was an excellent researcher, his factual data concerning pre-Reformation schools is invaluable. See the 1963 entry by W. E. Tate of York, England, for a reasonable and learned critique on Leach’s work.

1896 Essays Educational, by Brother Azarius (P. J. Mullany), D. H. McBride & Co., Chicago. The depth of the learning of this author, a member of the Christian Brothers, was very remarkable. As mentioned elsewhere, he took the time in the chapter, “M. Gabriel Compayre as an Historian of Pedagogy,” to comment on the many scholarly shortcomings of the renowned French educational “expert” of the period, Gabriel Compayre. Compayre was a very fallible French authority on higher education, accepted by American “experts,” about the same time that Ferdinand Buisson was accepted by
them as a French authority on primary education. Commenting on the influence of these two men, Brother Azarius said on page 280: “Will the Buissons and the Compayres continue to write our histories, and formulate our theories of pedagogy? Children of the Revolution, they find all excellence, all modern progress, all educational reform growing out of that terrible upheaval. Inimical to the Church, they can see nothing good come out of Nazareth.”

1897 “On Some Waxed Tablets Said to Have Been Found at Cambridge,” by T. M’Kenny Hughes, published in Volume LV of Archaeologia: or Miscellaneous Tracts Relating to Antiquity, Published by the Society of Antiquaries of London, Printed by Nichols and Sons, London, England, Pages 257-282. This is a remarkable article tracing a host of historical references to wax tablets and their use. It was prompted by a Cambridge workman’s unearthing and bringing to Hughes some circa 1300 A. D. waxed tablets.

Quantz was at the University of Wisconsin, where Joseph Jastrow was located. Jastrow had been a fellow graduate student of Cattell’s at Johns Hopkins in 1883 and had been one of the subjects along with John Dewey, G. Stanley Hall, and others in Cattell’s reading experiments when they were begun on March 17, 1883.

G. Stanley Hall had received his doctorate from William James at Harvard in 1878, after having studied with Wundt in Germany in 1877 where he had been a subject in Wundt’s reaction time and perception experiments. Cattell’s initial perception experiments at Johns Hopkins in 1883 were obviously inspired by the reports on Wundt’s work given by Cattell’s instructor, G. Stanley Hall. Cattell devised a rotating drum on which letters were pasted, and the drum was placed behind a screen with slits in it so that the letters were very briefly exhibited when the drum was rotated. Cattell timed his subjects’ speed and accuracy in reading the material.

Jastrow, one of Cattell’s subjects in 1883, was later at the University of Wisconsin, where Quanzt was located in 1897. In 1914, Starch was at the University of Wisconsin when his work on reading was published, listed later. Jastrow’s possible continued interest in Cattell’s experiments may have instigated the 1897 and 1914 work at the University of Wisconsin, since before 1915 only a very small amount of reading research had been done, according to Gray’s list.

Gray wrote in 1917 about Quantz’s 1897 work:

“Reports the results of an investigation with 50 Juniors and Seniors of the University of Wisconsin to determine the normal and maximum rates of oral and silent reading, and to determine some of the factors and conditions upon which rate of reading depends.”

The first work in the literature on reading rate was G. J. Romanes’ in England. Gray stated that on pages 136-37 of Romanes’ Mental Evolution in Animals (1884), Romanes had reported:

“the results of an investigation with ‘practiced readers’ to determine the speed of silent reading and the factors conditioning it... “

Sokal recorded that Romanes had given a talk on some unstated topic to the Aristotelian Society in London shortly before Cattell gave his talk in 1887. Gray also listed Adelaide M. Abell’s 1894 study done
under Mary Calkins, who had been William James’ solitary 1890 psychology student at Harvard, as discussed in this history.

In Sokal’s 1981 book on Cattell, An Education in Psychology, he quoted Cattell’s letter of March 22, 1885 to his parents from Leipzig:

“...there was this special work to be finished. I had to make a few simple experiments - what you did last year when you read as fast as you could - on ten persons, and this was a great bother.”

Sokal said this work was reported in Cattell’s first paper, “Uber die Zeit der Erkennung und Benennung von Schriftzeichen, Bildern und Farben,” Philosophische Studien 2 (1885): 635-650. Whether Cattell’s reading speed experiments with his own parents in 1884 were on both silent and oral reading is unknown, but Cattell’s interest by 1884 (or 1883) in reading speed on connected text, not just on his test apparatus, is obvious. Quantz’s and Abell’s studies were done under the influence of Cattell’s fellow psychologists, Joseph Jastrow and William James, so they also very probably shared Cattell’s interest in perception and speed in reading.

1897 New York School Journal, June 26, 1897. This issue lists popular reading series in 1897. Although this publication dating from perhaps the 1870’s until after 1900 was heavily biased towards the activists, it is nevertheless a useful source of information. It is difficult to locate copies, however.

1897 Three articles, Forum, New York, on testing of spelling and arithmetic carried out over 16 months from February, 1895 by Joseph Mayer Rice, M. D. Two articles were entitled “The Futility of the Spelling Grind,” April and June, 1897, Volume XXIII, p. 163-172 and p. 409-419. Rice’s third (1897?) article in the series was presumably on his arithmetic tests. The articles were the basis for Rice’s Scientific Management in Education, Publishers Printing Company, New York, 1913.

This is a chaotic assemblage of very useful information on materials for teaching beginning reading. Its disorganization is so great that it seems to suggest that Tuer’s file drawers had been emptied at random and then just bound in book form. Because of it hopeless disorganization and the fact that Tuer showed almost no understanding of beginning reading methods, his book is probably of little use concerning the teaching of beginning reading except for people who already learned a great deal about the topic.

1899 “The Primary Education Fetich,” by John Dewey, Forum, Vol. XXV, p. 315, 328. Dewey opposed using the period from 6 to 8 years of age to learn to read and write. On pages 382-391 of Popular Science Monthly, January, 1899, the magazine owned by Dewey’s long-standing friend, J. McKeen Cattell some time after 1900, G. T. W. Patrick wrote an article, “Should Children Under Ten Learn to Read and Write?” in which he concluded, “No.” I believe Patrick was a member from Iowa of the still very small American Psychological Association, but I have lost my source for that data. Dewey, who was also a member of APA along with Cattell, G. Stanley Hall and William James, had already given the
same general opinion in New York Teachers’ Monographs, November, 1898, for children up to eight years of age.

1890’s? The Education of Chaucer, George A. Plimpton. The exact date of the original publication is unknown, but it was republished in 1935 by Oxford University Press. Plimpton also compiled The Education of Shakespeare, republished by Books for Libraries Press, Freeport, New York. Plimpton reproduced materials which he considered to have been used by Chaucer and Shakespeare as beginning texts. As discussed in this history, Plimpton was almost certainly wrong about Chaucer, as the material reproduced, in English and not in Latin or French, was most probably only a Lollard catechism, and not an ABC book.

Rudolph Reeder, in his 1900 history listed later, referred on page 92 of his bibliography to a collection of “New England Primers and Early School Readers,” in New York City. On page 36 of Reeder’s book, in a footnote, Reeder referred to Mr. George A. Plimpton’s Collection, New York City, apparently the same material. It seems very probable that the George Plimpton of the Ginn publishing company about 1930 was not the same man, but was very possibly a relative.

Susan Steinfirst, in her interestingly unpublished dissertation, The Origin and Development of the ABC Book in English from the Middle Ages through the Nineteenth Century, University of Pittsburgh, 1976, referred to an article in 1916 which is of interest concerning Plimpton’s collection. She said that the Proceedings of the Antiquarian Society for 1916 included this material: “The Marks of Merit, with an Article by G. A. Plimpton on Hornbooks and Their Use in America.” That reference reportedly made the claim that G. A. Plimpton owned “an early 16th century Mexican hornbook, believed to be the first on this continent.” If Plimpton were correct in his identification of that material, perhaps it was from the output of the first Mexican press, discussed elsewhere in this history.

1890’s to recent date: Elementary School Journal, University of Chicago, Chicago, Illinois; and Teachers College Record, Columbia University, New York. Microfilms of these two journals are at most major libraries. I do not know the precise dates on which these journals were founded, but after apparently 1890. Of greater historical use are the School Bulletin, Syracuse, New York, the School Journal, New York, New York, and the Public School Journal which was published, I believe, in Bloomington, (Illinois?). Spotty collections of these other nineteenth and early twentieth century journals are at many libraries, including the Library of Congress, and should be consulted as well as Barnard’s American Journal of Education, already mentioned.

1900 “Teaching Deaf-Mutes, Experience of the Institution at Mount Airy in Changing from Sign Speech to the Oral Method,” by Supt. A. L. E. Crouter, LL.D, The School Journal, New York, July 28, 1900. This article by Superintendent Crouter reported on his school’s twenty years of experience in teaching deaf children in Pennsylvania with different methods. It was an abstract of a paper he gave before the N.E.A. Department of Education of Defectives. Superintendent Crouter wrote:

“From 1820 to 1870 the Pennsylvania Institution for the Deaf and Dumb employed the sign or French method, signs being the basis of all mental development and the principal means of communication. In 1870 articulation teaching was introduced, from thirty to forty-five minutes’ instruction daily being given by a special teacher to such pupils as it was thought might be able to learn to speak and read the lips, the rest of the time being devoted to instruction by signs. Experience demonstrated the impossibility of securing the desired results under this method, and in 1881 there was opened a branch school where instruction was given by oral methods exclusively. At the same time two oral classes were formed in the main institution, the pupils of which were taught by oral methods but were permitted to mingle freely with the sign-taught pupils out of school. Practically all approved methods of instructing the deaf were then in
operation under the observation of the same officers, by whom comparative tests were made at stated intervals.

“In no instance were orally taught pupils found inferior to the manually taught, and their progress in language was notably better. The work under separate oral instruction was found to be greatly superior to that done in the oral classes whose pupils were allowed to mingle with manual pupils. The speech and lip-reading of the half-hour articulation classes was less and less satisfactory the longer it was compared with that of pupils taught by purely oral methods, and such instruction was finally discontinued in 1888. On the removal of the school to Mt. Airy in 1892, the two oral classes of the main institution were merged with those from the Oral Branch, and since then only two methods have been employed, the pure oral and the pure manual.

“The oral method has won its way in competition with the manual by sheer force of merit, so that since the establishment of the separate oral department in 1881, when nearly ninety per cent were under manual instruction and only a little over ten per cent, under oral, the conditions have gradually reversed themselves until the enrollment for 1899 showed over ninety per cent. in the oral department and less than ten per cent. in the manual. Since 1892, only 20 of the 493 pupils entered under oral instruction have had to be transferred to the manual department because of inability to learn by speech methods, and their subsequent progress has proved that their failure was due not to the method but to defective mental powers.

“After twenty years’ experimentation with and comparison of methods the school has arrived at the conclusion that proper oral methods - meaning the use of speech and speech-reading, writing, pictures, and the free use of books - are fully adequate to the best education of the deaf, and that when a deaf child cannot be so educated it is useless to hope for any marked success under any other method.”

Supt. Crouter’s comments speak for themselves concerning the appalling fact that in America today the vast majority of deaf children are not taught by the oral method. Furthermore, a great, emotional promotion of the sign method as the “right” of the deaf child has recently been launched, very like the current fevered promotion of the “whole language” reading method for hearing children. Unfortunately, it is undoubtedly true that once the conditioned reflexes underlying the sign method have been firmly established, it must be difficult to use the oral method, just as it is difficult to turn a “subjective” reader into an “objective” reader, because of conditioned reflexes which have become firmly established to regard print as “meaning” bearing and not “sound” bearing. Superintendent Crouter specifically said the two approaches, the oral and sign method, gave poor results when mixed, just as Rebecca Pollard commented in the 1880’s about mixing “sound” (phonics) and “meaning” (sight-words) in teaching beginning reading.

1900 Histoire du Catechisme, Depuis La Naissance de L’Eglise Jusqu’a Nos Jours (The History of the Catechism Since the Birth of the Church Until Our Days), by M. le Chanoine Honoraire Hezard, Cure de St. Pierre de Sens, Published by Victor-Retaux, Libraire-Editeur, Paris. This is a very long and exceedingly scholarly work. Yet this kind of painstakingly researched and fact-studded work has rarely been published since World War I. In my opinion, that is one more indication of our accelerating cultural degeneracy.
1900 American Public Schools: History and Pedagogics, by John Swett, published by American Book Company, New York. Swett was the author on a Barnes/Bancroft reader of 1867 and was a co-author on the Bancroft 1883 series, on which Josiah Royce was also a co-author. That series has been discussed at length in this history. This 1900 history is listed in the Bibliography to Early American Textbooks and is possibly of interest, although I have not seen it.

In 1900, the psychologist, James McKeen Cattell, was a professor at Columbia and the psychologist, Edward Lee Thorndike, Cattell’s and William James’ former student, was an instructor. William James, of course, was the famous psychologist/philosopher and Cattell’s very close friend. In 1904, at Cattell’s urging, the psychologist/philosopher John Dewey, one of Cattell’s subjects in Cattell’s 1883 sight-word experiments at Johns Hopkins, left the University of Chicago to join Columbia. Reeder’s unsatisfactory 1900 history, belittled by Mitford Mathews in his own reading history of 1966 listed below, should be considered in light of Reeder’s likely association with these early psychologists at the small Columbia University of 1900. These men are on record as in some way promoting the use of “meaning” instead of “sound” in the teaching of beginning reading. Reeder apparently also, like Cattell and Dewey, approved of promoting socialism, as he wrote a book of unknown date, Training Youth for the New Social Order, listed in The New York Public Library catalog under call number SSL.

1901 (?) “Spelling,” Teachers College Record, E. L. Thorndike. See the entry under 1893 by a Miss Wyckoff, whom Thorndike quoted, and comments elsewhere in this history.

Henry Suzzallo, who obtained his Ph. D. at Teachers College in 1905, also wrote an article on spelling in 1911 in the Teachers College Record, “The Teaching of Spelling; A Critical Study of Recent Tendencies in Method,” TCR V. 12, No. 5. Suzzallo was also one of the authors on the American Book Company spellers involved in the bid scandal in Texas in 1925, referred to elsewhere. In February, 1982, I requested the first book of Suzzallo’s Everyday Spelling of 1931 from the New York Public Library at 42nd Street. They sent down the second book in a 1936 edition, as they did not have the first. With some exceptions, this was the usual pattern in the New York Public Library and the Library of Congress whenever I tried to get materials concerning beginning reading or beginning spelling. However, Harvard’s vast and remarkable collections more than make up for the deficiencies in those libraries.

1901 The Lay Folk’s Catechism, published for the Early English Text Society, London, 1901. Includes information on the history of catechesis in general, and on the catechism of John Peckham, Archbishop of Canterbury, England, in 1281, and the catechism of John De Thoresby, Archbishop of York, England, in 1357. The content of Father Gerson’s fifteenth century catechism in France, ABC de Simples Gens, was similar. Although commonly taught orally and not from a book, the standard material of the catechisms of the time included at least the Pater Noster, Ave Maria, the Creed, and the Ten Commandments, and commonly the seven spiritual works of mercy, the seven corporal works of mercy, the seven sacraments, and other material.
Primers (1529-1545). Butterworth referred to its being a “monumental catalogue covering the entire field from 1478 to 1897” on English primers.

1904 Histoire Critique des Doctrines de l’Education en France Depuis le XVIe Siecle, by G. Compayre. Paris: Hachette (7th edition). In Brother Azarius’ book, Essays Educational, he very efficiently “deconstructed” Compayre and his “history,” demonstrating that Compayre was an academic charlatan. Yet, predictably, the literature indicates that Compayre was an “authority” who was given great credence at the time by “experts” such as those at Columbia Teachers College. Compayre was one of the contributors to the Cyclopedia of Education (1911-1913), and probably still is given great credence today.

1904 “How Words Get Meaning,” by Will Grant Chambers. Pedagogical Seminary, XI, March, 1904 - 30-50. Tests to 2,922 pupils to determine vocabulary development. The literature indicates the “experts” had a wealth of objective data by 1920 from such critical experiments and surveys as this. However, I have not seen Chambers’ article.

1908 “A Pragmatic Substitute for Free Will,” by Edward Lee Thorndike, in Essays Philosophical and Psychological in Honor of William James, pp. 585-610, 1908, according to Thorndike’s bibliography in the honorary issue of Teachers College Record, Teachers College, Columbia University, New York, devoted to Thorndike, February, 1926. When Thorndike denied the existence of free will, he obviously necessarily denied the existence of voluntary attention, as in reading. The baleful influence of that conclusion on the teaching of beginning reading has been discussed in this history.

1908 The English Grammar Schools to 1660, Their Curriculum and Practice, Foster Watson, First Edition 1908, Frank Cass & Co., Ltd., London, New Impression 1968. This is a very useful historical source. Watson discussed beginning reading materials in this work. On pages 182-183, he discussed Charles Hoole’s primer, written before 1660 but published in 1660, which he said had as its intent the arousing of children’s interest. Hoole’s comments show why reading difficulties were multiplying in the
mid-seventeenth century: the syllabary and the spelling book were largely being ignored. Hoole said in his New Primar (sic):

“The ordinary way to teach children to read is, after they have got some knowledge of their letters, and a smattering of some syllables and words in the hornbook, to turn them into the A B C or Primer, and therein to make them name the letters and spell the words, till by often use they can pronounce (at least) the shortest words at the first sight.

“...the A B C being now (I may say) generally thrown aside, and the ordinary primer not printed, and the very fundamentals of Christian religion (which were wont to be contained in those books, and were commonly taught children by heart before they went to school) with sundry people (almost in all places) slighted, the matter which is taught in most books now in use is not so familiar to them, and therefore not so easy for children to learn.”

Both the ABC books and the primers had contained complete syllabaries, so children who had used these books were introduced to reading by heavy drill on “sound,” not “meaning.” Hoole’s comments establish that there were difficulties in teaching beginning reading in 1660 after that drill on the syllabary had been dropped when the ABC books and primers were no longer in use. Such difficulties probably account for the rash of books which appeared just about that time, described by Watson, which were meant to simplify the teaching of beginning reading, and the renewed interest that appeared at that time in a simplified alphabet, discussed by Mitford Mathews and others.

Foster Watson saw and read Allnutt’s rare 1891 paper, which he reported was titled An early 16th century A B C in Latin after the Use of Sarum. Reproduced from the original in the Library of Lanhydrock. With a few Introductory Notes on the A B C and its History. “Privately printed for Lord Robartes (1891). Watson reported on it in his book, as has been discussed in this history.

A letter of June 8, 1897, is in the James McKeen Cattell manuscript files in the Library of Congress which Huey wrote to Cattell. Its content has been quoted earlier in the text of this book, and a photocopy of the original letter is reproduced in Appendix A. The 1897 letter asked Cattell’s help in enrolling for graduate course work in psychology since Huey was almost without funds. It read in part:

“I have finally decided to try to begin in earnest with psychology next fall.... I will only have about $150 to begin with next fall. If it seems possible for me to earn my way at Columbia I would like to begin there....

“Is it possible for me to get a scholarship at this late day? I did not feel free to apply for one before. Am afraid I cannot enter if have tuition to pay.

“If I am not troubling you too much, would you let me know about the possibilities for a scholarship, and what would be the best (or a possible) means of earning money in the University? Am willing to do anything.”

The letter also referred to a psychology text Cattell had previously lent Huey. Like Cattell in 1880, Huey was a graduate of Lafayette College, and Cattell’s father had once been president at Lafayette. That
letter suggests that Huey, who later became a psychologist, may well have been Cattell’s protege, even though he became a student in G. Stanley Hall’s Worcester graduate school rather than at Cattell’s Columbia. Huey’s obvious bias in his 1908 book for “meaning” and against “sound” in the teaching of beginning reading should be considered in light of his close association with the psychologist Cattell, whose 1880’s experiments are even today wrongly cited as “proof” of the superiority of the “meaning” method for teaching beginning reading. Cattell obviously had an ego investment in his research. Huey possibly had a debt to Cattell for favors received, and his 1908 book may have been written in final payment of that debt. As many have noted, Huey dropped all work on reading instruction as soon as that 1908 book was published. Huey died in 1913, after having worked since 1908 on unrelated material, which work was unpublished because of a fire shortly before his death which destroyed all his notes.

In Chapter II, Huey discussed his and others’ eye movement research in reading, concerning the question of how many stops were made on a line and how many letters were seen in each stop. Huey cited the 1879 research of Professor Emile Javal of the University of Paris, who had concluded that the sweep of the eyes across the page was not continuous, as had previously been thought, but discontinuous, and that every stop took in about ten letters. Huey opposed Javal’s findings to his own and others’ research which had concluded that there were a varying number of such stops to a line, some stops covering more letters than others, the number of stops for an average line being about five. Yet recent Scottish research indicates that, despite the seeming conflict, both Javal and Huey’s group were essentially correct. An almost standard “window” size does exist for every glance, which confirms Javal’s finding, although the “window” is larger than Javal thought. Huey’s and others’ earlier research had demonstrated a varying number of stops to a line, and an irregularity in the distance between them. It is obvious that since the “window” size does not vary, some glances must overlap with other glances to varying degrees, while other glances must skip past unread portions of the print. The Scottish finding therefore also can be used to confirm the research of Huey and others concerning the varying numbers of stops the eye makes on a line, and the irregular distances between such stops.

The new research was reported in an October, 1993, one-page article, “Words of Wisdom,” a copy of which I received from the English phonics author, Mona McNee. (The original British source was not specified.) The article concerned a study by Professor Simon Garrod and a team of researchers at:

“ESRC’s Human Communication Research Centre in Glasgow.... Using an electronic eye-tracker which was originally designed by NASA to help space shuttle crews control their instrumentation by eye contact, the researchers monitored the reading processes of over 300 people. They found that the human eye fixes on each word in a story and about three or four characters of the next word, an area known as a ‘text window’, confirming US research findings. In addition, the size of the window, which was typically 18 characters, remained the same regardless of the predictability of the text or the reader’s skills. Even speed readers had a text window of 18 characters. ‘If expectations were as important as the holistic book method suggests, the text window would have been much larger for more predictable stories and people would have scanned the words, not identified each one,” says Garrod. ‘Our research shows this isn’t the case.’ Word recognition, however, isn’t the only factor that determines an individual’s ability to read. A further HCRC study found that the ability to identify grammatical structures also has an impact. Readers presented with an ambiguous sentence structure, for example, had to slow down to disentangle it, even though previous passages they had read had explained it.... His work has also led to a commercial spin-off. Hewlett-Packard, one of the world’s top computer companies, is considering developing a ‘flick-through’ system for its word processing packages based on the HCRC’s and other researchers’ findings. The system, which uses the research on the amount of information an individual can take in at a glance, will allow you to flick through entire pages on a screen in the same way that you can leaf through sheets of paper.”
Therefore, it appears that both Professor Javal in 1879 and Huey in 1908 were essentially correct. However, the “window” is not ten letters as Javal surmised, but 18 letters. The numbers of stops on a line must be dependent on the individual reader’s attention, some overlapping more than others, while, in other cases, some stops must be made in a skimming fashion, jumping over portions of the text.

It is of interest that the present-day Scottish test subjects were shown to be reading whole words. That may or may not indicate they were identifying those words by their syllables. With his research methods, Oskar Messmer in Germany in 1903 distinguished between two types of German readers: “objective” accurate readers of syllables, and “subjective” inaccurate readers of whole words who were also dependent on guessing. It would be of interest to see if this new equipment can turn up syllable readers in those Latin-language countries where teaching by the syllable method is still in wide use. However, unlike Messmer’s more primitive methods, this equipment which measures only the movement of what is apparently an organically-based and automatic visual “window” may make such a distinction impossible.

Ayres published a graph concerning the promotions of 14,762 children in 28 cities in the United States about 1909. The great majority of the children, the graph showed, were in the right grade for their age or only a year lower or higher. Few were more than one year behind, and very few more than two years. City children in America had to stay in school till at least 14 in 1914 and 1915 when Ayres made his spelling tests on which his spelling scale was based. That meant the scores at fifth grade (when the normal age was 11) were representative of at least the minimum spelling ability of almost all American children who had attended school for five or more years.

Ayres’ scale was nothing more than the statistical averages from the written spelling tests of 70,000 children in grades two to eight in 84 American cities in 1914 and 1915, and the scores obtained from city to city (and even from school to school) were remarkably uniform. That scale showed that virtually 100 per cent of 1914-1915 American fifth-graders could correctly spell 137 of the highest frequency words, and 99 per cent of American fifth graders could correctly spell 200 of the highest frequency words. (Also, 98% could spell 283 of the highest frequency words, 96% could spell 365 of the highest frequency words, and so on, until 50% of American fifth graders could spell 929 of the 1,000 commonest words correctly in 1914 and 1915, which appears almost unbelievable today.) The Ayres spelling scale is therefore statistical proof that virtually all American city children who were capable of attending school for at least five years in 1914-1915, including Blacks and foreign-born, could also read at least simple material, since it is obvious that they could read far more words than the words they had learned to spell correctly.

The New York Public Library has reprinted material of February, 1912, from a periodical called Educator, entitled “The Relation Between Entering Age and Subsequent Progress Among School Children.” The table showed that the percentage of slow pupils was greatest among the children entering at five and that the pupils making more rapid progress were those who entered at the advanced ages. Whether this was based on Ayres’ work on “laggards” is unknown but appears probable. However, Ayres’ later work demonstrates that the topics of overage and repeated grades are complex. If valid, that table provides an argument against early entrance ages and against the teaching of reading in kindergarten.

1910 Hiberniae Partim Hactenus Ineditae, Compiled by C. Plummer, Oxford, England. See also C. Plummer’s Vitae Sanctorum Hiberniae, of earlier date. These are compiled from ancient Latin manuscripts of Irish saints’ “lives,” which contain some comments concerning education and the teaching of beginning reading. The English introduction by Plummer is of interest. See also the 1965 edition, Vitae Sanctorum Hiberniae, edited by W. W. Heist, Societe des Bollandists, Brussels, Belgium. Its English Preface is also of interest.
See also the bibliography to Parry’s 1920 history, Education in England in the Middle Ages, for many other European pre-Reformation source materials. Parry’s book is listed in this appendix under the 1920 date.

1910 The Epistles on the Romance of the Rose and Other Documents in the Debate, by Charles Fredrick Ward. This was Ward’s Ph. D. Dissertation at the University of Chicago, and it was reprinted in Transactions of the Royal Society of Canada, Section II, 1910, VIII. It is a history of the fifteenth century debate on the fourteenth-century neo-pagan literary work, Roman de la Rose, and a history of Father Jean Gerson’s and Christine de Pisan’s part in that debate. It is of real general interest concerning that period in history. For further information on Christine de Pisan, see the 1405 entry in this appendix on The Treasure of the City of Ladies, by Christine de Pisan, translated by Sarah Lawson, Penguin Classics: 1985.

1911 A History of the McGuffey Readers, by Henry H. Vail, published by The Burrows Brothers Co., Cleveland, Ohio. Vail had worked for the McGuffey publishers from shortly after the Civil War until after 1900. He had been the editor of the 1879 phonic revision and had written its book one himself. Furthermore, he eventually obtained the copyright to that book, and apparently to others in the 1879 series, so that he obviously was receiving royalties on it for many years, since it was still on sale in 1928, according to the American Catalogue. However, so was the 1901 sight-word “meaning” series still on sale in 1928 by American Book Company. The curious history of those editions has been discussed at length in this history.

The original sight-word series begun by William Holmes McGuffey in 1836 was replaced with a truly phonic series in 1879, on which Henry H. Vail himself had been the editor. That new series was almost totally different except for retaining many of the original selections from the highest readers. The 1879 series was replaced with the final series in 1901, which once again was a sight-word series and which once again was largely new. The higher readers in all three of the major editions did contain a considerable number of the original selections, but it was the lower readers which were most widely used, and the lower readers were almost totally different in each of the three major editions: 1836-38, 1879 and 1901. (There had also been minor editions at various times on the first series before it was replaced by the 1879 series.)

1911 A Study in Reading, Newark, New Jersey. 32 pages. Eldo L. Hendricks. Silver Burdett. I have not been able to locate this study by the publishers of the Ward phonic materials. It might be of real interest.

1911 “Learning to Read,” by Josephine Horton Bowden, Elementary School Journal, University of Chicago, September, 1911. Among her other interesting comments concerning her attempts to teach a few rank beginners straight sight-words (learning to read by “meaning”) was her remark that some did not even notice if they were shown the words upside down.

1911 Educational Problems, by G. Stanley Hall, Appleton and Co., New York.

1911 Forgotten Books of the American Nursery, by Rosalie V. Halsey, Boston.

1911-1913 A Cyclopedia of Education, Edited by Paul Monroe, New York. See in particular Teaching Beginners to Read, in the 1913 Volume 3, and Spelling, Teaching of, in the 1913 Volume 4, both by Henry Suzzallo, then at Columbia Teachers College, who had received his Ph. D. there in 1905.

In the former article, Suzzallo drew and discussed the “reading triangle” (my term), establishing that by 1913 there was a clear awareness that there are two different kinds of reading, direct (subjective), and
indirect (objective), the terms Oskar Messmer had used to summarize his experimental data in 1903, and that the two kinds were, quite literally, contradictory and mutually exclusive. Suzzallo felt that “meaning” was impaired by the longer, indirect route (visual to sound to meaning) but protected by the subjective route (visual direct to meaning, with sound appearing last, as an afterthought). The direct route, of course, is the deaf-mute sight-word method, where “sound” does not have to appear at all. Gallaudet’s students all read that way, picking up sight-word meanings, but never producing any sound. Suzzallo said in the 1913 encyclopedia article on reading, probably written a year or two earlier, in 1911 or 1912:

“The most active battleground in the reform of school teaching is found in the primary grades, particularly in the first school year where beginners are taught to read.... A discussion of the problem of teaching beginners to read is, therefore, crucial.”

Similar diagrams to the “reading triangle” had appeared in 1890 in William James’ psychology text to illustrate other reactions. The origin of the 1913 “reading triangle” obviously lay with the early psychologists such as James, Cattell, Dewey and Thorndike, all of whom had been closely associated for years. Suzzallo had been Thorndike’s admiring student, as he told in the February, 1926, Teachers College Record issue honoring Thorndike. James of Harvard had died in 1910, but Cattell, Dewey and Thorndike were all at Columbia in 1913.

Others of the many articles of interest in the Cyclopedia are: Vol. 1, 1911, Basedow, Campe, Heinecke, Education of the Deaf, and an article on Gallaudet by Will S. Monroe of Montclair State Normal, New Jersey, possibly related to the Cyclopedia’s editor, Paul Monroe, who was a professor at Columbia.

1912 Scientific Management in Education, by Joseph Mayer Rice. Publishers Printing Company, New York. This is discussed in this history. Rice’s 1912 book was based on his spelling and arithmetic tests in American schools in 1895 and 1896, which had been reported in three articles in Forum magazine, two in 1897, and probably the third also in 1897. See also Rice’s 1893 book, first published as articles in Forum, reporting on his extensive visits to American schoolrooms in 1892.

1912 The United States Catalog, Edited by Marion E. Potter. Third Edition. This lists all the books in print in the United States in 1912.

1912 “A Study of the Reading Vocabulary of Children,” by Myrtle Sholty, Elementary School Journal, University of Chicago, February, 1912. In this oral accuracy reading study on three second grade girls, Sholty found proof of Messmer’s objective and subjective types of readers, which had been described by Messmer in 1903. Huey’s 1908 book, above, described Messmer’s work more fully. Yet the 1912 awareness of two different types of readers was later buried. Gray very curiously “reviewed” Sholty’s research in 1917 and 1925 in a manner which totally obscured her findings: that readers can be either “objective” or “subjective.”

his 1956 book, The Teaching of Reading and Writing, and he also cited Valentine, Dumville and Winch, below.

1912 “The Methods of Teaching Reading in the Early Stages,” Benjamin Dumville, School World, (Probably in England), Vol. XIV, November, 1912, p. 408-413. This is discussed in this history.

1913 “Educational Measurements of Fifty Years Ago,” based on a communication from E. L. Thorndike, Journal of Educational Psychology, 4:551 (November, 1913.)

In a footnote on page 18 of his book, Introduction to Educational Measurement, Houghton Mifflin Company, Boston: 1951, Victor Noll listed the above 1913 citation. It had reported that an English schoolmaster, Reverend George Fisher claimed to have constructed by 1864 what he called a Scale Book. Fisher’s Scale Book included a scale of handwriting to grade samples of children’s handwriting, a standard list of spelling words, and questions in mathematics, navigation, Scripture knowledge, grammar and composition, French, general history, drawing, and practical science. Noll listed the 1913 citation and its original source as follows:

It seems likely that the American, Thorndike, would have learned of that obscure 1864 English citation from his close friend and fellow-professor, J. M. Cattell, who may have learned of it from Galton (Darwin’s cousin) while Cattell was living in England in the late 1880’s. Galton, with whom Cattell associated in England but who was considerably older and so may have seen the Fisher material when it first came out in 1864, shared Cattell’s interest in measurements. See Michael Sokal’s book on Cattell, An Education in Psychology, concerning that period in Cattell’s life.

1913 City of New York School Survey. This is a massive collection of data available in the New York Public Library. However, it was collected in a hothouse climate of political pressure, for which see Chapter XII of the autobiography of Paul Hanus of Harvard, Adventuring in Education, Harvard University Press, Cambridge, 1937. Hanus was appointed director of the proposed survey in 1911, and told in his autobiography of the many outrageous obstacles he met in trying to complete that assignment.

1913 A Contribution to Experimental Psychology, by Hermann Ebbinghaus, originally published in Germany in 1885. English translation published by Teachers College Press, Columbia University, New York. This included a study on the difference in speeds in learning meaningful material and meaningless syllables (and other studies).

1913 The Catholic Encyclopedia, The Encyclopedia Press, Inc., New York. Among the very great number of useful articles are Education of the Deaf and Dumb, and Port Royal. The high intellectual level of this reference work, and others like it in that period, is in sharp contrast to reference works available today. I believe that difference reflects a sharp drop in our general intellectual level since 1913, caused by the curriculum in our benighted government schools, including the “meaning” method to teach beginning reading.
1913 *Educational Psychology* (three volumes), by Edward L. Thorndike, Teachers College, Columbia University, New York.

1914 *A History of the Chicago Normal School* (1856-1906), by Mary Agnes Riley. This includes a considerable amount of background material on Colonel Frances Wayland Parker and the Cook County Normal School. It includes a biography of Parker, part of it actually autobiographical, taken from “an appendix to a book entitled ‘School Days of the Fifties’ by William M. Giffin, Dept. of Mathematics, Cook Co. Normal.” The 1895 *Course of Study* listed earlier was, I believe, filed with that thesis at the time I saw it, as its title appears in thesis’s table of contents as part of its Appendix. See also the 1882, 1883, and 1894? entries concerning Parker.

1914 *School Subjects as Material for Tests of Mental Ability,* Clara Schmitt, *Elementary School Journal, XV,* Nov., 1914, p. 150-161. Tested Gr. 1-5 and a group of children with below normal intelligence on speed and errors in oral reading, and ability to reproduce and interpret written material. She found the defective children “guessed” unknown words by meaning (berries instead of grapes, for instance) but children of normal intelligence relied on letter sounds and visual data. Therefore, Goodman and Smith’s promotion of “psycholinguistic guessing” amounts objectively to an attempt to turn the children of today into readers like the mentally defective Chicago children of 1914.

1914 “The Measurement of Ability in Reading,” E. L. Thorndike, *Teachers College Record XV,* September, 1914. Reports on Thorndike’s reading comprehension tests of 1913-1914 and William Scott Gray’s 1913-1914 oral reading tests prepared under Thorndike’s direction. Although this is a watershed document, I have never seen it referred to in any “establishment” literature on reading instruction. Nor have I ever seen any reference to any kind of tie between the famous “expert” Gray, of the University of Chicago after 1914, and the famous “expert” Thorndike of Columbia Teachers College. So far as available literature is concerned, a reader might assume that the men did not even know each other, and certainly could not guess that the famous Gray was the famous Thorndike’s protege. See the comments below under Herbert Austin Brown concerning their possible testing in Franklin, New Hampshire, and possible association with Currier and Duguid, listed later.

1914 “The Measurement of the Efficiency of Instruction in Reading,” by Herbert Austin Brown, *Elementary School Journal, University of Chicago,* June, 1914. Brown was Deputy State Superintendent of New Hampshire in 1914. He had received his master’s degree from Columbia Teachers College on June 13, 1912. He made some very intemperate remarks concerning the current teaching of reading in 1914, when most beginning reading instruction was strongly “sound” oriented:

> “The data which have grown out of these tests suggest emphatically that the prevailing pedagogy of primary reading is in need of thoroughgoing reconsideration in important particulars.... A new and more correct pedagogy of primary reading must be constructed, based upon the known laws of the learning process.”

Yet Brown also stated that children could read orally at that time with speed and great accuracy! His concern was with that oxymoron, “reading comprehension.” As already stated, Brown had received his master’s degree at Columbia on June 13, 1912, where he almost certainly would have known Thorndike, and Brown worked for the education department of New Hampshire until 1916 or so. Thorndike’s reading comprehension tests of 1914 include an item concerning a snowy town called Franklin, and Franklin, New Hampshire is snowy. The women teachers listed below under 1916, Currier and Duguid from Franklin, whose “testing” endorsed teaching without real phonics, taught in nearby Tilton. These associations suggest that Brown, Currier, and Duguid possibly were involved in the 1913-1914 oral reading and reading comprehension testing being carried out by Thorndike and Gray. When I called the New Hampshire state library trying to get information on such possible testing in 1913-1914, I was
referred to someone in the state office which had the annual volumes on New Hampshire education. The woman in that office to whom I spoke checked the shelves where the annual volumes were located, but found that the two volumes for 1912-1913 and 1913-1914 were missing from those shelves.

1914 to 1949 and later - Yearbooks, National Society for the Study of Education. Specific issues of these critically important materials are listed in Appendix D. Particularly see sections by W. S. Gray.

1914 The Measurement of Efficiency in Reading, Writing, Spelling and English, by Daniel Starch, College Book Store, Madison, Wisconsin. Joseph Jastrow, who had been one of Cattell’s subjects in his 1883 experiments at Johns Hopkins, was at the University of Wisconsin. See also the 1897 entry on Quantz of the University of Wisconsin.

1914 Life of St. Declan of Ardmore and Life of St. Mochuda of Lismore, with Introduction, Translation and Notes by Rev. P. Powers, London: Irish Texts Society. Portions of this work have been quoted in this history.

1915 A Manual of Primary Teaching Prepared by Grace M. Shields for Use in the Public Schools of Cedar Rapids, Iowa. Published by the Board of Education, Cedar Rapids, Iowa. 20 pages. New York Public Library SSD pv.92 #8. I have not seen this, but Dr. Orton found rampant reading disability in Iowa by the early 1920’s. This may outline what caused it. Grace M. Shields was co-author with the spelling “expert,” Ernest Horn of Ginn’s 1924 The Learn to Study Readers. Horn had written his thesis at Columbia Teachers College in 1914.

Circa 1915 and later - School and Society. This educational journal was originated and published by James McKeen Cattell. Its title was taken from a book by Dewey’s fellow psychologist, John Dewey. It is an important reference work.

1915 “Religious Instruction of the Young in the Sixteenth Century,” by M. Reu, Dubuque, Iowa, in Lutheran Church Review, Volume 34, No. 5, October, 1915, pages 566 to 585. Although sectarian in interpretation, this article is a scholarly collection of source material on medieval and slightly later education, and its bibliography should be of great interest to historical researchers who can read German.

1915 A Measuring Scale for Ability in Spelling, By Leonard P. Ayres, The Russell Sage Foundation, New York. This has been republished by Mott Media of Milford, Michigan.

The Ayres’ scale was based on tests given to 70,000 children in 84 American cities in 1914 and 1915. The scores were astonishingly high in comparison to achievement today.

In American cities of 1915, mandatory attendance laws kept children in school until age 14 or older, and Ayres had shown in his 1909 text, Laggards in Our Schools, that few children were more than two years behind the proper grade level for their age. Therefore, Ayres’ city scores at fifth grade represented scores for all children, and not just the “successful” ones, because all city children would at least have completed fifth grade before the school-leaving age of 14 or older. Ayres’ fifth-grade spelling scores provide statistical proof, in contrast to today, that virtually 100 per cent of city children, including Blacks and foreign-born, could read at least simple material in the America of 1915. (However, as referred to elsewhere, there is some indication, in contrast to today, that not only could virtually all Black children learn to read before the introduction of the deaf-mute-method readers in 1930, as proven by the 1915 Ayres’ scale, but they actually did better in school at that time than other children.)

When I called the Russell Sage Foundation in New York for information on the spelling scale some years ago, about early 1981, I was told they no longer had copies. The note I made at the time read, “Her list showed Laggards in Our Schools, 1909, but not spelling scale.” They had dropped their educational
section some thirty years before. I was told that the education library they once had was divided between
the New York Public Library and Columbia University, but the bulk of it went to Columbia University.
The difficulty I had in locating copies of the spelling scale at some libraries has been discussed in this
history. The only thing that the Library of Congress had in early July, 1981, was the cover of the spelling
scale, with an Ayres handwriting scale inserted instead.

However, in the summer of 1986, Harvard had two copies. In the back of one, publishing dates and
quantities were shown. From April, 1915, to January, 1918, 85,000 copies had been published, with
25,000 during 1915 and 30,000 during 1916. In May, 1917, 15,000 were printed, a month after World
War I began, and 15,000 in January, 1918, right in the middle of the war and despite the pressure of
wartime shortages. Those numbers suggest a large increase in use probably occurred after the war ended
on November 11, 1918.

Below are the norms shown on the 1915 Ayres spelling scale for some words which also appeared on
the 1954 Iowa spelling scale. The 1954 Iowa words were taken from Spelling and Writing Patterns, “A,”
The Follett Spelling Program, Teacher’s Revised Edition, by Morton Botel, Cora Holsclaw, Gloria
This second-grade spelling book listed 90 words for testing, and showed next to each the percentage of
beginning second graders who could spell it, according to the Iowa Spelling Scale, State University of
Iowa, Iowa City, Iowa, which was based on tests to 30,000 second graders in 1954. (The Iowa scale also
covered massive tests to other grade levels, which would be of interest to compare to other grade levels
on the 1915 Ayres scale.) Of the 90 test words in the Follett speller, 67 were also on the Ayres list of
1,000 words in 1915. However, the probability is that the Iowa tests were multiple choice tests, and not
dictated, written tests like those reported by Ayres in 1915, in which case the 1954 children would have
been drawing only on recognition, and not recall memory, a lower form of memory. Therefore, the
achievement the Iowa scores reflected can be presumed to be correspondingly weaker. (The Iowa scores
were beginning second-grade scores, and the Ayres scores were mid-second grade scores. However, I
have seen the beginning third-grade Iowa scores on the third-grade Follett speller, and they were still far
worse than the mid-second grade Ayres scores.)

The Ayres scale of the relative difficulty of the one thousand commonest words in English is divided
into 26 sections of increasing difficulty, from A for the easiest to Z for the hardest. Only two words
appear under section A, 4 words under B, and 7 words under C. The lists under subsequent letters
generally become progressively longer until about the middle when they generally decrease again in size,
with only 8 words under X (convenient, receipt, especially, etc.), two words under Y (decision, principle),
and three words under Z (judgment, recommend, allege.) Each of these lettered headings showing the
words in each section is preceded by the percentage of correct answers on that particular word list for
each grade level from second to eighth.

The 67 words in the 90 test words in the Follett speller which are also on the Ayres 1915 scale are
shown below, under the headings used on the Ayres scale. The first of the Follett-Iowa 67 words appears
under C, and others until L, at which point 50% of second graders spelled the words correctly in 1915.
However, Ayres did not bother to list the percentage of correct spellings at grade levels for any words
scoring less than 50%, so the numerical reporting for scores at second grade ended at L. However, three
words on the Ayres list which are also on the Iowa list did score lower than 50% in 1915 at the
mid-second grade level: “took” at level M, “beg” at level P, and “too” at level S. (Yet the homonym “to”
scored at level H, with 79% of second graders spelling it correctly, and the homonym “two” at level K, or
with 58% of second graders spelling it correctly.)

It is of great interest that of the 67 words on both the 1915 Ayres and 1954 Follett-Iowa list, Ayres in
1915 scored only three below 50%, (“took,” “beg,” and “too”). Yet the Follett text, reporting the 1954
Iowa scores on the 90 Follett test words, showed 80 of the total 90 words scoring below 50% accuracy in 1954, a level which Ayres in 1915 did not think worth reporting, even at as low a grade as mid-second!

In 1915, 50% of mid-second graders spelled 447 of the 1,000 commonest words correctly, and 50% of eighth graders spelled all 1,000 correctly. Even at fifth grade, 50% spelled 929 of the 1,000, correctly, so it is not surprising that Ayres did not bother to show any scores below 50% accuracy! The 1954 Iowa spelling scores are a disgraceful (and ignored) contrast to beginning 1915 second-grade and other grade level Ayres scores!

1915 Mid-Second-Grade % Accuracy on Sections of the 1915 Ayres Spelling Scale, compared to 1954 Iowa % Accuracy at Beginning Second Grade on Some Words from Those Sections.

The only words scoring above 50% accuracy on the 1954 Iowa scale, out of the 90 shown in the Follett speller, were “see, can, run, the, up, like, come, had, play.” These are obviously all basal reader high-frequency words, the kind the beginning 1954 second graders had been drilled on over and over again in their first grade so-called reading instruction, so children retained some correct visual memory of the words. It is no accident that the ONLY 1954 Iowa list word which outscored ANY words on the 1915 Ayres scale at second grade was the word, “see.” That scored 96% in 1915 but 98% in 1954! With the addition of the “name” words, “Dick” and “Jane,” a little “story” can be constructed from this tiny 1954
list of words scoring at 50% or higher. It is the kind of “story” in the 1954 first-grade basal readers. With such a “story,” it is easy to see why the one word, “see,” was so outstandingly successful in 1954, and why a few other words were relatively more successful than others: “See (98%) (Dick). See (98%) (Jane). See (98%) (Dick) run (51%). See (98%) (Jane) play (61%). (Jane) can (69%) see (98%) (Dick). Come (79%) see (98%) (Dick) run (51%), (Jane) can (69%) run (51%) like (52%) (Dick). Up (73%), up (73%), (Dick)! (Dick) had (50%) run (51%)!”

It is a national disgrace that, for over sixty years, such silly and irritating “meaningful” prose as that above has been permitted to masquerade as reading instruction. After 1930, first-grade children were no longer taught quickly and efficiently to read print by its “sound.” The sight-word phony-phonics “meaning” approach, and the dropping of true phonics, has resulted in the catastrophic (AND IGNORED!!!!) drop in ability that is demonstrated by comparing the 1915 Ayres spelling scale norms to the 1954 Iowa norms. The “sound” of print had been effectively ignored when the 1954 second-grade children had first been taught to read, when their conditioned reflexes in reading were probably being established for life. That is proven by the unbelievably low 1954 beginning second-grade scores on some phonically regular words, in contrast to the unphonetic “come” which scored at 79%: led 11%, stand 8%, bring 9%, rest 4%, sent 5%, wish 5%. Yet most phonically taught first graders can spell these phonetic words correctly in written spelling tests after only three or four months of first grade instruction, but would spell the unphonetic “come” incorrectly.

In 1922, Arthur I. Gates, who had been Thorndike’s student and was Thorndike’s and Cattell’s associate, wrote The Psychology of Reading and Spelling, at Columbia Teachers College, New York. Dr. Burdette Ross Buckingham had written Spelling Ability, Its Measurement and Distribution, published at Teachers College, Columbia, University in 1913, and it presumably was his doctoral dissertation. It was in 1919 that Buckingham wrote the Buckingham Extension of the Ayres Spelling Scale, published in Bloomington, Illinois. Buckingham’s “Extension” added words to the Ayres’ list which he claimed were common in spelling books, while presumably duplicating Ayres’ original list and the original scores to which Buckingham appended his rather pointless extra words. Yet Buckingham altered Ayres’ original material and original scores in several ways when he did this, without acknowledging that he had altered it, and his alterations effectively lowered Ayres’ very high scores to some degree. When I called Columbia Teachers College Library in 1996 to see if they had a copy of the Buckingham Extension of the Ayres scale, I was told that they had no copy, although they had copies of other materials by Buckingham. I later obtained a copy elsewhere.

1915 “Tests in Reading in Sycamore Schools,” by Karl Douglas Waldo, Elementary School Journal, University of Chicago, Chicago, Illinois, January, 1915. This article contains the “silent reading comprehension” test results reported individually on children from Miss Middleton’s combined third- and fourth-grade class, from the fall of 1913 and the spring of 1914. The tests made it possible to compare each child’s fall score to his score in the spring, and vice versa. Children could read orally with great accuracy at that time, as shown by the extraordinarily high spelling scores the Ayres’ scale registered in 84 American cities in 1915. Yet Miss Middleton’s silent reading comprehension scores gyrated wildly, with individual children sometimes scoring very high in the fall and very low in the spring, or vice versa.

What these scores demonstrated was the presence of automaticity and voluntary attention when the children were reading, actually the correct and healthy state of affairs. Children have to be motivated to read with voluntary attention, and “silent reading comprehension tests” are certainly not very motivating to third- and fourth-grade children. I have labeled such widely varying “silent reading comprehension scores,” which can sometimes be obtained from children with healthy automatic conditioned reflexes in reading, the “Miss Middleton Effect.” However, the record suggests the “experts” interpreted the scores very differently, as discussed in this history.
1916 “Measuring the Value of First Grade Readers,” by Fred L Whitney, American School Board Journal, LIII, September, 1916, 24, 77-78. (Investigation on relative merits of nine first-grade reading books. This should be historically of interest.)

1916 Measuring Primary Reading in the Dubuque Schools, by J. H. Harris and H. W. Anderson. Boston: Ginn & Co. Listed in W. S. Gray’s 1925 research summary. An article also appeared on page 17 of the Elementary School Journal in September, 1916. The material concerned tests on results from the Beacon, Aldine and Horace Mann readers, the phonic Beacon outscoring the sentence-method “meaning” Aldine and Horace Mann series. This material based on actual tests has dropped out of sight, while the following unscientific “study” by Currier and Duguid is still quoted in “expert” reference works.

1916 “Phonics or No Phonics,” by Lillian Beatrice Currier and Olive C. Duguid, Franklin, New Hampshire, in the Elementary School Journal, Volume XVII, December, 1916, University of Chicago, Chicago, Illinois. Without any real data, this “study” on two first-grade and two second-grade classes in Tilton, New Hampshire, one-half learning with phonics and one-half only by “meaning,” promoted the “meaning” approach. On pages 108 and 109 of his 1956 book, The Teaching of Reading and Writing, Gray said the phonics groups concentrated on letter sounds and were bored and confused on ideas, while the “meaning” groups enjoyed reading and got the story sense, but were “less careful and less correct... with regard to pronunciation. Keeping the sense in mind, they often substituted words from their own vocabulary for difficult or unfamiliar words.... They read more swiftly and with more expression.... Fatigue was reduced, because the story held their interest and they were intent on the outcome.”

Gray apparently really believed in that kind of reasoning, when the truth is that phonics-trained children are far more likely to enjoy reading. Yet Gray virtually never admitted in print, as he finally did in this excerpt from his 1956 book, that “meaning”-trained children were usually helpless when reading unknown words.

Currier had another article in the Elementary School Journal in February, 1923, entitled, “Phonics and No Phonics,” in which she identified the 1916 test group as a Tilton group, which she had not done in her 1916 article. As indicated previously, there is reason to believe that Thorndike’s and Gray’s 1913-1914 testing of reading comprehension and oral reading was done in part in Duguid and Currier’s school system in Tilton, New Hampshire.

1917 “The Psychology of Thinking in the Case of Reading,” by Edward Lee Thorndike, Psychological Review, May, 1917. This was one of three famous articles that Thorndike wrote in 1917 on “reading comprehension,” and the other two follow this entry. Thorndike (correctly) concluded that “reading comprehension” is a function of inborn intelligence.

1917 Indianapolis School Survey. This was a massive survey, reported in many volumes, on which Leonard Ayres worked. W. S. Gray carried out oral testing of reading in connection with this survey, but his manner of reporting results obscured their nature.

1917 Studies of Elementary School Reading Through Standardized Tests. *Supplementary Educational Monographs*, Vol. I, No. 1, by William Scott Gray. *Department of Education*, University of Chicago, Chicago, Illinois. (From his Ph. D. Dissertation, which work he began with Thorndike at Columbia in 1914. His relatively short 1917 bibliography concerning previous reading tests and experiments up to that date is of great interest, as it includes most American research on reading to that date, but curiously excludes Messmer’s, Cattell’s and other research done in Europe. It is, however, too lengthy to include all of its items here. However, note that on the University of Chicago Supplementary Educational Monographs, Gray’s is Vol. 1, No. 1! The material I saw from Gray’s 1917 thesis was the portion that was reproduced in Judd’s 1918 book below. It may or may not have included all of Gray’s 1917 material. However, I did obtain from Columbia Teachers College a copy of Gray’s 1914 thesis prepared under Thorndike which was, of course, complete.

1917 Preliminary Study of the Reading Attainments of College Freshmen, by M. E. Haggerty and J. M. Thomas, *School and Society*, VI, August 25, 1917, pp. 230-238, “Results of reading tests to college freshman in the University of Minnesota.” This note is from Gray’s 1925 research summary.

1917 “Recitation as a Factor in Memorizing,” by Arthur I. Gates, *Archives of Psychology*, No. 40, September, 1917, *Columbia University Contributions to Philosophy and Psychology*, Volume XXVI, No. 1, The Science Press: New York. This very interesting work concluding that oral recitation is a great aid to learning has been discussed in this history. Gates’ later work promoting silent reading seems directly to contradict his 1917 conclusion.

1918 Developmental Alexia, Congenital Word Blindness, or Inability to Learn to Read, by Clara Schmitt, *Elementary School Journal*, May, 1918. Also see Clara Schmitt’s 1914 article listed previously, in which she said her tests showed that guessing words from the context was a hallmark of the mentally deficient.

1918 “Educational Writings - Current Tendencies in the Construction of Spelling Books for Elementary Schools,” *Elementary School Journal*, University of Chicago, Chicago, Illinois. (Issue number was not noted.)

1918 Reading: Its Nature and Development, *Supplementary Educational Monographs* Vol. 2, No. 4, Charles Hubbard Judd et al, *The University of Chicago Press*, 1918. This is obviously a watershed book, and includes Gray’s oral reading test material which was the basis for his 1917 doctoral thesis. This work was funded by the General Education Board. In 1917, an investigation was begun in Congress concerning what were considered to be the illicit activities of such foundations, but the investigation foundered because of the advent of World War I in 1917. This is discussed in *The Leipzig Connection*, referred to elsewhere in this history.

“Summarizes investigations relating to methods of teaching reading and to growth period in the development of reading ability.” This note is from Gray’s 1925 research summary. In the Twentieth Yearbook in 1921, an article appeared, “Factors Affecting Results in Primary Reading,” by W. W. Thiesen and Ernest Horn. These yearbooks are a source for such “expert” thinking of the period.

Horn also wrote 5,000 Most Used Short Forms, the 5,000 Words of Highest Frequency as Compiled by Ernest Horn, Classified According to the Lessons in the Gregg Shorthand Manual, Anniversary Edition, The Gregg Publishing Company 1931. In 1927, Horn wrote 1,000 Most Used Forms, also concerning shorthand. A Gregg shorthand manual I saw published before 1920 taught both long and short vowels. Yet when I learned shorthand in 1942, no distinction was made between long and short vowels. That increases dependence on context-guessing when transcribing notes, but only gives a slight increase in speed when taking notes. Possibly Horn had some influence on that unfortunate change. Horn apparently was very influential concerning spelling, considering the fact that the Iowa Spelling Scale very possibly grew out of his work at the University of Iowa.

1919 “A Study of Oral and Silent Reading in the Elementary Schools of Evanston, by Elmer E. Jones and A. V. Lockhart, School and Society X, November 15, 1919, pp. 587-590. Gray’s 1925 research summary stated after this item, which was No. 195 on his list, “Present correlations between oral and silent results, Grade III - VIII inclusive.” Although this was listed in the numbered summary of research at the end of his 1925 book, Gray made no mention of this undoubtedly interesting material in the body of his 1925 text. Information on achievement of oral reading accuracy, except in individual testing and in Gates’ 1924 article, effectively disappeared from the literature after 1920, until the arrival of Gilmore’s oral reading test in the 1950’s. The body of Gray’s text, before his numbered summary at the end, was Gray’s lengthy commentary on existing research.

1919 Some Phases of Reading in the Elementary School, by R. H. Lane, Los Angeles Division of Educational Research, Los Angeles City School District, California. This is listed in Gray’s 1925 research summary under No. 228, with the comment, “Describes an oral reading test and presents results, Grade II - VIII.” Obviously this historical document may be of interest, if it could be located. Also on Gray’s 1925 list was No. 226, R. H. Lane’s Reading, First Year Book of the Division of Educational Research, School Document No. 13, Los Angeles School District, 1918.

1920 “Wooden Book with Leaves Indented and Waxed Found Near Springmount Bog, Co. Antrim,” by E. C. R. Armstrong, F. S. A., Vice-President, and Professor R. A. S. Macalister, Litt. D., Fellow, [Read 24 February 1920], Royal Society of Antiquaries of Ireland, Vol. 50, 1920. These waxed tablets dated to the sixth century contain portions of the Psalms in a pre-Vulgate version. They have been discussed in
this history, and presumably were written for a child to study, in the manner described in Irish saints “lives” of that period. Such books of waxed tablets were customary at that time.

These wooden tablets and the wax on them survived incredibly for almost one thousand, five hundred years. That fact can probably be attributed to their probably having fallen into a lake which then predictably evolved into an acid bog, where material cannot decay.

“The early Greeks also may be credited with other substantial contributions to the alphabet. At the time when the earliest known Thera inscriptions were written there already had been evolved out of the Phoenician characters five true vowels: alpha, epsilon, iota, omicron, and upsilon....”

As I. J. Gelb explained in his writings, (as in his article “Logogram and Syllabary,” page 334A of Volume 14, in the 1963 Encyclopedia Britannica), the Egyptian “consonant” signs which evolved into the Phoenician alphabet should not be considered as true consonants, because they were really an abbreviated syllabic system (“b” standing for ba, be, bi, bo, bu, ab, eb, ib, ob, ub, etc.). However, since that system lacked vowels it could only be used to write meaning-bearing words, as in “Th cw jmped vr th mn.” Yet, when the Greeks invented the vowels, probably between 800 and 700 B. C.,that reduced their newly completed alphabet to a purely “sound-bearing” syllabic system.

The right side of the brain handles pictures (“meaning-bearing” symbols), but the left side of the brain deals with language (“sound”), Therefore, the ancient Greeks now had to be using the left side of the brain to read their sound-bearing syllabic print, instead of the right side which had been used to read the meaning-bearing Phoenician print. Eye movements dominated by the right side of the brain move from right to left, but eye movements dominated by the left side move from left to right. (See Two Sides of the Brain, by Sid J. Segalowitz, Prentice-Hall, Inc., Englewood Cliffs, New Jersey, 1983, pages 80-81, “Lateral Eye Movements [LEMs]”.) The direction of ancient Greek writing showed the great puzzlement caused to these ancient Greeks by that totally unsuspected “pull” from their brains (the “LEM’s”). Therefore, the ancient Greeks stopped writing consistently from right to left as the Phoenicians had done but showed great initial confusion. As William A. Mason said in his book, page 340:

“Strange as it may seem to us today many queer experiments were tried by the early Greek scribes before they finally adopted the consecutive left-to-right writing of each succeeding line. A strong predilection was manifest for continuous and uninterrupted writing. This was carried out in a variety of ways before the writing became standardized. Sometimes the writing was boustrophedon (Ed.: meaning as the ox plows) with the letters reversed in the alternate lines, sometimes the boustrophedon lines were written in inverted characters, and sometimes the writing proceeded spirally from the middle, at times rightward, again leftward.”

However, Mason pointed out that the use of a left-to-right direction for alphabetic writing very soon became the standard. (The explanation for the change in the direction of writing, from right-to-left to left-to-right, is my own, based on Segalowitz’s comments on “LEM’s” or lateral eye movements.)

1920 “The Psychology of the Half-Educated Man,” by Edward Lee Thorndike, Harper’s Monthly Magazine, April, 1920. This offensive article has been discussed in this history. It actually counseled people to stop thinking, and instead to let “experts” do their thinking for them. It is amusing that some people who oppose the idea that the Pope can make infallible pronouncements on faith and morals, which the Pope only does about every three or four hundred years or so, anyway, nevertheless want everyone
meekly to accept as infallible all the murky pronouncements made daily by secular “experts” like Thorndike.

1920 The Correlation of Oral and Silent Reading Ability in Four Public Schools of Evanston, [Grades 3 and 4], by Clarence H. Riggs, Unpublished Master’s Thesis, Northwestern University. This may be of great interest.

1920 Education in England in the Middle Ages. Thesis Approved for the Degree of Doctor of Science in the University of London, by Albert William Parry, Principal of the Training College, Carmarthen, published in London by W. B. Clive, University Tutorial Press, Ltd. Dr. Parry stated in the Preface that he had been a student of Professor Foster Watson, D. Litt. See the 1908 entry on one of Watson’s important historical works, The English Grammar School to 1660.

Dr. Parry’s history is of remarkably high quality and prime importance. Quoting materials written in the periods in question, it establishes that widespread educational facilities were available without charge for the unprivileged classes in pre-Reformation England, which fact is diametrically opposed to the usual “expert” statements.

While this book is listed in the New York Public Library catalog, it is not available there, but it is available at the Library of Congress. It is particularly useful for its lengthy bibliography of many works which are omitted in standard “expert” writings, presumably because they were in conflict with the “experts’” biases, just as any reference to Parry’s scholarly history has been routinely omitted. Many “experts,” who are often very vocally and self-righteously opposed to open censorship, routinely practice an extremely distasteful hidden censorship by ignoring and burying their opposition, which behaviour should be labeled “unthink.”

1920 The History of Education by Ellwood P. Cubberley, Houghton, Mifflin Company, Boston - New York - Chicago- Dallas - San Francisco. Cubberley wrote another history specifically on American education. Cubberley was a member of the early-twentieth-century academic clique which enormously damaged American education. The contrast between the value of his history published in 1920 and that of Parry, also published in 1920, is marked. Cubberley’s is, objectively speaking, very inferior. Nevertheless. Cubberley’s 1920 work does demonstrate how enormously American intellectual life has declined since 1920, since it is unlikely that any book published today for American teachers’ colleges reaches anything like the level of difficulty or of competence of Cubberley’s work.

1920 The Present Status of the Teaching of Phonics, as Shown by an Analysis of Eighteen Reading Manuals, Unpublished Master’s Thesis, by Mabel Lucile Ducker, Department of Education, University of Chicago. This should be an interesting historical document, if competently and fairly done.

1920 Picture Story Reading Lessons, Stuart A. Courtis and Nila Banton Smith, 1920, World Book Company, Yonkers/Chicago, 1926. This work done originally in 1920 was the first to use Thorndike’s list of the commonest words. Courtis, who had been an “expert” from about 1911 and who worked on the New York city school survey, became a middle-aged graduate student and worked with Thorndike on arithmetic tests in 1919. That work was reported in the 1926 Teachers College Record issue in honor of Thorndike.

1921 “Word Knowledge in the Elementary School,” by Edward Lee Thorndike, Teachers College Record, Teachers College, Columbia University, September, 1921. Thorndike’s Teacher’s Word Book, with 10,000 of the highest frequency words based on his personal word counts over a period of about ten years, was published in 1921. It was later increased to the 20,000 commonest, and finally The Teacher’s
Word Book of 30,000 Words by Thorndike, with Irving Lorge, was published in 1944 (and 1972) by Teachers College Press, Teachers College, Columbia University, New York.

1921 The Story of the Irish Race, by Seamus MacManus, First copyright in 1921. Published in 1969 by The Devin-Adair Company, New York. This provides useful information on ancient education in Ireland, both Druidic and clerical, as well as its historical background. MacManus’s useful comments on the Viking period in Europe have been quoted in this history.

This was Buswell’s material which concluded there are different paths to reading ability. Yet Buswell skirted and avoided Messmer’s conclusion that there are actually two different types of readers, objective and subjective. Instead, Buswell implied that there is instead just one ultimate goal to be reached in whole or in its parts: the goal of “reading ability.” However, even Messmer himself seemed to think the subjective readers might eventually become objective readers.

In The Teaching of Reading and Writing, on page 108, Gray said in part concerning Buswell’s tests of pupils who had “sound” emphasis or “meaning” emphasis:

“The pupils who had been taught with the emphasis on word recognition read the words more accurately than the other group, followed the lines more regularly, and read the page more faithfully. However, they tended to read in a more mechanical fashion, with less expression and with less show of interest. The pupils who had been taught by the story method read less accurately and followed the lines less faithfully, but they read in a much more animated manner and gave every appearance of enjoying the passages read.”

“Gave every appearance” is hardly scientific testing data. However, concerning such “interest” which is presumed to be the fruit of teaching reading by “meaning” and one of the major reasons for promoting the “meaning” method, the remarks made by Dr. R. Orin Cornett in The Reading Informer of The Reading Reform Foundation , Scottsdale, Arizona, in October, 1979, should be considered. Dr. Cornett of the Gallaudet College for the deaf in Washington said that born-deaf Gallaudet College students who were brilliant but who had learned to read by the “meaning” method almost never read for pleasure!
On page 110 of his 1956 book, Gray said Buswell “showed” that phonics children had no “concern for the content or interest or enjoyment in reading” but methods which emphasized content produced pupils with an active interest in meaning but unable to recognize words. Gray said tests comparing global (“meaning”) programs which used some phonics (undoubtedly only deaf-mute-method phony phonics) to straight phonetic programs in Puerto Rico in 1931-32 and 1932-33 produced high silent comprehension scores and speed on the “meaning” programs, which he seemed to think settled the matter. Gray cited the Puerto Rico scores on speed of first grade reading, and referred to comprehension tests, but on the Puerto Rico program NO tests were made on reading accuracy!

As mentioned elsewhere, in a Bloomfield “sound” method classroom about 1940, as reported by Mitford Mathews in his book, Teaching to Read, Historically Considered, Gray heard first graders read with remarkable ease and accuracy. Instead of being impressed, Gray said experts had LONG known it was easy to teach children to read accurately and quickly, but they were heading for real trouble in “reading comprehension.” Gray obviously knew far more about the effect of “sound” or “meaning” in teaching beginning reading than he told in his written works, and he obviously knew that different and opposite kinds of readers result from the way in which beginning reading is taught. Buswell at the University of Chicago was later and very probably also at that time an associate of the psychologist, Judd. As a member, like Gray, of Judd’s group, Buswell also must have known far more about the effects of the initial teaching method than he expressed in this 1922 work. Yet Gray and Buswell buried that knowledge. Gray apparently did so because of his erroneous convictions about “reading comprehension” which he must have acquired when working with Thorndike in 1914.

The point is that no researcher has ANY business making value judgments on his data, and then burying the part he does not like! That is propaganda, not research.

1922 Learning Literacy and the Development of Speech by the Montessori System, V. I. Fausek, Moscow: Gosizdat. Although the Great Soviet Encyclopedia, listed later, indicated the sight-word method was in use in the Soviet Union until 1932, this 1922 Montessori material obviously must have concerned phonics. Ot Asbukilvana Fedorovado Sovremennaug Bukvaria (Russian Primers, 1574-1974), by V. P. Bogdanov, published in 1974, reported on primers in use in Russia since the sixteenth century and reproduced pages of some primers from the 1920’s. Those reproductions suggest that the versions of the sight-word method, when and if used in the Soviet Union, may have been very weak, depending also on phonics.

1922 The Psychology of Reading and Spelling with Special Reference to Disability, by Arthur Irving Gates, Teachers College Contributions to Education #129, Bureau of Publications, Teachers College, Columbia University, New York. Gates had received his Ph. D. at Columbia Teachers College in 1917 on a work on recitations, discussed elsewhere in this history.

1922 Tendencies in Primary Education, Florence C. Fox. This was listed in the Library of Congress catalog, but in 1989 I was given material for 1920 instead, not her 1922 material. I eventually located the 1922 material. In September, 1922, Florence C. Fox wrote this four-page Teachers’ Leaflet No. 10, Tendencies in Primary Education, published by the Department of the Interior, Bureau of Education, Washington. It reflected the current “expert” thinking.

Fox said on page 8 of her 1922 leaflet:

“Silent reading. - Perhaps the most notable innovation in methods of teaching is the universal emphasis which is being placed on silent reading. Every effort is being made to encourage the child to read silently and to form a habit which will serve him better than any other in his later life, the ability to interpret the printed page rapidly and intelligently and to enjoy the process.”
As shown in Appendix C, Fox wrote a 1918 reading series for Putnam, and the Indian Primer for American Book in 1906, both of which probably emphasized “meaning” more than “sound.”

1923 The Teaching of Spelling, by Daniel J. Beeby, Principal of the Oglesby School, Chicago, Modern Education Series, Edited by James E. McDade, The Plymouth Press, Chicago, Copyright by The Plymouth Press, 1923. (From a copy in the University of Chicago Libraries)

“Table of Contents:
Chapter I, The Course of Study in Spelling, Page 3;
Chapter II, Determining the Writing Vocabulary, Page 6;
Chapter III, The Psychology of Spelling, Page 12;
Chapter IV, Teaching Pupils to Spell, Page 15;
Chapter V, Graded Word List, Page 23”.

Obviously, the chapter, “The Psychology of Spelling, was very short, covering only pages 12, 13, and 14. In this University of Chicago Libraries’ copy, however, it was considerably shorter than intended by its author, since pages 13 and 14 had been cut out of the book, and none too tidily, with scraps of the missing sheet still showing on my photocopy. Yet it would have been of great interest to hear what Beeby had to say about the “psychology of spelling” in 1923, which remarks someone at the University of Chicago saw fit for some reason in the change-agent period after 1923 to remove from Beeby’s book.

In Chapter II, Beeby referred to Dr. Wallace Franklin Jones’ 1913 book, Concrete Investigation of the Material in English Spelling (published by the University of South Dakota). Dr. Jones had received his master’s degree at Columbia in 1908, on “The Problem of Grading and Promotion.” (Concerning the backgrounds on those who wrote on spelling and reading between 1900 and 1930, whose materials were anointed as “expert” and then widely promoted, almost all those background roads do seem to lead back to Columbia or the University of Chicago.)

Beeby said that Jones reported in his 1913 work on a study of 75,000 themes by 1,050 pupils in the United States, which were supposed to have used only 4,700 words in a total of 75,000,000. That claim is easily misunderstood, if the nature of low-frequency words is misunderstood (and if Jones REALLY counted that massive 75,000,000 words, instead of just sampling them, which is far more likely) . Three thousand of the highest frequency words compose about 98 per cent of most simple written material, and the rarer words in the half million or so words in English are squeezed into that remaining two per cent. The rarest words that Jones’ pupils used would have varied for each pupil and each theme, but would simply have appeared in his total count as in no way distinguished from the 3,000 or so commonest words that they all used. Therefore, all those 4,700 words cannot be considered highest frequency words, and therefore simply the equivalent of the first 4,700 words on Thorndike’s list of the 10,000 commonest words. Certainly some were among the more rare and possibly even the rarest words, and as such they represented only random samplings from the rest of the half-million words or so in English. Such rare words, or such samplings, naturally vary in each study.

Beeby also reported on the Cook and O’Shea list, “The Child and His Spelling,” published in 1914. Taken from the family correspondence of thirteen adults, the vocabulary totaled 2,970 different words. He also referred to Ayres’ list, stating only ten words made up twenty-five percent of writing, and 400 made up more than 80 per cent. However, he said, “Ayres also attempted to arrange the 1000 words in groups
of equal spelling difficulty and to assign a percentage grade value to each group. Extensive use of the scale proves to the writer that this part of the study was not a complete success.”

Beeby’s last comment in 1923 is of great interest. Ayres’ 1915 statistics cannot be doubted. He did produce the spelling scores shown on his scale, by absolutely massive testing of American students in 1914-1915. But Beeby, obviously in step with all the latest developments in 1923 (such as the curriculum of the Lincoln School in New York, where one of America’s very richest children, Nelson Rockefeller, was learning how to be dyslexic) stated he was NOT getting the kind of scores in 1923 that Ayres got in 1915. If Beeby was teaching reading “silently” for “meaning” in his 1923 school as recommended by the “experts,” and giving pure sight words to little beginners as recommended by the “experts,” it is certain he would NOT have been getting the scores Ayres got, any more than we do today. Ayres had produced a total averaged score for the tests given from grade 2 to 8 of 70 percent, and referred to that total average in his 1914 report, The Public Schools of Springfield, published by the Russell Sage Foundation, New York. Concerning his work in Springfield, Illinois, Ayres wrote, “In all, 3,612 children were tested with words that children in other cities on the average spell 70 per cent correctly, and the result was that the final average for the Springfield children was also 70 percent. It was found, however, that there was variation in the results for the different grades and schools.” Yet the variations, which he described, were not extreme.

In the 1918 Elementary School Journal of the University of Chicago, Joseph P. O’Hern, Assistant Superintendent of Schools of Rochester, New York, reported on scores obtained in various cities on the Ayres tests using the same reporting method that Ayres had used in Springfield in 1914: one total summary statistic was given to cover all grades and all schools in a city. In comparison to Ayres score of 70 for Springfield and other cities in 1914, O’Hern reported in 1918 that his city of Rochester had averaged 82; Butte, Montana, 80; Oakland, California, 77; and Salt Lake City, Utah, 86. The use of supplemental phonics had been constantly increasing ever since the turn of the century. The improvement in scores from 1914 to 1918 is quite believable, since spelling accuracy is the best single indicator of reading accuracy. Yet, after 1920, not only was “silent reading” greatly emphasized because of “expert” influence, but the “best” schools also taught heavy sight words, like the Lincoln School in New York City associated with Columbia Teachers College. Probably Beeby’s private Chicago school was also rather “advanced,” so his spelling scores might be expected to have dropped accordingly in comparison to Ayres’ 1914-1915 scores. Beeby strongly implied that they had dropped.

1924 Pedagogie Experimentale, by Dr. Theophile Simon, Librairie Armand Colin, Paris. Simon had worked with the famous psychologist, Alfred Binet, who by 1908 had invented intelligence tests of the type used today. Contains interesting matter, though Simon endorsed “global” (sight-word) reading. Helpful concerning titles of other books on education.

1924 (?) La Methode Decroly, by Adele Hamaides, a collaborator with Dr. Ovide Decroly. Collection des Actualites Pedagogiques. An English translation of Hamaide’s work, which is possibly this same material, is The Decroly Class, E. P. Dutton, New York, also shown in a library catalog as “1924?” . It concerns the work of the Belgian promoter of global sight-words, Dr. Ovide Decroly. However, as Hamaides described the approach, it was closer to the German analytic-synthetic method than to a true sight-word approach.

1924 A Test of Ability in the Pronunciation of Words, by Arthur I. Gates, Teachers College Record, Teachers College, Columbia University, New York. These oral tests on a very large number of children confirm that American schools had almost no literacy problem in 1924. These tests should be re-done today BUT ONLY WITH THE SAME STATISTICAL ‘AVERAGES,’ NOT ‘MEANS,’ to confirm the drastic decline in literacy that has taken place since the arrival of the two deaf-mute-method reading series in 1930. Macmillan’s was written by Gates; and Scott, Foresman’s was written by Gray. Both Gates and
Gray were ex-graduate-students who had worked very closely with their Columbia Teachers College psychologist professor, E. L. Thorndike.

1924 Then and Now in Education, Stuart A. Courtis and Otis W. Caldwell. This compares testing done in Massachusetts about the mid-nineteenth century with tests carried out in the twentieth century. Both men were members of the American Association for the Advancement of Science, in which W. S. Gray and other reading “experts” were also active. Cattell was the head of AAAS for many years.

“In the written language of ancient Egypt - the hieroglyphs - over three thousand signs are known, and whilst it is true that many of them are very rare, several hundreds were in common use; And whereas all our letters have one value only, namely alphabetic, the Egyptian signs might under various conditions be alphabetic, syllabic, ideographic, or determinative.. and may in addition have more than one phonetic value.... The man who could read and write was called a scribe.... The scribe’s profession was held to be one of the greatest dignity and importance... We know, moreover, that definite schools existed... antiquity has spared to us a considerable quantity of school exercise-books...”

However, when Christianity arrived in Egypt, Greek letters were adopted, with six additional letters, to represent the sounds of Coptic, the Egyptian language. This article reproduced a badly scrawled but complete alphabet and syllabary in Coptic letters which had been found on the walls of the Beni Hasam Tomb No. 12. The existence of that Coptic syllabary demonstrated that beginning alphabetic reading was taught by the syllabary in early Coptic times.

However, as the author of this article commented, no one knows what methods were used to teach the far more forbidding ancient Egyptian characters.

1925 “The Royal Primer” by Edward Percival Merritt in BIBLIOGRAPHICAL ESSAYS: A TRIBUTE TO WILBERFORCE EAMES, Cambridge, Mass.: Harvard University Press. Copyright 1925 by the President and Fellows of Harvard College. In 1924, (Edward) Percival Merritt wrote a history of The Royal Primer as a contribution to the volume, Bibliographical Essays, A Tribute to Wilberforce Eames, Harvard University Press, Cambridge. Merritt’s essay was then reprinted separately, with illustrations, in 1925 by Harvard University Press. The essay is a history of the eighteenth-century Royal Primer, which was published first by John Newbery. The Merritt reprint with illustrations is in the Art Print Room of the 42nd Street New York Public Library. Portions have been quoted in this history by permission of the publisher.

1925 Summary of Investigations Relating to Reading, by William Scott Gray. Supplementary Educational Monographs No. 28, The University of Chicago Press, Chicago, Illinois. Gray’s 1917 bibliography had listed the relatively few reading tests and experiments that had been done to 1917. This material listed the tests and experiments that had been done to 1925, only eight years later. There had been an absolutely massive explosion in numbers! Gray’s 1925 “Summary” was periodically brought up to date for many years afterward, with the help of others. The summaries demonstrate the near worthlessness of most reading “research.”
1925 “Standard Test Lessons in Reading,” by William A. McCall and Lelah Mae Crabb, Teachers College Record, Teachers College, Columbia University, New York. This was based on earlier work McCall did on reading comprehension with E. L. Thorndike, so the original inspiration very possibly came from Thorndike. Short paragraphs are followed by questions, and children score themselves. As children monitor their own results and find they missed answers, their scores rise on later lessons. Therefore, the use of such lessons was supposed to “teach” reading comprehension. What really happens is that children pay better attention on subsequent “lessons” when they find they have not scored well.

The make-up of this “reading comprehension” material anticipated the SRA reading comprehension kits some thirty years later which have been so massively used in American classrooms. However, since reading comprehension cannot be taught, as discussed elsewhere, since it takes place in that part of the brain, the higher brain mechanism, which cannot be conditioned or “taught,” all that such kits really do is to foster good attention habits on subsequent reading comprehension materials. Yet there is absolutely no reason to think that the habits of attention fostered on those classroom exercises transfer to other reading materials. Classroom time would be far better spent on teaching real subject matter, instead of on such wheel-spinning, time-consuming exercises as reading comprehension “lessons.”

1925 Problems in Beginning Reading, by Arthur Irving Gates, Teachers College Record, Teachers College, Columbia University, March, 1925. Lists 21 widely-used beginning reading series, which Gates had selected randomly out of a longer list of widely used American series. Yet, less than ten years later, almost the only readers in principal use in American first grades from the Atlantic to the Pacific Ocean were Gates’ 1930 deaf-mute-method Macmillan readers and Gray’s 1930 deaf-mute-method Scott, Foresman readers! That was hardly a “natural” development! In this article, Gates stated that the use of large amounts of supplementary phonics at first grade was almost universal.

1925 The Supplementary Device Versus the Intrinsic Method of Teaching Reading, by Arthur Irving Gates, Elementary School Journal, University of Chicago, Chicago, Illinois, June, 1925. This officially introduced the idea of Gates’ baleful “intrinsic” phonics, which was used as an excuse to remove all the supplementary phonics charts from American classrooms. The historical records suggest that by 1934 most supplementary phonics charts had dutifully been removed from the rolled-up window shades and from the bulletin boards of American classrooms. Harris’s article in the 1943 Encyclopedia of Modern Education, cited later, demonstrates that the “intrinsic” phonics method was unchallenged by that year. This 1925 article is a reprint of a speech Gates gave at the February, 1925, Cincinnati meeting of the National Society for the Study of Education, at which Part I of its 24th Yearbook was discussed, “The Report of the National Committee on Reading,” whose committee chairman was, it should be noted, William Scott Gray. Both Gray and Gates had been graduate students and close associates of of Thorndike.

Arthur Irving Gates indicated in a letter of November, 1965, he wrote to Dr. Jean Chall, quoted in her book, Learning to Read: The Great Debate, that he believed that most teachers were using very heavy phonics in the decade 1920-1930. So the vast numbers of American schools that were in existence in 1930, from coast to coast, and from the Canadian border to Mexico, shifted from the very heavy phonics that was in use in 1930, by Gates’ own testimony, to almost exclusive use of his newly invented “intrinsic” phonics some very considerable time before Albert J. Harris’s 1943 encyclopedia article. That elapsed time was a great deal less than 13 years. The fact that such a geographically enormous change was made in such a very short period of time proves the existence of the absolutely huge influence of the circa 1920’s and 1930’s clique which had installed Gates and Gray as America’s reigning “reading experts” and which then massively promoted their unscientific and disastrous theories.
1926 “In Honor of Edward Lee Thorndike,” Teachers College Record, Teachers College, Columbia University, February, 1926. Contributors included S. A. Courtis, James McKeen Cattell, Arthur Irving Gates, Henry Suzzallo, and others. The issue also included an annotated bibliography of E. L. Thorndike’s publications to that date. Another address given at the program honoring Thorndike on his 25th anniversary as a professor at Teachers College was by Charles H. Judd of the University of Chicago, but Judd’s address was not included in the honorary issue in February, not being printed until three months later, in the May issue.

The fact that all these men were invited to contribute articles or talks confirms a close tie between them and Thorndike: Cattell, Courtis, Suzzallo, Gates, and Judd. Yet Gates, who wrote in 1930 one of the first two deaf-mute-method reading series, strangely made no reference in his article on Thorndike to reading instruction. Elsewhere, Gates quoted notes on reading he had taken as a graduate student during Thorndike’s lectures, confirming that Thorndike had indeed discussed reading instruction. The long delay in printing the address by Judd of the University of Chicago was apparently unexplained. William Scott Gray of the University of Chicago, who wrote the other 1930 deaf-mute-method reading series, and who had worked so closely with Thorndike at Columbia in 1913-1914 directly under Thorndike’s supervision, preparing his oral reading tests which were massively used until 1918, was not listed as a contributor in the honorary issue.

The enormously influential psychologist, Thorndike, is described in the literature as having had no interest in beginning reading instruction. The historical record suggests that was untrue, and that the impression was deliberately fostered that Thorndike lacked such an interest in beginning reading instruction.

This is obviously an enormously important reference work. Among others of interest, it lists, under the date of 1514, item STC 1596 (in printer’s spelling and printing format of the time, v for u, etc.,) Horae beatae mariae virginis ad usum sarum (pro puereis) Paris...imp. [presumably imported by] F. Byrckman, London. This had been cited by Charles C. Butterworth on page 6 of The English Primers (1529-1545). Butterworth referred to its being listed in Edgar Hoskins’ 1901 “monumental catalogue covering the entire field from 1478 to 1897 of English primers, Horae Beatae Mariae Virginis or Sarum and York Primers with Kindred Books and Primers of the Reformed and Roman Use.” As discussed in this history, the 1514 book printed in Paris was probably only an ABC, not a true primer.

1926 The Ars Minor of Donatus, For One Thousand Years the Leading Textbook of Grammar Translated from the Latin, with Introductory Sketch, by Wayland Johnson Chase, Associate Professor of Education, University of Wisconsin, Madison, Wisconsin. In his Introduction, Chase made the following interesting comments:

“Learning and education, throughout the Middle Ages, survived because of the fostering care taken by the Christian church. Originating in the days of The Roman Empire, this church had recruited its membership from people of many and diverse races, bound together by the might of Rome’s power and the universal use of the Latin language. From this universality of Latin it had resulted that for centuries before the Roman Empire came to an end Latin had been both the spoken tongue of all churchmen, whether in the British Isles or on the Continent, and the literary language in which church records and church doctrines were written. Far into the period which followed the overthrow of Rome’s power Latin continued to be the language of both speech and writing among ecclesiastics, and also the literary tool of scholarship and officialdom. Indeed, it is
safe to assert that until about the twelfth century there was practically no writing done in Western Europe except in Latin.

“In those Middle Ages the church-fostered education existed not for priests alone, for from the ranks of those trained in church schools were drawn ministers of state, secretaries of feudal nobles, diplomatists, lawyers, and physicians, architects, and musicians. The bailiff of the manor and the merchant required Latin for their accounts, and the town clerk and the gild clerk, for their minutes. Today we have the Latin books in which Columbus studied navigation and geography, and it was in Latin that the captains of his day and later studied military tactics. Indeed, proceedings in law were recorded in Latin in England as late as 1730. The common use of it among all educated men made and kept it, throughout the Middle Ages and far into modern times, a truly international speech. This gave to authors like Erasmus a public comprising the whole civilized world, and rendered scholars cosmopolitan in a sense almost inconceivable to the student of today....

“In this widely extending area, knowledge of Latin, therefore, was indispensable. So the schools everywhere were Latin schools and learning to read was learning Latin, and the study of the grammer of this tongue was the recognized route to mastery of the power to read, speak, and write.”

Chase pointed out that the grammar book that was overwhelmingly the most common from 400 to 1500 A. D. was the Donati De Partibus Orationis Ars Minor (Lesser Study of Donatus About the Parts of Speech. The title was commonly shorted to Ars Minor, Donatus, Donat, or Donet.

Chase said its author taught rhetoric in Rome about 350 A. D. and his name possibly also included “Aelius.” The very little that is known about Donatus is the result of about two references made by his renowned pupil, the Church Father, Jerome, who translated the Bible into the Vulgate.

Chase said that the complete grammar was broken into two sections, and the Ars Minor is the first, and the Ars Major is the second. The Ars Major is about five times as long, and its complete title is Donati Grammatici Urbis Romae Ars Grammatica. Chase commented that the grammatical treatise of Priscian from Constantinople, appearing around 515, became a serious rival to the Ars Major, but the Ars Minor was never surpassed although it had many rivals. Chase wrote that for more than a thousand years the Ars Minor was the dominant text for beginners in Latin.

1926 “Old and New Methods of Teaching Primary Reading,” by Edith M. Peyton and James P. Porter, Journal of Applied Psychology, Vol. X, June, 1926, pp. 264-276. Cited by W. S. Gray on page 103 of his 1956 book for UNESCO, The Teaching of Reading and Writing, as reporting on test results at first and third grades which sharply favored “meaning” methods over “sound.” Since I spent 13 years at third grade and almost four at second grade teaching children who had overwhelmingly learned to read by “meaning,” either from Gray’s Scott, Foresman series or the equivalent Ginn series, and since I saw astonishing disabilities caused by the “meaning” method at second and third grades, I know from painful personal experience that Peyton and Porter’s conclusions are flatly wrong.

1926 A Series of Tests for the Measurement and Diagnosis of Reading Ability in Grades 3 to 8, Arthur Irving Gates, Teachers College Record, Teachers College, Columbia University, New York, September, 1926.

1927 “That Guy McGuffey,” by Hugh Fullerton, Saturday Evening Post, November 16, 1927. The article’s title is repugnant. It was an attempt to be “folksy” by the public relations associates of the “experts” who were apparently launching the McGuffey Myth with the publication of this article in a massively read and highly respectable national publication of the period. It is well to refer here to a remark made by James McKeen Cattell in 1929, quoted at length elsewhere:

“It is the object of psychology to describe, to understand, and to control human conduct...”

In being fed the McGuffey Myth, American thinking was apparently being “controlled.” In his 1927 article, Fullerton said:

“For year’s McGuffey’s system and his books guided the minds of four-fifths of the school children of the nation in their taste for literature, in their morality, in their social development, and next to the Bible in their religion.”

Westerhoff said (page 16 of his 1978 book listed later):

“It was such convictions, repeated countless times, that prompted Mark Sullivan in 1929 to chastise historians and scholars for ignoring McGuffey, the ‘most popular, most affectionately remembered person in the nineteenth century, a national giant to be ranked with George Washington and Abraham Lincoln.’”

Dr. Cremin referred to the belief that the McGuffey Readers had shaped the mind of America, and referred to it as:

“...the so-called McGuffey myth, propagated above all by Mark Sullivan in the second volume of Our Times: the United States, 1900-1925....”

However, the McGuffey Myth should not be defined primarily as the belief that the series shaped the mind of America, but instead should be defined primarily as the delusion that McGuffey’s were the readers used by eighty or ninety percent of American children in the nineteenth century.

What Westerhoff did not realize was that Vail’s 1911 book in praise of the readers really made no such claims. Vail’s work and these sources are discussed at length in this history.

1928 Our Times: The United States, 1900-1925, Volume II, America Finding Herself, by Mark Sullivan, published by Charles Scribner’s Sons, New York. This was the second volume of Sullivan’s
otherwise entertaining and nostalgic series, Our Times, the first volume of which was published in 1926 and the last reportedly in 1935. It is referred to above in the 1927 entry on the Saturday Evening Post article by Hugh Fullerton. In this second volume, Sullivan thanked “experts” for their “help” on historical details. The McGuffey Myth, apparently launched with the Saturday Evening Post article of 1927, appeared in Volume II, presumably because of the “help” of those “experts.” Nila Banton Smith quoted Sullivan’s version of the Myth on page 109 of her “history.” Her “history” was her doctoral dissertation at Columbia Teachers College about 1932, and was published in 1934 (and revised in 1965). Incredibly, Sullivan in his 1928 book increased the number of American children using the McGuffey series in the nineteenth century from the eight-out-of-ten in Fullerton’s 1927 Saturday Evening Post article to nine-out-of-ten!

1928 “William Holmes McGuffey and the Peerless Pioneer McGuffey Readers. pa 25c ‘28 Miami University,” by H. C. Minnich. The date of Minnich’s original text was 1928, not 1936 when American Book Company published William Holmes McGuffey and His Readers by Minnich. At the end of the section, “Readers,” in the Cumulative Book Index, 1928-1932, appeared “About Readers” and it contained this entry.

The Preface states, “The period treated is prior to the Anglo-Norman invasion and terminates about A. D. 1170...”.

This is an extraordinary and very large bibliography of ancient Irish texts. In the New York Public Library, 42nd Street main branch, a copy is on the open shelves under call number *RB CS. Presumably printed in 1929, it is in terrible condition. However, this work was republished in Dublin, Ireland, in 1979.

On page 187, Kenney said:

“The two Irishmen who had the greatest effect on the course of development of West-European civilization in the Middle Ages were two name-sakes and contemporaries of the sixth century, Columba of Iona and Columba, or, as he is now usually designated, Columbanus, of Luxeuil and Bobbio....”

Therefore, with original source material on which to draw, Kenney confirmed the influential position of the sixth-century Irish monks. The educational practices which the Irish monks followed in the teaching of beginning reading in the sixth century have been discussed in this history. From Kenney’s comment it is reasonable to conclude that the same practices in the teaching of beginning reading were followed in Western Europe since it was under the cultural and educational influence of the Irish monks. It is reasonable to assume that these methods which required the use of wax tablets for beginners remained essentially unchanged for many centuries, until the use of wax tablets for beginners was replaced by the use of ABC books in Western Europe. That was about the middle of the fourteenth century. The increased availability of paper by that time may have contributed to the change.

1930 Articles on Celestin Freinet in L’Eclaireur de Nice, France (approximate date).
Freinet, from France, became famous in Europe for promoting the “global” sight-word meaning method and “progressive” education, where some schools have been named after him (and after Dr. Ovide Decroly of Belgium, another promoter, who died in 1933).

Freinet wrote a booklet about 1926, Un Mois Avec Les Enfants Russes, after his group’s 1925 trip to Russian schools and its visit with Nadezhda Krupskaiia (1869-1939), USSR Minister of National Education, and Lenin’s widow. The material was discussed in a book by Elise Freinet (Freinet’s widow?) Naissance d’une Pedagogie Populaire, Library of Congress call number LB775.F76F7. In her book, Elise Freinet referred to L’Eclaireur de Nice’s number of July 6, 1926, which carried a favorable article and photo on Freinet’s school at Bar-Sur-Loup, France. She then said on page 51:

“Some years later, at the time of the affair of Saint Paul, we would have the occasion of refinding in L’Eclaireur de Nice some daily articles on Freinet but specialized this time in defamation and calumny the most base.”

Most surviving educational references contain only data that is favorable to such change-agents as Freinet. Therefore, the articles opposing him in that Nice newspaper might have some interesting and otherwise unavailable data. (Freinet’s school is discussed briefly in this history.)

1930 Notes on Epistemology, by Walter F. Cunningham, S. J., Fordham University Press, New York. This is a very heavy but fine refutation of the idea that “reality” cannot be perceived objectively, but only subjectively. It was the textbook in a very stimulating evening course I took in 1944 at Fordham University’s downtown branch under brilliant Father Bowen, S. J., when I was eighteen. It has been a fine antidote ever since to such “pragmatic” philosophies as those of William James and John Dewey.

1930 Elementary Education in Shantung, China, by Harold Fred Smith (Doctoral dissertation at Columbia University) In recent years, the Chinese have been using the Pinyin sound-bearing alphabet in combination with their meaning-bearing characters, so their present data on reading comprehension would presumably be comparable to Japanese data, since the new script would also use both sides of the brain, just as Japanese script does (the left for “sound,” and the right for “meaning”) However, it would be of great interest to obtain reading comprehension scores in China before the advent of the Communists, who installed the Pinyin sound-bearing alphabet to be used along with the meaning-bearing Chinese characters which had been in use in China for over two thousand years.

According to the above doctoral dissertation of Harold Fred Smith at Columbia University in 1930, on page 20, reading comprehension tests were given in China before the use of the Pinyin alphabet. Harold Fred Smith cited reading tests of Dr. McCall, apparently E. L. Thorndike’s student, Dr. William A. McCall. Although Harold Fred Smith referred only to Dr. McCall without the use of a first name, since the Thorndike-McCall Reading Scales for Grades 2-12 were prepared at Columbia Teachers College in 1921 and the McCall he discussed helped to write reading tests in China in 1922-1923, it is highly likely that the Dr. McCall he mentioned was the same man. Dr. Harold Fred Smith said:

“The tests used were those constructed with the assistance of Dr. McCall on his visit to China in 1922-23. They were published by the National Society for the Advancement of Education. Two and more forms were available for each test. The tests were given at the beginning and at the close of each period of the experiment so that the advance of each pupil and each grade could be determined.... Although the experimental work was carried on in various schools during the years 1923, 24, 25, 27, 28, and 29, the only results of value were obtained in 1927. Various surveys of schools during these years showed very poor conditions.”
The reports of “various surveys” in the 1920’s is also of interest, paralleling the many American school surveys, such as that in Cleveland, made between 1911 and 1919, all of which have also fallen into virtual oblivion, and most of which used Thorndike’s reading comprehension tests or some like them, Gray’s oral reading paragraphs and Ayres’ or Buckingham’s spelling scales. Gray’s oral reading scores, however, after his original 1914 Master’s material prepared under Thorndike, were so “treated” in his 1917 version that scores from Gray’s later oral tests are relatively meaningless.

Harold Fred Smith stated that the reading tests forms used in China were “published by the National Society for the Advancement of Education.” Since the tests were in use in 1923, that means that the “National Society for the Advancement of Education” most probably was in existence by 1923. See the reproductions at the end of Appendix D on two sheets from the James McKeen Cattell manuscript files at the Library of Congress. They were obviously draft forms on proposed memberships in “The American Society for the Advancement of Education” (apparently the first draft) and “The Educational Corporation” (apparently the second draft). Both were undated. From the above, it appears likely that the name chosen eventually was “National Society for the Advancement of Education” and that it was in existence by 1923. That would place the probable dates of the draft copies shown at the end of Appendix D to about 1921 or 1922. It was in 1922 that James McKeen Cattell founded The Psychological Corporation (with other people, although he was the principal founder) and he had long been a member by 1922 of the American Association for the Advancement of Science, and from about 1924 to after 1940 was the Chairman of its Executive Committee. The parallels of those organization names with the organization names on the Cattell draft copies are obvious.

As of June, 2000, according to the Manhattan telephone information operator, no listings appear in the Manhattan or nearby directories for the National Society for the Advancement of Education, for the American Society for the Advancement of Education, or for The Educational Corporation. Nor are they listed in the Washington, D. C., directory, according to the Washington, D. C. telephone information operator.

Yet the “National Society for the Advancement of Education” was apparently already in existence by 1923 and it was underwriting the cost for the very curious testing of the “reading comprehension” of people who used meaning-bearing Chinese characters. Those tests results could then presumably be compared to the test results from students who were taught pure meaning-bearing sight-words, with no use at all of phonic “sound.”

See also the 1933 entry below, Leaders in Education.

1933 Early American Children’s Books. A. S. (or A. W.) Rosenbach. Portland, Maine: The Southwell Press. Mary F. Thwaite in From Primer to Pleasure in Reading said this work contained descriptions of the books in Rosenbach’s own collection, which books are now in the Philadelphia Public Library. The dates of those books range from 1682 to 1836. Rosenbach’s summary volume, available at the New York Public Library and undoubtedly other major libraries, is very important and useful.
1933 Leaders in Education, James McKeen Cattell, Editor. Revised Edition in 1941. This was a “Who’s Who” type of guide for the field of education. It appears likely that a listing in this directory could have had a strong influence on a man’s career in education, so its editor obviously was in a powerful position.

The entry on E. L. Thorndike in the 1933 edition confirms Thorndike’s interest in the subject of reading. While it gave a date of 1912 for Thorndike’s being President of the [American] Psychological Association, no date was given for Thorndike’s being President of its Section on the Psychology of Reading. However, since Thorndike was President of that section on reading, he obviously had an interest in the psychology of reading!

According to Gates’ article in the February, 1926, honorary issue on Thorndike of the Teachers College Record, the academic year of 1911-1912 was the first time Thorndike gave his course, “Psychology of the Elementary School Subjects,” and the year Thorndike began his approximately ten-year-long job of searching out the 10,000 commonest words in English. To do this, Thorndike HIMSELF counted three and a half million running words in selected literature. That certainly demonstrated an interest in reading! Thorndike also wrote three famous articles in 1917 on the psychology of reading, listed in this appendix, as well as other materials on reading listed here.

The entry on Thorndike in Leaders in Education (1933) also confirms Thorndike’s very close relationship with Arthur Irving Gates during the period that Gates was preparing his deaf-mute-method readers of 1930. The deaf-mute-method readers used whole sight words to be read by “meaning” like Chinese characters, instead of by the “sound” of their individual letters. Thorndike was Director of the Division of Psychology at the Institute of Educational Research at Columbia Teachers College from 1922 to 1940, and Leaders in Education shows that Gates was Director of Section D of that Institute from 1922 to 1930. Gates remained at the same time, like Thorndike, a Professor at Columbia Teachers College.

Further in connection with the work on whole sight-words being done before 1930 by Thorndike’s one-time student, Arthur Irving Gates, another professor at Columbia Teachers College in the 1920’s, who was probably also a former student of Thorndike, was Dr. William A. McCall. McCall had been the co-author with Thorndike on the Thorndike-McCall Reading Scales in 1921, which were used to test so-called “reading comprehension.” A 1930 Columbia doctoral dissertation by Harold Fred Smith was entitled Elementary Education in Shantung, China. In that thesis, Smith said “Dr. McCall” was in China in 1922-1923, and made a 1922 adaptation of the 1921 Thorndike-McCall Reading Scales for Grades 2-12. Smith said those adapted reading comprehension tests were given in China in the years from 1923 through 1929. Therefore, it seems probable that some Columbia Teachers College personnel in the 1920’s were collecting data to observe possible differences in results from the two different kinds of reading by “meaning:” Chinese characters in comparison to whole, alphabetically written, sight words. Reading by sight-words results in “psycholinguistic guessing,” and, as my research data showed, very different statistical curves are produced when comparing group scores of such “psycholinguistic guessers” who are incapable of reading automatically to group scores of those who can read automatically without guessing. Unlike whole sight-words which require two or more fixations of the eyes for beginning readers, Chinese characters can be “read” automatically with one fixation of the eyes, and should not result in “psycholinguistic guessers.” Therefore, the 1920’s graphed results from China should have demonstrated to those at Columbia who knew how to interpret such statistical graphs that the Chinese students had achieved automaticity in reading, something which would be impossible for the “psycholinguistic guessing” sight-word readers to be produced by the Gates and Gray deaf-mute-method readers of 1930. See the further comments on Smith’s thesis the 1930 entry above, under his name.

Leaders in Education showed that Thorndike’s first honorary degree was an LL.D. at the University of Iowa in 1923 and his next honorary degree was at the University of Chicago in 1932. This suggests
Thorndike had a strong, early tie with Iowa, where Dr. Orton found rampant reading disability from the use of the “meaning” method by the early 1920’s. Thorndike’s close ties with Judd (his ex-classmate at Wesleyan, according to Judd’s May, 1926, Teachers College Record article) and with Gray, both of the University of Chicago, are known facts. Gray had prepared his master’s thesis on oral reading tests at Columbia in 1913-1914 under Thorndike’s direct supervision. In Cattell’s contribution to the February, 1926, Teachers College Record honorary issue on Thorndike, Cattell referred with amusement to an incident on the Twentieth Century Limited railroad train that used to run from New York to Chicago. A porter on that train delivering a telegram confused Cattell with Thorndike. That porter obviously must have been used to seeing Cattell and Thorndike travel frequently and together from New York to Chicago where Judd’s, Gray’s, and Buswell’s University of Chicago was located. Otherwise, that porter would hardly have known Cattell and Thorndike well enough, out of the thousands of people traveling on that overnight train throughout the year, to mix up their names.

The following appeared at the beginning:

“Introduction. The first edition of American Reading Instruction by Nila Banton Smith was one of those rare books that became a standard work and a classic upon its publication.... The author presented the only complete and insightful treatise on the history of reading instruction in the United States.... The first edition, published by Silver Burdett in 1934, was an outgrowth of Dr. Smith’s doctoral dissertation [Ed.: at Columbia Teachers College, in 1932 or 1934, entitled A Historical Analysis of American Reading Instruction....] and was printed in only one small edition. The book was soon out of print and available only through libraries.... During the late 1950’s when we began to assess more critically our position in reading, the value of the first edition was evident to all thoughtful persons concerned with reading instruction. Many of us began to urge Dr. Smith to up-date and reissue the book....”

Yet Smith’s book is misleading and incorrect, as has been discussed at length elsewhere in this history of reading instruction.

Smith obtained her doctorate in 1932 or 1934, reportedly based on her “history,” at Columbia Teachers College, at which both Edward Lee Thorndike and John Dewey were still professors, as well as the famous reading “expert,” Arthur Irving Gates. The psychologist/publisher Cattell had been fired from Columbia in 1917 for opposing the World War I draft but continued to be greatly influential. For instance, he was Chairman of the Executive Committee of American Association for the Advancement of Science for many years, and owned its journal, Science, apparently until his death in 1944.

Rudolf Flesch’s famous and best-selling book, Why Johnny Can’t Read, opposing the reading establishment of which Nila Banton Smith was a high-ranking member, was published in 1955. The New Illiterates by Samuel Blumenfeld, 1973; The Paradigm Company, Boise, Idaho: 1988, states on page 120:

“...the International Reading Association (IRA)... was founded in January 1956 at a meeting in Chicago by a merger of two organizations: The International Council for the Improvement of
Reading, headed by Dr. William S. Gray, and the National Association of Remedial Teaching, headed by Dr. Ruth M. Strang...”

That co-founder of the International Reading Association, Gray of the University of Chicago, who wrote the Dick and Jane sight-word, deaf-mute-method readers which blanketed America from about 1930 to almost 1970, had worked closely with Thorndike of Columbia in 1913-1914 as Thorndike’s graduate student. Arthur Irving Gates of Columbia Teachers College, who wrote the other 1930 deaf-mute-method reading primer, published by Macmillen, had been a graduate student at Columbia a year or so after Gray left in 1914. Gates had been a very close associate of Cattell and Thorndike for many years. Nila Banton Smith’s “history” was written by 1932 at Columbia Teachers College while both Gates and Thorndike were still associated with it. Smith’s “history” should be evaluated in light of that fact. The increased interest in its “scholarly” content in the late 1950’s appeared when the uproar over Flesch’s book was still rocking the “establishment,” during which period, as stated above, they “began to assess more critically [their] position in reading.”

1934 “Improving the Ability to Read,” by Edward Lee Thorndike, Professor of Education and Director, Division of Psychology, Institute of Educational Research, Teachers College, Teachers College Record, October, 1934. In this article, Thorndike made no mention of beginning reading.

1934 The New England Primer Issued Prior to 1830 [Bibliographical Check-list of the New England Primer], Charles F. Heartman, a bookman and a prolific writer on books. Also in earlier editions in 1916 and 1922. Heartman’s excellent research material has been widely quoted and widely used in this history. It was in his 1934 edition of the Bibliographical Check-List of the New England Primer that he remarked on the “most curious fact” that some primers could no longer be located:

“...probably due to the crime wave which spread, a few years ago, over all the libraries in the country.”

Similar disappearances of library books had not, however, registered as a crime in the Soviet Union. In Robert H. McNeal’s biography of Lenin’s wife, Krupskaya, Bride of the Revolution, The University of Michigan Press, Ann Arbor, Michigan: 1972, he told of her penchant for carrying out such periodic sweeps of Soviet libraries in the 1920’s to remove “objectionable” books.

See the 1935 entry below, on Heartman’s American Primers, Indian Primers, Royal Primers...., which has been of help in compiling this history.

“Ordinarily a person is entirely unconscious of the characteristics of these tiny movements of his eyes and it is entirely impossible for him to describe them accurately even when he gives his close attention to them. Eye movements are unconscious adjustments to the demands of attention during a visual experience.”

Since before 1922, Buswell had studied eye movements in the act of reading. Not surprisingly, he found “the demands of attention” were vastly different when reading than when looking at pictures. Eye movements in reading alphabetic print move from left to right, and then drop to the beginning of the next line, repeating the left to right movement. This left-to-right movement is rhythmic for a good reader, with fixations at a few points along the line. The time spent at each pause is also fairly rhythmic. Good adult readers grasp a little more than an averaged-size word in each fixation. But eye movements when
examining a picture are random: up and down, left and right, from one corner to another, with long fixations in one spot, but short in another. Such movements, of course, have no pattern and no rhythm and are obviously not automatic conditioned reflexes but are dependent on the wanderings of attention.

Dr. Hilde Mosse in The Complete Handbook of Children’s Reading Disorders, Human Sciences Press, New York: 1982, Volume I, pages 132-139, referred to the rhythmic movement in reading as a conditioned reflex. She said “linear dyslexia” could be the result when young children were obsessed with comic books, because the comic-book pictures with their randomly placed text in balloons interfered with acquiring the automatic movements needed in reading.

In a footnote on page 76 of his 1956 book, The Teaching of Reading and Writing, Dr. W. S. Gray said that Boyne’s unpublished dissertation had been prepared under his supervision. Mitford Mathews referred to it in his 1966 book, Teaching to Read, Historically Considered. In the Library of Congress, it is listed as call number LB 1573.L25. My request slip was returned to me with the note, “special format, other location.” I did not try further to get it, and regret that I have not seen a copy since it may contain some interesting details. However, it obviously agrees in general with Gray’s 1956 comments since it was prepared under Gray’s supervision in 1935.

1935 American Primers, Indian Primers, Royal Primers And thirty-seven other types of non-New-England Primers Issued prior to 1830, by Charles F. Heartman. Printed for Harry B. Weiss, Highland Park, N.J., Three Hundred Copies. This has been discussed in this history. See the 1934 entry above, on Heartman’s check-lists on the New England Primer in 1916, 1922, and 1934.

1936 “The Elizabethan ABC with the Catechism” by H. Anders, in The Library, the publication of the Bibliographical Society, Oxford University Press, London, 1936, Series IV, Volume XVI, page 38 and following. This has been discussed in this history. It contains much useful information on beginning reading materials in the sixteenth century. It also reproduces the surviving fragments of The ABC with the Catechism which has been dated to about 1585.

1937 “The Primer in English,” by Edwyn C. Birchenough, Esq., The Library, Series IV, Vol. XVIII, p. 177 and following, London. This very valuable article has been discussed at length in this history. See also the 1971 entry for the book by Charles C. Butterworth, The English Primers (1529-1545), Octagon Books, New York.

1938 Un Livre d’Ecolier du IIIe Siecle Avant Jesus Christ. By O. Gueraud and P. Jouguet. (A Book of a Schoolchild from the Third Century Before Jesus Christ) Publications de la Societe Royal Egyptienne de Papyrologie, Textes et Documents, II, Cairo, 1938. Discussed in the 1948 book, A History of Education in Antiquity, by H. I. Marrou. The 1938 material concerns an elaborate Greek syllabary on a papyrus roll found in the sands of Egypt just before World War II, which syllabary has been dated to the third century, B. C. Marrou presumed it was a teacher’s guide for teaching reading by the syllable method, instead of a child’s text, as the authors’ 1938 title suggests.

1938 Psychology of Elementary School Subjects, by William Henry Gray, (not William Scott Gray), Prentice-Hall, Inc., New York. It was from a copy of this book in the New York University Bobst Library that I first learned in the spring of 1980 of the existence of Leonard P. Ayres’ 1915 A Measuring Scale for Ability in Spelling. William Henry Gray mentioned it more or less casually, and very briefly. Yet, if I had not seen that book with its very brief comments on the nature of the Ayres’ scale, I doubt that I ever would have known, not only of the significance of the Ayres’ scale, but of its very existence. The
remarkable significance of the Ayres’ spelling scale is that it provides uncontrovertible evidence on the spelling ability (and therefore the reading ability) in 1914 and 1915 of 70,000 American children in 84 cities from grades 2 to 8. My ink comment on the photocopy I made at that time of the page mentioning the Ayres’ scale reflected my astonishment at what I had found. My comment was the simple exclamation: “Wow!” I have found no printed discussion on the nature of the once-famous and nationally-used Ayres’ scale dated later than this 1938 book.

However, I eventually did see Ayres’ spelling scale at least listed by name in a bibliography of test materials published in 1945, but with no explanation of its nature. Gertrude Hildreth who prepared the third edition of A Bibliography of Mental Tests and Rating Scales wrote that the second edition had come out six years previously (which would have been in 1939). The first appeared in 1933. Whether Hildreth had prepared all three is not known, but she obviously had not included Ayres in the earlier ones, as she stated that the only pre-1939 entries she listed in 1945 were those that had been omitted earlier. Therefore, someone must have told Hildreth that Ayres’ scale had been omitted, or she had stumbled across some reference to it herself.

The 1945 material was entitled A Bibliography of Mental Tests and Rating Scales - 1945 Supplement, Gertrude H(owell). Hildreth, Ph. D., Teachers College, Columbia University, N. Y., N. Y., published by The Psychological Corporation, New York, N. Y. A note on this material stated:

“During six years since the Second Edition of A Bibliography of Mental Tests and Rating Scales was published, more than a thousand additional test items have been printed. The list includes tests published prior to 1939 which were not included in the Second Edition as well as those published since then.

“As in previous editions of Bibliography, no attempt has been made to rate these new test materials in terms of their value to psychologists and educators, a feature that appears in Buros’ 1940 Yearbook (November, 1942).”

Therefore, Hildreth could very well have included the Ayres material in 1945 with no real knowledge of its nature, but only the bare facts concerning its publication.

Although Hildreth, herself, was an author on a sight-word American reading series, she was obviously fair minded since she later reported very objectively on the reading methods in use in the Soviet Union, as mentioned in the entry on her 1959 article in The Reading Teacher. Considering the fact that she was apparently open-minded, it is very interesting that the name and address, “G. Hildreth, 415 W. 118th NYC” appeared on January 12, 1948, on a check-out card in the sole surviving copy of the Ayres scale at Columbia Teachers College. That “G. Hildreth” may well have been Gertrude Hildreth, since she had listed the Ayres’ scale in 1945 in the bibliography she prepared, a third edition, but, as she noted, made no evaluation of any of the entries. It would be interesting to learn what made Hildreth go to the trouble to look up the Ayres scale and to find out what it really was, a long three years after she had put its name back, at least officially, in the literature as a test that had been “overlooked” in the earlier 1933 and 1939 Bibliography editions.

of “meaning” in beginning reading. That certainly seems to conflict with Russell’s having been an author on a “meaning”-approach series.

“As already pointed out by Simon, the results of children who have learned to read by the global method are completely different from those who learn to read by the synthetic method. We even admit that we have frequently been most embarrassed to evaluate these results....”

Seegers did not imply the results were permanent. Some of his comments are quoted in this history.

1940, 1948 - L’Education Nouvelle, by Angela Medici, Presses Universitaires de France, Paris, France. Of real interest concerning the history of what is usually called “progressive” education. What is particularly interesting is that she apparently was unaware that the term, “The New Education” was used in connection with Parker’s 1875 and later “Quincy Movement.”

1943 Encyclopedia of Modern Education, Philosophical Library, Inc., Printed by F. Hubner & Co., Inc., New York. Editor: Harry N. Rivlin, Department of Education, Queens College, New York; Associate Editor: Herbert Schueler, Department of Education, Queens College. The Advisory Board included Dean Harold Benjamin, University of Maryland; Dean Francis M. Crowley, Fordham University; Prof. William F. Cunningham, University of Notre Dame; Dean Frank N. Freeman, School of Education, University of California [formerly at the University of Chicago]; W. H. Kilpatrick, E. L. Thorndike and Professor I. L. Kandel of Teachers College, Columbia University; and Paul Klapper, President of Queens College. Klapper’s 1914 guide for teaching reading, mentioned by Nila Banton Smith in her “history,” had still been in print when the 1928 United States Catalog was published.

Comments by Albert J. Harris, in his article in the Encyclopedia, “Reading - Methods of Teaching,” indicate that “intrinsic” phonics (Code 3 whole-word phony phonics) was the prevailing and unchallenged method by 1943, even though the concept of “intrinsic” phonics had only been introduced in 1925 in Gates’ article, referred to earlier. Harris said:
“Systematic phonic methods have also fallen into disfavor for teaching beginners because they tend to emphasize the mechanics of reading at the expense of comprehension and promote habits of excessive vocalization which later interfere with the development of speed and fluency in silent reading. Phonics (q.v.) is generally taught as a supplementary rather than as a basic technique in word recognition.”

Under “Phonics,” also by Harris, this appeared:

“Phonic readiness is usually developed by giving practice in finding words that rhyme, words that begin with the same sound, etc. Letter sounds and phonograms are introduced by pointing out similarities and differences in words that have already been learned as wholes.”

With this description, Harris had given a classic definition of Code 3, whole-word, phony phonics. A. J. Harris also contributed the following articles of interest: Phonics, Reading, Eye Movements, Reading Interests, Reading - Methods of Teaching, Reading Readiness, Reading Vocabulary, and possibly others. Harris became the author of the widely used Macmillan reading series, in an edition which apparently replaced Gates’ 1930 and later Macmillan editions. He was also the author of the widely used teacher textbook, How to Increase Reading Ability, appearing in the original edition in 1940, and in revised editions for many decades following. It is listed in this bibliography under its 1975 revision.

This is a source of much material on the Elizabethan period. Baldwin opens Chapter I by quoting from William Kempe’s 1588 book, The Education of Children. It is painstakingly exact on teaching the initial steps of reading by the syllable method, but curiously seems to imply that open syllables should be pronounced with short vowel sounds. Of course, it is true that in English, unlike many other languages, open syllables very commonly are short, as in “pa-nel,” although dictionaries do not show the true syllabication of such short-vowel words, only showing that syllabication on long-vowel words (“la-bel”).

Also, after a child had learned the syllabary and the spelling of words by sound, Kempe said:

“...when he shall have ended his first booke the Catechisme, he wil be able to pass through the Primer commendably without spelling; some harde words here and there excepted.”

This statement from 1588 is further confirmation that the primer was not to be the first book.

Baldwin discussed at length the authorized books in the sixteenth century, the background on their development, and much more of great interest concerning that general period. He also included on page 122 a reproduction of a fragment from an ABC printed by John Day, c. 1551, from the original at Ushaw College, Durham. It contained the alphabet in black English letters and in regular letters, both capital and small, an almost complete closed syllabary (ab, eb, ib, ob, ub, ec.) but no open syllabary (ba, be, bi, bo, bu, etc.) and “In the name of the Father and of the sonne, and of the holy ghoste, so be it.” I have seen this reproduction no where else, although it certainly differs from the usual beginnings for hornbooks and ABC books.

See also the entry under 1936 for an article by H. Anders, “The Elizabethan ABC With the Catechism.”
1944, 1972 The Teacher’s Word Book of 30,000 Words, by Edward Lee Thorndike with Irving Lorge, Teachers College Press, Teachers College, Columbia University, New York. Based on Thorndike’s original Teacher’s Word Book (of the 10,000 highest frequency words) of 1921.

1945 The Story of Language, by Dr. Mario Pei, Professor of Romance Philology, Columbia University, J. B. Lippincott Company, Philadelphia: 1945, and Mentor Books, New York: 1960. This work and others by the brilliant linguist, Dr. Pei, are invaluable guides to an understanding of language. See also the 1958 entry by Dr. Pei, Getting Along in French.

1946 The Psychology and Teaching of Reading, by Fred J. Schonell, London: Oliver and Boyd. Schonell was a very well-known, pro-“meaning,” English “expert” comparable to Gates and Gray in America, and his other published material dates back at least to 1932.

1946 Foundations of Reading Instruction, American Book Company, Emmett Betts, 1946 and later revisions. This is a very large, pro-“meaning,” teacher-training book. Betts was also the co-author of the Betts Basic Readers of 1948 and later, and was a major American “expert” of the post-World-War-II period.

Betts was also the author in the 1940’s of an oral-reading-accuracy scale with a cut-off below 90 per cent as the “frustration” level. W. S. Gray had also used the below-90-per-cent failure level in his 1914 oral reading accuracy scales prepared under E. L. Thorndike’ personal direction, so both Gray and Thorndike in 1914 had to have known of the existence of some kind of a “frustration” level below 90 per cent accuracy in reading words or they would not have used it in the preparation of those oral reading accuracy scales. As discussed at length elsewhere, so did Gallaudet generally use a 90 per cent frustration level for introducing new words in his 1835 The Mother’s Primer written for hearing children, which I found by doing a word-analysis of that text. Although Gallaudet in no way drew attention to the fact that he was generally introducing only ten per cent of “new” words in his selections, he obviously had to be doing it because he know of the existence of some kind of frustration level when the memorized sight-words were less than 90 per cent of a selection. That “frustration” level obviously had to have been identified while Gallaudet was teaching his deaf-mutes to read solely by memorized sight-words and context-guessing. Gallaudet obviously must have found that the deaf-mutes could not context-guess the meaning of unknown words if the bed of memorized sight-words was less than 90 per cent. Since the Thorndike/Gray/Betts armada were promoting the deaf-mute reading method for hearing children ever since 1914, it was only reasonable that they would also have promoted the below-90-per-cent deaf-mute-method “guessing” frustration level for the correct reading of words. It is obvious that they knew of its existence, at least since 1914, and probably earlier.

See A. J. Harris’s book listed later, which was a comparable “expert” text.

“Freinet discusses what he calls the natural principles of learning and ways of preparing children to participate effectively in the plan. Two points which are much emphasized are the importance of writing in early learning activities, and the utility of printing presses, magazines, and exchanges as incentives to accurate work. A Manual which accompanies the Dutch reading materials prepared by Evers, Kuitert and Van der Velde describes the global method in detail and explains how it contributes to all-round development. (Evers, F., Kuitert, R. and Van der Velde, I. Naar Onze Moedertaal, Groningen, Wolters, 1952).”
Gray is, again, misleading concerning the truth, in his obvious approval of these European materials. If their “global” method (called the sight-word “meaning” method in America) “contributes to all-round development,” why, then, do we have such massive “functional illiteracy” in America?

See the previous entry under 1930 on Freinet, and the 1949 entry on Elise Freinet. The resemblance between the “whole language” approach of today, and Freinet’s approach, is self-evident.

1948 A History of Education in Antiquity, by H. I. Marrou, Professor of Early Christian History at the Sorbonne, Paris, translated by George Lamb. 1956 edition by Sheed and Ward, Inc., New York; 1967 edition by Mentor Books, New York. Although based on others’ research, this is a worthwhile book up to about 400 A. D. but is misleading after that date. An anti-clerical bias on the part of Marrou appears probable as it has been so common among French intellectuals since before the French Revolution. For instance, even though he was Professor of Early Christian History, he seemed to credit only ancient Greece and ancient Rome as the sources out of which Western civilization grew!

Marrou’s treatment of these materials can be cited as an example of “The Footnote Fallacy,” which is the assumption that footnotes can provide corroboration for an author’s otherwise unsupported conclusions. Yet, obviously, in practice, a defect can quote a defect. In this fashion, Marrou quoted Lorcin’s conclusion, but rejected his opponent Grosjean’s argument, which the reader can only know from the label attached by Marrou and his “footnote” authority, Lorcin. In this particular case, the intellectual nonsense is even greater because Marrou identified Lorcin as his very own student! Therefore, Lorcin was Marrou’s probable intellectual clone, and that almost put Marrou in the position of “footnoting” himself!

1948 An Introduction to Critical Thinking, A Beginner’s Text in Logic, by W. H. Werkmeister, Director, School of Philosophy, University of Southern California, published by Johnsen Publishing Company, Lincoln Nebraska, in the 1957 revised edition of the original edition of 1948. This book taught the specific, dead, “subject matter” of logic, which material has nothing to do with attitudes or emotions. In fact, by its very objectivity, it may trample on some students’ illogical attitudes and emotions. The title of this book demonstrates that the label, “logic,” and the label “critical thinking” were once considered to be synonymous. Yet “critical thinking” today in our government schools has instead become a label for programmed efforts to change attitudes (and therefore, emotions). Such efforts were once described by a far clearer label, “brainwashing.”

1949 Naissance d’une Pedagogie Populaire, Elise Freinet, Francois Maspero, Paris, in a 1978 edition. This book has been discussed in this history. The publisher’s exceedingly long list of its books in La Petite Collection Maspero was noteworthy: Che Guevera, Castro, Marx, Trotsky, etc.

This book was meant to promote Celestin Frienet’s much published “improvements” in elementary school teaching, which included the sight-word (global) method, and non-directive, “child-centered” teaching. On pages 48-50 of her 1949 book, Naissance d’une pedagogie populaire, Elise described how Celestin’s class looked when she arrived in 1926. She described the room as “beautiful disorder” but floating on top of it was an “inextinguishable enthusiasm.” Books were strewn everywhere. The room had a “biological laboratory” containing tadpoles, snails, slugs, “innumerable insects,” butterflies, a “garden of plants” and brook water with vegetables and rose petals in which the insects could “frolic.” The “altar” was the printing press. (Translation: the place was a noisy, probably dirty, mess. Worthwhile open classrooms are NEVER “disordered,” dirty or noisy.)

It is a very important source for information on the period from about 400 to about 1400, particularly since that thousand-year period is, incredibly, rarely covered in other works, and then often fleetingly, very incompletely, or very incorrectly. The fact that it was a solidly Christian period very possibly accounts for those thousand years being slighted by so many “intellectuals,” and for the fact that they have been labeled the “Dark Ages.” In contrast the eighteenth-century period of that arch-villain, Voltaire, is the so-called “Age of Enlightenment.” However, note the reference to “light” in both cases, which tends to recall the name of Milton’s most famous character, Lucifer.

1950 “Etude de Quarante Cas de Dyslexie d’Evolution,” by Madame Roudinesco, J. Trelat, and Madame Trelat. Enfance, No. 1 (Jan.- Feb.), Paris, France. The statement was made that global sight-word (“meaning”) programs produced 20% dyslexics, but “sound”-based programs produced only 2% dyslexics.

1951 Les Troubles du Langage dans les Dyslexies et les Dysorthographies,” by Suzanne Borel-Maisonny, Enfance, Paris. On page 402 in her discussion of reading disability, she used the term “psycho-linguistique,” some years before Kenneth Goodman and Frank Smith made the term “psycholinguistic” reading as familiar to teachers as “Dick and Jane” had been. The appearance of this article, the following article, and other articles in Enfance supporting “meaning” in beginning reading, appears to have been the result of the 1950 article, above, which reported acute failure from the “meaning” method and which therefore recommended the use of “sound.”

1951 “Troubles de l’apprentissage de la lecture.” by Ajuriaguerra, Enfance - No. 5 (Nov.-Dec.).

1951 How They Read, by Helen R. Lowe. Mrs. Lowe published this study to demonstrate the harm that resulted from teaching beginning reading by “meaning” instead of by phonics, or “sound.” Some years ago, I obtained a copy of the late Mrs. Lowe’s copyrighted paper from Mrs. Bettina Rubicam of Scottsdale, Arizona, who was then president of the Reading Reform Foundation. Mrs. Lowe’s paper contained misreadings like “horse” for “pony,” and “pot” for “pan,” based on more than 10,000 reading errors she had recorded over many years in her work with readers aged six to twenty-six. She also found such misreadings as “Switzerland” for “Massachusetts,” “absence” for “attendance,” “noodles” for “mill bells,” “twelve onions” for “the travelworn paper bag,” and “molasses and radishes” for “masses of
reddish gold clouds.” Mrs. Lowe’s paper has never been published, but she did have a short magazine article published, which I believe was in the Atlantic Monthly.

1952 “The ‘Term Lord’s Prayer’ Instead of ‘Pater Noster,’” by C. C. Butterworth, The Library Chronicle, University of Pennsylvania, Philadelphia, Pennsylvania: 1952, vol. XVIII, p. 24. Except for one isolated instance, the prayer was uniformly known by its Latin name in England until after the Reformation, as C. C. Butterworth pointed out in his article. The Lord’s Prayer was the only text on the hornbooks and was also the first text at the beginning of the ABC books which were used to teach beginning reading. Therefore, the fact that the name of that prayer was almost uniformly “Pater Noster” until the Reformation is a confirmation that beginning reading had to be taught in Latin until the Reformation.

1952 Gilmore Oral Reading Test, by John V. Gilmore, World Book Company. It would be useful to compare the carefully obtained and clear norms on this 1952 test to the clear norms that W. S. Gray showed first on his Ph. D. thesis in 1917, before he statistically treated his oral test scoring procedure to such an extent that the results amounted only to undecipherable gobble-de-gook.

What is most notable about Gilmore’s 1952 norms, unlike Gray’s untreated 1917 norms, is that they produce a bell curve, not a curve with scores piled up at one end. That kind of piling-up should be the case when “taught” material is being graphed, and Gray was only testing accuracy in oral reading, a “taught” skill. Bell curves are only produced if an in-born quality is being measured, and they are produced on reading comprehension tests, which indicates Gilmore’s oral reading, presumably testing only “accuracy,” was actually being done by using “comprehension.” Those 1952 test-takers were reading by “meaning,” and not by “sound.”

What is being measured with “reading comprehension tests” is native intelligence, not reading ability. That is certainly true for that portion of the test population which has succeeded in learning the 1,000 highest frequency words that compose more than 90% of most texts (or at least the 300 which compose 75% of most texts). With the matrix of high frequency words to guide them, such test-takers who are actually disabled readers can use their intelligence to guess orally at missing words or to guess the answers to test questions, “psycholinguistically,” even when they cannot read some of the major words in the selections and the questions. Binet and Simon some ninety years ago in France observed the astonishingly successful “guessing” ability of disabled readers taking intelligence tests that used oral reading comprehension, as noted elsewhere.

1952 “The Founding of the APA,” American Psychologist, 7, 1952, 95-97, according to the reprint entitled “Edward Wheeler Scripture, 1864-1945,” from the section, “Notes and Discussions,”: of the American Journal of Psychology, June, 1965, Volume 78, No. 2, pp. 314-317. The founding of the APA took place in 1892 in the study of G. Stanley Hall at Clark University, Worcester, Massachusetts, where Hall was the university president. Present were the psychologists William James, James McKeen Cattell, John Dewey, and others.

1952 “Reading: The Alphabet and Phonics,” by Monsignor Clarence E. Elwell, Catholic Educator, May, 1952. This was cited by Rudolf Flesch in his 1955 book, Why Johnny Can’t Read, page 15. Monsignor Elwell was Superintendent of Schools in the Diocese of Cleveland. After a four years’ experiment, he concluded:

“The experimenter finds teachers convinced and children apparently happier in their success.”
However, just as Madame Roudinesco’s Enfance article in 1950 in France, endorsing phonics, resulted in a spate of articles endorsing the global method, only a year later another Catholic clergyman reported a study of “silent reading” which endorsed the sight-word approach. The rarity of such Catholic schools studies in the literature should be considered along with the fact that the only two usually cited occurred almost back-to-back (May, 1952 and October, 1953). I suspect the second clergyman may have had “expert” help in setting up his simple “study” relying on “silent reading tests,” which implicitly seemed to cancel the results from the first four-year-long study. See the comments below concerning that 1953 study by Rev. John B. McDowell.

1953 “A Report of the Phonetic Method of Teaching Children to Read,” by Rev. John B. McDowell, The Catholic Educational Review, Vol. L, October, 1953, p. 506-519. As stated above, the timing of this brief study favoring “meaning” in teaching beginning reading strongly suggests it was meant as a rebuttal of Monsignor Elwell’s extensive study favoring “sound.” However, unlike Elwell’s study, it was not based on long-term teacher observation of children’s routine class achievement, but instead was based on one-time statistical results from standardized silent test forms. One test compared 77 matched pairs of boys and 55 matched pairs of girls at fourth grade on their Iowa Silent Reading scores. One group of boys and girls was from the “phonic” classes and the other group of boys and girls from the “regular” classes. The “regular” group was reported to have had higher scores and speed, but the “phonic” group superior scores on spelling. In addition, the Metropolitan test was given to 128 matched pairs. The “phonic” group were slightly superior in intelligence. Higher, but not statistically significant scores were obtained for the “regular” group.

In reporting this study, W. S. Gray said, “In spelling, the phonetic group was clearly superior,” which Rev. McDowell attributed to the “mental set.” He said, “The child was attentive to pronouncing the word, to getting anything that rhymed with the original word... and to spelling the word. But the ‘mental set’ of looking for meaning was not there.” In reality, the slightly superior scores for the “regular” group on “silent reading comprehension” are accounted for by the fact that they read with forced attention, and were incapable of letting their forced attention wander when reading. Yet any unmotivated readers from the fourth grade “phonic” group were capable of going through the motions of “reading” (silently reciting) the test even if their disinterested free attention chose to wander to pleasanter fields, which resulted in their getting lower scores, and lowering the class average. Classes whose individual “reading comprehension” scores fall in a narrow band of moderately good achievement should always be suspected of being incapable of reading automatically. Yet classes whose individual scores fall in a wide band, from very low to very high, have probably demonstrated automaticity in their reading.

The fallacy of using silent reading comprehension tests as indicators of reading achievement has been discussed in this history and in my 1981 unpublished book (of which I gave out over a hundred copies about 1981), The Case for the Prosecution, in the Trial of Silent Reading Comprehension Tests, Charged with the Destruction of American Schools.

1953 The English Primers (1529-1543), by Charles C. Butterworth. Copyrighted and published by the University of Pennsylvania Press in 1953, and reprinted by Octagon Books in 1971. This is the authoritative guide to the subject. It contains material from and references to other texts which have been invaluable in preparing this history.
1954 The Life of Henry James, by Leon Edel, A Discus Book/Published by Avon Books, A Division of the Hearst Corporation, New York, New York. This justly-famous multi-volume work is a superb piece of scholarship and fine writing.

1954 The Spans: Perception, Apprehension, and Recognition, by E. A. Taylor. American Journal of Ophthalmology, 44, p. 501-507. Data was given in this article on regressions in reading of 5,000 U. S. readers from Grade 1 to College. When recording eye movements in reading, 23% regressions were found at first grade and 15% at college. Yet in E. B. Huey’s 1898 work with American adults, reported on pages 27-29 of Huey’s 1908 book, The Psychology and Pedagogy of Reading, he cited “retrocals,” presumably regressions, which work out to only 3% when analyzed. Huey’s subjects, presumably 1898 American university undergraduate or graduate students, would probably have been exposed to heavy phonetic drill in spelling and become competent readers, like those Rice tested in spelling in 1895 and 1896. The two sets of data demonstrate an enormous decrease in automaticity in reading, which was to be expected after the 1930 wholesale adoption of the “meaning” method for teaching reading.

1954 “First Steps in Reading: Phonics the Key,” letter from Hunter Diack, The Times Educational Supplement, London, England, 7 May 1954, No. 2036, p. 441. Diack and J. C. Daniels were the authors of the semi-phonic, semi-linguistic Royal Road Readers published by Chatto & Windus, Ltd., London, and opponents of the prevalent English sight-word methods. This and the two letters below were cited by W. S. Gray in his 1956 book for UNESCO, The Teaching of Reading and Writing, in a footnote on page 84. See the British section of this history concerning the promotion of the “meaning” method in England starting again about 1930, where it had largely fallen into disuse in the early twentieth century. The “meaning” method was also promoted after 1930 in France, Germany, South America and elsewhere, as briefly discussed in this history, resulting in widespread reading disabilities, but the “sound” phonic method was uniformly used in Communist countries since 1932 at the latest.

1954 “Rival Reading Methods: Question of Timing,” letter from Frank Whitehead, The Times Educational Supplement, London, England, 21 May 1954, No. 2038, p. 503. In his citation of this letter and the two preceding it, Gray did not quote these remarks from this third letter: “...At first it is easy to know the words by the shapes. Bits of the shapes do not seem to do much. Other bits seem to do one thing one time and another thing another time. Look-and-say helps at first. Soon the boys and girls go mad....”

1954 The New Iowa Spelling Scale, State University of Iowa, Iowa City, Iowa. This material was prepared from actual tests of spelling by 30,000 American children at different grade levels. When words on this 1954 scale are compared to the same words on the 1915 spelling scale of Leonard Ayres, which had also been prepared by extensive tests of 70,000 American children in 1914 and 1915, an absolutely monumental drop in achievement is demonstrated. For instance, when a particular six of the words scored by Ayres at the second grade level were compared to the same six words on the New Iowa Spelling Scale at the second grade level, the 1915 average for those words was 73%, but the 1954 average was 25%. (See the 1915 entry on Ayres scale for scores on such individual words on each scale.)

The Iowa material was tested at the beginning of second-grade; the Ayres material was tested at mid-term. Of course, some appreciable drop must be assumed from the difference in the time of testing, but it should not be overly large. The astonishing, mind-boggling drop from spelling test averages like 73% in 1915 to averages of 25% in 1954 has never been publicly alluded to, so far as I know. That fact should be considered along with the fact that the once-famous spelling scale of Ayres has dropped into education history’s “black hole.”
To show how bad things are today in comparison to 1915, at that time in mid-fourth grade, 99% of American city children (which included Blacks and foreign-born) could correctly spell these 85 words, which are in descending frequency from Lists A through G on the Ayres scale of the highest frequency words: me, do, and, go, at, on, a, it, is, she, can, see, run, the, in, so, no, now, man, ten, bed, top, he, you, will, we, an, my, up, last, not, us, am, good, little, ago, old, bad, red, of, be, but, this, all, your, out, time, may, into, him, today, look, did, like, six, boy, book, by, have, are, had, over, must, make, school, street, say, come, hand, ring, live, kill, late, let, big, mother, three, land, cold, hot, hat, child, ice, play, sea. We know that now great numbers of fourth graders, particularly Blacks and foreign-born, cannot even READ these 85 words!

At mid-fourth grade, 98% could also spell List H, another 52 words, 96% could also spell List I, an additional 63 words, and 94% could spell List J, an additional 83 words. That meant that at mid-fourth-grade, 94% of children in 1915 could spell a total of 283 out of the thousand highest frequency words in English. It is self-evident that the children must also have been able to spell many more words of lower frequency on which they were not tested. Furthermore, all of the children would have been able to read correctly many, many more words than they could spell correctly! Therefore, America had no reading problem in 1915, which fact I believe has not fallen, but has been pushed, into education history’s “black hole.”

Presumably the “New” scale with 1954 norms has had more recent revisions since 1954.

The first Iowa Spelling Scale appeared about 1919, to judge from a brochure entitled, “To A Critical Audience” which is in the Harvard libraries, which brochure announced a new series of spelling books based on what was probably the original Iowa Spelling Scale. The background on that original Iowa Spelling Scale is given in that undated brochure of Ginn and Company. The fact that the brochure had to have been published by 1923 or earlier is shown by the “Received” stamp it bore from the Commonwealth of Massachusetts Department of Education dated March 17, 1923. It was then stamped by Harvard as having been received by them on April 24, 1928.

The pamphlet’s first page was headed, “The Place of Experiment,” and stated:

“...Since its first appearance about two years ago the piece, entitled The Common-Word Spellers, has enjoyed an uncommonly successful run upon all sorts of educational stages, large and small.

From this advertising blurb which was already in print some unstated time before the March 17, 1923, of the first library stamp, and which used the tiresome literary device of audiences in front of stages for two years, the new spelling books can be presumed to have been in trials since before March, 1921. Those spelling books, which were based on what was probably the original Iowa Spelling Scale, should have taken a year or two to prepare, so presumably the work on those spelling books was under way by or shortly after March, 1919. Therefore, what was probably the original Iowa Spelling Scale would have had to have been completed or at least under way by about 1919 since it was used in the preparation of these spelling books. The year of 1919 is also the year that Buckingham published his “Extension” of the Ayres spelling scale, in which Buckingham misrepresented and lowered Ayres’ extremely high norms, as discussed elsewhere.

Therefore, the 1915 Ayres Spelling Scale was under attack by two opposing scales either shortly before 1919 or probably no later than 1919: by Buckingham’s so-called “Extension” of the Ayres scale which was finished and published by 1919, and by the probably far worse and probably original Iowa Spelling Scale which was possibly finished by 1919 but which was at least underway by about 1919. The
The fact that the Iowa Spelling Scale of about 1919 was probably far worse than the 1915 Ayres scale is certainly suggested by the appalling norms on the 1954 “New” Iowa Spelling Scale.

Although this circa 1920 or 1921 spelling series was based on the early Iowa Spelling Scale, no mention whatsoever was made of the famous 1915 Ayres spelling scale which had preceded the Iowa scale only five or six years earlier. That certainly was a careful application of the “Unthink” principle.

Using that tiresome literary device of a stage and an audience, the brochure went on to say on page 2:

“ACT ONE

“Scene 1. W. N. Andersen, a student at the University of Iowa, working for his doctor’s degree under Professor E. E. Lewis and others, tabulates the vocabulary of 3723 business and social letters, and from this tabulation determines the 3000 words most frequently used.

“Scene 2. These words are pronounced to 200 or more pupils in each of the grades above the first, and by the results of this test are arranged in an ascending scale of difficulty known as the Iowa Spelling Scale.

“ACT TWO

“Scene 1. Dr. Lewis secures from Dr. Andersen the right to use this word list as the basis of a vocabulary for a modern spelling book.

“Scene 2. Dr. Lewis compares 16 additional word lists compiled from various sources, and from this comparison and extensive original investigation selects an additional 1500 words to be added to the Andersen list, making a scientifically selected writing vocabulary of about 4500 words.

“ACT THREE

“Scene 1. The results of experiment and research are organized by Dr. Lewis into a carefully graded, logically developed teaching scheme.

“Scene 2. The Lewis Common-Word Spellers are published and meet with widespread and increasing approval as evidenced by their use in a large number of schools, of which those listed at the back of this booklet are but a small number.”

The brochure went on to say that Dr. E. E. Lewis, the author, was “at present Superintendent of Schools in Rockford, Illinois.” Yet the original Iowa scale was prepared by Andersen under Lewis’s personal direction in Iowa, and it is highly probable that it was Lewis who gave his student, Andersen, that circa 1919 “inspiration” to do what was actually only a copycat job on Ayres’ 1915 work. Yet Andersen’s undoubtedly lengthy and tiresome word-counting and word-scoring work in preparing the Iowa scale under Lewis’ direction was apparently not going to enrich Anderson. Instead, any money that was going to be made from Anderson’s hard work would come to Lewis, from the royalties on Lewis’s wonderful new spelling books (on which Lewis probably also had the unpaid “assistance” of graduate students.).

On page 5, the following appeared concerning the original gradation by Andersen when he had prepared the Iowa Spelling Scale:
“The words were given as a test to two hundred or more children in grades two to eight inclusive. The results of this test established the relative difficulty of each word. This is the well-known Iowa Spelling Scale, commonly conceded to be the standard today, to the findings of which Dr. Lewis has added the results of his comparison of other recognized gradations.”

Therefore, this 1923 brochure establishes that the “experts” had succeeded by 1923 in replacing Ayres’ remarkable 1915 work with something more palatable to them: the Iowa Spelling Scale. In the 1970’s the New Iowa Spelling Scale was being used, with 1950’s norms, in a spelling series in the school system in which I taught. So far as I know, the New Iowa Spelling Scale may still be in use.

Furthermore, the vague reference to 3,000 of the highest frequency words, which I saw in one other source and which I mentioned earlier, may well have been to those 3,000 words in the original Iowa Spelling Scale of about 1919 or 1920.

1955 Why Johnny Can’t Read - And What You Can Do About It. Dr. Rudolf Flesch, Harper & Row, New York. This book created an uproar when it was published and became a best-seller. It is a watershed text and is still of great value, as is his 1981 text listed below. That 1981 book, however, was not only not a best seller, but it was very difficult to buy in book stores.

In Blumenfeld’s The New Illiterates (1973), he quoted from Time Magazine’s 1955 Review of the Year:

“If 1955 was notable for anything as far as the U. S. public schools is concerned, it may be that it will be remembered as the year of Rudolf Flesch.... American education closed ranks against Flesch.... [Why Johnny Can’t Read] remained on the bestseller list for thirty-nine weeks.... In Louisville, a mother reported on her third-grader’s typewriting: ‘He typed the letters very easily.... But after typing the letters B-O-W-L across the page about ten times, he called it pot.’ To such parents, Flesch’s book touched a sensitive nerve.”

That anecdote confirms that the little boy’s school had established a conditioned reflex in his brain so that he read words by their “meaning” instead of by their “sound.”

1956 The Teaching of Reading and Writing: An International Survey, by William Scott Gray. Scott, Foresman and Company, Chicago. Prepared in connection with UNESCO. Also listed in Appendix D. After citing research studies, Gray stated on page 110:

“The foregoing examples supply clear evidence that different methods of teaching reading develop different groups of attitudes and skills. This finding is supported by practically all detailed comparative studies made among both children and adults. The attitudes and skills developed may vary all the way from those that aid in word recognition to those that promote keen interest in the meaning of what is read. Or, again, they may include most, if not all, those that characterize an efficient reader.”

A subheading at the bottom of page 110 for a new section read, “Good Initial Progress in Reading Results from Emphasis on Both Meaning and Word Recognition.” Gray’s emphasis, of course, in his Scott, Foresman readers was on Code 3 phony phonics, not real phonics. Gray’s “word recognition” mentioned above had nothing to do with real, sound-based phonics. It was only the deaf-mute-method’s visual jig-saw-puzzle exercise of taking pieces off different remembered, “meaningful” sight words and then putting those broken pieces together so that they matched a new, “meaningful” unknown word, to help the poorly taught deaf-mute child to remember that new word the next time he saw it. The child had already figured out the “meaning” of the word from the so-called story’s context. However, for children
who were not deaf and who therefore may have known the sounds of all those jig-saw-puzzle pieces, the complicated "intrinsic phonics" exercise helped (sometimes!) in pronouncing the new word, not just in remembering what it looked like.

In his comments above, Gray had gone part-way towards admitting that different kinds of readers are developed because of different beginning methods, but he limited his comments to "skills" of the reader, implying there is, in effect, only one kind of reader - accomplished or unaccomplished.

Yet Gray’s spoken comments in a classroom about 1940, quoted by Mitford Mathews in his book, Teaching to Read, Historically Considered, were far more direct. Gray made it clear at that time that he believed children who learned to read by “sound” would be permanently damaged in their “reading comprehension.” Obviously, he thought such children would all become a different kind of reader than those who learned to read by “meaning.” Gray was certainly aware of the existence of two different types of readers, which types are developed because of differences in beginning reading methods. Gray apparently really believed in the “meaning” approach used by his readers, as late as 1956, even though by that time they had produced a sea of functional illiteracy in America, which fact certainly must have filtered through to his consciousness.

1957 Introduction to Educational Measurement, by Victor H. Noll, Houghton, Mifflin Company, Boston. This is a great help in following the reasoning behind the analysis of experimental data.

1958 Getting Along in French, by Dr. Mario Pei, Professor of Romance Philology, Columbia University, Bantam Books, New York. This work and others by the brilliant linguist, Dr. Pei, are invaluable guides to an understanding of the theory and history of language. See also the 1945 entry on Dr. Pei’s book, The Story of Language,

1959 Conclusion de Notre Enquete Sur l’Apprentissage de la Lecture. Rene Zazzo, in L’Ecole et la Nation, 60, July, 1959. Zazzo was apparently a psychologist. I was not able to get this article, which presumably concerns the publicity in France at that time in opposition to the “global” sight-word method.

1959 How Russian Children Learn to Read, by Gertrude Hildreth, in the December, 1959, issue of The Reading Teacher. Gertrude Hildreth was herself a reading expert and an author on an American sight-word basal reader series, so her open-mindedness in reporting what she saw is notable. An excerpt from her article follows:

“Vocabulary selection is not based on word-frequency counts or even primarily on child interest. Instead, words are introduced for the specific purpose of illustrating sounds in words and giving practice in letter sounds.... In the 1930 edition of this same book, hyphenation was
indicated by spaces left between the syllables of a word. In the Russian ABC primer, there is virtually no systematic word repetition. Instruction is primarily oral, conducted with the class as a whole. Russian educators are apparently not much worried about ‘silent reading for meaning’ in this early stage; they assume that the children know the meaning of the [words] and phrases they are reading.”

The Great Soviet Encyclopedia article on primers, referred to elsewhere, stated that the Soviet Union switched from the sight-word method to the analytic-synthetic method in 1932. Yet the fact that the 1930 primer seen by Hildreth had separated syllables indicates the switch was done earlier, and that the emphasis by 1930 was on syllable sounds. Actually, a review of the illustrations in the book on the history of Soviet primers, referred to elsewhere, suggests that the Soviet Union made little use of a pure “meaning” approach in reading, even before 1930.

1960s? (Date not obtained) Geography in the Middle Ages, by George H. T. Kimble, New York: Russell & Russell. Kimble demonstrated that geographical knowledge had deteriorated in the late Roman empire, and it was these texts that were used in the Middle Ages. They nevertheless still contained much of value.

1960? (Date unknown) History of the Hornbook, Leslie Shepard. (This is listed in the Library of Congress catalog as Z 1033.H 8553 but my request slip was returned with the too-familiar notation, “Not on Shelf,” on at least two occasions, one in September, 1988, and the other (blurred) apparently on July 19, 1989. It is not listed in The New York Public Library Catalog. Because of the almost non-existent reference materials on this topic, the fact that one of the few existing reference works is not available in these two major American libraries is inexcusable.)

1960 The Story of Language, by Dr. Mario Pei. J. B. Lippincott Company, Philadelphia: 1945, and Mentor Books, New York: 1960. This extraordinary work by a true expert, and the other works of Dr. Pei, are fundamental texts for an understanding of language. Characteristically, some of today’s so-called “intellectuals” belittle or pass over the great works of that master linguist, Dr. Pei. Yet his works will last long after their gnat-like publications have fallen into a well-earned oblivion.

1961 Tomorrow’s Illiterates, the State of Reading Instruction Today. Charles C. Walcutt, Editor. Little, Brown & Co., Boston. Walcutt was a principal author on the 1963 Lippincott phonic series.

1961 Old Textbooks - Spelling, Grammar, Reading, Arithmetic, Geography, American History, Civil Government, Physiology, Penmanship, Art, Music - As Taught in the Common Schools from Colonial Days to 1900. John A.(Ifred) Nietz, Emeritus Professor of Education, University of Pittsburgh, University of Pittsburgh Press, Pittsburgh, Pennsylvania. (So far as I know, this is one of only two usable and generally reliable works in print on this topic, the other being Early American Textbooks, 1775-1900, of the U. S. Department of Education, published in 1985. Some other materials do discuss textbooks up to 1830.)

1961 “These Children Love to Read,” by Frances V. Rummell. Saturday Evening Post, November 9, 1961. Based on Rummell’s then- proposed book, Rummell’s article concerned Mae Cardin’s opposition to sight words and the success of Cardin’s phonic method, despite massive hostility to it and attacks by the “establishment.”

1961 Donat et La Tradition de l’Enseignement Grammatical, by Professor Louis Holtz, Centre National de la Recherche Scientifique, Paris. Seventh century Latin grammars written by the Irish are discussed in this book, and show a Spanish influence. Spain was heavily influenced by Mediterranean trade, and Ireland was heavily influenced by Spain.

1961 The Dispute on Reading Methods (English translation of Spanish title), Berta Perelstein de Braslavsky, Editorial Kapelusz, Buenos Aires, Argentina, pages 10 to 17. Concerns the use of the global “meaning” to teach beginning reading in South America. See the 1973 Downing entry.

This book documents the attempts of activists to control American education over a very long period of years and their very successful efforts to propagandize American students to accept the “truth” of the “need” for socialistic, one-world government.

The book stated (page 1) that on September 12, 1905, the Intercollegiate Socialist Society was formed by Upton Sinclair, Clarence Darrow, Jack London, Morris Hillquit, and others and had permanent headquarters in the Rand School of Social Science in New York in 1908. It stated (page 2),

“By 1917 chapters had been organized in 61 schools of higher learning and in a dozen graduate bodies. From the very start the society actively observed the socialist movement in German universities... The I.S.S. was in close intellectual contact with the Fabian Societies which were flourishing in the rarified air of Britain’s cloistered halls.”

In 1883, the first Fabian Society had been organized in Britain by Beatrice and Sidney Webb, George Bernard Shaw, H. G. Wells and other “intellectuals,” its named derived from the Roman general, Quintus Fabius Maximums, who successfully defeated Hannibal by a strategy of “delay, attack, delay.” The text stated (page 3) that “method of patient, steady procedure” became known as “gradualism.” The text stated further, “In 1946, the Fabian Society’s Sixty-third Annual Report announced the establishment of an International Bureau ‘To prepare the ground for an international socialist policy in international affairs.’”
Using the enormous tax-free moneys of certain well-known foundations, such activists have promoted the concept of world government and a presumed “need” for centralized control of the whole world, while denigrating patriotism. For many years, they have also worked for the demise of the American Constitution, which stands in the way of their plans, by attempting to call a new constitutional congress. That attempt, so active before this 1962 book was published, is still very much alive today, more than thirty years later, and is perilously close to realization (only the votes of two more states’ legislatures needed to bring it about).

Paul W. Shafer of Michigan was a Member of Congress from 1937 until his death in 1954. A portion of this text is a copy of remarks Shafer made in the House of Representatives on March 21, 1952. The sad thing is that the tide has not “turned.” Activists are more successful than ever before in promoting centralized government control of education and the movement toward a one-world government.

1962 “Why Ivan Can Read,” page 191(? Elementary English, March, 1962. This would be of possible interest. When I checked the New York Public Library for it, the copy was ripped out of the publication.

Fries also wrote an article, “Linguistics and the Teaching of Reading” for the May, 1964, The Reading Teacher. In it, he outlined some of the history of the teaching of beginning reading. He said that Alexander J. Ellis in his 1845 book, The Alphabet of Nature, listed 27 previous special phonetic alphabets that had been made before Isaac Pitman, with the help of Ellis, published his special alphabet in 1842, in a book entitled Phonotopy. Fries said the use of the Pitman alphabet for teaching reading was reported in The Massachusetts Teacher, VI (1853), pages 25-28, and in Journal of the Proceedings of the National Educational Association for 1873. Fries was wrong. The 1873 article was on Leigh print, not Pitman print. See also the 1964 entry on Dr. Fries’ work.

1963 “Logogram and Syllabary,” by I. J. Gelb, page 334A, Volume 14, in the 1963 Encyclopedia Britannica. Gelb stated that the Egyptian “consonant” signs should not be considered as consonants, because they were really an abbreviated syllable system. “B,” for instance, stood for any syllable formed with b: ba, be, bi, bo, bu, etc.

1963 A. F. Leach as a Historian of Yorkshire Education, with an Index of the Yorkshire Schools (c. 730 to c. 1770) referred to in his works, etc., and some corrigenda, by W. E. Tate, B. Litt., F. S. A., Sometime G. W. Medley Senior Research Scholar in the University of Oxford; Reader in the University of Leeds and Curator of the Leeds University Museum of the History of Education, St. Anthony’s Press, York, England, 1963. Shortly before and after 1900, A. F. Leach performed some magnificent research work in England on sources for the history of education, but his reports on this work were very badly marred by his extreme bigotry. W. E. Tate’s mild-mannered commentary on Leach’s work makes some of it more usable and reliable.

See the 1896 entry on A. F. Leach’s English Schools at the Reformation.
1963 Encyclopedia Britannica, William Benton, Publishers, Chicago. The edition which was available in this year is particularly useful for biographies on those concerned with education, such as Basedow, Condillac, Diderot, Melchior Grimm, Locke, Rousseau, Cattell, James, Judd and Thorndike, as well as the articles on Accent, Alphabet, Consciousness, Logogram-Syllabary, Pragmatism, Psychology, and a great many other topics. However, it is very lacking concerning the history of reading instruction.

Although this work intentionally omitted most textbooks, it has nevertheless been of real use in compiling this history. It is of great importance as a reference work.

“In the present paper we start from the proposition that reading is a reconstitution of the sound forms of a word on the basis of its graphic representation. Understanding, which is often considered as the basic content of the process of reading arises as a result of correct recreation of the sound forms of words. He who, independently of the level of understanding of words, can correctly recreate their sound forms is able to read.”

1963 Ireland, Harbinger of the Middle Ages, by Ludwig Beiler, Oxford University Press, London. (Translated from the original German, 1961). This scholarly book has much information on the ancient Irish monks, who brought culture back to the European mainland in the 600’s, after its decline following the fall of Rome in the early 400’s. By the 700’s, Anglo-Saxon monks had joined the Irish monks in founding monasteries, which were centers of learning and culture, all over the European mainland.

1963 Irish Monks in the Golden Age, Edited by Rev. Professor John Ryan, S. J. Dublin: Clonmore and Reynolds, Ltd.; London: Burns and Oates. This is a collection of biographies, by various authors, of once-famous Irish monks in the general period from about 450 A. D. to about 800 A. D..

1964 “Linguistics and Teaching of Reading,” by Charles C. Fries, page 594 and following of The Reading Teacher May, 1964. Fries said:

“The discussions in English concerning the methods and materials for the teaching of reading began at least four hundred years ago. John Hart finished the writing of his The Opening of the Unreasonable Writing of Our Inglish Toung in 1551....

“Hart’s Orthographie of 1569 developed much more completely the principles set forth in his manuscript of 1551 and proposed the use of an ‘augmented’ Roman alphabet as a consistent spelling of the ‘sounds.’”

Fries also wrote Linguistics and Reading, Holt Rinehart and Winston, Inc., N. Y. 1962, listed above under 1962. On page 8, he referred to Hart’s 1570 book, A Methode or Comfortable Beginning for All vnlearned whereby they may bee taught to read English, in a very short time with pleasure..... Fries said that John Hart wrote in the preface:
“This manner of teaching is after the counsell of the excellent Latine rhetorician Quintilian who died above xiC yeres past.”

Fries also referred on page 8 to Hart’s 1551 The Opening of the Unreasonable Writing of Our English Tong, and to Hart’s 1569 An Othographic conteyning the due order and reason how to write or paint thimmage of manne’s voice, most like to the life Of nature. See also the 1962 entry above on Dr. Fries’ 1962 book.

1965 Au Seuil de la Culture. Robert Dottrens. Les Editions du Scarabee, Paris. This concerns the “global” sight word controversy in Europe, written from the viewpoint of a defender. On page 56, Dottrens mentioned a Monsieur de la Palisse who wrote in opposition to the global method. Articles by that man would be of interest, but I have not been able to locate them.

1966 Teaching to Read, Historically Considered: Mitford M. Mathews. The University of Chicago Press, Chicago and London. Copyright 1966 by The University of Chicago. All rights reserved. Published 1966, Phoenix Edition 1976. Excerpts in this history have been reproduced with permission from The University of Chicago Press. Mathews’ book is very valuable, despite the fact that, although sincerely attempting to clarify the history, Mathews was misled on many points.

1966 Reading in a Nutshell, by Martin D. Brennan and George J. Ameer. Colfax Press, Inc., Wayne, New Jersey. This very simple phonics program was of great use to me when teaching third grade. I used it to teach synthetic phonics to children who had been taught to read by the “meaning” method and phony phonics in first grade.

1966 Annals of Printing, by W. Turner Berry and H. Edmund Poole, London: Blandford Press. This is an extremely useful book. A portion from page 86 was quoted in this history, concerning the founding of the first printing press in North America in Mexico City in 1539.

1967 “A Psycholinguistic Guessing Game,” by Kenneth S. Goodman, Journal of the Reading Specialist, 4, (May, 1967). When Gates and Gray faded from the scene as the leading reading “experts,” Goodman and Frank Smith took their place. Goodman claimed that “psycholinguistic guessing” is the way people read, and therefore children should be taught to read by guessing words from the context. Yet Clara Schmidt had demonstrated in 1914, as listed previously, that only feeble-minded Chicago children in those days depended on “psycholinguistic guessing” in reading. Based on her tests of normal and feeble-minded Chicago children, she concluded in 1914 that “psycholinguistic guessing” is a hallmark of mental deficiency.

However, Clara Schmidt did not use the term, “psycholinguistic.” I first saw the term, “psycho-linguistique,” on page 402 of the article, “Les Troubles du Langage dans les Dyslexies et les Dysorthographies,” by Suzanne Borel-Maisonny, in Enfance magazine, published in Paris, France, in 1951, month not noted. (Its pages in the New York University Library were already crumbling into pieces by 1980 because of the inferior paper used in publishing. Such materials self-destruct.) Goodman was therefore not the first to employ the exceedingly harmful “psycholinguistique” nonsense to the teaching of beginning reading. It would be of interest to know if any contact existed between the French cadre of reading “experts” who seem to have banded together to write a series of articles in Enfance. Another, besides Borel-Maisonny, was Ajuriaguerra, who wrote an article in the Enfance issue No. 5 (Nov.-Dec., 1951, under the title, “Troubles de l’apprentissage de la lecture.” Those articles served to contradict the conclusions in an earlier article in the Jan.-Feb., 1950, (No. 1) issue of Enfance by Madame Roudinesco, J. Trelat, and Madame Trelat, which stated that “meaning” (“global”) programs produced 20% dyslexics, but “sound” phonics programs only 2%.
1967 Learning to Read: the Great Debate, Jeanne S. Chall, Ph. D., Harvard University, McGraw Hill Book Company, New York, second and third editions 1983 and 1996, Fort Worth, Texas: Harcourt Brace. This is an exceedingly important and fair-minded book. However, as an example of the mindlessness bred into so many people taking government-"certified" graduate courses in reading instruction, a certified reading specialist in an elementary school quite innocently told me that I should read the reviews of Chall’s book instead of the book itself! Naturally, the “expert” reviews (though Chall, herself, is a true expert and needs no quotation marks around the word) were scathing. Blumenfeld quoted many of the reviews in his 1973 book, The New Illiterates. While I was enrolled in William Paterson College in Wayne, New Jersey, from 1977 to 1978 taking graduate courses in reading instruction, it was impossible to get Chall’s book in the library, despite my long-term requests and though it was listed in the card catalog. Nor was her book a reference work in any of the reading courses. I finally bought my own copy from McGraw Hill in New York. Yet Rudolf Flesch’s 1955 book, so important to an understanding of reading instruction, was not even in the William Paterson College library’s card catalog!

I dropped out of the program for a master’s degree in reading instruction half way through because of my disgust with its slanted content. (I already had a master’s degree in natural history.)

1967 Sources for the History of Education. C. W. J. Higson, Editor, Library Association. A list of material, including school books, contained in the libraries of the Institutes and Schools of Education, and including children’s materials from the 15th century. I have not seen this material but it may be helpful.

1967 Bond, Guy L. and Robert Dykstra. “The Cooperative Research Program in First-Grade Reading Instruction.” Reading Research Quarterly, Summer, 1967, International Reading Association, Newark, Delaware. This research was supported by the U. S. Office of Education and concerned 27 programs, which used basal, basal plus phonics, i.t.a., linguistic, language experience, and phonic/linguistic (Lippincott’s) methods. Dr. Bond was Director of the Coordinating Center for the First-Grade Reading Studies. He had received his advanced degrees from Columbia University and had taught there as a visiting professor in the summers of 1940 and 1951, and was retired from the University of Minnesota. He had been the principal author on the “meaning” approach reading series of 1950-58 (revised in 1962), published by Lyons and Carnahan, Chicago, The Developmental Reading Series. That series was reviewed by Samuel Blumenfeld in The New Illiterates on page 302, Dr. Guy L. Bond was also a co-author with Miles A. Tinker of the University of Minnesota of a textbook on the teaching of reading. It was entitled Reading Difficulties, Their Diagnosis and Correction, and was published in 1973 by Prentice-Hall, Inc., Englewood Cliffs, New Jersey. Dr. Bond’s work, both on his reading series and on his textbook on the teaching of reading, favored the “meaning” approach in teaching beginning reading. Also working on the U.S.O.E. project was Dr. Robert Dykstra, Associate Professor of Education at the University of Minnesota, but Dr. Dykstra was a proponent of true phonics in beginning reading, which Bond was not.

The research was concerned almost totally with “silent reading comprehension.” As has been discussed in this history, that is a largely meaningless evaluation of reading competency. See the comments in the 1968 entry below on the small section of the research which concerned oral reading. The first-grade scores on oral reading in March of first-grade were too early to be significant. As noted below, the second grade oral reading scores for all programs which had been “treated” to give all beginners the same handicaps were reported to have been accidentally erased.

See the 1968 entry below.
1968 “Summary of the Second-Grade Phase of the Cooperative Research Program in Primary Reading Instruction,” by Dr. Robert Dykstra, Director of the Coordinating Center for the follow-up of studies in the USOE-supported Cooperative Research Program in First-Grade Reading. Reported in the Fall, 1968, Reading Research Quarterly, of the International Reading Association, Newark, Delaware. Most of the vast number of tests on the different reading programs were silent reading comprehension tests. Only a few were oral tests. On the oral tests, I was told when speaking by phone with Dr. Dykstra many years ago that someone had accidentally pushed a wrong button on the computer, wiping out all of the statistically-treated oral reading test results at the second grade level. Since the 1967 first-grade oral reading scores were taken about March of first grade and were too early to be reliable, that 1968 second-grade treated data would have been the first large-scale testing data on oral reading since William Scott Gray tested oral reading before 1918. No large-scale testing of oral reading has been done since, except when Arthur Irving Gates developed his norms for his word lists in 1924, and Gilmore developed his oral test norms in 1952. (Gilmore’s test was among the oral tests in the U.S.O.E. studies.) That means that the last such general tests were done before World War I, almost eighty years ago. Yet oral reading tests and dictated spelling tests are the only two sure ways to show the enormous failure that results from teaching beginning reading by “meaning” instead of by “sound.”

Dr. Dykstra has been on record for many years in support of a “sound” approach in the teaching of beginning reading. His conclusions based on the research in the U.S.O.E. studies endorsed “sound” in beginning reading. Dr. Dykstra wrote the chapter on research and evaluation for the 1974 book, Teaching Reading, A Phonic/Linguistic Approach to Developmental Reading, by Charles Child Walcutt, Joan Lamport, Glenn McCracken, with Robert Dykstra, Macmillan Publishing Co., Inc., New York.

See also the 1967 entry on the first grade studies, listed above.

1968 “The Rarity of Reading Disability in Japanese Children,” by Kiyoshi Makita, American Journal of Orthopsychiatry, p. 599-614, July, 1968. Japanese children are taught their meaning-bearing Code 1 Kanji symbols as strictly meaning-bearing, and their Code 10 Kana symbols as strictly sound-bearing. Therefore, they develop few conflicting conditioned reflexes, which is undoubtedly the reason that failure is so rare. Our reading failures result from teaching sound-bearing symbols (alphabetically printed words) as largely meaning-bearing.

1968 A History of Children’s Reading and Literature, by Alec Ellis, Pergamon Press, Oxford. This is an invaluable source book on factual historical material concerning Great Britain, although Ellis interprets that material very differently from this author. Ellis views the spread of government-controlled education since 1800 as a cultural boon instead of the cultural disaster that it has actually been, world-wide (although no recognition is ever given to that demonstrable fact).

1968 The Sane Positivist, by Geraldine S. Joncich (Cliford), Wesleyan University Press, Middletown, Connecticut. This is a very useful biography of Edward L. Thorndike.
However, on page 134 is an anecdote on Thorndike and Cattell’s predecessor in England, George John Romanes, which is very illuminating concerning the kind of men who founded experimental psychology:

“...the first important comparative psychologist, George John Romanes (1848-1894)... Of a wealthy Scottish family, Romanes traveled in England’s foremost scientific circles, meanwhile devoting himself entirely to his animal studies... He also put cats in sacks and released them far from home to check on the ‘homing instinct’; he reared animals in isolation to study their cries....”

If Romanes with his astonishingly inhumane “experiments” was typical of the kind of people in nineteenth-century “England’s foremost scientific circles,” then the men in those circles certainly were suitable models for those horror “science” movies that Hollywood has been grinding out since the 1930’s. Yet William James’ 1890 psychology book is full of far worse inhumane horror stories from the best “scientific circles” in European countries. The hideous Russian experimenter, Pavlov, was certainly not the first to torment helpless animals in the name of “science.” However, knowledge obtained in such a fashion in the long run usually does very little good and often has done great harm. (Consider the use of psychological torture in recent warfare.) At the very least, the kind of men who can casually do such things to animals are hardly the kind of men most people would like to have as visitors to their homes, not unless the family’s cats and dogs are locked safely away in an upstairs bedroom and the visit is going to be extremely brief.

The foregoing comments most desperately need saying, to counter the glowing reports that are usually found in the literature concerning the behavior of such “scientific” creatures as George John Romanes and his ilk. However, when the scores are totaled in a century or so about who learned the most about animal behavior, those experimenters who respected animals and who used them compassionately according to their natures are going to be seen as the only real accumulators of such knowledge.

1968 The Waysiders, by R. M. N. Crosby, Delacorte Press, New York, 1968. Dr. Crosby wrote of his work with dyslexic patients. In a footnote on page 103, he told of an early nineteenth-century case of transient dyslexia, which is quoted in this history.

1969 A Bibliography of the English Language from the Invention of Printing to the Year 1800 - A systematic record of writings on English, and on other languages in English, based on the collections of the principal libraries of the World, Compiled by R. C. Alston - Volume IV, Spelling Books, Printed For The Author By Ernest Cummins, Bradford. 500 Copies. [Ed.: Alston’s astonishing series which began to be published in 1965 has 11 other volumes, including three on grammar, one on the English dictionary, and others of great interest. Alston was associated with the British Library in London, England.]

1969 The First 120 Years, An Historical Narrative of the Syracuse Public Schools, 120th Anniversary, 1848-1968. Copyright 1969 by George W. Fowler. Published by Syracuse City School District, Syracuse, N. Y. I was told on April 16, 1984, that there was a gap of missing volumes of the Syracuse board minutes, from March 29, 1862, to April 1, 1886, and from March 5, 1895 to August 5, 1897. When researching the Board minutes, on which Fowler largely depended for his history, he also found a gap of two years (apparently the same for 1895-1897) in the Board records during Blodgett’s term as Superintendent. Yet Fowler implied that there was one other gap, when he said on page 57, concerning “The Missing Minutes,” that it extended from 1855 to 1881. Yet, in 1984, I saw the Board minutes from 1855 to 1862, and Fowler must have seen those from 1881 to 1886 which were missing when I was there in 1984! So the book 1855-1862 had reappeared, but the minutes for 1881-1886 had disappeared!
1969 Literacy and Development in the West, by Carlo M. Cipolla, Penguin Books, Baltimore, Maryland. This contains very useful statistics for the nineteenth and twentieth centuries. However, it has little information before those dates, since reliable records before that time are apparently very scarce.

1969 “Literacy and Education in England 1640-1900,” by Professor Lawrence Stone of Princeton, in the journal, Past and Present. Stone’s article contains the following citation on page 84 from John McFarlan, Inquiries Concerning the Poor, Edinburgh, 1782, page 245, and S. M. Elkins, Slavery, New York 1963, p. 60:

“Some societies have tried to prevent reading altogether. In America in the eighteenth and early nineteenth centuries slaves were kept illiterate by law on the grounds that ‘teaching slaves to read and write tends to dissatisfaction in their minds, and to produce insurrection and rebellion.”

Stone added on pages 85 and 86:

“In England after the Restoration, many of the propertied classes followed Hobbes in blaming the horrors of the Civil War on excessive education in the prewar years. Between 1660 and 1790, most men were convinced that a little learning for the poor is a dangerous thing, since it encourages them to aspire beyond their station, and so threatens social stability and the domination of the elite....”

Stone cited Christopher Wase, who wrote Considerations Concerning Free Schools, Oxford, 1678, as the source for this appalling statement: “Ignorance is the Mother of Devotion and Obedience.” Stone added:

“This was a view which it took a very long time to eradicate, and may be traced through Bernard Mandeville’s comment in the early eighteenth century that ‘should a Horse know as much as a Man, I should not like to be his Rider’ and Soane Jenyn’s complacent view of popular ignorance in 1757 as the opiate of the poor, ‘a cordial administered by the gracious hand of providence’, right down to the opinion of Bishop Beilby Porteous of London in 1803 that ‘men of considerable ability say that it is safest for both the Government and the religion of the country to let the lower classes remain in that state of ignorance in which nature has originally placed them.”

Stone had referred on page 85 to literacy in England in the eighteenth century:

“In 1726 a continental visitor observed, perhaps with a touch of exaggeration, that ‘All Englishmen are great newsmongers. Workmen habitually begin the day by going to coffee-rooms in order to read the latest news. I have often seen shoe-blacks and persons of that class club together to purchase a farthing newspaper.’ Fifty years later, this news-hungry literate working class... had begun to turn to political radicalism nurtured on Tom Paine: ‘Our peasantry now read the Rights of Man on mountains and moorside and by the wayside.’ The close connection between literacy and radicalism is brought out very clearly in an apprehensive letter from Dr. Currie of Liverpool in 1792. ‘The cause why Paine takes so much in Scotland is simply because the bodies can all read. Among the manufacturers of Manchester and Birmingham, not one in a hundred of whom know their alphabet, Paine has hitherto done little harm, though I am told he now begins to operate.’ In the words of Professor Plumb, ‘the terrible spectre of a literate, politically minded, working class began to stalk the land’. Thus the French Revolution, like the English Revolution before it, reinforced the suspicion of the propertied classes towards the
education of the poor, and by 1800 we find the bishop of Rochester denouncing both Sunday Schools and Charity Schools as ‘schools of Jacobinical rebellion.’

“Moral revulsion at the arrogance, complacency and cruelty that lie behind these notions of social control via ignorance should not blind one to the fact that they contain a basic truth: literate people are far harder to govern and to exploit than illiterate, for the simple reason that it is extremely difficult to make sure that they never develop a taste for subversive literature....”

Therefore, Stone produced historical proof of the desire of “elites” to control others by withholding literacy, and he had produced concrete proof of this desire as late as 1803.

1969 La méthode naturelle, I. L’apprentissage de la langue, by Celestin Freinet, published by Delachaux & Niestle, Neuchatel, Switzerland, under the auspices of the Institut J. J. Rousseau in Geneva. This exceedingly boring and useless book has been discussed previously. Some other books containing Freinet’s exceedingly boring but highly ballyhooed writings were published by Delachaux & Niestle, Neuchatel, Switzerland, and some were published by other companies. As mentioned previously, Celestin Freinet’s most interesting publisher was probably the Francois Maspero company in Paris, because it also published a massive list of books by Communist authors from all over the world. Elise Freinet, most probably Celestin Freinet’s wife, wrote Naissance d’une pedagogie populaire in 1949. It was being published in 1978 by that Francois Maspero company, which also published La Sante mentale de l’enfant by Celestin Freinet. A 1978 copy of the latter book, published after Celestin Freinet’s death, has a foreword by Elise Freinet. In her foreword, she said:

“The health of the child was the fundamental end of the change in teaching to which [Freinet] was consecrated since 1923.”

She said it had been the theme proposed by Freinet at the 16th Congress of the Modern School in Avignon in 1960.

1970’s? Printing in the Americas by John Clyde Oswald. Information on the products of the first Mexican press is given. On page 529, Oswald lists a 1544 edition of Doctrina Cristiana, crediting Juan Zumarraga as the author, and stating the 1544 copy is in the New York Public Library, along with Tripartito by Jean Gerson (“Sr. Juan Gerson”). Oswald stated that Doctrina is the first complete volume published in the Western World (presumably because the Mexican ABC, mentioned elsewhere, was begun in Spain). Oswald said Tripartito contains a picture, “Adoration of the Virgin,” which makes it the first American illustrated book.

1970 The Encyclopedie in Eighteenth-Century England and Other Studies, by John Lough, Professor of French at the University of Durham, Oriel Press, Ltd., Newcastle-upon-Tyne, England. This is an excellent source on the Encyclopedie. It contains this comment:

“The Supplement to the 1801 edition of the Encyclopedia contains in the dedication to George III, ‘The well-known denunciation of the Encyclopedie and all its works: The French Encyclopedie has been accused and justly accused of having disseminated, far and wide, the sedition of Anarchy and Atheism. If the Encyclopedia Britannica shall, in any degree, counteract the tendencies of that pestiferous work, even these two volumes will not be wholly unworthy of your Majesty’s patronage.’“

1734
1970 “The Functional Organization of the Brain,” by A. R. Luria, Scientific American, 1970, 222, 3.66-78. Reportedly said many spelling errors occurred when subjects were forced to spell with their mouths open. This experiment confirming the close tie between sound and spelling was reported, astonishingly, in Frank Smith’s Psycholinguistics and Reading, page 130. According to Leong’s article (cited under date of 1971 here) Luria wrote in his Higher Cortical Functions of Man (BasicBooks: 1966). The different bases for writing in different languages must entail a different cortical organization. Leong cited that remark in connection with the observed differences in aphasics reading Kana vs. Kangi, Japanese characters.

1970 Programmed Illiteracy in Our Schools, by Mary Johnson, Clarity Books, Winnipeg, Canada. Concerns the late Mrs. Johnson’s long battle with the education “establishment” on mis-instruction in reading, and her oral reading tests of Canadian children, proving the existence of terrible disabilities. The behaviour of the education “establishment” to Mrs. Johnson, as recounted in this book, is shocking.

Those Belgian texts for the use of Cuisinaire rods were far superior to, and very different from, the texts published by the Cuisinaire Company of America (which was unconnected to the Calozet company). Yet, so far as I know, the fantastic success of the Belgian texts are as unknown to most teachers today, either in Europe or America, as the fantastic results of the original Colburn text, Intellectual Arithmetic, Upon the Inductive Method of Instruction, which is discussed in this Appendix E under date of 1821. See the Colburn entry for further information on the 1970, 1973 Belgian materials.

Early 1970’s - Letterstad (with a “Letter Village,”) by Dr. H. J. Kooreman, The Netherlands. A multisensory synthetic phonics program to teach beginning reading in Dutch, adapted from programs Dr. Kooreman saw while in Russia. Dr. Kooreman was with Pedagogisch Centrum, Enschede, in The Netherlands in 1977.

1971 Barbarians, Christians and Muslims, The Cambridge Introduction to History, by Trevor Cairns. Copyright 1971 by Cambridge University Press. Published in 1975 by Lerner Publications Company, Minneapolis, Minnesota. Written and attractively illustrated for high school students, this is one in a series of books giving an “introduction to history.” It is extremely interesting for adults as well, because of its simple and wonderfully organized presentation of factual material. Of particular interest in this volume is the map on page 49 showing the widespread monasteries on the European continent founded by Irish monks by the end of the seventh century, and the map on page 61 showing the monasteries founded by English monks on the European continent during the eighth century. The enormous influence of these sixth-to tenth century Irish and English “insular” monks on European culture is only recently beginning to be acknowledged.

1971 Literacy and Society, Victor E. Neuberg. This is listed in the Library of Congress catalog under BL 2765.G7 N48 but my request for it was returned with the note, “Not on Shelf.” Since Neuberg wrote The Penny Histories in 1968, Oxford University Press, a delightful and useful study of chapbooks and their era, this book of his is probably also of real value. He wrote another book which I have been unable to locate, Popular Education in 18th Century England, which should also be of interest.

1971 The English Primers (1529-1545), by Charles C. Butterworth, Octagon Books, New York. This is extremely worth while, the primers being, of course, devotional books, not school books, comparable to the present Book of Common Prayer of the Church of England. See also the 1937 entry on an article by Edwyn Birchenough, “The Prymer in English,” in The Library, Series IV, Vol. XVIII, page 177 and following, London.

1972 Bride of the Revolution, Krupskaya and Lenin, by Robert H. McNeal. The University of Michigan Press, Ann Arbor, Michigan. This is an excellent (and very interesting!) biography. Lenin’s wife, Krupskaya, concerned herself with education in the Soviet Union, and idolized John Dewey. She had a huge private collection of books and wrote herself a vast number of dull materials. The Library of Congress catalog listed a very great number of her publications. This fascinating biography also mentions several library “sweeps” instigated in the Soviet Union in the 1920’s by Krupskaya, “purifying” their content. However, one “sweep” was too enthusiastic, since it removed the literary works of one of Krupskaya’s heroes, Tolstoy.

1973 and later - The Reading Informer. Published by the Reading Reform Foundation from 1973 to about 1989. An unparalleled clearinghouse for information on reading instruction, and dedicated to restoring the teaching of true phonics to beginning reading. Originally published in Scottsdale, Arizona, with the last issues from Tacoma, Washington. These issues are not in most libraries (and possibly not in any libraries) and are very difficult to obtain today. Many years ago while I was enrolled in a graduate program in reading instruction, I had noticed this publication, then unknown to me, cited in an article by Dr. Patrick Groff, “The Topsy Turvy World of Sight-Words.” Trying to find out how to locate this publication, I called the International Reading Association office in Newark, Delaware. The comment was made to me by some man there that I should not cite The Reading Informer in anything I prepared in my graduate work in reading instruction, as my instructor might not like it!

I started my research on beginning reading instruction in 1976, and in the intervening years until 1998, only one of the various books and articles I have written has ever appeared in print, and it was
published in the March, 1980, edition of The Reading Informer. That short paper was written in the fall of 1979, summarizing my 1979 book on my sabbatical research in America and Europe. In my sabbatical research, I had observed reading instruction in first grades and then gave oral reading tests to about 900 second graders in their own languages in America, Sweden, Germany, Holland, Austria, and France, using for my oral test a 144-word portion of a silent reading test from IEA (International Association for the Evaluation of Educational Achievement) in Sweden with their permission. I had the 144-word English portion translated into German, Dutch, Swedish, French and Icelandic by a commercial translating firm at my own expense. (I also tested the oral reading of sixth graders on a portion of a Bible Psalm in their own languages in the Netherlands and Sweden and virtually all read accurately and well.) My second-grade testing research had indicated that two different types of readers, or various mixtures of those types, are developed as a result of the degree of emphasis on either the “meaning” or “sound” approach in teaching first-grade reading. The “meaning” type reads with the conscious help of context, and so can never read automatically, while the “sound” type reads by the sound of print, not with the conscious use of context, and so can read automatically.

That paper was published in full in The Reading Reformer in March, 1980, but aroused no interest. I had also mailed it in the fall of 1979 to about 100 people, but almost the only two who ever replied were Dr. Rudolf Flesch, the author of Why Johnny Can’t Read (1955) and Why Johnny STILL Can’t Read (1981) and Dr. Charles C. Walcutt, co-author of the Lippincott reading series and an author of several books on the reading problem. Dr. Flesch was most supportive concerning my research, as well as my later library research, and tried to get my very imperfect 1979 book published (which he thought should be rewritten with the help of an editor). Dr. Flesch spoke himself to the president of Prentice, Hall, early in 1980, asking that they review my book, which they did, rejecting it, and it was indeed very badly written. Dr. Walcutt wrote me in November, 1979, that my research discovery as outlined in my brief paper, that opposite types of readers were developed by teaching beginning reading by “meaning” or by “sound,” was “of the highest importance.” Yet, by contrast, in January, 1980, Dr. Siegfried Engelmann, the author of the Distar phonic program, wrote that I had unnecessarily complicated matters by stating there are two different kinds of readers. When I called him by phone to discuss his letter, he told me that if I would send him my research results showing that there are two different types of readers, he would “shred” my research data.

Engelmann had apparently not heard at that time (nor had I) of Oskar Messmer’s 1903 German research which had also shown the existence of two different types of readers of alphabetic print: the objective, who read by syllables, and the subjective, who read by whole words and context guessing. The knowledge that there are two different and opposite types of readers of alphabetic print was effectively dead by 1979, as demonstrated by Dr. Walcutt’s and Dr. Engelmann’s responses to my paper. This was despite Buswell’s 1920’s data, in which Buswell said that different paths were used in learning to read but wrongly implied the same goal was reached by both. This was even despite William Scott Gray’s comments in his 1956 book, The Teaching of Reading and Writing, describing various “skills” used by “efficient” readers, which were lacking in inefficient readers. This was also despite Gray’s quotation of Seegers in Belgium who clearly admitted that for beginners different kinds of reading result from using the “meaning” or “sound” approach. Yet Seegers also implied the differences were only stages of development. Anyway, I seriously question whether many people have ever carefully read Gray’s “super-expert” book, although most other “experts” undoubtedly bought it at the time to put on their bookshelves, as it was undoubtedly ballyhooed in “education” magazines as of epochal importance.

In 1979, I wrote my paper announcing my research conclusion that there are two different types of readers, and it was published in The Reading Informer of the Reading Reform Foundation in March, 1980. At that time, I had not heard of Messmer’s 1903 conclusions based on his research that readers are either the “objective” or the “subjective” type (none of the 1971 Japanese research or Japanese characters, dated earlier). I believe Messmer’s conclusions had effectively been totally buried long before 1979 and
1980. However, since 1980, the awareness has been growing very gradually among phonics advocates of the fact that learning to read is not simply a question of efficient or inefficient teaching, but that there are two distinctly different types of readers developed by initial teaching methods.

The frightening reality is that the initial teaching method when used on alphabetical print determines the type of reader a child becomes, very possibly for life. The “meaning” method develops a subjective reader, who is permanently crippled by conscious context guessing, and who is unable to read at all unless he consciously concentrates on decoding the print. That leaves only part of his attention free to concentrate on the message, sharply lowering his “reading comprehension” and seriously interfering with his enjoyment from reading. The “sound” method when used on alphabetic print develops an objective reader, who is able to read as automatically as a computer can, with his whole attention left free to concentrate on the message, if he chooses to pay attention. The objective “automatic” reader can therefore enjoy his reading, without focusing consciously on decoding the print, just as a person who walks “automatically” can enjoy the scenery on his walk, without having to concentrate on where he puts his feet.

The current steamroller operation to put so-called “whole language” into schools all over the English-speaking world, from Australia to Great Britain, is breathtakingly vast, although the ludicrous impression being fostered is that it is a grass-roots development. The so-called “whole language” approach is being adopted mindlessly by a great many school administrators who are disturbingly ignorant of reading instruction history and who refuse to think or to investigate for themselves, apparently finding it less taxing to endorse someone else’s pre-packaged slogans. What is unforgivably vicious about that so-called “whole language” approach is that it promotes the teaching of beginning reading of alphabetic print by “meaning” instead of by “sound.” It therefore results in crippling defenseless little children, probably for life, by turning them into subjective readers. It drafts great numbers of little first-graders into the armies of helpless and unemployable functional illiterates that we already have. The fact that the “whole language” package has a lot of glittering truths in it (the promotion of real literature and composition writing, etc.) should be considered along with the fact that ALL good propaganda has always been inserted in a package that contains 98 per cent truth, and only 2% lies. The 2% lies are the propaganda itself.

1973 Comparative Reading, John Downing, Editor, The Macmillan Company, New York. Chapters were written by people from various countries. In particular, see the chapters by Franz Biglmaier, Germany; D. B. Elkonin, USSR, and Berta Perelstein de Braslavy, Argentina. John Downing and Faith Graham had been the authors of The Downing Readers published by Initial Teaching Publishing Co., Ltd., London, in 1964. Despite the “sound” nature of ITA print, Downing did not endorse sounding-and-blending synthetic phonics.

This painstakingly researched book is of enormous value and is unparalleled. (Morris’s heavily researched conclusions on this period should be contrasted to the opinionated, unsubstantiated and invalid comments of Marrou concerning the same period.) Morris extensively commented on the founding of European monasteries by Irish and English monks, and on their effect on European culture. Some of Morris’s comments on educational facilities of the period have been quoted elsewhere in this history, as well as some of his more generalized remarks on the period.

The methods used by the cultured Irish and English monks in the seventh and eighth centuries in the teaching of beginning reading must have become the standard methods on the European continent in later years, because of the massive influence of the Irish and English continental monastic foundations on subsequent European culture.

1973 John Newbery and his Successors, 1740-1814, by S. Roscoe, Five Owls Press Ltd., Wormley, England. This is very valuable concerning the children’s textbooks and storybooks published by the important publisher, Newbery, and by his successors.

The following is meant to serve as a much-needed critique of a very small, but loosely organized, group which has announced in 1933 and 1973, in writings signed by its members, that it is intentionally and systematically attempting to alter society, which alteration includes, obviously, the education of society’s children. The program that they outlined in these 1933 and 1973 signed writings has been successful to a disturbing degree, and it has achieved its great success despite the fact that the humanists’ intentions and activities remain unknown to the vast majority of people. When individual humanists are confronted with charges that their loosely organized group has been acting intentionally to change society since at least 1933, they deny the charges as hysterical and demented, particularly since the members are not formally affiliated with each other. Let the reader judge for himself from the written content of the Manifestos of 1933 and 1973, to which so many influential people have signed their names, whether the charges are hysterical and demented.

An article, “Evolution, Secularism and the Attack on the Church,” appeared in the Catholic Family News, January, 1995, John Vennari, Editor. M.P.O. Box 743, Niagara Falls, N. Y. 14302. It gave a quotation from a century ago which is very pertinent in considering the stated aims of the Humanist Manifestos of 1933 and 1973. Cardinal Pie of Poiters said over a hundred years ago:

“Is not the strategy of the enemies of God there to teach us a lesson? They want to destroy the Faith in the hearts of individuals, it is true, but they direct still more vigorous efforts to the elimination of religion from social institutions.”
This recalls the testimony of Orestes Brownson quoted earlier, concerning the aims of the secret society to which he belonged in 1829 and 1830. Its purpose was to destroy religion by mandating state education for all children, from which mandatory state education all religious teaching was to be deliberately removed.

Comments quoted below from the Humanist Manifestos of 1933 and 1973 make the following facts very clear. Many twentieth-century humanists aim to obliterate the Constitution and the sovereignty of the United States by burying our country under the dictatorial rule of a world government. They aim to promote mandatory socialism, and other philosophies which are abhorrent to the vast majority of Americans. Judging from their clearly stated aims, it would be difficult to find a more “un-American” group than such humanists. Yet, the primary goal of the twentieth century humanists is far more than an odious dictatorial world government and an odious social “control.” Their primary goal is identical to that of the nineteenth-century groups discussed by Cardinal Pie and Orestes Brownson. Their primary goal is to remove religion, and the influence of religion, from all social institutions. That obviously includes schools and therefore affects the teaching of reading.

One of the signers of the second Humanist Manifesto of 1973 was B. F. Skinner, the psychologist from Harvard. Not long after, Skinner wrote “Beyond Freedom and Dignity.” His thesis was that we can no longer afford either freedom or dignity, and that we must therefore submit to rule by a dictatorial “Big Brother” government which would manage mankind for its own good, whether “mankind” wished it or not. It is true that the two Humanist Manifestos imply (but not too strongly) that the “improvements” they promote should be adopted voluntarily. Yet Skinner’s book raises questions about how “voluntary” such improvements might actually be.

Some of the noteworthy “improvements” being proposed in the Manifestos are quoted below. However, in reading some of the idealistic prose that these Manifestos contain, it is well to keep in mind the overly cynical remark by J. P. Morgan, to the effect that every man has two reasons for doing anything: his good reason, and his real reason. It is also very worth while to remember the Biblical comment that the tender mercies of the wicked are cruel.

Paul Kurtz wrote in the “Preface” to the 1973 edition:

“Humanism is a philosophical, religious, and moral point of view as old as human civilization itself. It has it roots in classical China, Greece, and Rome; it is expressed in the Renaissance and the Enlightenment, in the scientific revolution, and in the twentieth century....

“Humanist Manifesto I... did not and could not address itself to future problems and needs. In recognition of the pressing need for a new, more relevant statement, forty years later Humanist Manifesto II was drafted. This more extensive and comprehensive document addresses itself not only to the problems of religion and ethics, but to the pressing issues of civil liberties, equality, democracy, the survival of human-kind, world economic growth, population and ecological control, war and peace, and the building of a world community. If the starting point of humanism is the preservation and enhancement of all things human, then what more worthwhile goal than the realization of the human potentiality of each individual and of humanity as a whole? What more pressing need than to recognize in this critical age of modern science and technology that, if no deity will save us, we must save ourselves? It is only by assuming responsibility for the human condition and in marshaling the arts of intelligence that humankind can hope to deal with the emerging problems of the twenty-first century and beyond. If we are to succeed in this venture, must we not abandon the archaic dogmas and ideologies that inhibit creative explorations and solutions?”
Note the curious sequence of ideas. The world is plagued with problems, which is undeniably true. Therefore, “h humankind” must “solve” the problems. Yet that non-entity, “h umankind” has never done anything, ever. It is people (individual men and women with individually different and commonly conflicting ideas) who do things. The author then poses a non-existent problem: “h umankind” cannot go about its work of “solving” problems until it gets rid of “archaic dogmas and ideologies” (religion), because religion is supposed to make it impossible for “h umankind” to solve those problems. Actually, what is truly impossible is the illogical stew of ideas in the Manifesto. It continues:

“Humanist Manifesto II was first signed by 114 individuals of prominence and distinction. It has since been endorsed by countless numbers of human beings from all walks of life as a document for our time, committed to both human fulfillment and survival. It is truly worldwide in scope. It seeks to express the longings and aspirations of women as well as men and people of different ethnic and racial origins.

“We herein publish both manifestos as working papers, committed to the development of a humanist awareness and an ethical concern. They are presented in a spirit of on-going and cooperative inquiry. They are intended not as new dogmas or credos for an age of confusion, but as the expression of a quest for values and goals that we can work for and that can help us to take new directions. Humanists are committed to building a world that is significant, not only for the individual’s quest for meaning, but for the whole of humankind. Paul Kurtz.”

That was from the 1973 preface, which was followed by a copy of the 1933 Manifesto. Item “Thirteenth” from the 1933 Humanist Manifesto I stated:

“Religious humanism maintains that all associations and institutions exist for the fulfillment of human life. The intelligent evaluation, transformation, control and direction of such associations and institutions with a view to the enhancement of human life is the purpose and program of humanism. Certainly religious institutions, their ritualistic forms, ecclesiastical methods, and communal activities must be reconstituted as rapidly as experience allows, in order to function effectively in the modern world.”

Note the use in 1933 of the word, “control,” which I have underlined in the above, and no reference to the obviously contrary wishes of the people in 1933 who were members of those “religious institutions” and who would be subject to such “control.” The anti-religious 1933 statement had a baldly stated purpose. That purpose was to interfere with and to control the behavior of other people. That is certainly in accord with the aims of Brownson’s 1829 and 1830 secret society. The similarity includes the fact that the 1933 statement was made by a tiny, tiny group of people concerning a huge group of other people, just as in 1829 and 1830. The tiny 1933 group wished to impose its will on a vast and unwilling majority, which was also the aim of the 1829 and 1830 secret group.

The Preface to the 1973 Manifesto stated:

“As in 1933, humanists still believe that traditional theism, especially faith in the prayer-hearing God, assumed to love and care for persons, to hear and understand their prayers, and to be able to do something about them, is an unproved and outmoded faith. Salvationism, based on mere affirmation, still appears as harmful, diverting people with false hopes of heaven hereafter. Reasonable minds look to other means for survival.

“Those who sign Humanist Manifesto II disclaim that they are setting forth a binding credo; their individual views would be stated in widely varying ways. The statement is, however, reaching for vision in a time that needs direction. It is social analysis in an effort at consensus.
New statements should be developed to supersede this, but for today it is our conviction that humanism offers an alternative that can serve present-day needs and guide humankind toward the future. Paul Kurtz. Edwin H. Wilson.”

Room for disagreement on certain points, therefore, is possible for the 1973 signers, but not, apparently, on the basic theme of militant atheism.

These comments immediately followed the “Preface:”

“We affirm a set of common principles that can serve as a basis for united action - positive principles relevant to the present human condition. They are a design for a secular society on a planetary scale.

“For these reasons, we submit this new Humanist Manifesto for the future of humankind; for us, it is a vision of hope, a direction for satisfying survival.”

The arrogance of this tiny group of atheists is breathtaking. Unasked by anyone except themselves, they propose “a design for a secular society on a planetary scale.” Not content with imposing their warped ideas only on the United States and its mere two hundred and a half millions or so of people, they intend to impose these ideas on the billions of people inhabiting the entire planet. Yet their atheistic ideas conflict with the convictions held all through human history by the mass of mankind, and they conflict with the convictions held by the mass of mankind today. Nevertheless, without any authority whatsoever, they intend to force their will on the whole of mankind.

In 1973, when the second Manifesto was adopted, Father Schwartz was founding innumerable homes in Korea for abandoned children, with great hardship to himself. Missionaries in Africa, with great hardships to themselves, were working to ameliorate the terrible suffering caused there by famine and war. That was more than a decade before the news of the African horrors finally reached our television screens. The atheistic signers of this 1973 word-stuffed declaration stated they rejected all religion, such as that of missionaries like Father Schwartz, because of their atheistic desire to serve “humankind.” Yet, how many of those atheists were actually serving individual, suffering real people on the real face of the earth, as the religious groups were doing at that precise time? I suspect Zero Per Cent of the signers of the Humanist Manifesto II ever left their convenient surroundings to serve anyone, anywhere, particularly without pay. The truth is that the one theme underlying this 1973 Humanist material, like the one theme underlying the 1933 material, is the burning hatred of religion. It is clear that the theme is not the burning desire to serve some meaningless entity labeled, “humankind.” Anyway, as Bishop Sheen once said (paraphrased), a lot of people who love “mankind” in the general have a great deal of trouble loving it in the particular. Yet missionaries like Father Schwartz (like our good Lord himself) love humanity in the particular, despite all its warts and its maddening and almost infinitely diverse human failings.

Under the heading, “Religion,” the 1973 document stated:

“...No deity will save us; we must save ourselves.

“Second: Promises of immortal salvation or fear of eternal damnation are both illusory and harmful. They distract humans from present concerns, from self-actualization, and from rectifying social injustices. Modern science discredits such historic concepts as the ‘ghost in the machine’ and the ‘separable soul.’”

Of course, “modern science,” humanism’s religion, does no such thing. However, like the characters in Alice’s Wonderland, humanists can say an uncertain thing in such a certain way.
The 1973 material continued:

“Rather, science affirms that the human species is an emergence from natural evolutionary forces. As far as we know, the total personality is a function of the biological organism transacting in a social and cultural context.”

Any lingering credibility the “humanists” may have retained disappears under the weight of that last wordy, seemingly scholarly, statement. If they had any competent scientific background, the authors of that statement must have known that evolution lacks any objective scientific confirmation, and that there has not been a single empirical discovery to confirm the theory of evolution since Darwin first proposed it in 1859. The fact that empirical evidence in favor of the theory is lacking, while empirical evidence refuting the theory continues to turn up in vast quantities, is made very clear by Dr. Michael Denton’s highly scientific book, Evolution, A Theory in Crisis. The reason that such scientific evidence continues to be ignored by so many “scientists” and by the humanists is a philosophical one, not a scientific one, as is made clear by a remark by Dr. D. N. S. Watson quoted in the Catholic Family News article mentioned earlier:

“The theory of evolution is universally accepted not because it can be proven true, but because the only alternative is special creation (by God) which is clearly incredible.”

Therefore, the humanists’ claim that it is “science” which supports their theory of evolution is flatly wrong. What supports it is their wilful and militant atheism.

Although real scientific evidence is often ignored, procedures or ideas which are wrongly labeled as “scientific” are sometimes used to support such fondly held opinions as that concerning “evolution.” Some such examples are the procedures used to date material. Such procedures are notoriously unreliable, and yet they are often given solemn credence in philosophically loaded, pseudo-scientific articles. In such writings, we continue to hear about such “scientific” procedures as Carbon 14 and Radioactive Dating. This same Catholic Family News article referred to some examples showing the unreliability of such methods. One example was taken from a Science magazine article. It told of Carbon 14 dating being used on the shells of snails which were still alive, but the methods dated those shells to 26,000 years old. Another example was from the geographic periodical, Antarctic. A newly killed seal, tested by Carbon 14 methods, was given an age of 1,300 years. A final reference (although the source was not given) was to some volcanic rocks formed in the sea near Hawaii only 200 years ago. Dated by the Potassium-Argon method, they were supposed to be up to 22 million years old, and some other volcanic rocks in Hawaii, known to have been formed in 1803, were supposed to be 160 million to 3 billion years old.

The Catholic Family News article commented further that no new genes are ever created in breeding (micro evolution) but the opposite occurs: genes are lost. Yet macro evolution presumes that new genes are created, despite the fact that laboratory experiments, such as on fruit flies, have never produced a single new gene. Therefore, macro-evolution, which is evolution in the sense Darwin proposed, and which presupposes the creation of new genes, unlike micro-evolution (animal breeding), is clearly an untenable theory. The humanists’ majestic affirmation of faith in “evolution,” because of supposed scientific “proof,” is totally unsupportable.

Manifesto II continued:

“There is no credible evidence that life survives the death of the body...”
The use of the word, “credible,” should be carefully noted. It only means that humanists automatically discount any testimony that comes from religious sources, even though that religious testimony is vast and deep.

The following was part of the material under the heading, “The Individual,” but its insertion was quite predictable. As butter is commonly paired with bread, sexual licentiousness has commonly been paired with atheism all through history.

“In the area of sexuality, we believe that intolerant attitudes, often cultivated by orthodox religions and puritanical cultures, unduly repress sexual conduct. The right to birth control, abortion, and divorce should be recognized. While we do not approve of exploitive, denigrating forms of sexual expression, neither do we wish to prohibit, by laws or social sanction, sexual behavior between consenting adults. The many varieties of sexual exploration should not in themselves be considered ‘evil.’ Without countenancing mindless permissiveness or unbridled promiscuity, a civilized society should be a tolerant one. Short of harming others or compelling them to do likewise, individuals should be permitted to express their sexual proclivities and pursue their lifestyles as they desire...”

This is rationally inconsistent. On what grounds do they deplore “mindless permissiveness or unbridled promiscuity,” since they do not deplore other aberrant sexual behavior, as religion does? By their own reasoning, aberrant sexual behavior, by itself, cannot be “wrong,” as claimed by religion, if such behavior is between “consenting adults.” Therefore, the AIDS bathhouses which had “mindless permissiveness” and “unbridled promiscuity” should have been perfectly acceptable, according to the ethical guidelines of the humanists.

The following was one of the points which appeared under the 1973 heading, “Democratic Society:”

“The separation of church and state and the separation of ideology and state are imperatives. The state should encourage maximum freedom for different moral, political, religious, and social values in society. It should not favor any particular religious bodies through the use of public monies, nor espouse a single ideology and function....”

One of the items under “World Community” in the 1973 Manifesto was the following:

“We deplore the division of humankind on nationalistic grounds. We have reached a turning point in human history where the best option is to transcend the limits of national sovereignty and to move toward the building of a world community.... Thus we look to the development of a system of world law and a world order based upon transnational federal government....

“The problems of economic growth and development can no longer be resolved by one nation alone; they are worldwide in scope. It is the moral obligation of the developed nations to provide - through an international authority that safeguards human rights - massive technical, agricultural, medical, and economic assistance, including birth control techniques, to the developing portions of the globe....”

Since one of the signers of the 1973 Manifesto was B. F. Skinner, who wrote the appalling book, Beyond Freedom and Dignity, claiming that we can no longer afford either freedom or dignity in the future but must submit to control by “experts,” it is reasonable to doubt whether “human rights” would be “safeguarded,” as this last paragraph recommends. Skinner’s book certainly puts all the wordy idealism of the Humanist Manifesto II into clearer focus, since the worldwide aims of the Manifesto obviously might be used as an excuse for justifying control of society, worldwide, by Big Brother.
However, given a (happily) theoretical choice between a rule by Big Brother, or a rule by even the most backwoods, under-educated clergyman, I suspect most people would vote for that clergyman. Such a vote would certainly be the wiser choice because, unlike Big Brother, that backwoods clergyman would have the Bible to use as his guide for decisions, instead of these Humanist Manifestos.

One of the most disturbing of the 1973 paragraphs, however, is the following (quoted earlier):

“We deplore the division of humankind on nationalistic grounds. We have reached a turning point in human history where the best option is to transcend the limits of national sovereignty and to move toward the building of a world community.... Thus we look to the development of a system of world law and a world order based upon transnational federal government....”

Anyone who endorses the last underlined portion has obviously disqualified himself for the United States Congress or for the Presidency, because both offices require solemn oaths in which an elected person must swear to uphold and DEFEND the United States Constitution. How can anyone who is looking for “the development of a system of world law” swear to uphold and DEFEND the United States Constitution? Such people have also disqualified themselves for service in the United States military, because their allegiance is clearly NOT to the United States but to a proposed “transnational federal government.” We need to have it spelled out, by an act of Congress, that anyone who chooses to “uphold and defend” the Humanist Manifesto will be disqualified from serving anywhere in the United States Government or in the United States military forces, or in agencies associated with them, because of the “clear and present danger” that such persons may perform seditious acts. Can you imagine George Washington permitting such people to serve in HIS army?

1974 The Hisperica Famina: I. The A-Text, translated by Michael W. Herren, Associate Professor of Humanities and Classics, Atkinson College, York University, Toronto, published by Pontifical Institute of Mediaeval Studies, Toronto, 1974. This is a book using a great number of rare Latin words and is presumed to have been used as a student text in Latin in Irish lay schools about 650 A. D., very much in the manner of a glossary. Yet it is a fascinating window on the past since the text concerns many of the routines and daily activities of lay students who were being schooled according to the ancient Druidic tradition.

1974 Insular Latin Studies, Michael W. Herren, Editor, Toronto. This collection which I have not seen includes a paper by John Contreni on the ninth century. I was told that paper might be pertinent to this history.

1974 Ot Asbukilvana Fedorovado Sovremennaug Bukvaria (Russian Primers, 1574-1974), by V. P. Bogdanov. This very large and attractive, heavily illustrated book of 138 pages, covered in white leatherette, has been available at the Library of Congress, untranslated so far as I know and unacknowledged by reading “experts,” for more than twenty years. Its call number about 1980 was Z 1033 H 8073, 1974. It is a history in Russian of beginning reading books in the Soviet Union over the last four centuries. I had small portions translated at my own expense about 1980. Pages from their primers from the 1920’s suggest that a lot of phonics was used, despite some sight-words, and despite the Soviet report that phonics only returned to beginning reading in the Soviet Union in 1932. That report appears in the Great Soviet Encyclopedia listed below.

1745
The first Soviet primers, compiled according to the so-called whole-words method, were replaced in 1932 by primers in which the analytic-synthetic sound method was restored...."

The article was written by P. O. Afanas’ev and N. A. Kostin. However, see the above entry which suggests that phonics had also been used, with some sight-word approaches, before 1932. Also, see later under 1983, in the entry for the article, “But Can Juanito Really Read?” Gertrude Hildreth’s comment concerning a 1930 Soviet primer that she saw in which the words had been divided between syllables. That is a clear indication that a “sound,” and not a “meaning,” method, was being employed in the teaching of that 1930 primer. It would appear that what the Great Soviet Encyclopedia called the “whole-words method” is what we would call a modified but truly phonic approach.

In addition to contemporary information, this text reproduces material from the reading controversy in Massachusetts in the 1840’s. Walcutt and McCracken also wrote Lippincott’s Basic Reading 1963 phonic series, and later revisions, but Dr. Walcutt endorsed only analytic, not synthetic, phonics. Dr. Dykstra, who had worked on the 1967 and 1968 USOE studies listed above, endorsed the use of “sound” in beginning reading in his chapter on research and evaluation in this book.

Mathurin Boscher (1875-1915), wrote Methode Boscher, a 1946 copy of which is listed in the Library of Congress catalog as published by Loudeac, France. It was not available when I requested it in 1980. As mentioned elsewhere in this history, Elise Freinet referred to the apparent contempt in which the French sight-word “expert,” Celestin Freinet, held the Boscher phonics charts in 1926.

1975 The Mystery of the Mind, A Critical Study of Consciousness and the Human Brain, by Wilder Penfield, M. D., Princeton University Press, Princeton, New Jersey. This enormously important book by a renowned neurosurgeon discussed his conclusions concerning what he termed the body’s automatic sensory motor mechanism, where all conditioned reflexes or learning is stored, and the higher brain mechanism, where consciousness resides.

On page 67 of her text, The Complete Handbook of Children’s Reading Disabilities, Dr. Mosse quoted from another work by Dr. Wilder Penfield, “Engrams in the Human Brain, Mechanisms of Memory” (1968) which is very pertinent concerning the effects of teaching anything, including the skill of reading:

“Only those things to which a man paid attention are preserved in the record or added to the automatic mechanism. The sights and the sounds and the somatic sensations that he ignored are not preserved in any engram form.”
Skills can be performed automatically, but, as Dr. Penfield pointed out, in order for the human brain to acquire any skills, conscious attention must be focused on them during the act of learning (conditioning).

The act of reading is, of course, a conditioned reflex, and should be performed automatically after it has been properly formed. The automaticity of the act is demonstrated by the fact that a computer can be programmed to read printed text aloud with virtually perfect accuracy. Firstbyt software, capable of reading print aloud and available for less than $50, can be used on inexpensive computers with almost the same degree of accuracy. However, there is something eerie about hearing your computer turn your typed work into human-sounding speech, with correct intonation at periods and commas, when you know there is almost nothing inside that computer to account for it except a little disk. The fact that computers can turn print into virtually perfect speech (by “sound”) should have made mincemeat out of the arguments for reading “psycholinguistically” (consciously, by “meaning”). Yet that fact apparently has been totally ignored by “reading experts.”

1975 How to Increase Reading Ability, by Albert J. Harris and Edward R. Sipay. David McKay Company, Inc., New York. Original edition in 1940, and revised editions to 1975 (and possibly later). Harris was the principal author of the Macmillan readers in the version which apparently followed Gates’ 1930 version. The series by Harris used a “meaning” approach and was in use for many years. This book, used in teacher training classes, has a strong bias toward the “meaning” approach. See also Betts’ teacher-training book, listed above under 1946 in its original edition. Betts was also a famous “expert,” who endorsed “meaning” in beginning reading and who was the principal author of a “meaning”-approach reading series.

1976 Comment Interesser l’Enfant a l’Ecole: La Notion des Centres d’Interet Chez Decroly, by Valdi Jose Bassan. Paris: Presses Universitaires de France. “Centers of interest” were an important part of the “open classroom” movement of the 1970’s.

1976 The Origins and Development of the ABC Book in English from the Middle Ages Through the Nineteenth Century, By Susan Steinfirst. Submitted to the Faculty of the Graduate School of Library and Information Sciences in partial fulfillment of the requirements for the degree of Doctor of Philosophy, University of Pittsburgh: 1976. Unpublished. Copyright 1976 by Susan Steinfirst. All Rights Reserved. (I borrowed this material through inter-library loan. It is wryly amusing that this worthwhile material remained unpublished almost twenty years after it was completed, while Nila Banton Smith’s appallingly incorrect “history” is considered a standard reference work!)

1976 Biographical Dictionary of American Educators, Edited by John F. Ohles. Greenwood Press, Westport, Connecticut. 3 volumes. This is an unparalleled source of information on people involved in education. It is based on the original work by extraordinarily competent and presently unsung publisher, C. W. Bardeen of Syracuse, New York. Bardeen also published a remarkable journal on education, The School Bulletin, from the 1870’s until 1920. Bardeen republished a great number of books on education that had been published in English, up to about 1890. Yet Bardeen and his exceptional contributions have almost totally faded from “expert” literature on education.
This includes an article by Bernhard Bischoff, “Bannita: 1. Syllaba, 2. Littera.” The article in German probably sheds some light on the sense in which “syllable” and “letter” were used in that period.

1976 Nu Laser Vi A, Borrman Matthis Salminen Wigforss, A. W. Laromedel, Stockholm, Sweden. This is the highly phonic primer I saw in use in my visits to Swedish first grades in the fall of 1977. Its effect was weakened to a greater or lesser extent in some classes by the adoption of what was called LTG. That was an experience-chart approach to reading, where children copied sight words from “stories” that they composed jointly in class. Each child kept his sight words in his own file box, studying the alphabet from the sight words he had chosen from the class experience charts. This is obviously a shift away from “sound” toward “meaning” in beginning reading. Yet the heavily phonic text was still mandatory in all Swedish classes as of 1977.

The LTG method was reportedly greatly praised in teachers’ journals at that time. Yet I heard it sharply criticized by several Swedish teachers, although some others used it. One who criticized it said the LTG method “was not good for teaching reading.” Another said, “I do not like it at all. I do not use LTG.”

I found, where it was in use, a typical profile appeared when comparing second-grade oral reading scores from LTG-emphasis classes to dominantly Nu Laser emphasis classes. The LTG-influenced second grades produced lower accuracy in oral reading, greater reversals, slower speed, and showed the effect on comprehension noted elsewhere: higher than one phonic class, but averaging lower than the two best phonics classes. That narrow band of reading comprehension scores associated with “meaning” emphasis programs demonstrates that the “meaning” method does control comprehension. The narrow band is a statistical function of the decreased accuracy, slower speed, and increase in reversals associated with “meaning” approaches. It therefore also proves that the decoding in the “meaning” emphasis programs cannot be automatic since decoding and conscious “comprehension” are involved in that demonstrable, statistical relationship. Yet the very wide band of “comprehension” scores that results from the “sound” emphasis programs demonstrates that the “sound” approach has no effect on conscious comprehension, either positive or negative. It therefore demonstrates that automaticity in decoding is possible with “sound” emphasis programs.

I tested five second-classes in Sweden: two in schools with some first-grade emphasis on LTG and three in schools with Nu Laser emphasis in first grade. However, all classes had to use Nu Laser to a very large extent, so all were highly phonic classes compared to American basal readers. See the table in Appendix A summarizing my research results.

While in Sweden, I was given the name of a woman to call to discuss the LTG method, but found, when I called, that she had gone to Austria to promote the method there. Yet there was obviously nothing at all “new” about that “meaning” method, including its fevered and enthusiastic promotion. The file-box approach for sight-words from the experience charts was, at that very time, being handled instead in England and elsewhere by individual notebooks each child kept to hold experience chart sight-words. I saw experience charts in wide use in French first grades in the fall of 1977, but they were usually used to teach heavy phonics. Experience charts date back at least as far as Colonel Parker’s schools in Quincy, Massachusetts, after 1875, probably as far back as the infant schools in England in the 1820’s, and possibly as far back as Robert Owen’s infant school in New Lanark, Scotland, in the late eighteenth century. The hallmark of experience charts, of course, is the promotion of “meaning” to teach the reading of alphabetic print, although the French schools I saw managed to use experience charts with a phonic emphasis.
1977 “Teaching and Development,” by Professor L. V. Zankov (concerned with curriculum reforms), Soviet Education, M. E. Sharpe, Inc., Vol. XIX, No. 4-6, February-March-April issue. The article discussed Soviet primary curriculum. In the Soviet Union, the teaching of reading (which was by “sound”) was completed in the first grade, which children began at age seven. The journal, Soviet Education, contained extraordinarily complete reports on education in the Soviet Union.

1977 Comparison of the Oral Reading Strategies and Comprehension Patterns Developed by... First Grade and Third Grade Students... by Donna E. Norton, University of Wisconsin, Madison. The study’s data showed that phonics-trained students made fewer regressions (looking backwards or re-reading) than “meaning”-trained sight-word students. The study specifically stated, “A synthetic-phonics approach developed small numbers of self-corrections.” Of course, the study also implicitly confirmed that two distinctly different types of readers were developed: objective (phonics) and subjective (sight words).

1978 La Sante mentale de l’enfant by Celestin Freinet, published by Francois Maspero after Celestin Freinet’s death, with a foreword by Elise Freinet, in which she said:

“The health of the child was the fundamental end of the change in teaching to which [Freinet] was consecrated since 1923.”

She said it had been the theme proposed by Freinet at the 16th Congress of the Modern School in Avignon in 1960. Other materials of Elise Freinet and Celestin Freinet are listed in this appendix and were discussed in Part 7 of this book.

1978 “Automatic Decoding, Its Role in Comprehension,” by S. Jay Samuels, The Reading Informer, Scottsdale, Arizona, October, 1978. Also “Automatic Decoding and Reading Comprehension,” Language Arts Magazine, (1978?), by S. Jay Samuels. The concept of automaticity in reading is not new, but was mentioned as long ago as James McKeen Cattell’s early work, although Cattell was obviously referring to what he (wrongly) believed could be automaticity in reading whole alphabetic words by their whole appearance as units, with no reference to their letter sounds. (The reasons behind Cattell’s error are discussed at length elsewhere.) In The Complete Handbook of Children’s Reading Disorders, Volume 1 and Volume 2, by Hilde L. Mosse, M. D., Human Sciences Press, Inc., New York, New York, 1982, Dr. Mosse referred on p. 78, Volume 1, pp. 470-471, Vol. II, and elsewhere, to the fact that automaticity is necessary if maximum reading comprehension can take place. That was also Samuel’s point.

In my 1979 paper, published in The Reading Informer in March, 1980, I stated that two different types of readers were developed as a result of different beginning reading methods. In the paper, I also referred to Samuel’s Language Arts article. The statistical profiles that resulted from comparing scores on my 1977-1978 test results had shown that children who had learned to read by “meaning” were dependent on the conscious “meaning” of context for word identification. They therefore were unable, by definition, to read automatically, since they were using consciousness for word identification. Yet children who learned by phonics were not dependent on context “meaning.” They could read therefore automatically and so achieve maximum reading comprehension when they chose to pay attention.
1978 Cross-Cultural Perspectives on Reading and Reading Research, by Dina Feitelson, International Reading Association, Newark, Delaware. Article by Stella S. F. Liu, “Decoding and Comprehension in Reading Chinese.” Article by C. K. Leong, “Learning to Read in English and Chinese: Some Psycholinguistic and Cognitive Considerations.” Apparently with no knowledge of Suzzallo’s material, the Liu article stated in principle the same ideas that Henry Suzzallo did in his 1913 article on reading in the Cyclopedia of Education, in which Suzzallo used a triangle to show two different and opposite paths in reading. One kind of reading goes from print at the lower right-hand corner of the triangle directly to meaning at the top point, and only possibly goes on down to sound at the lower left-hand corner. This kind of reading is in contrast to that which goes from print at the lower right-hand corner directly to sound at the lower left-hand corner, and only then goes on to meaning at the top. In Messmer’s 1903 terms, to which Suzzallo made no reference, the former is subjective reading which guesses meaning directly from the print, but the latter is objective reading which first reproduces the sound of the print and so does not need to guess its meaning. Concerning Leong’s article, see the 1971 entry on Kana and Kanji print.

1978 Reading, by Frank Smith. Also see the 1975 entry on one of Smith’s other books. He also wrote Psycholinguistics and Reading. Smith’s widely ballyhooed theories on teaching beginning reading by “meaning” instead of by “sound” parallel Kenneth Goodman’s extraordinarily ballyhooed ideas about teaching reading by what he called the “psycholinguistic guessing game.” (See the 1967 entry on Goodman.)

The claim has been made that a rural teacher in New Zealand was the initial inventor and promoter of the current “whole language” approach, and an extraordinarily dull commercial movie was produced in the 1980’s which was supposed to establish that she invented it because of her stickily gooey, purported concern for children’s educational welfare. Yet it is Smith’s and Goodman’s so-called “theories” which underlie the current plague of “whole language” for first-graders. It is now in use world-wide in English-speaking countries because of the enormous publicity and promotion that has been given to it. It must be admitted, however, that Smith’s and Goodman’s recipes for teaching beginning reading would be valid if the intent were to destroy reading ability instead of to develop it.

Joyce Morris of England has stated that Frank Smith makes “extraordinary assertions unsupported by research evidence.” Dr. Morris also said the following, as quoted elsewhere in this history:

“For, without any real evidence that Smith’s and Goodman’s ideas are effective in classroom practice generally, Liz Waterland’s translation of their ideas into her own practice (Waterland, 1985) has found widespread acceptance among British teachers, teacher-trainers and LEA.” (LEA is the Leicestershire, England, education authority.)

Waterland’s secondary material is only one of the glut of books and magazine articles in English pouring from presses all over the world in support of “whole language” as a method to teach beginners to read. Yet, to use such a method to “teach” beginning readers is nothing less than academic child abuse. Considering the massive harm being done to little children by “whole language” gurus, and since legal action can be taken against persons who market harmful medicines and foods, cannot some appropriate legal action be taken against those most responsible for promoting “whole language” to teach beginning reading to defenseless little children?

1978 McGuffey and His Readers, by John H. Westerhoff III. Abington: 1978, Mott Media, Milford, Michigan: 1982. This has been discussed in this history.

1979 The Little Office of the Blessed Virgin Mary. This is another name for the Book of Hours which was the major part of the enormously used Latin primers before the Reformation in England. The Book of Hours alone, in Latin, was widely used all over Europe, and many beautifully illustrated ones have found
their way into museums. The Little Office of the Blessed Virgin Mary is still in print in English in the United States, and is available from Franciscan Herald Press, 1434 West 51st Street, Chicago, Illinois 60609 (10th printing: 1979).

1979 “Deafness and Reading- A New Approach,” by Dr. R. Orin Cornett, Research Professor at Gallaudet College, Washington, D. C., and formerly Assistant U. S. Commissioner of Education and Director of the Division of Higher Education. Published in The Reading Informer of the Reading Reform Foundation, Scottsdale, Arizona, October, 1979. This was a copy of Cornett’s talk given at the 1979 meeting of the Reading Reform Foundation held at Princeton, New Jersey, in the summer of 1979. Dr. Cornett discussed his invention, cued speech, which he had also reported in his article, “What Is Cued Speech?”, Gallaudet Today, Winter/1974-75, Volume 5, Number 2. Cornett said that, while he was Director of the Division of Higher Education, he saw college reports from Gallaudet College. In one were two statements, “back to back”:

“The average IQ of students at Gallaudet College (the world’s only separate college specifically for deaf persons) is probably higher than that in any other institution of higher education in the world. The point, of course, is that deaf students have to be brilliant in order to reach college level.”

Cornett said the second statement was:

“Eighty percent of the students at Gallaudet College never read for pleasure, and three fourths of the 20% who do were not born deaf.”

He commented:

“It was the second statement that aroused my interest in deafness. I was horrified…. Reading is the only hope of the deaf for learning about the world and what is happening in it. The average reading level of 19-year olds in schools and programs for the deaf in the United States is about that of a nine-year-old hearing child. We fail the deaf in their area of greatest need. It was this shocking fact that caused me to begin learning about the problems of deaf persons and in 1965 to accept a position at Gallaudet College. I came to Gallaudet with the avowed intention of doing something about this problem.”

Cornett did do something remarkable. He developed cued speech, by which people use eight handshapes in four places near the face to make lip reading absolutely clear - a visual form of phonics. The method has been extraordinarily successful with little deaf preschoolers, who can then learn to read with phonics. A little child born totally deaf in the most isolated part of Australia was able to acquire speech, incredibly with normal nuances and even the rising and lowering of tones, by the age of about three, just from observing her parents’ use of Dr. Cornett’s cued speech. (It seems obvious that the human brain is pre-programmed in some unknown way so that it can acquire speech. Otherwise, the child’s instinctive use of musical tones would have been impossible.)

Cornett’s point, of course, was that “sound” is the natural way to introduce children to speech, even totally deaf children, rather than “meaning” or sign language. Yet, some thirteen years after Cornett’s talk, when a convention of educators of the deaf was being held in a Washington hotel, all the literature being handed out on a table outside the meeting rooms concerned the old methods. I saw nothing that concerned Dr. Cornett’s remarkably successful method.

The deaf have been betrayed for a very great number of years. That betrayal appropriately started in the so-called Age of “Enlightenment” and its city of “light,” Paris. The history of that betrayal, not surprisingly, eventually became intertwined with the history of the hideous French Revolution..
However, one point in Dr. Cornett’s testimony is of particular interest concerning teaching reading to hearing children. He said that the deaf who learned by “meaning” instead of “sound” almost never read for pleasure. That fact destroys the usual argument for teaching reading to hearing children by “meaning” instead of “sound.” That fallacious argument is that “meaning” approaches result in greater enjoyment in reading and a greater desire to read. See the comments under W. S. Gray’s 1956 book, The Teaching of Reading and Writing, in which Gray said that Buswell had shown in 1922 that children who learned by “meaning” instead of “sound” enjoyed reading more.

1979 Education in Ancient and Medieval Ireland, by Fergal McGrath, S. J., Studies “Special Publications,” Dublin, Ireland. This is an excellent reference work.

This book, written for the layman, described on its cover as “An Enthralling Account of the Structure and Workings of the Human Brain,” is far clearer and more usable than similar materials written for the layman. Much of its content is based on brain surgery performed on conscious patients, who could instantly report to surgeons the effects that resulted from the stimulation of various brain areas.

A very interesting diagram from a Scientific American article on brain research is reproduced in this book. It shows the areas in the brain that were activated while a subject was reading.

1980 The Leipzig Connection, by Lance J. Klass and Paolo Lionni, Heron Books, Portland, Oregon. This book is historically of great importance. It shows the influence on American education of the psychologists who had trained under the materialist psychologist Wilhelm Wundt in Germany, such as G. Stanley Hall, and James McKeen Cattell (and, very briefly, William James), and their students in America, such as John Dewey and E. L. Thorndike. Such influence was largely made possible after about 1900 by massive amounts of foundation money. The late Lance J. Klass told me in a letter some years ago that in his original book he had been critical of Cattell’s interpretation of his sight-word experiments, but his remarks were changed in the rewriting of Klass’s original book with Lionni, because of Lionni’s interpretation.

1980 American Education - The National Experience - 1783 - 1876, by Lawrence A. Cremin. Harper & Row. This is an exceedingly useful and reliable reference work by a former president of Columbia Teachers College in New York. In this work, Cremin referred to the existence of the McGuffey myth, and his comments have been quoted in this history.

1980 American Book Publishing Record. Cumulative - 1876-1949, R. R. Bowker Co. (New York Public Library call number *R-*GDB 81-91. This material has been discussed in this history. For general research purposes on the teaching of reading, it is exceedingly awkward and of very little use, unless a specific title is already known. Under New York Public Library call number *R-*GBO 83-1779 appears Books in Series - 1876-1949, R. R. Bowker Co. On this material, I made the notation, “It did not list Harris’s reading books [Appleton series] or the fact that Appleton had a reading series, but lots of other [notations] on Appleton.” A 1977 book I saw was published by Jacques Cattell Press, R. R. Bowker & Co., New York and London, 1977, which was apparently by 1977 a subsidiary of Xerox. Jacques Cattell was J. McKeen Cattell’s son, and presumably the founder of that press some time in the past. That fact
suggests that at some time in the past there was a possibility of influence from Cattell’s associates on the Bowker company.

1981 An Education in Psychology, James McKeen Cattell’s Journal and Letters from Germany and England, 1881-1888, Edited by Michael M. Sokal, The MIT Press, Cambridge, Massachusetts. Although concerned almost completely with Cattell’s early life and early associates, this nevertheless is an invaluable source for understanding the influence of Cattell and his associates on education in general. Sokal discusses Cattell’s early reading experiments. Sokal’s book is a remarkably scholarly and carefully researched work, and it has been invaluable to me in my own research.

1981 Why Johnny STILL Can’t Read, The Scandal of Our Schools, by Rudolf Flesch. Harper & Row, (now Harper Collins), New York. Although Flesch’s 1955 book had been a run-away best-seller, it was very difficult to obtain this excellent, carefully researched book in book stores in the year or so after it was first published. It was months before it was reviewed in The New York Times, and then negatively. I tried unsuccessfully to buy it in some book stores in New York, one in Philadelphia, one in Dallas, and one in Scottsdale, Arizona. I was told in one New York book store that they had requested it from the publisher some considerable time before but still had not received it. I read a report of a man who tried unsuccessfully to buy it on a trip coming from the West Coast towards mid-America. However, it is now easily obtainable in a relatively inexpensive paper-bound copy through Barnes & Noble, and so is Dr. Flesch’s 1955 book.

1981 Gates-McKillop-Horowitz Reading Diagnostic Tests, Teachers College Press, Columbia University. This is the latest revision of materials which were originally prepared by Arthur Irving Gates. They are not useful materials for objective testing of reading ability, since the current norms were obtained on a population taught by “meaning, not “sound.” However, one section contains part of the word lists for oral reading on which Gates tested thousands of students in 1923 and 1924. The current norms on that oral word test are not useful since they are based on median, and not averaged scores like the original materials, thus obscuring actual achievement. As indicated elsewhere, Gates’ 1924 material, based on far more useful averaged scores, is available in a 1924 article in Teachers College Record. Those word lists and those averaged norms could be of great use to show the enormous drop in reading ability since 1924.

1981 The Death and Letters of Alice James, by Ruth Bernard Yeazell, University of California Press, Berkeley, California. This has been mentioned in this text.

1981 (1968) History of Psychology, by William S. Sahakian:, F. E. Peacock Publishers, Inc., Itasca, Illinois. This is an absolutely extraordinary achievement, and a one-of-a-kind work which nothing else known to me on the topic even begins to approach.

1981, 1985 Is Public Education Necessary? by Samuel L. Blumenfeld, The Paradigm Company, Boise, Idaho. This very important book traces the history of the highly successful and heavily organized activism for government schools in America from about 1820 to about 1840. The highly literate America of 1776-1830 had almost no true “government” schools before 1820, except for some in New York and Massachusetts. As has been demonstrated at length elsewhere in this history of reading, as soon as government-subsidized schools were installed here and in Great Britain, the “meaning” method to teach beginning reading replaced the “sound” method. The result was rampant functional illiteracy, although that fact has been buried. Functional illiteracy, as opposed to simple illiteracy, was a brand-new disease that had first surfaced in eighteenth-century France, when the “meaning” method to teach the reading of sound-bearing alphabetic print was invented, as has been discussed in this history. It is my contention that the cause of functional illiteracy is the establishment in beginning readers of the Kanji (“meaning”) conditioned reflex in reading alphabetic print, instead of the proper Kana (“sound”) conditioned reflex.

1981 On A Field of Red, by Anthony Cave Brown and Charles B. MacDonald, G. P. Putnam’s Sons, New York. This is a fascinating and excellently researched account of Communist influence in the Western World since about 1917. On pages 467 to 470 of their text, they discuss the Soviet-sponsored “peace” rally in the Netherlands in 1932 at which Henry Wadsworth Longfellow Dana, the grandson of the poet, Longfellow, and the journalist, Dana, was a scheduled speaker, as mentioned in Chapter 50 of this book. In 1932, Dana was a professor at Harvard, but in 1917, as a young man, Dana had been fired from Columbia University, along with James McKeen Cattell, for opposing the draft in war time.

1982 When Hell Was in Session, by Jeremiah A. Denton, Jr., Traditional Press, Mobile, Alabama. Denton was a United States Senator in 1982, and had been a Naval pilot and flight leader when he was shot down and became a prisoner of war in North Vietnam. Denton’s imprisonment lasted from 1965 to 1973, during which long years he was usually in solitary confinement and was subjected to unspeakable tortures. It was under those intolerable conditions that the American prisoners in North Vietnam including Denton invented an efficient alphabetic tapping code with which to communicate, far simpler than the Morse code. That invention shows that new alphabetic “writing” systems, rivaling in efficiency the ancient Ogham and runic alphabets, can still be invented when the need calls for them and when clever men are able to meet that need.

1983 “But Can Juanito Really Read?”, by Tom Bethell, National Review, New York, New York, September 30, 1983 (pages 1196-1199). Since 1919, as Bethell documented in this article, almost the first item on the agenda for newly established governments in every country where Communists have taken over has been a massive literacy drive. It is unreasonable to assume that such governments would have given such drives so much time, money and manpower for sixty-six years (1917 to the date of Bethell’s 1983 article) unless such drives really worked, just as Communism has always “worked” according to the Communist standard of rigid control.

Bethell cited statements from commentators in free Western countries who doubted the claims Communist countries made for huge and almost-immediate successes in their literacy drives. The reason for the doubts of those commentators, as well as for Bethell’s questioning title, is that a key piece of information is missing from the discussion. Bethell and the commentators he cited who doubted the Communist claims are having the same problem in the definition for “reading” that was cited above in the definition for “effective.” “Effective” certainly has a different definition in the case of Communism, but so does “reading.”

Almost no one in the free Western World knows that there is not just one kind of “reading,” but that there are two diametrically opposed kinds (or mixtures of those kinds). The only kind of reading that works effectively for alphabetic print is reading by “sound.” Reading by “meaning” either does not work at all for alphabetic print or works badly.
Yet the Communists obviously knew for a long time that there are two kinds of reading (or mixtures of those kinds), and they knew it since some unknown time before 1932. The Soviet Encyclopedia clearly stated that in that year the Soviet Union threw out any use of the sight-word “meaning” method and installed the phonic “sound” method. That they had only used the “meaning” method in a diluted “sound” form is suggested by illustrations of Soviet primer pages from the 1920’s in Ot Asbukilvana... [Russian Primers, 1574-1974], and in Gertrude Hildreth’s description of a 1930 Russian primer she saw which was divided into syllables, a clear “sound” approach. She referred to that 1930 primer in her article on the teaching of reading in Russia, entitled, “How Russian Children Learn to Read,” The Reading Teacher, December, 1959.

In contrast to the Soviets, the Free World has been using the “meaning” method, or badly working mixtures of “meaning” and “sound,” in the teaching of alphabetic print almost uniformly ever since about 1930, under the influence of its highly vocal reading “experts.” That was the same time-frame in which the Soviets did the precise opposite: they outlawed “meaning” and mandated the use of “sound.”

Despite huge inputs of teacher time and taxpayer money in the free Western World, the wrong “meaning”-method in the teaching of alphabetic print has resulted in high illiteracy rates and in large numbers of reading disabilities. Therefore, because of their knowledge of widespread reading disabilities in the Western World and because of their false, unconscious assumption that there is only one kind of reading, people in the free Western World have doubted the huge claims for almost immediate success in the literacy drives in newly Communist countries. Their doubts are probably wrong, because there is not just one kind of reading, but two kinds: by “meaning,” or by “sound,” and the Communist world has been teaching the right way: by “sound.” In total contrast to teaching reading by “meaning,” teaching reading by “sound” is astonishingly easy and astonishingly quick, so there is no reason at all to doubt the claims made by newly Communist countries that they have almost wiped out illiteracy.

Bethell’s article was summarized on the table-of-contents page 1171 as follows: “ New Communist regimes always begin by eliminating a) illiteracy and b) unauthorized printed matter....”

Bethell’s article included these remarks:

“A big reported increase in the national literacy rate is one of the absolutely predictable aftermaths of all Communist revolutions....

“Always there is this business about literacy rates, and for a long time it puzzled me. The Communists would arrive and wreak their predictable havoc on the economy and in society generally, life would become progressively more militarized; and yet, in the midst of all this wreckage, slogans, queues, billboards, and militarization, there would be the claim, endlessly repeated: More people can read and write - the one undeniable success of the revolution....

“‘The [Nicaragua] revolution’s most significant accomplishment is a campaign to teach reading and writing that has gained widespread international regard,’ claimed Warren Hoge in the New York Times two years ago.... The claim of 12 per cent illiteracy had already been loudly triumphed by TASS, the Soviet news agency, and by Xinhua, the shrill Peking radio....

“The Soviet Union claims a 99.7 per cent literacy rate. ‘Observers outside Russia are agreed that these figures are a fraud,’ says Robert Pattison in his 1982 book, On Literacy...”

I have not seen Pattison’s book, but, since virtually everyone in The Soviet Union attends school for at least a few years, I find no difficulty whatever in crediting at least a 99% claim. The claim of 99%...
literacy was made in 1968 by a Japanese researcher, Kiyoshi Makita, concerning literacy in Japan. (His study, “The Rarity of Reading Disability in Japanese Children,” reportedly appeared in the American Journal of Orthopsychiatry, p. 599-614, July, 1968. Japan uses two-thirds Kana sound-bearing syllable characters and one-third meaning-bearing Kanji characters instead of the alphabet). Nor is it out of keeping with the comment in the early nineteenth century of the French-born scion of the American du Pont dynasty, who conferred with President Jefferson concerning education, and who was himself the author of a beginning reading program in France. Du Pont said flatly, concerning the young Americans about 1800 (obviously not including those held in slavery), that they could almost all read. John Adams, who later became president, said about 1760 that to find a [free] American who could not read was as rare as to be struck by lightning. Of course, in all these cases, except with the Kanji “meaning” characters, all of these people (the Soviets, the Japanese learning the dominant Kana “sound” characters, and the Americans about 1760 and 1800) had learned to read by “sound,” not by “meaning.”

Bethell referred to the report made by Barbara Bush the previous year that sixty million Americans are either illiterate or functionally illiterate. In my opinion, Barbara Bush’s estimate is far too rosy. Almost all Americans who learned to read after about 1931 learned to read by the disabling, deaf-mute-method “meaning” approach, with its phony, “intrinsic” guessing phonics. The disabilities that it has produced are far greater and far more hidden, I believe, than anyone has so far been able to establish. The yardstick being used to judge reading competency is the so-called, utterly fallacious, “reading comprehension test,” which only serves to mask disabilities. Until oral tests to adults are given on pronouncing lists of low frequency words, within a normal time limit, and written tests to adults are given on spelling the thousand highest-frequency words, it will be impossible to measure the extent of American disabilities. Those disabilities were caused by the deaf-mute “meaning” method of teaching beginning reading which was introduced in 1930 with the Dick and Jane deaf-mute-method readers, with their phony, “intrinsic” guessing phonics.

Bethell referred to the reports in both Cuba and Nicaragua shortly after their Communist take-overs that illiteracy had been almost wiped out, and the comment of one reporter that teaching to read can be seen as political. Bethell wrote:

“Lenin agreed with this line of reasoning. ‘An illiterate man is non-political,’ he stated succinctly in 1919. ‘First he must be taught to read.’”

Bethell quoted Seymour Hersh who wrote from Communist Saigon in 1979:

‘ There is heavy emphasis on mass education and ending illiteracy.’

Bethell added was the most recent Communist country with huge anti-illiteracy campaign, but commented that the illiteracy drive had been overshadowed by the increasing famine there.

Bethell wrote:

“It would be appropriate to give [Lenin] the last word. He said in 1922:

“‘In general, as you probably know, I do not have much sympathy for the intelligentsia, and our slogan “liquidate illiteracy” is in no way to be interpreted as being aimed at the creation of a new intelligentsia. The purpose of “liquidate illiteracy” is only that every peasant should be able to read by himself, without help, our decrees, orders, and proclamations. The aim is completely practical. No more.’”
Bethell’s most interesting article did not include a very curious, almost unrecognized fact: within the Communist world since about 1930, the reading of alphabetic print has been taught initially by “sound,” not by “meaning,” while in the Free World since about 1930 the reading of alphabetic print has almost always been taught by “meaning” or by “meaning/sound” mixtures in which “meaning” is usually dominant.

Franz Biglmaier of West Germany wrote an article for John Downing’s book, Comparative Reading (The Macmillan Company, 1973), in which he said that West German “experts” endorsed the global (sight-word “meaning”) method, and that 74% of the available sixty-one German primers in 1964 used the global approach. However, he said that the method used in Communist East Germany to teach beginning reading was phonics (“sound”).

In China, the emphasis in beginning reading turned to “sound” as soon as the Communists took over. They installed the Pinyin alphabet, which is sound-bearing. It is now taught to children before they are introduced to the meaning-bearing Chinese characters. By contrast, it is disturbing that some Japanese reading “experts” have tried to change reading methods there, introducing kindergarten students to large numbers of meaning-bearing Kanji characters. In the past Kanji characters were only taught later and very slowly, over many years of school. Beginners had learned to read ONLY with the sound-bearing Kana syllable characters.

Since it is so very easy to learn to read when the “sound” method is used, considerably more Juanitos may have learned to read than Bethell suspected. After all, the Communists promoted literacy programs since at least 1919 in the Soviet Union, and since 1945 behind the Iron Curtain. If the Communists’ literacy programs had been largely unsuccessful over all those years, does it not seem unlikely that they would have continued to concentrate so many scarce resources on those programs as late as 1980?

Literacy is apparently only promoted by change-agents, or power brokers, when the reading matter can be sufficiently controlled, along with the population itself. When the reading matter cannot be sufficiently controlled, it can contain truths which are unsettling (to the change-agents or power brokers). In the past, when the reading matter could not be sufficiently controlled, and when the population itself could not be sufficiently controlled, power-brokers have sometimes openly promoted illiteracy. Historical instances that can be cited of the desire to control subject populations by openly suppressing literacy are the state laws in the American pre-Civil-War South forbidding the teaching of reading to slaves, which laws were in effect up to about 1865, and the English Penal Laws forbidding the teaching of Irish Catholic children, which Penal Laws were not repealed until after 1800. Is a comparable intent to suppress literacy the real explanation for the massive promotion at present all over the English-speaking world of the “whole language” fakery in the teaching of beginning reading, and is the same intent the real explanation for the move to teach Kanji meaning-bearing characters to Japanese kindergarten students?

1983 Two Sides of the Brain, Brain Lateralization Explored, by Sid J. Segalowitz, Prentice-Hall, Inc., Englewood Cliffs, New Jersey. Because of differences in perception depending on which side of the brain is in use, a lot of nonsense has been written lately purporting that every human body is occupied by two distinct personalities - a kind of Jekyl and Hyde syndrome. This nonsense ignores the fact that consciousness is unitary since it can focus on only one thing at a time, and it ignores the fact that consciousness is known to arise at the brain stem, which is itself unitary. In contrast, Segalowitz’s book, based on relatively recent research, sheds much useful light on those differences in perception which are real and demonstrable when one side of the brain is compared to the other.

Concerning reading, Segalowitz clearly discussed on pages 91 and 92 the differences in reading Japanese Kanji (meaning-bearing) print and Japanese Kana (sound-bearing print). (Japanese print consists of a mixture of about two-thirds Kana symbols and one-third Kanji symbols.) Segalowitz said:
“In normals, it has been shown that reading Kana, as with English words, produces a right visual field (left hemisphere) superiority while the Kanji forms show a left visual field (right hemisphere) bias.”

Segalowitz cited as an authority for this statement:

“Sasasuma (sic: should be Sasanuma), Itoh, Mori & Kobayashi (1977). See Segalowitz, Bebout & Lederman (1979) for further discussion on reading symbols and lateralization.”

In his bibliography at the end of the book, Segalowitz cited

1984 A Distant Mirror, The Calamitous 14th Century, by Barbara W. Tuchman, Alfred A. Knopf, New York. This very interesting book establishes that the fourteenth century was, in large part, a morally and culturally degenerate period.

1985 Evolution, Theory in Crisis, by Michael Denton, M. D., Adler and Adler, Publishers, Bethesda, Maryland, and Burnett Books, Ltd., The Hutchinson Publishing Group, Great Britain. Dr. Denton’s painstakingly, lengthy scientific examination of many categories of evidence on accidental evolution makes it clear that Darwin’s theory of evolution, like the famed “emperor,” has no clothes. Dr. Denton, however, does not state that fact in such disrespectful terms. He is at all times calm, objective, and dispassionate.

1985 Back to Basics Reform Or... Skinnerian International Curriculum? by Charlotte T. Iserbyt, Published by The Barbara M. Morris Report, Upland, California. This carefully researched book concerns the current activists’ program for controlling education, which obviously includes the control of reading instruction.

1985 and Before (Publishing date unknown) “Webster’s Third New International Dictionary, ‘the definitive Merriam-Webster Unabridged Dictionary of the English Language.’ Has over 460,000 entries, 3,000 pictorial illustrations, 1,000 synonym articles...” Advertisement in The Fall Book 1985 of The Horchow Collection, Dallas, Texas. This is confirmation of the fact that the English language has about a half million words. That fact should be contrasted to the fact that post-1930 basal readers deliberately used only a few thousand of the highest-frequency words out of that half million, thus grossly hobbling
the normal language development of children, and probably their brain development as well in the language areas, since the brains of children from five to ten or eleven years of age or so are still in development.

As cited earlier in a footnote in this history, a girl who was raised without any meaningful contact with language until about the age of twelve later had very poor language development. Furthermore, what little language she eventually acquired was localized not in the left, language area of the brain that is normal for most right-handed people, but in the right brain. Lacking exposure to normal language in the critical period before twelve, her brain development had apparently become permanently hobbled, since later exposure to language could not make up for that earlier deprivation. The analogy appears obvious to the harm that must result when children under twelve are exposed only to rigidly controlled, very small vocabularies and grossly simplified syntax in school textbooks and in the “literature” normally published for them.

Only about 3,000 of the highest frequency words compose about 98 per cent of almost any discourse. Words from the remaining half-million or so words in English normally compose the remaining two percent of any untreated, natural discourse. However, when written material is artificially simplified in the deliberate attempt to remove that two percent of low-frequency words, the harm that is being done to vocabulary development is hidden. It is usually not even suspected. Such vocabulary control is the real reason for the drop in test scores at the high school and college levels.

1985 Early American Textbooks 1775-1900, A Catalog of the titles held by the Educational Research Library, U. S. Department of Education, Washington, D. C. This catalog is only a sampling of the titles in the library. More reading instruction materials are available in the Educational Research Library than appear in this Catalog. That library’s remarkable collection of rare nineteenth and early twentieth century textbooks has been woefully neglected and underfunded by the counter-productive U. S. Department of Education. In my opinion, for the sake of posterity, the Department of Education textbook collection containing so many important books should immediately be transferred to the Library of Congress where it will be relatively free from the counter-productive influence of bureaucrats who have their own axes to grind.

The department had an earlier publication in 1976 entitled Fifteenth to Eighteenth Century Rare Books on Education, A Catalog of the Titles Held by the Educational Research Library, National Institute of Education, Washington, D. C. It is almost useless as a source for texts on the teaching of reading.

1986 The Great American Con Game, by Barbara M. Morris, Published by The Barbara M. Morris Report, Upland, California. This disturbing book elaborates on the original work, listed under 1985, by Mrs. Iserbyt.

1986 William Bathe, S. J., 1564-1614, A Pioneer in Linguistics, by Dr. Sean P. O’Mathuna: Philadelphia and Amsterdam, John Benjamin’s. Dr. O’Mathuna stated that Johann Amos Comenius (1592-1670) had sincerely praised the work of William Bathe and credited it as the source for the method he used to teach Latin in his 1657 book, Orbis Sensualium Pictus. William Bathe, an Irish Jesuit, wrote Ianua Linguarum in Spain in 1611. As Dr. O’Mathuna established, Father Bathe’s method for teaching a language with its heavy dependence on teaching in syntactical wholes instead of disjointed words had been used in Bathe’s Irish family in the sixteenth century.
An article from about 1922, which was part of a collated volume I saw in the New York Public Library but unfortunately did not record, referred to a folk method the author had seen in use in rural western Ireland for learning Gaelic by memorizing sentences in Gaelic along with the same sentences in English. There is a striking resemblance to Bathe’s method and to Comenius who copied Bathe.

The probability is that the original source for Comenius’ method for learning a language which he adopted from Bathe, the comparing of such whole sample “meaning-bearing” sentences, is very ancient in Ireland. It is conceivable that it could have originated in the learning of Latin texts by Gaelic-speaking students as long ago as the sixth century and was the method by which the Irish monks had become so competently bilingual. Gaelic-speaking children could not at that time, learning Latin from written texts, have concentrated very much on isolated “words” because words were not separated in texts, and I have seen no reference to the early existence of a true Gaelic/Latin dictionary. As Michael Herrin discussed in his edition of Hisperica Famina, glossaries of the rarer and more difficult Latin words were eventually available, but they would have been for the use of advanced students. Therefore, perhaps it is only natural that a connected text, the Hisperica Famina, was apparently used to teach Latin in that period when ordinary texts showed no word separations. It may well have seemed more normal at that time to learn new words from connected texts instead of word lists.

It is known that in the ancient world learners were taught to separate written texts into syllables, not words. It appears probable that, in language, syllables generate syntax, which only then generates words. Dr. Mathuna pointed out that Bathe’s method did not rely over much on either the vocabulary/grammar approach, or on the “immersion” approach, but was a blend of both. Very probably, what might be called Bathe’s “syllable-to-syntax” method matches more correctly the natural flow of language, which would explain why it was so very successful.

Dr. Mathuna uncovered another fascinating point. In the early 1600’s, Father Bathe had been concerned with studying word frequency. That is an astonishing thing to learn, since it has been uniformly assumed that word-frequency studies are of far more recent date.

1987 Preventing Reading Failure, an Examination of the Myths of Reading Instruction, by Patrick Groff, Ph. D., San Diego State University, National Book Company, A Division of Educational Research Associates, Portland, Oregon. In addition to this important book, Dr. Groff has produced a very great many other important books and articles on reading instruction, and an extremely important review of research. He is the leading American authority on the use of phonics in beginning reading.

1987 Egyptian Hieroglyphs, (particularly page 40) by W. V. Davies, University of California Press/British Museum. This text, like the one below, Cuneiform, is of major importance in understanding the history of writing. Although hieroglyphs were dominantly meaning-bearing, it was from a few of them which were sound-bearing that the alphabet was ultimately developed.

1987 Cuneiform, by C. B. F. Walker, University of California Press/British Museum. This text, like the one above, Egyptian Hieroglyphs, is of major importance in understanding the history of writing. Cuneiform was dominantly a syllabary or sound-bearing system, while hieroglyphs were dominantly meaning-bearing. Yet cuneiform died out, while the a small portion of Egyptian symbols which were sound-bearing developed into the sound-bearing alphabet. Presumably one of the reasons the alphabet survived while cuneiform did not is the fact that cuneiform could only be efficiently written on wet clay in a series of indented wedges, but the alphabet could be written easily on any surface.
Also of interest concerning cuneiform is an article on page 130 and following of the December, 1988, issue of Smithsonian, Washington, D. C., entitled, “Deciphering the Way We Were.... Sumerian, the first written language, is getting its first dictionary as scholars probe life in 3000 B. C.”

“...the lost kingdom of Ebla, missing for the past 4,500 years. Located in northwestern Syria, it has been excavated since 1964 by a team of Italian archaeologists. The discovery: Ebla’s royal archive, nearly 20,000 clay tablets written in two languages, one a hitherto unknown Semitic dialect,... a record fleshing out the skeletons of a long-lost civilization, a vast commercial and cultural empire of a quarter of a million people rivaling the empires of Egypt and Mesopotamia. The clay rectangles outline diplomatic affairs; sophisticated trade agreements in textiles; laws; and administrative orders. Here are incised hymns, incantations, and school exercises. But even more important than the astonishing detail of the workaday world of the Near East of forty-five centuries past are the highly controversial documentations of previously unsubstantiated accounts of some of the names and places mentioned in the Bible - including Sodom, Gomorrah, and Jerusalem - on the clay tablets, called ‘Urusalima’.”

The apparently totally independent (?) development of the Chinese meaning-bearing characters is discussed in many published sources. The Japanese system (consisting of the meaning-bearing Kanji symbols and the syllabic sound-bearing Kana symbols, both of which developed from Chinese characters) is also covered in published sources. So are many other variant writing systems which have developed from the alphabet and which are in use today. However, concerning the general history of writing systems, only very recently has some success been achieved in deciphering ancient Mayan Mexican writing. It also has been found to be heavily syllabic, as reported in the article, “Linguists Solve Riddles of Ancient Mayan Language,” in the New York Times on April 4, 1989, page C-1. From the discussion in that article, it appears likely that the Mayan writing was a totally independent development, unconnected to either the Chinese or to the Egyptian/Near East sources.

1988 The New Big Book of Home Learning, The Basic Guide to Everything Educational for You & Your Children, (Revised Edition), by Mary Pride, Crossway Books, A Division of Good News Publishers, Westchester, Illinois. This is a remarkable encyclopedia of presently available educational materials, listing and describing many fine “sound”-oriented reading programs. Mrs. Pride has written a second volume concerning supplementary materials in all subjects. She has an accurate eye in evaluating materials, including worthwhile “open-classroom” types of manipulative materials for children in mathematics and science.

Circa 1989 - Miller Word Identification Assessment (MWIA) by Edward Miller, published by The Literacy Council, Charles M. Richardson, Chairman, P. O. Box 2845, Huntington Station, New York, 11746. Mr. Miller has constructed two lists of test words to be read orally, and timed. One consists of the high-frequency words normally taught as sight-words in “meaning” instruction first-grade programs, reportedly using the Dolch list of 220 words. The other list consists of phonically regular words which are not on the Dolch list. In comparing the accuracy and speed scores that children receive on each list, Mr.
Miller found that a profile commonly shows up, demonstrating whether a child is reading with a “meaning” conditioned reflex or a “sound” conditioned reflex, or a mixture of both.

As has been discussed at length in this history, I found such a consistent profile of “sound” or “meaning” reflexes (or mixtures of them) when comparing the various types of scores on my oral reading test results from America and Europe in 1977 and 1978. That statistical profile clearly demonstrated the existence of two different types of readers, or mixtures of the types. Also as discussed in this history, I later discovered in December, 1980, that my 1978 “discovery” was not new but had been observed by Oskar Messmer in Germany in 1903, in his tests of accuracy in reading briefly-exposed print. Messmer named the “meaning” readers the “subjective” type, and the “sound” readers the “objective” type. Mr. Miller’s easily administered and uncomplicated tests are the first and only tests that have ever been devised to identify those reading types easily (“subjective” or “objective” or mixtures of the types).

Charles M. Richardson reported on some of Mr. Miller’s test results in Mr. Richardson’s May, 1993, and September, 1993, newsletters, “TLC, The Literacy Council,” P. O. Box 2845, Huntington Station, New York, 11746. Mr. Richardson also gave Mr. Miller’s tests to Long Island high school seniors, who had begun school with the standard basal-reader, sight-word approach in first grade. What was particularly disturbing (but not surprising) from the scores that Mr. Richardson obtained from those high school seniors was that they demonstrated that the “meaning” reflex persisted even at the level of the senior year of high school. The seniors also showed a relative weakness in their ability to sound out unknown words. According to Mr. Richardson, an even more startling finding was that the error count on the Miller word list correlated strongly and negatively with the students’ verbal SAT scores (r = -0.61).

1989 Illiteracy: An Incurable Disease or Education Malpractice? U. S. Senate Republican Policy Committee, William L. Armstrong, Chairman. This illuminating material was prepared by Robert W. Sweet, Jr., at that time an associate of Senator Armstrong and later the head of the National Right to Read Foundation, P. O. Box 490, The Plains, Virginia, 20198. Mr. Sweet has worked for many years in the promotion of phonics in beginning reading instruction.

1990 Beginning to Read: Thinking and Learning About Print, A Summary, Prepared by Steven A. Stahl, Jean Osborn, and Fran Lehr, Center for the Study of Reading, the Reading Research and Education Center, University of Illinois at Urbana-Champaign. This is a summary for more popular use of Marilyn Jager Adams’ much larger important book published by MIT Press, reporting on much research in the field.

1990 “Restoring Volumes Bound for Ruin,” by Cathryn Donohoe, in Insight, April 2, 1990. It concerns the discovery in the binding of two tattered 16th century medical texts, bound in a single vellum cover, a fragment from about 625 A. D. from Rufinus’s Latin translation of Eusebius of Caesarea’s fourth century ‘Ecclesiastical History.’ The quotation in Part 2 is reprinted with permission of Insight. Copyright 1990, News World Communications, Inc. All rights reserved.

1990 “Exhibit Lifts the Veil of Obscurity,” Insight October 1, 1990, page 62. This article on an exhibit of the paintings of the artist Joseph Wright mentions in passing two instances of mindlessly inhuman brutality to animals by members of the usually highly praised Lunar Society and Royal Society. The two hideous “experiments” received no apparent opposition from members. One “experiment” was the cutting open of a conscious dog’s spine and performing experiments on it, done by members of the Royal Society (including Samuel Pepys) in the seventeenth century. The other was the killing of a pigeon by creating a vacuum around it, by pumping out all of the air in the bell jar in which it had been placed. That “experiment” was done before members of the Lunar Society in the eighteenth century. The lack of opposition and even active participation suggests the “intellectual” members witnessing and performing
those “experiments” were themselves inhuman monsters. The quoted portions in Part 4 of the article on the Wright paintings exhibit have been reprinted with permission of *Insight*. Copyright 1990, News World Communications, Inc. All rights reserved.

1990 *Life in a Medieval Village*, by Frances and Joseph Gies, Harper and Row, Publishers, New York. This is a very worthwhile book, a small portion of which has been quoted in this history.

1991 *The New York Times*, Obituary of June 19, 1991, “Zerna Sharp, 91, Dies in Indiana; Originated ‘Dick and Jane’ Texts, by Joseph B. Treaster.” Whoever gave Treaster his information certainly left out a vast amount of background information, without which his article title, if read in such isolation, was simply wrong. So was the title to the article in the Chicago Tribune, the next day, June 10, 1981, in the Obituaries section:

“Mother of ‘Dick and Jane’ books, Zerna Sharp, dies at 91.”

The names of the characters, and the so-called “story line” may have been Sharp’s contribution. But the characters, “Dick and Jane,” were not what made that series so different from earlier ones. What made it so different were the following facts:

1. It used a rigidly controlled high-frequency vocabulary of about two thousand words through the first three grades, those highest frequency words having only been identified by Thorndike by 1919 (and published in 1921). Before the advent of Thorndike’s list, only the thousand highest frequency words had been identified. Yet, in order to construct rigidly controlled vocabulary books of the very highest frequency words through the first three grades, about two thousand of those very highest frequency words had to be identified. Those approximately two-thousand words would provide a sufficiently large matrix for future context guessing of unknown words in the upper grades and throughout life. Thorndike’s 1934 article, listed in this appendix, specifically stated that about two thousand words would have to be learned as sight words before the beginning of fourth grade. (Yet Thorndike said he was deliberately omitting from that article any mention of the teaching of reading before fourth grade!)

2. The Dick and Jane series relied on a rigidly-controlled repetition of new words so as to fix them in memory. The dreary work of constructing “stories” which could provide that mathematically precise word repetition was the work of Sharp and the rest of the writing staff, who were apparently under her direction. The content of such stories and the names of their characters were of absolutely no importance for the “reading recipe” being used. The characters might just as well have been named Mutt and Jeff, and the stories might just as well have taken place in fairyland, instead of in America’s back yards.

3. The Dick and Jane series outlawed real (but supplementary) phonic drill, and in its place used the deaf-mute-method of so-called “intrinsic phonics,” figuring out unknown words from the context and fixing those unknown words in memory by comparing their parts to the parts of previously memorized sight words. That deaf-mute method requires no use of “sound” (real phonics) whatsoever.

Those three points were obviously the recipe given to the drudges writing the silly “stories” in the 1930 Scott, Foresman series. That recipe came from William Scott Gray, acknowledged as the senior author on that series, and his very own description of its use can be found in the series’ teacher’s guides of 1930, which he personally wrote. It was not the so-called story-line, nor the names of the characters, that made that series important. It was the deaf-mute-method “meaning” recipe that Gray gave to the writers of those stories, over whom Sharp was the apparent manager.
Gray had been Thorndike’s graduate student (and research assistant) in 1913-1914, at which time Thorndike had already been working for two or three years on his massive word counts, to provide the data for his list of the 10,000 commonest words, finally published in 1921. It was only after that word-count was published that it was possible to write second, third, and higher grade books with sufficiently controlled high-frequency vocabulary. (Thorndike’s graduate student about 1916, Arthur Irving Gates, wrote the other initial deaf-mute-method series, the Macmillan, which began to appear in 1930, and it also used the literary device of a little boy and a little girl, with its “stories” taking place at home and in the neighborhood. Therefore, there was nothing very original about the Dick and Jane “story” approach, since it is highly unlikely that Arthur Irving Gates plagiarized Zerna Sharp at the time that he had the parallel Macmillan sight-word series written by his own corps of drudges.)

The Chicago article continued:

“Private services for Verna Sharp, 91, mother of the ‘Dick and Jane’ primary readers, will be in Michigantown, Ind. Miss Sharp died Wednesday in a Frankfort, Ind., retirement home.

“For 30 years [sic], Miss Sharp worked for Scott, Foresman & Co., Glenview publishers who produced the ‘Dick and Jane’ books. There, she headed an editorial staff, wrote much of the text [sic], and commissioned the artwork for the books. She believed that the art was most important to the books and that it ‘carried’ the stories. But the repetitive action words - ‘Look, look!’ and ‘Run, run!’ - that made the books famous were her own, taken from her observations of youngsters on the Chicago beach between 74th and 75th streets, where she sunned and exercised in the 1920’s.

“Miss Sharp also drew heavily for her texts on the behavior of children in primary schools in LaPorte, Ind., where she once was a schoolteacher and principal....”

The article said that in 1964 she had retired from Scott, Foresman, and had gone to live in California, but had returned in the 1970’s, and that she was survived by Rush B. Sharp of Hamilton, Ohio, her brother.

The obituary in The New York Times on June 19, 1981, was more accurate (although not accurate enough) and included more information: The Times article said that Verna Sharp had never married and spoke of Dick and Jane as “my children. She had been a traveling reading consultant for Scott, Foresman when she came up with the idea of Dick and Jane, and the idea of their repetitive vocabulary. Before that, she had taught first grade for more than ten years, and had later been an elementary school principal.

The Times article quoted her nephew, Robert L. Sharp, as saying, “She used to go down and sit on the beach on the South Side of Chicago and listen to the kids playing. She noticed them saying, ‘Look, look,’ instead [of] one word, ‘Look.’ That’s how I understand the idea for the books came about.”

The article in the Times reported that she had not, herself, actually written the books but had worked with others, including an illustrator, Eleanor B. Campbell, whose pictures had demonstrated the so-called story line. The Times article gave the formula (obviously coming from William S. Gray) that Verna Sharp’s group used in the writing of the “stories.” No more than five new words were to be used in any of those so-called “stories,” and not more than one new word was to be used on any page.

However, it is obvious that Verna Sharp really believed in what she was doing, and that is very pathetic. She said, according to the Times article:
“There’s nothing these children do that a child couldn’t remember having done themselves.... They made the books part of themselves. We made reading easy for them and encouraged them to read more.”

In response to the criticism that Jane was subordinate to Dick, playing the stereotyped role for girls, Verna Sharp is reported to have answered:

‘It never bothered the children. That’s all an adult’s viewpoint.’

The Times article reported that Verna Sharp was born on August 12, 1889, the oldest of five children. Her father owned a general store in Hillsburg, Ind. Although she attended a Marion, Indiana, teachers college, she never earned a degree there. The Times article reported that, in addition to her brother, she also had two nephews and three nieces at the time of her death.

Despite the internal inconsistencies (such as Sharp’s having worked at Scott, Foresman for only 30 years before 1964, which would mean only since 1934, when the finished ‘Dick and Jane’ readers were actually put on the market in 1930), the articles are still informative. Yet, if the articles were read out of context by someone with no background in reading instruction history, they would be very misleading. In no meaningful sense can Zerna Sharp be called the “mother” of the ‘Dick and Jane’ readers even though she apparently supervised the staff actually putting them together, tailoring them to use only a handful of words in the “stories” and providing the monotonous repetition required by the deaf-mute method. She may also have suggested the two main characters, “Dick and Jane,” who actually did so very little in the vocabulary-impoverished so-called “stories.” Yet The Times article made it clear that Sharp had not, herself, been involved in the construction of those word-counting, dismally dull “stories.” Instead, the books themselves clearly identify W. S. Gray as the principal author since Gray was the one who concocted the recipe for the use of a specific limited number of sight words, and a very specific number of repetitions. Sharp and her staff were simply following Gray’s directions. Gray’s 1930 guide to the “Dick and Jane” readers certainly makes it clear that the rigid vocabulary control and the rigid, programmed numbers of word repetitions were his own contributions.

Less rigidly controlled vocabulary than Gray proposed had been in use in American sight-word primary texts since 1826 (not 1926), but upper-grade texts had always had to rely on “supplemental phonics,” since not enough high-frequency words could be identified to use as a guessing matrix above the primer levels. Gray’s use of Thorndike’s highly scientific list of the highest frequency words which provided that previously-unavailable guessing matrix was indeed new. So was Gray’s dismissal of any kind of “supplemental phonics.” Gray used instead Gates’ so-called “intrinsic phonics” (and so did Gates use it, and Gates also used Thorndike’s list, in the Macmillan series which began to come out in 1930). Children taught in Gray’s and Gates’s new deaf-mute-method way would be permanently inoculated against ever using any real “sound” in their reading. Instead they would have to rely on sight-words, and on context-guessing from sight-word parts, for the rest of their lives.

Probably Sharp’s only truly original contribution was her proposal that sight-word repetition did not have to be spaced throughout connected texts, but could come instead in unbroken salvos: “Look, look!” and “Run, run!” That made it far easier for her staff to construct texts which would meet Gray’s demand for specific numbers of sight-word repetitions, in order to “fix” those sight-words in the children’s memories. Sight words no longer had to be separated in “meaningful” text but instead could come in such explosive salvos: “Look, look!,” Run, run.” “Dick, Dick,” and so on, ad nauseum.

By reporting on Sharp’s Indiana background, both articles seem to suggest the strong possibility that Sharp had entered Scott, Foresman through the influence of W. S. Gray, since Gray was very active giving oral tests and (undoubtedly influencing reading instruction) in the state of Indiana during the
period in which Sharp was a teacher and principal in La Porte, Indiana. See the 1917 and 1919 entries in this appendix on Gray’s tests of oral reading in Indiana. Furthermore, W. N. Hailmann, associated since about 1880 or so with the founding of kindergartens in America, had been located in La Porte, Indiana. That was only about fifty miles or so from Chicago, where Gray was located, and La Porte was very likely a focal point after Hailmann’s day for continuing education “improvements” in the primary grades, like those that Gray was probably already promoting by 1917. Besides Hailmann’s influence, Indiana already had some very “prestigious” education history, and not just the fact that the Owens’ socialist experiment of 1826 and later had taken place in New Harmony, Indiana. See the discussion in Part 6 and Appendix C on the Indiana State Series of reading books, which series of books were so obviously connected with education activists from 1883 through about the 1890’s.

There was nothing in Gray’s background that would have fitted him for dealing with how to write controlled vocabulary readers for first, second and third graders. Such readers had been the norm ever since 1826 (not 1926). However, those earlier readers did not have Thorndike’s newly-identified two-thousand or so highest-frequency words which would make it possible to perform highly accurate context-guessing in the fourth-grade and higher. It is highly likely that Gray was looking around for a likely first-grade teacher about 1921 or so who could help him with the nitty-gritty of writing sight-word materials, but using Thorndike’s newly-identified highest-frequency words.

In March, 1919, Gray published an article in the Elementary School Journal on reading in Indianapolis which revealed (a) that in Indianapolis they used the sight-word method for first grade, and (b) that in Indianapolis the children could not read. But Gray glossed over that embarrassing fact lightly, citing the need for “supplementary phonics.” (Gates’ “intrinsic phonics” only entered the literature in 1925). Quotations from page 511 of Gray’s March, 1919 article, showed up again in a December, 1921, Elementary School Journal article by Chester Parker, and pages 160, 163 and 164 of Parker’s article confirm the poor performance in Indianapolis and the fact that Gray, himself, sometimes gave the oral tests and met with and spoke with principals and teachers in Indiana. Therefore, it is certain that Gray knew some teachers and principals in Indiana by 1919. By 1919 Indiana produced the “right” kind of teachers and principals, those who believed in sight words and silent reading, and it is certain that Gray met at least some of them personally. The bibliography on Gray’s 1925 summary of research shows that Gray was involved in testing in 16 cities in Indiana about 1917. One of those 16 Indiana cities in which Gray tested may well have been La Porte, Indiana (already well known because of Hailmann’s work there with kindergartens), in which city Zerna Sharp was employed as a first-grade teacher and principal. If La Porte had been one of those 16 cities in which Gray gave tests about 1917, that would strongly suggest that Gray may have met her at the time of the testing and remembered her by the early 1920’s as an experienced first-grade teacher who believed in “sight words” and “controlled vocabulary,” the kind who would know how to help him in writing the deathless prose of what eventually became the Dick and Jane readers.

Reference to Japanese reading achievement is made in the text, How to Increase Reading Ability, by Albert J. Harris and Edward R. Sipay, David McKay Company, Inc., New York (1940, revised editions to 1975 and probably later). On page 14, Makita was reported to have estimated in 1968 that the per cent of reading disability in Japan was 1%. The study being cited was “The Rarity of Reading Disability in Japanese Children,” by Kiyoshi Makita, American Journal of Orthopsychiatry, p. 599-614, July, 1968.
Concerning it, the comment was made:

“Makita attributed the low rate of disability in Japan to the nature of Japanese orthography and concluded that reading disability is more of a philological than a neuropsychiatric problem.”

In a footnote on the same page, this appeared:

“At the International Reading Congress in Vienna in August, 1974, Makita repeated his low estimate and was supported by T. Sakamoto. Both attribute this low incidence to the ease of learning kana, the Japanese syllable alphabet, and in part to almost universal parental teaching before children enter school. The kana writing system is apparently much easier to learn than the ideographs used in both Chinese and Japanese.”

The idiographs are the Kanji characters, the learning of which is spread over a child’s school years. Similar comments concerning the high level of Japanese literacy are often encountered elsewhere. Therefore, it is reasonable to assume that Japanese people must have little trouble with decoding, which makes Stevenson’s comments to the contrary, below, concerning reading very puzzling, indeed.

Stevenson made this statement concerning mathematics:

“In a recent study comparing the performance in mathematics of children in Sendai, Japan, with that of children in Minneapolis, the scores of Japanese children exceeded those of the American children in kindergarten, and the difference persisted through first and fifth grades. In fact, among the 20 fifth-grade classrooms tested in each city, the average score of the lowest-scoring Japanese classroom was above that of the highest-scoring American classroom. (Stevenson, Lee, & Stigler, 1986.)”

John Saxon’s highly successful American algebra program was reported on some time ago in an issue of National Review. That highly successful algebra program is enigmatically rejected by the American education “establishment.” Yet it produces the same kind of results in America on algebra as the Sendai/Minneapolis study does on elementary mathematics. The bottom achievers in American high school classes using Saxon’s algebra program outscore the top achievers in American high schools using the “experts’” algebra programs. Therefore, it is reasonable to assume that the difference between the Japanese and American classes on elementary mathematics can probably be explained by the fact that the Japanese are using elementary mathematics texts as competent as Saxon’s algebra texts, while the American government schools are using elementary mathematics programs produced by the same kind of “experts” as those who rejected Saxon’s algebra materials.

Stevenson continued:

“Japanese children fare less well in cross-national studies of reading. When children were given tests of decoding and comprehension in the Stevenson, Lee, and Stigler (1986) study, the relative status of children in the two countries was reversed. The reading scores of the American children exceeded those of the Japanese children. Rather than reflecting less interest in reading or poorer instruction, it seems likely that the lower scores of the Japanese children stemmed from the difficulty of learning to read Japanese. Learning to read Japanese appears to be more difficult than learning to read English.”

That is obviously not the case, since the Japanese end with 99% literacy, and we do not, and since Makita flatly stated that learning Japanese was easier, not harder. What the reading study did uncover was not reading disability in the Japanese children but the presence of automaticity in reading (decoding),
which is the result of correct automatic conditioned reflexes. In contrast, because of misinstruction in reading, the American children had faulty conditioned reading reflexes. They were incapable of reading automatically, and could read only consciously, or “psycholinguistically.” Incapable of reading automatically, such disabled children are incapable of letting their attention wander and may receive slightly higher averaged “reading comprehension” scores than properly taught children, if the properly taught children permit their voluntary attention to wander while they are reading. Yet, if the Japanese and American “comprehension” scores had been individually graphed instead of lumped into averages, they would have shown predictable profiles. The Japanese first- to fifth-grade scores would have gone from very poor to superb, reflecting the inattention of some readers who therefore scored low, but the presence of voluntary attention and superb reading comprehension in others. The faulty American scores would have fallen into that typical narrow band that demonstrates reading disabilities, higher than the worst Japanese scores, but lower than the best. That narrow band of reading comprehension scores results from forced but divided attention between the meaning of the text and the effort to decode the print.

My 1977-1978 research discovered the fact that a narrow band of reading comprehension scores is a statistical function of lower accuracy scores in decoding print. That narrow “reading comprehension” band indicates the presence of reading disabilities.

Such disabilities are certainly induced in American children attending government schools, but historically they have not been induced in Japanese children. However, that may be changing, since Japanese “experts” are reportedly now urging that children in nursery school and kindergarten make a heavy study of the difficult Kanji “meaning” characters that were previously only taught, very gradually, to much older children. Japanese “experts” are also urging that three-year olds be taught the Kana characters, but the Bender-Gestalt norms show that average three-year-olds cannot yet distinguish between geometric shapes. Both unfortunate practices should induce reading disabilities in many immature Japanese children.

1991 Educating for the New World Order, by B. K. Eakman, Halcyon House, Portland, Oregon. Mrs. Iserbyt’s book, listed above, was the original work on this subject, and Barbara Morris’s book, above, contributed further to it. Mrs. Eakman elaborated on the subject with very useful current information, which is largely based on the remarkable work of Anita Hoge in Pennsylvania.

1993 “Phonicsphobia,” a paper by Dr. Joyce Morris, presented on September 18, 1993, at the “Literacy 2000” conference at Roehampton College in England. The conference was reportedly organized by Dr. Beve Hornsby and Longman publishers. Excerpts have been quoted at length in this history in the section concerning Great Britain. Dr. Morris’s comments are greatly illuminating concerning the history of the teaching of reading in England from the late 1930’s until 1993. Since she was a young beginning teacher during World War II (about 1943?), but had received no training from her college tutors in phonics, it appears evident that the teaching of phonics must have been “officially” gone in England by the late 1930’s. The theme of Dr. Morris’s paper was the existence of intense and irrational opposition to the teaching of phonics, which she labeled, “phonicsphobia.”

Dr. Jeanne Chall in her 1967 landmark book, Learning to Read: The Great Debate (1967) had referred specifically to some of the work of the well-known psychologist from England, Dr. Joyce Morris. Dr. Morris is highly qualified to comment on developments in England in the teaching of reading.

1768
1993 Reading Reform Foundation Newsletter published by Mona McNee in England, reported in No. 22, December, 1993, and in other material, on work by Professor Simon Garrod and a team of researchers at ESRC’s Human Communication Research Center in Glasgow, Scotland. Using an electronic eye-tracker in studying the reading of over 300 subjects, they found that the size of the “text window” for human beings is typically only 18 characters, even for speed readers. Since the human eye is also limited physiologically by the speed with which it can move from one fixation (of 18 characters) to the next, that Scottish finding obviously establishes that so-called “speed reading” of whole pages of print at rates of 1,000 to 2,000 words a minute cannot be true reading but is only scanning. Intelligent scanning, which has its proper place, is the acquired ability to pick up snatches of words and to use those snatches to guess the missing and far greater portion of a page. Professor Garrod’s research seems to establish that such scanning is a perilous activity if a scanner arrogantly assumes that he has really read the material.

Concerning basic literacy, this 150-page book is totally useless statistical fog. It does present some interesting statistics concerning some behaviors of groups in American society, based on levels achieved in tests of “reading comprehension.” Yet what was being tested in the test population was its available functioning intelligence, not its “literacy.” An inexpensive personal computer which has a speaker and Firstbyt “Smoothtalker” software can pronounce typed material aloud, scoring at almost 100% on basic literacy, but total zero on “reading comprehension.” In contrast, as Binet noted almost ninety years ago in France, as quoted by Simon in 1924, some children who read with enormous errors and difficulty nevertheless can get the general idea of newspaper articles. Therefore, the two subjects, basic literacy and available functioning intelligence, absolutely should not be mixed together on tests, or the test results are meaningless, just as meaningless as talking of the “reading comprehension” of Smoothtalker software. This 1993 massive survey would rate Binet’s disabled readers fairly high on their literacy scale, when the scale on which those children actually did rate high about ninety years ago was Binet’s scale of intelligence quotients. After all, Binet used those reading comprehension tests as part of his famous invention, the intelligence test, not to test “literacy”!

The 1993 so-called “literacy” tests are hopelessly flawed, their results being dependent on many factors besides intelligence such as education and cultural background. Results were only partially dependent on some degree of reading ability, and it is impossible to separate that basic literacy strand from the other strands. Therefore, to call this a “literacy survey” is nonsense, despite the elaborate rationale which is presented for claiming it was necessary to throw all such unrelated factors into one big testing pot.

This terribly flawed study should be contrasted to the more usable Functional Literacy Study based on tests given in 1971, 1974, and 1975. That study was funded by the Government’s Right to Read program, and carried out by the National Assessment of Educational Progress, a project of the Education Commission of the States, Denver, Colorado. The 1970’s tests were given nationwide to 17-year olds, high-school seniors. In contrast to the vague 1993 report, the report of that 1970’s study described all the individual questions and gave the percentage of accurate answers to each question. The simple 1970’s questions make it far easier to judge the results on the basic literacy strand, though, of course, intelligence is certainly also involved in answers given. However, the fact that the test was given to high school seniors suggests that almost all subjects should have been of average or better intelligence. Since the questions were not difficult, the literacy strand became the dominant one, not the comprehension strand.
The most difficult item on the 1970’s test and the one with the lowest score concerned finding the amount of coverage for bodily injury liability on a standard insurance form. Only 18% of high school seniors could do that. On a book-club membership form, only 44% could recognize that no money had to be sent in, and that the club would bill them. On a traffic ticket, only an average of 46 per cent could find the date by which the fine had to be paid. On a report card, an average of 75% of high school seniors could identify the subject in which improvement was shown, but 25% could not. Tables in the back of that study showed some questions on which 90.6, 94.7 and 94.1% answered correctly, so the seniors were obviously trying to score correctly. The higher scores came on questions like the one described as follows:

“Picture of four doors that might be in a school, labeled ‘Principal,’ ‘Nurse,’ ‘Cafeteria,’ ‘Library.’ Door where you might go for lunch?”

The 1970’s scores therefore ranged from the most difficult one, on which only 18% of seniors could find the amount of coverage for bodily injury liability on a standard insurance form, to middling difficulty, when only 46% could find the date on a traffic ticket by which the fine was due, to 75% who could find the subject in which improvement was shown on a report card, and finally to the easiest ones, 94% or so. The easiest questions were like the one testing whether the seniors could read or psycholinguistically guess the word, “lunch,” in the given question, and then match it (perhaps also by “psycholinguistic guessing” from initial consonant sounds) to the correct one of four pictured doors carrying word labels.

Only 55.6% of high school seniors answered 90% of these exceedingly simple questions correctly, which meant that 44.4% failed functional literacy (and therefore basic literacy) by any reasonable standard. That result contrasts to the 1993 study, on which a mixed and academically lower population is actually presumed to have performed far better, by the vaguely defined levels of the 1993 study. The 1993 study does not present percentages on right and wrong answers to specific questions, like the 1970’s study, but only vague, generalized “levels” of difficulty with a sample question for each. It shows statistically-arrived-at “scales” of achievement, instead of clear percentages of right and wrong answers which permit a reader to construct his own “scale” of achievement. The 1993 study breaks scores down by a very great number of sub-groups, which obviously represented great overlapping, presumed to be representative of American types. The earlier test had a specific test population: 17-year old American government school seniors, the vast majority of whom spoke English and were free of physical impairments. Yet the 1993 study instead used many mixed populations, and included in each age, geographical or other sub-group unspecified numbers of subjects who were hearing impaired, visually impaired, or spoke a foreign language. It did specify those overall numbers of disabled persons in the total test population but not in each sub-group. The foreign-language group obviously must have skewed results for some age and geographical groups, just as the visually impaired obviously skewed results for upper-age groups.

Furthermore, the study specifically stated it took more samples from Blacks and Hispanics (see pages 5 and 6) and they are known to have more severe literacy problems than other groups. That should have lowered results, and yet the results were astonishingly high, particularly in comparison to the 1970’s study. The publicity that appeared about September, 1993, when the study came out, stated that it reported great literacy disabilities, but that is simply not the case when the study itself is examined. Such publicity, however, may well have deflected the criticism this study so clearly deserves for its badly inflated conclusions concerning basic literacy.

The statistics implied instead that all groups (and therefore most in them) possessed the ability to read very simple material. Yet a simple 90-word-paragraph oral-reading-accuracy test, like William Scott Gray’s 1914 paragraphs, could have been easily administered in two minutes to each subject, considering
the nature of the study, in which subjects were interviewed in their homes. Such an oral test would have shown clear statistical results on each subject’s ability to read words, exactly as it is possible to judge the accuracy of Firstbyt Smoothtalker computer software, and would have shown the falsehood of the general conclusions of the 1993 “literacy” study that almost no one had trouble with reading (and therefore pronouncing) simple material.

WHY WAS SUCH AN ORAL TEST NOT INCLUDED? WHY HAS IT BEEN SEVENTY YEARS SINCE THE LAST MEANINGFUL ORAL READING STUDY WAS DONE IN AMERICA, DURING WHICH TIME OUR MASSIVE BASIC LITERACY PROBLEMS HAVE APPEARED? (That seventy-year-old study was Arthur I. Gates’ “A Test of Ability in the Pronunciation of Words,” page 205-219 of Teachers College Record, Teachers College, Columbia University, New York, November, 1924.)

This 1993 foggy, statistically-laden study tells absolutely nothing about basic literacy levels, or the degree of reading disability among those people who have been trained to “guess” their way “psycholinguistically” down a page, guessing from the total context the meaning of many individual words which they actually cannot pronounce. Of course, that is the same way Binet’s disabled readers read some ninety years ago, and their ability to guess “meaning” was a function of their intelligence.

Two statements made in the 1993 report are particularly objectionable. This one was on page xviii:

“After all, the majority of adults who demonstrated limited skills described themselves as reading or writing English well, and relatively few said they get a lot of assistance from others in performing everyday literacy tasks. Perhaps these individuals are able to meet most of the literacy demands they encounter currently at work, at home, and in their communities.”

That statement discounts the necessity of doing anything about our government-school-caused basic literacy problem, and instead implicitly denies that such a basic problem exists. Concerning that wrong conclusion, see the above 1970’s score of high school seniors, demonstrating appalling literacy problems.

The second particularly objectionable statement was this on page xx:

“Historians remind us that during the last 200 hundred [sic] years, our nation’s literacy skills have increased dramatically in response to new requirements and expanded opportunities for social and economic growth. Today we are a better educated and more literate society than at any time in our history.”

That statement can be contrasted to the contemporary historical documents I have quoted all through this long history.

This hopelessly defective 1993 “study” can now be used to support the “establishment” conclusion that our education weaknesses do not concern the teaching of basic reading (decoding) but instead concern “higher-level thinking skills,” the world’s ultimate oxymoron. Thinking is carried out in that part of the brain, the higher brain mechanism, which cannot be conditioned, or “taught,” so to attempt to “teach” such “skills” is utter nonsense. With the existence of these imaginary disabilities in “higher-level thinking skills” being supported by the “data” in this so-called literacy research, the “disabilities” can then be treated with such curricular panaceas as “whole language” and “critical thinking” (i. e., brainwashing). Concerning the nature of curricula “reform,” see the book listed in the 1991 entry above, Educating for the New World Order, by B. K. Eakman, Halcyon House, Portland, Oregon.

1997 Reading Reform Foundation Newsletter published by Mona McNee in England, stated the following on page 24 of issue No. 35, April, 1997:

“In 1955 Rudolph Flesch’s book ‘Why Johnny Can’t Read’ came out.... The outrage he felt as he realised the enormous damage that had been done was clear in that book. It was a best-seller for 9 months in America, and should be read by every student teacher. In 1981 his second book, ‘Why Johhny STILL Can’t Read’ came out, but it was in conflict with a reading scheme published by his publisher, Harper, Row. Instead of being another best-seller and perhaps dislodging the ‘experts’ from their positions of influence, it sold only 30,000 copies - only seven in Britain by April 1984 when Flesch wrote to me:

“I tried to describe (the sad sequence of events) in my 1981 book “Why Johnny STILL Can’t Read,” but to no avail. Harper & Row sabotaged the book, didn’t advertise and eventually recalled it from the stores. I talked to three excellent lawyers, all of whom told me it was hopeless to sue.

“So U. S. illiteracy marches on unabated. My estimate is that some 30 million adults in this country are wholly illiterate, plus another 40 or 50 million marginally so. There are now 48% black teenagers out of work; I’m sure most of them can’t read and are therefore incapable of filling a job.

“I tried to resell my phonic exercises to another publisher, but was turned down by seven of them. Then I gave up.”

Mrs. McNee commented:

“The educationists ignored Flesch’s researches and just waited out the storm of the 1955 book, and carried on regardless.”

***************

ADDENDA

The following additional works, most of which this author has not seen and therefore not included in this lengthy annotated bibliography, were listed in the “Bibliography” to Early American Textbooks, published by the U. S. Department of Education, Washington D. C., 1985.

1892 (1907) The Essentials of Method, by Charles DeGarmo. Heath & Co., Boston. [ED.: De Garmo’s general influence has been mentioned in this history.]

1916 William Holmes McGuffey and His Readers, by Harvey C. Minnich, American Book Co., New York. This U. S. Department of Education entry is in error concerning the publication date by American Book Company, which was 1936, not 1916. As shown earlier, the first publication date for Minnich’s work was 1928, but by another publisher. Reference to Minnich’s work has been made in this history. Since the promotion of the McGuffey Myth, which is that the series was used by 8 or 9 of every 10 children in the 19th century, was only begun in 1927 with the publication of the very widely read Saturday Evening Post folksy article, “That Guy McGuffey” the error in moving Minnich’s publishing date back from 1928 to 1916 only serves to bolster the McGuffey Myth that was only invented in 1927.

1957 (Original publishing date not given) Recollections of a Lifetime, Volume II, by Samuel G. Goodrich, published by Miller, Orton and Mulligan, New York. [Ed.: Although I have not seen Goodrich’s autobiography, Goodrich and his works have been discussed in several places in this history.]

1962 The American Spelling Book, by Noah Webster (1831 edition with an Introductory Essay by Henry Steele Commager), Teachers College Press, New York. [Ed.: that 1831 edition would most likely have been based on Webster’s 1829 major revision. That was NOT Webster’s original version, and it was the 1783 original material which had been massively used up to 1826, the date the activists began to move the teaching of beginning reading from the “sound” approach to the “meaning” approach. One of those activists was Samuel Goodrich, mentioned above. By 1831, “meaning”-approach primers like Goodrich’s (written shortly afterwards, in which he belittled Webster) had taken over beginning reading instruction in America, and the use of Webster’s speller (in either the 1783 or 1829 versions) by beginning readers had almost completely ceased, except in backwoods areas. The use of the 1829 version did continue in massive use for older children, but the damage had been done to the children by then by teaching them initially to read by “meaning” instead of by “sound.” Commager’s choice of an 1831 edition of Webster’s speller, if it was the 1829 version, as appears probable, is therefore unfortunate and misleading. However, I have not seen Commager’s Introductory Essay nor his 1962 reprint.]

1964 Guardians of Tradition: American Schoolbooks of the Nineteenth Century, by Ruth Miller Elson, University of Nebraska Press, Lincoln, Nebraska.

APPENDIX F
Copies of Some Papers by Geraldine E. Rodgers Which Were Submitted to Government Entities And Which Were Never Acknowledged in Any Way

CONTENTS

Section 1.

Comments given orally at the July 19, 1989, Open Meeting on Recompetition of Regional Educational Laboratories, Office of Educational Research and Improvement (OERI), Department of Education, 555 New Jersey Avenue NW, Room 328, Washington, D. C., after which a written copy of the remarks was formally submitted. No acknowledgment of the oral remarks or of the written paper has ever been received, eleven years later.

Section 2.

Material sent to ALL members of The National Assessment Governing Board in February, 1992, along with a copy of the comments that had been made before it in orally (with a written copy also submitted) in October, 1989. Those 1989 comments were never acknowledged. In addition, a paper copy of an early draft of this book, The History of Beginning Reading, was sent to three members. This book was almost completed in draft form in February, 1992, except for most of the appendices and the section on France. Offers of computer disk copies of the 1992 draft history were given to the other members. Not a single one of the TWENTY-FOUR PEOPLE associated with The National Assessment Governing Board who were sent copies of this material has ever replied up to July, 2000, eight years later.
The primary educational problem in America is functional illiteracy. Any research which can establish its cause and its cure should get the highest priority when the Federal Government underwrites future educational research.

Yet, to judge from past history, it is most unlikely future applicants will plan effective literacy research. It is therefore the responsibility of the Federal Government to insure such research by requesting bids on specific work which clearly promises to clarify the problem.

Bids should be sought on four items which I shall describe. I ask you not to shirk your responsibility to see that tax dollars for research are spent wisely and that you request bids on all four items.

Tens of thousands of reading comprehension studies have been done since such tests first appeared about 1914. Bizarrely, only about a dozen oral reading accuracy studies have been done. Yet the worthlessness of reading comprehension tests instead of oral reading accuracy tests to test reading ability was made clear as early as 1908, when two master psychologists in France found reading comprehension to be a function of intelligence, not reading skill. Dr. Theophile Simon wrote the following in his 1924 book, “Pedagogie Experimentale,” on his work with Alfred Binet on the original intelligence tests, when children were required to show how much they comprehended of what they read orally.

“...we have observed many times this curious thing: it happens that some children read very incorrectly, so incorrectly that their reading aloud is, for those who listen, very nearly incomprehensible, and then, if one asks them what they have read, they say it almost correctly. There is therefore less correlation that one could believe possible between the understanding and the correctness of reading.”

“Almost correctly,” of course, is not good enough, but it is this “curious thing” Binet and Simon observed in Paris in 1908 which explains the current American “method” of teaching reading by psycholinguistic guessing. English has perhaps half a million words. Yet only about 300 of them compose about three-quarters of the words in simple materials. Children who know about 300 high-frequency sight words and who have been drilled in guessing from the context, as American children constantly are drilled, can give the illusion of reading and pass lower level comprehension tests, just as Binet’s subjects did. Their real reading failure will only show up on more difficult material, exactly where we are hearing that our reading problem is now, above fourth grade level.

The only thing new about teaching reading by psycholinguistic guessing is the name. The same approach appeared in the watershed readers of 1930, W. S. Gray’s Scott, Foresman “Dick and Jane” readers, and A. I. Gates’ Macmillan readers.

For the record, both Gates and Gray had been graduate students and friends of the master American psychologist, E. L. Thorndike, and associates, like Thorndike, of two other master psychologists, John Dewey and James McKeen Cattell.
The Gates-Gray readers used a context-guessing approach for unknown words, which were carefully embedded in texts of memorized sight words. They did not teach children to decode unknown new words by true phonics because the 1930 Gates-Gray reading method is actually an ancient approach used to teach deaf-mutes language. On page 17 of Gates’ 1930 book, “Interest and Ability in Reading” he indirectly admitted that connection.

“Becoming a Nation of Readers,” the Government-funded 1985 report, adopts a definition for reading on page 11 which implies that conscious attention, or guessing, is required in the identification of even a single word. The use of conscious attention in reading rules out automaticity.

Yet the highly qualified Dr. Hilde Mosse, the psychiatrist-pediatrician who wrote “The Complete Handbook of Reading Disorders” in 1982, considered the reading act to be an automatic conditioned reflex. She considered a lack of automaticity in reading to be a disability. Her landmark work is not cited in “Becoming a Nation of Readers.” Instead, this report implicitly contradicts her and implicitly denies the possibility of automaticity in reading.

Gates said in his 1925 article, “Problems in Beginning Reading - An Analysis of 21 Courses,” that heavy phonics was taught then in almost all American first grades. For reliable illiteracy data, we must compare today’s psycholinguistic reading results with results from heavy phonics before 1926.

The First Test
Gates’ word lists reported in his 1924 article, “A Test of Ability in the Pronunciation of Words,” should be retested. In mid-year 1923-24, Gates tested individually 1700 pupils of grades 1 through 6 in schools mainly in New York, New Jersey, Pennsylvania and Delaware. On Gates’ lists of progressively more difficult words, the average score at sixth grade was 95.5% and for 14 year-olds 90.9%. Children for whom the age was given were obviously left-backs, since children had to stay in school by law to those ages. Statistically speaking, 100% of the children at sixth grade or old enough to be in sixth grade pronounced over 90% of the list.

If we could obtain a score like that today, we would have no illiteracy problem. Yet the newer Gates-McKillop 1963 test results on the same word lists seem to imply we do get results like that. The Gates-McKillop median score, at the 50th percentile, is about the same as the 1924 average of over 90%. This is a classic case to prove that median and average scores are not equivalent. Very likely the 1963 score shows that only 50% of the children average now what 100% of the children averaged in 1924. Gates’ oral test must be run and marked to show the average and not the median, just as in 1923-1924, in order to get hard data on the drop in reading accuracy in grades 1 through 6.

The Second Test
The correlation between spelling accuracy and reading accuracy is very high. Leonard P. Ayres’ “A Measuring Scale for Ability in Spelling” should be retested exactly as done in 1914-1915, when he tested 70,000 children in grades 2 through 8 in 84 American cities. These new norms should be compared to the 1915 ones to show the degree of retardation. Children were normally not permitted to drop out of school in those cities before about 14 years of age or older. Ayres showed elsewhere children then were almost never more than two years below grade level. Therefore, 1915 fifth grade scores represented virtually 100% of city children in that age group, and showed clearly virtually 100% were literate, including Blacks and foreign born.

If World War I Army illiteracy statistics should be cited in an attempt to discount Ayres’ data, the unreliability of these statistics should be made clear. The 1917 program was run by American psychologists. In most Army camps, psychologists marked soldiers illiterate if they had not reached a specific grade level. It varied from camp to camp, from fourth to eighth grade. Abe Lincoln, who only
reached second grade, would have been marked illiterate by the World War I psychologists. In a minority of camps, a so-called reading test was given. Draftees who were undoubtedly nervous and distracted were scored as illiterate if they could not answer enough comprehension questions on a news article they had read. Their oral reading accuracy was not tested so the test was meaningless.

**The Third Test**

Eye regression movement means to go back to look again at print already seen. Such movements can be recorded statistically with laboratory methods, as shown in Educational Development Laboratories, Inc., “Research Information Bulletin 3, 1960”. Another kind of test called oral reading error studies has shown that, even at first grade, phonically trained first graders make far fewer regressions. They are obviously reading sound, and not going back to check meaningful conscious guesses.

Since most American schools keep a reading record on each pupil showing reading texts used from first to sixth grade, and since records follow the pupil to a new school when he moves, it should be simple to break sixth grades into two groups: those who learned with true phonics in first grade and those who learned with context guessing phony phonics plus sight words in first grade. Labeling of programs for this test as true phonics or context-guessing phony phonics should follow the guidelines in Dr. Rudolf Flesch’s carefully researched 1981 book, “Why Johnny STILL Can’t Read.” As Dr. Flesch pointed out, 85% of American first-grades use textbooks he labeled The Dismal Dozen, which teach only context-guessing phony phonics.

With sixth-graders identified on first grade methods, an eye movement study like that of Educational Development Laboratories should be carried out to compare the two methods. Fewer regressions would indicate greater automaticity, and numerous regressions a lack of automaticity.

**The Fourth Test**

Methods are available to tell if a reader is using his LEFT or his RIGHT brain memory bank to read print. See, for instance, an article by Daniel Goleman in the May 12, 1985, “New York Times Magazine” on experiments in which words were read by either one or the other side of the brain.

Again, it should be possible to arrange tests between two groups: sixth graders phonically trained in first grade, and sixth graders with context-guessing phony phonics plus sight words in first grade.

The left side of the brain is normally the language side, so phonically trained sixth graders should test like the classical aphasic patients in William James’ 1890 psychology text: capable of reading only with the left side of the brain. This should suggest true dominance and the formation of an automatic conditioned reflex.

The right side of the brain is known to be used for the reading of Chinese characters. Since sight words are taught as wholes or globally like Chinese characters, and since context-guessing phony phonics teaches partial phonics, children taught with these two associated approaches should demonstrate they are reading with both sides of the brain. Reading with both sides of the brain suggests mixed dominance with possible impairment of automaticity.

-----------------------

Please inform me if you will or will not request these four tests, and, if not, why not, so that your response will become a matter of public record. Thank you.

(Copies were distributed widely, many without cover letters.)
Section 2

The following was submitted to ALL members of The National Assessment Governing Board in February, 1992, along with a copy of comments made before it in 1989. (However, a correction has been made in the following on the title of Dr. Chall’s book, which title had been quoted incorrectly.) In addition, a paper copy of the history, which was almost completed in draft form except for most of the appendices and the section on France, was sent to three members. Offers of computer disk copies of the draft history were given to the other members.

Not a single one of the twenty-four people associated with The National Assessment Governing Board who were sent copies of this material has ever replied up July, 2000, eight years later.

THE 1992 READING ASSESSMENT:
IS IT FRAUDULENT?

Comments on the Failure of
The National Assessment Governing Board
Of The National Assessment of Educational Progress
To Report that a Consensus on
Testing Reading Achievement in 1992 Does Not Yet Exist

And on Their Misrepresentation in their December, 1989,
Public Hearings: Analysis of Comments - Final Report
That Such a Consensus Is Developing by Quoting Only the
Biases of Those Entrenched Vested Interest Groups in
Education which Many Observers Believe Are Directly Responsible
For American Functional Illiteracy,
Their Failure to Achieve a Viable Consensus
Being in Violation of Specific Legislation of
The United States Congress.

In Addition,
A Preliminary Draft Version of
A History of Reading Instruction
To Provide Necessary Background Material
To Understand the Issues at Stake

By: Geraldine E. Rodgers, B.S., M.A.
Retired Primary Grades Teacher
and Researcher in Education
Copyright 1992, Geraldine E. Rodgers
On October 11, 1989, the National Assessment Governing Board of the National Assessment of Educational Progress held a hearing in Trenton, New Jersey, requesting comments from the public on the proposed 1992 NAEP tests of reading achievement in American schools. This was in accordance with Public Law 100-297, section 6(E), which states, “Each learning area assessment shall have goal statements devised through a national consensus approach, providing for active participation of teachers, curriculum specialists, local school administrators, parents and concerned members of the general public.” Shortly afterwards, the National Assessment Governing Board held hearings in several other American cities, for the same purpose.

These hearings resulted in their issuing in December, 1989, the totally unsatisfactory Public Hearings: Analysis of Comments - Final Report, which purports to provide a summary of the views expressed by the public at these meetings but which totally omits any views which contradict the views of the vested interests in America’s education establishment. The Final Report instead tells approvingly of such things as requests for open-ended questions like those on the Michigan reading test which produced such a hornets’ nest of opposition from angry parents in Michigan.

My testing requests which I read at their October 11, 1989, hearing in Trenton are given on pages 16, 17 and 18. Yet, my requests were totally omitted from the final report on these legislatively mandated hearings, which hearings were held solely to receive such requests.

Also given, starting on page 19-1, is my February 11, 1992, copyrighted addition to my testimony, which I am now sending to the National Assessment Governing Board. It outlines the history in American schools of the massive use for hearing children of a deaf-mute reading method. Instead of teaching children to read by the sounds of the letters in words, the deaf-mute method teaches reading without the use of sound. It was used in eighteenth century France by the Abbe de L’Epee, and had been in use in Europe as long ago as the fifteenth century. Printed words were taught as soundless, meaning-bearing wholes, like symbols and pictures. After enough words were learned as pictures with which to build sentences, unknown words were inserted in such sentences, the meaning of which could be guessed from the sentence’s context. An addition to the deaf-mute method is “phony phonics,” which means to drill students to piece together the beginning consonant sounds of one known word with the ending portion of another known word to work out a third unknown word. This approach of building new words from the parts of memorized whole words was also used with deaf-mutes, to help them visually to distinguish among sight-words. Such two-step visual “phonics” which is only the pasting together of parts of known whole sight-words is used as as additional crutch, besides the meaning of the context, with which to guess an unknown printed word’s identity, out of the reader’s already existing store of spoken vocabulary. Very often, however, the only “phonics” used is the beginning sound of an unknown whole word, which is worked out by comparing it to the beginning sounds of known whole words, plus a context guess.

Because of the structure of language, the reading disabilities that result from the deaf-mute method plus phony phonics are hidden by fifth grade for most children, so that fifth grade teachers in middle-class communities will often say they seldom find a child who cannot read. From this vast population of hidden reading failures in upper grades come our low achievers in high school and college. Only one thousand high frequency words out of the half-million or so in English comprise over ninety percent of written texts. Once children know these sight-words and have been drilled to guess new words by the aid of the context and phony phonics, they can read at or well above ninety percent accuracy, which is above the frustration or failing rate, on material made up of words already in their spoken vocabularies. Fifth grade and higher grade teachers therefore wrongly assume such children can read. Fifth grade teachers (and the NAEP) should test children on the oral reading of a list of progressively more difficult rare words. They would be astonished to find children who either could not read these words at all, or who had such
difficulty piecing words together with phony phonics that it was evident the “skill” could be of little use to them on demanding material. It is this inability to read and therefore to learn low frequency words which accounts for the inability of high school students to handle academically demanding texts, which is discussed further below.

In order to uncover the extent of real reading disabilities in school children, I requested the Department of Education in my letter of September 19, 1986, to William J. Bennett, then Secretary of Education, to arrange to have carried out four specific survey tests of real reading ability to establish clearly the harmful effects of the reading methods in use in American schools. These testing requests were denied by the counter-productive U. S. Department of Education, just as my other testing requests of October 11, 1989, were ignored by the National Assessment Governing Board.

As necessary background to the deaf-mute method currently in use in American schools, the attached history also outlines the history of reading instruction in general. The National Assessment Governing Board implicitly supports this deaf-mute method by failing to report that this entrenched method has aroused vigorous opposition from many people. My purpose in sending this addition to my October 11, 1989, testimony is to enlighten the National Assessment Governing Board concerning the previous history and actual nature of reading instruction. With such information which they obviously lack, they should be in a position to amend their faulty report of 1989. Through omission, it falsely suggests that a kind of consensus is developing for invalid reading tests which support this deaf-mute method. It is to be hoped that, in an amended report, the National Assessment Governing Board will outline the demand for valid reading tests from those who oppose America’s “reading establishment.”

When the National Assessment Government Board finally admits that the only kind of consensus on the testing of reading which can exist at present is a two-part testing program which provides for both invalid reading tests (to placate the institutionalized vested interests in education) and valid reading tests (to meet the demands of outraged members of the public), it will then be able to achieve a consensus on reading tests as mandated by the U. S. Congress.

One of my October 11, 1989, requests was for oral testing of accuracy in reading lists of progressively more difficult words, the lists being those prepared by Arthur I. Gates in 1923, on which he tested 1,700 students in 1923-1924 at grades two to six, all of which words, astonishingly, more than 95% of American 1923-1924 students could read by sixth grade! The oral reading of word lists is a more desirable oral reading test than the oral reading of paragraphs, such as those paragraphs first prepared by William S. Gray in 1914 (on 1915 versions of which thousands upon thousands of American students were tested before 1918). To paraphrase what Leonard P. Ayres reported in his 1915 A Measuring Scale of Ability in Spelling,

A MERE ONE THOUSAND OF THE HIGHEST FREQUENCY WORDS OUT OF THE HUNDREDS OF THOUSANDS IN ENGLISH OCCUPY MORE THAN 90% OF ANY RUNNING TEXT IN ENGLISH.

By the end of fourth grade in our benighted schools, most of our so-called “functional” illiterates have been taught these thousand or so highest frequency words as whole sight-words, like Chinese characters, without concentration on their individual letter sounds.

FUNCTIONAL ILLITERATES CAN THEREFORE SCORE OVER 90% WHEN READING ANY CONNECTED TEXT, WHICH IS “PASSING” OR ABOVE THE “FRUSTRATION LEVEL.” “ABOVE THE FRUSTRATION LEVEL” MEANS THE SIGHT WORDS THEY KNOW MAKE UP ENOUGH OF THE CONTEXT SO THAT THEY CAN GUESS THE MEANING OF THE
REMAINING UNKNOWN WORDS OR AT LEAST THE MEANING OF THE READING SELECTION AS A WHOLE.

This, of course, is how deaf-mutes were taught to work out the meaning of unknown sight words. The new words were embedded like raisins in a dough consisting of their memorized sight words. Since such scores of over 90% on oral reading tests are marked as “above the frustration level” or passing,

MOST OF OUR FUNCTIONAL ILLITERATES WOULD PASS TESTS OF CONNECTED ORAL READING AND HIDE THEIR TERRIBLE INABILITY TO READ UNFAMILIAR WORDS, JUST AS THEY CAN GUESS SO MANY ANSWERS ON THE LOWER LEVELS OF OUR FRAUDULENT “READING COMPREHENSION” TESTS WHICH HAVE BEEN USED TO MASK OUR READING FAILURES FOR SIXTY YEARS.

Yet, it is the lowest frequency, more unfamiliar, words which bear the deepest meaning in a text, and it is the sound of these words which our functional illiterates cannot “decode,” or, if they can, do so with such difficulty that the “skill” is of little or no use to them when they are reading connected text with difficult words. Having acquired rigid conditioned reflexes in first grade to look at words as meaning-bearing wholes because they were taught by the deaf-mute method, it is impossible for them to “hear” unfamiliar printed words as sound as they are reading, even when they can guess the meaning of the words from the context. They therefore are not able to combine the sound of such words with the apparent meanings of the words from the context during the actual act of reading connected text, as competent readers are able to do. They are obviously unable to add such words to their vocabularies even if they can discern the meanings of the words from the context.

The “phony phonics” which functional illiterates have been taught in our schools by the use of mountains of expensive reading workbooks can frequently only be used to identify printed words which such readers already know as spoken words. Functional illiterates are nearly helpless when sounding out words they do not already know as spoken words, many being unable and others unwilling to use Arthur I. Gates’ effort-filled, awkward, complicated, “intrinsic phonics” approach which is actually the deaf-mute approach of using context and parts of known whole words to add an unknown whole word to the visual memory. Yet it is this unpleasant, conscious approach dealing ONLY with the comparison of whole words, NOT letter sounds, which is actually used by those deaf-mute trained American readers who have managed to rise above the “functional illiteracy” level, as attested by the 1985 Government report, Becoming a Nation of Readers (page II).

Almost 100 per cent of those readers who developed phonetic conditioned reflexes in first grade, and those of the deaf-mute [method] trained readers who are lucky enough to be able to read with some degree of success despite that defective approach, can add new printed words to their vocabularies by figuring out their sound from the print and their meaning from the context. They are therefore constantly adding the sound and meaning of such new low frequency-words to their reading vocabularies. By contrast, functional illiterates are left in a state of arrested vocabulary development. It is precisely this inability to sound out and then to learn from the context the meaning of these low frequency words which accounts for the low scores of functional illiterates in upper-grade “reading comprehension.” The only approach that can uncover their terrible decoding disability is the oral reading of progressively more difficult word lists, where there is no context for the illiterates to use as “clues” for “psycholinguistic guessing.”

It is curious that no one has ever pointed out the Achilles Heel of the “psycholinguistic” teaching of reading and of its most recent retread, the “whole language” approach. After stripping off the layers of verbiage with which both methods are covered, it is obvious they are actually the same (and the same as the “natural” method promoted by “experts” in the 1890’s). The approach makes it exceedingly difficult
for readers taught only that way and without true phonics to increase their vocabularies through their independent reading. Therefore, the approach arrests mental development and ultimately lowers verbal intelligence quotients.

Yet oral accuracy tests on word lists are reportedly not going to be given to the whole 1992 fourth grade reading test population to uncover the fact that many cannot really read, and that they are not “functionally illiterate” but simply illiterate (meaning unable to deal with letters). Instead, only a portion of the 1992 test group will be tested on oral reading. Yet even this test will not be on progressively more difficult word lists, but on connected oral reading of paragraphs where most of the words are certain to be high-frequency words, which, with context-guessing of words already in spoken vocabularies, can yield high scores and hide decoding disabilities. But even this unsatisfactorily small oral test group in 1992 will NOT be scored on oral reading accuracy, as was done on the Gray oral reading tests given to vast numbers of students between 1914 and 1918. (The fact that oral tests were given to thousands of students in those years makes it abundantly clear that it is NOT unfeasible to give large-scale oral tests. To see how easily it can be done, refer to the 1917 The Cleveland School Survey - Summary Volume, by Leonard P. Ayres, which reported on page 168 and following on the 1915 Cleveland schools oral tests given to 1,831 pupils.) Instead, in the proposed 1992 tests, if the students are considered to have read at a normal rate, it is reported that they will not be tested on accuracy AT ALL but will simply be recorded as having passed the test! Yet most people begin to approach their adult oral reading speed by the fourth grade level, including those poor readers who read with many errors - the “functional illiterates.”

As has been pointed out, functional illiterates are capable of passing oral accuracy reading tests at above 90% accuracy because they may know the one thousand highest frequency sight words which account for over 90% of most texts. Yet even if they know only about 300 of the highest frequency sight words, which few words compose an incredible 75% of most texts, such readers may score above the 90% frustration level if they are accomplished context guessers.

IS IT NOT CURIOUS THAT THIS TESTING INFORMATION HAS NEVER BEEN PUBLISHED?

Functional illiterates are also likely to substitute guessed synonyms for those low frequency words they do not know, without a perceptible change in rate (“puppy” for “dog,” etc.) particularly since so many have been drilled to read in this “psycholinguistic guessing” “whole language” fashion since first grade. It is almost unbelievable, therefore, that the appalling 1992 “assessment” is reportedly going to record such fourth graders, who read at an average rate but inaccurately, as passing the oral test! Only the slow and stumbling readers, who have been unable to memorize even high-frequency sight words, the most disabled readers out of the small group being “tested” (?) on oral reading, will receive an oral reading score, but even it will not be an accuracy percentage score. Instead, it will come from the disgraceful “cloze” “tests” which are meant only to yield a subjective analysis of how “good” they are at “psycholinguistic guessing.” Yet when Clara Schmidt tested the oral reading of Chicago children in 1914, she found “psycholinguistic guessing” to be the hallmark of the mentally deficient! (Her article, “School Subjects as Material for Tests of Mental Ability, I,” appeared in the Elementary School Journal, then Elementary School Teacher, of the University of Chicago in November, 1914.) Clara Schmidt’s 1914 mentally retarded children, therefore would be scored on the 1992 reading assessment as more accomplished “readers” than children of normal intelligence!

Reading “rate” tests and “cloze” tests are clearly NOT the oral reading accuracy tests I requested which would have given objective percentage scores on reading accuracy for ALL fourth graders, instead of opinions on the kinds of errors made by a tiny group of the most disabled. By “cloze” philosophy, those errors favoring the context’s “meaning” instead of the letters’ “sounds” are considered far more desirable, since they show the student is concentrating on the “meaning” of the selection. Errors
concentrating on letter sounds are supposed to demonstrate inferior reading ability, even though Clara
Schmidt found that concentrating on letter sounds was the hallmark of children with normal intelligence,
and that “psycholinguistic guessing” was the hallmark of the mentally deficient.

The “born yesterday” nature of today’s “cloze” tests and “error analyses” must be considered. Cloze
tests originated (though most of their proponents probably do not know it) in work by Ebbinghaus in
Germany in 1885, reported in his Memory: A Contribution to Experimental Psychology. (According to
William S. Sahakian, page 107 and following, and page 458, History of Psychology, F. E. Peacock
Publishers, Inc., Itasca, Illinois, Ebbinghaus’s report included “his study of completion tests,” which
obviously are cloze tests, as well his study on the relative ease of memorizing meaningful material
compared to meaningless syllables.) The most important contribution to “error analysis” theory came
from Clara Schmitt, working in the Chicago schools, who reported in the Elementary School Teacher in
November, 1914, on the kinds of oral reading errors made by mental defectives. The children she tested
who had normal intelligence misread words primarily by sound. To use an old analogy from another
source, children who make errors on words by “sound” might read “bottle” for “battle.” Decoding by
sound, such children are on the right track for adding words to their vocabularies - and can correct the
misreading from bottle to battle once they know the context. (As has been pointed out, the misread
sentence, “My father was in a bottle” is rapidly corrected to “My father was in a battle.”) Clara Schmitt’s
mental defectives, however, “psycholinguistically” guessed whole words for meaning, not sound. By the
former analogy, her mentally retarded students might have read “war” for battle, and never would have
known they were wrong. The error Clara Schmitt actually reported in her article, however, concerned the
reading of the fable about the fox and the grapes:

“The errors in pronunciation made by the normal children... were always in favor of a word
which had considerable visual or phonetic resemblance to the correct word. The errors made by
the defective children with the first selection which was perfectly familiar to them in content, at
least, were absurd so far as visual or phonetic values were concerned, but were calculated to fill
in the context. The defective child reads, for instance, that the fox saw a vine with berries on it.
Because of the great prevalence of this type of variation the performance of the defective group
cannot be compared with that of the normal.”

Clara Schmitt’s poor retarded students “psycholinguistically” altered “grapes” to “berries,” which she
found to be a hallmark of mental disability. Yet according to the “born yesterday” cloze theory, reportedly
to be used on the 1992 “oral reading” error analyses, Clara Schmitt’s mental defectives would be marked
as accomplished readers because they were reading for “meaning,” while normal children who decode for
sound would be marked as disabled! Is THIS the kind of “oral reading test” and reading philosophy to be
used in 1992?

The second test I requested was dictated spelling (spelling being the best over-all indicator of reading
automaticity, as any honest primary grade school teacher could confirm). These two proposed 1992 test
scores on oral reading accuracy and spelling accuracy could then be compared to the A. I. Gates’
1923-1924 oral word list norms and to the Leonard P. Ayres 1915 spelling norms in A Measuring Scale
for Ability in Spelling, which scientific norms were based on tests of thousands of American students in
those years: 1923-1924 and 1914-1915. Hard test data in 1992 to compare to these earlier scores should
confirm the drastic drop in reading ability which has occurred since 1930 because of the adoption of the
deaf-mute method for teaching first-grade reading.

Virtually no meaningful large-scale testing of oral reading has been done since 1930. The United
States Office of Education large-scale, Government-funded first-grade studies on 27 different kinds of
reading programs in 1967 were almost completely composed of written tests, but some oral reading was
tested which compared phonics-trained classes to sight-word (“deaf-mute method”) trained classes.
However, the tests were done in the spring of first grade which was too soon to produce meaningful results. The following year, USOE continued the tests on some of the original 27 programs in second grade, and this testing also included oral testing. But the second grade oral test data did not become available with the written test data. The children in the 27 programs had been pre-tested before beginning first grade to determine how many did or did not know the alphabet, and how many did or did not have other “readiness” strengths or weaknesses. The resulting data was fed into the computer so that all classes started with the same “handicap.” The scores on all subsequent tests were adjusted accordingly by the computer so that they could be compared fairly. When I inquired by telephone about the availability of these final oral reading scores for second grade, I was told by a man who had worked on the USOE tests that someone had accidentally pressed a wrong button and wiped out all this scientifically-processed data on the second grade oral tests. This wiped-out tax-supported second-grade data would have provided the first meaningful large-scale testing of oral reading in America in fifty years.

NAEP, which is funded by tax dollars, is now in a position to provide the first large-scale testing results on American written spelling and oral reading accuracy in about SEVENTY YEARS and yet is failing to make provision for such tests. Its failure to do so should be brought to the attention of Congress which passed the enabling legislation for this testing program, now being so appallingly mishandled. NAEP and the National Assessment Governing Board should be held strictly accountable in the future if the 1992 reading assessment finally turns out to have been an improper use of tax monies.

The large-scale multiple-choice printed spelling test forms which are used today, in place of standardized large-scale dictated, written spelling tests like Ayres’, require that a student check which one of about four printed spellings for a word he considers correct. Such multiple-choice preprinted tests are NOT valid spelling tests. These spelling tests arrived about 1930, curiously at about the same time as the Gates and Gray deaf-mute-method, sight-word readers which had such a catastrophic effect on American spelling and oral reading accuracy. The drop in spelling is proven beyond any possible question by comparing certain words which occur on both the Iowa norms in the 1950’s and on Ayres’ norms in 1915.

Also by 1930, “silent reading comprehension” tests introduced in 1914 (and one of the first in 1914 was by the Columbia Teacher’s College famous psychologist, E. L. Thorndike) had totally displaced large-scale individual oral reading accuracy tests. Yet, curiously, the standardized oral reading accuracy tests which went out of general use in schools after the 1920’s except in “reading remediation” were also introduced in 1914 by Thorndike’s student, William Scott Gray. The tests were prepared under the psychologist Thorndike’s direct supervision. In 1923, Thorndike’s other famous ex-student, Arthur I. Gates, who worked at Columbia Teachers College with Thorndike, wrote the oral word-list test which I am requesting be retested in 1992.

Portions of the Gates test are currently used on a test published by Teachers College Press, but the scores are treated very differently than in 1924, reporting only on the score of the median child who is half-way between the top and the bottom of the class. The resulting norms are in no sense comparable to average scores for whole classes in 1924, even though they look similar, and even though such “median” and “average” scores on other topics generally tend to be similar. It is easy enough to show that they are NOT similar on the Gates word lists: no one could believe that one hundred percent of today’s sixth-graders can read nineteen of twenty increasingly difficult words, or, to put it differently, that ninety-six percent of sixth graders could read one hundred percent of the increasingly difficult word lists without a single error, if four percent read none of them. (That would give a four percent illiteracy rate, opposed to 96% total literacy!) That is exactly what those 1924 “average class” scores meant statistically, though individual scores obviously fell in between these two extreme statistical cases. However, it is obvious we would have only a minor illiteracy problem if our sixth graders today could score like those in 1924.
Gray returned to the University of Chicago from Columbia Teachers College in 1915 to work with Thorndike’s ex-college classmate, the psychologist Charles H. Judd, and Gray later wrote the Scott, Foresman “Dick and Jane” deaf-mute method readers published in 1930. Arthur I. Gates, Thorndike’s student about 1916, published in 1930 the primer of his deaf-mute method Macmillan series. These two deaf-mute method series published by Thorndike’s ex-students, Gates and Gray, starting in 1930, were the first such deaf-mute series ever published for hearing children. Their books which used the “new” “intrinsic phonics” pushed the supplementary phonics charts out of primary classrooms, all over America. For instance, as I was told by a teacher who taught in New Jersey at that time, New Jersey state-supplied phonic drill charts were removed from classrooms after 1930.

Gates’ deaf-mute method intrinsic phonics, which meant comparing an unknown word in context to remembered words in memory to see like parts so as to help in guessing its identity, was publicized as a scientific, enlightened, child-loving replacement for the old, child-abusing phonic drill. No one mentioned it was based on the visual analysis used for centuries in teaching deaf-mutes.

For almost fifty years dating from the early 1920’s, Gates and Gray were widely publicized as the ultimate “reading experts” in America by America’s education establishment. Nila Banton Smith made these comments about them on page 222 of American Reading Instruction (1932, 1965) for the period from about 1925 to 1935 (as outlined on page 196):

“During this period two ‘giants’ in the field of reading instruction turned their great funds of knowledge to practical application in developing basal reader programs. These ‘giants,’ in so far as reading goes, were Dr. Arthur I. Gates and Dr. William S. Gray, both of whom, during the immediately preceding years, had conducted research of great magnitude and produced writings in great volume concerning the teaching of reading.”

Paper never refuses ink, even that from Smith or her “giants,” Gray and Gates.

“...the late William S. Gray, acknowledged leader of, and spokesman for, reading experts for four decades; major summarizer and interpreter of reading research; and author of America’s leading basal-reader series, the Scott, Foresman & Company series.”

It would be interesting if someone would research this development historically to demonstrate the power of public relations. The fame (notoriety?) of Gray and Gates coincided with a push to remove oral reading from the schools, and to replace it with silent reading and silent tests, at all levels from grade one upwards. It coincided with the burying of the once-famous Ayres’ spelling scale which demonstrated American children in 1915 had been able to spell - and therefore to read - with astonishing accuracy.

Gates at Columbia Teachers College, New York, and Gray at the University of Chicago, who were both trained by Thorndike, trained horde’s of reading “experts” who themselves wrote other deaf-mute method series. Thorndike’s theories were refined from ideas he had received from his former professors, the psychologists William James of Harvard and James’ close friend, James McKeen Cattell of Columbia, and Cattell’s and James’ delusions are the probable source for the use of the deaf-mute method for hearing children. Yet Cattell and James were only endorsing the deaf-mute methods so successfully promoted in America from 1826 until about 1900, the same methods by which they had both probably been taught to read as children. (That most Americans learned to read with a “phonic” McGuffey series in the 1800’s is an academically scandalous myth, as my attached history concretely demonstrates.)
Thorndike’s ex-students, Gates and Gray (and their horde of followers who are suitably decorated with meaningless university degrees in “reading instruction”) are directly responsible, as obviously is Thorndike, for America’s functional illiteracy. (I dropped out of a program for an additional master’s degree half-way through. It was in “reading instruction,” but the content was so faulty the degree would have been as meaningless as a degree in astrology or alchemy. It is a tragedy that, because of misinformation and disinformation from “experts,” well-intentioned teachers and professors have been misled into thinking such programs have validity and so promote such programs.)

Large-scale tests of written spelling accuracy and oral reading accuracy were commonly done in massive city school surveys all over the United States from 1914 to 1918. The dropping of such large-group tests as the standardized 1915 Ayres spelling scale and the William Scott Gray standardized 1915 oral reading paragraphs has raised the gravest of doubts concerning the objectivity and motivations of the leaders of the “reading instruction community” over the intervening years. These were the same years in which our functional illiteracy problem developed. One might have assumed that the National Assessment Governing Board would have chosen to allay doubts concerning its own objectivity by reporting on the need for carrying out once again such large-scale written spelling accuracy and oral reading accuracy tests, in addition to the invalid “reading comprehension tests.” Today’s scores might then be compared to those recorded before 1930 when American schools taught children to read by phonics, and not by the deaf-mute “whole language” sight-word method which is prevalent today.

The National Assessment Governing Board report also cavalierly ignored the comments of other speakers who requested that NAEP test achievement of today’s phonically-trained students against those trained today by the deaf-mute sight-word “whole language” approach. Instead, in their discussion of proposals for spending taxpayers’ money, the National Assessment Governing Board continued to speak of their non-existent and impossible-to-achieve consensus on testing. This imaginary consensus attempts to legitimize the fact that pro-phonics taxpayers will be forced to continue to pay for “testing” of reading which is not testing at all. The standardized but invalid silent reading comprehension tests which have been used in the past can be passed by shrewd guessing by functional illiterates with average or higher than average intelligence. Therefore, they correlate far more closely with intelligence quotients than with mechanical reading ability which can be demonstrated by oral reading of progressively more difficult word lists. “Silent reading comprehension tests” do not reflect the ability to read low-frequency words except for virtual illiterates, who cannot read enough of the high-frequency words to use their intelligence to guess at answers. However, a newer and even more objectionable version of the silent reading comprehension test is now being proposed for the 1992 reading assessment: an “open-ended” exercise specifically tailored to hide the rampant and widespread reading failures which have been the product of the recent anti-phonics “whole language” steamroller, which has been turning out large numbers of such virtual illiterates who cannot read enough even to make shrewd guesses to the answers on objective silent reading comprehension tests.

“Open-ended questions” on the proposed NAEP printed silent reading test forms would provide the option of several “correct” printed answers to a printed question out of a larger number of printed answers, instead of only one correct answer out of such multiple choices. Those remaining printed answers to be marked “wrong” would presumably be either logically impossible or unacceptable to the subjective biases of the test-makers. Yet, when there are several “correct” answers to any given question, such multiple “correct” answers must obviously represent only subjective opinions, which can obviously vary or there would not be so many different flavors of ice cream. Such multiple “correct” answers, however, cannot represent objective facts, unless the principle of contradiction (“A thing cannot be and not be at the same time,”) is being temporarily suspended by the National Assessment of Educational Progress. Furthermore, it is statistically obvious, because of the multiple correct answers, that a student could score “correctly” on a very large number of such open-ended questions simply by filling in blanks randomly, without reading anything at all, which might yield a relatively high grade level score.
Any grade school teacher in America can confirm that some students regularly fill in blanks at random on these multiple-choice, silent printed tests. Such tests have taken the place of the oral recitations which were in use not only in the nineteenth and early twentieth century but since ancient times. Almost no one in America today even knows what “recitation” really means, unless he is reading Alice in Wonderland who talks about her recitations. (The written essay tests which attempt to take the place of oral recitations are awkward and unsatisfactory for evaluation purposes.)

Psychologists label the memory differences required for oral recitations vs. multiple-choice printed tests as “recall” vs. “recognition.” Seeing in print the date 1066 opposite a list of names including Harold of Hastings, some students might “recognize” the connection between the date and Harold, but would be totally unable, without the test form in front of them, to “recall” either Harold of Hastings’ name or the date 1066. By random blank filling other students can, by sheer chance, connect Harold and 1066 and get “correct” answers, even though these students might not even be able to PRONOUNCE Harold of Hastings or even read the number 1066.

Random blank-filling on subject-matter standardized tests such as in the sciences or mathematics can raise scores above the zero mark, but it is highly unlikely in subject-matter areas that random guessing can produce a passing grade, so such subject-matter tests are perfectly valid tests, even though they reflect “recognition” memory and not “recall” memory. Subject matter tests have no “context clues” with the answers embedded in reading selections to enable a student with a sufficiently high intelligence to identify the answers, even if he cannot read many of the words on the page. “Psycholinguistic guessing” is the reason why reading “comprehension” tests do a bad job of testing reading, except for the almost totally illiterate, but it is also the reason why reading “comprehension” tests are an excellent indicator of intelligence. By contrast to reading “comprehension” tests, in most standardized, multiple-choice, subject-matter tests, the student does not have context but only his own learning to use as the source for correct answers. Unquestionably, such standardized, multiple-choice, subject-matter tests need to be used more, not less, in our schools, to demonstrate whether students are, or are not, learning subject matter.

Yet a drive is on to eliminate such standardized, multiple-choice, subject-matter tests, just as a drive is on to replace objective multiple-choice “reading comprehension” tests with “open-ended” multiple-choice reading tests. Bad as the objective reading comprehension tests have been, the open-ended reading comprehension tests are considerably worse. Random blank filling on objective reading comprehension tests, which is the only option open to a near illiterate, has at least yielded scores usually below grade level. Therefore, the objective reading comprehension tests managed to some extent to separate those who could read a little from those who could not, or would not, read at all. With the so-called Michigan-type test with open-ended questions which will dispense with one objectively correct answer, it will no longer be possible to provide even this bedrock data.

In its report, the National Assessment Governing Board supported the open-ended testing approach of this infamous Michigan assessment test by reporting positively on page 7 on the possible use of such “open-ended questions.” (It should be noted, however, that the Michigan test outraged parents even more by its content than by its open-ended, non-objective form.) Since, by definition, such open-ended questions can have no one correct answer but instead represent opinions, the use of such questions cannot possibly constitute an objective curriculum “test.” Such questions are, however, widely used on psychological tests to assess personality traits. The National Assessment Governing Board should have stated on page 7 of its report, of course, that the NAEP is only authorized by law to carry out objective testing of achievement. NAEP was formed and funded solely for the purpose of producing objective data on scholastic achievement, NOT to assess such things as personality traits. Actually, if such “open-ended” questioning of captive audiences of public school children should invade the area of values and psychology, the very asking of such questions in public schools would be illegal. It should be
remembered that the Hatch Amendment (The Protection of Pupil Rights Amendment, Section 439 of the GEPA) was passed specifically to protect pupil privacy and to prohibit unauthorized psychological meddling in the public schools, which can occur with the kind of “open-ended questions” implicitly endorsed by the National Assessment Government Board in its unfortunate final report.

The promotion of the objectionable NAEP reading tests appears to have come as a result of concerted action by relatively small groups of people (change-agents) who obviously shared the same aims. The harmful changes in American educational practices over about the past 165 years have always come from such groups, as my reading history demonstrates, a draft of which is attached. That people in the past should have banded together to produce worthwhile improvements is, of course, only natural. What is different about most groups which affected American education is that they promoted changes which have always had, at their core, control of the content of the education of the children of the public. American education has been shaped to the liking of change-agents, sometimes in direct opposition to the wishes of their parents, or, more commonly, without their knowledge. The publicity the change-agents have generated to effect change has always been the same: expressed horror at some real or imagined defects in current education, following which emotional outcry recipes were given for the cure of such “defects.” The change-agents’ cures have always moved towards more centralized control of education, through the use of at least one of the three “T’s”: Teacher education, Textbooks, or Tests.

It is usually easy to discern the “improvements” being worked on by change-agents at any period of time by reading their newspaper and magazine articles, and books and speeches, concerning “defects” in education, and then reading their recipes for cures. The “defects” they list at present are legion and sometimes their cures may seem to be so, but a common denominator can be seen in all of today’s “cures.” The common denominator is the promotion of the third “T,” Tests - tests for children and tests for teachers. Those who control the content of the tests will have a stranglehold on education, no matter how much the “choice” of schools and tuition vouchers are promoted.

The smokescreens being used at present to cover up the move to control through Tests are the “spontaneous” and highly publicized movements toward school-based instead of centralized control, toward parents being allowed to choose the schools to which to send their children, and toward tuition credits. These are all obviously very good and highly desirable things, and many fine people are working to bring them into existence. These fine people are apparently unaware that others may be using these same causes as smokescreens behind which to conceal the movement toward total control through “Tests.”

What children are taught - or not taught - can be controlled through “official” tests, and “unsuitable” teachers can be failed and not hired for the schools through “official” tests. The achievements of parental choice and tuition credits will become meaningless if the children’s curriculum in all schools is to be rigidly controlled by “official” tests. “Local control” will also be meaningless if the teacher candidates for locally-controlled schools will be expected to pass a test made up by some group such as the Carnegie foundation.

Such groups will take it upon themselves not only to decide what it is that a “good” teacher should consider a “right” answer, but what questions should be asked in the first place. In the Michigan reading tests, for example, many parents found many of the questions to be highly objectionable, but their opposition did not change the tests. Therefore, when such “official” tests arrive for both children and teachers, where will free speech be then not only for children and teachers but for parents?

At present, however, the country is saddled with the proposed 1992 reading tests. Since they will take place, all effort should be made to see that at the least they are not so false and misleading as previous reading tests based on that oxymoron, “reading comprehension.” To assure that they are not so
misleading, rigid oral accuracy tests and rigid spelling tests such as I recommended in October, 1989, should be included instead of omitted as at present.

It should be remembered that the Constitution made no provision for any Federal Governmental involvement of any kind in education (just as it kept the Government out of religion). The Constitution never envisioned the existence of such Governmental groups as the NAEP and the National Assessment Governing Board. Even state involvement in education in the United States did not commence until some years after the Constitution was written, and even then it was minimal. New York State and Massachusetts were the first states to become involved in education, and yet for many years they were almost the only states to have done so. State involvement in education in the United States did not begin to become at all general until more than fifty years after the Constitution was written, and only then because of a massive drive by heavily organized activists for government schools, as Samuel Blumenfeld documented in his book, Is Public Education Necessary? (The Paradigm Company, Boise, Idaho, 1981, 1985). Yet incontrovertible evidence exists of extraordinarily high literacy in America before government schools existed outside those few in Massachusetts and New York State. Even in those states, governmental schools were very limited and private education was highly successful.

Edmund Burke said succinctly 200 years ago, “Power corrupts, and absolute power corrupts absolutely.” If the National Assessment Governing Board and the NAEP mishandle the 1992 reading assessment by failing to give valid tests, a wide audience may remember Burke’s adage and come to believe in the potential harmfulness of granting power to evaluate achievement and thereby to shape curriculum to self-perpetuating Governmental agencies which are unaccountable to the voting public. The National Assessment Governing Board and the NAEP may thereby hasten the happy day when American education and the policing of American educational results will be returned, by future acts of Congress, by a Constitutional amendment, or even by a decision of the Supreme Court, totally to the local (not the state) level. After all, that is where the United States Constitution originally, and obviously very intentionally, left them.
Testimony Given at the
National Assessment Governing Board Public Hearing
Trenton Board of Education Board Room
108 North Clinton Avenue, Trenton, New Jersey 08609
October 11, 1989
By Geraldine E. Rodgers

The purpose of these meetings is to get a consensus on goals for the 1992 assessment of fourth-grade reading. The dictionary defines “consensus” as “general agreement.” To try through a few public meetings to get agreement on goals in reading methods and tests when Americans have been bitterly divided on them for well over a hundred years cannot succeed. NAEP must amend this impossible aim by giving two separate sets of tests to meet the vastly different teaching and testing goals of both sides of the controversy.

Despite opposition from the true-phonics side, those who promoted the phony-phonics, sight-words-plus-guessing, deaf-mute method of teaching reading have been in almost total control of American schools, teacher colleges and reading books since the 1920’s. It is sad that the deaf-mute method they installed to teach normal children to read is an inferior way to teach even deaf mutes! Nevertheless, their vigilant censorship practices have kept this group in control. Their disinformation has even misled many into thinking true phonics has returned to reading instruction. Such disinformation and censorship must not affect the 1992 tests.

The latest window-dressing title for the deaf-mute guessing method is “whole language.” The latest fake reading test is the notorious Michigan assessment test, reliably reported to be used by NAEP in 1992. Although the test is indefensible, I am not so naive as to presume comments like mine can stop the reading establishment steamroller from pushing that bad test into our schools. Yet, meaningless tests of reading comprehension like Michigan’s do represent a consensus on how to teach and test reading from that curious group, America’s entrenched reading experts. But their opponents have a different consensus: that true phonics is necessary for beginning reading. As American citizens, the pro-phonics group has the right to expect that NAEP will protect pro-phonics interests with the same ardor with which NAEP protects the interests of the deaf-mute method steamroller. Therefore, NAEP must also use tests the pro-phonics group can approve.

Our hordes of functional illiterates, unknown before 1930, were produced by the invasion of our schools in 1930 by the deaf-mute method of sight words and context guessing for teaching reading. The experts won this victory for the deaf-mute method by confusing the differences between reading skill and comprehension. Real tests of reading skill were replaced by 1930 by tests which reflected children’s relative ability to understand and to guess - the so-called silent reading comprehension tests.

Unlike America’s reading experts in 1930 and today, the Russian psychologist, D. B. Elkonin, entertained no such confusion on the differences between reading skill and understanding. He said:

“Understanding, which is often considered as the basic content of the process of reading arises as a result of correct recreation of the sound forms of words. He who, independently of the level of understanding of words, can correctly recreate their sound forms is able to read.”

Elkonin saw reading as a skill like typing. The master French psychologist, Alfred Binet, also saw the skill of reading as something completely different from comprehension. When he tested intelligence in Paris in 1908, children were asked to tell how much they understood of what they had just read orally. His assistant at the time, Dr. Theophile Simon, said in 1924:
“...we ... observed many times this curious thing: it happens that some children read very incorrectly, so incorrectly that their reading aloud is, for those who listen, very nearly incomprehensible, and then, if one asks them what they have read, they say it almost correctly. There is therefore less correlation than one could believe possible between the understanding and the correctness of reading.”

“Almost correctly,” of course, is not good enough, but this capacity to guess the meaning of a page from those few words which can be read explains why children taught by the “whole language” variant of the deaf-mute method, and who therefore cannot really read, can still get passing scores on reading comprehension.

Dr. Hilde Mosse, psychiatrist and pediatrician, said in her Complete Handbook of Reading Disorders that reading should be an automatic conditioned reflex, and that a lack of automaticity in reading such as Binet saw is a disability. Since reading comprehension tests can be passed by guessing, they reveal nothing about defects in automaticity.

The structure of the brain explains why “reading comprehension” should have no place in a definition of reading and why it is a classic oxymoron. According to Dr. Wilder Penfield, the famous neurologist and surgeon, the human brain has two main systems: the automatic sensory-motor mechanism, which is our brain’s computer, where our learning or conditioned reflexes are stored, and the higher brain mechanism, where our consciousness resides.

Testing reading achievement, like testing of vocabulary meanings, should be concerned only with the automatic sensory-motor mechanism, the brain’s computer, because that is where such learning or conditioned reflexes are stored. Testing of reading achievement should not be concerned with the higher brain mechanism, where consciousness and comprehension reside, because, by definition, that part of the brain cannot be taught or conditioned. That is why trying to teach comprehension is ridiculous.

For 1992, therefore, these tests are needed to show how well children have learned to read printed words, not how well they can guess meaning:

**Pronouncing of Word Lists:**

Oral testing of word lists is better than paragraphs since word lists are immune from context guessing. “A Test of Ability in the Pronunciation of Words” by Arthur I. Gates should be used in 1992. Gates told in 1924 of his oral tests of 1700 pupils in grades 1 through 6 on his lists of progressively more difficult words. Fourth grade averages for 1992 must be compared to his 1924 fourth grade averages to show the failure of the deaf-mute method. Median scores, such as those on the 1962 Gates-McKillop tests, (“the average child,” or the child at the 50th percentile)\(^{42}\), ABSOLUTELY SHOULD NOT BE USED as they obscure results.

\(^{42}\) The phrase in parentheses was added on November 1, 1989. Also, the date of the Gates-McKillop test was corrected from 1963 to 1962. The Gates-McKillop Reading Diagnostic Tests (1962) and the Gates-McKillop-Horowitz Reading Diagnostic Tests (1981) were published by Teachers College Press, Teachers College, Columbia University, New York, New York. The test I recommended, however, is SOLELY that outlined by Arthur I. Gates in his “A Test of Ability in the Pronunciation of Words,” page 205-219 of Teachers College Record, Teachers College, Columbia University, November, 1924. The necessary word lists and sufficient information on his test results are contained in that article. The 1915 A Measuring Scale for Ability in Spelling, originally published by the Russell Sage Foundation, New York, New York, has been republished by Mott Media, Milford, Michigan. The preface attributed to me was only an adaptation of material I sent Mott Media and was not written by me, and that adaptation is factually wrong in places.
Dictated Spelling Tests:

Spelling accuracy is the best indicator of oral reading accuracy, but it must be tested by dictated, written spelling tests, not by multiple choices on printed forms. Leonard P. Ayres’ tested 70,000 children in grades 2 through 8 in 84 American cities on written spelling of the commonest words, and in 1915 reported the results in A Measuring Scale for Ability In Spelling. Fourth graders in 1992 should be retested with Ayres’ scale and their scores compared to 1915 fourth graders. The drop in scores since 1915 should be catastrophic because of the switch to the deaf-mute method.

Inclusion of these tests of real reading ability should counterbalance meaningless multiple-choice tests on silent reading comprehension.
